RESEARCH & DEVELOPMENT IN POLISH SCIENCE

2018-2019

Scholarships offered for PhD students

2018-02-01

If you have your doctoral thesis reviewed and you carry out research in technology combined with medical sciences, you can receive the scholarship from Czesław M. Rodkiewicz Scholarship Foundation.

Polish citizens, permanently living and obtaining the engineer diploma from Polish universities can apply for the scholarship competition. During the qualification procedures the jury will take into consideration the subject of the doctoral thesis and its impact on the science, academic achievements and the opinions of their tutors with two independent researchers. Ultimately, two doctoral students will receive a scholarship of 4,000 Canadian dollars. The application and required documents should be sent to the following address: Janusz Wójcik, President 622 Wahstao Rd Edmonton, Alberta, T5T 2Y4 Canada, until April 30, 2018.

You can find more information on the Foundation's website

Software programmers are the sign of the technological revolution in Poland

2018-02-05

250 thousand programmers working in Poland are one fourth of all IT developers employed in Central and Eastern Europe.

They are among the best professionals in the world - emphasize the authors of the latest Stack Overflow report «Central & Eastern Europe Developer Landscape 2017». Polish universities educate over one million students. There are 69 higher education institutions in Warsaw, 27 in Wrocław, and 21 in Poznań and Kraków. Reputable universities are also in Katowice, Łódź and Gdańsk and Gdynia. And it results in the largest number of technology companies and start-ups created there.

RNA Composer supports the imagination of scientists

2018-02-06

We are the best in creating of automatic systems for predicting RNA structures and their three-dimensional presentation - said Dr Marta Szachniuk. She and a team of Prof. Ryszard Adamiak from the Institute of Bioorganic Chemistry PAS in Poznań have developed system of the RNA Composer. It is a free, publicly available, quick IT tool. It deals with both short and very long chains of RNA molecules with complex architecture.

During the 6 years of functioning of RNA Composer it has already performed 1 million tasks. This way many scientists got the first idea of how the molecule looks in three dimensions. The Polish results of RNA research are well-known worldwide. In this field, innovative experiments are conducted by a team of Prof. Janusz Bujnicki from the International Institute of Molecular and Cell Biology in Warsaw. Prof. Ryszard Kierzek from the Institute of Bioorganic Chemistry PAS in Poznań described the thermodynamic rules of RNA folding. (kp)

People cannot talk to a hippopotamus

2018-02-06

... because we can only hear some of the sounds they communicate. Hippopotamuses have a special anatomical structure and they can receive sounds in the water ... with a jaw.

Using the system of specialist microphones, acoustics specialists from the Academy of Mining and Metallurgy in Krakow (AGH) stated that animals communicate in low and very low frequencies. - It is highly probable that they are infrasounds - said Marcin Zastawnik from AGH - whose human ear is unable to capture. Scientific certainty will be obtained after acoustic processing of recordings obtained during the research. Audible sounds issued by hippopotamuses are similar to a croak interrupted by hiccups. (Kp)

Torun scientists are looking for evidence of the dark matter

2018-02-07

Dr Piotr Wcisło from Torun University with his team is looking for evidence for the existence of dark matter. For now, they pointed places where dark matter is not present.

For the purposes of experiments, researchers from Toruń organized a network of optical atomic clocks. Clock from the National Laboratory FAMO cooperates with similar devices in the United States, Europe and Japan. Measurements are so precise that the special camera would measure the speed of approaching America to Europe. - If we can hear the same «click» in all our clocks we will know that it is not a coincidence. So we will recognize the change of one of the most fundamental physical constants. The experiment will show if there are so-called topological defects revealing forms of dark matter. (Kp) More:

Do not dry the peatland

2018-02-07

Peat bogs, occupying about 2% of the lands on Earth, accumulate almost twice more coal than forests; they accumulate ¼ of coal in all ecosystems in the world. The square meter of peatland receives annually about 1 kg of carbon dioxide - recalls the communication of the Warsaw University of Life Sciences (SGGW).

Research conducted at this university has shown a comprehensive, beneficial effect of peatlands on the condition and balance of the natural environment. Peatlands are not worth drying them up. Profits from leaving them untouched are higher than profits from obtained arable land. - The governments of many countries have noticed that the use of peatlands does not require their degradation - emphasized Dr Mateusz Grygoruk from the Department of Hydrology and Water Resources of the Faculty Construction and Environmental Engineering SGGW – and they direct significant efforts to restore their original state. (Kp)

Institute of Electronic Materials Technology develops a white laser

2018-02-07

Laser sources of white light can revolutionize the screens of TVs and smartphones, car headlights and they can be even the successor to the standard of wi-fi communication.

Polish scientists work on new methods of producing sources of white light laser. One of the basic elements of the white light lasers is the ceramic lumiphore Ce: YAG- currently developed at the Institute of Electronic Materials Technology in Warsaw. Lumiphore is a chemical compound causing the effect of luminescence, that is to say, emitting light waves not under the influence of high temperature. White light can be used, among others in LEDs, in laser lights, in the car industry or in energy-saving street lamps. More: <https://innowacje.newseria.pl/news/bialy-laser-moze,p772965438>

Secure quantum dots

2018-02-07

Researchers from the Institute of Physical Chemistry of the Polish Academy of Sciences in Warsaw and the Faculty of Chemistry of the Warsaw University of Technology have developed an innovative method of producing quantum dots of zinc oxide, one of the most commonly used nanomaterials.

New ZnO nanoparticles are safe. They can be introduced into biological and medical laboratories, e. g. for imaging processes or applied in materials exposed to humans, like paints. Such solutions are carried out, among others in the NANOXO start-up company. The research was financed by the Foundation for Polish Science and the National Science Center. The results were published in the well-known scientific journal „Chemistry - A European Journal” with participation of Krakow scientists from the Jagiellonian University. (kp)

Selvita invests in innovative oncology projects

2018-02-08

Biotechnological company Selvita will conduct a public offer of their shares to raise capital for the development of innovative oncology projects. In the next four years, it will allocate PLN 290 million, of which PLN 140 million is to be obtained from investors.

Selvita wants to allocate their funds to the development of SEL120, which is to fight acute myelogenous leukemia and for four innovative platforms: targeted therapies, cancer cell metabolism with immuno-metabolism, immunological and immuno-oncological as well as a biological molecules tooling platform. Selvita successfully commercializes innovative projects. Its leukemia drug SEL24 is the first Polish drug approved for clinical trials in the US. More about the SEL120 drug development project: www.selvita.com/pl/projekty-innowacyjne/sel120

Polish nature reserve with a research station in Colombia

2018-02-08

The „Polish” reserve is to occupy an area of approximately 30 hectares and will be located on the eastern side of the Andes, approximately 30 km in a straight line from the Amazon Forest.

The initiators of the reserve are Dr Marta Kolanowska from the University of Gdańsk and Dr Radomir Jaskuła from the Faculty of Biology and Environmental Protection of the University of Lodz. In January 2017, the Institute for Biodiversity Research was established. It is a non-profit foundation to collect money for a plot of tropical forest and to set up a research station through voluntary contributions from people who are close to nature especially such exceptional places as rain forests. More:

Research on graphene at the University of Lodz

2018-02-13

The team of Prof. Zbigniew Kluska from the Faculty of Applied Physics and Computer Science at the University of Lodz investigates the properties of the electronic structure of the graphene in connections (hybrid systems) with the so-called transition metals like yttrium or zirconium. The experiments will allow to describe the laws and mechanisms governing the transport of electric charges at the nanometer scale. This will open the way to creating a new class of hybrid materials that will be used in new generation of computers.

Graphene is characterized by unusually high strength and flexibility. Its properties create conditions for electric charge carriers to move at very high speeds. Professor Zbigniew Kluska also deals with determining the methods of marking these carriers of electric charge, which will enable them to overcome distances comparable to superconductors. This makes graphene interesting for applications in spintronics, a new branch of advanced electronics. (Kp)

University drone examines air quality in Wrocław

2018-02-15

The Department of Climatology and Atmospheric Protection at the University of Wrocław is testing air quality with a modern drone. The device was purchased thanks to a subsidy from the Municipal Office in Wrocław.

The idea for the purchase of a drone by the University of Wrocław appeared already in 2015, when the LIFE-APIS / PL project implemented by the Department of Climatology and Atmospheric Protection was awarded with the Polish Innovation Prize. It was a great opportunity to establish scientific cooperation with Optimum Tymiński Company, which in 2017 created the first unmanned flying platform. In environmental monitoring, drones are very popular and have different applications. The University drone is used as a platform for measuring air quality and basic meteorological parameters. The range of measurements is several hundred meters. The drone is equipped with the so-called environmental warhead, measuring dust and ozone concentration; in addition, it measures the temperature and humidity of the air. More about the LIFE-APIS / PL project: <http://life-apis.meteo.uni.wroc.pl/>

Researchers from the Warsaw University of Technology help in analyzing data of bank clients

2018-02-16

Researchers from the Faculty of Mathematics and Information Sciences of the Warsaw University of Technology will build a model of credit risk assessment for a retail client. This is a part of a joint project with FinAi company, which received PLN 7.3 million from the National Center for Research and Development under the Intelligent Development program.

FinAi is a Polish startup founded in 2016, operating on the FinTech (financial innovation) market. The goal of the company's cooperation with Polish scientists is to combine scientific achievements and work on new customer databases so as to create real business solutions. - The idea is to collect data on potential customers from a much wider range than before. Using social media in the first place. Of course, everything is in accordance with the law. There will be a lot of data, additionally connected with time. Time graphs are our tool for the analysis - explains Prof. Jarosław Grytczuk from the Warsaw University of Technology.

Polish scientists working on the landing system on Phobos

2018-02-16

Researchers at the Krakow AGH University of Science and Technology are involved in the project of the European Space Agency, which aims to launch the lander on Phobos - one of the moons of Mars.

Researchers from the Faculty of Mining and Geoen지니어ing, together with the Space Research Center of the Polish Academy of Sciences, started the project «LOOP - Landing Once on Phobos». Research conducted at the AGH University of Science and Technology is a part of the European Space Agency (ESA) project. Designing construction works on the surface of Phobos is one of the tasks of the research team from the Faculty of Mining and Geoen지니어ing. The experimental laboratory works include reconstructing the conditions prevailing on Phobos and examining the reaction of various types of ground to the lander's foot. Simulations of the lander's contact with the Phobos surface will be carried out on a mobile platform in one of the halls at the Faculty of Mining and Geoen지니어ing. The team of the AGH University of Science and Technology together with the Space Research Center of the Polish Academy of Sciences has two years to carry out the project.

Researchers from Kraków develop emotion detection technology

2018-02-19

The team of Dr. Przemysław Witaszczyk from the Faculty of Physics, Astronomy and Applied Computer Science of the Jagiellonian University in Krakow undertook an attempt to create a professional software that examines the emotions of computer game players.

These are innovative research on the so-called emotional interface based on artificial intelligence. Researchers want to define the emotions of the of virtual games players as precisely as possible. - It is necessary to use not only the equipment, but above all, modern machine learning methods, in order to create so-called game emotion engine. Data on the player's emotional level are collected by means of a 12-channel medical EKG device, an electroencephalograph, a sensitive mouse, and gameplay markers from the game - explains Dr. Witaszczyk. Emotion detection technology can have many applications also out of computer games, for example in medicine, education, entertainment or social media. The team members are applying for 5 million PLN from the National Center for Research and Development and from the Foundation for Polish Science.

Polish innovation in the treatment of arrhythmias

2018-02-19

One electrode inserted into the patient's heart instead of two used so far. This is how the ablation procedure will change with the innovative MiniMax electrode developed in the Polish company Medinice by Prof. Sebastian Stec.

Due to the built-in 3D mapping system, the electrode is adapted to perform heart ablation procedures without using X-rays. Ablation, or the method of treatment of cardiac arrhythmias involving the insertion of an electrode through the artery or femoral vein to the patient's heart, was first carried out in Poland

in April 1992 by Prof. Franciszek Walczak. Since then, the technology of the tools used in the procedure has been constantly improved. New technology can improve the safety of the procedure and shorten its duration. The first patients will use this method at the end of the year as part of a clinical tests.

The National Science Center will spend over PLN 326 million on scientific research

2018-02-19

The National Science Center has settled four competitions addressed to scientists who start an independent career or create research teams, carry out projects in international cooperation and conduct pioneering research. More than PLN 326 million has been awarded to young researchers.

The award-winner scientist is Dr Ireneusz Sadowski from the Institute of Political Studies of the Polish Academy of Sciences. In his project «Three generations of the Polish transformation» he analyzes social changes in a cohort (group) perspective. He will receive nearly PLN 400,000 for his research. In turn, one of the research teams, led by Dr Monika Dering from the Institute of Dendrology of the Polish Academy of Sciences will attempt to reconstruct the evolutionary history of the Caucasus forests. For this research including Comparative phylogeography of six tree species, almost PLN 1.4 million has been allocated. Even more funds for research will be obtained by Dr Marcin Nowotny from the International Institute of Molecular and Cell Biology, who receives almost PLN 4.3 million for structural studies of the action mechanism of bacterial DNA repair.

PLN 200 million for regional science and research agenda

2018-02-20

National Center for Research and Development launches a competition „Regional science and research agendas”. PLN 200 million is allocated for implementing the innovative

projects and for conducting research and development works. The call for applications will start on March 15, 2018 and will last until May 15, 2018.

The competition is addressed to organizations consisting of at least one scientific organization and at least one enterprise, under condition that a scientific participant is the leader and the formal applicant of the project. The project must include experimental development work. Co-financed projects must be implemented out of the Mazowieckie Region. The thematic scope of regional research and development agendas were based on research issues that fit into regional specializations, submitted by regional Marshal Offices in agreement with representatives of regional scientific centers. They include: a healthy society; bio-economy agro-food industry; sustainable energy, transport and construction; innovative technologies for the environment; innovative technologies and industrial processes. More about the competition: <http://www.ncbr.gov.pl/fundusze-europejskie/poir/konkursy/konkurs-141220...>

Scientific conference on the development of Eastern Poland

2018-02-20

The sector of small and medium enterprises and the competitiveness of the peripheral region is the title of the conference that will be held on May 24-26, 2018 in Kazimierz Dolny. The organizer of the tenth international scientific conference is the University of Economics and Innovation in Lublin.

For years, the conferences focused on the development of Eastern Poland and they formed a research initiative group called «Lublin Project». This year three plenary sessions are planned. They analyze the impact of the small and medium-sized enterprises sector on regional and local development as well as support instruments for the small and medium enterprises sector provided by the local government. The third topic are start-ups and their participation in the process of stimulating economic growth. The President of Lublin is the honorary patron of the conference. Applications for participation in the conference should be sent by May 5, 2018, to the e-mail address: sylwia.skrzypek-ahmed@wsei.lublin.pl

Polish scientists investigate the number of porpoises in the Baltic Sea

2018-02-21

University of Gdańsk with the Marine Station of the Institute of Oceanography as the Polish coordinator of the SAMBAH project, was nominated by the decision of the European Commission's Directorate-General of Environment, for the main prize in the competition „Best of the best” for Life+ projects in 2016 – 2017 years.

The results of the competition will be announced on May 23, 2018, during the Green Week of the European Union in Brussels. In the SAMBAH project hydroacoustic methods were used to study small ce-

taceans for the first time in the world on this scale. Numbers and seasonal distribution of porpoises in the Baltic Sea were also established. All the Baltic States participated in the research, with the exception of the Russian Federation. The collected data are used to develop and implement effective methods of protecting Baltic porpoise populations. The Polish partners in the project were the Institute of Meteorology and Water Management - Maritime Branch in Gdynia and the Chief Inspectorate for Environmental Protection. National co-financing was provided by the National Fund for Environmental Protection and Water Management. (Kp)

Joint project of the University of Gdańsk and the World Fund for Nature

2018-02-21

Nearly 30 gray seals, a dozen sea ducks and over 200 razorbills, a species of medium sea birds were observed in the Mewia Łacha reserve belonging to the Marine Station of the Institute of Oceanography at the University of Gdańsk during the visit of employees of the World Fund for Nature - WWF Poland and WWF Kenia (WWF - World Wildlife Fund). The only Polish refuge for seals is located at the mouth of the Vistula.

The place is monitored as part of a joint project of the University of Gdańsk and the World Fund for Nature - «Protection of mammals and seabirds and their habitats.» It was started two years ago and aims to protect marine mammals – seals, porpoises and coastal breeding birds. The Marine Station scientists presented research and educational activities for the protection of the Baltic Sea, including long-term joint projects with the WWF Polska foundation. The visitors had the opportunity to familiarize with the educational and display infrastructure, they visited the so-called House of Porpoise and observed medical training of gray seals, when the animals learn to accept human presence (kp)

Largest Polish insurance company creates innovative solutions with the AGH University of Science and Technology

2018-02-21

Powszechny Zakład Ubezpieczeń and Akademia Górniczo-Hutnicza in Krakow signed a letter of intent regarding establishing long-term cooperation in the field of research and development projects. The largest financial group in Central and Eastern Europe and the Krakow University will jointly create innovative solutions connecting science and business.

Both sides want to join forces, including in the field of technological innovation, research, didactics, as well as the use of technology and laboratory base. The cooperation of the insurance company and university assumes scientific and research studies, implementation of joint research and development of the projects. The first joint project of Powszechny Zakład Ubezpieczeń and Akademia Górniczo-Hutnicza is the implementation of the TANGO 2 project entitled «Active-safety system for motor vehicles based on an individual driver model». The total cost of the project is estimated at PLN 1.2 million, of which PLN 1 million is financed from the resources of the National Center for Research and Development. The Universal Insurance Company will cover 15% of the project costs.

Scholar from Warsaw will study the most famous syndrome in psychology

2018-02-22

Professor Magdalena Żemojtel-Piotrowska from the Department of Christian Philosophy at the Cardinal Stefan Wyszyński University in Warsaw won the National Science Center competition and received over PLN 1.7 million to create a team and research one of the most famous syndromes in psychology - narcissism.

- We are trying to explain the social functioning of different types of narcissism - said Professor Żemojtel-Piotrowska in a brief description of the project, available on the website of the Cardinal Stefan Wyszyński University - the state of knowledge about this phenomenon needs a solid, theoretical and well ordered research. Research will include observational and objectivized data, such as the analysis of the functioning of narcissistic people in social networks or in romantic relationships. The whole research is complemented by intercultural research; it verifies the assumption of the existence of four forms of narcissism in various contexts and cultural conditions. (kp) More: <http://www.uksw.edu.pl/pl/uniw-ersytet/uczelnia-dzis/aktualnosci/1265-wys...>

Ecohydrologists from Lodz awarded for innovative solution

2018-02-23

Elimination of toxic cyanobacterial blooms, improvement of water quality in the part of the Bzura river basin and reservoirs in Arturówek near Łódź are practical effects of the application of innovative solutions developed by ecohydrologists from the Department of Applied Ecology of the Faculty of Biology and Environmental Protection of the University of Lodz.

For this project, they received the prestigious «The Best LIFE projects» prize for the best projects completed in 2016-2017. Now they are applying for an even more significant distinction - «Best of the best award». The solution elaborated by the Lodz

researchers combines the system of hydrotechnical installations and ecological biotechnologies. It allows, for example, to reduce by 80-90 percent the level of nitrogen and phosphorus compounds. The project was implemented by Dr Tomasz Jurczak; coordinated by Prof. Maciej Zalewski, both from the Department of Applied Ecology, Faculty of Biology and Environmental Protection, University of Lodz. (Kp)

National Center for Research and Development will support the Polish railway in the implementation of innovative projects

2018-02-23

Polskie Koleje Państwowe Intercity (PKP Intercity) signed a letter of intent with the National Center for Research and Development. Both institutions will cooperate in the implementation of innovative projects for sake of passengers of Polish railways. A letter of intent signed under the joint implementation of the „Luxtorpeda 2.0” program assumes implementations of the innovative rail initiatives.

Dr. Sebastian Skuza, deputy minister of science and higher education emphasized that « just undertaking the effort of innovative partnership in this field, is an innovation itself». In turn, Prof. Marek Chorowski, director of the National Center for Research and Development, said that together with the Polish State Railways, they will analyze current state of technology. Also the specific technological challenges and the market for innovation are being defined. According to the director of the National Center for Research and Development, « creating a market and setting specific technological and economic requirements will guarantee that a valuable final product will be created». In February 2016, Prime Minister Mateusz Morawiecki announced that the railway industry will be one of the Polish «smart specializations». - The government wants to withdraw from the concept of developing a country based on supporting the metropolis for sustainable development. Development cannot be only in

big cities. We need to create more perspectives for medium towns and small towns- highlighted- Prime Minister Morawiecki.

Polish scientists develop research in Sudan

2018-02-23

Soon, the Polish Archaeological Center of the Mediterranean Archeology Center of the University of Warsaw will start work in Khartoum, the capital of Sudan.

- Currently, 11 scientific missions from Polish universities are working in Sudan - said Dr. Artur Obłuski, director of the Center of Mediterranean Archeology in Cairo (Egypt) - four research projects are underway, including ancient trade routes and human populations. The Polish Archaeological Center will be opened on February 27, 2018 with the participation of Sebastian Skuza, deputy minister of Science and Scholarship and Prof. Marcin Pałys, Rector of the University of Warsaw. It will be headed by Prof. Mahmoud el-Tayeb, who has been associated with the University of Warsaw throughout his academic career. Polish archaeologists are still in the forefront of Nubia (ancient Sudan) research. At the end of the 1950s, the expedition of prof. Kazimierz Michałowski discovered and saved the famous frescoes from the Faras cathedral (kp) More: <http://www.pcma.uw.edu.pl/wydarzenia/arttykul/powstaje-polski-osrodek-archeologiczny-w-chartumie/>

Scientific consortium Pol-Stor-En was established

2018-02-26

The Pol-Stor-En research consortium was founded under the patronage of the Ministry of Energy. Its members included the AGH University of Science and Technology, the Institute of Non-Ferrous Metals, the Gdańsk University of Technology, the Poznań University of Technology, Warsaw University of Technology, the Jagiellonian University and the University of Warsaw.

The main goal of the consortium is to increase the scientific potential for the development of energy storage and cooperation with the industry. It highlights the combining the strength of scientific and research centers in order to develop a comprehensive product that can be used by industry. Pol-Stor-En is part of strategic programs developed in the Ministry of Energy, such as the Electromobility Development Plan and the Directions for the Development of Energy Innovation. It is also a complementary activity with EU projects.

International Center for the Theory of Quantum Technologies launches in Gdańsk

2018-02-26

This year, the International Center for the Theory of Quantum Technologies will be opened in Gdańsk, where world-class research will be conducted with the participation of both Polish and foreign scientists.

The creation of this facility was possible thanks to the PLN 35 million funding received by the University of Gdańsk for the creation of a center. The funds were obtained as part of the program International Research Agendas, organized by the Foundation for Science. The director of the new International Center for the Theory of Quantum Technology is Prof. Marek Żukowski, current director of the Institute of Theoretical Physics and Astrophysics of the University of Gdańsk. He is the author or co-author of over 150 scientific papers. The most important achievements

of Prof. Żukowski are research on quantum communication and on the development of the safest ciphers.

Wrocław University of Environmental and Life Sciences investigates colorful potatoes

2018-02-26

Department of Potato Processing Technology of the Department of Agricultural Technology and Storage of the University of Life Sciences in Wrocław has conducted research on colorful potato varieties as a potential raw material for nutrition and processing.

Wrocław scientists study the chemical composition, in particular the content of polyphenolic compounds with particular emphasis on anthocyanins. Compared to varieties with white or yellow flesh, potatoes of colorful varieties contain twice as many polyphenolic compounds, including anthocyanins. The latter, contained in a potato skin with a colored flesh can be used as food additives, e.g. for oils due to their antioxidant properties. More about the Department of Agricultural Technology and Storage at the University of Life Sciences in Wrocław https://www.binoz.upwr.edu.pl/wnoznew/?page_id=33

New research center at the Wrocław University of Technology

2018-02-26

In October 2018, the new research center „GEO-3EM Energy, Ecology, Education” of the Wrocław University of Technology will be opened. All 12 laboratories are located on 4,500 square meters. The total value of the investment is approximately PLN 100 million.

The aim of the project prepared by the Wrocław University is to create a unique center of research and technology transfer in the aspect of sustainable use of raw materials and energy from various sources. Research conducted in this center e.g. spatial mobility, natural and secondary raw materials, machinery and equipment as well as materials processing, are

to be used by the Lower Silesian industry. The authors of the project assume that ideas developed here will be commercialized.

New laboratory of the Silesian University of Technology established in cooperation with the industry

2018-02-26

Research on the impact of post-accidental spine injuries and creating robots helping medical staff to care for the sick will be possible thanks to the Leonardo Lab, established at the Faculty of Biomedical Engineering at the Silesian University of Technology.

The solutions created in the Leonardo Lab are interdisciplinary and practical applications, providing better care for health and the support for medical personnel in the fight against diseases. Leonardo Lab is an example of cooperation between Polish universities and industry. It was established due to the cooperation of the Faculty of Biomedical Engineering at the Gliwice university with the APA Group, which is one of the leaders on the intelligent industrial automation market.

Polish scientists take part in the hunt for dark matter

2018-02-27

Scientists from the Institute of Nuclear Physics of the Polish Academy of Sciences and the Jagiellonian University researched the properties of axions, hypothetical particles of dark matter.

- If the axions exist - summarized Dr. Adam Kozela from the Institute of Nuclear Physics of the Polish Academy of Sciences, - there are fewer and fewer places in theoretical models where they could hide. The pioneer of the discovery of dark matter was the Polish astronomer Marian Kowalski. In 1859 he noticed that movements of stars close to us cannot be explained only by the movement of the Sun. The universe has almost 5.5 times more dark than ordinary matter. Its nature remains unknown. (Kp) <https://informacje.pan.pl/index.php/informacje/14-nauki-scisle-i-nauki-o-ziemi/2053-poszukiwania-ciemnej-materii-coraz-mniej-kryjowek-dla-aksjonow>

Professor Krzysztof Nowicki believes Minoan civilization to be different than generally thought

2018-02-27

The collapse of the Minoan civilization was not the result of a massive volcanic eruption on the island of Santorini - believes Prof. Krzysztof Nowicki from the Institute of Archaeology and Ethnology of the Polish Academy of Sciences - it followed gradually and it was initiated by terrible Greek invasion of the Crete.

The scholar, after 30 years of research, revised views on key moments in the history of Minoan civilization. He emphasizes that there was no cult of rulers. The distance between citizens and rulers was much smaller than in the countries of the ancient Near East. - There was no obsession with honoring dead rulers, such as in Egypt - said Prof. Nowicki - in Crete they were rather guardians and priests, not warriors. Minoan culture was one of the most powerful and original ancient civilizations; it developed from the second half 4 mil-

lennium BC until 1200 BC. It is distinguished by art and architecture, as well as advanced techniques of metalworking, stone and ceramics. (Kp) More: <https://informacje.pan.pl/index.php/informacje/12-nauki-humanistyczne-i-spoleczne/2037-kluczowe-momenty-dziejow-cywilizacji-minojskiej>

Polish scientists develop solutions for Phobos and asteroids probe landers

2018-02-28

The researchers want to find answers to questions what forces affect the chassis of the lander while touching the ground of the Phobos and how the dynamics of this chassis will affect the active steering? The implementation of the projects commissioned by the Space Research Center of the Polish Academy of Sciences by the European Space Agency should provide the answers.

The proposed solutions will also be used in vehicles settling on light, almost devoid of gravity asteroids, celestial objects on which there are deposits of valuable raw materials. In the first project Polish Industry Incentive Scheme Landing Once On Phobos - Space Research Center of the Polish Academy of Sciences cooperates with the Faculty of Mining and Geoen지니어ing of the AGH University of Science and Technology in Krakow. In the second project concerning the impact of active steering on the chassis dynamics, the partners are GMV Romania and AVS United Kingdom. (Kp) More: <https://informacje.pan.pl/index.php/informacje/14-nauki-scisle-i-nauki-o-ziemi/2057-ladowanie-na-fobosie-z-udzialem-cbk-pan>

National Science Center summarized the results of MINIATURA

2018-02-28

The MINIATURA competition gathered 828 scientists, who received support for their basic research, and the total amount of funding reached almost PLN 30 million.

The MINIATURA competition is addressed to persons with a doctoral degree obtained up to 12 years

prior to the application, who did not manage the implementation of the research project at the time of submitting the application, nor were awarded with doctoral scholarships or internships financed from the funds of the National Science Center. The MINIATURA competition financed only implementing basic research, such as pilot or initial research, conference trips, queries, internships or scientific consultations. The greatest number of grants were received by scientists from the Jagiellonian University, the University of Lodz and the University of Warmia and Mazury. The opening of the second the MINIATURA competition is planned for April 2018.

National Center for Research and Development invites for projects under the Eureka Initiative

2018-03-01

The National Center for Research and Development has started the call for proposals for projects implemented as part of the Eureka Initiative. The goal of the Initiative is to support international cooperation in research and development.

Applications can be submitted by April 23, 2018, and there are no thematic restrictions. Projects should meet the following basic criteria: they should be implemented in international cooperation (must be attended by at least two independent entities from two different Eureka member states), have market orientation and anticipate the development of a new product, process or service. Projects under the Eureka Initiative must have a civilian purpose. The Eureka initiative is a decentralized network of 41 countries, including EU countries in order to support international cooperation in research and development. Poland has been a member of the Eureka Initiative since June 1995. COST Association holds conference on quantum in the Copernicus Science Center

2018-03-07

On 8 March 2018, the COST Association will present COST CONNECT project at the Copernicus Science Center. The event is titled „Quantum: Where will the next jump go?“ Prof. Aleksander Bobko, secretary of state in the Ministry of Science and Higher Education and Dr Ronald de Bruin, director of the COST Association confirmed their participation in this conference.

The cycle of events under the name COST CONNECT was initiated by COST (European Cooperation in Science and Technology) in June 2017. The aim of the project is to combine COST representatives and other scientists interested in the given scientific issue, who could contribute to the research initiated by COST. The European Program for Scientific and Technical Cooperation is jointly organized by 36 European countries and Israel as an institutional structure. Its most important task is to organize multilateral scientific and technical cooperation of member countries. More: http://www.cost.eu/events/cost_connect_quantum

Ministry of Science selected beneficiaries of the „Dialog“ program

2018-03-07

The Ministry of Science and Higher Education published the list of projects approved for funding within the „Dialog“ program.

The «Dialog» program includes co-financing of activities in three areas: «Scientific excellence», «Science for innovation» and «Humanities for development». Its purpose is to support activities aimed at building cooperation and strong relationships between entities operating in science and the socio-economic areas. The beneficiaries are the Polish Press Agency Foundation, which received nearly PLN 2 million for running and developing the website «Science in Poland», Copernicus Center Foundation, whose project «Humanities in dialogue» will

be supported with almost PLN 1.5 million and the Pedagogical Faculty of the Ignatianum Academy in Krakow, which will receive over PLN 1 million for the «Inclusive Society in the Catholic Social Studies» project. More: http://www.nauka.gov.pl/g2/oryginal/2018_03/17f9882f2d057e7047ff1ffcf16598bf.pdf

Competition for Polish-Luxembourgian service innovations

2018-03-07

The National Center for Research and Development has opened an on-line application for the CORE 2018 competition announced by the Luxembourg agency Fonds National de la Recherche.

Applications for bilateral, Polish-Luxembourgian projects in the category «Innovation in Services» can be submitted to the Fonds National de la Recherche. The National Center for Research and Development allocates PLN 2 million to co-finance Polish entities for the projects that will be accepted for funding under the competition procedures. Applications can be submitted by 18 April 2018 only in electronic version, in English. More: <https://www.fnr.lu/funding-instruments/core/>

National Center for Research and Development announces a competition for projects within the TECHMATSTRATEG program

2018-03-08

The director of the National Center for Research and Development has announced the second competition for projects under the strategic program of scientific research and development work within „modern material technologies“ - TECHMATSTRATEG.

The main objective of the Program is to develop knowledge that will transfer innovative solutions to the socio-economic environment and raise international position of Poland in scientific research

and development works. The competition covers five strategic problem areas: technologies of construction materials, technologies of photonic and nanoelectronic materials, technologies of functional materials and materials with designed properties, non-waste material technologies, technologies of biodegradable engineering materials, materials technologies for energy storage and transmission. The budget allocated for selected projects in the competition is PLN 200 million, and applications can be submitted from April 9 to June 8, 2018. More: <http://www.ncbr.gov.pl/programy-strategiczne/nowoczesne-technologie-materialowe---techmatstrateg/techmatstrateg-ii-konkurs/aktualnosci/art,6013,techmatstrateg-ii-konkurs.html>

Researchers from Poznań work on innovative technology to combat cancer

2018-03-08

Poznań researchers developed a method for obtaining from hemp drugs supporting the treatment of patients with cancer.

The project was conducted for four years by the University of Life Sciences in Poznań, in cooperation with the Institute of Natural Fibers and Medicinal Plants of the University of Medicine in Poznań and the Institute of Human Genetics of the Polish Academy of Sciences in Poznań. They developed an innovative technology for obtaining from hemp agents that support the treatment of cancer patients with a low content of psychoactive substances. Results show that the chemical compounds contained in this plant (cannabinoids) can inhibit or even destroy cancer cells. However, before the drug hits the market, many years of analysis, clinical and observational studies are necessary.

National Center for Research and Development supports research and development in the shipbuilding industry

2018-03-09

The National Center for Research and Development announced the first competition as part of the pilot program of the INNOship sector program. The program is designed to support research and development in the shipbuilding industry.

We have great shipbuilding traditions and well-educated engineers in Poland. If we add to this the increase in expenditure on research and development, we will achieve our goal: shipbuilding can again become a showcase of the Polish economy - said Deputy Prime Minister Jarosław Gowin, Minister of Science and Higher Education. The reconstruction of the shipbuilding industry is one of the priorities of the government's activities. The first stage of the INNOship program will last two years. Two competitions have been planned with a total budget of around PLN 240 million. The call for applications in the first competition will start on April 30 and will last until June 29, 2018.

Competition for the Siemens Award

2018-03-12

The entries for the XXIII Contest for the Siemens Award for 2017 will be accepted until March 31, 2018. The competition is organized by Warsaw University of Technology and Siemens AG. It promotes outstanding achievements in technology and scientific research conducted by employees of academic and non-academic institutions in Poland.

The Siemens Award may be given to authors of works concerning areas of interests to Siemens AG such as: electrical engineering and energy, generation, transmission and use of electricity, electronics and information technology, automation and robotics, rail transport as well as traffic management and control. Works can be submitted at: Rector's office of the Warsaw University of Technology Pl. Politechniki 1, room 106, 00-661 Warsaw with the note «Competition for the Siemens Award»

Foundation for Polish Science to allocate over PLN 11 million to young researchers

2018-03-12

The Foundation for Polish Science has agreed further competitions in the HOMING and RETURN programs. Funding in the total amount of PLN 11.2 million will be shared by fifteen young scientists who implement innovative research and development projects in Poland.

The HOMING program is addressed to researchers from abroad who want to implement a research project in Poland. Within this program 12 young doctors will be enabled to develop their careers in Poland. They will receive a total of PLN 8.8 million for the implementation of post-doctoral internship projects. The RETURNS program will allow three researchers to return to academic work after a break related to maternity. The winners will receive PLN 2.4 million for conducting research. Funds for financing grants in both programs come from the Intelligent Development Operational Program. List of winners in the HOMING competition: <https://www.fnp.org.pl/grantobiorcy-homing-konkurs-42017/> List of winners in the RETURNS competition: <https://www.fnp.org.pl/grantobiorcy-powroty-konkurs-42017/>

Researchers from the Adam Mickiewicz University determined the composition of the water shrew venom

2018-03-13

Researchers from the Department of Systematic Zoology of the Institute of Environmental Biology, Faculty of Biology, at the Poznan University, professor Leszek Rychlik and Krzysztof Kowalewski, described the composition and role of water shrew venom as the first in the world.

The results of their research have been published in the Journal of Mammalogy. The water shrew is one of the few species of shrew mammals that are poisonous. To determine the usefulness of the venom of this species, a series of experiments was carried

out, to observe water shrews hunting victims of various sizes. As it turned out, in contrast to other representatives of this species, water shrew is able to defeat their victims more efficiently. More: <https://academic.oup.com/jmammal/advance-article-abstract/doi/10.1093/jmammal/gyy013/4911419>

Comprehensive development program of the Technical-Humanistic Academy in Bielsko-Biała

2018-03-13

In April 2018, the project „Academy of the Future - Comprehensive Development Program of the Academy of Technology and Humanities in Bielsko-Biała” will begin.

The project was qualified for co-financing by the National Center for Research and Development under the POWER program (Operational Program Knowledge Education Development). Its main goal is to increase the efficiency of education at the University of Technology and Humanities in Bielsko-Biała and to improve the quality of university management. This objective is to be achieved by expanding the educational offer allowing to acquire competences and qualifications expected by employers, increasing educational competences, integrating internal and external systems related to university management and improving the competences and qualifications of the management and administrative staff. In addition, the academy in Bielsko-Biała intends to introduce an integrated university management system.

„Polish universities - Horizon 2020 strategy“

2018-03-13

The National Contact Point for Research Programs of the European Union in cooperation with the Confederation of Rectors of Academic Schools in Poland invites participants to Olsztyn for an informative meeting „Polish universities - the strategy for Horizon 2020. The European Union Framework Program for research and innovation as an instrument of internationalization of scientific organizations“.

It will be devoted to increasing the participation of Polish universities and industry in the Horizon 2020 program, in particular, in grants of the European Council for Scientific Research, and in competitions for Spreading excellence and widening participation (Teaming, Twinning, ERA-Chairs). The event will take place on March 21, 2018 (Wednesday) at 11.00 - 15.00 in Olsztyn, building of the Old Boiler Room, ul. R. Prawocheński 9. Registration for the event: <http://www.uwm.edu.pl/rpk/szkolenia/rejestracja?training=520>

Polish female scientist among the emerging talents of world science

2018-03-13

Dr Agnieszka Gajewicz from the University of Gdańsk, holder of the scholarship L'Oréal Poland Program „For Women and Science“, was awarded the International Rising Talents.

The Polish woman was included in the group of 15 women from different countries who, thanks to their research, have a chance to change the world. Dr Gajewicz is the third Polish woman in the history of the competition, who was awarded this distinction. She was appreciated for research on chemical risk assessment of various types of substances. A researcher from the University of Gdańsk recently deals with the development of chemoinformatic methods in science. Chemoinformatics is a relatively new field of science at the intersection of computer science, mathematics, chemistry and theoretical physics and

chemometrics. International Rising Talents is a competition for emerging world science talents organized by the L'Oréal Foundation and UNESCO. The official award ceremony will take place during the final gala on March 21 in Paris. More: <https://en.unesco.org/women-in-science-rising-irt-2018>

Innovative technologies at the Lodz University of Technology

2018-03-14

Professor Anna Kogut will present opportunities for cooperation between universities, entrepreneurs and the National Center for Research and Development at the Lodz University of Technology.

Professor Kogut, the President of the Council of the National Center for Research and Development, will open a conference on innovative technologies. The aim is to match the world of science and business for providing successful research, development and commercialization of innovative solutions and technologies. The organizers of the event are Center of Technological Transfer Ltd and the Center for Cooperation with the Economy, Innovation and Technology Transfer of the Lodz University of Technology. The meeting will take place on Tuesday, 20 March 2018, at the Bay of Sport of the Lodz University of Technology at Politechniki 10.

R&D National Center to allocate over 5 billion zlotys for research and development

2018-03-14

The National Center for Research and Development will allocate over PLN 5 billion for research and development projects this year - said Piotr Dardziński, deputy minister of science and higher education.

As part of the "Fast Track", - the Center's flagship program, five competitions will be provided. Their budget amounts to almost PLN 3 billion. The program is horizontal, there are no industry restrictions, and various projects are allowed to apply for co-financing. - «Fast track» supports all those entrepre-

neurs who have the courage to undertake innovative projects. Those that will change the reality - said Professor Aleksander Nawrat, deputy director of the National Center for Research and Development. Deputy Minister Dardziński announced the return of competitions within the «Social Innovation» program. The previous program brought an application allowing blind or visually impaired people to listen to alternative soundtracks at the cinema, such as audio description or the lecture version.

University of Lodz launches Study of medieval literature of Orthodox Slavs

2018-03-14

Linguists, literary scholars and historians from several departments of the University of Lodz, in cooperation with foreign scientists, will research „Polemical literature of the Orthodox Slavs in the Middle Ages“. The research will be carried out thanks to a grant from the „Harmonia“ program of the National Science Center.

The aim of the project is to present this important part of the European cultural and historical heritage in terms of the complexity of medieval literature of the Orthodox Slavs. This involves gathering, describing, analyzing and releasing medieval anti-heretic, anti-Jewish, anti-Latin and anti-Tatar texts. These sources are important to comprehend the complex history of Eastern Christianity, and at the same time - extremely diverse in terms of genre. There are polemical treaties, liturgical texts, polemical stories and speeches, as well as anathemas or tips on how to punish apostates from Orthodox Church.

Łomża researchers investigate the properties of the fast-growing Oxytree tree

2018-03-14

In the area of the College of Agribusiness in Łomża an Oxytree experimental field for research purposes was founded by scientists.

The main goal of the experiments was to determine the biometric features of a fast growing tree. Oxytree is a deciduous tree with unique properties. It is a resistant and undemanding plant. It is non-invasive and safe for the local ecosystem. The high quality wood obtained from Oxytree is a sought-after industrial raw material and material with high calorific value. In addition, after being cut, the tree grows back again. Dr Eng Janusz Lisowski and Henryk Porwisiak, scientists from the Łomża College have already conducted research on growth, overwintering, presence of macro and microelements as well as Oxytree's combustion heat. More about the results of research in the Scientific Notebooks of the College of Agribusiness: <http://oxytree.pl/wp-content/uploads/2018/03/Zeszyt-Naukowy-nr-67.pdf>

Ministry starts Virtual Research

2018-03-15

In the fourth quarter of 2018, recruitment for the teams of the Virtual Research Institute will begin - said Piotr Dardziński, Deputy Minister of Science and Higher Education at the Third Health Challenges Congress (HCC) in Katowice.

The project of Virtual Research Institutes is the implementation of the concept presented in 2017 by Prime Minister Mateusz Morawiecki and by Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin. According to their announcements, the new institution is to invest half a billion zlotys in biotechnology and biomedicine research in Poland.

Polish scientific expeditions to Peru

2018-03-15

Since 2006, Polish scientists have been implementing a project called „Polish Science Expeditions to Peru.” The initiator and the head of those expeditions is Prof. Eng. Andrzej Paulo from the AGH University of Science and Technology in Krakow.

Polish scientists from the Faculty of Geosciences of the University of Silesia participated in the most recent trip to Peru. The main goal of the expedition in 2017 was research on the manifestations of modern tectonic activity in the subduction zone on the South American oncoming (top) lithospheric plate, under which the Nazca plate is moving at a rate of 63 mm per year. Scientific research conducted by employees of the Silesian university are related to the project called «Creating a scientific foundation for the future Colca Canyon National Park and the Volcano Valley in southern Peru». This project was included in the group of 40 scientific programs selected in the competition for the most outstanding achievements of Polish science as part of a project «Promotion of the achievements of Polish science» co-financed by the European Union.

Medical University of Silesia develops an innovative technology of craniofacial reconstruction

2018-03-15

Department of Laryngology, Faculty of Medicine of the Silesian Medical University in Katowice begins the implementation of the project „Introduction to the surgical practice of new technologies for the reconstruction and regeneration of damaged tissues in the facial area”.

The undertaking will be co-financed by the National Center for Research and Development with almost PLN 7 million. The project will be implemented by a consortium including Medical University of Silesia in Katowice, Institute of Non-Ferrous Metals in Gliwice, the company «Solveere» Ltd and Kardio-Med-Silesia

in Zabrze. The main task of the consortium will be to develop technology for receiving personalized tissue scaffolds that will be used in facial reconstruction.

PLN 1.3 billion for Integrated University Programs

2018-03-16

The National Center for Research and Development has announced the results of the Integrated University Programs competition. Due to the high quality of the projects, the competition budget has been increased - from 500 to almost 700 million PLN.

The beneficiaries of the competition of the National Center for Research and Development are public and non-public Polish high schools. The assumption of the project is to adapt educational programs to current socio-economic needs. «It is very important that the Polish economy today focuses on modern technologies using the latest scientific discoveries,» said Deputy Prime Minister and Minister of Science and Higher Education, Jarosław Gowin. In total, the Ministry of Science awarded 138 projects in Integrated University Programs with PLN 1.3 billion of support.

Polish scientists to focus on a system of intelligent road signs

2018-03-19

Researchers from the Academy of Mining and Metallurgy in Kraków and Gdańsk University of Technology are working on a system of intelligent road signs, adapting smartly to traffic and weather conditions.

The system is designed to help drivers better adapt their speed to the conditions on the road. The main goal of the project is to improve the safety and increase the collision avoidance. AGH UST Communication announced that the system called INZNAK will be the first such solution in Poland and one of the few in the world. The project was appreciated and financed by the National Center for Research and Development and the General Directorate of National Roads and Motorways.

Deputy Minister of Science Piotr Muller announces the consolidation of scientific research

2018-03-19

In October this year, the new law on science and higher education will enter into force. I have no doubt about it - said Piotr Muller, Deputy Minister of Science and Higher Education, on Polish Radio 24.

Referring to the fears that the new law prefers large universities in terms of allocating the major parts of funding transfers to them, Minister Muller said that the government has two options for sharing money. «To treat all equally, or we will try to create a system promoting more successful organizations. We will choose the latter solution. «- he explained. He also announced the consolidation of scientific research. «We have limited expenditures on research. We should decide on ambitious and useful research for the Polish society and economy, «- said Muller.

Successful year for the University of Gdańsk

2018-03-20

The last year was very successful time for the University of Gdańsk. Our scholars achieved many prizes. Prof. Cezary Obracht-Prondzyński won the Hevelius Prize for his humanities research. Dr Agnieszka Gajewicz, in turn, received a very prestigious international award International Rising Talents and Piotr Zieliński awarded the Prize of Jan Uphagen - said the rector of the University of Gdańsk, Professor Jerzy Gwizdała in conversation with the university radio station „Mors”.

The Rector highlighted the cooperation with other universities, and a merger with the Medical University of Gdańsk in the fields of science, research, didactics, and the implementation of research results into the economy. «The best demonstration of the fact that such cooperation is very effective is the highest possible assessment that the Intercollegiate

Faculty of Biotechnology and its International Research Agenda received in the field of research on anticancer vaccines,» he added.

Scientists from Torun studied Peter Rubens' paintings in London

2018-03-20

Professor Piotr Targowski from the Institute of Physics at the Nicolaus Copernicus University in Toruń and Dr. Magdalena Iwanicka from the Institute of Monuments and Conservation carried out research on the monumental paintings of Peter Paul Rubens on the vault of the Whitehall Banqueting House in London - informs the University of Toruń.

Toruń scientists stayed in London from 12 to 16 March 2018 at the invitation of the Historic Royal Palace. Using OCT optical tomography, they analyzed the structure and the condition of repeatedly restored pictures. It is part of a multidisciplinary campaign conducted within the MOLAB offer (mobile laboratory) of the international research project IPERION CH (Integrated Platform for the European Research Infrastructure ON Cultural Heritage) implemented in the Horizon 2020 program.

New way of determining landslide activity

2018-03-21

Researchers from the University of Silesia have developed a new way of determining landslide activity by examining annual tree increments. The discovery has an impact on land development plans - houses and roads should not be built in areas of active landslides.

The trunks of trees growing on landslides are often inclined or bent due to landslides, which results in the creation of broader annual increments on one side of the trunk. Researchers from the University of Silesia have developed a method for analyzing such increments. The invention allows to study soil activity for construction planning purposes and to create accurate threat maps for local governments,

indicating safe areas and those that are exposed to ground movements. This will allow to manage the space in a more rational way and limit damage resulting from landslides in the future.

Silesian University of Technology receives nearly PLN 29 million for modernizing education

2018-03-21

Nearly PLN 29 million was obtained by the Silesian University of Technology for the implementation of an educational project within the first part of the Integrated Programs of the University program, organized by the National Center for Research and Development. This is the second largest funding among all Polish universities.

Under the first part, universities will receive funds intended primarily for new education programs, PhD studies, training sessions for teaching staff and improving students' competences through high-quality internship programs and additional courses, including courses in foreign languages. The goal of the Integrated University Programs program is to develop higher education to meet current social and economic needs of Poland. This year - under the first program part - NCBiR subsidies amount to nearly PLN 700 million. About one hundred universities in Poland received money for educational projects.

Wrocław scientists won prize for in vitro plants

2018-03-22

Scientists of the Department of Genetics, Plant Breeding and Seed Production at the University of Life Sciences in Wrocław, were awarded in the Genius Universitatis competition for plants propagated in vitro and sealed in small jars. The jury awarded it in category of best promotion gadget.

They appreciated the innovation of the gadget, aesthetics, its thematic connection with the university profile, sharing knowledge of botany, biotechnology and genetics and promoting the university. Plants - sundews, orchids and violets propagated in vitro, enclosed in small, decorative jars, on white and black nutrients ensuring their growth for several months - are created under the supervision of prof. Renata Galek in the laboratories of the Department of Genetics, Plant Breeding and Seed Science at the Faculty of Natural Sciences and Technology. More: http://www.glos.upwr.edu.pl/aktualnosci/47467/gadzet_promocyjny_upwr_nagrodzony.html

Fraunhofer Project Center to be built at the Opole University of Technology

2018-03-22

The branch of the German Fraunhofer Institute - one of the largest research organizations in the world and the inventor of the MP3 format - will be created at the Opole University of Technology. The work on the details of the agreement, business plan, budget and program assumptions of the Fraunhofer Project Center is expected to be completed soon.

The Project partners are the Opole Science and Technology Park and the Technical University in Chemnitz. The Opole branch of the Institute is to deal with „slimming” of cars - research on the use of lightweight constructions in their production. Lighter cars will burn less fuel and emit less carbon dioxide so they will become more ecological. The Fraunhofer Institute is one of the largest, most innovative and

important scientific organizations supporting industry in Europe. Founded in 1949, the Fraunhofer Society brings together nearly 70 German scientific organizations, with 30,000 scientists and with the research budget of billions of euros per year.

Miniature laboratory wins the „Innovation is a Woman” competition

2018-03-22

Agnieszka Podwin, PhD student at the Wrocław University of Technology, won the 8th „Innovation is a Woman” competition. The young researcher developed a refined laboratory on the chip, including a gas dispenser to support cell culture and a yeast-powered mini reactor for generating oxygen.

The laboratory on the chip is a miniature device of a size from a few millimeters to a few square centimeters. It is used for various types of biochemical analyzes, e. g. analysis of genetic material and blood, but also for cell culture. Cell cultures require the use of dispensers that provide them with various types of nutrients and gases. For research on miniature chips, the miniaturized versions of devices should be used, but the models available on the market are expensive. The PhD student developed her own type of dispenser made of semipermeable polymer. More information: <http://pwr.edu.pl/uczelnia/aktualnosci/wielkie-mozliwosci-miniaturowego-laboratorium-10797.html>

Wrocław archaeologists printed in the journal „Nature”

2018-03-23

Researchers from the Institute of Archeology of the University of Wrocław worked in an international team of scientists from Europe and the United States. The results of their research are described in the prestigious journal Nature.

The international team of 144 geneticists, archaeologists and anthropologists has attempted to explain

the «beaker phenomenon» - a riddle related to the appearance of similar objects between 4750 and 4400 years ago in the graves across Europe. Because of the exclusive bell-shaped beakers the findings were called the bell-beakers culture. It triggered a debate that lasted over a hundred years whether they are traces of migration of people on a large scale. The results of genetic examinations of about 400 skeletons described in «Nature» from various sites in Europe indicate that the spread of the «beakers phenomenon» between Iberia and Central Europe took place without significant population movement.

European universities call for double funding for research and innovation in EU

2018-03-26

Thirteen European university networks have called for a doubling the budget for research, innovation and education in the next EU financial perspective. This common position was expressed by the European University Association (EUA) and the Network of Universities from the Capitals of Europe (UNICA), with the University of Warsaw as a member.

As part of the current financial perspective, 80 billion euros have been allocated to scientific research and innovation. It is the budget of the Horizon 2020 Framework Program. Universities plan to convince decision-makers to double these funds in the next financial perspective, so that the budget of the 9th Framework Program is 160 billion euros.

Wroclaw University of Economics strengthens the didactic potential

2018-03-26

PORTAL - Integrated Development Program of the Wroclaw University of Economics - received almost PLN 11.5 million of funding from the National Center for Research and Development. The main goal of the project is to strengthen the didactic potential of the university.

The money raised in the competition will be used to create a Business Process Simulation Center - an interactive laboratory for visualizing business processes using the latest technologies and implementing modern models of university management through the integration of IT systems. Co-financing will allow the launch of new courses, the creation of an additional offer to develop students and their competences and a high-quality internship program to acquire practical skills and better preparation. Subsidized internships and trainings will allow to develop teaching, managerial and administrative skills.

New workshop at the Faculty of Environmental Engineering of the Wrocław University of Technology

2018-03-26

The new didactic and research laboratory was opened at the Faculty of Environmental Engineering at the Wrocław University of Technology. It enables to conduct classes in the field of heating and heating technologies.

The lab will be used by full-time and part-time students of Environmental Engineering. They can run simulations of the heating installation, including floor heating with a heat pump as a source of energy. Thanks to the laboratory, students will be able to use theoretical knowledge in practice, because, as emphasized Dr Marcin Klimczak from the Department of Conditioning, Heating, Gas and Air Protection, students are usually able to design a heating installation, but they do not know how these sys-

tems look in fact. The laboratory was established thanks to the cooperation of the Environmental Engineering Department with the TECE company, a global producer of sanitary and heating systems.

Chocolate for participation in the study of olfactory memory

2018-03-27

Agnieszka Sabiniewicz, PhD candidate in the fourth year of psychology at the University of Wrocław, conducts research on olfactory memory as part of her doctoral thesis.

The survey in which everyone can participate is anonymous, takes about 40 minutes and is memorizing and naming smells, presented in the form of «fragrants markers». The aim of the project is to determine the cognitive and personality correlates of the olfactory memory. Because so far very little has been known about the olfactory memory, the author counts on the current study to understand its connections with other parts of the human psyche. Each participant will receive information about the level of their olfactory memory, profile of personality traits and the level of working and spatial memory. And in addition - chocolate. You can make an appointment for an examination by email: a.sabiniewicz@gmail.com

PLN 200 million for universities educating future teachers

2018-03-28

The National Center for Research and Development has announced a competition for „Teacher training programs”. The project is financed from the Operational Program Knowledge Education Development and aims to raise the competence of students who intend to become teachers.

Improving the quality of education at all levels of education is one of the conditions for the expansion of our economy. We want the knowledge acquired from kindergarten to the University studies to be practical and useful. That is why we need highly

qualified staff - said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. Public and non-public higher education institutions can apply for co-financing. Projects should last from 24 to 60 months. The maximum value of the project depends on the size of the university and it starts from PLN 4 million for high schools educating less than 4 thousand students, up to 12 million for the largest universities, educating over 12,000 students. In total, PLN 200 million was allocated to the competition. The call for applications starts on April 23 and will last until June 6, 2018. More: [http://www.ncbr.gov.pl/fundusze-europejskie/power/aktualnosci/art,6058, konkurs-nr-powr-03-01-00-ip-08-00-pkn18-na-programy-ksztalcenia-nauczycieli-dotyczacy-opracowania-i-wdrozenia-programow-ksztalce.html](http://www.ncbr.gov.pl/fundusze-europejskie/power/aktualnosci/art,6058, Konkurs-nr-powr-03-01-00-ip-08-00-pkn18-na-programy-ksztalcenia-nauczycieli-dotyczacy-opracowania-i-wdrozenia-programow-ksztalce.html)

PLN 35 million for the development of colon cancer drug

2018-03-28

The company Pure Biologics, using the laboratories of the Wrocław Technology Park, received funding from the National Center for Research and Development for the development of an innovative drug for anti-cancer immunotherapy. The total value of the project is over PLN 35 million.

The aim of the project is to develop a recombinant antibody - Multibody, which can be an immunotherapeutic drug for patients suffering from colorectal cancer - the third most common cancer diagnosed in women and the second most common in men. The project, which is scheduled to start in the first half of 2018, will be based on a technological platform- PureSelect to search for antibody fragments with therapeutic and diagnostic potential. The solution proposed by Pure Biologics will allow the development of an innovative drug with a unique therapeutic potential. The company is ready to start the second phase of clinical tests.

University of Physical Education in Wrocław to test the players of Śląsk Wrocław

2018-03-28

The Wrocław Academy of Physical Education and the Śląsk Wrocław football club have signed a cooperation agreement that includes the regular conduct of motor, physiological, biomechanical and psychological tests of the players of Silesia.

The agreement also regulates the rules of the use APE's facilities by Śląsk Wrocław and its Football Academy. At the press conference, the signatories highly appreciated the importance of the signed document, which - in the opinion of the APE's Rector Andrzej Rokita - is the beginning of long-term cooperation. The President of Śląska Wrocław, Marcin Przychodny, stressed the strategic nature of the partnership and expressed his willingness to use the enormous scientific and research potential of the university. «This is an important element of achieving success, and I greatly look forward to this cooperation,» he announced.

University of Opole to create a research and development center for agriculture and agri-food industry

2018-03-29

The University of Opole is building the International Research and Development Center for Agriculture and Agricultural and Food Industry. The facility will operate in two places - at the campus of the university in Opole and in near Prószków - where the Royal Academy of Sciences operated at the turn of the 19th and 20th centuries.

In the Prószków, the University launches laboratory performing paid research in the field of toxicology, ecotoxicology, soil science and precision agriculture. There will also be educational plots, paths and a special space for events related to agriculture, e.g. fairs. The research center will be established in Opole, in the building of the Faculty of Natural Sciences and Technology. The project costs over PLN 42 million.

PLN 32 million are granted from the Regional Operational Program, 10 million is own contribution of the University, the local governments and Opole industry. The construction starts in spring, the Center will be ready by the end of 2019 to start its research activities in 2020.

Kraków AGH University researchers to explore the caves on Spitsbergen

2018-03-30

Scientists from the Department of Mechanics and Vibroacoustics of the Faculty of Mechanical Engineering and Robotics at the AGH University of Science and Technology in Krakow has conducted a comprehensive acoustic analysis of ice caves at Spitsbergen.

In March, the third scientific expedition took place. Works were carried out during this and two previous expeditions (in August 2016 and in February 2017) by: Prof. Eng. Jerzy Wiciak, Prof. Eng. Antoni Kalukiewicz, Dr Eng. Janusz Piechowicz, Dr Eng Dorota Czopek and Dr Eng Paweł Małecki. It is an important starting point for further acoustic studies in the polar environment, and in particular for the observation of acoustic climate changes. During this year's expedition, acoustic measurements were made in four ice caves: Larsbreen, Longyearbreen and Tellbreen. It is planned to continue the acoustic research in Spitsbergen in the summer season, therefore the existing recordings database will be supplemented with the Barentsburg acoustic map in the summer time and acoustic monitoring of the bird colonies in the area of the Fuglefljell plateau.

Eggs as Easter symbol and the most perfect product of nature

2018-03-30

The egg is the most perfect product of nature, and it contains substances that can save lives - says Prof. Tadeusz Trziszka from the Wrocław University of Environmental and Life Sciences, author of several hundred

scientific papers on food technology, expert in poultry and eggs technology.

Nothing contains so much healthy food ingredients in nature as an egg - says prof. Trziszka. It contains all the bioactive substances necessary to create life. The phenomenon is that with use of thermal energy only it is enough to start life! «If life can be created from eggs, it can be used to save lives, to fight against civilization diseases,»- emphasized the scientist. Professor Trziszka ensures that there are no contraindications to eating eggs. «There are substances that are important in the regulation of blood pressure, agents that destroy bacteria and viruses, especially active against the influenza virus. There is also cystatin, which can be used in the fight against brain and cancer dementia diseases «- enumerates Prof. Trziszka. New technology to reduce emissions of nitrogen oxides and sulfur dioxide in Opole

2018-04-03

Energetyka Ciepna Opolszczyzny with the Energy Institute and the companies Budimex and Mostostal Kraków are developing new technologies for cheap and effective reduction of nitrogen oxides and sulfur dioxide emissions in the process of coal combustion in the boilers.

In the WR25 boiler- screens in Opole, preparatory works have already been carried out to carry out temperature measurements to determine the so-called temperature window. It is an area of optimal temperature that allows the reduction of nitrogen oxides and sulfur dioxide. The solution requires little interference in the structure of the boiler and low installation costs. The research effect can bring the important effect for the heating industry i.e. reduction of nitrogen oxides at a level of at least 60%. and reduction of sulfur dioxide even above 90%. - depending on the reagent used and the implemented optimization. Such efficiency enables compliance with new emission standards for gaseous pollutants in the full capacity range of boilers.

Warsaw students to examine UV radiation from the stratosphere

2018-04-03

Students of the Warsaw University of Technology with unprecedented accuracy will examine the distribution of ultraviolet radiation in different layers of the atmosphere. They implement their idea as part of the German-Swedish student program REXUS / BEXUS organized by the European Space Agency.

The LUSTRO project consists in the creating a system of sensors and rotating mirrors. The completed system will be lifted using a stratospheric balloon to a height of approximately 25-33 km and will remain there for several hours. During this time, two periscopes will collect data on the intensi-

ty of UV radiation. The flight of the balloon with the LUSTRO experiment is planned for the autumn of 2018.

Agreement on the Polish-Chinese competition for research projects

2018-04-06

The National Science Center has signed an agreement with the National Natural Science Foundation of China (NNSFC) in Beijing. It will result in a bilateral competition for Polish-Chinese research projects in the field of basic research.

The competition, conducted in cooperation with the Chinese partner will be another bilateral project offered by the National Science Center. The Polish-Chinese projects will be supported in the field of life sciences, exact and technical sciences and selected disciplines in social sciences. The detailed conditions of the competition will be announced in June 2018. - We hope that the Polish-Chinese program will attract so much interest as previous bilateral competitions. The selected direction of cooperation is no a coincidence. Establishing and strengthening relations with such an economically and scientifically active country as China will certainly serve the Polish academic environment - emphasized Prof. Zbigniew Błocki, director of the National Science Center.

Scientists from Białystok patented „Substitute of natural saliva”

2018-04-06

Białystok University of Technology, Medical University of Białystok and company Nantes Nanotechnology received the patent for the invention „ Substitute of natural saliva”.

This invention was designed by the scientists Prof. Jan Dąbrowski and Dr Eng Joanna Mystkowska from the Białystok University of Technology and Prof. Halina Car and Dr Katarzyna Niemirowicz from the Medical University of Białystok. The essence of the invention is a substitute for oral saliva with favorable physicochemical and tribological properties

(related to friction). The preparation of artificial saliva, composed of mucin, xanthan gum and colloidal nanogold solution, was prepared on the basis of physiological saline treated with low-temperature and low-pressure plasma - informs Białystok University of Technology. The role of the preparation is to moisten the mouth and reduce friction in the dental system. This is especially important for people with salivary disorders, e.g. people who have undergone cancer therapy or use drugs that inhibit the secretion of saliva, such as depression medications.

Global warming increases the number of plant species on the mountain peaks

2018-04-06

In the last 10 years, the number of plant species on mountain peaks increased five times faster than in the years 1957-1966. The Polish botanists Dr Bogdan Jaroszewicz and Patryk Czortek from the Białobrzegi Geobotanical Station of the Faculty of Biology of the University of Warsaw write about it in the journal Nature.

The data for the last 145 years, provided from 302 European peaks indicate that the acceleration in the growth of species variety is directly linked to global warming. Researchers proved that mountain flora shows a tendency consistent with the so-called «Global great acceleration» - faster changes taking place in the global economy, society and ecosystems. The research was conducted by the botanists from 11 European countries. Researchers did not only collect up-to-date data on the flora of 302 mountain peaks, but also performed a literature query to access research reports and botanical tours of nineteenth-century botanists. <https://www.nature.com/articles/s41586-018-0005-6>

University of Gdańsk projects included in the GOSPOSTRATEG program

2018-04-09

Two projects of the University of Gdańsk have received funding under the strategic program „Social and economic development of Poland in the conditions of globalizing markets” - GOSPOSTRATEG.

The National Center for Research and Development decided to finance the «Export consortium as an element of the policy of economic development and competitiveness» and «Citizens decide» projects. The first objective is to create conditions for the activation of exports for the small and medium-sized enterprises by developing a strategy of export consortia in Poland and system solutions of support policies for such consortia. The second project is to change in the Act on the legislative initiative for citizens. The changes will allow to use the IT in collecting signatures and will simplify procedures.

Gdańsk University of Technology receives a grant within the framework of Polish-Taiwanese research cooperation

2018-04-09

The scientist of Gdańsk University of Technology will receive funding for the project in the joint competition organized by the National Center for Research and Development together with the Taiwanese Ministry of Science and Technology.

The creator of the project Power2hCarbon «Materials for direct conversion of electricity to hydrocarbons» is Dr Eng Piotr Jasiński, Prof. of the Gdańsk University of Technology. In the scientist's opinion, the electrolysis of water, and in particular the electrolysis of water and carbon dioxide, is a very promising technology for the storage of energy in the form of hydrogen or synthesis gas from renewable sources, such as wind and solar energy. «This is so-called the power-to-gas concept that allows the re-

duction of greenhouse gas emissions, while providing sources of energy» - emphasized the author of the project, which will be implemented jointly with the National Taipei University of Technology.

Almost PLN 70 million for the development of Silesian universities

2018-04-10

Rectors of Silesian universities received checks with subsidies for modernizing education system from the Deputy Prime Minister, Minister of Science and Higher Education, Jarosław Gowin as part of the „Integrated University Programs”.

«I want to ensure that these symbolic checks will be cashed as soon as possible. It is very important for us to start the internal reforms as soon as possible, and that money should start working as soon as possible to improve the teaching offer of Silesian universities and raise the level of scientific research,» said the Deputy Prime Minister. The checks were received by representatives of seven universities - Rector of the Silesian University of Technology Prof. Arkadiusz Mężyk, Rector of the University of Economics Prof. Robert Tomanek, Vice-Rector for Finance and Development of the University of Silesia Prof. Michał Daszykowski, Vice-Rector for Studies and Students of the Medical University of Silesia Prof. Joanna Lewin-Kowalik, Rector of the Academy of Fine Arts Prof. Antoni Cygan, Rector of the University of Technology and Humanities in Bielsko-Biała Prof. Jarosław Janicki and the Rector of the Academy of Jan Długosz in Częstochowa, Prof. Anna Wypych-Gawrońska.

Agreement on cooperation between the Warsaw University of Technology and the Main Inspectorate of Road Transport

2018-04-10

Joint implementation of IT projects and cooperation in the implementation of IT systems

by the Chief Inspectorate of Road Transport are tasks included into an agreement signed by Warsaw University of Technology and the Main Inspectorate of Road Transport.

The contract was signed by the Rector of the Warsaw University of Technology Prof Eng Jan Szmidi and Chief Inspector of Road Transport Dr Eng Alvin Gajadhur. The cooperation focuses primarily on the joint implementation of IT projects, analysis, development, implementation of IT systems by the Chief Inspectorate of Road Transport. The aim of the agreement is also to support scientists from the Warsaw University of Technology in the training employees of the Inspectorate. On the other hand, the Main Inspectorate of Road Transport accepts students of the Warsaw university for internships.

Applications for EIG CONCERT-Japan competition

2018-04-11

The applicants submit their offers for the 5th competition under the EIG CONCERT-Japan initiative. EIG CONCERT-Japan is an international joint initiative supporting and developing cooperation in the field of science, technology and innovation between European countries and Japan. For the first time, the National Center for Research and Development takes part in the organization of the competition.

As part of the competition, scientific units, enterprises and scientific consortia may apply in the contest. The support will be dedicated to basic research, industrial research and development works on the topic of the competition «Functional porous materials». The National Center for Research and Development allocated a budget of 750,000 euro to co-finance the participation of Polish entities in the project. More: <http://www.ncbr.gov.pl/programy-miedzynarodowe/wspolpraca-wielostronna/-inne-inicjatywy-wielostronne/eig-concert-japan/aktualnosci/art,6085,eig-concert-japan-informacja-dotyczaca-otwarcia-naboru-inference-WV-konkursie.html>

Over PLN 5 million for the education of PhD students at the Silesian University of Technology

2018-04-12

Two projects from the Silesian University of Technology received funding from the National Center for Research and Development. The university has received over PLN 5 million for the implementation of programs increasing the quality and effectiveness of education at the PhD studies. Both projects will be implemented at the Faculty of Automation, Electronics and Computer Science.

The first awarded project is «AIDA (Applied Integrative Data Analysis) - interdisciplinary PhD studies in the field of data processing and analysis». It assumes increasing the quality and efficiency of education at PhD studies by creating interdisciplinary studies responding to the growing demand for experts in the analysis of large data sets. The second project is a program of modern PhD studies in the field of cyber-physical systems. Its primary goal is to provide stable support for the development of young, highly qualified scientific staff and promote new leaders of research teams.

Center for Literary Research for Children and Youth at the University of Wrocław

2018-04-12

The Center for Literary Research for Children and Youth has been launched at the University of Wrocław. At the inauguration, a seminar „Literary research for children and youth at the University of Wrocław - modern perspectives” was organized.

Studies of literature and books for children and youth at the Wrocław University have been conducted since the 1960s. The first scientist to deal with this topic was Prof. Jerzy Cieřlikowski. The idea of the Center appeared in 2015 during the conference «Literary Margins and Digital Media» organized by the University and the Academia Europea Knowledge Hub Wrocław. In 2016, the university organ-

ized the international congress «The Child and The Book». The Wrocław part was entitled «Children’s Literature and Play» and referred to the heritage of Prof. Cieřlikowski. The event was attended by 150 researchers from around the world. The Center began operating on Tuesday 10 April.

Polish-Austrian agreement on a joint competition for research projects

2018-04-13

The National Science Center has signed an agreement with the Austrian Science Fund (FWF). The result of the cooperation will be a bilateral competition for Polish-Austrian research projects in the field of basic research.

As part of the new competition, Polish-Austrian research teams will be able to apply for financing research projects in all areas. The announcement of the competition is planned for the last quarter of 2018. Substantive assessment of the applications in the competition will be conducted by the Austrian website. According to the National Science Center, the agreement signed by the director Zbigniew Błocki and the president of the Austrian agency Klement Tockner is one of the elements of closer cooperation between research funding agencies in the Central Europe region.

AGH University of Science and Technology explores and promotes copper-based materials

2018-04-16

The Non-Ferrous Metals Division of the AGH University of Science and Technology in Krakow presented a system of balustrades and stair handrails made of an antimicrobial copper alloy.

The department is working on the implementation of antimicrobial tactile surfaces made of copper and its alloys in public places and promotes pro-health properties of copper-based metallic materials. During the presentation of the system, a scientific seminar was held. Dr Eng Monika Walkowicz delivered a seminar lecture «Copper and copper alloys in anti-

microbial tactile applications». The antimicrobial effectiveness of copper has been used for therapeutic purposes since antiquity. The subject of the lecture was supported by the results of microbiological tests of antibacterial effectiveness of copper and its commercial alloys in contact with pathogenic bacteria such as E. coli, Escherichia coli, or Staphylococcus aureus, Staphylococcus aureus.

Dr Kosinski explores psychological targeting on the web

2018-04-16

Visited websites, online shopping, played songs, watched profiles on Facebook or messages published on social media – all those traces left by Internet users are a treasury of data for companies and can be used to influence their behavior. They reveal not only person’s likes and preferences, but even the kind of personality - says Dr Michał Kosiński, a psychologist at Stanford University and a graduate of the Social and Social Sciences University of Social Sciences and Humanities in his latest research.

- Our previous research has shown that you can accurately predict the psychological characteristics of a person when you get permission from him to access her Facebook profile. However, we have now proven that companies can target the users based on their psychological profiles without their consent. For example, liking of the «Party» page on Facebook correlates with extraversion, and liking of the «Stargate» page goes hand in hand with introversion, this targeting (selection of an appropriate group of users with specific ads) allows to reach extroverts and introverts - says Dr. Kosinski. The expert underlines that research results can help to develop a system of control and balance in the form of legal acts, regulations and IT measures to prevent the inappropriate application of this technology.

Employee of the Medical Faculty at the University of Rzeszów wins the grant for cancer therapy

2018-04-16

Optimization of deep-tissue photodynamic therapy by measuring fluorescence lifetime is the title of the project presented by Dr David Aebisher for the grant enabling the purchase of scientific research equipment in 2018-2019 - informs Dr. Maciej Ulita, a spokesman of the University of Rzeszów.

The Ministry of Science and Higher Education granted PLN 1,811,000. The scientific research program for the implementation includes the purchase of a spectrometer for measuring the lifetime of fluorescence and the lifetime of singlet oxygen and it refers to innovative methods of photodynamic therapy. Photodynamic therapy is the treatment of cancers that uses photo-generated reactive forms of singlet oxygen (1O_2) to damage target cancer cells. The use of photodynamic therapy in the treatment of esophageal cancer, prostate cancer and cell lung cancer is becoming more and more popular among physicians around the world.

Project of the Medical University of Gdańsk receives subsidies from the Polish League Against Cancer

2018-04-17

The research project „Analysis of the possibility of introducing a statutory ban on the use of tobacco and tobacco products in passenger cars transporting children” by the researchers of the Medical University of Gdańsk obtained funding in the Onkogranty competition.

The aim of the project is to analyze available studies on the exposure of children to tobacco smoke in private vehicles, to examine legislative trends in selected countries and to analyze the legitimacy and feasibility of introducing such provisions in Poland. After the research and tests, a report containing a

proposal for legislation will be presented. It will be prepared in consultation with the Ministry of Health and will be disseminated nationwide. In addition, the resulting conclusions will be the basis for scientific publications. Onkogranty are awarded annually by the Foundation „Polish League Against Cancer”, which seek for new and so far not financed by other institutions projects referring to the program „Strategy against Cancer in Poland 2015-2024”.

Researchers of Wrocław universities to research drugs from 400 years ago

2018-04-17

Researchers from the Medical University and the University of Wrocław will jointly analyze the medicinal preparations described in the texts from 400 years ago.

The project, scheduled for 4 years, will start this year. The group of scientists from both universities is led by Dr Jakub Węglorz from the Department of Polish and General History of the XVI-XVIIIth cent. Historians from the University of Wrocław will collaborate with researchers from the Department of Pharmacognosy of the Medical University in Wrocław. The sources of knowledge of scientists are primarily the records of personal experiences and memories of authors from four centuries ago - diaries, notes, letters. Such notes - in the opinion of the researchers - show the actual picture of medical practices, which could significantly differ from the patterns known from the medical literature of that time. The project «Reconstruction and analysis of medicinal preparations identified on the basis of ego- documents from old Polish period (XVI-XVIII century)» is financed under the Sonata Bis 7 competition.

Partners of the Baltic Science Network project meet at the University of Gdańsk

2018-04-18

The Baltic Science Network project partners met at the University of Gdańsk. The aim of the meeting was enhancing the level of sci-

entific excellence and innovation in the entire Baltic Sea region.

The Baltic Science Network prepares strategies and programs supporting higher education, research and innovation. Activities are carried out in several areas: strategies for specific research areas; improvement of existing research infrastructure; developing mobility tools and recommendations for increasing the participation of countries with a lower innovation rate in international initiatives. Members of the network are ministries and agencies responsible for education, development, innovation and research as well as universities and scientific institutions from Denmark, Estonia, Finland, Latvia, Lithuania, Germany, Norway, Poland, Russia and Sweden as well as international organizations of the Baltic Sea region.

University of Gdańsk to examine the qualifications of Pomeranian teachers

2018-04-18

The University of Gdańsk, together with the Statistical Office in Gdańsk and the Pomeranian Voivodeship Authority, will examine the qualifications of Pomeranian teachers. The project will be implemented by scientists and students from the Faculty of Social Sciences of the Gdańsk University.

The detailed goal of the project is to define the preparation of Pomeranian teachers for the challenges of modern education in the context of ensuring the development of Pomeranian school pupils. The project will include surveys among teachers, pupils and parents in randomly selected Pomeranian schools, as well as individual interviews with teachers, parents and students, and focus studies with teachers. After the analysis of the results, an expert panel is planned to develop recommendations in the field of teachers' support and their professional development. The experts will also attempt to identify areas in which actions are necessary to ensure high quality of education for all Pomeranian pupils.

Competition for the projects of Maria Curie-Skłodowska COFUND

2018-04-19

The European Commission has announced a new competition for the Maria Curie-Skłodowska COFUND projects, co-financing grants and scholarship programs. Applications may be submitted by institutions interested in the creation of grant programs (for persons with a PhD degree).

All grant programs should aim at strengthening the international mobility of researchers, including intersectoral mobility. Their goal should be to mobilize domestic and international institutions to create high-quality research and training programs using the Maria Curie-Skłodowska Action Patterns that support the development of research careers. The projects last from 36 to 60 months and they are to implement an interdisciplinary, international and cross-sectoral research and training program. More: http://www.kpk.gov.pl/?page_id=22729

PLN 20 million from the National Science Center for „small grants”

2018-04-19

The National Science Center launched the Miniatura 2 competition. It is addressed to people with a PhD degree, received up to 12 years prior to the application, who had not managed and implemented research projects funded by the National Science Center.

The aim of «small grants» is to enable researchers to take their first steps in the grant system. The experience gained during the implementation may help in the future to run finance projects under other competitions - explains Professor Zbigniew Błocki, director of the National Science Center. The funds obtained in the competition will be used by the researchers to complete queries and scientific internships, research, provide consultancy and conference trips, as well as preliminary and pilot examinations. The funding period is a maximum of 12 months, and the individual amount vary from 5,000. up to PLN

50,000. The total amount for the Miniatura 2 competition is PLN 20 million. More: <https://ncn.gov.pl/ogloszenia/konkursy/miniatura2>

University of Toruń to receive PLN 1.7 million for the development of quantum technologies

2018-04-19

A team of scientists from the Faculty of Physics, Astronomy and Applied Informatics at the University of Nicolaus Copernicus in Torun will receive PLN 1.7 million for the project „The cryogenic system for the development of new optical quantum technologies”.

Torun researchers from the team headed by Dr Piotr Wcisła received a grant for the purchase of a cryogenic installation for controlling the temperature of experimental systems, such as an ultra-stable optical cavity or a confocal microscope. The investment enables to start new research programs in the areas of atomic and molecular physics, simple molecules chemistry, quantum information, ultra-precise optical metrology, and the search for new physics going beyond the Standard Model- as informs the University on its website. Dr Piotr Wcisła is a graduate of the Inter-Faculty Individual Studies in Mathematics and Natural Sciences (specialization in atomic physics) at the Jagiellonian University. He has completed an internship at the Harvard-Smithsonian Center for Astrophysics in Cambridge.

Interdisciplinary Research Center in Georgia

2018-04-20

In Kutaisi, the second largest city in Georgia, the Professor Stefan Krukowski Interdisciplinary Research Center was opened. Polish scientists working in Georgia gained the base for new expeditions.

The newly opened center is the first foreign archaeological station in the Transcaucasus. The archaeologists from the University of Warsaw have been conducting their research for years in this area. The center is headed by Dr Radosław Karasiewicz-Szczy-

piorski from the Institute of Archeology, University of Warsaw. The Georgian partner is the National Agency for Cultural Heritage.

Debate on cooperation between business and science at the 11th Investment Forum in Tarnów

2018-04-20

If we plan to achieve development based on innovation we must create a spirit of the dialogue between companies and scientists. Such conclusions result from the debate of entrepreneurs and representatives of science, which took place during the 11th Investment Forum in Tarnów.

The more dynamically developed economy, the greater the percentage of gross domestic product is spent on science. If science receives money, the greater is the chance to implement innovation in business. In order for this correlation to work in practice, it is necessary to integrate both environments that set common goals - said Dr. Stanisław Kowalski, rector of the University of Economics and Computer Science in Kraków. The panel discussion was also attended by Dr. Eng. Jadwiga Laska, rector of the State Higher Vocational School in Tarnów, Paweł Buszman, president of the board, American Heart of Poland and Leszek Nowicki, president of the board of the Tarnowska Agencja Rozwoju Regionalnego.

PhD student at the University of Life Sciences in Wrocław wins a gold medal at the Geneva exhibition

2018-04-20

Joanna Kozłowska from the University of Life Sciences in Wrocław won a gold medal in the medical category and a special prize of the Malaysian Association for Scientific Research at the 46th International Exhibition of Inventions in Geneva.

PhD student of the chemistry department at the Wrocław university presented a series of 46 inventions regarding the preparation of new derivatives of flavonoids - organic compounds naturally occurring in plants. In the competition she competed in the M class - related to medicine, surgery, hygiene, orthopedics and materials for the disabled. The research conducted jointly with the Wrocław Medical University checks the activity of the compounds obtained by the PhD student on cancer cell lines. „In our research we focus on colon cancer, in the future we plan research on other cell lines, including breast cancer. The first results are very promising, „says the winner.

Declaration of the Visegrad Group on economic cooperation in the field of innovation

2018-04-23

Ministers of the Visegrad Group countries (Poland, Hungary, the Czech Republic and Slovakia) signed a declaration in Budapest on economic cooperation in the areas of competitiveness, innovation and digital transformation.

The declaration assumes the use of shared data resources in a modern approach to conducting research and development works, and the implementation of the idea of «Industry 4.0». The countries of the Visegrad Group would also like to include startups in the technological modernization process and deepen the work on cybersecurity and modernizing

Internet technologies. - We are observing what the more advanced economies are doing and we are participating in the EU initiative “Digitization of the European Industry”. We are building the Platform for the Future Industry, which will stimulate industrial transformation - said Marcin Ociepa, deputy minister of entrepreneurship and technology, who signed the Budapest Declaration on behalf of Poland.

Over PLN 100 million for innovative projects in the power industry

2018-04-23

The National Center for Research and Development offers over 100 million PLN for the implementation of innovative projects run by entrepreneurs from the power industry. This is the result of the second competition of the PBSE sector program. Its main objective is to increase the innovation of the national electricity sector in the perspective of 2023 - informs the National Center for Research and Development.

- Projects implemented under sectoral programs of NCRD are to bring benefits not only to the given industry, but to the entire economy and citizens. Over PLN 100 million, which we offer to Polish entrepreneurs for the development of better, more effective and ecological solutions, is an investment that will pay back and serve next generations of Poles - says Piotr Dardziński, deputy minister of science and higher education. Thanks to the support of the National Center for Research and Development, 19 companies will be able to implement projects - among others: «The use of low-dimensional structures to broaden the absorption spectrum and increase the efficiency of silicon cells in the IBC or BIFACIAL architecture” by ML System SA, „Development and implementation of the technological process processing of waste from fluidized bed boilers using CO2 for the production of cement substitute „proposed by the Tauron group or” Development of innovative biomass treatment technology to improve fuel parameters and increase the possibility of biomass utilization „ by OZE 11.

Bionanopark and the Medical University of Lodz to study myeloma

2018-04-24

Lodz Bionanopark and the Medical University of Lodz have established research cooperation. Based on personalized genetic tests they intend to establish, why some patients with multiple myeloma do not respond to pharmacological treatment.

Prof. Tadeusz Robak, project manager from the Medical University of Lodz informed at a press conference that physicians from the Provincial Center of Oncology and Traumatology in Lodz will take part in the research. The medical team will take the bone marrow for testing and then, the selected genetic material will be analyzed by the Laboratory of Personalized Medicine and the Biotechnology Laboratory in Bionanopark. The results of cooperation in research on one of the most dangerous blood cancers will be important for matching therapy to a specific patient. Bionanopark is a modern implementation center for business. It has top-notch research equipment, biotechnology and nanotechnology laboratories.

PLN 200 million for joint innovations of scientists and entrepreneurs

2018-04-24

The National Center for Research and Development announced the fourth „Application projects” competition, the aim of which is to support research and development works - carried out by consortia composed of scientific entities and enterprises.

The activities of the Ministry of Science and Higher Education and the National Center for Research and Development precisely match the Responsible Development Strategy of Prime Minister Morawiecki. The aim is to enable Polish economy to develop as much as possible basing on research conducted by Polish scientists - said Jarosław Gowin Deputy Prime Minister, Minister of Science and Higher Education during the announcement of the competition. Only consortia consisting of a maximum of 5 entities including at least one scientific unit and one enterprise, may apply for co-financing research and development works. The applications can be submitted from May 16 until July 16 - informs the National Center for Research and Development. More: <http://www.ncbr.gov.pl/fundusze-europejskie/poir/konkursy/projekty-aplikacyjne2018/>

Agreement on cooperation between the Ministry of Finance and the Faculty of Mathematics and Information Sciences of the Warsaw University of Technology

2018-04-25

The Ministry of Finance signed agreement on cooperation with the Faculty of Mathematics and Information Sciences of the Warsaw University of Technology. According to the Ministry of Finance, the agreement concerns cooperation in the field of scientific, research and implementation of joint projects in the analytical area and IT infrastructure.

The agreement assumes that students of regular studies PhD studies of the Faculty of Mathematics

and Information Sciences of the Warsaw University of Technology will be involved in cooperation on educational, scientific and research projects. The document also describes internships and apprenticeships in the Ministry of Finance for faculty students and paid forms of cooperation. The agreement will apply until August 31, 2020.

Agreement on scientific and technical cooperation between Poland and the USA

2018-04-25

On April 23, 2018, the government of the Republic of Poland and the government of the United States signed an agreement in Washington between on mutual scientific and technical cooperation. On behalf of the Polish government, the agreement was signed by Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. The Polish delegation included also Jadwiga Emilewicz, Minister of Entrepreneurship and Technology, Adam Bielan, Deputy Speaker of the Senate and Piotr Dardziński, Deputy Minister of Science and Higher Education.

- Our visit on such high level with such a broad formula demonstrates that Polish-American relations are very good - said Deputy Prime Minister Jarosław Gowin. The agreement is to strengthen the scientific and technical cooperation of Polish scientists, scientific entities and executive agencies such as the National Center for Research and Development, the National Science Center and the National Academic Exchange Agency with American partners. It will apply for 10 years.

First applications for the Polish synchrotron SOLARIS

2018-04-25

Until May 20, scientific entities can submit applications for access to research stations at the SOLARIS National Synchrotron Radiation Center. The Academic Center of Materials and Nanotechnology of the AGH University of Science and Technology in Krakow invites participants to the seminar devoted

to the use of synchrotron, which will take place on April 26.

The seminar will include the presentation of measurement methods. The application procedure for measurement time will also be presented. During the seminar, Dr Eng Joanna Stępień from the Academic Center of Materials and Nanotechnology will give a lecture «SOLARIS - the first proposals in the Polish synchrotron program.» The entities can apply for time on three measurement stations: PEEM (photoemission electron microscopy), XAS (X-ray absorption spectroscopy) and UARPES (ultra angle-resolved photoemission spectroscopy), which are placed on two currently operating measurement lines.

University of Economics in Wrocław implements the „EURHISFIRM” project

2018-04-26

Wrocław University of Economics has started the implementation of a three-year project „EURHISFIRM - Historical high quality companies level data for Europe”. The project is already implemented by universities from France, Germany, the Netherlands, Belgium, Spain and the United Kingdom as part of the Horizon 2000 program - informs the University on its website.

The project includes the collection, development and analysis of historical financial data on European enterprises, including companies listed on stock exchanges. The research period covers data after 1815 year. The main coordinator of the project is Paris School of Economics, with other 12 research entities, including the University of Economics in Wrocław. The project is implemented at the Institute of Financial Management at the faculty of management, IT and finance at the Wrocław University of Economics. It is managed by the director of the Institute - Prof. Krzysztof Jajuga.

Researchers from Warsaw University nominated for the European Inventor Award

2018-04-27

Researchers from the Faculty of Physics and the New Technologies Center at the University of Warsaw Dr Joanna Kowalska, Prof. Edward Darzynkiewicz and Prof. Jacek Jemielity were nominated for the European Inventor Award.

The European Inventor Award is organized by the European Patent Office. It is attended by inventors contributing to economic or social development from around the world. Researchers from the University of Warsaw have been studying the interactions of proteins and RNA nucleic acid fragments in cellular processes for over 10 years, as well as the chemical synthesis of analogous terminals of mRNA molecules. Through their research, they solved the issues of mRNA instability and increased its productivity. Their discovery provides the development of effective genetic vaccines that in the near future will fight malignancies. The award ceremony will take place on June 7 in Paris.

SATIM spin-off company of the AGH University of Science and Technology wins grant from the Industrial Development Agency

2018-04-27

SATIM Satellite Monitoring, a spin-off company from the AGH University of Science and Technology in Kraków received a grant over PLN 170,000. The University receives it under an agreement signed with the Industrial Development Agency as part of the Open Innovation Network project.

According to the press release of the AGH University of Science and Technology, the SATIM company was founded by scientists from the Faculty of Geology, Geophysics and Environmental Protection and deals with satellite surveys of subsidence of land in mining and post-mining areas. Funds obtained under

the grant of the company's creator will be allocated to software that will improve the services of satellite monitoring of movements of the area. SATIM is one of many successful examples of commercialization of scientific research at the Krakow university. For several years, the company has been conducting research and development projects in cooperation with the European Space Agency.

Polish BLOOM project to launch

2018-04-27

University of Agriculture in Krakow and the Copernicus Science Center coordinate the Polish version of the international BLOOM project (Boosting European Citizens' Knowledge and Awareness of Bio-Economy Research and Innovation).

The project is devoted to the dissemination of knowledge about the bioeconomy. It also aims to increase the involvement of various groups in the planning and implementation of scientific research and practical solutions in this area. Bioeconomy deals mainly with such areas as ensuring food security, managing sustainable natural resources, reducing dependence on non-renewable resources, mitigating climate change and adaptation to it.

PLN 8 million grant for the Naval Academy in Gdynia

2018-04-27

The Naval Academy received almost PLN 8 million in subsidies under the Operational Program Knowledge Education Development for 2014-2020. Owing to the grant, students and candidates will be able to develop additional skills, gain valuable certificates and experience, increase their competitiveness in the labor market.

The program will be implemented at the Humanities and Social Sciences as well as Command and Maritime Operations faculties. Eight modules have been planned. Five modules are assumed to develop students' competences in the fields of international relations, army in the public service system, education, IT systems in security and national security. As separate modules the Academy will introduce Inte-

grated IT System, program of paid internships for students of international relations, the army in the public services system and educational portal with the system of creating and providing training within e-learning.

Researcher at the Opole University of Technology receives grant and position in Measurement

2018-04-27

Prof. Grzegorz Królczyk from the Department of Machine Technology and Production Automation of the Faculty of Mechanical Engineering of the Opole University of Technology received a grant from the National Science Center as part of the OPUS competition. The scientist also became a member of the editorial committee of the prestigious magazine "Measurement".

Professor Królczyk deals with modeling of dynamic and endurance issues in the process of precise milling. The project will be implemented in 2018-2020. Its budget is over PLN 750,000. OPUS is a competition for research projects, including financing the purchase or manufacture of equipment necessary for their implementation. It is a prestigious competition, in which the academic achievements, including publications in renowned scientific journals, constitute a significant contribution to the scientist's final evaluation. «Measurement» is one of the most prestigious metrological journals in the world. Professor Królczyk accepted the position of Associate Editor.

Gowin: We want to develop cooperation with the US in creating cancer drugs

2018-04-30

Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin announced that Poland will cooperate with oncologists from the United States in creating modern cancer drugs. The cooperation will include research of the cancer detection and prevention.

During his visit to the USA Deputy Prime Minister Jarosław Gowin together with representatives of the Ministry of Health, visited the oncological hospital MD Anderson Cancer Center in Texas, where he stressed: - We are very interested in developing cooperation with MD Anderson. We want to focus our efforts on research and development, including the biotechnology sector. It would be valuable for us to use the experience of MD Anderson to research modern cancer drugs.

Medical University of Gdańsk to study nanocellulose bioimplants

2018-04-30

The research team from the Clinic of Cardiac Surgery and Vascular Surgery at the Medical University of Gdańsk has made an experimental implantation of an original heart valve prosthesis made of bacterial nanocellulose in three sheep - informs the university on its website.

The operations were carried out in the experimental medicine laboratory of the Catholic University of Leuven in Belgium - a world-renowned center specializing in preclinical studies of various bioimplants in cardiac surgery. The operations were successful, now the half-year period of observation began with the aim to check the functioning of the implanted heart valve and examine any degenerative changes within the applied bioimplant. Cooperation between the Gdańsk University and the University of Leuven began in 2016 with joint research on the possibility of using Polish bionanocellulose in regenerative medicine in the aspect of bioimplants in cardiac surgery and vascular surgery.

Professor Aleksander Nawrat about innovations

2018-05-07

The changes proposed by the Ministry of Science and Higher Education are intended to release the potential of Polish science. Two new legislation acts on innovation and the Constitution for Science enable Polish universities to commercialize research results, set up their own companies spin-offs or establish their cooperation with business - says Prof. Aleksander Nawrat, deputy director of the National Center for Research and Development in the journal „Wszystko co najważniejsze”.

In his article «Course on Innovation» Prof. Aleksander Nawrat presents examples of successful Polish projects financed by the National Center for Research and Development. Last year, 64 competitions were announced and the Center supported 3702 projects with a total funding of PLN 18.5 billion. The role of public administration is to stimulate and support the activities of the scientific, economic and financial environment - concludes Prof. Nawrat. More: <https://wszystkoconajwazniejsze.pl/prof-aleksander-nawrat-kurs-na-innowacje/>

Joint discovery of Polish and German scientists in the Tatras

2018-05-07

Dr Paweł M. Owsiany from the Adam Mickiewicz University in Poznań together with scientists from Germany discovered new species of algae in the Tatra National Park. The obtained research results allow to include the Tatra Mountains as one of the European centers of biodiversity to the areas of „emerging” new species.

Research in the Tatra National Park is carried out by the Nadnotecki Institute of the Adam Mickiewicz University in Piła, with the support of the Nord Foundation and the Handicapped Scuba Association (HSA) «Step by Step». Two of the discovered species of dinoflagellata (Dinoflagellata) were named Parvodinium marciniakii

and Parvodinium trawinskii after Piła scientists - Grzegorz Marciniak and Krzysztof Trawiński. Researches of the Dr. Owsiany team are conducted in cooperation with the research group of Prof. Marc Gottschling from the Ludwig and Maximilian University in Munich.

Agreement on cooperation between the University of Rzeszów and the University of Bari

2018-05-08

The University of Rzeszów has signed a scientific cooperation agreement with the Italian Aldo Moro Università Degli Studi di Bari. Both universities were represented by the rectors Prof Sylwester Czopek and Prof. Antonio Felice Uricchio - informs the Rzeszów university.

The signed agreement provides joint research and exchange of employees and students. In addition, universities will exchange experiences in the organization of the teaching process and study programs of similar specialties. They will also carry out joint studies and research projects. - Establishing scientific relations with foreign centers is an important aspect of the pro-quality policy pursued by our University. We are glad that the University of Bari joined our partners - said Prof. Sylwester Czopek.

International scientific center of excellence to be created in Łódź

2018-05-09

The Foundation for Polish Science has granted funding for the creation of a new scientific and research center in Łódź. „The International Center for Research on Innovative Bio-based Materials” (ICRI-BioM) will be constructed in Łódź Bionanopark.

This project results from the involvement of the Łódź University scientists and the support of the Max Planck Institute from Mainz. - Establishment of a research institution in Łódź within the International Research Agenda (IRA) means bringing excellent scientific staff, global leaders in unique, interdisciplinary research to our city - emphasized Prof. Stanisław Bielecki - the former rector of the Lodz University of Technology and the initiator of the MAB's application.

Call for Polish-South African research projects

2018-05-10

The National Center for Research and Development (NCBR) together with the National Research Foundation (NRF) have announced the call for joint Polish-South African research projects.

The projects must concern the following research areas: Health Sciences, Agriculture, Bioscience and biotechnology, Environment and climate change, Water and renewable technologies, Maritime economy, Clean coal technology, Information and communication technologies. The National Center for Research and Development will allocate up to PLN 450,000 for the project to co-finance the participation of Polish entities in the program. Limited number of at most 10 projects will be co-financed. The project implementation period is 36 months. The deadline for submission of applications is 9 July 2018. More: http://www.ncbr.gov.pl/gfx/ncbir/userfiles/_public/programy_miedzynarodowe/wspolpraca_dwustronna/rpa/2_konkurs/zasady_udzialu_polskich_podmiotow_rpa_2018.pdf

University European Center to be created in Lublin

2018-05-11

The mayor of Lublin, Krzysztof Żuk, the mayor of Nancy, Laurent Hénart, the rector of the Maria Curie Skłodowska University, Prof. Stanisław Michałowski and the rector of the University of Lorraine, Prof. Etienne Criqui signed agreements on the establishment of the University European Center in Lublin, with aim to conduct research and teaching of European integration.

The agreement is part of the partnership renewal agreement between Lublin and the French partner city of Nancy - informs Aneta Adamska, spokesperson at the Maria Curie-Skłodowska University in Lublin. The Center is a joint initiative of the partner cities of Lublin and Nancy, the Maria Curie-Skłodowska University, the University of Lorraine and three Ukrainian universities: the Kyiv National Taras Shevchenko University, Chernivtsi Yuri Fedkovich National University and the Subcarpathian National Vasyl Stefanyk University in Ivano-Frankivsk.

One PLN billion for the Integrated University Programs

2018-05-11

On June 11, the call for proposals for Integrated University Programs will be launched. This time, the National Center for Research and Development, the executive agency of the Minister of Science and Higher Education, will allocate a PLN billion for this purpose. The project is financed from the Operational Program Knowledge Education Development for 2014-2020.

As underlined Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education, the Integrated University programs will be implemented to improve the competences of personnel and increase internationalization of Polish universities by inviting lecturers from abroad. Public and non-public higher education institutions can apply for this co-financing. It is implemented in the form of three paths, depending on the size of the univer-

sity. As a result, smaller universities will not have to compete for funds with larger ones. Projects should last from 18 to 48 months. The co-financing amounts from PLN 3 to 40 million. More: <http://www.ncbr.gov.pl/fundusze-europejskie/power/aktualnosci/art,6176,konkursy-na-zintegrowane-programy-uczeln.html>

Polish business supports the development of science

2018-05-11

The Cedrob Group from Ciechanów presented the results of the grant competition „We support development”. Out of over one thousand projects submitted in various categories, 72 were selected. 1 million PLN was allocated for their implementation.

In the Science and Development category the Warsaw University of Life Sciences in Warsaw for the project «Ways of managing the bird poultry» and the Institute of Public Initiatives Foundation for the project to create the Polish Leaders' Academy were awarded PLN 30,000 each. The other awarded winners include: University of Life Sciences in Poznan for the project «Wheat and corn straw as a potential material for the production of bioethanol and biomethane», Student Scientific Circle at the Medical University of Gdańsk for the project «The impact of silver nanoparticles' functionalization on their antimicrobial properties» and the Cardinal Stefan Wyszyński University in Warsaw for the project «Summer School of Young Scientists».

Foundation for Polish Science to offer scholarships to the most talented young researchers

2018-05-14

The Foundation for Polish Science for the 26th time granted START scholarships to the 100 most talented young scientists from all over Poland. They will receive PLN 28,000 for their research.

START is the largest scholarship program in Poland for the best young researchers who are under 30 years of age. The Foundation also selected two scientists who had exceptional scientific achievements this year: Przemysław Mróz from the Astronomical Observatory of the University of Warsaw and Dr Michał Winiarski from the Faculty of Technical Physics and Applied Mathematics at the Gdańsk University of Technology. Their scholarships will be enhanced to PLN 36,000 - informs the Foundation for Polish Science. The award ceremony will be held on May 26 at the Royal Castle in Warsaw. The call of applications for the next competition will start this autumn. More: <https://www.fnp.org.pl/oferta/start/>

Scholarships for young scientists of the Wrocław University of Technology

2018-05-14

Five researchers from the Wrocław University of Technology received scholarships from the „Foundation for Polish Science” Start program. Researchers will get 28,000 PLN annually.

At Wrocław University of Technology scholarships were awarded to Mateusz Dyksik from the faculty of Basic Technical Problems; Dr Eng Anna Dżimitrowicz and Jan Zaręba from the Chemical department, and Maciej Kowalczyk and Łukasz Sterczewski from the Electronics department. Scholarships were awarded for the 26th time. This year scholarship holders were selected from 890 candidates. The Foundation for Polish Science «Start» is the largest scholarship program for young researchers in Poland. Scholarships are to support them financially at the beginning of a research career and enable them to devote themselves to the science.

PLN 300 million for innovations in the automotive industry

2018-05-15

The National Center for Research and Development has started the call for proposals in the 2nd competition of the INNOMOTO program. The executive agency of the Minister of Science and Higher Education allocates PLN 300 million for innovative projects in the automotive industry.

The INNOMOTO sector program announced in September 2016 by Deputy Prime Minister Jarosław Gowin aims to support innovative solutions for the automotive industry to ultimately increase the competitiveness of the Polish automotive sector in the perspective of 2026. As part of the program, based on the research agenda established in consultation with entrepreneurs, the Center will finance projects implementing innovative solutions for vehicles and drives, production technology, regeneration and recycling as well as innovative parts, components and vehicle systems. The call for proposals in the INNOMOTO competition will last until July 10. The minimum project value is PLN 1 million, and the maximum is PLN 30 million. More: <http://www.ncbr.gov.pl/fundusze-europejskie/poir/konkursy/innomoto2018/>

University of Wrocław and Dresden Technical University to conduct joint research

2018-05-15

Psychologists from the University of Wrocław with the scientists from the Center of Smell and Taste Senses at the Technical University in Dresden will examine the social and cognitive functioning of people who lost their sense of smell. Cooperation will be possible thanks to the European program „Strategischen Fördertopf Internationalisierung”.

The money from the program is devoted to the development of strategic scientific cooperation between the Technical University of Dresden, King's College in London and Prague and Wrocław univer-

sities. The aim is to internationalize the curriculum and research as well as to raise the ranking of the university. Researchers are planning to organize a summer school, a series of seminars and guest lectures, and popular science meetings to internationalize the staff of both universities and popularize research results. They also plan to create a program for exchanging experiences including bilateral visits and a mentoring program for research assistants.

Researchers from the University of Silesia developed nanoparticles of copper oxide with biocidal properties

2018-05-16

Researchers from the University of Silesia's physics institute have developed a new method of producing copper oxide nanoparticles with fungicidal and bactericidal properties. The solution has been patented.

Nanoparticles obtained with the method of Dr Jerzy Peszke and Anna Nowak are characterized by high biocidal effectiveness against various microorganisms - fungi, bacteria and algae. They can be used, for example, to protect building ceramics as well as external and internal surfaces of buildings against the development of pathogenic agents. Their main advantage is a several times longer duration of action in comparison to preparations based on chemical compounds. In addition, their low production cost and ease of application to various types of surfaces allows for its versatile application in the form of powder - says Dr. Jerzy Peszke.

National Science Center to allocate PLN 400 million for research projects

2018-05-17

National Science Center announced the results of the 14th Opus and Preludium calls. Researchers submitted 3122 applications, of which 669 projects were accepted for funding. National Science Center granted PLN 397,5 million for their implementation.

In the Opus the Center accepted: «Transformations of Polish food in a cosmopolitan food landscape» by Prof. Fabio Parasecoli from the Institute of Philosophy and Sociology of the Polish Academy of Sciences, «Architecture of the Legal Mind» by Prof. Bartosz Brożek from the Faculty of Law and Administration of the Jagiellonian University and «Fish under stress - a dermal stress response system - how does it work?» by Prof. Ewa Kulczykowska from the Institute of Oceanology, Polish Academy of Sciences. In the Preludium co-financing will include: «Reception of ancient philosophy in the works of Mulla Sadra» by Agnieszka Erdt from the Faculty of Philosophy and Sociology of the University of Warsaw and «The influence of magnetic admixtures on states bound in superconductors» by Eng Szczepan Głodzik from the Faculty of Mathematics, Physics and Computer Science of the Maria Curie-Skłodowska University in Lublin. More: <https://www.ncn.gov.pl/konkursy/wyniki/2018-05-15-opus14-preludium14>

Bialystok Physicists in the European consortium COST

2018-05-17

The Faculty of Physics of the Department of Physics and Magnetism at the University of Bialystok will implement a new project of the European Cooperation in Science & Technology (COST)- informs Katarzyna Dziedzic, spokesperson of the University of Bialystok.

The „Ultrafast opto-magneto-electronics for non-dissipative information technology” project will be coordinated by Radboud University from the Netherlands within the international consortium. The head of the work carried out by Polish scientists will

be Dr Andrzej Stupakiewicz from University of Bialystok. He emphasized that „this project will allow for greater integration of the international scientific and technical environment in one of the most innovative areas of science related to information technology.” More: <http://www.cost.eu/>

National Center for Research and Development checks if Polish Hyperloop can be constructed

2018-05-18

The National Center for Research and Development, together with the Ministry of Enterprise and Technology set up a working team to check the possibilities of launching a railway construction in vacuum tunnels in Poland.

Prof. Maciej Chorowski, director of the National Center for Research and Development, highlights in an interview with the newspaper «Puls Biznesu», that the possible construction would be based on the standard developed in Poland, but it would not be a competition for Hyperloop in other corners of the world, because the same technology can have a variety of technical solutions. The National Center for Research and Development works on new solutions allowing to accelerate the traditional railways. As part of the Luxtorpeda 2.0 project, this year a letter of intent was signed with the Polish State Railways on the construction of new locomotives prototypes.

Agreement on cooperation between Warsaw University of Technology and the Naval Academy

2018-05-18

The rector of the Warsaw university Prof. Jan Szmidt and the rector-commander of the Polish Naval Academy, commander Prof. Tomasz Szubrycht signed a cooperation agreement.

The signed agreement is to contribute to «the development of scientific-didactic and scientific-research activities in areas particularly important for the de-

fense of the country and maritime economy, using the potential, position, experience and achievements of both universities.» As part of the cooperation, it is planned to create joint research teams, mutual provision of services in the field of access to laboratories and the use of technical equipment. Warsaw University of Technology and the Naval Academy will also exchange experts and jointly organize scientific and technical conferences and symposia.

Memorandum of understanding between universities in Zielona Góra and Chinese Hangzhou

2018-05-18

Rector of the University of Zielona Góra, prof. Tadeusz Kuczyński and president (rector) of the Chinese University of Zhejiang A & F, Prof. Yin Yibin signed a memorandum of understanding on the teaching and research cooperation of both universities.

Universities from Zielona Góra and Chinese Hangzhou will cooperate in the areas of exchanging scientists and students to conduct research of common interest, visits of scientists invited to give lectures, inviting to participate in conferences, symposia, research and training; exchange of information, scientific materials and publications and to facilitate the mobility of lecturers and students through exchanges and visits between universities. The University of Zielona Góra previously signed two cooperation agreements with other Chinese universities: the University of Chongqing as part of the ERASMUS + program and a bilateral agreement with the Shanghai Pedagogical University.

Medical University of Gdańsk projects achieve funding in OPUS 14

2018-05-18

Three projects of scientists of the Medical University of Gdańsk have received funding from the National Science Center in the 14th OPUS 14 competition.

The laureates include the scientists from the molecular enzyme department at the inter-university faculty of biotechnology: Dr Rafał Sądej with the project «The role of FGFR2 in the regulation of autophagy in breast cancer - prognostic significance» and Dr Patrycja Koszałka for the project «The role of CD73 (ecto-5'-nucleotidazay) in the processes of promotion and progression of breast cancer and its evaluation as a therapeutic target». The project «Study of reproductive potential of oocytes and embryos with the use of proteomic analysis of alveolar and culture fluid» by Prof. Krzysztof Łukaszuk from the obstetrics and gynecology nursing department of the health sciences also was financed. Over PLN 4.2 million will allow the employment of young scientists in post-doc positions and the payment of scholarships for students and PhD students.

Professor Chorowski claims new technologies to be coupled with traditional industries

2018-05-21

Poland will use its chance for sustainable development if investments in startups and R & D programs will have a real chance of commercialization, and they will not face any walls separating them from the market - highlighted Prof. Maciej Chorowski, director of the National Center for Research and Development in his latest article in the magazine of the leaders of the opinion „Wszystko co najważniejsze”.

Professor Chorowski believes that Poland has to combine new technologies with traditional industrial industries. In his opinion, „it will be possible to become a leading modern economy in new

areas, not by imitating today's undisputed leaders - Google, Facebook, Bookingcom or Uber.” More: <https://wszystkoonajwazniejsze.pl/prof-maciej-chorowski-jak-polska-gospodarka-moze-wykorzystac-nowe-technologie/>

Wrocław University of Technology to receive nearly 8.2 million in Opus and Prelude programs

2018-05-21

The National Science Center allocated nearly PLN 8.2 million to the scientists from the Wrocław University of Technology for the implementation of research projects within Opus and Prelude programs – informed Michał Ciepielski from the information and promotion department of the Wrocław university.

The largest grant was given to Dr Eng. Artur Podhorodecki, from the faculty of basic problems of technology, who received almost PLN 1.5 million for the project «Thin-film light sources with tunable emission in the 1000-2000 nm range based on colloidal, semiconductor quantum nanostructures». Dr. Podhorodecki's solutions may be applied in infrared displays in the military industry as elements of sensors and microchip biosensors and as a light source in various detection systems. In total, within the Opus program, more than PLN 7.4 million was awarded to 10 scholars, within the Preludium program over PLN 710 thousand grants were received by 6 young scientists from the Wrocław University of Technology. More on the website: <http://pwr.edu.pl/uczelnia/aktualnosci/miliony-na-badania-dla-naukowcow-z-pwr-10860.html>

Discovery of scientists from the University of Warsaw to develop a drug for spinal muscular atrophy

2018-05-22

The team working under the direction of Prof. Jacek Jemielity from the Center of New Technologies of the University of Warsaw and Dr Joanna Kowalska from the Faculty of Physics of the University of Warsaw, both the laureates of the Foundation for Polish Science programs developed a new modification of the structure of the end of the 5' mRNA molecule, so-called “cap” - informs the Warsaw university.

According to the researchers, this discovery may be used in the development of a drug for spinal muscular atrophy (SMA) or other genetic disorders. The new modifications developed by the researchers show surprising biological properties, attractive for potential clinical applications in the pharmaceutical industry. The team of Prof. Jacek Jemielity was nominated for this year's European Inventor Prize, awarded by the European Patent Office. Currently, the selection process in the Popular Prize category is underway. Its winners are selected in an online poll in which everybody can take part. <https://www.epo.org/learning-events/european-inventor/finalists/2018/jemielity.html>

PhD student at the University of Silesia explores the history of Antarctic land ecosystems

2018-05-22

Mariusz Wierzoń, a PhD student at the Faculty of Biology and Environmental Protection of the University of Silesia, is studying the history of Antarctic land ecosystems, using molecular biology.

The use of molecular biology in the study of mosses will allow to check whether Antarctic endemics have been emigrated from a relatively close land - for example, spreading from subantarctic islands, or perhaps survived in Antarctica since the times when South America, Africa, India, Australia, Antarctica and the south-eastern part Asia created one supercontinent - Gondwana. Until recently, scientists believed that in colder periods on Earth some of the continents were tightly covered with ice, which effectively prevented the development of any form of life. Research has shown, however, that even in the most hostile environment, oases may appear in which certain plants can survive unfavorable times.

National Center for Research and Development allocated PLN 7 million to a startup analyzing content on the Internet

2018-05-23

Three Polish residents living in New York have created a startup that offers web publishers the software to check the interest of content published on the Internet.

Jarosław Góra, Wojciech Woziwodzki and Sebastian Zontek founded Deep.BI in the USA, because from the very beginning they wanted their product to be global. They collected almost PLN 12 million for their undertaking. The Polish fund Black Pearls VC and the National Center for Research and Development and businessmen Piotr Walter and Adam Sawicki put together PLN 7 million for the startup's development.

PM Gowin: TANGO 3 to improve the conditions for conducting research and development works in Poland

2018-05-23

The TANGO 3 competition is a joint venture of the National Science Center and the National Center for Research and Development. It is to finance projects that will increase the use of the results of basic research. Its aim is to build a bridge between basic and applied research and industrial research.

TANGO 3 will allow both national agencies to improve the conditions for conducting research and development in Poland. The competition gives the opportunity to introduce products, services or technologies into market. Scientific organizations, universities, scientific centers of the Polish Academy of Sciences, and even natural persons can participate in the competition. - We want to enable better transfer of knowledge to the industry and thus fully use the opportunities of Polish science - says Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. The call for proposals will run from June 14 to December 20, 2018.

Szczecin scientists win grants from the program „Incubator of Innovation +”

2018-05-23

Five research teams of the Pomeranian Medical University and the Maritime University of Szczecin received nearly PLN 2.5 million from the „Incubator of Innovation +” program for their projects.

The grants were awarded for «The prototype of the impression tray for unilateral missing teeth in the mandible» - under the supervision of Dr. Małgorzata Tomasiak, «An innovative kit for umbilical cord blood collection in premature babies» - under the supervision of Prof. Bogusław Machaliński, «Development of dry bath technologies in a mixture of CO₂ and O₃ gases» - under the supervision of Dr Anna Lubkowska, «Innovative composite materials with a halloysite filler for the production of reinforced

dental prostheses» under the supervision of Dr Ewa Sobolewska and «Total Free Station- Autonomous Measurement System» under the supervision of Dr Eng Grzegorz Stepień. The awarded teams can count on 2-year support, in particular in the area of commercialization of research results.

Polish-German Center for Hybrid Lightweight Structures established in Gliwice

2018-05-24

Experts from Germany and Poland will jointly conduct research on new materials and hybrid constructions. The agreement on the establishment of the Polish-German Center for Hybrid Lightweight Structures was signed in Gliwice.

The agreement was concluded by Silesian University of Technology, city of Gliwice, Katowice Special Economic Zone, Federation of Aviation Firms «Bielsko» Institute of Light Engineering and Technology Polymer Technical University in Dresden, as well as Technical University Bergakademie in Freiberg. Cooperation between representatives of science, industry and self-government from Poland is to help in the development of modern technologies for the design of lightweight constructions. The creation of the center is a response to the expectations of modern industry regarding the development of innovative material technologies and the rapid commercialization of research results.

Three scientists from the Gdańsk University of Technology receive START scholarships

2018-05-25

MSc. Mateusz Daško and MSc. Mariusz Szko-da from the chemical department and Dr Eng Michał Winiarski from the Faculty of Technical Physics and Applied Mathematics of the Gdańsk University of Technology received scholarships from the Foundation for Polish START Studies. Dr Eng. Winiarski has also received a distinction for his application.

The winners were selected from 890 candidates. The basic criterion for awarding a scholarship is the quality of scientific achievements. The annual support amounts to PLN 28 thousand PLN or PLN 36 thousand for additionally awarded students. The money can be used for any purpose. The START is the largest scholarship program in Poland for researchers under 30 years of age, representing all fields of science. The group of scholarship holders are over 2,900 people. Scholarships are to support young scientists financially in the difficult beginnings of their careers and enable them to devote themselves fully to science.

University of Warsaw researchers anticipate election results more accurately than polling centers

2018-05-28

Researchers from the Faculty of Journalism, Information and Bibliology of the University of Warsaw have been researching Big Data for a few years and they are convinced that their analyzes of changing electoral preferences are more accurate than polling surveys.

BigData's research team is led by Professor Włodzimierz Gogolek. During the last presidential election campaign, the team carried out a project on political preferences. The results turned out to be

much more accurate than the outcomes of pre-election surveys - says Dr Eng Wiesław Cetera from the Department of Information Technology of Media of the Warsaw university in an interview for the onet.pl portal. The basis of research and source of knowledge were social networking sites and all types of forums on the Internet. Researchers searched for everything that Internet users wrote about the main candidates for the office of the President. Then we combined it in the statistical process defined by the algorithm and compared it with earlier quotations. The result we obtained was almost identical to the result of the election - adds Dr. Cetera. PLN 200 million for the new program „Third University Mission”

2018-05-29

Social and professional activation and prevention of social exclusion are the main goals of the call for the implementation of the „Third University Mission”. The National Center for Research and Development, the executive agency of the Minister of Science and Higher Education, informs that it will allocate PLN 200 million for this purpose.

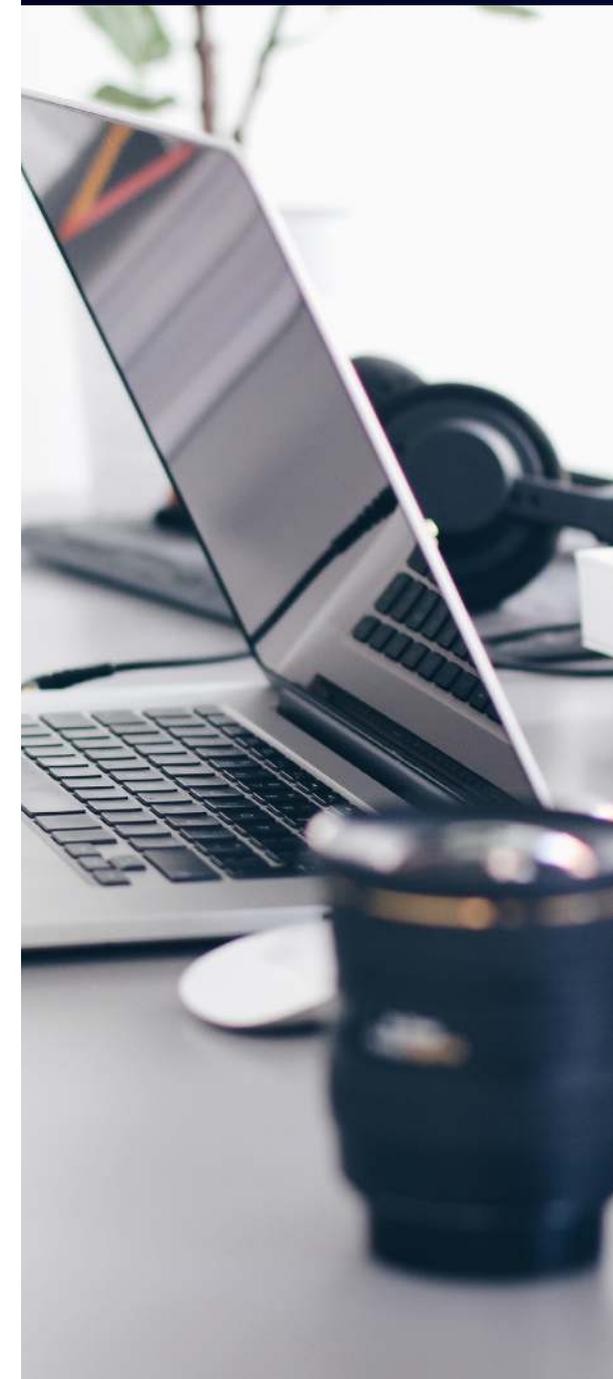

As Deputy Prime Minister Jarosław Gowin said, «we create an offer for all who want to deepen and develop knowledge throughout life.» The «Third University Mission» is a new program providing the universities with the opportunity to broaden their educational offer to recipients from outside the academic community. The participants will have the opportunity to develop their skills and acquire competences that will enable their professional and social activation. More: <http://www.ncbr.gov.pl/fundusze-europejskie/power/konkursy---aktualne-nabory/mu18/>

Students from Zielona Góra and Gdańsk studying the influence of cosmic radiation on tissue cells

2018-05-29

The Scientific Society of Space Medicine, University of Zielona Góra, in cooperation with the SimLE circle of the Gdańsk University of Technology, carried out the first stratospheric mission as part of the ANTARES project.

The mission was to elevate tissue cells into the stratosphere, where the intensity of cosmic radiation is higher and observe the reactions. During the experiment held in Toruń, the stratospheric balloon with samples reached a height of 24. 657m, where the instruments showed radiation about 12 times bigger than on the Earth's surface. Students are now conducting sample tests for changes that could be caused by the increased amount of cosmic rays. The ANTARES project focuses on the processes of carcinogenesis under the influence of cosmic rays. It was the first experiment of a series that the University students plan to conduct in cooperation with the scientific club SimLE Gdansk University of Technology.

National Agency for Academic Exchange hosts Delegation from Beijing

2018-05-30

The Beijing Municipal Bureau of Human Resources and Social Security delegation visited the National Academic Exchange Agency. The talks concerned cooperation between universities and scientific organizations as well as the possibilities related to the exchange of scientists.

Beijing Municipal Bureau of Human Resources and Social Security is a Beijing government institution responsible for increasing the mobility of researchers. The Chinese guests were presented with the mission and priorities of the National Academic Exchange Agency, as well as the programs run by the Agency. The Chinese side is interested in the exchange of research workers with Poland and support for inter-university cooperation. It was emphasized that this could take place, among others, within the framework of the Academic International Partnerships program implemented by the Agency.

Researchers from the University of Zielona Góra win grants in OPUS and PRELUDIUM competitions

2018-05-30

Dr Eng Wojciech Paszke from University of Zielona Góra, Prof Eng Marcin Witczak, from the Faculty of Computer Science in Electrical Engineering and Automation and Eng Marta Nycz from the mechanical department of the University of Zielona Góra obtained grants in OPUS and PRELUDIUM calls.

Dr Eng Wojciech Paszke runs the project «Learning-based methods ensuring high quality of resistant control.» The project will be carried out until 2021 with the scientists from Great Britain and China. Professor Dr Eng Marcin Witczak represents a research team conducting the project «Controlling the life span of complex systems using the multiple damage estimation strategy». Eng Marta Nycz from the Faculty of Mechanical Engineering runs

the project «Electrochemical method for determining the level of thermal shock proteins using biosensors based on the substrate of titanium dioxide nanotube on titanium foil modified with silver nanoparticles». More about the projects: <http://www.infoserwis.uz.zgora.pl/index.php?troje-naukowcow-z-uz-otrzymalo-granty-ncn>

Agreement on cooperation between the Krakow University of Technology and the Railway Transport Office

2018-06-01

The Krakow University of Technology and the Railway Transport Office have signed a cooperation agreement regarding the implementation of joint activities in the areas of research, education and human resources.

According to the agreement, the Rail Transport Office will give opinions on educational programs in the fields of specialization related to rail transport, offer students the diploma issues and organize internships for students. In turn, the Krakow University of Technology declared the launch and conduct of post-graduate studies, courses and trainings related to rail transport. The university will also implement the results of joint projects and possible patents. It will also carry out research and provides the access to measuring equipment for the Office.

PhD student of the University of Silesia explores briquettes and charcoal for barbecue

2018-06-04

Zbigniew Jelonek, PhD student at the University of Silesia develops the comparative standards for the analysis of pollutants in charcoal and briquettes used in barbecue grills. The aim of the research is also the identification of harmful compounds resulting from the combustion of solid fuels.

- My goal is to analyze briquettes and charcoal available on the Polish market in terms of the presence of substances harmful to human health and our environment - explains a PhD student. He also wants to develop the least harmful composition of these fuels

by demonstrating the influence of solid contamination on the processed food and the elimination during the production phase to reduce the emission of carcinogenic compounds. The research is carried out as part of the implementation PhD dissertation in the cooperation with the company GGS-PROJEKT Department of Geology and Environment - informs the university spokesman, Jacek Szymik-Kozaczko.

Rzeszów University of Technology to cooperate with the Ożarów Group

2018-06-05

Rzeszów University of Technology will cooperate with the Ożarów Group in the field of joint research and development projects.

A letter of intent was signed by Dr. Eng. Mariusz Oleksy, vice-rector for development and contacts with the economy of the Rzeszów University, and Marek Surowiec, member of the Board, director of strategy for the Ożarów Group. Pursuant to the document, the parties agreed to undertake joint activities and hold lectures for students about the production of cement and its use, the organization of conferences, visits and student internships. The cooperation will also concern research and development undertakings.

Polish-French Forum of Science and Innovation at the University of Warsaw

2018-06-05

On 12 June 2018, the „Polish-French Forum of Science and Innovation” will be held at the Library of the University of Warsaw.

The aim of the project is to promote Polish-French cooperation in the field of research and innovation, celebrating 60 years of the existence of the French Culture Center and the Francophone Studies of the University of Warsaw and emphasizing the opportunities offered by European research programs. The event will start with the speeches of Dr Maciej Duszczuk, vice-rector for scientific affairs of the University of Warsaw, Piotr Dardziński, undersecretary of state in the Ministry of Science and Higher Education, and Pierre LEVY, the ambassador of France in Poland. The participants will also discuss the internationalization of higher education and research, the perspectives of Polish-French cooperation in the field of science in 2013-2018 and the bilateral program of PHC Polonium. Forum registration until June 6, 2018 at: https://docs.google.com/forms/d/e/1FAIpQLSehAKldQmZOI_T2TZbngSfKaDMIs5M-v8sTpgi1g-V7Tf42cRQ/viewform

PLN 230 million for the increase of competitiveness and innovativeness of Polish pharmacy

2018-06-06

The National Center for Research and Development announced the InnoNeuroPharm call, which aims to increase the competitiveness and innovation of the Polish pharmaceutical sector, including neuromedicine, in the perspective of 2026.

PLN 230 million has been allocated to the program. The InnoNeuroPharm sector program was created on the initiative of the Polish Association of Employers of the Pharmaceutical Industry and the Polish Innovation Platform of Neuromedicine. The research areas of the InnoNeuroPharm sector program include innovative medicinal products,

innovative technologies for the production of medicinal products, innovative diagnostic methods and new biomarkers with practical diagnostic-predictive applications in the field of neuromedicine, innovative methods of rehabilitation of neuromedicine patients, development of tools supporting research on medicinal products. More: <http://www.ncbr.gov.pl/fundusze-europejskie/poir/konkursy/innoneurop-harm-2018/>

To develop scientific and business projects, contact BraveCamp

2018-06-06

Only until June 8, 2018, students, PhD students, employees and graduates of the University of Warsaw and the Medical University of Warsaw can apply for the BraveCamp weekly summer school.

The Camp allows participants to develop their ideas for scientific and business projects. From 8 to 14 July at the Zegrze Lake, participants of the BraveCamp will refine and shape their ideas under the supervision of specialists dealing with project management, self-presentation, marketing and sales. At the end of the camp, students, PhD students, employees and graduates of two Warsaw universities will present their solutions, and the jury will choose only one project. The winner will receive a grant of PLN 10 thousand. More: <https://www.iuwnet.org/>

Polish-German BEETHOVEN calls to be extended to new scientific disciplines

2018-06-07

The National Science Center has announced the continuation of BEETHOVEN calls addressed to Polish and German scientists. The National Science Center (NCN) and Deutsche Forschungsgemeinschaft (DFG) have decided to extend this initiative to new scientific disciplines.

In September 2018, the third call for Polish-German research projects BEETHOVEN and the first BEETHOVEN LIFE call will be announced. The call called

BEETHOVEN CLASSIC 3 will be a continuation of the BEETHOVEN 2 program and participants can submit applications for financing research projects in the humanities, social, art and selected disciplines of exact and technical sciences. BEETHOVEN LIFE 1 is a new call for funding Polish-German research projects in the field of life sciences - informs the National Science Center.

AGH University of Science and Technology in Krakow to develop new drilling technology

2018-06-11

The AGH University of Science and Technology in Krakow and the Polish Oil and Gas Company have completed the first demonstration phase of the MiniDrill project developing a new drilling technology.

It is an innovative solution that can increase hydrocarbon production and reduce drilling costs. Innovative technology involves drilling a large number of parallel small diameter holes using a high pressure jet of water. Prof. Rafał Wiśniowski, dean of the Faculty of Drilling, Oil and Gas emphasizes that employees of the Faculty have been creating innovative solutions in drilling technologies for over 50 years. Thanks to this, it is possible to drill in new areas such as ocean depths or extraterrestrial celestial bodies. Currently, it is extremely important to improve existing methods and create new solutions in the field of acquiring liquid resources on our planet.

Polish-Chinese project of chemists from Toruń and Nanjing

2018-06-13

Chemists from the University of Toruń and Nanjing Tech University will jointly implement the project „Novel mixed matrix membranes (MMMs) for the separation of liquid and gas mixtures”.

On the Chinese side, the project will be led by Dr. Jin Wanqin from Nanjing Tech University, from the Polish side by Prof. Wojciech Kujawski. The Torun scientist deals with applications of membrane techniques, especially the separation of gases and vapors (which may be used, for example, in the extraction of shale gas), and pervaporation allowing the separation of liquid mixtures that cannot be separated by distillation (used in the production of biofuels). Professor Kujawski is also the coordinator of another project concerning innovative polymer membranes carried out together with the French University of Rouen, he also managed the Polish-Austrian project «Experimental and theoretical research on the mechanism of transport of organic solvents through membranes».

University of Białystok to develop student entrepreneurship

2018-06-14

The University of Białystok has obtained funding for its project within the program of the National Center for Research and Development „University of the Young Explorer”.

This time, primary school students will develop their skills in the field of creativity, innovation or entrepreneurship - informs the university in Białystok. As explained Dr. Karina Sachpazidu-Wójcicka, director of the Eastern Technology Transfer Center of the University of Białystok, the project aims to develop universal competencies necessary on the labor market in the future. The university has received over PLN 343 thousand for this project. The educational part of it assumes the implementation of three modules: "I cooperate - I think - I solve"; "ABC of Entrepreneurship";

"My own start-up - from idea to implementation". Recruitment for the project will start in September. 144 pupils from elementary schools of the Podlasie Voivodeship will be able to take part in the program.

PM Gowin: Investing in artificial intelligence is always investing in a human being

2018-06-15

- Investing in artificial intelligence is always investing in humans - in those who are the creators of intelligent machines. And it provides the direction and sets priorities for us.

And for our government. Firstly, we must invest in talented people - said Deputy Prime Minister Jarosław Gowin during the Impact 18 conference. As the Minister of Science and Higher Education emphasized in his speech, a major civilizational change is taking place, and Poland must use its opportunities and potential in this global race. Poland has become a hotbed of technical talents, our developers are world leaders. We do great at computer Olympics, we get grants, our young scientists and IT specialists win over and over again in international competitions. The Ministry of Science and Higher Education tries to create the best conditions for their development - said Deputy Prime Minister Gowin.

Scholarship call for German scientists in Poland

2018-06-18

The Foundation for Polish Science launches the twenty-second call for the Polish Honorary Scientific Scholarship, within which well-known German scholars can come to Poland for several months studies. From 15 June to 1 October, Polish scientists may appoint foreign candidates for scholarships.

The scholarship is aimed at honoring the scientific achievements of the scholars and stimulating long-term cooperation between Polish and German researchers. It is the equivalent of the Humboldt-Forschungspreis, a prestigious award for foreign scholars of the well-known German Alexander von Humboldt Foundation. The Foundation aims to promote Poland as an increasingly attractive place

for practicing science for both Polish and foreign researchers - said Dr. Tomasz Poprawka, deputy director for program activity at the Foundation.

COST seminar at the University of Warsaw

2018-06-18

On July 2, at the University of Warsaw, a seminar on the European Cooperation in Scientific and Technical Research - COST will be held.

What is the COST program? How can a Polish scientist participate in COST program activities? How to join current activities (COST Actions)? These issues will be explained by Jadwiga Mrozowska, the main specialist in the Department of International Cooperation of the Ministry of Science and Higher Education. COST is a European Program for Scientific and Technical Cooperation (European Cooperation in Science and Technology) created by 36 European countries and Israel (as a cooperating state), whose most important task is to organize multilateral scientific and technical cooperation of member countries. Registration for the seminar: <http://bob.strony.uw.edu.pl/seminarium-cost-europejski-program-wspolpracy-w-dziedzinie-badan-naukowo-technicznych-european-cooperation-in-science-and-technology/>

PhD student at the University of Gdańsk awarded in the FameLab competition

2018-06-18

Paulina Jędrak, PhD student at the Faculty of Biology at the University of Gdańsk, received a prize from the Kosciuszko Foundation in the finals of the FameLab competition for a lecture „The secret of the elixir of youth” about the role of telomeres in the aging of the organism.

PhD student during the finals told the participants about the aging of the body and the role of chromosomal ends - telomeres in this process. Some cells, e.g. cancerous, produce an enzyme called telomerase, which rebuilds lost telomere fragments after each division. - In my speech, I was wondering if we could use telomerase to design new anticancer therapies or extend human life - explained the PhD student. FameLab is an international competition, during which the scientists face the jury and the audience to present their research work in three minutes speech. In Poland, FameLab is organized by the Copernicus Science Center.

PLN 40 million for Polish-Chinese research projects

2018-06-19

The National Science Center allocates PLN 40 million for researchers who want to implement Polish-Chinese projects under the new SHENG call.

The SHENG call for Polish-Chinese research projects is a novelty in the Center's offer. The Polish National Science Center and the Chinese National Natural Science Foundation of China (NSFC) signed agreement at the end of March this year in Beijing. - The direction of cooperation is not accidental. Establishing and strengthening relations with such an economically and scientifically active country as China will certainly contribute to the Polish academic environment - says Prof. Zbigniew Błocki, director of the National Science Center. The call for applications for Polish units will end on September 17, 2018. More: <https://www.ncn.gov.pl/ogloszenia/konkursy/sheng1>

Płock to finance research projects of the local Higher Vocational School

2018-06-20

Six lecturers from the State Higher Vocational School in Płock received over PLN 100,000 in the call of the Mayor of Płock for financing research grants within the „Cooperation with universities” project.

The aim of the call is to strengthen the scientific potential of the Płock region through the individual development of PhD holders. - Academic character of Płock has been created for years. These grants, however, are a very important element of this process - said the rector of the Płock university, Prof. Maciej Słodki, who believes that the results of scientific research will contribute to the development of scientific disciplines and research potential of the region, the development of local entrepreneurship and the increase of innovation and competitiveness of the Płock region.

Mazovia Region, Warsaw School of Economics and Warsaw University of Technology to launch consortium

2018-06-20

Representatives of the Warsaw School of Economics and the Warsaw University of Technology met the marshal of the Mazovia Voivodeship Adam Struzik to create a new scientific consortium.

The consortium of Mazovia and the universities won the highest score in the call organized by the National Center for Research and Development for research projects under the program «Social and economic development of Poland in the conditions of globalizing markets - GOSPOSTRATEG» in the category «Middle income and average product trap». The meeting concerned the support of the harmonious development of the voivodship in order to strengthen the economic development of Mazovia subregions and reduce the disproportions between

the Warsaw metropolis and other parts of the Region. More: <https://www.mazovia.pl/aktualnosci/art,6578,rozwoj-mazowska-w-warunkach-globalizujacych-sie-rynkow.html>

The first Polish investment fund in Kraków to support scientific research

2018-06-20

Jacek Krupa, Marshal of the Małopolskie Region Jan Pamuła, president of the Małopolska Regional Development Agency and Prof. Tadeusz Słomka rector of the AGH University of Science and Technology in Kraków signed an agreement establishing the Małopolska Science Fund - Closed Investment Fund of Non-Public Assets.

The task of the first investment fund in Poland, modeled on the solutions from Cambridge, is the financial support for scientific research and promising projects emerging at the university - says Anna Żmuda - Muszyńska, press spokesman of the AGH University of Science and Technology. In the next four years, at least PLN 20 million will be allocated to the fund for the development of innovative projects.

Cooperation of Warsaw University of Technology with Veolia Energia Warsaw

2018-06-21

The Warsaw University of Technology signed a framework cooperation agreement with Veolia Energia Warszawa. The document was signed on behalf of the company by Jacky Lacombe - president of the board, general director of Veolia Energy Warsaw and by the Prof. Eng. Jan Szmidt, rector of the Warsaw University of Technology.

According to the provisions of the agreement, internships for students and PhD students will be launched. Both entities will organize scientific and technical conferences, symposia and seminars, as well as prepare publications and competitions. The activities of the Warsaw University of Technology and Veolia Energia Warszawa will also be carried out in the field of research and development of new technologies, with particular focus on the energy efficiency of urban and industrial systems, including the Intelligent District Heating.

Dardziński about research on zero-emission bus technology

2018-06-21

Research on the development of zero-emission bus technologies will change not only the profile of Polish cities, but also Polish scientists - said Piotr Dardziński, deputy minister of science and higher education in an interview with Energetyka24.

- We want to make a bus that allows the development of healthy, public-friendly public transport, that is simply a zero-emission bus - said Deputy Minister Dardziński. This should show the role of scientists to all inhabitants of big cities and small cities. And the scientists, who conduct research in those cities and who are maintained from public taxes, should remember that their research should be dedicated to local problems - he added.

Extended call for Strategy of Excellence applications

2018-06-22

The Ministry of Science and Higher Education informs that the deadline of the call for applications under the Strategy of Excellence - Research University has been extended until July 6.

The subject of the call is support for scientific research and analyzes aimed at realizing goals and assumptions of the long-term university development plan including activities increasing the international recognition of academic activities, strengthening research cooperation with high-reputable research centers internationally, improving the quality of education of students and PhD students, preparing comprehensive solutions for the professional development of university employees and improving the quality of university management. The allocated budget is PLN 20 million.

Candidates to apply for the National Center of Science Council

2018-06-25

On June 21, 2018, the Minister of Science and Higher Education announced the election of candidates for the members of the Council of the National Science Center, based in Krakow.

The candidates for the members of the Council of the National Science Center should be submitted by: «entities being scientific units with at least category A and entities representing the scientific community. Both categories are able to submit two candidates for each field of science. « The entity submitting the candidate, apart from his personal data, must describe the scientific achievements and provide information on the candidate's scientific activity, including the number of publications and the number of citations, describe the qualifications and professional experience useful to perform the function of a Council member and attach a list of completed or implemented research projects. Applications should be submitted by July 20,

2018. More: https://www.nauka.gov.pl/komunikaty/nabor-kandydatow-na-czlonkow-rady-narodowego-centrum-nauki_20180621.

Medical University of Lodz and Roche Poland sign a cooperation agreement

2018-06-26

Specialists from Roche Polska with scientists from the Medical University of Lodz will carry out research and development projects and look for new solutions supporting the sustainable development of health care. This is the purpose of the cooperation agreement signed between the Medical University of Lodz and Roche Polska.

Agnieszka Kosowska, director of legal affairs and communication at Roche Polska, during a press conference after signing the contract said: The role of academic centers is crucial as a partner in the implementation of joint ventures in health care. In cooperation with the Medical University of Lodz, we are launching the first program of PhD implementation. The University of Lodz cooperates with over 150 best universities and scientific institutes in Europe, such as: Karolinska Institute, Oxford, Cambridge, Imperial College, IESE Business School, University of Leuven and the Max Planck Institute. In turn, Roche Polska is one of the leaders among companies dealing in providing innovative solutions in the field of health care.

Researchers of the Gdańsk University of Technology win Siemens award for research achievements

2018-06-26

Professor Dariusz Mikielwicz and Dr Eng Jan Wajs from the Faculty of Mechanical Engineering at the Gdańsk University of Technology received the Siemens Research Prize, awarded for the particularly valuable and practicable results of scientific research.

Scholars of the mechanical department were awarded for their work: «Waste heat management from the power unit through the use of the ORC cycle reheated with steam from the vent and new high-performance heat exchanger structures». The Siemens award is granted to Polish scientists and research teams since 1995. The award promotes outstanding and practical achievements in the field of technology and research conducted by scientists of academic and non-academic institutions in Poland in the electrotechnics, energy, electronics, ICT, automation, rail transport, biomedical engineering and environmental engineering.

Warsaw University of Technology launches project Warsaw Design Factory

2018-06-27

The Warsaw Design Factory has been launched in the Center of Innovation Management and Technology Transfer at the Warsaw University of Technology. This is special program to help students and university staff to create innovations and develop cooperation with the environment.

The goal of Warsaw Design Factory is to build a modern and innovative university, interdisciplinary, creative teams of young scientists and fully engaged academic staff. The Warsaw Design Factory will host courses, workshops, trainings and programs for students and employees. The projects implemented here are to foster the development of cooperation between science and business and the teaching skills of the staff of the

Warsaw University of Technology as well as to develop students' professional skills. More: <https://www.wdf.pw.edu.pl/>

Call for Polish-Lithuanian research teams

2018-06-27

Polish and Lithuanian scientists submitted 253 applications within the first DAINA call organized by the National Science Center together with the Lithuanian Scientific Council. 16 projects for the total amount of almost PLN 15 million received financing. The Polish-Lithuanian research teams carrying out research in all scientific disciplines applied for the support.

The receivers of the DAINA 1 program will research the common cultural and natural heritage of Poland and Lithuania. In this context, they will follow the perception of the bison and the primeval forest in the 18th and 19th centuries. As part of astronomical research, scientists will organize a Polish-Lithuanian «hunt» for galactic black holes, while in life sciences they will research systems of long-range electrical signaling in plants. Researchers from Poland and Lithuania will also check how the adaptation to the environmental change from water to land had progressed. See the list of projects targeted at financing: <https://www.ncn.gov.pl/konkursy/wyniki/2018-06-25-daina1>

Report on research and development activities of Polish enterprises

2018-06-27

55 percent Polish companies conduct research and development - according to the latest report „R & D exemption - a milestone in the development of enterprises' innovation”, prepared for the Ayming Poland.

The report was prepared by the agency Kantar Millward Brown, which conducted a market research on R & D activities and the use of an exemption for research and development in companies. From 2018, entrepreneurs conducting research and de-

velopment activities can deduct as much as 100 percent of eligible costs. Previously, it was 50 percent. After more than two years of Polish proposal of exemption for research and development, as much as 35 percent entrepreneurs admitted that they did not hear about it. However, only 9 percent entrepreneurs deducted it in the fiscal year 2017. The report shows that as many as 45 percent of business representatives do not conduct research and development activities and do not benefit from exemptions. Companies lose the opportunity to obtain savings that could be spent on business development. See the report: https://www.ayming.pl/typo3conf/ext/almacg/user_upload/Ayming_Poland/PDF_download_files/Ayming_Raport_2018_Ulga_B_R_Krok_milowy_w_rozwoju_innowacyjnosci_przedsiębiorstw.pdf

Rzeszów University of Technology to support State Higher School of Eastern Europe in Przemyśl

2018-06-29

Both schools will cooperate in science, education, promotion of modern solutions, scientific research, innovation and entrepreneurship.

The agreement was signed by Prof. Tadeusz Markowski the rector of the Rzeszów University of Technology, and Dr Paweł Trefler, rector of the State Higher School of East European in Przemyśl. It assumes cooperation in the field of the quality of education, creating and conducting postgraduate studies, additional courses. The agreement also covers joint initiation, organization and development of contacts with foreign universities, in particular from Eastern Europe.

Call for proposals under the CORNET Initiative in an international competition for research project

2018-06-29

The call for proposals was launched within the 26th international competition for research projects under the CORNET Initiative. The scope of the competition includes research for the needs of specific industries.

Partners of Poland, represented by the National Center for Research and Development, are institutions from Austria, Belgium, the Czech Republic, the Netherlands, Japan, Canada, Germany, Peru and Switzerland. As explained the Ministry of Science and Higher Education, research for the industry within the competition is initiated by industry associations of companies and often carried out by specialized scientific units working for a specific industrial sector. They include mainly development works. The National Center for Research and Development contest has allocated EUR 750,000 as co-financing for the projects of selected Polish entities. More: <https://www.cornet.online/>

„Support the most talented young scientists”

2018-06-29

The Foundation for Polish Science has launched a campaign under the slogan „Support the most talented young scientists”. In this way, the foundation wants to raise money for its scholarship winners, the START program winners.

As the Foundation for Polish Science informs, its START scholarship program is the largest program for young researchers in Poland since 26 years. It is a financial challenge for the foundation. Every year, young Polish scientists receive over PLN 3 million. In order to ensure the continuation of the program, the Foundation launched a collection campaign and asked for financial support for individual and institutional donors. Each year scholarships are received by about one hundred researchers before the age of 30, representing all fields of science. In this way, the Foundation for Polish

Science helps the most talented young people in the difficult beginnings of their research career. Young scientists can be financially supported on the site:

Scholarships of the Minister of Science and Higher Education for outstanding achievements for PhD students

2018-07-02

By October 15, 2018, PhD students can apply for a scholarship from the Minister of Science and Higher Education for outstanding scientific or artistic achievements related to PhD studies or outstanding achievements in sports.

The Minister of Science and Higher Education awards 84 scholarships with the maximum limit of PLN 25,000. Minister's scholarships are awarded to PhD students at the request of the rector of the university. Applications will be evaluated using the point method. Points are awarded for individual scientific achievements, artistic achievements or achievements in sport. In order to assess applications, the minister may appoint experts. More: <https://www.nauka.gov.pl/komunikaty/informacja-na-temat-stypendiow-ministra-za-wybitne-osiagnieciecia-dla-doktorantow-na-rok-akademicki-2018-2019.html>

„Science for You” competition is underway

2018-07-02

The „Science for You” competition is one of the projects implemented under the third pillar of the so-called Gowin's strategy „Science for You” - the social responsibility of science. 1000 students and almost 150 teachers qualified for the first stage of the competition.

By July 24, 2018, the tutors of 73 teams will take part in on-line seminars, during which they will learn how to apply the scientific method, create educational aids themselves and how to prepare a draft research project. The authors of the best outlines will take part in the Summer School of Prototyping, which will take place in the last week of August 2018 - informs the Ministry of Science and Higher Education. More: <https://naukad-laciebie.gov.pl/kategoria/nauka-dla-ciebie/>

AGH University of Science and Technology student examines a modular guitar

2018-07-02

Monika Sobolewska, a student of acoustic engineering at the AGH University of Science and Technology in Kraków, conducts her master's thesis research on a modular guitar. The specialist construction is to enable determination of the influence of individual elements of the instrument on its acoustic parameters.

The construction of the modular guitar contains all the traditional elements of the classical guitar. The only difference is to combine the plates with the sides and the fixing of the neck. Instead of gluing the boxes, a toothed clip was used, inspired by the Japanese art of joining wood. Comprehensive studies of guitars are conducted in the anechoic chamber of the Department of Mechanics and Vibroacoustics at the Krakow University. The properties of the guitar were researched by a robot - a project of Mikolaj Wilczyński, a student of automation and robotics. The robot's task is to stimulate the guitar string in the right position and in a remote way. Thanks to automation, the solutions manage to obtain the proper repetition of the sound, which is the basis for an objective analysis of its parameters.

Studies of filamentous fungi at the University of Environmental and Life Sciences in Wrocław

2018-07-02

Ewa Kozłowska, PhD student at the Faculty of Biotechnology and Food Sciences at the University of Life Sciences in Wrocław, studies the use of filamentous fungi as biocatalysts. She received almost PLN 70,000 for her research project from the National Center for Science Prelude 14 program.

Entomopathogenic filamentous fungi are those that infect insects. In the project they will serve as biocatalysts for the transformation of steroid compounds. Steroids are widely used in medicine - they are the second most commonly used group of drugs after antibiotics. - Biocatalysts work just like our liver that produces enzymes that transform outer compounds into the body into less harmful molecules - I use as such «liver» the filamentous fungi that are the enzymes' provider. Thanks to these fungi, new compounds can be obtained with valuable biological activities, impossible to achieve by means of traditional chemical synthesis - says a PhD student.

One million PLN for a joint project of the University of Białystok and the University of Kaunas

2018-07-03

„Financial capabilities of the Jagiellonian states in the sixteenth century in terms of comparative approach” - this is the title of the project, which will be jointly implemented by scientists from the University of Białystok and the University of Kaunas in Lithuania.

Researchers will receive nearly PLN 1 million from the National Science Center, as part of the recently-finalized DAINA competition organized jointly with the Lithuanian Scientific Council. The head of the project on behalf of the University of Białystok

will be Dr. Piotr Guzowski from the Faculty of History and Sociology, on behalf of the Lithuanian side - Dr. Marius Sirutavičius. The main objective of the project is to examine the financial capabilities of the Kingdom of Poland and the Grand Duchy of Lithuania in the 16th century (1492-1586). The researchers want to calculate the amount of tax revenue, estimate the income of a monarch, examine the credit market at the time and flow of funds between the two Jagiellonian states.

Researchers develop a new method of palladium recovery from used catalysts

2018-07-05

Researchers from the University of Silesia, the Institute of Non-Ferrous Metals in Gliwice and the University of Adam Mickiewicz in Poznań have developed a new method of palladium recovery from used catalysts.

Researchers from three centers have developed an effective and cost-effective method of recovery of palladium from old catalysts by separating the element from the post reaction mixture by sorption with silica gel subsequently treated with sulfuric, nitric and hydrochloric acids, thereby recovering the palladium in the form of tetrachloropalladate, finally transformed into palladium dichloride - the most convenient raw material for the synthesis of homogeneous catalysts. Thanks to the solution, which has been patented, it will be possible to reuse the recovered metal for the production of new catalysts, which will reduce the costs of their production and will be less burdensome for the natural environment.

Student at the University of Rzeszów wins the Diamond Grant of the Minister of Science and Higher Education

2018-07-06

Bartłomiej Krzych, a second year MA student in Philosophy at the University of Rzeszów, received the prestigious Diamond Grant of the Minister of Science and Higher Education

- informs Dr. Maciej Ulita, spokesman for the Rzeszów University.

The idea of the Diamond Grant is to support exceptionally gifted students or graduates conducting high-level scientific research, so as to give them the opportunity to shorten the career path of science. As part of the program, the additional funds are intended for financing research conducted by highly talented students or graduates. Bartłomiej Krzych's project "The philosophical and theological thought of Fr. Augustine Jakubisiak (1884-1945)", was very highly rated by the Ministry and received funding PLN 180,000 and took 12th place out of 80 awarded projects. The scientific supervisor of the project is Krzysztof Bochenek, Prof. of University of Rzeszów.

Students of the Maria Curie Skłodowska University wins „Diamond Grants”

2018-07-09

Two students of the Faculty of Chemistry of the Maria Curie Skłodowska University in Lublin have won the „Diamond Grant”, a prestigious award of the Ministry of Science and Higher Education for graduates of bachelor's studies or students after the third year of master's studies conducting research and possessing outstanding scientific achievements.

This year, Minister of Science and Higher Education Jarosław Gowin awarded over PLN 16 million to finance the projects. The «Diamond Grant» program has been implemented since 2012 and provides young scientists with financial independence and paves the way to the PhD. The winners of the competition are Łukasz Baran with the project: «Computer simulations of selected molecules on solid surfaces» and Paweł Woźnicki with the project: «Combination of achiral coupling reaction type> P(O)H and cyclic vinyl esters and asymmetric Michael addition - source of chiral 1,2-functionalized cyclohexanes for applications in organic synthesis «.

Wrocław students to study the behavior of cancer cells in the stratosphere

2018-07-10

The project of students of the Wrocław University of Technology and the University of Wrocław - ARES (Astrobiology and Radiation Experiments in Stratosphere) was awarded by the 3M company and received 10,000. PLN for further development of research on the behavior of cancer cells in the stratosphere.

Students want to send a stratospheric balloon at a height of about 30 km above the surface of the Earth, sensitive to the radiation of human skin cells - normal keratinocytes and melanoma. At this height, environmental conditions are the same as on Mars. This will enable checking the effect of all high doses of radiation on the functioning of human cells. As part of the research, an attempt will be made to develop a biological radiation sensor based on skin cells and to check the influence of selected substances of natural origin in their use in pharmacological protection against changes caused by the action of electromagnetic radiation.

„Academic Forum” Competition for young scientists

2018-07-12

The editors of the monthly journal „Academic Forum” announced the 14th competition for the popular science article „Complicated and simple. Young scholars about their research „. The competition was supported by the Minister of Science and Higher Education.

The competition can be attended by people who are under 35 years of age: researchers of universities and research institutes, and PhD students. The science articles should promote in an accessible way participants' own scientific research or research in which they took part. The competition will accept texts in Polish with 10-12 thousand characters. Interested students are requested to submit their articles by 11 September 2018 with the note

«Competition» to the following address: Forum Akademickie, ul. Zana 38, 20-601 Lublin, room 407 See the competition rules: <https://forumakademickie.pl/wp-content/uploads/2018/06/Regulamin-XIV-Konkursu-Skomplikowane-i-proste.-M%C5%82odzi-uczni-o-swoich-badaniach.docx>

Polish prime minister awards scholars for scientific achievements

2018-07-12

The President of the Council of Ministers awarded 50 prizes for scientific, technical, artistic, post-PhD and PhD dissertations for 2017.

Prime Minister's prizes were established on the initiative of the Polish Academy of Sciences in 1994. They are awarded for scientific or artistic achievements, including outstanding academic, artistic or highly-rated achievements being the basis for holding the PhD or post-PhD titles, outstanding PhD dissertations and other scientific and technical achievements. This year's winners are Prof. Agnieszka Słowik and Prof. Tadeusz J. Popiela from the Collegium Medicum of the Jagiellonian University in Krakow, who received the first prize in the category of scientific and technical achievements for the „Małopolska program for the treatment of acute ischemic stroke with mechanical thrombectomy coordinated by the University Center for the Treatment of acute ischemic stroke - CITO”. In the category of scientific achievements, Prof. Ewa Górecka was awarded for outstanding scientific achievements in the field of chemistry and physics of liquid crystals, in particular for pioneering contributions to research on the structure and properties of liquid crystal materials. The full list of the winners: <http://bip.kprm.gov.pl/download/75/34943/Listapracwywyozone-ProzzaPresidentRadyMinistroww2018r.docx>

Polish research and development units implementing a cybersecurity project

2018-07-12

The Institute of Communications, Scientific and Academic Computer Network of the National Research Institute and the Institute of Innovative Technologies EMAG have started joint implementation of the cybersecurity project - KSO3C.

The result of the work will be the creation of an organizational structure and the development of uniform methods for assessing and certifying the security of ICT products and services. The KSO3C project, or «National Scheme of Assessment and Certification of Security and Privacy of IT Products and Systems Compliant with Common Criteria», is co-financed by the National Center for Research and Development.

Silesian University of Technology implementing the international BIOTRAFO project

2018-07-13

The Silesian University of Technology will cooperate with 13 research organizations from around the world in the BIOTRAFO project concerning the influence of temperature on the construction of power transformers. The project coordinator is the Cantabrian University of Santander in Spain.

In the BIOTRAFO project, researchers will analyze the influence of temperature on power transformer constructions in which biodegradable esters are used as cooling fluids. Environmental aspects and fire risks related to the use of these factors will also be examined. Money for research is allocated within the Horizon 2020 program as part of the Research and Innovation Staff Exchange funding scheme. The project manager is Prof. Jacek Smółka from the Institute of Thermal Technology of the Faculty of Environmental Engineering and Power Engineering at the University of Technology.

Five Wrocław universities create a research center - WRoclaw Concept

2018-07-13

Rectors of five universities in Wrocław signed an agreement on the establishment of the WRoclaw Concept Research Center. Its task is to implement international research and development programs and technology transfer to the Polish economy.

The Wrocław University of Technology (leader of the consortium) and Wrocław, Nature, Economics and Medical Universities joined the agreement starting the common initiative of universities from Wrocław and Saxony. The center's activity is to help consolidate the academic environment and institutions dealing with technological development and innovation. Its task will be to initiate, prepare and create conditions for the implementation of research, development, implementation and educational projects. The Center was established as the equivalent of Dresden-concept - a scientific research network founded by the Technical University of Dresden and four German scientific societies: the Fraunhofer, Max Planck, Leibniz and Helmholtz Institutes.

Physicists from the University of Lodz looking for a safer way to produce nuclear energy

2018-07-16

Researchers from the Department of Nuclear Physics and Radiation Security at the University of Lodz, participate in an international research project using the n_TOF device. The project aims to develop a safer way of producing nuclear energy. Research is being carried out at the European Organization for Nuclear Research (CERN) in Geneva.

The n_TOF device, which is located at CERN in Geneva, allows for accurate observation of neutrons, i.e. particles, occurring in the atomic nucleus. The n_TOF machine is the only such construction in the world. About 150 researchers from 43 scientific institutes and universities participate in the project.

Three nuclear physicists from the University of Lodz are the only Poles participating in it. The research of physicists from Lodz is financed from the grant of the National Science Center.

Information Refining Center - a new University of Warsaw spin-off company

2018-07-16

The Information Refining Center (CRI) is the latest spin-off company established at the University of Warsaw. Its founders are scientists from the Faculty of Journalism, Information and Bibliology. The company deals with Big Data analysis - large collections of information available in cyberspace. This is the eighth company that operates at the university and the first representing the humanities.

For 7 years, researchers from the Department of Information Technology of the Media of the Faculty of Information Journalism and Bibliology have been conducting research related to the Big Data analysis. Using thousands of robots, they collect information from the indicated Internet sources. Data is collected in thematic databases. There, they are refined and analyzed. Thanks to technology, the scholars managed to predict the results of the presidential and parliamentary elections in 2011 and 2015 and to analyze economic, technological and scientific trends. The founders of CRI are Prof. Włodzimierz Gogołek, Dr Wiesław Cetera, Piotr Celiński and Dariusz Jaruga. More: <http://uwrc.pl/nowy-spin-off-centrum-rafinacji-informacji/>

PhD student at the University of Life Sciences in Wrocław to rejuvenate cells

2018-07-16

Katarzyna Kornicka, PhD student at the Faculty of Biology and Animal Production at the University of Life Sciences in Wrocław, is implementing the project „Mitochondrial transfer as an innovative method of restoring stem cells to stem cells isolated from

adipose tissue suffering from metabolic syndrome (EMS)”.

The research of a Wrocław PhD student is a consequence of an earlier project, in which the researchers tried to rejuvenate stem cells of horses using resveratrol and 5-azacytidine. - In my project I want to rejuvenate the same cells, only by another method, through artificial transfer of mitochondria, which I isolate from «healthy cells» - explains Katarzyna Kornicka. She adds that in the future there is a chance to use this method in human medicine, especially in transplantology. For her project, the scientist obtained a grant - almost 140,000 PLN. The money is received from the Prelude 14 program of the National Science Center.

Young scientist creates a mathematical model of the low-temperature pyrolysis process

2018-07-17

Paweł Stępień, PhD student at the Faculty of Natural Sciences and Technology of the University of Life Sciences in Wrocław wants to create a mathematical model of the low-temperature pyrolysis process. The project „Energy balance of low-temperature pyrolysis of organic waste” received a grant from the Prelude 14 program of the National Science Center.

The aim of the project is to determine the energy consumption of pyrolysis for 30 types of materials included in municipal waste - including kitchen waste, paper, plastics and their mixtures using thermogravimetric analysis and differential scanning calorimetry. - In simpler terms, I will heat waste samples up to 500 degrees Celsius in an inert gas atmosphere and record their mass decreases and the amount of energy necessary to undergo the process - says PhD student. He adds that the research was undertaken because pyrolysis is considered as a future-proof method of thermal utilization of waste.

Polish-American cooperation agreement in biomedical sciences

2018-07-18

Health Minister Prof. Łukasz Szumowski and Alex Azar, secretary of health and social care USA, signed a cooperation agreement in the field of biomedical sciences between both countries.

Minister Łukasz Szumowski stressed that thanks to the agreement, Polish biomedical sciences and Polish scientists will gain a great opportunity for development and access to the resources of knowledge, experience and scientific research available to American institutions. The director of the National Academic Exchange Agency, Łukasz Wojdyga, who participated in the visit to the US, announced the launch of this year's new program of scholarships and financing the PhD studies, research programs for about one hundred Polish young scientists in medicine and biomedical sciences. The American side is interested in cooperating and using Polish experiences in infectious diseases, especially tuberculosis.

Nearly PLN 15 million from the National Science Center for scholarships for PhD students

2018-07-19

The National Science Center (NCN) will allocate nearly PLN 15 million for PhD students who start their research. The result of the ETIUDA provided funding for 147 scientists from 335 applicants. As part of the ETIUDA program, PhD students will receive 4.5 thousand PLN monthly. In addition, the internship holders can run their research at a foreign research center of their choice. To cover the costs associated with a stay abroad, they receive additional 9,000. PLN monthly.

As emphasized Prof. Zbigniew Błocki, director of NCN, increasing the mobility of scientists was one of the priorities from the very beginning of the National Center for Science, and the ETIUDA competition activates the younger generation of researchers. More: <https://www.ncn.gov.pl/konkursy/wyniki/2018-07-17-etiuda6>

Researchers from the Jagiellonian University awarded by the American Association of Clinical Anatomists

2018-07-19

Dr Przemysław Pękala and Dr Brandon Michael Henry from the Department of Anatomy of the Jagiellonian University Collegium Medicum received awards from the American Association of Clinical Anatomists - AACA. It is the largest and most prestigious association of scientists in the field of anatomy around the world.

Dr. Przemysław Pękala received the award for the best science poster (Biomechanics behind the age-related changes in the Anatomy of the Achilles Tendon), and Dr. Brandon Michael Henry for the best anatomical publication (Consensus guidelines for the flat reporting of study ethics in anatomical research within the framework of the anatomical quality assurance (AQUA) checklist). The winning works were created in the Department of Anatomy of the Jagiellonian University Collegium Medicum under the supervision of Prof. Jerzy Walocha and Dr Krzysztof Tomaszewski.

Ministry of Health to launch Medical Research Agency

2018-07-20

In September this year, a draft bill establishing the Medical Research Agency (ABM) will be ready - said health minister Łukasz Szumowski.

At the beginning, the Agency's budget, modeled on the British Medical Research Council, would amount to PLN 100 million. The Medical Research Agency will be divided into three divisions. The first division will deal with providing scientific grants for the implementation of research projects. The second division will conduct scientific research commissioned by the administration, and the third department will carry out the Agency's own research. - The agency will not be a bank to provide money - announced Minister Szumowski and added that conducting re-

search will be easier because the Agency will use the database of medical institutes that are subject to the Minister of Health.

Scientist of the Nicolaus Copernicus University in Toruń wins the competition in the TEAM program

2018-07-20

Dr Ireneusz Grulkowski from the Institute of Physics of the Nicolaus Copernicus University in Toruń will receive almost PLN 3.5 million to create a research team. The money comes from the competition of the Foundation for Polish Science in the TEAM program.

The grant will allow the employee of the Department of Biophysics and Medical Physics at the University of Toruń to carry out the project «Lenticular and vitreal light scattering and refraction for tomorrow's eye diagnostics». Dr Grulkowski heads a team in Bio-Optics and Optical Engineering in Toruń. He uses advanced techniques of optical engineering in the development of new imaging methods dedicated to biology and medicine. His team cooperates with many centers in the country and abroad. His research on the new generation of optical tomographs has been awarded by the American Optical Society of America.

Students of the Wrocław University of Technology receive over 400,000 PLN from the Diamond Grant program

2018-07-23

Joanna Doskocz and Paweł Holewa from the faculty of basic technical problems at the Wrocław University of Technology have become laureates of the contest of the Ministry of Science and Higher Education „Diamond Grant”.

Paweł Holewa was awarded for the project «Investigation of optical properties of epitaxial quantum dots InAs / InP with reduced surface density for applications in fiber-optic quantum communication», which will receive nearly 220,000. PLN funding. Joanna Doskocz was awarded for the project «Determination of the influence of the size of lipid aggregates on their mechanical and electrostatic properties». The student will receive over PLN 216 thousand for her research. The first «Diamond Grants» were awarded in 2012. In this year's seventh competition the winners were selected from among 214 young scientists in a two-stage competition procedures. They have gained over PLN 16 million in total for their research.

PLN 100 million for the grant program of the Foundation for Polish Science

2018-07-24

The Foundation for Polish Science will allocate PLN 100 million its new grant program called TEAM-NET. It is financed from the resources of the Intelligent Development Operational Program. The call for the competition in the program will be conducted from October 1 to October 31, 2018.

The aim of the program is to encourage Polish scientific units and their researchers to establish closer scientific cooperation. To obtain a grant, the applicant will have to prepare a joint interdisciplinary research project covering a minimum of two fields of science and implemented by at least 3 to 6 teams. The subject of the project should be in line with the

list of National Smart Specializations and take into account the implementation of R & D works so that the project's effects could be applied in economic practice. The project management will be supervised by the Management Team together with the Scientific and Economic Committee performing management and advisory functions. More: <https://www.fnf.org.pl/oferta/team-net/>

PhD holders can still submit nominations for the Dream Chemistry Award competition

2018-07-24

Young PhD holders of natural and technical sciences can take part in the Dream Chemistry Award. The winner of this year's competition will receive 10,000 euro and Dream Chemistry statuette. Nominations should be reported by the end of July. The organizers are the Institute of Physical Chemistry of the Polish Academy of Sciences and the Institute of Organic Chemistry and Biochemistry of the Czech Academy of Sciences.

Dream Chemistry Award is a competition aimed at researchers implementing a scientific project in the field of chemistry with physics, biology, medicine or material engineering. The finals of the subsequent competitions take place alternately in Warsaw and Prague. The competition can be attended by scholars under 37 who defended their PhD in 2011 or later. Candidates for the award may be submitted by researchers with a PhD or higher title and at least 10 years of experience in exact or natural sciences. More: www.dream-chemistryaward.org

Researchers from Piła studying algae diversity in Spitsbergen

2018-07-24

The Nadnotecki Institute of the Adam Mickiewicz University in Piła organized a research expedition to Spitsbergen (Svalbard, Arctic). The expedition results from the Piłski Institute's specialization in conducting studies

and research in the field of water management and environmental protection.

The research cruise on the Polish yacht S / Y Hi Ocean One is supported by the Nord Foundation, the city of Piła and the association of disabled divers Krok po Kroku HSA in Piła. The seven-member team will conduct research along the west coast of Spitsbergen to learn about the diversity of grooves (Dinophyceae, Dinoflagellata). They plan to learn the diversity of species of algae present in the water depth, dwelling on the bottom (including sperm forms), on the water-land border and in freshwater land habitats of Spitsbergen. The team has research experience in extreme cold water conditions in the Tatras as the researchers from 2013 dive in high-mountain lakes.

PLN 100 million for projects to improve the quality of life in the Lodz region

2018-07-25

The Lodz Region and the National Center for Research and Development (NCRD) will allocate PLN 100 million for projects that will improve the quality of life and support active and healthy aging.

The projects will be implemented as part of «joint venture» i.e. financing research and development works will be carried out by NCRD in cooperation with external entities. The NCRD chose the Łódź Voivodeship because this region has significant scientific and research potential. The National Center for Research and Development is looking here for partners to implement long-term undertakings that fit in with their development strategies - said prof. Maciej Chorowski, director of the National Center for Research and Development.

Koszalin University of Technology to launch research and implementation center

2018-07-25

The Faculty of Technology and Education at Koszalin University of Technology plans to create the research and implementation center for surface engineering, process design and processes simulation as well as vibroacoustic studies. The center is to be built by the end of 2019.

The innovations implemented after the launch of the Center will enable expanding the research and service offer of the university in the field of surface treatment, including heat, chemical and plasma treatment, and the electrical machinery, woodworking and furniture industries. - We are creating our Research and Development Center with aim to cooperate with the industry. We invest in instruments to expand our range of services. We will be able to specialize even better in the study of surface properties. This is a chance to develop solutions that will more durable and more resistant to abrasion - says vice-rector for science and development of the university - Prof. Eng. Witold Gulbiński.

University of Environmental and Life Sciences in Wrocław to improve the resistance of plants

2018-07-25

Dr Magdalena Wołoszyńska from the faculty of biology and animal husbandry at the University of Life Sciences in Wrocław will carry out the research project „Regulation of Arabidopsis thaliana photomorphogenesis by Elongator - a protein complex epigenetically regulating gene expression”.

«To put it simply, it's a complex that regulates gene expression, but does not change the DNA sequence, it only modifies chromatin. Such modifications can take place in various ways, and the complex works in such a way that it changes histones, which causes the chromatin looser and genes are more easily transcribed - explains the researcher. In her

research, for which she obtained a grant from the National Development Center, Dr Wołoszyńska will be modifying the Arabian thistle - a plant with a very small genome, which can be transformed relatively easily. The results of her work may be important in the future as a key to improve plant resistance to drought or low temperatures.

Silesian University of Technology to cooperate with Zakłady Urządzeń Komputerowych ELZAB SA

2018-07-25

Silesian University of Technology in Gliwice starts the cooperation with Zakłady Urządzeń Komputerowych ELZAB S.A. The partners will cooperate primarily in the implementation of research, development, implementation and production works and projects, as well as in the commercialization of developed solutions.

The cooperation will include projects related to pulse pump and other medical electronics devices, mechatronic and power devices, as well as electromobility - especially for charging stations and hydrogen production stations. The partners will also cooperate on projects in the field of industrial automation and other electronic and electrical devices. The agreement will allow the university and the company to use mutual knowledge and experience. One of the main goals of joint projects is to implement their results into business operations.

Modified yeast can help fight for environment

2018-07-26

Dr Aleksandra Mirończuk from the Faculty of Biotechnology and Food Sciences at the University of Life Sciences in Wrocław will examine the possibilities of the yeast *Yarrowia lipolytica* to biodegrade plastics. She received almost PLN 1.1 million from the National Science Center for her research.

Yeast will be genetically modified, artificial genes encoding enzymes that can hydrolyze plastics will be introduced to yeast cells. The combination of the natural

yeast properties of *Y. lipolytica* with the engineering of their metabolism should enable the biodegradation of plastics. Research can contribute to the fight against environmental contamination - I hope that we will achieve an effect in which modified yeast will exude enzymes that break down plastics, thanks to which they will build their own biomass, speaking colloquially, they will grow on these plastics - says Dr. Mirończuk.

University of Lodz holds the second Student Research Grants competition

2018-07-27

The effects of bisphenol A and nonylphenol on proliferation and gene expression, pop-petinism, silver-palladium bimetallic systems on graphene, a new space strategy for Europe or the perception and reception of sculptures by artists from the Makonde people are just some of the topics of winning projects in the second Student Research Grants competition.

81 research projects were submitted by students of the Łódź university and the winners received financing for a total amount of PLN 270,000. Grants awarded to students of the University of Lodz should encourage their further scientific work and prepare for applying for money from grants of other institutions. More: <http://www.studenckiegranty.uni.lodz.pl/>

Poland to receive 8 billion euro from the Horizon Europe program

2018-07-27

The budget of the Horizon Europe research and innovation framework program will amount to nearly 100 billion euros in the years 2021-2027.

This is the European Commission's proposal for this largest research and innovation program in Europe in history. According to preliminary estimates, up to EUR 8 billion may be allocated to Poland. Horizon Europe consists of three areas. Open Science (open science) is to support research projects conducted by scientists, fund scholarships and scientific exchanges, and invest in top-class research infrastructure. In turn, the area called Global Challenges and Industrial Competitiveness (global challenges and industrial competitiveness) is to support research related to social and industrial changes. Support in this area is to be divided into six thematic clusters: health, safe society, digitization and industry, climate, energy and mobility as well as food and natural resources. The last area is Open Innovation, which aims to make Europe the leader in innovation. Detailed distribution of funds to individual EU countries will be made in 2019.

Silesian University of Technology to examine the welding processes of stainless steel

2018-07-27

Silesian University of Technology will implement the i-Weld Project (Integration of advanced experiments, computation and data for Duplex Stainless Steel joining Innovation).

Researchers will conduct research on duplex stainless steel welding using a modern data exchange system. The aim of the project financed from the Horizon 2020 program as part of the Research and Innovation Staff Exchange (RISE) scheme is the development of new materials and processing processes. Within its framework, optimal welding

conditions will be established ensuring high mechanical properties and corrosion resistance. The obtained data will then be used to develop a new manufacturing technology. The coordinator of the project is the John Moores University in Liverpool, at the Silesian University of Technology, the research will be coordinated by Dr Eng Zbigniew Brytan from the mechanical department.

Projects of the University of Silesia co-financed within the „University of the Young Explorer“ call

2018-07-27

The National Center for Research and Development has announced a list of projects co-financed in the „University of the Young Explorer“ call under the Operational Program Knowledge Education Development. 11 projects will be implemented by the University of Silesia.

The aim of the projects will be to develop educational programs and to implement teaching activities for children and teenagers from 6 to 16 years of age. These activities serve to stimulate their cognitive curiosity, stimulate intellectual, axiological and social development, inspire creative thinking and develop interests and passions, promote the culture of innovation, and familiarize with the academic environment and the university as a place for scientific viewing of reality and integration of the local community around centers academic. The competition was open to public and non-public universities, which prepared projects that ensure the development of key competences and universal skills for children and youngsters.

Pomeranian Medical University in Szczecin launches the Progressio- Integrated development program

2018-07-30

The implementation of the Progressio - Integrated development of the Pomeranian Medical University in Szczecin has started. This support program will include 1927 students, 100 administrative and administrative staff and 2 teaching staff.

The aim of the project is to develop the university by expanding the educational offer corresponding to the needs of the economy, labor market and society, and to improve the functioning of the university by supporting organizational changes and improving staff competences. The project will include studies for medical, medical and dental students, medical analysis, biotechnology, nursing, physiotherapy, cosmetology and dietetics students, as well as specialized courses and study visits for nursing students, training for management and administrative staff and internship for teaching staff. The purchase of IT systems to manage the university and employing a career counselor are also planned.

University of Technology and Life Sciences in Bydgoszcz to cooperate with ARRK Shapers' Polska

2018-07-31

University of Technology and Life Sciences in Bydgoszcz has signed a cooperation agreement with ARRK Shapers' Polska Ltd.

The agreement assumes joint conduct of research, analytical, pro-innovative and implementation works, in particular in the field of consulting, research and scientific, design and construction work, searching for innovative solutions and products as well as designing, coordinating and implementing joint research and projects. ARRK Shapers' Polska Ltd is the largest and most modern tooling in Poland. The company employs over 270 people - mainly UTP graduates. It specializes in the production of high-lot injection molds for the automotive industry for Toyota, Jaguar, Mercedes, BMW or Porsche.

Four young Polish scientists receive grants from the European Research Council

2018-07-31

Four Poles received grants of the European Council for Scientific Research for their research. The grants amount to nearly 6 million euro.

This is a record in terms of the number of grants for Polish scientific institutions from the beginning of the Council's existence. The European Research Council (ERC) selected nearly 400 people with unique potential and scientific achievements out of 3170 applications. The grants were awarded in the ERC Starting Grants call under the Horizon 2020 program for the youngest researchers from 2 to 7 years after the PhD. The awarded Polish scientists are: Dr Piotr Achinger from the Institute of Mathematics of the Polish Academy of Sciences, Dr. Michał Németh and Dr Tomasz Żuradzki both from the Jagiellonian University and Dr Magdalena Winiarska from the Warsaw Medical University. More about the awarded projects: <https://informacje.pan.pl/index.php/serwis-media/2290-czterech-polskich-naukowcow-z-najwazniejszymi-grantami-w-europie>

Center for Renewable Energy of the University of Zielona Góra in the Ekostrateg program

2018-07-31

The Renewable Energy Center of the University of Zielona Góra in Sulechów received a nomination in the Ekostrateg 2018 economic program. The program aims to reward companies and institutions that care for the natural environment, looking for innovative solutions for the economy.

Ekostrateg is a nationwide image program aimed at companies in the energy sector and public institutions dealing with environmental protection. The originator of the program is the Polish Agency of Entrepreneurship. The basis for the nomination of the Renewable Energy Center are numerous activities in the field of research and development in the energy sector, as well as active cooperation with the

scientific community. The awarding ceremony will take place at the Poznań International Fair during the 6th Polish Congress of Entrepreneurship on September 24-25.

Equipment for almost PLN 9 million received by the West Pomeranian University of Technology in Szczecin

2018-07-31

The West Pomeranian University of Technology in Szczecin, by the end of 2019 will be supplied with a measurement laboratory and a welding plant for almost PLN 9 million. In this way, the university will develop scientific and researching potential in shipbuilding, offshore, energy or transshipment.

The metrology laboratory will be provided with the apparatus for measuring the dynamic properties of structures and large-size machines, IT infrastructure, equipment for diagnosing and controlling machines, for example portable machines and technology for strength and utility tests of new composite materials. A modern simulation system for thermal-deformation cycles of welding processes will be purchased for the university welding plant to evaluate the technology and materials used for welding. Modern equipment will be also received by the department of mechanical engineering and mechatronics.

Veterinary and biocosmetology are the most popular majors of the University of Life Sciences in Lublin

2018-08-01

Six thousand candidates registered for studies at the University of Life Sciences in Lublin in this year's recruitment. The university has prepared 1810 places at full-time studies.

The most popular field of study in this year's recruitment is veterinary medicine, for which there are 9 candidates for one place. Biocosmetology was also very popular, which is a new trend offered by the

University of Life Sciences. The number of volunteers exceeded the number of places for 7 times. Dietology and Animal behavior were also popular with 4 candidates per one place. More: <http://www.up.lublin.pl/glowna/?form=default&rid=15515>

Regenerative Medicine Center of the Warsaw University of Life Sciences to receive over PLN 66 million

2018-08-01

The Warsaw University of Life Sciences (SGGW) will create a Regenerative Medicine Center and an integrated set of laboratories equipped with innovative equipment for animal testing.

The investment will be possible thanks to EU support. As part of the Regional Operational Program for Mazowieckie Voivodeship 2014-2020, SGGW will receive PLN 66.6 million for this purpose. The Regenerative Medicine Center will implement projects on medicine and veterinary medicine, in the field of physiology and pathophysiology of diseases, research into diseases that threaten public health in a broad sense, and innovative research in the field of highly specialized regenerative medicine.

Scholarships for scientists of the Nicolaus Copernicus University in Toruń

2018-08-01

The Polish Academy of Learning awarded scholarships from the Lanckoronski Foundation and the Foundation Fundacji of Brzezia Lanckorońskich to researchers from the University of Toruń.

The prizes were received by Dr Mirosława Buchholtz from the Department of English Philology and the Department of English Literature for the project „Art and artists in the stories of Henry James”; Dr Dorota Grabowska-Pieńkosz from the Faculty of Pedagogical Sciences for the preparation of a monograph of the Pedagogical Society; Dr Krzysztof Kania from the Faculty of Historical Sciences for a scientific study of the life of August Zaleski; Dr Karol Kłodziński from the University Library for the study of the activity of slaves and freedmen in the provincial administration of the early Roman Empire; Prof. Szymon Olszaniec from the Faculty of Sciences for the preparation of a monograph of the Roman administration in late antiquity / early Middle Ages and Prof. Waldemar Rezmer and Prof. Aleksander Smoliński from the Department of Military History at the Faculty of Historical Sciences. More: <https://www.umk.pl/wiadomosci/?id=25546>

University of Poznan to implement projects financed by the Foundation for Polish Science

2018-08-01

Four projects of the Adam Mickiewicz University in Poznan (AMU) won in TEAM and TEAM-TECH competitions organized by the Foundation for Polish Science. The total amount of funding is over PLN 14.5 million.

In the TEAM category, three projects of the University will be co-financed. Two of them are carried out at the faculty of biology: under the supervision of Dr Krzysztof Sobczak - «RNA-based pathogenesis with the expansion of trinucleotide repeats - mechanisms and strategies of treatment» and of Dr Piotr

Ziółkowski - «Identification of chromatin factors affecting meiotic recombination in plants». The project «The most important concepts of historical thinking» of Dr Ulrich Timme Kragh from the faculty of modern languages also was awarded. In the TEAM-TECH category, the winner was the team of Poznan Science and Technology Park of the UAM Foundation for the research «New inductors of plant resistance and their use as an innovative approach to protecting plants from pathogens».

Gdańsk students want to explore the Polish countryside in Siberia

2018-08-02

of the University of Gdańsk want to start a research expedition to Wierszyna - a unique Polish village in Siberia. Enthusiasts of anthropology want to save from the oblivion the history of the village founded in 1911 by voluntary settlers from the Małopolska who emigrated in search of a prosperous life.

Wierszyna is a unique Polish village in Siberia - about two hundred kilometers north of Lake Baikal. Today, about five hundred Poles live in it. For over one hundred years they managed to preserve their native language and customs. Wierszyna inhabitants have a strong sense of cultural and religious identity - they speak and write in Polish and remember songs, stories, fairy tales and even jokes brought by their parents and grandparents from far-away Poland. Gdańsk students intend to conduct field studies involving conversations with residents, they want to ask them about their daily lives, worries and joys, fears and reflections and plans for the future. More: https://ug.edu.pl/media/aktualnosci/77622/studencka_wyprawa_wierszyna_2018

New organization of the Polish Academy of Sciences to search the dark matter

2018-08-02

Astrocent is a new research unit at the Nicolaus Copernicus (CAMK) Astronomical Center of the Polish Academy of Sciences. It will be the third CAMK scientific studio. The main re-

search topics will be gravitational waves and the search for dark matter using technologically advanced instruments.

The new unit will be created as part of the International Research Agenda (MAB) program implemented by the Foundation for Polish Science. The Astrocent project has received financing in the amount of over PLN 37 million (for five years) in the second open call in the MAB program. Astrocent laboratories will be located in the Innovation Management and Technology Transfer Center, in the main campus of the Warsaw University of Technology.

Wrocław Technology Park to cooperate with Pardis Technology Park in Iran

2018-08-02

Wrocław Technology Park will cooperate with Pardis Technology Park in Iran. The contract was signed during the innovation and technology exhibition Inotex 2018 - the Smart City Exhibition in Tehran was organized for 6 years by an Iranian partner.

Pardis Technology Park is the largest and oldest technology park in Iran. It deals with the fields of nanotechnology, biotechnology, robotics, laboratory and IT / ICT. - Signing the agreement is a positive signal for the development of Pardis relations with Poland, established in 2017 - when the park began talks with the National Center for Research and Development - said the head of the office of the Polish Investment and Trade Agency in Tehran Jarosław Kaczyński. He noted that during the talks and meetings, both sides emphasized the potential and opportunities of cooperation between the parks. The biggest increase in trade between Poland and Iran can take place in the pharmaceutical industry.

Silesian University of Technology to develop a device to assess the surgical drills

2018-08-02

University of Technology has established cooperation with Rudpol-OPA. The partners will jointly implement the device to assess the degree of wear of surgical drills.

The project will involve primarily the department of biomedical engineering. - For our department, wide cooperation is extremely important, especially since we have ambitious development plans. We want solutions from our laboratories to be revived for the benefit of industry - says the dean of the faculty, Prof. Marek Gzik. Under the agreement, the Silesian University of Technology undertook to perform a service and research work entitled „Development of a design, implementation documentation and implementation of a working prototype device for assessing the degree of wear of surgical drills“.

Recruitment of candidates for the Council of the National Center for Research and Development

2018-08-03

The Minister of Science and Higher Education asked the scientific and socio-economic and financial groups to indicate candidates for the members of the Council of the National Center for Research and Development.

The four members will be selected from the candidates nominated by the scientific community. The candidates should have at least a PhD degree and actively conduct research or development work. Three members will be appointed from professionally active candidates indicated by socio-economic and financial groups. Membership in the Council cannot be combined with membership in: Committee for Evaluation of Scientific Units; Scientific Policy Committee; The Council of the National Center for Science and the Central Commission for Degrees and Titles. More: <https://www.ncbr.gov.pl/o-cen->

[trum/aktualnosci/szczegoly-aktualnosci/news/ogloszenie-o-naborze-kandydatow-do-rady-narodowego-centrum-badan-i-rozwoju-48469/](https://www.ncbr.gov.pl/aktualnosci/szczegoly-aktualnosci/news/ogloszenie-o-naborze-kandydatow-do-rady-narodowego-centrum-badan-i-rozwoju-48469/)

Second UWERTURA call completed

2018-08-03

The National Science Center (NCN) has completed the UWERTURA call. About 21 researchers worked on internships in foreign scientific teams implementing grants of the European Council for Scientific Research, but only 8 were selected.

The UWERTURA program aims to support Polish researchers in successful applying for European funds and increasing their participation in the group of laureates of European Research Council (ERC) competitions. The call was to include the scientists with at least a PhD degree who were already running a research project funded by the National Science Center. The winners will take internships in foreign scientific teams implementing ERC grants, and after returning within 18 months they will prepare and submit their own grant application to this organization. See the ranking list of the Uwertura contest: <https://www.ncn.gov.pl/konkursy/wyniki/2018-07-31-uwertura2>

First winners of the Miniatura 2 competition

2018-08-06

The National Science Center informed about the first laureates of the second competition Miniatura 2 for scientific activities aimed at implementing basic research.

The call for proposals in the Miniatura 2 competition is conducted on a continuous basis and its assessment period is reduced to four months. In the first round of the competition, 30 applications were financed. Subsequent ranking lists will be published by the end of April 2019. The laureates include the priest Dr Adam Kubis from the Catholic University of Lublin for the application „Sin and disease. The nature of the relationship between disease and sin in the light of exegesis analysis J 5,14 and 9,2-3 „, Dr Łukasz Michalczyk from the Ignatianum Acade-

my in Krakow, who submitted the application entitled „Preparation of eye movement sequence and visual spatial attention“ and Dr. Małgorzata Andrea Domino from the Warsaw University of Life Sciences (SGGW) for the study „Evaluation of the mucosal fibrosis process in uterus of mares in the endometrosis at the gene level.“ More: <https://www.ncn.gov.pl/konkursy/wyniki/miniatura2>

Faculty of Physics of the University of Białystok receives the Grant of the National Science Center

2018-08-06

Dr Michał Matczak from the Institute of Molecular Physics of the Polish Academy of Sciences will conduct his research at the Department of Physics of Magnetism at the University of Białystok.

He received over 900,000 PLN for the project implementation in the SONATINA 2 competition of the National Science Center - said Katarzyna Dziędzik, spokesperson of the University of Białystok. The scientist will study the magnetic properties of materials that could be used to construct magnetic mass memories and logic systems using skyrmions. Skyrmions are magnetic quasi-particles of very small sizes, allowing to obtain high information storage densities. SONATINA is a competition aimed at scientists who have a PhD degree no longer than 3 years. In the second competition, 154 applications were submitted, of which 45 researchers will receive funding.

Young researchers to receive almost PLN 12 million within the programs of the Foundation for Polish Science

2018-08-06

The Foundation for Polish Science has held contests within the HOMING and POWROTY programs. Financing in the amount of nearly PLN 12 million will be received by 15 young researchers who will implement innovative projects in Poland.

The Foundation for Polish Science informs that, as part of the HOMING program, 11 young PhD holders will come to Poland from abroad to complete their post-PhD internship projects. The winners will receive grants in the total amount of almost PLN 9 million. The POWROTY program, on the other hand, will enable 4 researchers to return to academic work after a break related to parenthood and work outside of science. The winners of the POWROTY program will receive over PLN 3 million for conducting their research. Funds for financing grants come from the Operational Program of Intelligent Development. More: <https://www.fnp.org.pl/grantobiorcy-homing-konkurs-52018/> <https://www.fnp.org.pl/grantobiorcy-powroty-konkurs-52018/>

Gdańsk scientist from the inter-university faculty of biotechnology receives Grant from the TEAM program

2018-08-07

Professor Igor Konieczny from the intercollegiate department of biotechnology of the University of Gdańsk and the Medical University of Gdańsk will be the manager of the project „Conditional activation of proteases for targeted proteolysis in regulation of DNA replication”.

The project received a grant within the TEAM program competition of the Foundation for Polish Science. The amount of co-financing is almost PLN 3.5 million. In this year's TEAM program, co-financing of research projects with a total value of nearly PLN 45

million will be received by thirteen winners, selected from among 60 candidates. The rewarded researchers will carry out their projects in cooperation with a total of 38 foreign and 12 Polish scientific partners. Funds obtained from the Foundation will allow to finance 44 workplaces for scientists employed in projects and over 39 scholarships for young scientists (students and PhD students) involved in the implementation of research.

School of Molecular and Theoretical Biology at the University of Poznan

2018-08-07

Adam Mickiewicz University in Poznań has launched this year's School of Molecular and Theoretical Biology. 82 high school students from Poland, Belarus, Croatia, Spain, Moldova, Germany, Russia and the United Kingdom as well as from the Philippines and the USA take part in it.

During the classes, participants implement projects under the guidance of outstanding scientists. - The idea of the school is primarily to involve students in scientific research, conducted by experts from around the world. Each participant independently chooses a team of specialists with whom she wants to cooperate - says the head of the Evolutionary Biology Laboratory at the University, Prof. Jacek Radwan. Classes are conducted by about 100 lecturers - scientists, university staff, PhD students and people responsible for the organization of the project. They are scientists from Harvard University, Adam Mickiewicz University, the University of Edinburgh and the Moscow State University.

Students of the Warsaw University of Technology creating a yogurt substitute

2018-08-08

Students of biotechnology of the Warsaw University of Technology are working on a substitute for yogurt based on millet. The product is to be a local and cheaper competitor of yoghurts available on the market,

made of coconut, rice and soy milk - informs the Office for Promotion and Information of the Warsaw university.

Students within the «Herbion» Scientific Circle of Biotechnologists operate at the Faculty of Chemistry of the Warsaw University of Technology. They decided to create yoghurt based on cereal raw materials. They chose millet, because it has many valuable features and it is gluten-free. This also means that people who have celiac disease or gluten allergy could eat such yogurt. As students emphasize, millet is also cheap and easily available. Additionally, as other alternatives of plant milk – there is no lactose and cholesterol in it.

Scholars to study loan and guarantee funds at the University of Lodz

2018-08-08

The Department of Accountancy of the Faculty of Management at the University of Lodz is conducting research on the market of loan and guarantee funds in Poland.

The aim of the project «Financing the operation of loan and guarantee funds» is financed by the OPUS grant from the National Science Center and it is to determine the degree of financial independence of guarantee and loan funds in Poland. As part of the research, scientists from Lodz intend to conduct a series of analyzes, surveys and focus groups. The conducted research will allow to determine whether the loan and guarantee funds will be operated in the future on the current or even higher level when co-financing from the European Union programs ends.

PhD student from Iran at Gdansk University of Technology examining food contaminated with pesticides

2018-08-08

Mansoure Kermani is preparing a PhD thesis in analytical chemistry at Isfahan University of Technology in Iran. Her research is a part of an internship at the Department of Analytical Chemistry of the Gdańsk University of Technology and it may bring the creation of breakthrough methods for detecting substances threatening human health in water and food.

The student began writing her PhD thesis on the preparation of nanostructural sorbents for studying the presence of pesticides in the environment through gas chromatography at the university in Isfahan. The project implemented in Gdańsk concerns the preparation of sorption materials in the SMPE technique (microextraction to the stationary phase) for the isolation of compounds essential for environmental protection, mainly of pesticides and herbicides. These sorbents will be hybrid materials based on a combination of porous silica and ionic liquids with different properties.

Five faculties of the Silesian University of Technology receive positive opinions for their implementation PhD programs

2018-08-08

The five faculties of the Silesian University of Technology received a positive evaluation and passed to the second stage of the competition organized by the Ministry of Science and Higher Education.

The Ministry awarded Faculty of Automatic Control, Electronics and Computer Science, Faculty of Chemistry, Faculty of Environmental and Energy Engineering, Faculty of Materials Science and Metallurgy and the Faculty of Transport. The universities applied for money for full-time PhD studies starting in the academic year 2018/2019, when education will be con-

ducted in cooperation with the PhD student's employers. The money will co-finance the costs of using the research infrastructure in order to implement the PhD student's research, as well as to finance the PhD scholarship during the PhD studies provided for in their program, but not longer than 4 years. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListWiadomosci&Page=1&WebPartTitle2=News&Filter1Field2=Identyfikator&Filter1Value2=2341>

Archaeologists from the Jagiellonian University discover in Israel a defensive wall from 5,000 years ago

2018-08-09

Researchers from the Institute of Archeology of the Jagiellonian University in Kraków completed the excavation season at the Tel Erani station in Israel with the discovery of a defensive wall from 5,000 years ago.

The spot investigated by the team from the Institute of Archeology is located near the town of Kiriath Gat and covers about 26 hectares. The discovery of a defensive wall about 11 meters thick may prove that the cities of southern Levant were built earlier than previously thought. This is the oldest building of this type in Israel. Archaeologists from the Jagiellonian University estimate that it was built around 3,300 years BC and is another proof that Tel Erani was a well-developed center before the arrival of the Egyptians. The project is financed by a grant from the National Science Center and carried out in cooperation with researchers from the Ben-Gurion University in Berszewo, the Israel Antiquities Authority and the University of Buenos Aires. More: https://www.uj.edu.pl/wiadomosci/-/journal_content/56_INSTANCE_d82IKZvhit4m/10172/140485607

PhD student at the University of Economics in Wrocław wins the ETIUDA competition

2018-08-09

Mariusz Maziarz, PhD student at the Ecological Economics Department of the Wrocław University of Economics, became one of the 39 winners of the ETIUDA 6 competition. He receives almost 75 thousand PLN for research the causality in contemporary economics.

The young scientist has already been noticed in other competitions. In 2016, he received a W. Styś scholarship for outstanding achievements in the field of social sciences and humanities. In 2016, he won, among others grant of the PRELUDIUM competition in which the National Science Center finances research projects carried out by people starting their careers. He is also the winner of the first place in the competition on the essay «Ethics in Finance. The Robin Cosgrove Award, organized by the Polish Bank Association. Representatives of various scientific disciplines applied for funds for research within the ETIUDA 6 competition. The most number of 152 applications were submitted in exact and technical sciences.

Winners of the FIRST TEAM competition

2018-08-10

The Foundation for Polish Science selected the winners of the fifth competition in the FIRST TEAM program. Thirteen young researchers received grants of over PLN 26 million to create their first research teams.

The FIRST TEAM program supports young researchers in building academic self-reliance. Each grant amounts up to approximately PLN 2 million and is intended for the implementation of team projects and undertaking the most interesting research challenges. Grants are financed from the funds of the Intelligent Development Operational Program. In the group of winners of the 5th competition, up to four scientists are associated with the University of Warsaw. Two grants of the Foundation were awarded to researchers from the Faculty of Physics and one from the Faculty of Chemistry and the Center of New Technologies of the University of Warsaw. See the list of winners and projects: <https://www.fnp.org.pl/grantobiorcy-first-team-konkurs-52018/>

Scientist at the AGH University of Science and Technology to study collective intelligence on the Internet

2018-08-10

Dr Rafał Olszowski from the Humanities Faculty at the AGH University of Science and Technology in Kraków, one of the winners of the SONATINA2 Science Scientific Center competition, will implement the project „Collective Intelligence on the Internet: Applications in the Public Sphere, Research Methods and Models of Citizenship Participation”. The researcher received a grant of over PLN 500,000 to finance the work.

The main research goal of the project is a critical review of the hitherto used methods of studying «collective intelligence» (CI) in terms of their adequacy for use in the public sphere - informs AGH University of Science and Technology. As part of his work, Dr Olszowski will provide practical analysis of

selected enterprises exhibiting CI features, carried out on the Internet and addressing issues belonging to the public sphere. It will also conduct an experiment using information software, where the behaviors of volunteers will be examined for the needs of the project.

University of Lodz becomes the leader in the second MINIATURA competition

2018-08-10

The most grants in the competition of the National Science Center MINIATURA were obtained by young scientists from the University of Lodz.

In the latest call of the MINIATURA, the University of Lodz received funding for 5 projects. The second and third places were taken by the Nicolaus Copernicus University in Toruń and the Catholic University of Lublin, which have earned respectively three and two grants. The awarded projects included, among others, the proposal of Dr. Szymon Wiśniewski from the Faculty of Geographical Sciences of the University of Lodz. He will examine how the behavior of Lodz residents regarding public transport has changed due to the limitation of trade on Sundays. For this project, the Lodz scientist will receive over 35 thousand PLN.

Seven PhD students of the University of Wrocław to participate in the ETIUDA competition

2018-08-10

Seven PhD students of the University of Wrocław won over 750,000 in total PLN from the National Science Center as part of the sixth ETIUDA competition.

The following projects will be financed: «Veterans in Spanish society in the 17th century» by Paweł Szadkowski; «Personal items made of bones dated to the early Bronze Age: materiality and meaning» Kinga Winnicka; «Deliberation in the hermeneutic perspective. From the theory of language to the political practice» by Wojciech Ufla; «Cognitive

and personality correlates of olfactory memory» by Agnieszka Sabiniewicz; «The role of metalloproteinases in shaping long-lasting synaptic plasticity and excitability of the neuronal network in the CA1 area of the hippocampus of mice» by Patrycja Brzdąk; «Characteristics, optimization and application of Zn²⁺ + ion-dependent interactions» by Anna Kocyla and «Application of algorithmics in the context of selected social and economic issues» by Krzysztof Sornata.

Warsaw University of Life Sciences to launch the Innovative Center of Nutritional Sciences

2018-08-13

- In the area of agriculture industry, a technology race is under way. In this race Poland will not be staying at the back. That is why we support research aimed at the development of this extremely important sector - said Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education, during the signing of the agreement enabling the construction of the Innovative Nutrition Center of the Warsaw University of Life Sciences.

Under the agreement signed by Deputy Prime Minister Jarosław Gowin, the Minister of Agriculture Jan Ardanowski and the Rector of the Warsaw University of Life Sciences, Prof. Wiesław Bielawski, Ministry of Science and Higher Education will allocate 40 million PLN for the construction of the Innovative Center of Nutritional Sciences. According to the Ministry of Science, the investment assumes the creation of a didactic-laboratory facilities intended for conducting scientific and educational activities in the field of human nutrition science. The center will also be equipped with a unique laboratory enabling conducting world-class research. The investment is to be completed by 2022.

Agreement on scientific cooperation between the Nencki Institute and Siemens Healthcare

2018-08-13

Professor Agnieszka Dobrzyń, director of the Marcel Nencki Experimental Biology Institute of the Polish Academy of Sciences and Joanna Miłachowska, a member of the management board of Siemens Healthcare, have signed a framework agreement on scientific cooperation.

The contract signed between the Nencki Institute and Siemens is aimed at establishing general principles of cooperation between these institutions. The agreement also includes the use of a magnetic resonance scanner in the Brain Imaging Laboratory, for the implementation of joint scientific projects. The principles included in the contract allow for the implementation of scientific and implementation projects based on Siemens Healthcare techniques not yet commercially available.

Two PhD students of the Silesian University of Technology become laureates of the ETIUDA competition

2018-08-13

Two PhD students of the Silesian University of Technology have been among 64 winners of the ETIUDA competition in the field of exact and technical sciences. They will receive funding from the National Science Center for the implementation of their research projects.

Małgorzata Burek from the Faculty of Chemistry will receive PLN 120,700 for the implementation of her project «Hydrogels containing trehalose - research on synthesis, characterization and biomedical use». Wojciech Uchman from the Faculty of Environmental and Energy Engineering will receive PLN 108,656 for the project entitled «Experimental and computational determination of performance characteristics and efficiency of the micro-cogeneration system».

ETIUDA is a competition for scientists taking their first steps in the research. Within its program, PhD candidates receive scholarships of 4.5 thousand PLN monthly. The laureates also have the opportunity to complete an internship at a selected foreign research center.

University of Gdańsk to cooperate with the Port of Gdansk

2018-08-13

Cooperation in the field of student internships, research and development projects, organizing training and conferences, as well as knowledge transfer and commercialization of research results - these are the main assumptions of the agreement between the University of Gdańsk and the Port of Gdansk - said Beata Czechowska-Derkacz, a spokesman for the university.

The agreement will allow to organize the internships for outstanding students, as well as trainings within the expert knowledge and experience of the University's academic staff. The area of joint activities also includes research and development projects as well as support for scientific research relevant to maritime economy. Joint scientific conferences and symposia will also be organized. The agreement is another initiative within the framework of the University's cooperation with public institutions, enterprises and organizations in which the university offers its scientific-research and organizational potential.

12 projects of students from the University of Warsaw awarded in the competition „The best of the best! 3.0 „

2018-08-14

In the program „The best of the best! 3.0” 98 projects were recommended for funding. 12 projects were submitted by students of the University of Warsaw.

The program «The best of the best! 3.0» is addressed to outstanding students who have a plan

of their research. It assumes mainly financing their participation in international conferences or competitions. The beneficiaries of the competition will receive over PLN 11 million. Among the awarded projects were: Expanding knowledge and presentation of research results in the field of nucleotide chemistry and biology and nucleic acids through participation of members of the Scientific Society of Biological Chemistry «Nucleotide» in international scientific conferences (Center of New Technologies of the University of Warsaw), Preparation and participation of the Warsaw University team in international robotics professions (Faculty of Physics) and Development of a system supporting speech generation in patients after laryngectomy using artificial intelligence methods (Faculty of Psychology).

Researchers at the University of Wrocław to study migration processes

2018-08-14

Dr Patrycja Matusz-Protasiewicz and Prof. Leszek Kwieciński from the Department of Strategic and European Studies at the Institute of International Studies of the University of Wrocław received funding within the Horizon 2020 for the ADMIGOV project - Advancing Alternative Migration Governance.

The project concerns migration management in the European Union as the impact of globalization on migration and Europeanisation processes, protection of human rights, international law and systemic approach to migration as a new type of public policy and intergroup relations. The surveys will also cover sending non-EU migrants. The project is managed by the University of Amsterdam. The consortium consists of 13 entities, including universities, international and non-governmental organizations. This is a RIA (Research and Innovation Actions) project, which means that it is financed by the EU. The total budget is almost EUR 2.8 million.

Scientists of the Wrocław University of Technology win scholarships from the National Science Center

2018-08-16

Eight researchers from the Wrocław University of Technology received scholarships within the Etiuda competition.

The rewarded scientists are Marta Kolonko for «Molecular analysis of C-terminal regions of Methoprene tolerant and Germ-cell expressed proteins from *Drosophila melanogaster*», Dominik Drabik for «Development of experimental methods to determine the mechanical parameters of lipid membranes», Karolina Orłowska for «Metrology of optomechanical interactions with MEMS microelectromechanical systems», Arkadiusz Jędrzejewski for «Non-equilibrium critical phenomena and phase transformations in dynamic spin models», Filip Formalik for «Influence of phonon dynamics on structural changes and adsorption in hybrid nanoporous materials», Mateusz Szatkowski for «Generation of exotic light field states with the use of spatial light modulators», Adam Mielnik-Pyszczorski for «Modeling of the kinetics of charge and spin carriers in conjugated semiconductor nanostructures» and Paweł Widomski for «The influence of hybrid layers on durability of forging tools». More: <http://pwr.edu.pl/uczelnia/aktualnosci/granty-naukowe-dla-naszyc-mlodych-wzaczy-10944.html>

Projects of the Polish Energy Group co-financed from the National Center for Research and Development

2018-08-16

The PGE Group received PLN 27.5 million to implement innovative projects under the Electricity Sector Research Program. The Group received grants from the National Center for Research and Development for 6 projects.

One of them is designing a robot for inspection of power boilers fueled by the ground coal. Also, pro-

jects of „Seasonal heat accumulator using thermochemical transformations and supplied from renewable energy sources”, and „Developing a system of autonomous reduction of the effects of failures in the power grid” will be subsidized. The Group obtained co-financing for the „Installation of ash solidization in a hybrid boiler furnace” as well as „Development of an intelligent low-voltage network reconfiguration system with a support system for assembly services” and a project for „Monitoring and control of the power system in terms of wind farm operation, extending their life and optimizing the impact on the environment”.

Foundation for Polish Science to support the commercialization of research projects

2018-08-17

The Foundation for Polish Science organizes on Tuesday 18 September an information meeting on the commercialization of research projects. The meeting is addressed to the winners of Foundation competitions and members of their research teams who implement their projects under the Intelligent Development Operational Program.

The participants will learn about how apply for an additional grant for commercialization of their research results. They will also learn about other support tools, such as the acceleration of business ideas or investment funds available for scholars. The meeting will end with a discussion on the chances and barriers in entrepreneurship of scientists. Experts in the field of combining research and business activities will take part in the final part of the meeting. Registration for the meeting at: <https://www.fnp.org.pl/formularz-rejestracji/?eid=20&eis=nsbyw-73fjg>

Three scientists from the Nicolaus Copernicus University become the laureates of the Miniatura 2 competition

2018-08-17

The scholars of the Nicolaus Copernicus University in Toruń became the laureates of the Miniatura 2 competition of the National Science Center. The Center supports the implementation of basic research.

Dr Maciej Serowaniec from the law and administration department will receive PLN 6 490 for the project «The Supreme Audit Institutions in the Constitutional Systems of the Member States of the European Union»; Dr Brygida Świeżawska from the faculty of biology and environmental protection will get PLN 49,665 for preliminary studies on the project «Determination of the glutamic acid content in ATP binding by the catalytic center of adenylate cyclases from *Arabidopsis thaliana*» and Dr Eng Wojciech Zalewski from the faculty of economic sciences and management will receive 40 590 PLN for preliminary research „Support of logistic processes in road transport with the use of telematics systems”.

Scientists from the Warsaw University of Life Sciences researching cancer

2018-08-20

The Faculty of Veterinary Medicine of the Warsaw University of Life Sciences (SGGW) launched the Król Lab, in which scientists will conduct cancer research for 5 years. This has been made possible by the grant of the European Research Council in the amount of EUR 1.4 million, which in 2016 was awarded to Dr Magdalena Król, Prof. Warsaw Agricultural University.

The research conducted in the Król Lab laboratory is aimed at explaining the biological phenomenon discovered by Prof. Magdalena Król. Thanks to many years of scientific work related to cancer research, she discovered that certain cells of the immune system give cancer cells a specific group of proteins. This mechanism may probably be used in oncological practice for the precise delivery of cancer-destroying drugs directly to the tumor.

Projects of scientists of the Krakow University of Technology awarded in the „Leader” program

2018-08-21

Three projects from the Faculty of Chemical Engineering and Technology of the Krakow University of Technology were awarded in the ninth „Leader” program organized by the National Center for Research and Development.

The Center awarded: project «Development of a method for the preparation of biohybrid hydrogel materials incorporated with a nanocarrier system - a drug as multi-compartmental dressings enabling the treatment of Psoriasis» by Dr Eng Katarzyna Bialik-Wąs, project «Osteochit3D - personalized bioactive 3D printed sponges for advanced bone tissue repair in dentistry» by Dr Eng Marek Piątkowski: and the project of Dr. Jolanta Pulit-Prociak «Development of a method for the preparation of non-toxic active substance carriers based on nanomaterials». Each project was co-financed with PLN 1.2 million.

PhD student at the University of Lodz to examine trade on the Internet

2018-08-21

Agnieszka Jabłonowska, a PhD student from the Faculty of Law and Administration of the University of Lodz, will examine the Internet security, and in particular she will deal with the level of security offered to its users by internet platforms such as Couchsurfing.com, Airbnb.com or Blablacar.com.

Agnieszka Jabłonowska's project was awarded by the Foundation for Polish Science within the START program. As part of the scholarship, the laureate will also take a one-month internship at the University of Tilburg.

Diamond Grant for researching Lower Silesia as Harry Potter's world

2018-08-21

Adrianna Michno from the University of Wrocław received the Diamond Grant for the project „Lower Silesia as a world imagined by Harry Potter”. The subject of research will be Lower Silesia as a place for locating and concretizing imaginary worlds.

- I intend to reconstruct and analyze the motivations of the persons and entities participating in them—said Michno. She emphasizes that she chose Harry Potter because of the popularity of his world, the nature of his cultural phenomenon, similar to that accompanying «Star Wars» or the world of J.R.R. Tolkien and by the international status of events related to the Potter's universe taking place in Lower Silesia. Michno will research Wrocław's Quidditch team, magical camps at the Czoch's Castle, the role-playing game College of Wizardry, as well as convents and other events related to fantasy.

PhD student of the University of Gdańsk studying behavioral mimicry of butterflies

2018-08-22

Marta Skowron Volponi, a PhD student of the Faculty of Biology at the University of Gdańsk, received the award for the presentation of „Not solely morphological mimics: imitation of hymenopteran flight trajectories in clearwing moths (Sesiidae) of Southeast Asian rainforests” presented at the international entomological conference - XI European Entomology Congress in Naples.

The laureate presented the results of biomechanics research on the flight of butterflies from the family of the sightseers, conducted in cooperation with the University of California in Berkeley and the University of Macquarie in Sydney. After filming butterflies, bees and wasps, and comparing their flight trajectories, it turned out that bee- like butterflies fly slower, in an irregular way, similar to bees, while the gnat- like butterflies fly faster, more regularly and in a simpler way, just like wasps. This is the first research-based evidence for the occurrence of behavioral mimicry in this group of butterflies.

Scientists at the University of Silesia studying global warming in Spitsbergen

2018-08-22

A team of scientists from the University of Silesia set out on the trip to Spitsbergen. Researchers will investigate the reactions of Glacier of Hans and its surroundings to the intense warming of the climate. The first Silesian expedition was set out on Spitsbergen 40 years ago.

To understand the mechanisms of global climate change, the polar regions must be closely observed. The warming of Spitsbergen climate is almost three times more intense than in Silesia and Poland. Responses of the natural environment to higher air temperatures are clearer and they anticipate changes in Polish latitudes. Accurate study of these changes makes it easier to predict the effects of global warming. Mateusz Czapla - geodesist, Dominika Bałdys - geographer, and Paulina Waleczek - graduate student specializing in quantitative glaciological research will use the latest methods - scanning, drones, automatic digital cameras and recorders of environmental parameters to research global warming. More: <http://www.us.edu.pl/dossible-cia-gle-tam-wracamy-40-lat-wypraw-polarnych-uniwersytetu-slaskiego>

Students of Collegium Medicum of the Jagiellonian University to learn how to develop new medicines

2018-08-23

Drug Discovery & Development is a new field of study which will be launched in the next academic year at the Pharmaceutical Department of Collegium Medicum of the Jagiellonian University in Krakow. The education program includes the identification and development of new medicines.

The cooperation of academic circles with the largest and most innovative Polish pharmaceutical companies is an opportunity to provide the pharmaceutical and biotechnology sector with high-quality

specialists. Polish pharmaceutical company Adamed is one of the companies that support a new study by shaping the program, lecturing specialists and organizing internships. More: www.ddd.farmacja.cm.uj.edu.pl

Polish and Lithuanian scientists to study deformations in oxide proton conductors

2018-08-23

Researchers from the Faculty of Technical Physics and Applied Mathematics of the Gdańsk University of Technology and the Faculty of Mathematics and Natural Sciences of the Technical University of Kaunas will study deformations in oxide proton conductors. The project received almost 660 thousand PLN in the first competition of the National Science Center and the Lithuanian Scientific Council - DAINA.

The aim of the project is to investigate the impact of deformation on thin layers of a promising subtype of ion-conducting materials, i.e. proton conductors, which have not yet been tested in this respect - says Prof. Dr Eng Maria Gazda, the project manager. The impact of mechanical deformation on electrical conductivity in metal was observed over 160 years ago. Conscious manipulation of electrical and chemical properties through mechanical deformation is called «deformation engineering» and is used in commercial semiconductor devices and new classes of materials.

Scientists from the Wrocław University of Technology receive over PLN 4 million for research

2018-08-23

Three researchers from the Wrocław University of Technology will receive funding for their innovative projects as part of the ninth „Leader” program of the National Center for Research and Development.

Money will be received by scientists from the university's mechanical department: Dr Eng Rafał Mech for «Magnetostrictive-nano-crystalline composite materials for use in the field of energy recovery and transformation» (co-financing amount PLN 1 193 550); Dr Eng Patrycja Szymczyk for «Incremental production of individualized medical devices based on polymeric biomaterials» (PLN 1,195,000) and Dr Eng Adrian Zakrzewski for «Process control of material treatment with a laser beam using chromatic aberration» (PLN 875,000). The Leader program is addressed to young researchers who want to gain experience in managing the implementation of a research project and improve their competences in building, managing and directing their own research team.

Scientists from Toruń become laureates of the Sonatina 2 competition

2018-08-23

Dr Nicolas Peschken from the faculty of physics, astronomy and computer science and Dr Michał Złoch from the Interdisciplinary Center of Modern Technologies of the Nicolaus Copernicus University in Toruń become the laureates of the Sonatina 2 competition of the National Science Center.

Dr Peschken will receive over 600,000 PLN for the implementation of the project «The impact of cosmic space-driven winds on disk galaxies and the evolution of their angular momentum», and Dr Złoch will obtain over 950,000. PLN for the project «The use of MALDI-TOF / MS technique in monitoring and rapid diagnosis of the development of diabetic foot infection». The Sonatina 2 competition is aimed at scientists who have a PhD degree no longer than 3 years. In this year's competition, 154 applications were submitted and funding was granted to 45 researchers. The whole project budget is over PLN 30 million. As part of the grant, the laureates are paid within his Polish scientific organizations, their research projects are supported and they are provided with an internship at a foreign scientific center lasting for 3 to 6 months.

National Science Center in 2017 awarded over 1.1 billion PLN to scientists

2018-08-24

The National Science Center (NCN) summarized the competitions organized in 2017. At that time, NCN announced and settled 12 competitions. As part of the announced competitions, the NCN received over 10,000 applications, and 2,940 of them were qualified for funding. The total amount of granted financing amounts to PLN 1.1 billion.

The most popular competition in the NCN's offer last year was OPUS. In its two parts, the Center received over 3.6 thousand applications to grant financial support to 890 in the total amount of over PLN 694 million. The second place is taken by PRELUDIUM, under which over 2.3 thousand non PhD researchers applied for funding. Thanks to the NCN support, almost 700 scholars will carry out their research and receive support in the amount of almost PLN 79.2 million. The most of funds in competitions was awarded by the National Science Center last year to scientists conducting research in voivodships including the strongest academic centers: Mazowieckie, Małopolskie and Wielkopolskie Regions.

Foundation for Polish Science to launch a new call TEAM-NET

2018-08-27

In October 2018, the Foundation for Polish Science starts a new call for applications within TEAM-NET project, implemented and financed from the Intelligent Development Operational Program.

As the Foundation for Polish Science informs, the aim of TEAM-NET is to encourage Polish scientific units and researchers working in them to establish closer scientific cooperation. In the TEAM-NET project, it will be possible to finance not one but a network of cooperating research teams that will be able to implement large-scale research and development projects of interdisciplinary character. Each team can receive financing up to PLN 3.5 million for 36 months. These funds can be spent for the salaries of leaders and

team members, scholarships, as well as the costs of implementing an interdisciplinary research program. The call for applications for the TEAM-NET will be conducted from October 1 to October 31, 2018. The contest's budget is PLN 100 million. More: <https://www.fnp.org.pl/oferta/team-net/>

University of Rzeszów to receive half a million PLN for the for improving the competences of primary school pupils

2018-08-27

The University of Rzeszów has signed a contract with the National Center for Research and Development for the project „University of Rzeszów for Young Explorers”. The amount of support for the University of Rzeszów will amount to PLN 483,272. The total value of the project is PLN 498,219.

According to Dr Maciej Ulita, a spokesman at the University of Rzeszów, the project will be implemented from October 2018 to December 2019 by the Rzeszów University in partnership with the association «EKOSKOP». The beneficiaries of the project will be 1258 primary school students from the Podkarpacie Region and the surrounding area. The main assumptions of the project are to support schools in developing pupils' competences and skills: mathematics and natural sciences, understanding, creativity, entrepreneurship, problem solving and team work.

Researcher from the University of Silesia to study extreme cyclones

2018-08-28

Dr Łukasz Pawlik from the Faculty of Earth Sciences at the University of Silesia is a laureate of the UWERTURA 2 competition announced by the National Science Center (NCN). He received more than 112 thousand PLN for his research of cyclones.

Dr Pawlik is implementing the WINDIMPACT research project. He conducts research on extreme

force cyclones, including their impact on biogeomorphological and soil systems. Thanks to the subsidy, the climatologist will hold an internship at the University of Reading in Great Britain. He will work there in a team headed by Prof. Sandy P. Harrison. The UWERTURA 2 competition is addressed to scientists with at least a PhD degree, who were managers of research projects co-financed by the National Science Center and plan to conduct a foreign internship. Thanks to this, they are given the opportunity to gain knowledge and experience in the international grant system.

Scientist from Toruń to investigate the star formation areas in the outer parts of the galaxy

2018-08-28

Dr Agata Karska from the Astronomy Center of the University in Toruń will receive PLN 2 million to create a research team. The grant comes from the competition of the Foundation for Polish Science in the FIRST TEAM program.

The money is allocated to the project «Laboratory of Molecular Astrophysics: regions of star formation in the outer parts of the Galaxy”. Researchers plan to identify the «pre-school» stars and their characterization through a series of astronomical observations using the best telescopes in the world. As part of the project, the first Polish research group dealing with astrochemistry (or molecular astrophysics) will be created. This is a dynamically developing interdisciplinary field of science investigating space chemistry in the world. The long-term goal of scientists and companies is to create a laboratory in Poland to design parts for the most important astronomical telescopes of the future. More: <https://www.umk.pl/wiadomosci/?id=25613>

Almost PLN 1.5 billion in the „Fast Track” program for entrepreneurs by the end of the year

2018-08-29

The National Center for Research and Development (NCRD) will allocate nearly PLN 1.5 billion by the end of 2018 for entrepreneurs within the „Fast Track” program.

- The «Fast Track» provides a specific support and concrete results contributing to the civilization and technological leap of our country. Since the beginning of the year, both large and small companies have submitted to us over 500 innovative projects, applying for a total co-financing of nearly PLN 4 billion. So we can see that the willingness to innovate is really big in Polish enterprises - says deputy director of NCRD Izabela Żmudka. The call for proposals in the competition for micro, small and medium enterprises will last until December 14. In the case of large companies and consortia, the leader of which is a large entrepreneur, applications can be submitted from September 3 to November 30. More: <https://www.ncbr.gov.pl/o-centrum/aktualnosci/partoly-aktualnosci/news/polska-na-szybkiej-sciezce-do-innowacji-49099/>

Polish scientists looking for the place of the greatest battle of antiquity

2018-08-30

Polish scientists from the Jagiellonian University and the AGH University of Science and Technology in Krakow are looking for the place of one of the greatest battles of antiquity won by Alexander the Great.

The Battle of Gaugamel, in 331, p.n.e. between the Macedonian-Greek armies under the command of Alexander the Great and the Persian army commanded by the king Darius III, led in effect to the collapse of the Persian empire. The research is financed by a grant from the National Science Center and conducted in today's Iraq, in cooperation with the Italian archaeological mission from the University of Udine. Their goal is to determine the exact

location of the Battle of Gaugamel in the light of multidisciplinary research. In addition to the sources of ancient, archival and contemporary cartographic data, satellite technologies will play an important role in research. More: <https://wiadomosci.onet.pl/swiat/gdzie-miala-miejsce-bitwa-pod-gaugame-la-ustalaja-to-polacy/zb7ymt9>

Poznań Science and Technology Park looking for new plant protection products

2018-08-30

A consortium of the Poznań Science and Technology Park (PPNT) and the Innosil company gained over PLN 4 million for research on plant inducers and their application. The money comes from the competition Team-Tech Foundation for Polish Science.

Research on plant inducers is aimed at developing and implementing a plant protection product that is safe for humans and the environment. The main principle is based on stimulating the internal immunity of the plant, not on the fight against the pathogen, as it is so far. The measure is developed as ecological and, at the same time, economical. Previous studies allow to obtain surprisingly good results with the minimum amount of active substance used. The project «New inductors of plant resistance and their use as an innovative approach to the protection of plants against pathogens» is conducted by Dr Eng Marcin Śmiglak from PPNT in cooperation with Prof. Henryk Pospieszny from the Institute of Plant Research.

Competition for financing international research projects on biodiversity

2018-08-31

In October 2018, the BiodivERsA consortium, which includes the National Science Center, will announce a competition for international research projects on biodiversity.

The BiodivERsA consortium consists of 22 agencies operating in 14 European countries and Brazil. The aim of this year's competition is to support research

projects that concern biodiversity and its impact on the health of animals, people and plants. The competition will be open to international research teams made up of scientists from at least 3 countries of the BiodivERsA consortium participants. The deadline for submitting pre-proposals will expire in November 2018 and project financing will start at the end of 2019. More: <http://www.biodiversa.org/1481>

IUSER program supports Polish electric power industry

2018-08-31

The National Center for Research and Development as part of the IUSER sector program co-finances innovations in the Polish power sector. The main objective of the IUSER program is to increase the international competitiveness of the sector of producers of intelligent devices and systems for generating energy as well as management of systems and elements of distributed energy.

The funded projects include, among others: a self-learning system that reduces energy consumption, an intelligent wind farm management system, water turbines in small hydropower plants and solar farms. Bartosz Konopacki from the National Center for Research and Development explained that EU regulations stipulate Poland to implement new energy production technologies that are not based on coal. This year, the National Center for Research and Development has spent PLN 27 million on investments in research and development projects in the field of power engineering.

Researchers from the Silesian University of Technology become laureates of the LIDER program

2018-08-31

Dr Eng Alina Brzęczek-Szafran from the Faculty of Chemistry and Dr Eng Błażej Tomiczek from the mechanical engineering department of the Silesian University of Technology became the laureates of the 9th program of the National Center for Research and Development „Leader”.

Dr Eng Alina Brzęczek-Szafran obtained PLN 1 196 250 for the implementation of the project «Innovative method of preparing lactams for acidic ionic liquids», and Dr Eng Błażej Tomiczek received PLN 1,180,000 for the implementation of the project «Development of composite materials with increased thermal conductivity for use as tools for plastics processing”. The Leader program is addressed to young scientists. Its aim is to broaden their competences in independent planning of work and managing their own research team during project implementation, the results of which may have practical application and have implementation potential. The maximum co-financing amount for the project is PLN 1.2 million.

Nicolaus Copernicus University in Toruń looking for new tools to fight cancer

2018-08-31

The research group from the Faculty of Chemistry at the Nicolaus Copernicus University will take part in the international project „Airborne Biomarkers for Colorectal Cancer” (ABC-Cancer), which aims to find a minimally-invasive tool for the diagnosis of colon cancer.

The consortium that will implement the project is: University of Maastricht (the Netherlands), which acts as a leader; IVV Laboratory of Process Engineering at the Fraunhofer Institute in Freising and Medical Clinics together with Polyclinic III of the University of Munich (Germany) and Nicolaus Co-

pernicus University in Toruń. The main goal is to develop new methodologies and standard operational protocols - including the unification of the methodology for the preparation and analysis of biological samples and the analysis of volatile organic compounds in the feces and intestinal gases and air exhaled by coupled chromatographic techniques and ion mobility spectrometry. More: <https://www.umk.pl/wiadomosci/?id=25601>

Chinese concern TCL to launch artificial intelligence center in Warsaw

2018-09-04

The Chinese concern TCL will open its largest foreign research center in Warsaw with aim to develop artificial intelligence research in which the Chinese want to cooperate with scientists from the University of Warsaw.

TCL is the third largest producer of televisions in the world. Over 100 scientists will carry out projects in Warsaw related to learning and understanding body language or image analysis. - It is about new functionalities that facilitate human interaction with devices that can be «installed» in home appliances - explained Bartosz Biskupski, head of TCL Research Europe. According to him, projects created in the laboratory will make a technological revolution. - We have focused on Poland because we need people with mathematical and algorithmic skills to work, and Polish scientists present the highest level – adds Bartosz Biskupski.

„Continuity and change in communication in contemporary Polish-German relations“

2018-09-04

The Polish-German Foundation for Science announces a competition „Continuity and change in communication in contemporary Polish-German relations“.

The contest participants should concentrate in their research on communication within contemporary Polish-German relations. The research can be devoted to the role of specific groups and social agents with the emphasis on the communication in the politics, the media and in civil society. Researchers from universities and other scientific institutions in Germany and Poland are invited to submit applications, in cooperation with the relevant institutions from the other country. The subsidy allocated to the project amounts up to 300,000. euro. The project may last from 24 to 36 months, and applications must be submitted in Polish and German by November 15, 2018. The Foundation will announce the decision on the grant by the end of April 2019 at the latest. More: <http://www.pfn.pl/pl/index.php>

New winners of the MINIATURE 2 competition

2018-09-04

New 95 researchers have been awarded in the MINIATURE 2 competition. They will receive a total of nearly PLN 3.25 million for the implementation of scientific activities such as preliminary research, pilot studies, queries, internships, scientific consultations and conference trips.

The laureates are Dr Beata Bielska from the Nicolaus Copernicus University in Toruń, who will receive nearly PLN 40,000 for the implementation of preliminary research in the project «Downloading and plagiarizing. Student culture of copying in terms of massification, commercialization, internationalization and diversification of higher education in Poland»; Dr Zofia Danuta Wóycicka from the Polish Academy of Sciences, who will conduct

a research trip for over 30,000 PLN within the project «Rescuing Jews during the Second World War in the narratives of European museums», and Dr Anna Szpakowicz from the Medical University of Białystok, who will receive 50 thousand PLN for pilot studies in the project «The role of new adipokines in the pathogenesis of atherosclerosis and «obesity paradox» in patients with ischemic heart disease».

Researchers from the University of Wrocław receive grants in the SONATINA competition

2018-09-04

Two researchers from the Faculty of Biotechnology of the University of Wrocław are awarded in the second part of the National Science Center competition – SONATINA.

Dr Joanna Hołówska's project «The role of mHIF protein in the organization of Mycobacterium chromosome and its impact on gene expression» was subsidized with PLN 819,795, and Dr. Agnieszka Strzałka received PLN 926,100 for the project «The role of interaction between HupA and HupS proteins during growth and response to stress Streptomyces bacteria». The SONATINA competition can be attended by people who obtained a PhD degree not earlier than three years ago. In the current competition, 154 applications were received, of which 45 were accepted, and their authors will receive more than PLN 30 million for their projects. The grant enables employing a researcher in a research unit, project implementation and internship at a foreign university lasting from 3 to 6 months. More: <https://uni.wroc.pl/nagrodzone-badaczki-z-uwr-w-konkursie-sonatina/>

Researchers from Białystok join the team for scientific cooperation with USA

2018-09-05

Vice-rector for medical science at the Medical University of Białystok, Prof. Marcin Moniuszko and Prof. Marek Konarzewski from

the University of Białystok joined the team for scientific cooperation with USA.

This team was created by the ordinance of the Minister of Health of August 2018. Under the Polish-American agreement, scientists from both countries will cooperate in the field of joint research and training. The priorities include: vaccine-preventable diseases and other infectious diseases, tuberculosis - in particular its multi-drug resistant strains and strains with enhanced drug resistance - pandemic flu, chronic diseases, cardiovascular diseases, malignant tumors, diabetes, respiratory diseases and dementia. Joint Polish-American research will also concern mental health.

National Science Center signs the S Plan

2018-09-06

From January 1, 2020, researchers carrying out grants, which are financed by national agencies, will have the obligation to publish the results of their work in scientific journals with open and free access. These are the assumptions of the so-called S-Plan signed by the National Science Center.

The preamble to the document «Coalition S for the implementation of full and immediate open access» includes assumption that «no science should be closed behind paid barriers». The signatories of Plan S are agencies financing research from Austria, France, Ireland, the Netherlands, Italy, Luxembourg, Norway, Slovenia, Sweden, Great Britain and Poland. Providing full and open access to the science is also supported by the European Research Council. More: <https://www.nature.com/articles/d41586-018-06178-7>

One hundred thousand PLN offered in the competition Polish Product of the Future

2018-09-06

The grant of 100,000 PLN is the main prize of the XXIth Competition „Polish Product of the Future” organized by the Polish Agency for Enterprise Development and the National Center for Research and Development.

The grant may be used for the development, promotion or internationalization of the Polish products. The main goal of the competition is building awareness of Polish brands, promoting and supporting the development of the most innovative products and technologies developed in Poland. Its participants may include scientific entities, entrepreneurs and consortia consisting of scientific units and entrepreneurs operating in Poland. The condition of joining the competition is presenting a new, innovative product or technology in one of three categories: Product of the Future by the scientific unit, Product of the Future by the entrepreneur, Product of the Future by a scientific unit and an entrepreneur. More: <http://www.parp.gov.pl/konkursppp>

Krakow scientists working on a new carrier of oncology drugs

2018-09-06

Researchers from the Krakow University of Technology are working on intelligent carriers of oncological drugs. Special molecules based on zinc and titanium oxides will allow the drug to attack cancer cells more accurately without damaging healthy organs and tissues.

Researchers from the University of Technology are supported by scientists from two other Krakow universities: the Jagiellonian University and the University of Agriculture. - Our goal is to create innovative carriers of therapeutic substances based on nanostructured metallic oxides, whose properties would allow their safe use in living organisms - said Dr. Eng. Jolanta Pulit-Prociak from the Krakow University of Technology, who manages the work of the re-

search team. The project is financed from the «Leader» program. The researchers received a grant from the National Center for Research and Development amounting to nearly PLN 1.2 million.

Over PLN 400 million from the National Center for Research and Development for security-related programs

2018-09-11

As part of security-related programs, the National Center for Research and Development (NCBR) will spend PLN 410 million in 2018 - said the deputy director of the Center, Prof. Eng. Aleksander Nawrat during the International Defense Industry Exhibition, which took place in the first week of September in Kielce.

The main objective of the Defense Exhibition is to promote Polish defense industry companies abroad. Many, among the presented solutions are financed by the National Center for Research and Development. As the NCRD informs, the most interesting solution for fair participants was the Model of a Hypothetical Two-Seat Lightweight Aircraft in the Configuration of a Combined Wing, which is tested in Nevada as part of the Polish-American cooperation. The second popular solution was «Passive Location System». It is an innovative airspace observation system that is undetectable for hostile systems.

Archaeologists from the University of Rzeszów investigating the Scythian stronghold in Podkarpacie

2018-09-11

Fragments of Greek amphorae, vessels, a dozen Scythian arrowheads and bronze ornaments are the discoveries of archaeologists from the University of Rzeszów in Chotyniec (Podkarpackie) found during the study of the settlement from about 2,500 years ago belonging to the Scythian family.

As Maciej Ulita, a press spokesman at the University of Rzeszow, said on the air of TVN24, that

currently the team of archaeologists is continuing research carried out last year in Chotyniec on the ash spot, located in the settlement from the early Iron Age. - With each layer of earth removed, it turns out that the discovered seat of the Scythian people hides many secrets. The sensation of last year was the Greek amphora for wine, which seems to be the only such artefact in Poland and became the hallmark of the Chotyniec expedition - added Dr. Ulita.

Students of the Medical University of Wroclaw receive co-financing for the cosmic project

2018-09-12

The Student Scientific Circle of Biology of Cancer Cell at the Medical University in Wroclaw won almost 320,000. PLN of funding for a research project on the protection of biological material for the needs of space missions.

The assumption of the awarded project is to send radiation-sensitive human cells (healthy and cancerous) to a height of about 30 km above the Earth's surface. This will enable checking the influence of sub-orbital conditions on the functioning of human cells including high doses of radiation. Students will also attempt to develop a biological radiation sensor based on human cells and to check the influence of selected natural substances in terms of their use in pharmacological protection against changes caused by electromagnetic radiation. The money will help in the implementation of laboratory tests and enable participation in courses and conferences. Young scientists want to cooperate with the European Space Agency. More: <https://www.umed.wroc.pl/content/nasi-studenci-w%C5%83d-najlepszych-z-najwy>

Mateusz Sokolski from the Medical University of Wrocław wins the grant from the European Society of Cardiology

2018-09-12

Dr. Mateusz Sokolski, assistant at the Clinic of Heart Diseases at the Medical University in Wrocław received a prestigious training grant European Society of Cardiology (ESC), which will allow him to develop knowledge and skills in the field of cardiology in a reputable clinic in Switzerland.

Dr Mateusz Sokolski is one of 11 this year laureates of the ESC grant, and one of the two awarded Poles, who can raise their qualifications in the field of cardiology through training in the better developed country. Dr Sokolski will be training at the Zurich clinic for 12 months. The condition of qualification, apart from the young age of the participant, was an impressive scientific achievement, which Dr. Sokolski performed under the supervision of Prof. Piotr Ponikowski - the promoter of his PhD dissertation.

European Technology Forum to start September 26 in Katowice

2018-09-12

On 26 and 27 September, the European Technology Forum will be held in Katowice, during which a group of specialists will discuss European research and technology policy. Plenary sessions and four thematic conferences are planned, including the „Industry 4.0” conference organized by the Silesian University of Technology.

The main goal of the Forum is to discuss the priorities of European science and technology policy and funding mechanisms for research and technological development, in particular those planned for implementation under the Horizon Europe program. Experts will discuss the promotion of creating different types of networks and partnerships - both by industry, science, and public authorities - to avoid

duplication of efforts and set common research and development goals. During the event, the goals of the Responsible Development Strategy for Poland in the field of research and innovation by 2020 and 2030, will also be presented. More: <http://euroforum.iztech.pl/forum>

Three Gdańsk high schools to carry out the DATA BRIDGE project

2018-09-12

Gdańsk University of Technology obtained financing for the new MOST DANYCH (DATA BRIDGE) project, which provides for the construction of a repository of Open Research Data to collect and share data generated during many research projects carried out at universities and scientific institutions.

The aim of the project is to increase the availability of research data financed by institutions supporting scientific activity and to establish a center of competence in this field at the university. The project received funding in the amount of PLN 26.7 million from the European Regional Development Fund and will be implemented by a consortium of Gdańsk University of Technology, as the leader of the project, as well as the University of Gdańsk and the Medical University of Gdańsk.

Young geologists from the University of Wrocław studying Iceland

2018-09-13

Students from the Scientific Circle of Geologists of the University of Wrocław began the science camp „Iceland 2018”. The purpose of the expedition is to describe and document photographic major geological sites in Iceland, take samples of rocks forming volcanoes Askja, Hekla and Katla, and create a geotourist guide.

- Through the guide, we want to share the knowledge about the origins of Iceland, its age, the reason why in one part of the island we encounter rocks with a relatively sour composition, others with a

more alkalid composition, however it would seem that Iceland abounds only in basalt rocks - explain participants. The group of 12 students is supported by Prof. University of Wrocław Marek Awdankiewicz - volcanologist, petrologist of igneous rocks from the Institute of Geological Sciences and Dr Honorata Awdankiewicz from the Polish Geological Institute of National Research Institute. Supervisors will watch over the scientific part of the trip. More: <https://uni.wroc.pl/mlodzi-geolodzy-z-uwr-odkryja-tajemnice-islandii/>

Cooperation between the Polish Naval Academy in Gdynia and Zakłady Mechaniczne „Tarnów” S.A

2018-09-14

The Naval Academy in Gdynia signed a letter of intent on cooperation with Zakłady Mechaniczne „Tarnów” S. A. The document concerns cooperation in the development and implementation of a new generation of materials for applications in the armaments and shipbuilding industries.

As a result of joint research, new effective technologies for the production of composite materials will be developed. It will be accompanied by searching for materials with unique properties, in particular resistant to piercing and with good corrosion resistance. The signatories of the letter have already cooperated within the framework of the Scientific and Industrial Consortium. Together with the Military University of Technology in Warsaw and PIT-RADWAR SA, they created the first Polish autonomous ship's weapon system to combat airborne, surface and shore objectives - OSU 35. The consortium received the prestigious award of the Polish defense industry 2018.

Krakow's scientists conduct innovative research in the field of regenerative medicine

2018-09-17

Scientists at the Collegium Medicum of the Jagiellonian University and the Krakow John Paul II Specialist Hospital are looking for a way to use a new type of stem cells to treat patients with cardiovascular disease.

The problem concerns hundreds of thousands of Polish patients for whom there is basically no good method of therapy. Heart failure is associated with a death risk of 50 percent in 5 years and, despite the continuous implementation of new drugs, there is only insignificant improvement of these indicators and the quality of life. Regenerative medicine is a chance for the patients after myocardial infarction to regain lost tissue and to protect those with chronic lower limb ischemia from amputation – said Prof. med. Piotr Musiałek from the Clinical Department of Heart and Vessel Diseases at the Krakow Specialist Hospital, who provides clinical trials assessing the effectiveness of the new therapy.

Researchers to receive PLN 530 million in calls of the National Science Center

2018-09-18

For the sixteenth time, the calls for OPUS and PRELUDIUM competitions begin, and for the fourteenth time it starts for the SONATA competition. In domestic competitions, a total of PLN 480 million is to be received by Polish researchers. In cooperation with the German Research Community, the BEETHOVEN CLASSIC 3 call and the new - BEETHOVEN LIFE 1. call will be launched. In international calls, scientists can obtain PLN 50 million. In total, there is a record pool of PLN 530 million to be received in open calls.

- We welcome the fact that cooperation with the German Research Community has been extended by a call in the field of life sciences. Thanks to this, the offer for researchers cooperating with the German side has been completed - says Prof. Zbigniew Błocki, direc-

tor of NCN. In turn, Prof. Janusz Janeczek, chairman of the NCN Council, emphasizes that in the OPUS, PRELUDIUM and SONATA calls «the level of applications submitted every year is getting higher and it happened that good applications were rejected due to insufficient budget of a given competition». - We wanted to increase the pool of funds, thanks to which more valuable projects will have a chance for implementation - explains Prof. Janeczek.

Deadline for submitting applications in the „Eagle of Innovation” to expire

2018-09-19

Until 30 September 2018 R&D companies can apply to the „Eagle of Innovation” call organized by the newspaper Rzeczpospolita and the National Center for Research and Development. This year, in addition to innovative projects implemented by companies in four categories, the organizers have added the Centennial Innovator category.

The main goal of the «Eagle of Innovation» is to select and reward companies conducting research and development, introducing new products and services to the market and achieving business successes. From the delivered applications the Chapter will select companies that successfully invest in innovation and thus are competitive not only on the Polish, but also on the European market. Scientists to investigate the American porcino invading Europe

2018-09-20

It is not known exactly how and when it got to Europe. The American porcino (boletus) began appearing in the north of Europe several years ago, and it can already be found in many places on the continent. It was seen on Bornholm, near Potsdam, and in the Polish Podlasie Region.

As said Dr Julia Pawłowska from the Faculty of Biology of the University of Warsaw, there is no definite an-

swer to whether it is invasive and whether it displaces other species, including our native mushrooms. - This cannot be said yet, because there is no adequate research yet. But we have plans to do such research - adds Dr Pawłowska and explains that it probably appeared for the first time on the Lithuanian coast, near Klaipėda, and it is spreading very dynamically throughout Europe. - You cannot tell why. Perhaps because yet «mushroom-eaters» did not discover it - I mean, for example, insects - explains Dr. Pawłowska.

Silesian University of Technology to create a modern coal mine with the company HMS Bergbau AG

2018-09-21

Silesian University of Technology has signed an agreement on cooperation with the German company HMS Bergbau AG. It will be mainly carried out in the areas of research, education and human resources. The partners decided to join forces to create a modern hard coal mine.

The University of Technology also agreed to educate HMS Bergbau employees, organize trainings using its own didactic base, perform expert opinions and analyzes, and provide engineering staff for a German partner. On the other hand, a German company will provide internships to students, organize recruitment of engineering staff from among the graduates of the University and enable students to write their diploma theses on topics related to the company's operations. Under the agreement, the new partners will also take joint actions to obtain financial resources, including EU funds, that enable the effective cooperation. More: <https://www.polsl.pl/Lists/Aktualnosci/Uczelniane/PokazWiadomosc.aspx?WebPartTitle=ListWiadomosci &Page=1&WebPartTitle2=News&Filter1Field2=Identyfikator&Filter1Value2=2387>

Polish-Vietnamese talks on increasing scientific and economic cooperation

2018-09-25

Increasing the level of academic exchange, intensification of joint research activities and promotion of Polish language at Vietnamese universities are the topics of the meeting of Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education with the Vietnam government delegation headed by Truong Hoa Binh, Deputy Prime Minister of Vietnam.

During the meeting, the internationalization of studies was discussed. To enhance it, the sides decided to create a Polish language course at the University of Hanoi. The representative of the Vietnamese government expressed a wish to increase the limit of Vietnamese scholarship holders at Polish universities in the future. Deputy Prime Minister Gowin emphasized during the talks that Polish-Vietnamese cooperation could be intensified in the pharmaceutical, agri-food, armaments or tourist sectors. He also stressed that the presence of a large Vietnamese diaspora in Poland remains important factor of economic cooperation.

Müller: We raise the bar. We will appreciate important research

2018-09-26

- In many disciplines we have reasons to be proud. Polish science is a kind of export product and it is at a satisfactory level, but we have even more ambitions - said Piotr Müller, deputy minister of science and higher education.

As emphasized Piotr Müller, the Ministry of Science he wants scientists to be able to focus on research relevant to them and the country. He admitted that the new law raises the bar. - There is a parametric criterion, we assess the level of citations, then the implementation criterion and then the socio-economic impact. Above all, the point is to focus on higher quality research. The ranking table will list

publishers and magazines that have a real impact on science. This is a key change and many people are afraid of it. Those who really want to take up teaching and scientific challenges have nothing to fear - said Deputy Minister Müller and assured: «We will appreciate real, relevant scientific research. We will compare philosophers with philosophers and historians with historians. This will be assessed by experts from the scientific community».

University of Lodz receives the record funding for research within the MINIATURA 2

2018-09-27

The University of Lodz has received a record amount of 13 research grants, which makes 10% of all funds submitted to Polish universities within the competition MINIATURA 2.

- Science develops when the proper conditions are created. As the university, we attempt to create the best conditions for our scientists - said Professor Elżbieta Żądzińska, vice-rector of the University of Lodz for science. The Łódź University provides scientific support during the studies. Any student interested in research may apply for the grant from the University's own program - Student Research Grant. The application procedure is simplified, but it remains very similar to the applying for grants from the National Science Center. This prepares young researchers to apply later for such grants as MINIATURA 2.

Stratospheric experiment of scientists from the National Center for Nuclear Research

2018-09-27

The meteorological balloon brought a capsule containing a specially adapted set of two CosmicWatch educational detectors into the Space. The item is prepared by scientists from the National Center for Nuclear Research (NCBJ).

According to Dr. Armand Budzianowski from NCBJ, the aim of the undertaking was to make measurements showing how the intensity of cosmic radiation changes at various altitudes. The balloon

reached the stratosphere at a height of about 32 km. There the pressure difference outside and inside of the balloon caused it to break. From that moment, the capsules with instruments were free to parachute downward to Earth. The sets measured cosmic radiation intensity, which after reading and comparing with balloon flight parameters allow to illustrate how it changes at various altitudes.

Call launched for the Fulbright Specialist Program

2018-09-27

The Polish-American Fulbright Commission announced a call for proposals under the Fulbright Specialist Program for the hosting of American specialists.

Specialists may represent scientific fields such as: American studies, anthropology, archeology, public administration, librarianship, journalism and social communication, education, economics, physics, IT, education of engineers, biological sciences, chemical sciences, political sciences, mathematics, environmental protection, peace and conflict resolution, social assistance, law, agriculture, sociology, urban planning, management, public health. The aim of the program is to enable Polish institutions to establish cooperation with outstanding American specialists, as well as to provide the joint implementation of a project lasting from 2 to 6 weeks. The stay of American specialists in Poland may be related to lectures, workshops, participation in conferences, consultations, assessments and expert opinions, or the development of local research projects. More: <http://fulbright.edu.pl/specialist/>

Polish Science to launch START 2019 program of the Foundation

2018-10-01

Until 31 October 2018, young scientists may apply for a scholarship within the START 2019 program. The call is organized by the Foundation for Polish Science.

The START scholarship is addressed to the most talented young researchers, awarded for their scientific achievements. Researchers representing all fields of science who did not exceed 30 years of age can apply for the scholarship. In the scholarship call, the quality and originality of the candidate's previous scientific achievements and their most important research achievements are assessed. In previous years, the amount of the annual scholarship was PLN 28,000. The scholarship can be used for any purpose.

Rzeszów scientists studying parks as a source of air pollution

2018-10-02

The interdisciplinary team of the Faculty of Biology and Agriculture at the University of Rzeszów is conducting a unique research on air pollution, sourced by parks.

Researchers are studying Rzeszów parks and their allergenic potential character. According to estimates, as early as in 2025, half of the European population will suffer from an allergy and pollen allergens will cross-react with food allergens. - We have no assumptions that the park can be a source of air pollution. Meanwhile, based on Spanish research, such a statement is frequent in the scientific literature. It does not mean that the parks are bad, because their health benefits are indisputable and undeniable. The point is to manage reasonably them and not to create unnecessary health risks - said Agata Ćwik from the Department of Agrobiological and Environmental Protection of the Rzeszów university in an interview.

Scientific conference „People to bees, bees to people”

2018-10-02

On October 13, 2018 University of Agriculture in Krakow, Polish Academy of Sciences, Małopolska Agricultural Advisory Association, Board of the Provincial Union of Beekeepers in Krakow and the Beekeeping Society are organizing the scientific conference „People to bees, bees to people”.

The aim of the Conference is to familiarize students with the current problems of wild and breeding bees and to mobilize them for a greater commitment to saving the environment in which bees live. During the event, the interactions between plants and bees and causes of disturbances in these interactions will be discussed as well as issues regarding the quality of products provided by the honey bees.

University of Warsaw receives nearly EUR 20 million for research within Horizon 2020

2018-10-02

The National Contact Point for Research Programs of the European Union summarized 576 calls of Horizon 2020 program. The University of Warsaw became the leader among Polish universities in terms of the number of projects implemented under the EU's Horizon 2020 Framework Program. The university has won almost EUR 20 million in calls and will implement 65 projects.

The Warsaw University submitted as many as 396 applications for the Horizon 2020 program. 65 co-financed projects of the university were granted for a total sum of 19.96 million euros. The success rate is 16.5%. In 14 projects, the university acts as a coordinator. The University received also the most prestigious grants, awarded by the European Research Council (ERC).

Research starts with the Krakow Solaris synchrotron

2018-10-03

Kraków scientists began regular research in the Solaris Synchrotron National Radiation Center. The synchrotron creates unique research possibilities, previously unavailable in Central and Eastern Europe.

The Polish synchrotron enables three research opportunities: PEEM (measurements using photoelectron microscopy), XAS (X-ray absorption spectroscopy) and UARPES (angular-resolved photoelectron spectroscopy). The Krakow synchrotron provides research in such fields of science as biology, chemistry, physics, material engineering, nanotechnology, medicine, pharmacology, geology and crystallography. The Solaris Center is the first center in Poland with aim to conduct research not only by its employees, but also by the scientists from other institutions free of charge.

PLN 100 million for research teams within the TEAM-NET call

2018-10-03

Till 31 October 2018 the applications for the TEAM-NET program can be submitted. The budget of the call is organized by the Foundation for Polish Science and amounts in total PLN 100 million. The funds come from the Intelligent Development Operational Program.

The TEAM-NET program is addressed to research units and offers funds for creating networks of cooperating research teams. According to the Foundation for Polish Science, its aim is to encourage Polish scientific units and researchers to establish closer scientific cooperation. Funding for applicants in the TEAM-NET program may be received for 3 to 6 scientific units. To obtain a grant, the applicant must prepare a joint interdisciplinary research project that will cover at least two fields of study. Each research team can receive PLN 3.5 million for three years. More: <https://www.fnp.org.pl/oferta/team-net/>

Opole's Fraunhofer design center receives additional financing

2018-10-03

The Fraunhofer Design Center for Advanced Light Technologies at the Opole University of Technology acquired further funds for research and implementation. The money comes from the Regional Operational Program and is the result of the extension of funding for science in the Opole region.

The fund will be used to equip the IT laboratory, to provide research of innovative materials and their assessment in terms of impact on the environment (including by accelerating their aging). New devices on which researchers will develop light technologies will go to the University and the Opole Science and Technology Park. - The Fraunhofer Institute license attracts like a magnet - says the rector of the University of Technology, Prof. Marek Tukiendorf and adds that 90 companies are already interested in the project, and the creation of the center is the greatest achievement in the entire history of the university.

First competition under the program „Support for scientific journals”

2018-10-05

The Minister of Science and Higher Education announced the first competition as part of the „Support for scientific magazines” program. The call for applications will last until October 16, 2018.

The aim of the program is to support the publishers of Polish scientific journals not included in the international databases of scientific journals with the largest coverage, but publishing scientific articles on a high scientific level. This support is to be used to improve the level of publishing and editorial practices. The first call was announced in the fields of humanities; engineering and technical sciences; medical sciences and health sciences; agricultural sciences; social sciences; exact and natural sciences and theological sciences. More: http://www.bip.nauka.gov.pl/g2/oryginal/2018_10/4e73bd30b9bda7345f0e66df11054e6b.pdf

Young Scientists' Forum: „Innovation - Interdisciplinarity - Interactivity”

2018-10-08

On November 3 - 15, The Maria Curie Skłodowska University in Lublin and the Marshal's Office of the Lublin Voivodship in cooperation with the Institute of Agrophysics of the Polish Academy of Sciences in Lublin will organize the second Young Scientists Forum „Innovation - Interdisciplinarity - Interactivity”.

The meeting is addressed to PhD students and young researchers from Lublin universities (up to 35 years of age) who conduct or would like to conduct interdisciplinary and innovative research and are focused on interactivity. The proposed topics of the workshops during the Forum are Design Thinking, Public Speaking (self-presentation), Stress in the work of a researcher, Creating the image of a scientist and planning the path of a young scientist, Research project management and Scientists in business on the example of photonics. More: <https://www.umcs.pl/pl/fmn.htm>

How to write a project application to the European Space Agency

2018-10-08

The Polish Space Agency together with the European Space Agency are organizing on October 16 - 19, 2018 in Warsaw, a training and workshops entitled „How to write good projects in response to ESA Invitation to Tender for R & D activities”.

The Polish Space Agency training is addressed to representatives of industrial entities and scientific-research units. The course includes a three-day workshop on writing a project application for the European Space Agency and training on ECSS standards in the field of «Space Project Management». Classes will be conducted in the form of lectures and workshops in groups of several people. The lectures will be led by experts from the European Space Agency: Olivier Pin, Fabio Mazzaglia, Gian Lorenzo Casini, Gertrud Talvik and Stephane

Combes. More: <https://polsa.gov.pl/wydarzenia/zapowiedzi/18-zapowiedzi/726-szkolenie-i-warsztaty-how-to-write-good-proposals-in-response-to-an-esa-invitation-to-tender-for-rd-activities>

PhD student at the Wrocław University of Technology receives scholarships from the Kościuszko Foundation

2018-10-08

Jędrzej Górski, PhD student at the Faculty of Mechanical Engineering at the Wrocław University of Technology, became a scholarship holder of the Kościuszko Foundation. He received a grant of 15 thousand dollars for a 5-month stay in one of the American research centers.

- I am planning to go to the NASA Jet Propulsion Laboratory in California for five months. During my stay I will be helping in everyday lab work as well as collecting materials for my PhD thesis - says Górski. The Kościuszko Foundation is an American-Polish cultural and educational institution founded in 1925. Grants scholarships are addressed to young people and scientists from Poland and the USA to provide information, popularization activities and scientific exchange in the field of Polish culture and science. The scholars can get funds for scholarships and research grants for studies, research and internships in the USA. The scholarship will cover travel costs, housing allowance as well as health and accident insurance.

Gdańsk University of Technology rebuilding the historic building into a multidisciplinary research centre

2018-10-10

Gdansk University of Technology is renovating a historic building in the oldest part of the campus. After the reconstruction, it will become a modern centre performing the function of interdisciplinary research, museum of technology and art gallery.

The building will include the special zones for students, employees and academic organizations as well as a meeting place for the science and business, a media library with a bookstore, a press room and a café connected to a club room. The university will invest PLN 14.2 million in renovation and reconstruction of the facility, including PLN 3.9 million from the Ministry of Science and Higher Education. Thanks to the subsidy, an interdisciplinary centre GUT MediaLab will be created. It is planned as a space for the integration of research for teams from various faculties of the Gdańsk University of Technology. It will contain tools for two- and three-dimensional presentations in 4K resolution, electronic boards and automated systems for sharing research results and consultations. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/budynek-%E2%80%9Ehydromechanika%E2%80%9D-zyska-nowe-oblicze

Gdańsk Medical University to receive Grant for Polish-Canadian research

2018-10-10

Dr Marcin Gruszecki from the Department of Radiological Informatics and Statistics of the Gdańsk Medical University received a grant as part of the MINIATURE 2 competition announced by the National Science Center.

His research: «The influence of hypoxia on selected parameters of the brain and cardiovascular physiology» will be implemented jointly with Prof. Patrick Nera

from the University of Regina in Canada. The aim of the search for scientists will be to obtain 30-minute records of blood pressure, ECG and oxygen saturation in hemoglobin chamber conditions. Hypoxia causes a number of changes in the brain, including increased perfusion, blood volume, blood-brain barrier permeability, up to a slight cerebral oedema. Better understanding of the interactions between blood pressure, heart and oxygen saturation level will contribute to a deeper understanding of the pathophysiology of high-altitude disease or sleep apnoea syndrome.

Researcher Prof. Gryko published in Angewandte Chemie

2018-10-11

Prof. Daniel Gryko from the Institute of Organic Chemistry of the Polish Academy of Sciences, laureate of the Foundation for Polish Science 2017, published the results of his research in the Angewandte Chemie Journal.

The research was conducted in cooperation with the team of Prof. Valentine Vullev (University of California, Riverside). Scientists have demonstrated for the first time that the molecule of an organic dye can completely stop the transfer of an electron in one direction using molecular electrical dipoles (so-called electrets). At the same time, moving the electron in the opposite direction is very fast. The discovery of professors Gryko and Vullev can potentially accelerate research on the conversion of light into electricity in modern technologies. More: <https://onlinelibrary.wiley.com/doi/10.1002/anie.201802637>

Season of archaeologists from the University of Warsaw in Armenia ended

2018-10-11

The expedition of the Center of Mediterranean Archeology and the Institute of Archeology of the University of Warsaw has completed another season of research at Metsamor in Armenia.

Polish archaeologists have been conducting research in this area for six years, providing important

information about the functioning of the settlement, whose history dates back to the beginnings of the Iron Age, i.e. the 12th century BC. The mission is directed by Dr Krzysztof Jakubiak from the Institute of Archeology in the season of 2018. The scientists discovered half-kilogram brown bracelets, ceramics, glass beads, a bone-head with a duck-shaped head and three graves. This year, archaeologists have been able to identify the remains of the building for the first time in the area of the lower city where the mission worked.

Ministerial scholarships for Toruń scientists

2018-10-11

Three researchers from the University of Nicolaus Copernicus in Toruń will receive scholarships from the Minister of Science and Higher Education awarded to scientists conducting high-quality research with an impressive scientific output.

Dr Paweł Pomastowski is Associate Doctor at the Interdisciplinary Center of Modern Technologies. He graduated from master's and PhD studies at the Faculty of Chemistry. He deals with biocolloid chemistry and surface physicochemistry. Dr Michał Piechowicz is an Associate Professor at the Department of International and European Law. His research interests are focused on the issues of the decision-making process in the European Union, lobbying and representation of interests at the supranational level and new forms of communication. Dr Marta Pokrywczyńska is a biotechnology graduate from the Faculty of Medicine of Collegium Medicum. She defended her PhD thesis «The role of mesenchymal stem cells in the remodeling of the reconstructed rat bladder wall» in 2011. More: <https://www.umk.pl/wiadomosci/?id=25687>

New program of the National Academic Exchange Agency for PhD students

2018-10-12

The **Wilhelmina Iwanowska** program of the National Academic Exchange Agency has begun. It includes foreign trips lasting from 6 to 12 months. The program is addressed to PhD students.

As part of this new project run by the National Academic Exchange Agency, PhD students representing all fields of science will be given a chance to travel to the best research centers in the world. They may be accompanied by their spouses and children and, in the case of disabled persons, their caretakers. Beneficiaries of the program will be able to take part in PhD studies, implement the «PhD Implementation» program, conduct research, obtain materials for the dissertation or scientific publication. The first trips can be carried out from the beginning of September 2019. More: <https://nawa.gov.pl/naukowcy/program-im-iwanowskiej>

University of Technology and Humanities in Bielsko-Biała receives PLN 10 million for improving the quality of education

2018-10-12

The University of Technology and Humanities in Bielsko-Biała received PLN 10 million for the implementation of the project „Ordering competences - Nursing from education to employment”. The agreement in this matter was signed by the rector of the university - Prof. **Jarosław Janicki** and Undersecretary of State in the Ministry of Health - **Maciej Miłkowski**.

The aim of the project is to improve the quality of higher education in the field of nursing, which is expected to cause more interest of an additional number of graduates. The implementation of the project will allow to develop professional competences and qualifications of medical personnel corresponding to the epidemiological and demographic needs of the country. The goal will be achieved by organizing a series of medical vocational training for graduates.

Polish-German study of the language of science

2018-10-15

From June 2017, the staff of the Faculty of Humanities of the University of Warmia and Mazury in Olsztyn, together with German scientists, will carry out an international research project, which aims to describe the Polish and German language of science.

The project is financed by the Polish-German Foundation for Science and will be implemented by May 2019. The partner of the Polish university in its implementation is Friedrich-Schiller-Universität in Jena. The main goal of the project is to examine and describe the Polish and German language of science in terms of the occurrence of various types of classed word combinations characteristic for the scientific style of both languages. As a result, an electronic database of phraseologies typical of the language of science will be created, which will be available to both private persons and institutions. The access to the base is free.

Success of employees of the Department of Molecular Microbiology at the University of Wrocław

2018-10-16

Employees of the Department of Molecular Microbiology of the Faculty of Biotechnology of the University of Wrocław received Prof. **Kazimierz Bassalik** prize for the best Polish microbiological work. The competition is organized by the Molecular Biology Committee of the Cells of the Polish Academy of Sciences.

The main prize was received by Dr **Joanna Hołowska**, Dr **Damian Trojanowski**, Dr **Katarzyna Ginda**, Dr **Bartosz Wojtaś**, **Bartłomiej Gielniewski**, Prof. **Dagmara Jakimowicz** and Prof. **Jolanta Zakrzewska-Czerwińska** for the work «HupB is a bacterial nucleoid-associated protein with an indispensable eukaryotic-like tail». One of two equally important awards was received by Dr **Agnieszka Strzałka**, Dr **Marcin Szafran**, Prof. **Terence Strick** and Prof. **Dagmara Jakimowicz**, for the work: «C-terminal lysine repeats in *Streptomyces* topoisomerase I stabilize the enzyme-DNA complex and confer high enzyme processivity”.

College of Ecology and Management becomes the laureate of the Polish Intellectual Development Award

2018-10-17

The College of Ecology and Management in Warsaw became the laureate of the Polish Intellectual Development Award 2018. The contest was held under the patronage of the President of the Patent Office of the Republic of Poland.

The Warsaw University of Technology was awarded in the University of the Future category «for the highest quality education of students based on a modern didactic and scientific-research base». From 2016, the winners of the Award are organizations that show the future orientation in their activities. All projects, investments and ventures implemented by the winners are characterized by innovation and are the best examples of sustainable and intelligent development. The awards will be presented during the International Forum of Intelligent Development 3.0 Uniejów 2018, which will be held on October 18-20, 2018.

Researchers of the University of Life Sciences in Poznan receive A. P. Dekaban scholarships

2018-10-17

Two researchers from the University of Life Sciences in Poznań received the scholarship of the A. P. Dekaban Foundation. Researchers will take internships at the Canadian University of British Columbia in Vancouver.

The grants were given to Dr. Joanna Helena Śliwowska (Faculty of Veterinary Medicine and Animal Sciences, Institute of Zoology) - Senior Dekaban Travel Award and Dr. Maciej Jarzębski (Faculty of Food Sciences and Nutrition, Department of Physics and Biophysics) - 5-month Post-doctorate research grant. Foundation of A. P. Dekaban was founded in the early 1980s by the eminent Dr Anatol Dekaban and his wife Pamela Liddle-Dekaban. The aim of the Foundation is to offer new academic and technological achievements from the world to Polish academic scholars. Granted scholarships are intended for academic teachers who are 40 years old and have a PhD degree.

German Evening of Research and Development in the Poznań Science and Technology Park

2018-10-17

The Poznań Science and Technology Park invites participants to the German Research and Development Evening on October 24th. The purpose of the meeting is to establish and deepen contacts between scientists, researchers, representatives of the organization and potential business partners from both countries.

- We invite those who deal with projects related to environmental protection and new technologies at the meeting point of science and business or are interested in international cooperation in the field of research and development projects in the field of environmental protection and sustainable de-

velopment. The «German evening of research and development» will consist of a substantive and networking part. During the first part, a discussion will be held about the challenges related to innovations in environmental protection, commercialization of scientific research and international cooperation. The second part will include time for networking, meeting new people in the industry and establishing valuable contacts. More: <http://ppnt.poznan.pl/biznes-i-badania-w-niemczech-poznaj-partnerow/>

CyberLAB team of the National Center for Nuclear Research has detected a gap in the PLC software from Siemens

2018-10-18

Researchers from the National Cybersecurity Laboratory of the Center for Nuclear Research have detected a dangerous gap in the software of one of the commonly used PLC logic controllers, which is used, among others, in nuclear installations. The discovered vulnerability could result in denying access what would lead to loss of connectivity with the controller. The manufacturer has already fixed the gap, recommending necessary corrections to all users.

As part of the participation of the National Center for Nuclear Research in the «Enhancing Computer Security Incident Analysis at Nuclear Facilities» program run by the International Atomic Energy Agency, a specialized CyberLAB laboratory is being created.

Lodz University of Technology to launch pilot 5G network

2018-10-19

On the campus of the Lodz University of Technology, a pilot network of the new generation 5G will be created. This will allow scholars to conduct research that will show the benefits of solutions implemented in new generation systems and create the conditions for testing new services before com-

mercial 5G networks start functioning.

The creation of the 5G pilot network was announced by Marek Zagórski, the minister of digitization, during his visit to the Łódź university. - I believe that the scientific potential of employees and students is so large at the University that it is worth making the 5G technology that is to appear in Łódź would be strongly associated with the ideas that will arise here - said Minister Zagórski. According to the assumptions, the 5G network will be launched by 2020 in at least one city in Poland, and in 2025 in all major cities and on main communication routes.

Pomeranian Medical University in Szczecin to expand the didactic and clinical-research center

2018-10-19

The Pomeranian Medical University in Szczecin signed a letter of intent with the City of Szczecin regarding investments in the area of streets Unia Lubelska and Zimowski. The university wants to build there a modern didactic and clinical-research center for 15 academic units.

The creation of modern research laboratories will enable large-scale research projects and the search for effective methods of cancer therapy. It will be possible to expand the educational offer with modern virtual reality technologies, medical e-learning platforms or expanding cooperation with medical simulation centers. - We know that the investment is serious, we believe that the rector will obtain the necessary funds. I believe that the government will send funds to Szczecin to improve the center, which can further develop and affect not only Poland but also our western neighbors - said Piotr Krzystek, mayor of Szczecin, during the ceremony of signing the document.

Scientists of the University of Life Sciences in Poznań to examine the effects of betaine

2018-10-22

Researchers from the Institute of Human Nutrition and Dietetics at the University of Life Sciences in Poznan will carry out studies aimed at assessing the effects of betaine supplementation on body composition, physical fitness and betaine metabolism in the group of men training CrossFit.

The project is financed by the National Science Center. Betaine is a compound that was first isolated from beets. It is also produced in the human body with choline. In the sport aspect, it has been shown to increase muscle mass while reducing the amount of abdominal fat. This suggests the potential benefits of using it by athletes. Betaine also prevents cell dehydration, which is why it seems that it can affect the ability to exercise. Poznan scientists want to examine the exact mechanism of action of betaine and determine its most effective dose.

Kozminski Academy to cooperate with the National Center for Nuclear Research

2018-10-23

Kozminski Academy (ALK) in Warsaw signed an agreement on scientific and didactic cooperation with the National Center for Nuclear Research (NCBJ), which includes, among others, joint research projects, the development of analytical tools and the application of artificial intelligence in the analysis of large data sets.

Researchers and IT specialists at the National Center for Nuclear Research have quite rare skills acquired during the processing and analysis of a huge amount of data that we have been dealing with in physical experiments for many years - said the NCBJ director Prof. Krzysztof Kurek. There is a lot of evidence that these skills and tools and methods developed by physicists can be successfully applied to the analysis of social, economic and economic

processes and phenomena. Our scientists already have achievements in this field, in particular in the area of medical data analysis. We are sure that together with colleagues from ALK we will be able to broaden this list of achievements considerably - added the NCBJ director.

Competition for the best diploma thesis on Polish-Chinese economic cooperation

2018-10-23

The Polish-Chinese Business Council has announced the third competition for the best diploma thesis on contemporary economic cooperation between Poland and China.

The participants can apply until November 30. As in previous years, the organizers invite students and graduates of domestic and foreign universities who have defended their diploma theses in the period from October 1, 2017 to September 30, 2018. The competition is held under the patronage of the Ministry of Science and Higher Education, the Ministry of Enterprise and Technology and the Embassy of the People's Republic of China in Poland. The application is free, and winners can receive attractive prizes: among others, annual scholarships in China funded by the embassy of the People's Republic of China and internships in reputable companies. More: http://pchr.pl/konkursy-i-szkolenia/konkurs_pd_2018/

Adam Mickiewicz University in Poznań to examine the relations of the European Union with other countries

2018-10-23

The Adam Mickiewicz University in Poznan will receive 100,000 euro from the European Union's Education, Audiovisual and Culture Executive Agency. The agency awarded the university with the prestigious scientific grant of the Center of Excellence Jean Monnet.

As part of the program, the faculty of political science and journalism will provide research on multidimensional external relations of the European Union with

other countries. Researchers want to find answers to questions about the role and significance of the Union in the new international order, as well as about the shape and nature of its relations with the United States, China and Russia and the countries of South America, Central Asia and North Africa. The program is addressed to students and all people who do not deal with the problems of functioning of the European Union on a daily basis. In addition to the own events at the Faculty of Political Sciences and Journalism, the guest lectures will be held at other faculties of the University and at universities in Poland and abroad.

Research teams established as part of the Centers of Scientific Excellence Dioscuri

2018-10-24

Aleksandra Pekowska and Grzegorz Sumara defeated 45 candidates from all over the world and they will set up research teams in Warsaw as part of the Centers of Scientific Excellence Dioscuri next year.

The Dioscuri program was created on the initiative of the Max Planck Society to set up research teams able to compete effectively in the international arena. The first call for the creation of Centers was announced in Poland in cooperation with the National Science Center. Research teams within the Centers program will be established at the Institute of Experimental Biology of the Polish Academy of Sciences in Warsaw. Every team will receive 1.5 million euros for five years. More: <https://ncn.gov.pl/dioscuri/>

Bavarian scholarships for master's, PhD studies and internships

2018-10-24

The government of the German federal state of Bavaria invites Polish citizens to apply for scholarships for master's studies, PhD studies and annual scientific internships at Bavarian universities.

The aim of the scholarship program is to support academic cooperation and academic exchange between Bavaria and Central, Eastern and South-Eastern Europe. The scholarship is awarded for a year with the possibility of extending up to 3 years, and its rate is adapted to the family situation of the scholarship holder and can be increased if the scholar has children. Candidates should apply directly through the BAYHOST Center at the University of Regensburg. The deadline for submitting applications is 1 December 2018. More: <https://www.uni-regensburg.de/bayhost/english/scholarships/study-in-bavaria/index.html>

Torun scientist receives a grant from the Japan Society for the Promotion of Science

2018-10-24

Dr Akiko Nishiyama from the Department of Atomic, Molecular and Optical Physics at the Faculty of Physics, Astronomy and Applied Informatics of the Nicolaus Copernicus University in Toruń received a prestigious grant from the Japan Society for the Promotion of Science.

The grant awarded as part of the «Overseas Research Fellowships» competition is received for the project «Broadband and highly sensitive spectroscopy of free-radicals and short-lived molecules using an infrared frequency comb». Its aim is to study chemical reactions involving free radicals using broadband spectroscopy, based on the combining of optical frequencies. The project will be implemented from April 2019 in the Laboratory of Ultrafast Spectroscopy in cooperation with scientific units from Germany and Italy. The research results

will help explain the formation processes of prebiotic molecules in the interstellar space - which is important for astrochemistry and the theory of life formation in the Universe.

National Science Center has signed the DORA declaration

2018-10-25

Director of the National Science Center Prof. Zbigniew Błocki has signed the DORA declaration (San Francisco Declaration on Research Assessment) regarding the method of evaluating the quality of scientific research by entities financing science, journals and scientific units.

The basic postulate formulated in the declaration is to assess the quality of researchers' work on the basis of substantive and not quantitative criteria. In the opinion of the signatories the researchers should be assessed primarily by the originality of their achievements and the impact on the development, and not only with the use of bibliometric indicators. The San Francisco Declaration was formulated in December 2012. At present, 667 organizations and over 13,000 people from all over the world signed the declaration. The Foundation for Polish Science is one of the signatories.

Poznan scientists study the properties of celandine herb as a potential cancer drug

2018-10-25

A team of scientists headed by Prof. Anna Goździcka-Józefiak from the Faculty of Biology, Adam Mickiewicz University in Poznań, researches the properties of a common plant - celandine, which may be an effective drug for some cancers caused by HPV (human papilloma virus).

Celandine (*Chelidonium majus*), which is common in Poland, has been used in folk medicine for removing warts since antiquity. The plant is a well-known remedy for skin lesions, it also has cholagogic, antimicrobial, calming and analgesic properties. As a result of research, some properties of celandine have been scientifically confirmed. New applications have also been discovered. It turned out, among others,

that extracts from *Chelidonium* reduce the risk of new endometriosis foci. This is important because so far no effective method for treating this disease leading to infertility has been developed. More: <http://zycie.amu.edu.pl/nauka/uam-cudowne-zielenienietylko-na-raka>

Łódź University of Technology becomes laureate of the Polish Intellectual Development Award 2018

2018-10-26

Lodz University of Technology became the laureate of the Polish Intellectual Development Award 2018 in the „University of the Future” category. It was granted to the Łódź University for the implementation of the „Innovative Textile 2020+” project.

The aim of the Innovative Textile 2020+ project is increasing the degree of commercialization and internationalization of applied research in the field of innovative and modern textile. The project leader is the Faculty of Materials Technology and Textile Design of the Lodz University of Technology, and it is coordinated by Prof. Izabella Krucińska. The consortium includes also the Institute of Safety Technology MORATEX, the Central Institute for Labor Protection - the National Research Institute, the Institute of Biopolymers and Chemical Fibers and the Textile Research Institute.

Dr. Kamila Duś-Szachniewicz to receive Polish Intellectual Development Award

2018-10-26

Dr Kamila Duś-Szachniewicz associated with the Chair and Department of Pathomorphology of the Medical University in Wrocław becomes a laureate of the Polish Intelligent Development Award in the category „Innovative young science leader” for the project „The use of innovative technology of optical pliers for the development of low-invasive targeted lymphoma therapy”.

The prestigious award was won by the most innovative

projects implemented under EU and national programs by Polish scientific institutions, institutions and companies involved in research and development, which contribute to the sustainable development of Poland. Dr Duś-Szachniewicz's project was financed in 2015-2018 by the National Center for Research and Development as part of the LIDER program. The project obtained two patents and two applications for the inventions.

Commercialization of research - a challenge for young scientists

2018-10-29

The Academy of Young Scientists of the Polish Academy of Sciences together with the National Center for Research and Development invites participants on November 15, 2018 to the conference „Commercialization of research – a challenge for young scientists”, which will take place in Warsaw.

The aim of the conference is to create a platform for discussion to identify problems faced by young scientists who want to commercialize their research. During the event, a panel discussion will take place to introduce the case study, presenting specific examples of successful and complicated commercialization processes. Speakers will describe the critical stages of the process and present their points of view on the commercialization process.

Polish-Israeli call for research and development projects

2018-10-29

National Center for Research and Development (NCBR), executive agency of the Minister of Science and Higher Education, jointly with the Israel Research and Development Center for the Israel Innovation Authority / ISERD announced a joint competition for research and development projects aimed at developing innovative products or technological solutions with high potential for commercial applications.

The NCRD budget for co-financing the implementation of projects selected in the Polish-Israeli call

is PLN 2 million. Co-financing can be allocated only for those R&D projects developed by Polish and Israeli entities, which will receive funding from the Israel Innovation Authority. The applications can be submitted by January 15, 2019. More:<https://www.ncbr.gov.pl/programy/programy-miedzynarodowe/wspolpraca-dwustronna/izrael/vi-konkurs-pl-il/aktualnosci-szczegoly/news/szosty-polsko-izrael-ski-konkurs-na-projekty- R & D-52127>

Student of the University of Rzeszów received a scholarship from the King of Saudi Arabia

2018-10-30

Maciej Noga, the 3rd year student of engineering at Biotechnology at the University of Rzeszów, received a research grant funded by the King of Saudi Arabia for the implementation of the scientific project „Why it is so difficult to find potent drugs against cancer? - decoding the druggability of molecular target”.

The project will be carried out under the direction of an outstanding scientist in the field of protein biochemistry of Dr. Łukasz Jaremko at the University of Science and Technology King Abdullah (King Abdullah University of Science and Technology) in Saudi Arabia. King Abdullah University of Science and Technology (KAUST) is a private interdisciplinary Saudi university founded in 2009 by the King of Saudi Arabia - Abdullah bin Abdulaziz Al Sauda. The student of the Rzeszów University will receive a monthly scholarship of USD 1000, accommodation in a dormitory, travel expenses and insurance.

Archaeologists from the University of Warsaw started in Sudan a project funded by the European Council for Scientific Research

2018-10-30

Archaeologists from the University of Warsaw started in Sudan the first excavation season within the project called „Urban Metamorphosis of the community of a Medieval African capital city“.

Researchers from the Center of Mediterranean Archeology of the University of Warsaw received the Starting Grant of the European Council for Scientific Research. Field work in Dongola, Sudan, will be conducted under the direction of Dr Arthur Obłuski, who in September this year became the chairman of the International Society for Nubian Studies. The aim of the project is to analyse the process of transformation and nature of the transformation of Dongola from an important Christian center, the capital of the Kingdom of Makuria, into a Muslim city.

Prime Minister's prizes for two researchers from the University of Life Sciences in Wrocław

2018-10-30

Dr Dominika Kulig and Dr Anna Gliszczyńska from the Faculty of Biotechnology and Food Sciences of the Wrocław University of Environmental and Life Sciences have received prizes of the prime minister for PhD dissertations and the achievements being the basis for their postPhD degree.

Dr Dominika Kulig works in the research group «BioActive Team» dealing with the development of innovative methods for food preservation. The aim of her PhD thesis was to produce materials for use as edible casings for food products - in particular raw meat and its products. These materials are of natural origin and are formed on the basis of biodegradable polymers. Dr Anna Gliszczyńska was awarded for receiving a new generation of

environmentally friendly biopesticides that selectively reduce populations of harmful insects. They are also effective in the prevention and therapy of cancer diseases based on natural origin compounds. More: http://www.glos.upwr.edu.pl/aktualnosci/48429/nagrody_premiera_for_naukowcow_z_upwr.html

Physicists of the University of Wrocław published on the supernova explosion mechanisms in Nature Astronomy

2018-10-30

Research results of Dr Tobias Fischer from the Faculty of Physics and Astronomy of the University of Wrocław together with an international group of researchers will help to solve one of the biggest mysteries of astrophysics.

His article - «Release of quarks as a supernova explosion mechanism in the process of formation of massive blue supergiant stars» - was published in «Nature Astronomy». The existence of matter known as quark-gluon plasma has been speculated for a long time. Thanks to the results obtained, it will be possible to study it in the context of future galactic explosions. Supernova explosions are phenomena considered to be the most energetic explosions in the Universe. Thanks to Fisher's research, it was possible to show that the appearance of exotic particles under extreme conditions can lead to supernova explosion.

Silesian University of Technology begins cooperation with Henkel

2018-10-30

Silesian University of Technology has signed an agreement on cooperation with Henkel Polska Operations Ltd. Its aim is to use the experience and scientific achievements of the University and the potential of Henkel and its position on the market for activities

servicing the good of the parties and the development of the region.

The agreement was concluded for an indefinite period and it assumes dealing with topics of research and development works, presenting and promoting achievements, providing cooperation with employing graduates, exchange of experience in knowledge management, as well as appointing a team of specialists for strategic technical and organizational solutions and cooperation in improving educational programs. Henkel has undertaken to present a list of proposed master's thesis topics to be used by students of the University of Technology and it is to enable students to take up a diploma thesis on the topics indicated by the employer.

University of Lodz signed a cooperation agreement with Philips

2018-10-31

Professor Antoni Różalski, the rector of the University of Lodz and Krzysztof Fąfara, member of the board of Philips Polska, signed a cooperation agreement between the University of Lodz and Philips - the world leader in the medical technology industry.

The aim of the cooperation is to use the experience and scientific achievements of the University of Lodz and the potential and position of Philips Polska as an employer. Exchange of knowledge and experience will enable co-creation of didactic programs, classes and workshops, as well as organizing internships and reporting research problems. The contract was concluded for two years - until September 30, 2020. - We believe that students of the University of Lodz will gain valuable experience and will be able to test their skills in modern business areas related to medical technologies - said Krzysztof Fąfara, member of the board of Philips Polska.

Over PLN 326 million allocated by the Ministry of Science within the „Regional Initiative of Excellence” program

2018-11-02

The Ministry of Science and Higher Education has granted a total of over PLN 326 million of financial support to 30 academic universities for the implementation of scientific research important for the region within the „Regional Initiative of Excellence” program. 12 million PLN of this amount will be received by the University of Warmia and Mazury (UWM) in Olsztyn.

The university has submitted the project «Innovative high-quality food for the health of society and sustainable development - an integrated program for the development of scientific research and innovation in the field of agricultural and veterinary sciences at the University of Warmia and Mazury in Olsztyn». Support will be provided for: agronomy, fishing, food and nutrition technology, zootechnics and veterinary science. The UWM project is part of the «Strategy for socio-economic development of the Warmian-Masurian Voivodship by 2025», which emphasizes the development of an economy based on three smart specializations: water economy, wood and furniture, and high-quality food.

Archaeologists from Poznań exploring the Piast stronghold in Grzybów

2018-11-02

Archaeologists from the Adam Mickiewicz University in Poznań discovered a church and a cemetery in the city of Grzybów. After 11 years they resumed the research to explain the secrets of the largest city in the Piasts' domain.

The researchers hope that the work will explain in part the mystery of the location of a huge city Grzybów located between Gniezno and Giecz. This early medieval stronghold, built in the first decades of the tenth century was the largest city of this type in the Piasts' domain. The four-hectare castle was by half bigger than Lednica and Giecz, and Gniezno

reached such dimension only in the 11th century. Why did such a huge fortress function only a hundred years? What were the circumstances of its fall? Why was it created here? Who raised it and what was the reason? - answers to these questions can be provided by excavations conducted by Dr. Marcin Danielewski from the Institute of Archeology. The project received funding from the National Science Center within the Opus 13 program. More: <http://www.uniwersyteckie.pl/nauka/archeologia-uam-wciaz-wiele-tajemnic-w-grzybowie>

Researcher of the Adam Mickiewicz University develops a hamster protection project

2018-11-02

Dr Joanna Ziomek from the Adam Mickiewicz University in Poznań together with the Polish Society for the Protection of Nature Salamandra developed a project for the protection, breeding and reintroduction of the European hamster. The Poznański Zoological Garden has joined the rescue mission of the endangered species.

The environmentalists caught 8 hamsters in the Czech Republic, which are reproduced in the vicinity of Jaworzno. Poznański Zoological Garden joined the action: there are currently 12 hamsters in the Old ZOO. Individual hamsters born and raised in the zoo will be the starting population for the rebuilding of the species. European hamster, whose population in the last 40 years has decreased by 75 percent. It is a species registered in the Polish Red Book of Animals. The causes of extinction of this species are change of the crop system, use of large amounts of chemicals and urbanization of the village. Climate change is also important. Too warm winter means that animals are too quick to wake up and have nothing to eat.

Institute of Aviation begins cooperation with the Faraday Research and Development Center

2018-11-05

The Institute of Aviation in Warsaw has signed a cooperation agreement with the Faraday Research and Development Center appointed by the Energa Group.

The goal of the cooperation is to develop innovative solutions that will help to provide the Group's clients with high quality services and new products as well as to reduce operating costs and introduce new technologies for everyday use. - We want to use the potential of the Institute for efficient detection of failures and prevention of line and energy infrastructure from failures. The Institute's extensive experience in the use of drones or planes and in advanced analysis of the recorded material with the use of artificial intelligence will help to achieve that - said Marcin Karlikowski, president of the Energa Faraday Research and Development Center.

University of Bydgoszcz receives over PLN 11.5 million

2018-11-05

The Faculty of Natural Sciences of the University of Casimir the Great will receive over PLN 11.5 million under the „Regional Initiative of Excellence” program. The grant will allow the university to raise the level of scientific research conducted by biologists.

The implementation of the project will bring tangible benefits not only to the academic staff, but also to the socio-economic environment of the university and students. The direct effect of the activities will be the improvement of the level of scientific research conducted by biologists from the University of Kazimierz the Great. It will happen through increasing the number of scientific publications, employing additional staff and its development, increasing the number of international agreements, increasing the participation of researchers in international exchanges, organizing international conferences, obtaining new scientific qualifications and developing research infrastructure.

Polish-German declaration on cooperation in the field of research and development

2018-11-06

As part of the Polish-German intergovernmental consultations held in Warsaw, Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education, with Anja Karliczek, the Federal Minister for Education and Research, signed a declaration of cooperation in the area of research and development.

The topic of talks between the heads of the Polish and German science ministries was the cooperation of the National Science Center with the Max Planck Society as part of the DIOSCURI Program, which aims to create Centers of Scientific Excellence in Central and Eastern Europe. The discussion also focused on strengthening the participation of Polish scientists in European Union programs and cooperation in the field of the European Research Area. In the signed declaration both ministers undertook to support research projects as the main element of bilateral cooperation. The document underlines the importance of cooperation in the fields of science, research, development and innovation.

University of Szczecin to receive over PLN 10 million for improving research

2018-11-06

The University of Szczecin will receive over PLN 10 million for the implementation of the project „Improving the quality of scientific research in economic sciences with a special focus on the services sector”. The money is allocated by the Ministry of Science and Higher Education as part of the Regional Initiative of Excellence program.

The project will be implemented in 2019-2022 by the faculties of economic sciences and management as well as management and economics of services of the University of Szczecin in the group of disciplines: economics, finance, management sciences and commodities. Funds will be allocated

for training and study trips for employees, financing publications, monographs in reputable publications, supporting initiatives aimed at intensifying cooperation with the socio-economic environment, developing scientific infrastructure (building a laboratory system supporting professional research) and supporting scientific research with new didactic methods.

Poznan scientist examines the wood warblers

2018-11-07

Dr Jakub Szymkowiak from the biology department of the University of Adam Mickiewicz in Poznań examined the impact of the wood warblers' pace of sounding on the defense of its territory and the influence of the presence of other birds on the decision to establish a nest by the wood warbler. The research results of the Poznań scientist were published in leading ornithological and behavioral journals.

In his works, Dr Szymkowiak showed that the pace of singing pace of wood warbler is important for defending its territory. He also showed the relationship between the characteristics of this signal and personality. The Poznan scientist has shown that the voices of other birds can influence the wood warblers' decisions related to the choice of a nesting place. Dr. Szymkowiak conducts research in the Wielkopolski National Park, where he is equipped with recording equipment and he can record the voices of birds. He is interested in how animals acquire information about the world, how they make decisions and learn - especially from each other.

„Polish Returns” – Polish scientists from abroad moving to the Wrocław University of Technology

2018-11-08

Three scientists who have carried out their research so far in the USA, Spain and Italy, will move to the Wrocław University of Technology. Everyone received research grants in

the program of the National Agency for Academic Exchange „ Polish Returns”.

Dr Jacek Herbrych from the University of Tennessee (Knoxville, USA) received a grant of PLN 1.1 million and will work for the Department of Theoretical Physics). Dr Eng Grzegorz Pasternak from the University of Trento (Italy) received a grant of PLN 1 million and will work at the Polymer and Carbon Materials Department, and Dr Eng Sabina Rosiek-Pawłowska from the University of Almeria (Spain) received a grant in the amount of PLN 1.6 million and will work for the Department of Structural Fundamentals and Flow Machinery. Program «Polish Returns» allows scientists working abroad to return and take up scientific work in Poland. Thanks to the program, Polish universities and scientific units will acquire specialists with international experience and knowledge about the latest research trends.

University of Białystok to receive almost PLN 9 million from the „Regional Initiative of Excellence” program

2018-11-09

University of Białystok received funding PLN 8,791,222 under the „Regional Initiative of Excellence” program from the Ministry of Science and Higher Education. The money will be spent on developing the research potential of two disciplines: linguistics and literary studies.

The main goal is to support linguistic and literary studies conducted at the University of Białystok. The funds obtained will allow for the implementation of research projects, the publication of monographs and scientific articles, financing of researchers' trips to library and archival queries as well as conducting surveys. The university also intends to employ young researchers and thus increase their participation in the employment structure in developed disciplines – additional calls for PhD students and PhD holders are planned.

Deputy Prime Minister Gowin awards 80 scientists with the Diamond Grants

2018-11-09

Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin awarded 80 young scientists with prizes in the 7th competition of the Diamond Grant program.

The goal of the Diamond Grant program is to select the best of the best Polish young scientists, creating an accelerated path of career for young researchers with unique scientific achievements. Each of the winners received up to 220,000 PLN for the implementation of its first independent research projects lasting from 12 to 48 months. During the project implementation, they will be able to receive a remuneration of up to PLN 2,500 per month. - For several years, our country has been implementing a development plan, a plan to rebuild the Polish economy. Modern strong economy can only be built on the work and research of scientists. That is why we have been building a bridge between Polish science and business for several years - said Deputy Prime Minister Gowin.

Students of the Wrocław University of Environmental and Life Sciences receive Diamond Grants

2018-11-12

Karolina Tkacz and Igor Turkiewicz from the department of biotechnology and food sciences at the University of Life Sciences in Wrocław won the „Diamond Grants” of the Minister of Science and Higher Education.

Karolina Tkacz wants to develop a product based on sea buckthorn - a plant containing many biologically active compounds that can be used in functional foods that can positively affect the body. The aim of Igor Turkiewicz's research is to identify and use the bioactive potential of quince fruit by creating microcapsules with its polyphenolic fraction. This will reduce its degradation in the human body and increase bioavailability. Both laureates within their joint part of the project are planning to build a sim-

ulated human digestive tract. This in vitro model will allow to study the bioavailability and absorption of bioactive compounds in juices. More: http://www.glos.upwr.edu.pl/aktualnosci/48528/diamentowe_granty_dla_studentow_upwr.html

Researchers from the Collegium Medicum of the Jagiellonian University to investigate the influence of the electromagnetic fields

2018-11-13

Researchers from the Department of Biophysics Collegium Medicum of the Jagiellonian University (CM UJ) in Krakow have started a multidirectional research project „The influence of electromagnetic fields on the human body”.

- Electromagnetic fields are ubiquitous and cannot be avoided. Field sources are present in our natural environment, but their intensity is millions of times smaller than the intensity of electromagnetic fields originating from artificial sources, created by our civilization - said Prof. Eugeniusz Rokita from the Department of Biophysics, Department of Physiology, Faculty of Medicine, CM UJ. Krakow scientists want to investigate whether the fields of electromagnetic frequencies used in wireless communication have an impact on our health. The research is to focus both on checking the subjective assessment of the influence of electromagnetic fields on the body based on questionnaire studies and on conducting a series of clinical tests.

Researchers from the University of Warsaw examine addiction to the network

2018-11-13

Researchers from the Faculty of Journalism, Information and Bibliology of the University of Warsaw studied in Poland the FOMO (Fear of Missing Out) phenomenon, i.e. fear of being disconnected from the network.

Research on a representative group of Polish Internet users (up the age of 15) was set on a very

extensive, scientific basis. The effect of the work was not only calculating the FOMO indicator in Poland, but also getting acquainted with the scale of this phenomenon. Dr. Anna Jupowicz-Ginalska, initiator and coordinator of the study emphasizes that «thanks to the obtained data, we know that high FOMO syndrom concerns 16% Polish Internet users over 15 years of age. This is a large group, because it means that several million Poles may have problems with disconnecting from the Internet and smartphone. « See the test report: <https://www.wdib.uw.edu.pl/attachments/article/1992/FOMO.%20Polacy%20a%201%C4%99k%20przed%20od%C5%82%C4%85czeniem%20%20z%20raport%20C5%20bada%2084.pdf>

Wrocław chemists developing a 3D printing method in hydrogels

2018-11-13

Dr Anna Witek-Krowiak, Dr Anna Dawiec-Liśniewska and Dr Daria Podstawczyk from the Wrocław University of Technology are developing a 3D printing method in hydrogels. Researchers already have sent a patent application for their project and prepare a publication.

The works of Wrocław chemists are going in three directions: composing of hydrogel and thermoplastic materials for 3D printing, agrochemicals and placing living organisms (algae) in hydrogels. All of these realizations are guided by a common idea - designing structures with specific properties and shapes. In the opinion of chemists, their idea has a chance for commercialization, being the Polish equivalent of filaments currently produced in only a few places in the world - in the Netherlands and Korea. The researchers emphasize that the method is not particularly demanding and can be applied to other composite materials. More: <http://pwr.edu.pl/uczelnia/aktualnosci/co-mozna-wydrukowac-z-hydrozelu-11025.html>

Science scholarships in Israel

2018-11-14

The National Academic Exchange Agency and the Israeli Embassy in Warsaw inform that up to 9 December students can apply for research scholarships in Israel.

On the basis of the «Executive Program for 2011-2014» to «Agreement between the Government of the Republic of Poland and the Government of the State of Israel on cultural, scientific and educational cooperation», the Israeli awards, every year: 5 specialist, 8-month scholarships for academic research in Israel for students, PhD students and young scientists; 1 scholarship for an 8-month study and research stay for students and academic specialists representing various fields, including arts and 4 scholarships for the Hebrew summer course. The scholarship includes the tuition fee and it partly covers the costs of stay in Israel. More: <https://nawa.gov.pl/images/Bilateralne-Naukowcy/09.11/Zalacznik-3-Izrael.pdf>

9th European Forum of Marketing of Scientific and Research Institutions in Warsaw

2018-11-14

The Institute of Aviation invites participants in marketing science to participate in the 9th European Forum of Marketing of Scientific and Research Institutions, which will be held on November 15-16, 2018.

The aim of the Forum is to present the latest research results and practical solutions used by scientific and research institutions, institutes, universities and technology parks from all over Europe. The forum will be an opportunity to show visitors from Europe the achievements of Polish scientists, marketing specialists and practitioners in the field of promoting science and innovation. The event will be held under the patronage of the Ministry of Science and Higher Education, and will take place in the Institute of Aviation in Warsaw at al. Krakowska 110/114. More: <https://ilot.edu.pl/minib/>

Pomeranian Medical University in Szczecin gains PLN 12 million to study civilization diseases

2018-11-15

The Pomeranian Medical University in Szczecin received about PLN 12 million for the project „The impact of biological and environmental factors on the development of selected diseases, with particular emphasis on civilization diseases, and methods of their prevention and treatment”.

The aim of the project is to conduct interdisciplinary research combining the issues of medical sciences and health sciences. The subject of the proposed research concerns issues related to civilization diseases of various origins - from biologically or environmentally conditioned diseases to social and psychological disorders. Money for research is allocated from a pilot competition under the «Regional Initiative of Excellence» program of the Ministry of Science and Higher Education and will be paid for four years. More: <https://www.pum.edu.pl/aktualnosci/12-mln-zl-dla-pum>

Nicolaus Copernicus University in Toruń applying for the status of a research university

2018-11-16

The Nicolaus Copernicus University in Toruń will receive PLN 1 million for the implementation of the project „Nicolaus Copernicus University in Torun - a vision of research excellence” as part of the program of the Ministry of Science and Higher Education „Strategy of Excellence - University of Research”.

The main tasks of the program are raising international recognition of universities, strengthening research cooperation with centers of high international reputation, improving the quality of education of students and PhD students, attracting the most talented candidates from the country and abroad, and improving the quality of university manage-

ment. One of the basic goals set in the university development strategy for 2019-2025 is to obtain the status of a research university. Implementation of the project «Nicolaus Copernicus University in Torun - a vision of research excellence» will help to achieve this goal.

University of Gdańsk to examine the social activity of Polish migrants in Germany

2018-11-16

The University of Gdańsk will implement the project „Areas of social activity of Polish migrants in Germany. Comparative study of Berlin and Hamburg „. The money for its implementation comes from the Polish-German Foundation for Science.

The project aims to determine the nature of the presence and social activity of Polish immigrants in urban space and to compare social behavior and forms of participation in the public life of Poles living in Berlin and Hamburg. The result of the project will be scientific publications in Polish, German and English. The project partners will take part in international conferences devoted to migration in the contemporary world, they are also planning submission of applications for the main call of the Polish-German Foundation for Science, expanding the spatial scope of the study - by including cross-border migration on the Polish-German border.

Polish researchers become laureates of L'Oréal-UNESCO scholarships for women in science

2018-11-19

Six Polish researchers received this year's L'Oréal-UNESCO scholarships for women in science. The Polish Committee for UNESCO, the Ministry of Science and Higher Education and the Polish Academy of Sciences are the partners of the „L'Oréal Poland for Women and Science” program.

Scholarships in the amount of PLN 35,000 in the post PhD category were received by: Joanna Gościńska from the Faculty of Chemistry, Adam Mickiewicz University in Poznań, Dr. Paulina Kasperkiewicz-Wasilewska from the Faculty of Chemistry of the Wrocław University of Technology and Dr. Anna Muszewska from the Institute of Biochemistry and Biophysics of the Polish Academy of Sciences. Scholarships in the amount of 30 thousand in the PhD category were received by Beata Małachowska from the Medical University of Lodz and Anna Piotrowska-Murzyn from the Institute of Pharmacology of the Polish Academy of Sciences in Kraków. Scholarship in the MA category in the amount of 20 thousand PLN was received by Aleksandra Synowiec, a student at the Faculty of Biochemistry, Biophysics and Biotechnology of the Jagiellonian University in Krakow.

Center for Didactics and Medical Simulation in Katowice to hold Scientific and business brunch

2018-11-19

SPIN-US Sp. z o.o, a special-purpose company of the University of Silesia, and the Technology Transfer Center of the Silesian Medical University invite participants to the Center for Didactics and Medical Simulation in Katowice on November 28 for the scientific and business brunch „Billion in patent 5”.

The meeting will provide the opportunity to present solutions in the areas of medicine and pharmacy and

Life Quality Technology in terms of their use in the economy, identify projects for the future commercialization of research results and create new relationships that can become the basis for implementation of research and development projects. The presented innovations include minimally invasive treatments in the field of aesthetic medicine; a biodegradable dressing nanofiber; a new approach in health care of the youngest patients; 3D technology in modern anatomy education and modern methods of polymer synthesis. More: www.miliard5.evenea.pl

Adam Mickiewicz University in Poznań receives one million PLN for the research university status

2018-11-19

University Adam Mickiewicz in Poznań received almost PLN 1 million for the project „Strategic dimensions of functioning of the University of Adam Mickiewicz in Poznań as a research university” realized within the competition „Strategy of Excellence - University of Research” organized by the Ministry of Science and Higher Education.

- The awarded funds will allow us to receive expert opinions and analyses that are to help the university in working out useful solutions in order to apply for the status of a research university next year - says prof. Ryszard Naskręcki, Vice-Rector for Science and International Cooperation. Within the ministerial program, universities can obtain funds to support research and analyses aimed at developing the objectives and assumptions of a long-term development plan for a research university.

Chemist from the Wrocław University of Technology receives prestigious scholarship

2018-11-20

Dr Paulina Kasperkiewicz-Wasilewska from the Faculty of Chemistry at the Wrocław University of Technology became a scholar-

ship holder of the L'Oréal-UNESCO program for Women and Science for conducting advanced research in the field of life sciences.

The chemist is involved in the determination of activity and imaging of proteolytic enzymes - an important group of enzymes controlling biochemical processes occurring in living cells and leading to removal of abnormal cancer cells. The results of her research have recently been published in the prestigious Journal of the American Chemical Society. The «L'Oréal Poland for Women and Science» program is aimed at promoting scientific achievements and encouraging the continuation of scientific work. Its partners are the Polish Committee for UNESCO, the Ministry of Science and Higher Education and the Polish Academy of Sciences. The winners are awarded a scholarship to cover the costs of traveling to any chosen scientific conference in Europe.

Universities from the province Kuyavia-Pomerania creates a consortium to build a laboratory base

2018-11-20

Public universities of the province Kuyavia-Pomerania created a consortium for the project „Laboratories of technical and exact sciences dedicated to the development of research potential in the field of innovative solutions and technologies of key importance for the economy of the Kuyavian-Pomeranian Voivodeship”.

The consortium consists of the University of Kazimierz the Great in Bydgoszcz, the University of Nicolaus Copernicus in Toruń and the University of Technology and Life Sciences in Bydgoszcz (leader). The modern laboratory works in the field of exact and technical sciences financed under the project will be focused on the search and promotion of innovative ideas, products and services. The first informative meeting was devoted to the new scientific and research infrastructure of the project and the prospects of economic development of the technical industry in the province Kuyavia- Pomerania.

Almost PLN 400 million allocated for financing projects within Opus and Preludium calls

2018-11-21

Nearly PLN 400 million was allocated by the National Science Center (NCN) to finance research projects selected in the this year's Opus and Preludium calls.

The Opus 15 call is addressed to all scientists, regardless of their academic degree. Till now 1838 applications were submitted, of which 359 projects were qualified for financing. The Preludium 15 participants do not need to have PhD degree to apply for research funds. In this program, 1132 applications were submitted, of which 259 projects received funding. List of co-financed projects: <https://ncn.gov.pl/konkursy/wyniki/2018-11-16-opus15-preludium15>

21 scientists from the Wrocław University of Technology receive grants from Opus and Preludium calls

2018-11-21

Almost PLN 15.5 million from the National Science Center for the implementation of their research projects were received by 21 scientists from the Wrocław University of Technology as part of Opus and Preludium calls. Previously, the Wrocław University of Technology received a total amount of over PLN 8 million.

The most significant aid has been given to Dr Eng. Marcin Sieńczyk from the chemical department. His project «O'yyong-nyong virus CP protease: substrate profiling, design and synthesis of inhibitors and molecular probes with their biochemical analysis» gained over two million PLN within the Opus call. Opus and Preludium are the most popular calls organized by the National Science Center. 2970 applications were submitted in both calls, of which 618 projects received funding. They are announced twice a year, and in November the Polish researchers were awarded almost PLN 400 million.

Researchers of the Medical University of Wrocław receive Grants of the National Science Center

2018-11-21

Three scientists from the Medical University of Wrocław received grants from the National Science Center within Opus and Preludium calls.

The winner of the Opus call was Wojciech Kosmala from the Department and Clinic of Cardiology. He received over 400,000 PLN for the implementation of the project: «A hypertensive response to moderate exercise load and an increased risk of developing cardiovascular complications and reduced exercise tolerance». The PRELUDIUM grant was granted to Artur Andrzej Nahorecki from the Department of Angiology at the Faculty of Health Sciences for the implementation of the project: «Sleep apnea syndrome in patients with carotid stenosis - affecting the stability of atherosclerotic plaque» and Aneta Popiel from the Department of Histology and Embryology at the Faculty of Medicine for the implementation of the project: «The role of testine expression in pre-invasive and invasive cervical cancer».

Consortium of Gdańsk universities to carry out the BIONANOVA project

2018-11-22

The consortium of Medical University of Gdańsk, University of Gdańsk (leader), Gdańsk University of Technology and INNOVABION Ltd will implement the project „New generation systems for the delivery of bioactive molecules in chemically synthesized and genetically engineered nanobiomaterials (BIONANOVA)”.

The results of the BIONANOVA project will be used to develop new unique methods of drug delivery and to create innovative nanobiomaterials for the

treatment of diseases of various etiology. The research will be carried out using advanced cell culture techniques, immunology, molecular biology and genetics. The proposed budget for the project is over PLN 25 million. The money for the project's implementation is allocated by the TECHMATSTRATEG program of the National Center for Research and Development. The goal of the Program is to stimulate the growth of innovation and competitiveness of the Polish economy.

Researchers and students from outside the European Union to receive permission to stay in Poland for up to 5 years

2018-11-23

The Polish government has submitted to the Sejm a bill amending the Act on foreigners. The new regulations will allow researchers and students from countries not belonging to the European Union to obtain a permanent residence permit in Poland for up to 5 years.

The draft law adapts the Polish law to the EU directive on the conditions of entry and stay of third-country nationals for the purpose of conducting research, studies, training, volunteering, exchange programs for schoolchildren or educational projects and taking up an au pair work. The new regulations will allow foreigners involved in education to stay in Poland for a period to 5 years.

University of Life Sciences in Wrocław launches a network of stations for vibration tests of the Earth's crust

2018-11-23

The Institute of Geodesy and Geoinformatics of the University of Life Sciences in Wrocław has launched a network of permanent Global Navigation Satellite Systems (GNSS) as part of the EPOS-PL project - European Observation System.

GNSS receivers allow to determine the position of the station on the basis of satellite signals with an accuracy of a few millimeters and can be used to study vibration measurements of the Earth's crust during seismic shocks and mining bumps. The network consists of stations located in Wrocław, Katowice, Będzin, Chorzów, Chełm Śląski, Rybnik, Borowa Góra near Warsaw and in Komorniki near Środa Śląska. GNSS stations perform continuous autonomous observations of satellite signals from five navigation systems: US GPS; Russian GLONASS; the European Galileo system; Chinese BeiDou and Japanese QZSS. Call for international research projects devoted to antibiotic resistance is launched

2018-11-26

On 5 December 2018, the international call JPI AMR (Joint Programming Initiative on Antimicrobial Resistance) will be launched. It is dedicated to antibiotic resistance.

The call is to bring international research projects focused on the development of tools, technologies and methods of diagnostics that allow detection of antimicrobial resistance. Financial support will be provided to research projects that may impact areas, where the risk of antibiotic resistance is most serious, such as low- and middle-income countries in Africa and Asia. The budget for the competition is EUR 20 million, including EUR 500 thousand allo-

cated by the Council of the National Science Center to fund the participation of Polish researchers. More: <https://www.jpiamr.eu/>

Universities from Gdańsk and Szczecin developing a technology for acquiring and exploring gravity data

2018-11-26

Consortium of Gdańsk University of Technology, Maritime University of Szczecin and GEOPARTNER will carry out the project: „Development of technologies for the acquisition and exploration of gravity data offshore of Polish marine areas and its coasts” (MORGAV).

The aim of the project is to develop technology for the acquisition and exploration of gravity data from the coasts of Polish maritime areas and its coast for the needs of the harmonization of offshore altitude measurements with the EVRS (European Vertical Reference System). The developed technology for acquisition and exploration of high precision offshore gravity data will fill a significant information gap in the research of Polish Exclusive Economic Zone. The results of the research will allow the introduction of automated methods for monitoring marine areas into the practice, will also enable multi-aspect analyzes of spatial data.

Researcher from the University of Białystok receives Award of the Polish Physical Society for a PhD dissertation

2018-11-27

Dr Krzysztof Szerenos from the Faculty of Physics, University of Białystok (UwB) was awarded by the Polish Physical Society (PTF) for his PhD dissertation „Ultrafast nonthermal photo-magnetic recording in dielectrics”.

Dr Szerenos in his dissertation described a new method of ultrafast photomagnetic recording in thin dielectric layers. The supervisor of the work is Dr Andrzej Stupakiewicz, Prof. of Białystok University.

This is not the first award for Dr. Krzysztof Szerenos. The researcher from Białystok received this year's Prime Minister Award for the best PhD dissertation. In April, he received the Medal of a Young Scientist awarded by the Warsaw Technological University.

Polish researchers become leaders of the work on artificial intelligence

2018-11-27

Polish experts working on the development of artificial intelligence are considered the world leaders of AI. They participate in many studies in scientific centers, especially abroad. Polish technologies introduced into foreign markets are often better than those which have been offered up to now.

The Polish government has a plan to use the potential of specialists in artificial intelligence. In November, the Ministry of Digitization published «Assumptions for AI (artificial intelligence) strategy in Poland». It assumes, among other things, the creation of a central repository of anonymous medical data, which will be completely or partially open. The action plan of the Ministry of Digitalization in 2019 also provides support for the development of a new AI program in the economy, the creation of the Digital HUB of Innovation and the launch of a virtual institute of artificial intelligence.

Pomeranian Science and Technology Park in Gdynia investigating bioactive chokeberry juice

2018-11-30

Conducting research at the Pomeranian Science and Technology Park in Gdynia as part of the InnovaBio Pomorze project, students discovered that bioactive chokeberry juice contains five times more polyphenols than the red wine, famous for these ingredients.

Five different wines from the medium price range were analyzed for their polyphenol content. All tests showed that chokeberry juice beats the spots off any wine competitor. The research was carried out at the request of a small Polish producer who, after receiving the results, immediately wants to start production of chokeberry juice on a prototype production line. Vegetable polyphenols are part of the plant immune mechanism, inhibiting the development of insects and even viruses that attack them. Polyphenols supplied in the diet are considered to be beneficial for human health and are attributed to the anti-cancer effect and to prevent diseases of the circulatory system. More: <http://ppnt.pl/en/aktualnosci/ppnt/aronia-nowy-polski-superfood>

Researcher of the University of Silesia looking for better forms of barley

2018-12-05

Dr Agata Daszkowska-Golec from the Department of Genetics of the University of Silesia is looking for forms of barley that are more tolerant to long-term water shortages. The researcher analyzes the mechanisms of action of two genes: CBP20 and ERA1.

Dr Daszkowska-Golec investigates defense mechanisms against drought stress in barley and Arabidopsis (*Arabidopsis thaliana*) based on the analysis of their genetic code - I am involved in the identification of genes related to plant response to long-term water deficiencies and how mutations of these genes contribute to improvement tolerance to drought - says the biologist. Barley, which occupies

the fourth place in Poland in terms of cultivated area, is primarily used as fodder and material for the production of malt, flakes, groats or sprouts. Researchers are looking for new, better varieties of this grain, characterized by good fertility and high resistance to stress factors. More: <http://www.us.edu.pl/w-strone-elitarnej-odmiany-jemienie>

Researcher from the University of Białystok to conduct research at the University of Alaska

2018-12-06

Dr Julita Sadowska from the University of Białystok (UWB) will conduct research for a year at the University of Alaska (Anchorage, USA) within the scholarship, which Dr. Sadowska obtained from the Bekker program carried out by the National Academic Exchange Agency.

The research object of Dr Sadowska from the Department of Animal Ecology at the Institute of Biology will be the arctic ground squirrel. Alaska is one of the places where these animals live. The researcher from Białystok received PLN 156 thousand for the implementation of her project. The goal of the Bekker Program is to increase the international mobility of Polish scientists and academic teachers by enabling them to conduct research or teaching in the best foreign centers around the world.

Call „Third University Mission” completed

2018-12-07

Over 200 university projects from all over Poland received funding from the National Center for Research and Development as part of the „Third University Mission” call.

The projects selected in the competition are addressed to various groups of recipients and each of them is an example of social responsibility of the university. - Over 170 million PLN, which we are allocating for the implementation of these projects throughout Poland, is an opportunity to develop competences and support specific people, and at the same time it is an investment in the future of us all - said Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin during the

announcement of results. The aim of «The Third University Mission» call is to develop and implement educational programs and didactic activities, courses or trainings in cooperation with education entities, local government or non-governmental organizations. List of projects: https://www.ncbr.gov.pl/fileadmin/POW-ER/03.01...3MU_18/Zal._nr_6_final_Lista_rankingowa_wnioskow_ocenionych_pozytywnie__2_.pdf

Program Preludium 15 offers grants for PhD students of the Wrocław University of Environmental and Life Sciences

2018-12-10

PhD students of the Wrocław University of Environmental and Life Sciences have received over 400,000 PLN for their research. Their projects will be financed from the Preludium 15 call of the National Science Center.

Katarzyna Godlewska will implement the project «The mechanism of action of novel plant extracts and their effect on Arabidopsis thalian stress resistance». 210 thousand PLN will be used to examine the possibility of using higher plants for the production of biostimulants for arable crops. Grzegorz Bury received 196 thousand PLN for «Determination of precise orbits of GNSS satellites based on combined laser and microwave solutions». For the determination of orbits, the Global Navigation Satellite System (GNSS) data is used as standard system. The PhD student developed a methodology for their determination with the use of the laser technology. The project will analyze errors of measurements to suggest one solution for both types of observations.

Researcher at the University of Life Sciences in Wrocław receives one million PLN from the Leader program

2018-12-14

Dr Paulina Nowicka from the University of Life Sciences in Wrocław will receive almost PLN 1 million from the program of the National Center for Research and Development ,Leader' for scientists under 35 of age, who want to gain experience in managing research projects and in building a team.

With this financing, Dr Nowicka will carry out research combining natural sciences in the field of food and human nutrition technology as well as biological sciences. She wants to develop innovative healthy and tasty snacks for kids. - I plan to use our native fruits and vegetables (e.g. cherry, apple, pear, kamchatka berry, sea buckthorn, kale, spinach, tomato) characterized by high pro-health potential. I will also use herbs and edible flowers. The plan is to expand the range of products available on the market with health-promoting features that are not only healthy, but also tasty, and thus increase the demand for Polish vegetables and fruits. More: http://www.glos.upwr.edu.pl/aktualnosci/48742/lider_dla_dr_pauliny_nowickiej_z_upwr.htm

Adam Mickiewicz University in Poznan to implement the „Third University Mission”

2018-12-14

Projects of the University Adam Mickiewicz University in Poznań received more than 8 million funding in the competition of the National Center for Research and Development „Third University Mission”.

Co-financing was granted to the following projects: « Adam Mickiewicz University in Poznan, a forge of Wielkopolska talents »; «The future of Wielkopolska in the hands of the University of Adam Mickiewicz in Poznań »; « Adam Mickiewicz University in Poznan cares about the development of the Wielkopolska »; «University of Youth Competence Development»; «Discoveries of chemistry - Discover, Check, Use»

and “UAM Collaboration - Training program for the inhabitants of the region». The aim of the competition is to develop and implement programs and didactic activities together with entities acting for education - self-government units and non-governmental organizations. Thanks to it, universities was able to prepare educational programs, courses and trainings addressed to recipients from outside the academic environment.

Gdańsk University of Technology project to receive over PLN 2.2 million

2018-12-14

Gdansk University of Technology in cooperation with the Municipality of Gdańsk and the Kashubian People's University implements the project „Technological University of Many Generations”. The initiative has obtained over PLN 2.2 million in funding in the competition of the National Center for Research and Development „Third University Mission”.

The Gdańsk University of Technology will prepare a training program for 1500 people of all age groups, in which the emphasis will be put on practical, workshop and laboratory classes. Their subject area will include exact and technical sciences: mathematics; physics; chemistry; electrical engineering; shipbuilding and programming as well as socio-economic sciences. The University of Technology will make its laboratories, equipment, classrooms and sports facilities available to listeners. The subject of the classes was chosen by the residents in a special survey. There will be such issues as the presence of harmful chemicals in everyday products or mobile applications that allow participants to train their mind and prevent the development of Alzheimer's disease.

Polish researcher to test the unusual properties of Haller's cress

2018-12-17

Dr Alicja Babst-Kostecka from Władysław Szafer Institute of Botany within Polish Academy of Sciences in Kraków won the award of

the Ministry of Investment and Development ,Polish investments of the future' in the ,Innovations for the environment' category.

The aim of the prize is to award people who successfully implement ambitious projects for environmental protection. The subject of the awarded project is the Haller's cress (Latin *Arabidopsis halleri*) - a white-flowering perennial which has spread to mining heaps and mines, i.e. contaminated areas with high concentrations of heavy metals in the soil. Haller's cress attracted the attention of scientists thanks to its ability to survive in such conditions. It turned out that it is a so-called hyper accumulator and can accumulate from 100 to 500 times more heavy metals than other plants. Dr Babst-Kostecka's team prepared an EU project to check its features and how it can be used.

Researchers of the Wrocław University of Environmental and Life Sciences receive grants worth PLN 4 million

2018-12-18

Scientists of the University of Life Sciences in Wrocław received grants in the call of the National Science Center - Opus 15. Their total value is almost PLN 4 million.

Dr Beata Łabaz from the Institute of Soil Sciences and Environmental Protection will deal with black earth soils in Poland against the climate change and the impact of settlement and human activity from the beginning of the Neolithic period. Prof. Krzysztof Marycz from the Department of Experimental Biology as the first in the world describes the influence of metabolic syndrome in horses on the functionality, steatosis and inflammation of the liver. Professor Krzysztof Sońnica will set global geodetic parameters using the Galileo satellite system, Dr Jarosław Waroszewski will study erosion and soil development in the loess landscape of the Wzgórza Trzebnickie, and Prof. Aneta Wojdyło from the Department of Fruit, Vegetable and Nutra-ceuticals Technology will develop a model drink with pro-health properties focused on the prevention and therapy of civilization diseases. More: http://www.glos.upwr.edu.pl/aktualnosci/48753/opus_15_prawie_4 mln_zl_dla_upwr.html

Consortium with the participation of Krakow universities to develop a model of a welfare farm

2018-12-19

Consortium of the Ministry of Agriculture and Rural Development (leader), Agricultural Advisory Center (CDR) in Brwinów, Jagiellonian University and Agricultural University in Krakow, signed a contract with the National Center for Research and Development to fund the GROW-ID project „Welfare farms in rural development against demographic challenges”.

The project will be implemented as part of the strategic program of scientific research and development work «Social and economic development of Poland in the conditions of globalizing markets» GOSPOSTRATEG. The main objective of the project is to develop a welfare farm model and to prepare a system of implementation in the form of a development strategy of the care farms. It is to eliminate development barriers in Poland: inequalities between cities and rural areas in access to social services, insufficient coordination of public services at the local level and low quality of social capital.

University of Economics in Katowice to receive additional funds for development

2018-12-21

The University of Economics in Katowice (EU) in 2019 will receive almost PLN 29 million to increase the basic fund - says the letter of the Deputy Prime Minister, Minister of Science and Higher Education - Jaroslaw Gowin, addressed to the rector of Dr. Robert Tomanek.

Min. Gowin said that funds in the form of two-year government bonds will be transferred in 2019. The nominal value of government bonds, for which the Minister of Science and Higher Education applied to the Minister of Finance for the University of Economics in Katowice is PLN 28.825 million. Providing

additional money for university development was one of the key demands in the discussions of the university authorities with the Ministry of Science and Higher Education during the work on the reform. As a result, the Law on Higher Education and Science, i.e. the Constitution for Science guarantees a constant mechanism for the increase of expenditures on research and higher education as well as an increase in minimum wages in universities. More: https://www.ue.katowice.pl/no_cache/uczelnia/aktualnosci/article/ue-katowice-otrzyma-dodatkowe-srodki-na-rozwoj.html

University of Technology and Life Sciences in Bydgoszcz to study photovoltaic panels

2018-12-24

University of Technology and Life Sciences in Bydgoszcz (UTP) has signed a cooperation agreement with the company dealing with the processing of plastics and the production of photovoltaic panels by the company Hanplast Ltd.

Hanplast is the world's first manufacturer of new generation solar modules in SmartWire Connection Technology (SWTC). According to the agreement, the efficiency of the panels will now be tested in the university's laboratories. An automated production line is based on SWTC technology and operates in the plant located in the Bydgoszcz Technological Park. In this technology, cell connections are applied at a lower temperature (140 ° C) than the soldering process in traditional stringer (230-300 ° C) photovoltaic modules used in buss-bar or multi wire technology. As a result, SWCT induces lower thermo-mechanical pressure on the solar cell, reducing its brittleness and ensuring a longer service life.

Researchers from the University of Warsaw to participate in EIT Food projects

2018-12-27

Researchers from the faculties of psychology, mathematics, computer science and mechanics and management at the University of Warsaw (UW) will participate in 19 projects financed by the Knowledge and Innovation Community in the area of EIT Food.

EIT Food is part of the European Institute of Innovation and Technology - an institution of the European Union that supports innovation and entrepreneurship in Europe. EIT Food is a Knowledge and Innovation Community dealing with the modernization of the food sector. It is composed of 50 partners from 13 countries. These include universities, research units and enterprises, among others: University of Warsaw, University of Cambridge, Hohenheim University, Technical University of Munich, Bosch, Nestlé, PepsiCo, Siemens, Sodexo and Polish Maspex. The projects of the scientists from the University of Technology will be implemented in 2019 and concern education, innovation and communication.

Polish-English-Dutch project at the University of Zielona Góra

2018-12-27

The University of Zielona Góra, together with the English University of Nottingham and the Dutch University of Twente, are carrying out the research project „Smart Cities EMC Network for Training (SCENT). The project's budget is almost 2.4 million euros.

The main objective of the project is to create a network offering training for PhD students in specific issues related to electromagnetic compatibility (EMC) intelligent cities. The project is developed as part of the European research program HORIZON 2020: 1.3 - Excellent science / Marie Skłodowska-Curie (MSCA). EMC is necessary for the reliable operation of systems containing electronic, telecommunications and energy systems. It is also a legal requirement for the introduction of the product to the European Union market.

University of Silesia to implement the project „ProspectUS - the concept of strengthening the research position”

2018-12-27

The project of the University of Silesia (University of Silesia) „ProspectUS - the concept of strengthening the research position” has received over 910 thousand PLN from the call of the Minister of Science and Higher Education „Strategy of Excellence - a research university”. The money will be used to carry out R&D to develop a long-term university strategy.

The activities will serve to increase the international recognition of the university's academic activities, develop research cooperation with foreign research centers, improve the quality of education of students and PhD students, as well as manage the university and increase the number of obtained grants for research. The aim of research and analysis is to identify areas that will strengthen the status of the University of Silesia as a research university. On this basis, a development concept will include the deepening of cooperation with the economic and social environment of the university and strengthening the potential of the university and the newest changes - for example the new law on higher education and science.

International projects developed at the University of Silesia in Katowice

2018-12-28

The University of Silesia obtained co-financing of international projects from the National Academic Exchange Agency program: two of them will be carried out with partners from the Czech Republic - Palacky University in Olomouc and Masaryk University in Brno, the third project with the Universidade de Évora in Portugal.

The program is to support the mobility of researchers in order to carry out joint research projects.

Co-financing is intended to cover the costs of personal exchanges as part of the partners' academic cooperation. The Silesian University with Czech universities will carry out projects: «The role of criminal law in the protection of children's rights in a European perspective with special regard to Polish and Czech legislation» and «Contemporary challenges for international and European law. The Czech and Polish perspectives». Together with the Universidade de Évora in Portugal, the University of Silesia will realize the project «In search of mysticism - new dimensions of spirituality in music, the fine arts and new media of the 20th and 21st century».

University of Silesia in Katowice to implement the project „One University - Many Opportunities Integrated Program”

2019-01-02

The University of Silesia in Katowice has received over PLN 39 million from the National Center for Research and Development for the project „One University - Many Opportunities. Integrated Program”.

The implementation of the project will contribute to the development of the university - including by implementing changes in the management of the educational and organizational process, and thanks to the multifaceted activities planned under the project, it will strengthen the professional, communication, analytical and language competences of students. The project will allow to increase the competences of the academic and teaching staff as well as the administrative and managerial staff, it will also give the opportunity to implement IT management tools or create open educational resources. Thanks to co-financing, the university plans to include valuable lecturers from abroad in conducting classes, as well as organizing study visits and internships for students and research and teaching staff.

IP box tax solution enters into force

2019-01-04

From January 1, 2019, IP box enters into force. This solution is addressed to entrepreneurs conducting research and development (R & D) activities, directly related to the creation, development or improvement of intellectual property rights.

The Ministry of Entrepreneurship and Technology explains, that the solution comes into effect if the entrepreneur spent money on research and development, developed or bought a new technology, obtained a qualified intellectual property right for it and commercializes. In that case he can pay only 5 percent of CIT or PIT tax. IP box operates in many countries that have focused on innovation as the driver of the economy. Israel, the Netherlands, the United Kingdom, Ireland and Luxembourg have similar solutions.

University of Bydgoszcz to carry out the project „In good terms with nature”

2019-01-07

The Faculty of Natural Sciences of the University of Kasimir the Great (UKW) in Bydgoszcz will receive over 600,000 PLN for the implementation of the project: „In good terms with nature”. The money is allocated from the call of the National Center for Research and Development.

As part of the project, educational classes will be conducted in the laboratories and lecture halls of the faculty of natural sciences at the university as well as in the UKW Botanical Garden for pupils from 7th and -8th classes of elementary and post-primary schools. During the implementation of the project, the Faculty will host a total of 450 pupils, also from the Louis Braille school in Bydgoszcz. In addition to classes in specialized laboratories, the Garden of Herbal Plants will be established in the Botanical Garden, which will be specially designed with selected species of plants to experience the nature with many senses.

Researcher of the Poznań University of Technology nominated for the Polish Intelligent Development Award

2019-01-08

Krzysztof Wegner from Poznan University of Technology has been nominated for the Polish Intelligent Development Award 2019 in the category: „Scientist of the Future”. He received his nomination for the project „MUCHA - Spatial Image Registration and Processing System” financed by the National Center for Research and Development under the LIDER VIII program.

The aim of the Poznań researcher's work is to develop an innovative system of recording and processing of spatial images with very high resolution, a large number of registered beams and a wide angle of acquisition. The result of the project will be the technology of the construction of a new generation of spatial image cameras. Along with the spatial image registration system, specialized algorithms processing the recorded spatial mobile scene will be developed. They will enable virtual walks in previously recorded mobile spatial scenes and precise geometric measurements of registered objects.

Maritime University of Gdynia to receive almost PLN 12 million

2019-01-08

Gdynia Maritime University has been the laureate of a pilot call of the Ministry of Science and Higher Education „Regional Initiative of Excellence”. The university obtained a grant of PLN 11.87 million under the decision of the Minister of Science and Higher Education - Jarosław Gowin.

Thanks to the funding, the university will carry out the project «Development of the research base and scientific achievements of the employees of the Electrical Department of the Maritime University in Gdynia» from January 1, 2019 to December 31, 2022.

The project will provide academic teachers with trainings, access to scientific databases, instrument grants, small research grants, conference grants, professor subsidies, habilitation scholarships and employment financing for new research workers.

Jan Kochanowski University to participate in the international project of x-ray method analysis of elements

2019-01-09

Jan Kochanowski University (UJK) in Kielce represents Poland in the international project „European Network FOR Chemical Elemental analysis by Total reflection X-Ray Fluorescence”.

The project will concern the X-ray method of elemental analysis and it is part of the European Cooperation in the field of Scientific and Technical Research (COST). 49 scientists from 23 countries will participate in it. The project management committee is composed of Dr Dariusz Banaś, Prof. UJK and Dr Aldona Kubala-Kukuś. Both of them are employees of the UJK Institute of Physics. The value of the project is 60 million euros. It will be implemented in 2019-2022 years.

New international projects of the Warsaw University of Life Sciences

2019-01-09

In December 2018, scientists from the Warsaw University of Life Sciences received funding for four international projects.

Two projects «Effective and sustainable supply of agro-environmental and climatic public goods through European Union agriculture» and «Innovative system of processing food on a reduced scale» have received financing under the Horizon 2020 program. Also, under the ERA-NET program, the project „Using potato-microbial interaction for the development of sustainable breeding and production strategies” was co-financed. Within the framework of bilateral cooperation between Poland and South Africa, project „Application of phylogeographical and metagenomic methods in estimating the impact of invasive Australian acacia species on the rhizobium community in the Mpumalanga and KwaZulu Natal Provinces in South Africa” received financing.

Researchers of the University of Life Sciences in Wrocław to participate in the Mozart program

2019-01-09

Two scientists from the University of Life Sciences in Wrocław - Prof. Agnieszka Noszczyk-Nowak and Prof. Michał Dziecioł - will carry out projects within the Mozart project together with Wrocław companies.

Professor Noszczyk-Nowak together with a veterinary clinic Neovet will deal with the development and implementation of cardiological examination schemes in dogs and cats undergoing chemotherapy. Professor Dziecioł and the company Inter Technologie will conduct joint research on the possibility of using chemical and semiochemical volatile substances in modulation of human behavior. The Municipal Program of Supporting the Partnership for Higher Education and Science and the Business Activity Sector «Mozart» connects Wrocław scien-

tists and the companies. The company gets the opportunity to benefit from the intellectual potential of the researcher and use its specialist knowledge for the development of the company, and the scientist gets the opportunity to work in a business environment and use knowledge in practice. More: http://www.glos.upwr.edu.pl/aktualnosci/48837/mozart_wspolpraca_naukowcow_z_wroclawskimi_firmami.html

Professor Jerzy Sobczak becomes a member of the Management Committee of the European Action COST

2019-01-10

Professor Eng. Jerzy Sobczak from the Department of Foundry of the AGH University of Science and Technology in Krakow was nominated as a member of the Management Committee of the European Action COST, at the request of the Ministry of Science and Higher Education.

COST (The European Cooperation in Science and Technology) provides funding for the creation of research networks called COST activities. These networks offer open space for collaboration between scientists across Europe (and beyond), and thus give impetus to research and innovation. Researchers can create a network based on their own interests and research ideas in any field of science.

Wrocław University of Environmental and Life Sciences to implement the „BioSciUniversity” project

2019-01-11

Wrocław University of Environmental and Life Sciences has been included in the group of 19 Polish universities, which received funding under the competition of the Minister of Science and Higher Education „Strategy of Excellence - University of Research”.

700 thousand PLN has been allocated for the project «BioSciUniversity», which aims to improve the

quality of university management, including the introduction of organizational changes, allowing to increase the international importance of the University's activities. The most important tasks of the project are raising the international recognition of the academic activity of the university by selecting Leading Research Teams, strengthening research cooperation with high-reputable research centers; improving the quality of education of students and PhD students, in particular on faculties and scientific disciplines related to priority research areas, and preparation of comprehensive solutions for the professional development of university staff.

International Center for Research on Artificial Intelligence and Cyber Communications established in Łódź

2019-01-16

The Faculty of Management of the University of Lodz (UŁ) is launching an international Center for Research on Artificial Intelligence and Cyber Communications.

Its main goals are to conduct and disseminate scientific research, organize conferences, seminars and workshops with the participation of experts, publish monographs, scientific articles and analyzes, raise funds for research and development of research infrastructure and promote open cooperation of international experts. - Establishing the Center at the Faculty of Management of University of Lodz is a response to the needs of both business and students. More and more companies are deciding to use artificial intelligence in their activities, developing their competitive advantage. This increases the demand for students with business knowledge who know the methods and potential of this new technology - said Dr. Artur Modliński, head of the Center for Research on Artificial Intelligence and Cyber Communications.

Polish and Portuguese researchers to examine the indoor air quality

2019-01-16

Polish and Portuguese scientists will carry out the project „Indoor air quality and public health implications of fungi and mycotoxins contamination of HVAC systems”.

The project has received funding from the National Academic Exchange Agency as part of the bilateral exchange program for scientists between Poland and Portugal. The coordinator of the Polish side is Dr Magdalena Twarużek, Prof. Associate from the Department of Physiology and Toxicology, Institute of Experimental Biology, Faculty of Natural Sciences of the University of Bydgoszcz. The Portuguese side is coordinated by Dr Susana Viegas from the Centro de Investigação em Saúde Pública, Escola Nacional de Saúde Pública in Lisbon.

Researchers from Poznań and Lisbon to cooperate

2019-01-17

The team of Karolina Wieszczycka from the Institute of Technology and Chemical Engineering of the Poznań University of Technology obtained funding in the call for bilateral exchange of scientists of the National Academic Exchange Agency (NAWA) and Fundação para a Ciência e a Tecnologia (FCT).

As part of the project «New carriers in the HF system for the selective separation of precious metal ions from waste sources» teams from the Poznań University of Technology and Instituto Superior Técnico from Lisbon will cooperate in searching for new solutions of hydrometallurgical recycling of waste electrical, electronic equipment and used car catalysts. The purpose of the exchange program is to support the mobility of researchers in order to implement research projects conducted jointly by partners from Poland and Portugal.

Silesian University of Technology signs an agreement on cooperation with the city of Świętochłowice

2019-01-18

Silesian University of Technology signed an agreement with Świętochłowice. The cooperation will take place primarily in the areas of education, research and development and human resources. The university will also actively participate in the organization of the „Świętochłowice Business Plan” competition.

The partners will cooperate in the scope of agreeing on research and development topics, presenting and promoting achievements, improving educational programs and modernizing the education process. It is also planned to appoint specialists for strategic technical and organizational solutions. The city and the university will actively cooperate in employing graduates of the Silesian University of Technology and in the organization of student internships. The university also decided to involve in stimulating the activity of Świętochłowice residents in starting and running a business and became a partner of the „Świętochłowice Business Plan” competition.

Jan Długosz University of Humanities and Natural Sciences to carry out two research projects

2019-01-18

University of Humanities and Natural Sciences in Częstochowa received money from the National Science Center for the implementation of two research projects.

The first of them, «Research on methods of intensification of sorption processes in modified construction of adsorbent beds», obtained co-financing in the amount of over 830 thousand PLN from the call OPUS 15. The project manager is Dr Jarosław Marek Krzywański from the faculty of mathematics and natural sciences. The second project is entitled

«Theoretical studies of physical properties of chalcopyrite semiconductors for applications in solar cells». It received over 136 thousand PLN within the PRELUDIUM 15 PLN call. Its supervisor is Myron Rudysh, PhD student of the Faculty of Mathematics and Natural Sciences.

Projects of the Silesian University of Technology co-financed in the 3rd TANGO Call

2019-01-21

Projects of electrical, automation, electronics and computer science as well as environmental and energy engineering faculties at the Silesian University of Technology will receive funding from the National Center for Research and Development and the National Science Center.

Co-financing is granted to projects: «Probe for dynamic measurements of fluid parameters in two-phase flows, mainly in wet steam» under the supervision of Dr Eng. Sławomir Dykas from the faculty of Environmental engineering and energy, «Innovative photonic measurement system for biomedical applications» under the supervision of Prof. Paweł Karasiński from the Electrical department and «Application of three-dimensional vascular network models» under the direction of Dr Eng. Krzysztof Psiuk-Maksymowicz from the faculty of Automation, Electronics and Computer Science. The money is allocated from the support program for the practical use of TANGO basic research results. In total, from 11 projects 6 of them will receive financing within the TANGO call.

Wrocław University of Science and Technology to implement the project „Cybersecurity for the economy of the future”

2019-01-21

Wrocław University of Science and Technology received almost PLN 22 million from the National Center for Research and Development for the project „Cybersecurity for the economy of the future”. The Lower Silesian Security Cluster will be involved in its implementation.

The goal of the project is m.in. improving the quality of cyber security education, which is to cover not only students but also research and teaching staff and management. The plans are to launch new and modernize already existing education programs, as well as to purchase tools and software. - High-quality semi-annual internships for students will also be of key importance. As a university, we have financial resources to implement them, we must now find companies where they could acquire knowledge. In this respect, we count on cooperation with cluster members - says Prof. Tadeusz Więckowski, head of the Department of Telecommunications and Teleinformatics at the electronics department quoted on the university website.

Białystok high schools to run the Innovation + Incubator project

2019-01-22

Białystok University of Technology, Medical University of Białystok and the University of Białystok have conducted joint achievements in supporting the transfer of research and the results of scientific work to industry.

The three largest universities in the Podlasie region have been implementing the Innovation + project for the past two years. The project allowed to finance 26 pre-implementation works, 4 new companies and 14 patent applications. The Institute of Innovation and Technology at the Białystok University of Technology (IIiT PB) was the leader of the project Incubator of Innovation+. Tomasz Stypułkowski, the

president of the board of the Incubator of Innovation + as a tool, emphasized that it is indispensable in the commercializing of scientific projects. - We have proven, above all to ourselves, but also to the business and scientific society that it makes sense - he said.

International Visegrad Fund Scholarships

2019-01-22

Until March 15, 2019, graduate students and young researchers can apply for scholarships of the International Visegrad Fund.

Grants under the program are offered in all scientific disciplines, in every possible language and include a stay of 1 to 4 semesters. The program does not have any age limit for candidates. Scholarship holders can study or conduct research at universities and research centres in Central and Eastern Europe. The fact that the grant is addressed to both the student and the host institution facilitates the application process for both, the candidate and the selected center. The International Visegrad Fund supports financially projects that develop cooperation between the Visegrad Group countries (the Czech Republic, Poland, Slovakia and Hungary), the Western Balkans and the Eastern Partnership. More: <https://www.visegradfund.org/>

Agreement on cooperation between the Lodz University of Technology and the Apator group

2019-01-22

Joint education of students, effective preparation of graduates to the requirements of the changing market, mutual exchange of knowledge, implementation PhD theses and joint research and development projects are the most important elements of the cooperation agreement signed between Lodz University of Technology and the Apator group Ltd.

The contract is a part of the development strategy of the Lodz University of Technology, providing the cooperation of the university with the economic en-

vironment. This is a very important element of the evaluation of the university's activity under the new Higher Education Act, which can be translated into specific financial subsidies - emphasizes Prof. Sławomir Wiak, rector of the Lodz University of Technology. The Apator Group consists of 16 domestic and foreign entities. The organization implements technologically advanced smart-class products and services on the market and systems for active management of energy media distribution networks.

Bydgoszcz scientists to help design the roofing of the ski jumping hill

2019-01-23

University of Technology and Life Sciences in Bydgoszcz (UTP) signed a letter of intent on cooperation with the Archigeum company. Under the agreement, the scientists from Bydgoszcz will join the research to build a roofing of the Wielka Krokiew runaway - a ski jumping hill in Zakopane.

The idea of a tunnel protecting jumpers against snowfall and giving thermal protection before jumping was created by the Archigeum Architecture Design Workshop from Zielonka. The project has already gained the acceptance of the International Ski Federation FIS in Switzerland. Scientists from the University of Bydgoszcz under the direction of Dr Eng. Dariusz Skibicki from the Department of Computer Methods will perform strength calculations of the structure using the finite element method and will model the wind and snow load.

Gowin: Young, talented scientists are our treasure

2019-01-24

51 young scientists have awarded nearly PLN 60 million in the 9th LIDER competition, which is organized by the National Center for Research and Development (NCBR). Winners from all over Poland received distinctions and symbolic checks from the Deputy Prime Minister Jarosław Gowin.

The LIDER program granted funds to young scientists to create and run their own research teams. Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education said that Poles are witnessing a cutting-edge technological and generational change. - Thanks to ambitious researchers, science is developing at a tremendous pace, overcoming technological barriers and it assures civilization progress. Young, talented scientists are our treasure as well as scientific leaders who are eager to conduct their research are the future of Polish science. By supporting them, we support Poland's development - added Deputy Prime Minister Gowin.

Kielce University of Technology to receive 12 million PLN as part of the Regional Initiative of Excellence

2019-01-25

Kielce University of Technology received PLN 12 million to support scientific research and develop a long-term development strategy. Funds granted by the Ministry of Science and Higher Education under the Regional Initiative of Excellence program will be devoted to the development of two disciplines: „Environmental Engineering” and „Construction”.

The goal of the project is to raise the level of scientific research and development work; increasing the importance of research in the international scientific community; increasing the impact of scientific research on the functioning of the socio-economic environment in the regions and supporting research

on modern didactic methods aimed at improving the quality of education. The Kielce University of Technology will carry out the project for the next 4 years.

Koszalin University of Technology to launch new research and implementation center for surface engineering

2019-01-25

The Koszalin University of Technology (PK) is launching a research and implementation center for surface engineering, process design and simulation as well as vibroacoustic research. The cost of the project is PLN 3.35 million.

The Center is to refine and expand the research and service offer of the university in the field of surface treatment, including heat treatment, thermo-chemical, plasma and PVD coatings (application of a hardener). The University has equipment for applying coatings using PVD and diamond-like coatings based on carbon. - Our activity is to modify the surface of the tools to increase their durability. This can be achieved by plasma nitriding and application of anti-wear coatings - says Vice-rector of the Polish Academy of Sciences, Prof. Witold Gulbiński. Equipping tools with wear-resistant coatings often extend their durability, which reduces production costs. The University has already implemented several such research and development projects.

Deputy Minister of Science Piotr Dardziński on the Łukasiewicz Research Network

2019-01-29

- We wanted the Łukasiewicz Network Research Institutes to focus on tasks that are not assigned to universities. To provide knowledge and technology to entrepreneurs, and not to do didactics and awarding degrees - said Piotr Dardziński, deputy minister of science and higher education.

However, the Deputy Minister stressed that this does not mean that there will be no PhD students in Łukasiewicz Network or that there will be no academic career there. This will be possible in cooperation with universities or institutes of the Polish Academy of Sciences. The main tasks of the Network are independent implementation of research projects of great importance for the country's economic policy, supporting the commercialization of the results of research and development works and coordinating the implementation of such projects by institutes focused in the Network.

Polish government adopted a draft law on supporting scientific activities from the Polish Science Fund

2019-01-31

The Council of Ministers has adopted a draft law on supporting scientific activities from the Polish Science Fund submitted by Minister of Science and Higher Education Jarosław Gowin.

The act will create a new mechanism for financing research and development works and their commercialization. The fund is to support the creation of virtual research institutes, providing stable public funding at a level that allows achieving a specific effect in a selected area of science over a period of 5-10 years. - The adoption of the project on the Polish Science Fund is an important milestone on the road to enriching Polish science and the Polish economy with this component of knowledge that we all need so much - said Prime Minister Mateusz Morawiecki. Also, the deputy minister of science Piotr Müller stressed that the creation of virtual research institutes is an opportunity especially for Polish outstanding scientists dealing with biotechnology and biomedicine. The amount of 500 million PLN will be directed to research in these areas.

National Center for Nuclear Research signed a cooperation agreement with the University of Tokyo

2019-02-01

Professor Tatsuya Okubo, dean of the School of Engineering at the University of Tokyo and Prof. Krzysztof Kurek, director of the National Center for Nuclear Research (NCBJ), signed an agreement on academic exchange between the institutions he represents.

The agreement signed for a five-year period provides for the exchange of scientists, students and administrative staff, conducting joint research, organizing lectures and symposia, and exchanging scientific information. NCBJ strives to establish scientific contacts with all leading research institutions in Europe, America and Asia. - We would like to use the Japanese experience in educating our PhD students. We also intend to conduct joint research, among others, using the Japanese infrastructure as well as the unique opportunities offered by the Maria research reactor operating at NCBJ – said director Kurek.

Cedrob to subsidize scientific research of the Warsaw University of Life Sciences

2019-02-04

Researchers from the Faculty of Production Engineering of SGGW of Warsaw University of Life Sciences (SGGW) have completed scientific research entitled „Ways of developing a bird poultry farm” thanks to the financing obtained in the competition „We support development” organized by the company Cedrob S.A.

As part of the subsidy, the research team purchased the necessary equipment, a muffle furnace, a granulator with exchangeable matrices, a flue gas analyzer and a laboratory scale. The manure research at the SGGW Analytical Center was also financed. The results of the research will be presented at the international conference Biosystems Engineering 2019 in Tartu, Estonia and published in the journal Agronomy Research.

Łódź University of Technology to start cooperation with a biotechnology company Bio-Gen

2019-02-04

One of the leading biotechnology companies in Poland Bio-Gen has signed a cooperation agreement with the Lodz University of Technology.

- The ability to use the knowledge and experience of Bio-Gen specialists is of great importance to us, both for scientific and educational projects - said the dean of the Faculty of Biotechnology and Food Sciences Prof. Maria Koziolkiewicz. The prospect of cooperation in organizing internships for students, educational meetings and conducting joint research and development of new technologies are also important factors. The Bio-Gen plans to employ several hundred new, young employees in Łódź. Its cooperation with the Lodz University of Technology is a chance for the company to select the best candidates.

Meeting of the International Research Consortium of the Scalings project in Wrocław

2019-02-04

The participants of the International Research Consortium of the Scalings project realized within the framework of the European research program Horyzont2020 met at the University of Economics in Wrocław. The Wrocław University is one of the project's partners.

The meeting was attended by about 30 scholars from the universities involved in the project from Austria, Denmark, France, Spain, Germany, Switzerland, Great Britain and Italy. The Scalings project concerns innovation in the field of introducing renewable energy in cities (the subject of research are campuses of European universities that undertake energy transformation). It is implemented as part of a competition whose guiding principle is to involve society in co-creating science and innovation - including the recently popular development of responsible research and innovation - RRI.

Scientists receive grants within the MINIATURA call

2019-02-05

33 scientists received the MINIATURA grants in amount of nearly 1.2 million PLN for the implementation of scientific activities such as preliminary research, pilot studies, queries, internships, scientific consultations and conference trips.

The latest list includes the application of Dr Eng. Anna Maria Hebdy from the Jagiellonian University in Krakow for «Path of signal transmission in the response of pine vulgaris to the stress of air pollution in the Krakow urban agglomeration», who will receive almost 50,000 PLN for her preliminary research. Dr Karolina Kupczyńska from the University of Lodz will receive 20,000 PLN on the query to the work «Forms of autobiography in a French-language comic book and graphic novel» and Dr Iwona Zielińska from the Academy of Special Education in Warsaw will obtain almost 30 thousand PLN for preliminary research on the problem of domestic violence among Polish immigrants in England in the opinion of British practitioners.

Rzeszów scientists to study how the aerosol can help in the treatment of autumn and winter depressions

2019-02-05

The scientists of the University of Rzeszów are planning to conduct research that will help to treat autumn and winter depressions with an ordinary aerosol. The research would be carried out in cooperation with the American Yale University.

The aim of the research of scientists from the University of Rzeszów is to create a measure that could effectively counteract autumn and winter depressions. Such a measure would deceive our mind, causing the sensations of the body that it is summer when we feel much better than in the winter. The research will take place at the Center for Pre-clinical and Clinical Research, which is to be created by April 2020. Thus, the aerosol tests are to be carried out on animals. Together with the American university, the Rzeszów University will try to obtain a scientific grant for this research.

SUNRISE receives one million euros for research converting solar energy into fuel

2019-02-06

The SUNRISE consortium, including the University of Warsaw, Leiden University, University of Uppsala, the French Alternative Energies and Atomic Energy Commission, the Italian National Research Council, the European Energy Research Association, and Siemens AG, has received a grant from the European Commission for a project on the use of solar energy in circular economy.

Researchers are to create a roadmap for research aimed at converting solar energy into fuel and other high-value chemical products. The researchers intend to be an alternative to energy based on fossil raw materials. The project is financed under the Horizon 2020 program. The consortium received an annual grant of EUR 1 million within the Future and Emerging Technologies-Coordination and Support Action call.

ProspectUS project inaugurated at the University of Silesia

2019-02-06

The University of Silesia started the implementation of the project „ProspectUS - the concept of strengthening the research position“. The project analyzes will be a source of data in order to develop the objectives and assumptions of the long-term university development plan.

The project will be implemented by seven teams created by research and teaching staff, administration and management, as well as external experts. Actions called «Silesian research» are to serve primarily to strengthen the research potential of the university. The current state of the university will be analyzed: scientific activity in the area of individual scientific disciplines, the level of research cooperation and the quality of education, as well as the analysis of the academic environment will also be carried out, including study on the importance of

trends in civilization changes, styles and ways of life of the society and political conditions in the national and international dimensions.

Polish scientists to participate in the project of studying the nitrogen circulation in urban space

2019-02-06

Researchers from Austria, China and Poland will implement the project „Nitrogen circulation in urban space: a new economic approach (UNCENT) to meet the challenges of climate change“. The head of the Polish team is Dr Eng. Monika Suchowska-Kisielewicz from the University of Zielona Góra.

Contamination with nitrogen has been considered one of the most serious global challenges. The most important sources of nitrogen compounds are agriculture and soil fertilization, combustion processes, landfills and waste processing installations as well as sewage treatment plants. The aim of the project is to create «urban nitrogen balances», to identify the causes and routes of release of these compounds and methods of counteracting, taking into account the recovery of useful materials - such as nutrients. The amount of over 874,000 PLN is allocated from the Sustainable and Liveable Cities and Urban Areas call financed by the Chinese NSFC agency and the JPI Urban Europe network including the National Science Center belongs.

Prototype of a patrol and intervention vehicle tested by Poznan policemen

2019-02-06

„The Praetorian“ - is a patrol and intervention vehicle for the police, which was created with the participation of the Special Purpose Vehicle of the University of Economics in Poznan, started a month-long test in the conditions of daily work of officers.

The vehicle's prototype was created as part of a research and development project by a consortium of three partners: the Polish Platform for Homeland Se-

curity (coordinator); Target Company UEP (scientific partner) and Automotive House GERMAZ (industrial partner). The project aims to create a vehicle best suited to the needs and expectations of police officers. During the work on the Praetorian prototype, 20 proprietary solutions have been created that ensure the multifunctionality of the vehicle and the possibility of its complete configuration. The car will work both in everyday patrol, as well as in the situation of securing a mass event such as a match or concert.

Poland to participate in the European Molecular Biology Laboratory

2019-02-08

Poland became a member of the EMBL -European Molecular Biology Laboratory. This will enable the development of cooperation with EMBL for Polish scientists and PhD students, including the creation of joint scientific initiatives.

The European Molecular Biology Laboratory is an international research organization of European countries, specializing in conducting basic research in the field of natural sciences. It was established in 1974 at the initiative of the European Organization of Molecular Biology. Membership in the organization enables the development of cooperation between Polish scientists and PhD students from EMBL, including the creation of joint programs. The characteristic feature of EMBL is interdisciplinary character. EMBL employs biologists, biochemists, physicists and IT specialists.

Physicists from the University of Białystok discovered new possibilities for photomagnetic 3D recording

2019-02-08

Physicists from the University of Białystok (UwB) have discovered new possibilities of photomagnetic 3D recording, and the results of their research have just been published by the journal Nature Communications.

The results of research conducted by an international team of physicists, under the supervision of Dr Andrzej Stupakiewicz from the Department of Physics of Magnetics, Faculty of Physics, was published in the prestigious journal Nature Communications. The scientists presented a new concept of selective ultrafast record of magnetic cells in a layer of pomegranate with an admixture of cobalt ions. The recording takes place using only ultra-short laser pulses with a combination of optical parameters such as polarization, wavelength and intensity of light. As Dr Andrzej Stupakiewicz emphasizes, this unique opportunity opens the way to «photomagnetic 3D recording», which would allow even more efficient use of light to record information in digital memories. More: <https://www.nature.com/articles/541467-019-08458-w>

Silesian University of Technology starts cooperation with Asseco Data Systems

2019-02-11

Silesian University of Technology has signed a cooperation agreement with Asseco Data Systems. The partners will cooperate primarily on the didactic, research and organizational levels.

According to the provisions of the agreement, students and PhD students of the University of Technology will be able to take internships in the company, as well as write diploma and PhD dissertations on topics related to its activities. Also special internships will be organized for graduates and scientists. The signatories of the agreement also plan to launch joint MBA studies in the field of cyber security as

well as university and project management, as well as to organize projects promoting IT, including competitions and training. The implementation of joint research projects is also planned. Asseco Data Systems is one of the most modern companies in the IT sector. It provides products, services and IT solutions for enterprises and local government administration. Poznań researcher to participate in the management committees of COST scientific networks

2019-02-11

Dr Katarzyna Waszyńska from the Adam Mickiewicz University in Poznań (AMU) was appointed by the Minister of Science and Higher Education to represent Poland in the Management Committees of COST Scientific Networks.

The Poznań scientist will work in committees: CA18121 Cultures of Victimology; understanding processes of victimization across Europe and CA18124 - European Sexual Medicine Network. Dr Waszyńska is a psychologist, clinical sexologist and sex educator. She is the head of the UAM Health Promotion and Psychotherapy Unit. Her scientific interests focus on issues related to psychology, sexology, and sexual health promotion. COST is an organization that finances research networks that offer opportunity for collaboration between researchers in Europe and beyond. The network gives an impulse to the development of research and innovation. Since 1971, COST has been receiving funding from the European Union under various framework programs for research and innovation.

Polish scientists win the competition organized by the HERA consortium

2019-02-19

Four research teams from Poland became the laureates of the competition organized by the HERA consortium (Humanities in the European Research Area). 203 international research applications were submitted in the Public Spaces: Culture and Integration in Europe competition.

Polish winning 20 projects include: BESTROM: Over stereotypes: cultural exchange and Roma people's contribution to the European public space led by Dr Anna Piotrowska (Jagiellonian University). HCPubS: Healthcare as a Public Space: Integration and social diversity in the context of access to healthcare in Europe led by Prof. Paweł Łuków (University of Warsaw). FestiVersities: European music festivals, public spaces and cultural diversity led by Dr Karolina Golemo (Jagiellonian University) and en/counter/points: en/counter/points: contact, culture and (re) negotiating in the public space led by Dr Grażyna Szymanska-Matusiewicz (University of Warsaw).

Silesian University of Technology cooperates with the Air Force Institute of Technology

2019-02-20

Silesian University of Technology is intensively developing scientific-research and didactic cooperation with aviation institutions. The latest partner of the university becomes the Technical Institute of Air Forces from Warsaw. The contract has been signed by the Vice-Rector for General Prof. Bogusław Łazarz and the director of the Institute, Prof. Mirosław Kowalski.

The signatories of the agreement expressed their satisfaction with the strengthening of contacts between institutions whose business profiles allow for synergistic scientific and research cooperation in innovative fields of knowledge. The signed document will be the first step towards intensification of activities in the dynamically developing civil and military aviation industry. The contract provides joint conducting research and development, innovative and implementation activities, as well as implementation of projects financed from domestic or foreign funds. The partners will also organize training for employees and undertake many other initiatives.

Implementation of the BIOTRAFO project started at the Silesian University of Technology

2019-02-22

The implementation of the BIOTRAFO project financed by the Horizon 2020 program began at the Silesian University of Technology. Its goal is to increase mobility of scientists and the transfer of knowledge in accordance with the principles of the MSCA-RISE mechanism. Project research will focus on the design and use of high-performance, compact power transformers immersed in biodegradable fluids.

Their results will be useful for the whole environ-

ment related to the power transformers industry. This is directly related to the objectives of the program e.g. the creation of a network of cooperating institutions for expanding knowledge and development of devices using biodegradable oils. Beneficiaries and partners in the project are employees and PhD students from research institutions and companies from European countries: Spain, Germany, Turkey, Great Britain and Italy as well as partner countries from South America and Asia: Argentina, Japan, Colombia and Peru.

Researchers from Gdańsk and Wrocław looking for new uses of cold plasma

2019-02-22

Scientists from the Wrocław University of Technology and the University of Gdańsk are conducting research on the use of cold atmospheric plasma to inactivate bacteria responsible for diseases of cultivated and ornamental plants. Their work can revolutionize the agro-technical industry.

The aim of the joint project is to develop a fast, effective and cheap method of eradication of bacterial pathogens responsible for diseases of cultivated and ornamental plants. The experiments are carried out using potatoes, chicory and hyacinths as model plants. By «treating» plants, scientists use a so-called «tripod» mounted on a tripod. a plasma pen that generates a cone of cold atmospheric plasma, several centimeters long and only a few millimeters thick. This allows precise destruction of bacteria in the infected part of the plant. In the near future, scientists plan to continue research on the possibility of using cold atmospheric plasmas in medicine. Information Refining Center to monitor technological trends

2019-02-25

The Information Refining Center, commissioned by the National Center for Research and Development (NCBR), will develop a solution for acquiring and analyzing large amounts of data from sources concerning global and Polish trends in research, development and innovation.

Effective programming of support for R & D and innovation activities should be based on reliable and, above all, up-to-date data that allow identifying and forecasting technological trends - says Dr Aleksander Żołnierski from NCRD. That is why NCBR decided to implement mechanisms to monitor technological trends. Ultimately, accurate identification of the current situation in the area of research and development and innovation will allow to improve the NCBR offer. The NCBR entrusted the implementation of this project to the Information Refining Center, the first human-social spin-off company established at the University of Warsaw.

Polish Sejm adopted the draft law on the Łukasiewicz Research Network

2019-02-26

The Sejm adopted a parliamentary bill establishing the Łukasiewicz Research Network. It will join 37 research institutes and the Polish Center for Technology Development and will start its activities on April 1, 2019. The Centre will conduct key research from the point of view of the interests of the state.

The primary goal of the network is to coordinate the activities of various institutes. Until now they have been dispersed, losing their potential. The network, thanks to its design, will serve to integrate these potentials, as well as the effectiveness of organizational activities - said Deputy Minister of Science Piotr Dardziński, government plenipotentiary for the reform of the operation of research institutes. The basic tasks of the network are to conduct application research and development works and to provide the transfer of knowledge to the economy, which are particularly important for the country's economic and innovation policy.

Rzeszów University of Technology receives nearly 12 million PLN for the development of aviation technologies

2019-02-27

Rzeszów University of Technology received almost PLN 12 million for the implementation of the project „Regional Center of Excellence in Automation and Robotics, Information Technology, Electrical Engineering, Electronics and Telecommunications of Rzeszów University of Technology”. The project will be implemented from the „Regional Initiative of Excellence” program, which was announced by the Ministry of Science and Higher Education.

The aim of the project is to strengthen the research potential of the Rzeszów University of Technology

and increase the level of scientific research. The project will be implemented in 2019-2023. Its detailed tasks include technology development and the use of Artificial Intelligence (AI), Internet of Things (IoE), machine learning (ML) and analysis of large sets of quickly collected data (Big Data) for the needs of the aviation industry.

Wrocław Technology Park launched a portal promoting the cooperation of Polish companies and scientists

2019-02-27

Wrocław Technology Park has launched the big-science.pl portal, which will promote the cooperation of Polish companies and scientists.

“Big Science Institutions” is a definition of international organizations or research centers connected with projects concerning the Great Science. They are responsible for conducting large-scale experiments and research as well as expanding the infrastructure to the necessary one. The result of their activities are innovations that change the face of science and industry, and thus our everyday lives and the future of humanity. Big Science combines the potential of many institutions, industries and fields of science. Thanks to the partner cooperation of the business and science environment, the development of the industry is driven by projects with budgets allocated for the development of an innovative, high-tech economy.

Scientist of the West Pomeranian University of Technology receives Marie Skłodowska-Curie Actions scholarship

2019-02-28

Dr Eng. Paweł Sikora, a scholar of the Didactic Team of Economics, Organization and Management in the Construction of the West Pomeranian University of Technology in Szczecin, has received individual schol-

arship of the Marie Skłodowska-Curie Actions (MSCA) as part of the EU Horizon 2020 Framework Program.

Project of Dr Sikora entitled «Ultra-Lightweight Concrete for 3D printing technologies» scored 94.4 / 100 points. The scholarship will be carried out at the Technical University of Berlin in cooperation with the industrial partner SIKA AG for 24 months. It will allow Dr Sikora to continue his research as part of the started Bekker's internship. The MSCA program supports researchers at various stages of their careers, funding research and training in Europe and non-European countries. At the same time, it enables institutions to employ researchers and involve their employees in international research and training projects.

Wroclaw University of Economics to cooperate with the Rawlplug SA company

2019-03-01

Wroclaw University of Economics has signed an agreement to cooperate with Rawlplug S.A. - a global leader in the development of innovative solutions in the field of fastening techniques, their design, production and distribution.

Cooperation will be directed at the development of education programs, innovative and practical implementation of diploma theses, research and development activities, transfer of innovations and technologies as well as consolidation and strengthening of relations between the academic environment and the business environment - with particular emphasis on Lower Silesia. The company Rawlplug S.A. is the dominant company in the Rawlplug Capital Group, which has almost a century of tradition and an undisputed reputation in the fastening industry. The character of the brand is expressed by the slogan Trust & Innovation, meaning the search for the best technical solutions, supported by knowledge and many years of experience of its employees.

National Center for Research and Development to offer PLN 2.25 billion in four „Fast Path” competitions

2019-03-04

The National Center for Research and Development (NCBR) announces this year's „Fast Path” competitions. The 2019 budget for four competitions is PLN 2.25 billion.

In 2019, NCBR will conduct 4 competitions. Similarly as in previous years, applicants who aim to create and market a new or significantly improved product, service or process may apply for co-financing under the „Fast Path”. The program is horizontal in nature, which means that it does not have a pre-defined topic, and the submitted projects must only be part of one of the National Intelligent Specializations. This year, for the first time, small and medium-sized enterprises as well as large entrepreneurs can apply for co-financing under one competition procedure. In addition, the NCRD will allow companies and also consortia with scientific organizations to participate in the competition. More: <https://www.ncbr.gov.pl/programy/fundusze-europejskie/poir/konkursy/konkurs-21112019-szybka-sciezka/>

Deputy Minister Dardziński: We need innovators at universities and in companies

2019-03-05

The creation of the Łukasiewicz Research Network means that the entrepreneur will easily find a partner and have substantive and financial support from the scientific organizations, but above all it means the support of competent scientists to develop new technologies - said Piotr Dardziński, deputy minister of science and higher education.

Support for research institutes, incentives for universities to conduct research with greater commercialization potential and to make education easier are the three main elements to develop the innovation of Polish companies and they could be realized through the Łukasiewicz Research Network. - We

need people at universities who understand innovation, we need people in companies who understand innovation, and we need innovative investors. The project of implementing PhD theses is the answer to those needs. We have already been teaching almost a thousand PhD students who write their PhD theses, working in companies - added Dardziński.

Scientists from the Poznan University of Technology win the Miniatura2 competition

2019-03-06

Scientists from Poznan University of Technology became the laureates of the second Miniatura National Science Center competition. Grants awarded as part of the competition are used to co-finance a single scientific activity.

The awarded projects run by researchers from the University of Technology include: «Assessment of surface phenomena during the development of polymer-polymer joints. Application of the technique of overmoulding composite prepregs for selective location of reinforcement with continuous fibers» (preliminary research, Dr Jacek Andrzejewski from the Faculty of Machine building and Management), „Mechanics of one-sided connections in sandwich structures” (preliminary research, Dr Robert Studziński from the Faculty of Civil Engineering and Engineering). „Synthesis of an intercalative relationship of graphite with perromnic acid” (preliminary research, Dr Bartosz Piotr Gurzęda from the Faculty of Chemical Technology).

Researchers from the Gdańsk University of Technology to participate in an international project for a cleaner Baltic Sea

2019-03-07

The Gdańsk University of Technology joins academic and research institutions from six countries of the Baltic Sea Region that deal with developing better anti- flood solutions tools for urban planners.

The aim of the project is to create a concept of comprehensive planning and implementation of in-

telligent drainage systems for everyday practices of cities and water supply and sewage services. It is to contribute to reducing the inflow of pollution from urban areas to the Baltic Sea by as much as half of the floods. The NOAH project «Protection of the Baltic Sea against pollution due to floods caused by intense precipitation in urban areas» is financed by the European Territorial Community in the Interreg Region of the Baltic Sea program. The project is carried out by two departments of the University of Technology: the civil engineering and the environment departments in cooperation with the «Water supply - Słupsk» company. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/naukowcy-z-pg-w-miedzynarodowego-projekcie-na-rzecz-czystszego-baltyku

Dr Michał Puszczynski from the Wrocław Academy of Fine Arts receives the Fulbright scholarship

2019-03-08

Dr Michał Puszczynski from the Ceramics and Glass Faculty at the Academy of Fine Arts in Wrocław received a Fulbright Senior Award for the academic year 2019/2020. The Fulbright Senior Award is a scholarship for scientific and research workers of Polish scientific institutions for the implementation of their own research projects in the USA. During their stay in the USA, lasting from 3 to 9 months, the scholarship holders can implement their own research projects at an American university, research institute, government institution or non-governmental organization. For the academic year 2019-20, the Polish-American Fulbright Commission awarded 21 such scholarships out of 80 received applications. The scholarship is financed by the US Department of State and the Polish Ministry of Science and Higher Education.

Gdańsk scientists studying changes in biodiversity as a result of climate change

2019-03-15

Researchers of the Bird Migration Research Station of the Faculty of Biology of the University of Gdańsk (UG) carry out the research project „Early warning system on changes in biodiversity as a result of climate change”.

Researchers returned from a scientific trip to South Africa. During the expedition, scientists investigated the moulting and migration dates of birds migrating between their nests in Europe and wintering grounds in South Africa. The terms of moulting and migration of the species studied depend on the environmental conditions - especially temperature and precipitation, so that birds can be bioindicators of climate change in the hemispheres from they migrate. The expedition was part of a research project led by Dr Magdalena Remisiewicz from the Bird Migration Research Station and Prof. Les G. Underhill from the Animal Demography Unit of the University of Cape Town, financed by the National Center for Research and Development and the National Research Foundation as part of the «Poland-South Africa Cooperation» program.

Polish scientists printed 3D the world's first bionic pancreas

2019-03-18

Researchers from the Foundation for Research and Development of Science (FBiRN) in Warsaw printed 3D the world's first bionic pancreas with blood vessels.

In October 2015, on the initiative of FBiRN, the BIONIC consortium was formed. It includes the Foundation for Research and Development of Science together with the team of DM Michał Wszola, Institute of Experimental Biology Polish Academy of Sciences together with a team of Prof. Agnieszka Dobrzyń, Faculty of Materials Science at the Warsaw University of Technology under the supervision of Prof. W. Świąszkowski, Center for Biostructure of the Warsaw Medical University under the direction of Prof. Artur

Kaminski, the Infant Jesus Clinical Hospital in Warsaw and the MediSpace company. The consortium received funding from the National Center for Research and Development as part of the STRATEGMED III program and thanks to this support, in 2017 intensive work on the bionic pancreas started, which was successful. More: <https://fundacjabirn.pl/projekty/projekt-biodrukowanie-3d-bionicznej-trzustki/>

Polish Science Fund to be launch

2019-03-19

The Sejm has passed a law on supporting Polish science from the Polish Science Fund. The bill was prepared by the Ministry of Science and Higher Education (MNiSW).

The fund will be created by Bank Gospodarstwa Krajowego (BGK) and will be co-financed with PLN 500 million. The Fund is to finance the Virtual Research Institute (WIB), which will be an innovative structure for conducting scientific research. The way of its functioning will differ from the typical method of financing research in Poland. Financial resources will be allocated to the creation and development of research teams. The act, which will now be directed to the Senate, will allow the creation of a new mechanism for financing research works and their commercialization in Poland.

National Science Center to launch a call for international research projects on materials science and materials engineering

2019-03-21

The National Science Center (NCN) in cooperation with the M-ERA network announces the MERA-NET 2 call for international research projects on materials science and materials engineering.

International consortia consisting of at least 3 research teams from at least 2 countries participating in the competition may apply for this funding. The head of the Polish team must have at least a PhD degree. The MERA-NET 2 funds can be allocated for remuneration of the research team, remuneration

and scholarships for its regular or PhD students, purchase or manufacture of scientific and research equipment and other costs related to expenses necessary for the implementation of the research project. The amount of funds allocated by the NCN for the implementation of Polish researches in the competition is 500,000. euro. More: https://m-era.net/joint-calls/joint-call-2019/m-era-net_callflyer_2019-1.pdf

TEAM-NET competition

2019-03-22

The Foundation for Polish Science has announced the results of the TEAM-NET competition. Co-financing for a total amount of over PLN 105 million will be allocated for five projects.

Within the TEAM-NET competition, scientific organizations could obtain grants to create a network of collaborative research teams conducting interdisciplinary research. From 39 projects submitted for the competition, five projects that received the highest number of points have been awarded. The TEAM-NET competition was won by the Medical University of Lodz for its project entitled „We will cure neutropenia (FIXNET)”. Its aim is to develop methods for the diagnosis and treatment of diseases associated with neutrophil dysfunction, i.e. white blood cells responsible for the proper functioning of the human immune system. The project will be implemented by a consortium of three academic centers. The amount of PLN 23 million will allow the university to create a network of five research teams working together to solve the problem. More: https://www.fnp.org.pl/assets/Lista-rankingsowa_FNP_TEAM_NET.pdf

President of Poland Andrzej Duda signed the bill on the Łukasiewicz Research Network

2019-03-22

The act is to ensure more effective cooperation of research institutes that will be part of the network. This will happen through the unification of financial management mechanisms, people, real estate and intellectual property rights.

There are 111 research institutes operating in Poland, which are supervised by 16 ministers. This affects the dissipation of their potential. Almost one third of these scientific units achieve higher rental income than sales of services related to research and development. The network will be joined by 37 institutes (now mostly subordinated to the Ministry of Enterprise and Technology), as well as the Polish Center for Technology Development. The Łukasiewicz Center will be responsible for the coordination of their activities.

First call of the program „Initiative of excellence - a research university”

2019-04-01

The aim of the call is to select and support universities that will strive to achieve the status of a research university, and will be able to effectively compete with the best academic centers in Europe and the world.

Universities participating in the competition will be required to present a plan for raising the level of research and quality of education, the implementation of which will contribute to raising the international importance of the university's activities. Universities selected in the competition will receive increased subsidies annually, in the years 2020-2026. The call for proposals under the «Initiative of excellence - research university» program will start on May 15 and will end on June 24, 2019.

Science for football

2019-04-02

The capital football club Legia Warsaw strengthens cooperation with innovators. It has already launched the research and development centre “LegiaLab”.

The Warsaw club is launching the Legia Training Center in Grodzisk Mazowiecki, where it will also include start-ups. They will get access to the sports infrastructure, analytical facilities and tactical club, which will allow to quickly verify their visions. -We want to involve the startups in the sports industry, in particular football, in which they can find recipients of their innovative solutions. The value of this market, both professional and amateur football, is growing at a very fast pace in the world and in Poland. Naturally, more and more money and investments will be also spent on new technologies in this industry - said Tomasz Zahorski, plenipotentiary of the Legia Warsaw board.

Piotr Dardziński becomes President of the Łukasiewicz Research Network

2019-04-03

Piotr Dardziński became the president of the Łukasiewicz Research Network established on 1 April 2019, the third largest research organization in Europe. He will lead a group of 38 research institutes that will soon present a wide offer for entrepreneurs from start-ups, small and medium-sized companies and large corporations.

Piotr Dardziński was previously the secretary of state in the Ministry of Science and Higher Education responsible for cooperation of science and business. He supervised the government agency National Center for Research and Development, the National Academic Exchange Agency and the research institute Information Processing Center. - The Łukasiewicz Research Network is the implementation of Polish aspirations for cooperation with European and world institutions. We are now an important partner for organizations such as the German Fraunhofer Association, the French Carnot or the Finnish VTT - said President Dardziński.

Cooperation agreement between Gdansk University of Technology and Grupa LOTOS

2019-04-02

Grupa LOTOS and Gdańsk University of Technology have signed a cooperation agreement. The signatories will work together on research and development projects in the area of low-emission transport and energy storage.

The plan is to build devices that will be able to be implemented in the industry of lithium-ion and hydrogen batteries. Scientists from the university will prepare transducers, batteries and energy storage. The university will provide laboratories and qualified staff, LOTOS will guarantee the purchase of equipment and it will deal with issues related to technology and license. The University and Grupa LOTOS have been cooperating for many years - employees of the company conduct lectures and exercises at the university, and students participate in classes at the refinery. The new LOTOS Lab company will coordinate projects related to new methods of energy balancing, new batteries and cells as well as modern methods of energy storage and transport.

University of Gdańsk joins the group of 20 universities in the program „Initiative of excellence - a research university”

2019-04-04

The University of Gdańsk joins 20 Polish universities qualified for the program „Initiative of excellence - a research university”. The aim of the program is to select and support universities that will strive to achieve the status of a research university and will be able to effectively compete with the best academic centers in Europe and in the world.

Universities qualified for the program met high enough assessments of research and didactics. There are statutory conditions regarding scientific categories obtained during the last comprehensive assessment of scientific performance. In addition, none of the fields of study offered by the university may be negatively assessed by the Polish Accreditation Committee. The selection of research universities is one of the most important aspects of the reform of higher education, introduced by the new law on higher education - the so-called Constitution for Science. More: https://ug.edu.pl/media/aktualnosci/87117/uniwersytet_gdanski_wsrod_20_uczelni_w_programie_inicjatywa_doskonosci_-_uczelnia_badawcza

Call for proposals for bilateral exchange with Germany

2019-04-05

The National Academic Exchange Agency (NAWA) has started accepting applications for bilateral exchange of scientists with the Federal Republic of Germany. The main purpose of the exchange is to support the mobility of scientists in the implementation of research projects, agreed and conducted jointly by partners from Poland and Germany. Joint research projects can cover all fields of science.

Co-financing can only be used to cover the costs of personal exchanges. The sending party finances the

journey of his researcher, while the receiving party covers the costs of the stay of a researcher from the partner country. The maximum amount of project financing from NAWA's budget is PLN 25,000. Applications for financing the exchange may include universities, scientific institutes of the Polish Academy of Sciences, research institutes and international institutes or other entities conducting mainly scientific activities, operating on the territory of Poland and having a scientific category. More: <https://nawa.gov.pl/naukowcy/wymiana-bilateralna#wymiana-bilateralna-pomiedzy-polska-a-niemcami-2019>

Poznań universities and Enea Operator to launch a project of Virtual reality in the energy sector

2019-04-08

Enea Operator, together with the University of Economics in Poznań and the Poznań University of Technology, launched a research and development project using virtual reality technology. They are aiming to develop a system to increase the competence of employees of Enea Operator technical services using virtual goggles.

The implementation of the project assumes the implementation of interactive training scenarios for fifteen selected Main Supply Points and ten medium voltage stations. Within them, the electrician will move inside a three-dimensional digital model. The project of implementing the «Flexible system for increasing the competence of employees of technical services using virtual reality techniques» is co-financed from EU funds under the «Fast track for large enterprises and consortia» Research Program implemented by the National Center for Research and Development.

Jan Kochanowski University in Kielce signs a contract with the Research Network Łukasiewicz

2019-04-16

Jan Kochanowski University (UJK) in Kielce as the first university in Poland has signed a contract for scientific and research cooperation with the Research Network Łukasiewicz.

The Łukasiewicz Research Network was established on April 1. It consists of 38 institutes that are to commercialize the research in Poland. In Kielce, the agreement was signed by representatives of the Institute of Biopolymers and Chemical Fibers in Łódź and the Lodz Institute of Leather Industry. - The University is a place where not only science is practiced in the fundamental area, but part of the research must be completed as industrial implementations - said Prof. Jacek Semaniak, rector of the Jan Kochanowski University. Representatives of research institutes that will cooperate with UJK talked about specific projects. They presented as an example- the production of diabetic shoes that will be able to dose insulin.

Silesian University of Technology cooperates with the Military Central Office of Construction and Technology

2019-04-16

Silesian University of Technology has signed an agreement on cooperation with the Military Central Office of Construction and Technology S.A. with headquarters in Warsaw. The university strengthens cooperation with research institutes and aviation industry companies.

The agreement provides for cooperation in the field of research and teaching as well as research and development in the field of aviation technology. It will consist of joint running and conducting scientific research as well as research and development and implementation works, programs for improving the qualifications of research and engineering and technical staff. Military Central Office of Construction and Technology deals with the construction and production of modern equipment for defense purposes. It is the only company in Poland that completely equips military airports with above-ground servicing of aircraft. Currently, the company is also targeting its offer for the civil sector.

School for Industry Leaders 4.0 and the Science and Research Center to be launched in Radom

2019-04-17

- Another bridge joining business and science was set up in Radom,- said Deputy Prime Minister Jarosław Gowin, during the ceremony of signing a letter of intent between the University of Technology and Humanities (UTH) in Radom and the Foundation of the Platform for Future Industry.

Two modern facilities will be created for the purposes of UTH: School for Industry Leaders 4.0 and the Science and Research Center. School of Industry Leaders 4.0 will start operating this year. This is the project of the Ministry of Enterprise and Technology,

and it aims to support Polish companies in adapting to the requirements of the industrial era 4.0. The Science and Research Center for the UTH medical faculty will be created in the premises of an old sports hall in Radom. The investment costs over PLN 32 million. The facility will include magnetic resonance, computed tomography, EOS, ultrasonography and educational rooms.

Scientists of the University of Silesia and miners to cooperate for the environment

2019-04-17

University of Silesia, a special-purpose company of the university SPIN-US and Jastrzębska Spółka Węglowa signed a letter of intent to cooperate in the implementation of projects aimed at responsible restoration of the natural values of habitats in areas transformed as a result of mining and industrial activities.

The declaration assumes research and development works consisting in the identification of the status and potential of the environment based on the latest knowledge about the functioning of the environment. Undertaken actions are not only aimed at improving the condition of the natural environment, but also at improving the quality of human life through the increase of environmental values of areas transformed as a result of human activity. The latest scientific achievements will be used to solve environmental problems. Initiatives will be implemented with the participation of scientific and expert staff, which will allow to develop modern solutions and to implement innovations and environmentally friendly technologies. More: <https://www.us.edu.pl/universytet-slaski-i-jastrzebska-spolka-weglo-wa-deklaruja-wspolne-dzialania-na-rzecz-sowiska-atatu>

Rzeszów University of Technology joins Stalowa Wola Agreement

2019-04-18

In the hall of the Faculty of Mechanics and Technology of the Rzeszów University of Technology in Stalowa Wola, representatives of the Rzeszów university, self-government of the Podkarpackie Voivodeship and Huta Stalowa Wola (HSW) SA, local governments of the city and Stalowa Wola County signed the Stalowa Wola Agreement.

The essence of the agreement is «support for the process of ensuring long-term conditions for the stable development of the Stalowa Wola economic area, including HSW SA and all companies and enterprises located in the region of Stalowa Wola, Tarnobrzeg, Mielec, Nowa Dęba, Niska, Gorzyce and Leżajsk». The aim of this initiative is «to create the best conditions for stable social and economic development of cities and regions from the area of the historic Central Industrial District». Signatories of the agreement are planning extension of the didactic base, scientific and research infrastructure, teleinformatics and laboratory scientific and research base of Rzeszów University of Technology in Stalowa Wola.

Deputy Prime Minister Gowin tells about spectacular success of Polish science

2019-04-18

In the international Teaming competition organized as part of the Horizon 2020 program, grants were awarded to three Polish research centers -said Deputy Prime Minister Jarosław Gowin, Minister of Science and Higher Education.

Deputy Prime Minister Gowin emphasized: «Spectacular success of Polish science! In the very prestigious Teaming Horizon 2020 competition 3 Polish scientific centers have won grants for the first time, namely: AGH University of Science and Technology in Kraków, the National Center for Nuclear Research and the Institute of Electronic Materials Technology!» The Teaming competition under the Horizon 2020 program assumes building new centers of excellence. As part of the project, 13 grants were awarded (including three Polish centers) with a total value of EUR 195 million. List of awarded projects: https://ec.europa.eu/programmes/horizon2020/sites/horizon2020/files/widening_teaming_2_2019_results_table.pdf

Projects of the University of Gdańsk ranked high in the list of the Miniatura 2 call

2019-04-18

Scholars of the University of Gdańsk are winners of the Miniatura 2 call organized by the National Science Center. They can get grants for preliminary and pilot studies, queries, internships, scientific consultations and conference trips.

Dr Małgorzata Kapusta will carry out the project: «An attempt to identify motor proteins involved in the transport of the male reproductive unit in the May lily», Dr Przemysław Karpowicz's grant allow to run the project: «Development of a model for affinity testing of platelet-derived growth factor PDGF-BB with its receptors», and Dr Agata Błaszczyk received financing for her project «Research on the mechanism of antifungal activity of compounds produced

by Baltic cyanobacteria - search for inhibitors of aspartyl proteases Sap». This is the last ranking list of the competition. 17 research projects were funded for a total amount of almost 560,000 PLN and they will be implemented at the Gdańsk University.

Researcher of the University of Economics in Poznan receives Scholarship of the Kosciuszko Foundation

2019-04-19

Doctor Piotr Tarka, Prof. Associate of the University of Economics in Poznań from the Department of Market and Services Research received the Kosciuszko Foundation scholarship for research and study for a 4-month stay in the USA.

The scholarship will allow the researcher of the Poznań University to carry out research into the impact of personal values on the compulsive purchasing behavior of young US consumers. The research will be carried out in cooperation with American University of Pennsylvania and the University of Richmond. The results will be compared with the results of tests on the Polish research sample. The Kosciuszko Foundation is an American-Polish cultural and educational institution founded in 1925. The aim of the Foundation is to conduct, support and promote intellectual, cultural and educational exchange between Poland and the United States of North America.

8th „Mozart” program to start in Wrocław

2019-04-24

The Wrocław Academic Center invites participants to the 8th Municipal Program for Supporting the Partnership of Higher Education and Science and the Business Activity Sector „Mozart”. The deadline for sending applications to the program is 1 July.

The program invites scientists with at least a PhD degree employed at a university or at an institute as a researcher or a teacher or an entrepreneur operating in Wrocław and employing workers in this city. The City of Wrocław offers this program to active scientists and en-

trepreneurs who have an idea for a joint project. Thanks to this cooperation, the entrepreneur uses the extensive and specialist knowledge of the researcher for the development of the company, and the scientist acquired the business knowledge he uses in education, research and development. More: <https://wca.wroc.pl/mozart>

University of Silesia becomes a partner of the boDEREC-CE project

2019-04-25

Detection and analysis of residues of pharmaceuticals in drinking water is the main goal of the BECEREC-CE project, which was implemented by scientists from the University of Silesia. The university will provide knowledge and experience by providing tools for industry and administrations in the field of sustainable water management and land use.

The project aims to develop an integrated decision support system for water supply companies and to improve the quality of drinking water. The task will be implemented on the basis of identification and detailed analysis of processes determining the transformation of pharmaceutical residues or their natural degradation, as well as the evaluation of the effectiveness of their elimination through various methods of water treatment. The project involves 12 partners from Croatia, the Czech Republic, Slovenia, Poland, Germany, Italy and Austria, as well as 7 supporting partners. The project is financed from the Interreg Central Europe program.

Researcher of the Nicolaus Copernicus University in Toruń becomes the laureate of the Polish Intelligent Development Award

2019-04-25

Professor Artur Terzyk from the Faculty of Chemistry at the Nicolaus Copernicus University in Toruń became a laureate of the Polish Intellectual Development Award in the category „Scientist of the Future“.

The Toruń scientist was awarded for his project «Are nanohedges thirsty? New carbon allotrope and carbon nanomaterials as components of novel superhydro- and superomnify surfaces.» Professor Terzyk is the author of over 230 scientific publications, editor of one book and co-author of the other work. He received a scholarship from the Polish Science Foundation and a Prime Minister award for his post PhD dissertation. The Polish Intellectual Development Award has been awarded since 2016, its winners are organizations and people who demonstrate pro future orientation in their activities. Projects, investments and ventures implemented by the winners are characterized by innovativeness and are examples of sustainable and intelligent development.

University of Gdańsk implementing the project „Bioeconomy for ‚blue growth‘ in the Baltic Sea Region“

2019-04-26

The University of Gdańsk, together with universities and institutions from the countries of the Baltic Sea region, implement the project „Bioeconomy for ‚blue growth‘ in the Baltic Sea Region.“

The project, implemented by the Finnish Institute for Environmental Protection, the Latvian Institute for Water Ecology, the University of Tartu, the Kaliningrad State Technical University, Klaipėda Science and Technology Park and the University of Gdańsk

will use the results of INTERREG territorial cooperation projects already implemented or completed and other projects financed from other sources concerning promotion of the «blue» bioeconomy. This will allow decision-makers to take full advantage of the opportunities associated with solutions for developing the «blue» bioeconomy around the Baltic Sea, as well as the „blue” innovations. It will also contribute to creating a platform for the exchange of results between partners and other stakeholders of the «blue» bioeconomy and to integrate knowledge and expertise in the region.

Polski Koncern Naftowy Orlen to launch a Research and Development Center

2019-04-29

Polski Koncern Naftowy (PKN) Orlen has started the construction of the Research and Development Center (CBR), which will be a key investment enabling the development and implementation of its own technologies.

The tests will be carried out at the CBR to improve technological processes, products and to optimize costs. It will be also a modern cooperation platform between PKN ORLEN and science and business. Another important goal of the investment is to promote science. The centre will include an educational part referring to the exact sciences and activities of the Orlen Group. The partners are planning to involve students and young scientists who will have the opportunity to gain experience and new competences. The Research and Development Center will be a modern platform for the exchange of knowledge and experience between the Orlen staff, and universities, institutes or startups - said the President of PKN Orlen Daniel Obajtek.

Fulbright STEM Impact Award to launch its scholarship program

2019-04-29

Polish-American Fulbright STEM Impact Award has launched its new scholarship program, which is aimed at active researchers

representing the STEM (Science, Technology, Engineering, Mathematics).

During the program lasting from 2 to 6 weeks, scholarship holders will have the opportunity to pursue their own research projects, prepare their own classes and curricula, and broaden their knowledge in the field of commercialization of science and the efficient writing of grant applications in institutions in the United States. The offer is addressed to specialists who manage research projects and supervise the work of other researchers. The call for applications will last until June 28, 2019. More: <https://fulbright.edu.pl/fulbright-stem-impact-award/>

Singapore to fund doctoral scholarships in the field of exact sciences and engineering

2019-04-30

Singapore Agency for Science, Technology and Research A * STAR (Agency for Science, Technology and Research) invites students to apply for doctoral scholarships in the field of exact sciences and engineering.

The Singaporean research, innovation and entrepreneurship have developed considerably over the last decade. Thus, the number of public and private research and development entities is growing, and this causes an increase in the demand for PhD students in various fields. In May this year, A * STAR representatives will visit Warsaw and Krakow. On behalf of the Singapore agency NAWA invites all interested students to meetings on 18 and 19 May. Registration for the event: https://docs.google.com/forms/d/e/1FAIpQLSclFgt_Pky54JR6mchf37-Hh3Sf-Sa1n7ejVz5c0j3Krlvdssg/viewform

National Science Center to spend over PLN 36 million for Polish-Chinese research cooperation

2019-04-30

In total, almost PLN 36.4 million will be transferred by the National Science Center (NCN) to Polish-Chinese scientific research as part of the recently announced SHENG 1 competition. Applicants could raise funds for basic research in life sciences, technical sciences and selected social disciplines.

- The first SHENG competition was a pilot in many respects. For the first time, Polish scientists could obtain such significant funds to finance direct cooperation with Chinese researchers in the field of basic research. Interestingly, the conclusions were evaluated in a two-track procedure - independently by our experts and by experts from the Chinese agency. The final list of projects qualified for funding was created after comparing these two assessments and agreeing on the positions of both agencies - emphasized Prof. Zbigniew Blocki, director of NCN. According to the National Science Center, 30 projects will receive financial support. The total budget of the awarded grants is PLN 36 377 384. More: <https://ncn.gov.pl/konkursy/wyniki/2019-04-26-sheng1>

Medical University of Bialystok launched the Research Potential Map

2019-05-02

Research Potential Map is one of the first university portal in the country where scientists, experts, interesting ideas for commercialization, modern equipment and research equipment on individual facilities can be found in one place.

The UMB Research Potential Map contains: research offer (scientific cooperation), expert database (scientific cooperation or cooperation with entrepreneurs), services (commercial offer that could be used to cooperate with entrepreneurs), research centers and their potential, inventory of equipment, information on patents and licenses, forum information exchange. The

portal was created as part of the Incubator of Innovation + project. More: <https://www.umb.edu.pl/mpb>

Polish-Chinese research on the reduction of greenhouse gas emissions

2019-05-07

The development of photocatalysts for the efficient production of solar fuels as a result of single- and multi-electron reduction of carbon dioxide is the main goal of the project carried out jointly by Prof. Wojciech Macyk from the Faculty of Chemistry of the Jagiellonian University and Prof. Jiaguo Yu from Wuhan University of Technology.

Professor Macyk is one of the scientists who received a grant in the 1st Sheng competition for Polish-Chinese basic research, organized by the National Science Center (NCN) and the National Natural Science Foundation of China (NSFC). Traditional sources of energy cause a huge emission of greenhouse gases to the atmosphere, in particular carbon dioxide. The use of photocatalytic reduction CO₂ seems to be a promising and environmentally friendly strategy for obtaining chemical raw materials. What's more, this approach is particularly beneficial due to the use of solar energy.

New competition in ICT technologies

2019-05-07

The European CHIST-ERA network has announced a new competition in the area of information and communication technologies. The launch is planned for October 2019.

Participants can submit applications for financing research projects in the following thematic areas: Explainable Machine Learning-based Artificial Intelligence; Novel Computational Approaches for Environmental Sustainability. The detailed thematic scope of the competition will be specified during the CHIST-ERA 2019 Conference, which will be held on June 11-13, 2019 in Tallinn (Estonia). Participation in the event is free and open to all interested scientists. More: <http://www.chistera.eu/conference-2019-programme-overview>

Scientist of Wrocław University of Science and Technology studying the power of photon flux

2019-05-07

Karolina Orłowska from the Wrocław University of Science and Technology is researching the force of the photon flux hitting the object. Her research can be used in biological and chemical sciences, e.g. measuring molecular forces.

A PhD student from the Faculty of Electronics of Microsystems and Photonics uses MicroElectroMechanical systems for measurements. They are much smaller, lighter and faster than their macroscopic counterparts. The task of these small systems is to convert a mechanical signal into an electrical one. The intention of the PhD student is to create a microscale, based on solutions used in the electrical scales - a device used by the US National Institute of Standards and Technology to measure kilograms. Scientists found the pattern from Sevres to be inaccurate. That is why they have developed a different measurement method. They calculate the mass with the use of an electrical scales, balancing the weight with a force acting on the conductor with the current in the magnetic field. Outstanding young scientists to receive the Ministry scholarships

2019-05-08

Until May 31, 2019, outstanding young scientists with significant achievements in scientific activity can submit applications for scholarships.

According to the Ministry, a young scientist is a PhD student or academic teacher with a PhD degree awarded less than 7 years ago and employed at a university or higher education institutions, Polish Academy of Sciences, the PAS institutes, research institutes, international scientific institutes operating in Poland, the Polish Academy of Learning or another entity that conducts scientific activities. The scholarship is awarded for a period not longer than 3 years. The maximum scholarship cannot exceed PLN 5390 per month. More: <https://www.gov.pl/web/nauka/informacja-na-temat-stypendium-ministra-nauki-i-szkolnictwa-wyzszego-dla-wybitnych-mlodych-naukowcow-w-2019-r>

Scientists of the Wrocław University of Science and Technology receive grants for their Polish-Chinese projects

2019-05-08

The National Science Center announced the results of the first Sheng competition for the implementation of Polish-Chinese research projects. The laureates are two scientists from the Wrocław University of Science and Technology who will receive over PLN 3 million for their research.

Prof. Krzysztof Abramski from the electronics department received funding for his project «Low-loss anti-resonance fibers for the mid-infrared range - research on the possibilities of use in gas lasers and laser gas detection». Dr Eng. Dominika Wawrzyńczyk from the chemical department will study „Combination conversion of photon energy in nanoparticles doped with lanthanide ions for applications in biology and medicine”. The competition enabled to obtain funds for basic research in the

area of life sciences, technical sciences and selected disciplines of social sciences. The projects will be implemented in Poland and China, each of them will be supervised by two managers: one on the Chinese and the other on the Polish side. More: <https://pwr.edu.pl/uczelnia/aktualnosci/granty-ncn-na-polsko-chinskie-projekty-realizacji-przez-naukowcow-z-pwr-11178.html>

START to offer scholarships for the most talented Polish young scientists

2019-05-13

The Foundation for Polish Science for the 27th time awarded START scholarships for the most talented young scientists from all over Poland. This year, 100 young researchers will receive scholarships. The amount of the annual scholarship is 28 thousand PLN, and the total amount of the START scholarships in 2019 is PLN 3 million.

The winners of the 2019 competition were selected from among 899 candidates. The average age of the laureates is 29 years, and 60% of the winners have a PhD degree (the average age of obtaining a PhD in Poland is about 35 years). Since 2009, the Foundation has also been awarding distinctions to the candidates in the START program, whose research achievements have been rated outstanding by the competition's reviewers. Scholarships for these outstanding scholars will be increased to PLN 36,000. This year, the distinctions were received by: Agata Perlińska and Michał Parniak-Niedojadło from the Center of New Technologies at the University of Warsaw, Dr Eng. Rafał Szabla from the Institute of Physics of the Polish Academy of Sciences in Warsaw and Michał Włodarczyk from the Faculty of Mathematics, Computer Science and Mechanics of the University of Warsaw.

Gdańsk University of Technology to establish STOS Competence Center

2019-05-13

Gdansk University of Technology has signed a contract with Pomerania Development Agency for co-financing the construction of STOS Competence Center (Smart and Transdisciplinary knOwledge Services). The total value of the project exceeds PLN 114 million, co-financing amounts to over PLN 66 million and will come from the EU and the Ministry of Investment and Development programs implemented by the voivodeship self-government.

- This investment should give a new impulse to our environment, allow for the development of research and modern didactics. Gdansk University of Technology has great development ambitions, and this project was of interest of our late rector, Prof. Jacek Namieśnik. We will try to continue his will to support the STOS Competence Center - says Prof. Piotr Dominiak, the rector of University. The project includes the construction of STOS Competence Center and a platform for the modern SMART services supporting research and development activities. Projects of the University of Gdańsk receive financing under the SHENG 1 program

2019-05-13

The four projects of the University of Gdańsk were qualified for receiving funding as part of the National Science Center SHENG 1 program for Polish-Chinese research projects.

Qualified projects are «Development and analysis of highly efficient, complex gallium-ion, bifunctional antibacterial compounds with photosensitizing properties» by Dr Mariusz Stanisław Grinholec; «LPCAT substrate specificity from photosynthesising single-cell algae accumulating oils, in forward and backward reactions and characteristics of their functions in the acyl phosphatidylcholine group» by Prof. Antoni Banaś, «Application of new experimental approaches to characterize the balance between helper T lymphocytes (Th17) and regulatory T lymphocytes (Treg), necessary for antitumor immune response» by Dr Zhi Jane Chen and «Towards a simpler quantum test» by Dr Marcin Pawłowski.

University of Gdańsk receives funding for the „Baltic Science Network - A Science Powerhouse” project

2019-05-15

The University of Gdańsk will implement the project „Baltic Science Network - A Science Powerhouse” thanks to funding from the Interreg Region of the Baltic Sea Program.

The project is a continuation of the «Baltic Science Network» project, in which UG also participated as a partner. It aims to implement scientific policy in the macro-regional dimension and ensure better representation of interests of the Baltic Sea Region at the European Union level in terms of the researcher mobility and innovation excellence in the areas of Photon and Neutron Science, Life Sciences and Welfare State. The main objective is to increase the competence of ministries and funding agencies to design and implement transnational research infrastructure support programs in order to cooperate in research and innovation. The project coordinator

is Free and Hanseatic City of Hamburg - Ministry of Science, Research and Equalities. More: https://ug.edu.pl/media/aktualnosci/88223/interreg_region_morza_baltyckiego_zatwierdzono_12_projektow_w_tym_jeden_w_partnerstwie_z_uniwersytetem_gdanskim

Scientists to receive over PLN 527 million in next competitions of the National Science Center

2019-05-21

The National Science Center (NCN) has launched the competitions for research projects in the basic research OPUS 16, addressed to all researchers regardless of internship and academic degrees, and PRELUDIUM 16 and SONATA 14 addressed to researchers at the beginning of their scientific career.

Researchers will receive a total of more than PLN 527.6 million for research projects in the basic research. 3826 applications for the total amount of over PLN 2.4 billion were submitted, of which 777 projects were qualified for financing. The total value of financing in all three competitions was PLN 527,205,611, and the average success rate exceeded 20.5%.

Research Network Łukasiewicz to develop the Polish economy

2019-05-27

The Łukasiewicz Research Network is to ensure a more effective cooperation of research institutions- emphasized Jadwiga Emilewicz, the Minister of Entrepreneurship and Technology- Science is to be an important factor of the development of the Polish economy.

- The Polish Research Network Łukasiewicz is the third in Europe in terms of potential, after German and French networks. With regard to European networks, the best model is not competing but cooperation. The French, Germans, Finns are really great at using European funds. And if someone wonders why we need such a research network, the third

largest in Europe, it is worth remembering that in the next EU perspective, the European Commission will spend EUR 100 billion on research and development - reminded Piotr Dardziński, president of the Łukasiewicz Research Network.

Deputy Prime Minister Gowin encourages Poles to take part in Mission Boards Horizon Europe

2019-05-27

Until 11 June 2019, Poles can apply for the Mission Boards of the Horizon Europe program. Deputy Prime Minister Jarosław Gowin invites Poles to be part of this venture.

Horizon Europe is the largest research and innovation funding program in the history of Europe. It can be participated by all European citizens, not just scientists and entrepreneurs. Currently, people EU citizens can apply for the Mission Boards. Each mission will be a group of 15 people who will control the achievement of goals. According to the Ministry of Science, 5 European missions for future generations were selected in a long consultative and analytical process: Climate change, Oncology, Healthy land, Clean oceans and seas, Smart cities. -We want Poles to be part of this ambitious undertaking. We want the most courageous, open and innovative people from Poland to participate in the missions and help Europe make a giant step for humanity - said Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education. More: http://ec.europa.eu/transparency/regexpert/index.cfm?do=calls.calls_for_app

Researchers of the University of Silesia to obtain over 2.8 million co-financing under the Sonata competition

2019-05-27

Four projects of researchers at the University of Silesia will be implemented thanks to the funding obtained in the Sonata competition of the National Science Center. The total amount of support is over PLN 2.8 million.

The co-financed projects are: «The meaning of the legal text in the light of selected concepts of cognitive linguistics» (department of law and administration); «Chinese New Silk Roads in Central Asia - measures, strategies and actors of the Belt and Way Initiative» (philological faculty); «Interaction in plant-bacteria system during phytoremediation of soil co-contaminated with hydrocarbons and heavy metals» (department of biology and environmental protection) and «Innovative polymerization methods of less activated monomers (LAMs)», (faculty of mathematics, physics and chemistry). Sonata supports students starting a scientific career in conducting innovative basic research or an original methodological solution.

University of Wrocław joins the consortium of the Ruralization project

2019-05-28

Scientists of the University of Wrocław Dr Sylwia Dołzbłasz, Dr Krzysztof Janc and Dr Andrzej Raczyk received funding under the Horizon 2020 grant for the project „RURALIZATION The opening of rural areas to renew rural generations, jobs and farms”.

The aim of the project, entirely funded by the European Union, is to broaden knowledge and support policy-making in response to the challenges that rural areas face today in Europe in the context of economic, social and territorial cohesion. The project's budget is 6 million euros. The research is to support rural renewal processes - especially in the field of identification of innovative instruments and strate-

gies facilitating generational renewal in agriculture and rural development, as well as access to land. The consortium implementing the project includes universities, research institutes, non-governmental organizations and small and medium-sized enterprises from 12 European countries. More: <https://uni.wroc.pl/dofinansowanie-projektu-ruralization/>

Projects of researchers at the University of Gdańsk receive co-financing under the OPUS competition

2019-05-29

Three scientists from the University of Gdańsk received funding for their projects as part of the OPUS competition of the National Science Center. 1880 applications were submitted to the 16th OPUS competition.

As part of the competition, project funds were received by: Prof. Marek Grinberg from the faculty of mathematics, physics and computer science for «Energy structure and spectroscopic properties of 3d3 (Cr3 +, Mn4 +) ions in crystalline matrices in extreme conditions»; by Dr Agnieszka Herman from the oceanography and geography department for «Observation and modeling of the interaction of sea ice with the boundary layer of the atmosphere and the ocean» and by Dr Tomasz Wiśnik from the law and administration department for «Judges and virtues. Study of the theoretical theory of justice». OPUS is a competition addressed to scientists regardless of the stage of their scientific career, with no funding limit for one project. In this year's competition, 361 projects were qualified for financing.

Researcher of the University of Silesia detected dangerous compounds in solid fuel for barbecue

2019-05-29

Zbigniew Jelonek, PhD student at the University of Silesia has examined the pollution of the solid fuel for the grill available on the Polish market. He also compared the results with the organic content declared by producers in products.

The scientist decided to determine the amount and type of contaminants present in charcoal and briquettes from charcoal, as well as to compare the results of organic carbon content declared by producers. Jelonek has also developed standards for quick identification of undesirable additives in order to optimize the production process of these fuels and adapt it to the applicable standards. To date, he has found fragments of plastics and metals, fragments of glass and even amber in samples. These types of substances are dangerous, due to mutagenic and carcinogenic compounds, which arise as a result of combustion and can contaminate grilled food and get into the human body. More: <https://www.us.edu.pl/niebezpieczne-zwiazki-w-paliwach-stalych-do-grilla-badania-mgr-zbigniewa-jelonka>

PhD students to receive Warsaw Scholarships

2019-05-30

The Mayor of Warsaw invited students to apply for a PhD scholarship financed by the capital city of Warsaw. PhD students from Warsaw universities who would like to carry out research projects related to the development and ongoing functioning of the city are invited to take part in the program.

Scholarships will be granted for a maximum of 12 months with a total amount of up to PLN 30,000 per project. The results of the research are to be related to specific challenges of the functioning and development of Warsaw. Scholarships will be awarded for research projects in areas indicated by the City of Warsaw. Apart from financial support, the scholarship holder can count on the substantial care of the Warsaw administration for example, facilitating access to data and studies or assistance in dealing with any formalities required to conduct the study. More: <http://www.um.warszawa.pl/sdd>

Researcher of the University of Zielona Gora becomes an expert of the National Center for Research and Development

2019-05-30

Dr Eng. Zbigniew Fedyczak, Prof. University of Zielona Góra, from the Institute of Electrical Engineering, Faculty of Computer Science, Electrical Engineering and Automation, was appointed to the Team of Experts of the National Center for Research and Development for development of renewable energy in transport.

The aim of the team's work is to coordinate the Center's activities related to economic and technical analysis in search of the optimal structure of the use of energy from renewable sources in transport (in particular biocomponents and liquid biofuels and electricity) in 2020 and subsequent years. The team's task is to analyze the development of renewable energy in transport - in particular, review and analysis

of existing concepts, verification of the potential of domestic industry and scientific and research units, identification of market potential of using renewable energy sources in transport and identification of barriers to the development of this area.

Rzeszów University of Technology signs agreement on cooperation with Linetech Aircraft Maintenance

2019-05-31

Rzeszów University of Technology and Linetech Aircraft Maintenance have signed a cooperation agreement. They will jointly train aviation engineers, support students' research and projects.

The strategic cooperation agreement includes practical training of aviation engineers, R & D support of the projects addressed to academic lecturers, scientific groups or even sports sections. Rzeszów University of Technology has been training civil aviation pilots for over 40 years, and since 2007 it has added also aviation mechanics. Graduates of the university are becoming engineers of manufacturing companies from the Aviation Valley. LINETECH Aircraft Maintenance is a service provider of MRO (Maintenance, Repair, Overhaul / Service, Repair, Regeneration) for Boeing 737, Airbus A320 and one of the leading services for Embraer brand products. - The contract with Linetech expands the possibilities of our cooperation with the aviation sector. They will be used by both students and our lecturers. This is an important part of our development strategy - says Tadeusz Markowski, rector of the Rzeszów University of Technology.

Seven scientists from Wrocław University of Science and Technology receive Start scholarships

2019-06-03

Seven young scientists conducting research at Wrocław University of Science and Technology have been awarded by the Founda-

tion for Polish Science and received support from the Start program. This is the third best result for Polish universities.

The laureates of scholarships from Wrocław University of Technology are: Dr Eng. Bartosz Błasiak (physical chemistry, chemical department); Dr Eng. Róża Gościń (computer science, electronics department); Dr Eng. Błażej Jaworowski (physics, faculty of basic problems of technology); Dr Eng. Piotr Klukowski (bioinformatics, faculty of computer science and management); Dr Eng. Adam Moysowicz (chemical technology, chemical department); Dr Eng. Olga Rac-Rumijowska (electronics, faculty of electronics, microsystems and photonics) and Dr Eng. Wioletta Rut (chemistry, faculty of chemistry). The Start is the largest scholarship program for the best Polish researchers under 30. This year, the winners were selected from among 899 candidates. The annual scholarship is 28 thousand PLN.

Silesian University of Technology to cooperate with the Korean company LG Chem

2019-06-04

Silesian University of Technology will cooperate with the leader of the Korean chemical industry - the company LG Chem. The agreement aims to use the experience and scientific achievements of the Silesian University of Technology and the potential and position of LG Chem for further activities serving the good of the parties and the development of the region.

Under the agreement, LG Chem Wrocław Energy Sp. z o.o. will present a list of proposed topics for diploma theses for the university students to enable them to write their diploma theses on the topics indicated by LG Chem and to carry out student internships. Silesian University of Technology will take into account the issues reported by the other party to the diploma thesis topics, will share the thesis with the consent of their authors, and the university staff will participate in selected research work. More: <https://www.polsl.pl/Lists/Aktualnosci/Uczelniane/PokazWiadomosc.aspx?WebPartTitle=ListWiadomosci&Page=2&WebPartTitle2=Number&Filter1Field2=Identyfikator&Filter1Value2=2727>

Winners of the Master program to receive scholarships

2019-06-05

Until July 19, 2019, the Foundation for Polish Science (FNP) is accepting applications for the scholarships addressed to the winners of the Master program.

In the previous program scholarships were awarded to fourteen scholars who carried out their projects in research centers in the USA, Great Britain or Germany. The winners of the Master program after the project implementation and the Foundation's final report on its implementation may apply for a visiting scholarship. Candidates submitting the application must be employed in a Polish scientific unit and carry out scientific research project. Pursuant to the regulations, within the competition the board may award up to three scholarships of up to EUR 5,500 per month, for a period of 3 to 6 months for a student staying in one research center abroad. The decision of the selection of winners is made by the Foundation's Board. More: <https://www.fnp.org.pl/oferta/wyjazdowe-stypendia-naukowe-dla-laureatow-programu-mistrz/>

Scientists of the Adam Mickiewicz University joins the interdisciplinary research project iTre-es

2019-06-05

Scientists of the Adam Mickiewicz University in Poznań are conducting an extensive, interdisciplinary research project iTre-es. Their research is to determine how trees and shrubs affect the ecosystems of local communities.

The aim of the researchers is to examine how changes in legal regulations concerning tree felling affect the residents' decisions, what are the effects of cutting down trees from the point of view of the benefits provided by trees and shrubs and what are the social preferences regarding restrictions imposed on the private sphere, trees and shrubs on private areas. Researchers also want to check whether the use of the group debate method can affect social

preferences. The researchers will use technologies of terrestrial 3D laser scanning, geomapping trees and local surveys. More: <https://itre-es.com/>

Scientist of the Gdańsk University of Technology to receive over half a million PLN for the Polish-Chinese research project

2019-06-10

Dr Grzegorz Graff from the Faculty of Technical Physics and Applied Mathematics of the Gdańsk University of Technology received over 500,000 PLN for his project „Topological invariants: the structure of space and its mappings” in the Polish-Chinese SHENG 1 competition. As part of the project, the Gdansk team will cooperate with a group of scientists from the Academy of Mathematics and Systems Science in Beijing.

The aim of the project is to examine some important classes of space (compact manifolds, Lie's groups, surfaces, polyhedrons) and their mappings in each other using the so-called «Topological invariants», which are very useful tools in topology and theory of dynamic systems. The expected results of the project can be used in other fields of exact sciences, especially in physics and game theory. SHENG is a competition for research projects conducted by the National Science Center in cooperation with the National Natural Science Foundation of China.

Norwegian Funds to offer over 129 million euros for the support of scientific research

2019-06-11

Minister of Investment and Development Jerzy Kwieciński and Olav Myklebust, Ambassador of the Kingdom of Norway in Poland signed an agreement on the implementation of the „Research” program under the 3rd Norwegian and EEA Funds.

The «Research» program is an opportunity to strengthen the transfer of research results to the

economy, and thus to make it more competitive and dynamic - said Minister Jerzy Kwieciński. The program aims to improve the results of Polish scientific research. It will be implemented within 2 areas: support of basic research (40% of program allocation), which will be managed by the National Science Center and support of application research (60% of program allocation), which will be managed by the National Center for Research and Development. Over EUR 129 million will be allocated for the support of scientific research under the 3rd Norwegian and EEA Funds.

Consortium of Polish universities sorts out fly ash

2019-06-12

The AGH University of Science and Technology (AGH) in Kraków, the Lublin University of Technology and the University of Warsaw joined in the FUNash consortium to develop materials of increased usability, produced on the basis of fly ash.

The materials can be used in construction (cements and biocomponents), agriculture (fertilizers and biofertilis) and environmental engineering (sorbents and biopreparations for the remediation of polluted waters, soils and gases). Six scientific teams will implement the project, and their members will have full access to the scientific and research infrastructure of the entities forming the consortium. The leader of the consortium is the Lublin University of Technology. The realization of FUNash project is to provide products, services and technologies to various branches of industry. This will be the first comprehensive approach to the using fly ash so far.

Lodz University of Technology signs an agreement with the company Korona Candles

2019-06-14

Vice-Rector for Science of the Lodz University of Technology (Pł) Prof. Ireneusz Zbiciński and the President of the Management Board of Korona Candles Andrzej Wróbel signed a co-operation agreement. The Korona Candles is a leading producer of the candles in the world.

The cooperation will assure research and development works, especially those with potential of implementation. Their joint activities will include mechatronics, automation and robotics, production engineering, material engineering (plastics, composites) and chemistry. The contract includes a declaration of selecting the best Pł students for apprenticeships and internships at Korona Candles. Particular attention is paid by the partners to conducting practical classes and dedicated courses by employees of Korona Candles.

National Science Center to launch five new competitions

2019-06-21

The National Science Center has announced five competitions, including GRIEG and IdeaLab, financed with funds from Norwegian and EEA funds. In addition, competitions MAESTRO 11, SONATA BIS 9 and UWERTURA 4 have started. In total, scientists can obtain 161 million PLN and almost 42 million euros for basic research.

GRIEG is a competition for joint Polish-Norwegian research projects implemented in all fields of science with particular emphasis on polar research and social sciences research. The research must be carried out jointly by Polish-Norwegian research teams consisting of at least one Polish partner, acting as a consortium leader, and at least one Norwegian partner. IdeaLab is a competition for research projects carried out jointly by research teams consisting of at least one Polish partner, acting as the leader of a consortium and at least one partner from Norway, Iceland or Liechtenstein.

Institute of Non-Ferrous Metals implements a strategic project as part of the TECHMATSTRATEG competition

2019-06-25

The Institute of Non-Ferrous Metals has started the implementation of a strategic project within the TECHMATSTRATEG competition „Modern technologies for the production of functional magnetic materials for electro-mobile and medical applications”.

The strategic goal of the project is to develop and market new technologies for the production of low-loss magnetic 3D components for electro-mobile and medical applications. The project is implemented by a consortium: Łukasiewicz Research Network, Institute of Non-Ferrous Metals, Faculty of Materials Science, Warsaw University of Technology, Institute of Metallurgy and Materials Science of the Polish Academy of Sciences and three companies: Trafeco - Polish producer of transformers, chokes and filters for power electronics, railways and medicine; Megatech - designer and manufacturer of high-speed DC and 3D Lab motors – company specialized in the production of powder materials and their use in incremental technology.

Dr Iwona Jelonek from the University of Silesia becomes the new president of the board of the Polish Pellet Council

2019-06-27

Dr Iwona Jelonek from the Faculty of Earth Sciences at the University of Silesia became the president of the board of the Polish Pellet Council. The organization’s tasks include representation and support of entities operating on the pellet market and conducting research and development, promotional and educational activities.

The Polish Pellet Council is an association operating since 2017, whose members include companies in-

involved in the production, trade and distribution of wood pellets, heating equipment manufacturers, installers and business entities, institutions and organizations operating in this industry and involved in its development. Dr Iwona Jelonek is a research worker at the Department of Geochemistry, Mineralogy and Petrography at the Faculty of Earth Sciences and a long-time member of the Polish Pellet Council. As a certified specialist, she is also accredited by the International Committee for Coal and Organic Petrology in the field of applied petrographic methods.

Institute of Non-Ferrous Metals in Gliwice to receive over 850,000 PLN

2019-06-27

Research Network Łukasiewicz - Institute of Non-Ferrous Metals in Gliwice was included in the consortium, which will carry out the project „Multiscale analysis of microstructure changes of surface layers resistant to abrasion of plasma sprayed and remelted using concentrated energy sources in the aspect of improving their mechanical properties”.

The consortium include: Akademia Górniczo-Hutnicza in Kraków as the Leader; Research Network Łukasiewicz – Institute of Welding and Research Network Łukasiewicz - Institute of Non-Ferrous Metals. They are planning to investigate the phenomena occurring during laser or electron beam remelting of layers based on nickel alloys doped with renewable Ni-Cr-Re sprayed plasma. The total cost of the project is over 850,000. PLN. The money is allocated from the budget of the National Science Center.

Polish-German project implemented at the University of Environmental and Life Sciences in Wrocław

2019-06-28

Wrocław University of Environmental and Life Sciences and the Christlich-Soziales Assoziation Bildungswerk Sachsen e.V. (CSB) will implement the project „Network of nutritional education for the sustainable development of the Euroregion Nysa”, whose main task is the exchange of experience, transfer of scientific knowledge and intensification of cooperation between entities from Poland and Saxony.

The leader of the project is CSB, which was established in 1991 and for many years has been involved in topics related to healthy and balanced nutrition. The Center of Nutrition and the Herbs of the Monastery Marienstern, as well as at the Farm for Children and Youth in Hoyerswerda, are organizing lessons for pupils and adult seminars. The project assumes developing educational offers for various target groups and building a bilingual online platform. An important element will also be the creation of the Didactic Center in Radomierz and improvement of educational conditions at the Farm for Children and Youth in Hoyerswerda. Dardziński: We convince entrepreneurs to do business with science

2019-07-01

- By means of factual arguments, we want to convince entrepreneurs to do business with science. Let companies think what is their future in 10, 20 years and what technology they will need there. We will take care of the rest - said Piotr Dardziński, president of the Łukasiewicz Research Network.

Łukasiewicz Research Network is to support research, which to be commercialized sooner or later, and the distinction between basic and applied

research seems theoretical. If we want to develop photonics, we must also conduct basic research, and if we deal with big data we need to employ good mathematics theorists - explains Dardziński. The recipients of the Łukasiewicz Network offer are primarily Polish companies, but there have recently been meetings with the American biotechnology company Amgen and such potentates as Volkswagen, Ikea or Google.

3rd competition under the e-Pionier program

2019-07-03

The National Center for Research and Development has started to accept applications for the 3rd competition under the e-Pionier program. The creators of research and development projects using information and communication technologies (ICT) will compete for funding in the amount of PLN 25 million.

The aim of the competition is to support talented programmers in implementing ideas that solve important social and economic problems. Thanks to the use of information and communication technologies, they have a chance to be a breakthrough in improving the quality of life of the whole society. The e-Pionier competition is implemented in the pre-commercial procurement formula (PCP). This means that the contracting entity identifies a specific problem for which there is no solution available on the market. Employers may be public sector institutions and prosocial actors (foundations, associations, commercial entities). Applications can be submitted from July 1 to August 30, 2019.

Call for Polish-Swiss research projects

2019-07-03

The National Science Center (NCN) has announced the Alphon call for Polish-Swiss research projects organized in cooperation with the Swiss National Science Foundation (SNSF). 7 million PLN was allocated to research funding.

Alphon is a two-way international call aimed at Polish research teams, which together with a Swiss partner

team will apply for financing the project. The head of the Polish research team must hold at least a PhD title, and the funds raised as part of the competition may be used to pay for the research team, scholarships for regular and PhD students. As part of the competition, the project participants can also finance the purchase or manufacture of scientific and research equipment and cover other costs necessary to carry out the research. The research project can last from 24 to 36 months. More: <https://www.ncn.gov.pl/ogloszenia/konkursy/alphorn>

Agreement on the Central European grant competition

2019-07-04

The directors of Central European agencies, including the National Science Center (NCN) from Poland, associated in the initiative of the Central European Science Partnership (CEUS), have signed an agreement on a grant competition that will finance joint bilateral or multilateral research projects of scientists from Poland and Austria, Czech Republic and Slovenia.

The competition, scheduled for launch in 2020, will be based on the so-called the procedure of the lead agency procedure. The National Science Center emphasized, that thanks to this procedure, it will be possible to submit an application for financing an international research project and conduct its substantive evaluation only in one agency, as part of the national standard competition offered by this agency, and then the project will be supported by the other institutions basing on the results of the assessment. Research consortia will have freedom in choosing the agency to direct the application.

Researchers of Poznań Science and Technology Park to study plant inducers

2019-07-04

Researchers from the Poznań Science and Technology Park, together with Innosil, are implementing the project „New inducers of plant resistance and their use as an innovative approach to protecting plants from pathogens”. They obtained PLN 4 million for their research from the Team Tech- Foundation for Polish Science program.

The research and implementation works carried out as part of the project concern modern and environmentally safe plant protection chemicals in the form of resistance inducers. These compounds, when used in doses many times lower than conventional pesticides, effectively stimulate the natural immune system of plants against viral, bacterial and fungal infections. The active substance is able to increase the resistance of plants against pathogens to a level higher than 85%. This is the unprecedented level of activity for commercially available plant protection products. More: <https://ppnt.poznan.pl/induktorzy-odpornosci-roslin/>

PLN 20 million for new courses on the Polish educational platform MOOC

2019-07-08

The National Center for Research and Development (NCBR) will allocate nearly PLN 20 million under the call for the preparation of free online courses for the platform Navoica.pl.

Navoica is a Polish MOOC (Massive Open Online Course) educational platform that provides available courses for all persons interested in learning, acquiring new competences and skills. The platform provides education throughout the life, is free and available all the time. Navoica was launched last year by the Ministry of Science and Higher Education and the Young Science Foundation. The call «MOOC Course» will allow to broaden the educational offer of the platform, where language training, programming workshops, entrepreneurship courses, modern

marketing, and even sign language classes will be available. NCBR's financial support comes from the Knowledge, Education and Development Operational Program and include 52 courses. The total amount of support for best projects is almost PLN 20 million.

Polish-German SmartRiver project: Smart Oder Region launched

2019-07-10

IHP - Leibniz Institute for Innovative Microelectronics from Frankfurt / Oder and the University of Zielona Góra are implementing the SmartRiver Intelligentes Odergebiet / SmartRiver: Inteligentne Nadodrze research project.

The aim of the project is to support flood protection of residents in the Oder river region of Słubice and Frankfurt (Oder), and to develop a cross-border, intelligent non-invasive monitoring system for flood embankments and riverside areas on both sides of the border area. A project worth PLN 1 146 thousand euro is co-financed by the European Regional Development Fund under the INTERREG VA Poland - Brandenburg Program 2014-2020. The coordinator of the project is IHP, and the Zielona Góra university, represented by the Institute of Metrology, Electronics and Computer Science. Also, Institute of Environmental Engineering is a partner in the project.

Students of the Adam Mickiewicz University in Poznań receive Diamond Grants

2019-07-11

The Minister of Science and Higher Education awarded the Diamond Grants for the eighth time. The winners include six students of the Adam Mickiewicz University in Poznań.

The scholarships for their research were obtained by Jakub Buda for his „Bioaccumulation of radioactive isotopes and their impact on populations of organisms in the supraglacial zone of glaciers”; Kinga Kułaga for her “Nighttime song of daytime

birds - side effect of light or functional behavior?”; Rafał Świergiel for “The role of political and social processes in shaping the constitutional system of the Republic of Poland”; Michał Wiczorkowski for “Obeying the rule. The status of interpretative rules in the practice of applying the law in the light of Wittgenstein's skeptical paradox; Adrian Walkowiak for “Selected transition metals (Fe, Ti, V, Nb, Ta) in various matrices as catalysts of oxidation processes using light and / or hydrogen peroxide” and Paulina Książek for “Between madness and non-normality: the heroines of Krzysztof Penderecki's operas”.

Soon National Center for Research and Development to launch new calls

2019-07-12

The National Center for Research and Development (NCBR) will announce 6 new calls under the Intelligent Development Operational Program (SG OP). This is an additional opportunity for companies and scientific and industrial consortia, which in 2019 want to apply for co-financing research and development.

This year NCBR will spend PLN 3.93 billion for all calls under the SG OP. As part of the «Fast Path» program, entrepreneurs will be able to apply for funding in two thematic calls: one will be dedicated to projects in the field of space technologies (with a budget of PLN 300 million) and the other call is for technology of plastics (with a budget of PLN 180 million). The NCBR will also announce another call as part of the 4th GameINN. PLN 100 million will be allocated for co-financing the gaming sector. As part of the so-called Joint ventures with local governments NCBR will launch a call with the Śląskie Voivodeship (budget PLN 43 million) and the Lubelskie Voivodeship (budget PLN 17 million).

Young scientists from Toruń win Diamond Grants

2019-07-12

Three young scientists from the University of Nicolaus Copernicus in Torun won the „Diamond Grants” of the Minister of Science and Higher Education.

Hubert Joachim Józwiak from the Faculty of Physics, Astronomy and Applied Informatics will receive PLN 189 553 for the project «Collision effects in the hyperfine structure of the hydrogen molecule - a fundamental problem of modern molecular spectroscopy». Olgierd Borowiecki from the Interdisciplinary Center of Modern Technologies raised PLN 179 854 for the project «Imaging praxies - or the cerebral basis of procedural cognitive skills is identical to the cerebral basis of procedural motor skills? - fMRI test ». Aleksandra Bogumiła Florkiewicz from the Faculty of Biology and Environmental Protection will get PLN 182,443 for «Searching for soil drought stress markers used in the selection of yellow lupine varieties with increased yield potential».

Gdańsk University of Technology cooperates with the Port of Gdansk Authority SA

2019-07-12

The Faculty of Ocean Engineering and Ship Technology of the Gdańsk University of Technology and the Authority of Gdansk Port have concluded an agreement on scientific and didactic cooperation, under which both parties will jointly apply for national and foreign grants for the implementation of research and development projects.

The agreement included provisions on lecturing by port employees, organization of study visits in its area, cooperation of ZMPG SA with students on the implementation of engineering and master's programs (including topics), as well as organization of student and industrial internships. The signatories of the agreement are Dr Eng. Janusz Kozak, Prof. Associate of Gdańsk University of Technology, dean of the Faculty of Ocean Engineering and Ship Technology, Marcin Osowski, Vice President of the Port of Gdansk Authority SA and Łukasz Greinke, President of the Port of Gdansk Authority SA.

Students of the Wrocław University of Science and Technology receive Diamond Grants

2019-07-15

Four students from the Wrocław University of Technology have become laureates of the 8th „Diamond Grant” program sponsored by the Minister of Science and Higher Education. They will receive scholarships of PLN 220,000 for the implementation of their research projects.

The awarded students of the Wrocław University of Science and Technology are: Michał Klask – for «Development of a method of orderly placing anisotropic nanostructures in optically active thin polymer layers and testing their optical properties»; Dorota Tomaszewska for «Non-linear conversion of the optical frequency comb into the mid-infrared spectral range for spectroscopic applications». Grants were also awarded to Bartosz Uniejewski for «Forecasting wholesale electricity prices for the needs of risk management: The use of regularization and forecast averaging», as well as Grzegorz Marcjasz for «Deep learning in probability, probabilistic forecasting and trajectory of electricity prices».

Network of Regional Specialist Observatories to grow

2019-07-15

The consortium of the Silesian University of Technology and the Łukasiewicz Research Network - the Institute of Non-Ferrous Metals in Gliwice joined the Network of Regional Specialist Observatories. Enhancing the network with an observatory in the field of production technology and material processing will help improve the management of the development of regional scientific and technological potential.

The goal of the network, created in 2013, is to develop communication and cooperation, as well as provide the data exchange between business and the scientific and research environment as well as institutions of business environment. After the ad-

mission of new members, the network will include seven observatories, which will allow to assure a comprehensive way of managing the protechnological development of the region in a broad partnership coordinated by the voivodship self-government. The partnership is to be systematically expanded in accordance with the eight technological areas designated in the Technology Development Program of the Silesian Voivodship.

Two students of the Medical University of Wrocław win the Diamond Grants

2019-07-17

Klaudia Bardowska and Dawid Przystupski from the University of Medical Sciences in Wrocław became the laureates of the competition of the Minister of Science and Higher Education „Diamond Grant”. They received 220,000 PLN for the implementation of projects PLN.

Dawid Przystupski will carry out his research project «Sonoporation as a modern method of modulation of gastrointestinal cancer cell membranes in anti-cancer therapy» at the Department and Department of Molecular and Cell Biology at the Faculty of Pharmacy with a branch of medical analytics. Klaudia Bardowska will realize her project «Biomarkers of recurrence and progression in bladder-cell carcinomas non-muscle-forming - relationship with inflammatory reaction and activation of the plasminogen system” in the Nephrology and Transplantation Medicine Clinic at the medical department of post-graduate education.

Research of physicists from Toruń receive over PLN 15 million

2019-07-17

The Institute of Physics of the Nicolaus Copernicus University in Toruń (UMK) in cooperation with other scientific centers received grants from the Ministry of Science and Higher Education and the National Center for Research and Development. Thanks to funding, Toruń physicists will carry out two research projects.

Astronomical Center Nicolaus Copernicus of the Polish Academy of Sciences and the Institute of Physics of the Nicolaus Copernicus University are realizing the project «National Center for Satellite Quantum Communication (NCSatKom)» co-financed by the Ministry of Science and Higher Education with over PLN 9.6 million. The National Center for Research and Development co-financed a joint project of the Faculty of Physics, Astronomy and Computer Science applied at the Nicolaus Copernicus University, Syderal Poland and the University of Gdańsk. The main goal of this initiative is to develop a «self-steering electronic satellite controller for quantum entanglement generator». NCBiR will allocate over PLN 5.5 million for this purpose.

Researchers of Koszalin University of Technology support the wood industry

2019-07-18

Koszalin University of Technology is implementing the project „Improvement of process and material efficiency in sawmill industry” within the framework of the strategic program of scientific research and development „Natural environment, agriculture and forestry” - BIOSTRATEG financed by the National Center for Research and Development.

The project is carried out in a consortium of the University of Life Sciences in Poznań, Koszalin University of Technology, Koszalin Przedsiębiorstwo Przemysłu Drzewnego (KPPD) Szczecinek SA and Warsaw University of Life Sciences. As part of it, a

modern device for grinding technological blades in the wood industry was installed in the abrasive laboratory of the university's mechanical department. The implementation of the research results will increase in innovation and competitiveness of enterprises in the wood industry. The Koszalin University participates in a part of the project, which will result in the modernization of technological processes and production procedures in one of the KPPD plants.

Polish Academy of Sciences receives 170 million euros loan from the European Investment Bank

2019-07-22

The European Investment Bank (EIB) and the Polish Ministry of Finance signed an agreement on the support of the Polish Academy of Sciences (PAS) with a loan of 170 million euros for the years 2019-2020. The funds will help finance the basic scientific activity of institutes and research units belonging to the Polish Academy of Sciences. The EIB loan will complement the financing of the Ministry of Science and Higher Education.

Boosting research and development is a key element that will help Poland become a knowledge-based economy. For this reason, the EIB loan activity for the Polish public sector, traditionally focused on large transport infrastructure and urban development, also has a focus on innovation, skills and science. This project is the result of excellent cooperation between the EIB and the Polish Ministry of Science and Higher Education, which is based on 19 projects financed by the EIB since 2004 - said Vazil Hudák, vice president of the EIB, responsible for operations in Poland.

University of Gdańsk joins the consortium of the RESBIOS project under the Horizon 2020 program

2019-07-22

The University of Gdańsk, together with partners from 11 countries, is implementing the RESBIOS project (RESponsible research and innovation grounding practices in BIOSciences). Activities implemented under the Horizon 2020 program are aimed at strengthening the practice of responsible research and innovation in the area of biological sciences.

The main goal of the project is to implement RRI (responsible research and innovation) practices in five new research organizations from different countries through the implementation of a dedicated package of activities. The result will be institutional changes in these units in relation to the five key areas of RRI (social involvement, education, gender equality, open access, ethics). The project will be carried out for three years in a consortium coordinated by the Italian University of Tor Vergata in Rome. The consortium consists of 12 partners from 11 countries. The project's budget is EUR 1.5 million.

Poznań scientists investigating the value of potato juice as a source of protein

2019-07-23

Dr Iga Rybicka from the Department of Technology and Instrumental Analysis of the University of Economics in Poznań, together with scientists from the University of Life Sciences in Poznań, carried out a study verifying the value of protein fraction of potato juice.

Potato protein is considered one of the most valuable proteins due to the high content of essential exogenous amino acids. Until now, it has not been used in large-scale consumption due to the technological limitations of its acquisition. The analysis of Poznań scientists showed that the developed method of producing a protein concentrate from potato juice gives a product with the desired nutritional value and biological activity. The conclusions from the study were published in the English-language magazine *Nutrients*.

Gdansk University of Technology joins a consortium researching modern road surfaces

2019-07-24

Gdańsk University of Technology became part of a scientific consortium, which together with an industrial consortium made up of Budimex S.A., Grupa Lotos S.A. and Orlen Asphalt Sp. z o.o. will develop technology to reduce road construction costs and improve their durability through the use of highly polymer modified asphalt.

Researchers will investigate the impact of the use of modified and highly modified bitumens, i.e. HiMA (Highly Modified Asphalt) asphalt for the construction of various layers of pavement, which will allow to update the Catalog of Typical Structures of Prone and Semi-rigid Surfaces. The results of research and analysis will be known next year. The works will be carried out as part of the research program «Optimization of the asphalt structure of the road surface thanks to the use of modified bitumens». The

scientific consortium consists of Warsaw University of Technology and the Research Institute of Roads and Bridges in Warsaw, in addition to the Gdańsk University of Technology. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/pg-w-konsorcjum-badajacym-nowoczesne-nawierzchnie-nerogowe

National Center for Research and Development to launch National Science Center competition Tango 4

2019-07-25

In the third quarter of 2019, Tango 4 will be announced as part of the Joint Undertaking of the National Science Center (NCN) and the National Center for Research and Development (NCBiR).

The main objective of the joint initiative is to increase the degree of commercialization of technologies based on the results of basic research obtained in base projects, in particular: defining a plan for developing technologies based on the results of basic research and increasing the involvement of entrepreneurs in the development of technologies based on the results of basic research. Accepting and evaluation of applications will be conducted continually and divided into rounds until 30 June 2020. The competition has no thematic limitation. PLN 30 million has been allocated for co-financing projects selected in the competition.

Cooperation between Polish and Korean scientific institutions

2019-07-26

Łukasiewicz Research Network - Institute of Non-Ferrous Metals will cooperate with the Korean Institute of Industrial Technology. The cooperation agreement was signed between the institutes and their branches.

The cooperation will consist in searching for possible sources of financing for joint research and carrying out research and development projects, mainly in the field of widely understood technologies for the production and processing of materials and products

made of light metal alloys. Also, research work will be carried out to implement new technologies in industry. The agreements were signed between institutes from Poland and South Korea and their branches: Research Network Łukasiewicz - Institute of Non-Ferrous Metals Light Metal Division and Research Institute of Advanced Manufacturing Technology under the Korea Institute of Industrial Technology.

Dr Eng. Wojciech Kamieniecki appointed director of the National Center for Research and Development

2019-08-01

Dr Eng. Wojciech Kamieniecki was appointed the director of the National Center for Research and Development (NCBR) by the Minister of Science and Higher Education. Pursuant to the Act on the National Center for Research and Development, the new director was selected through a competition. The term of office of the NCBR director is four years.

- Dr Wojciech Kamieniecki will be the NCBR Director in a unique period: closing the current budget perspective of the European Union and developing new European mechanisms for financing research and development. This is a big challenge, but also a chance that under his leadership, NCBR becomes a key subject combining science and business, actively influencing the formation of innovation policy not only in Poland but also in Europe in the next years - said Jarosław Gowin, deputy prime minister and minister of science and education higher.

National Science Center to support young scientists with almost PLN 54.5 million

2019-08-02

The National Science Center (NCN) will finance 159 scholarships for students, 50 projects carried out by scientists up to three years after the PhD studies and five internships in foreign research teams for people applying for grants from the European Research Council (ERC).

The National Science Center will allocate nearly 54.5 million PLN for scholarships, projects and internships for young scientists under the Etiuda 7, Sonata 3 and Uwertura 3 competitions. Young scholars by both age and career criteria are the most active group in terms of the number of submitted and qualified applications. That is why we want the grant the offer taking into account their needs and expectations - says Prof. Zbigniew Błocki, director of NCN. - An important component of competitions addressed to young researchers is internship at a foreign research center, which gives the opportunity to work in international research teams and gain experience, and then transfer it to the native soil - added NCN director.

Young researchers from the Wrocław University of Science and Technology receive scholarships from the National Science Center

2019-08-02

Two young scientists from the Wrocław University of Technology received scholarships from the National Science Center in the seventh Etiuda competition. Over 260,000 PLN will be allocated to complete their projects.

Dawid Grabarek from the Chemistry Department thanks to a scholarship of over 152,000. PLN will realize the project «Modeling and characterization of two-photon absorption processes in selected fluorescent proteins by the methods of theoretical chemistry». Maria Pawliszewska from the electron-

ics department earned over PLN 114 thousand for the implementation of the project «Ultrashort pulse generation in 2 um spectral range using nanomaterial-based saturable absorbers». Etiuda is a competition for scientists making their first steps in the research. Within its framework, persons preparing a doctoral dissertation are granted scholarships of 4.5 thousand PLN monthly. In addition, the laureates can take internships at a foreign research center of their choice. They will receive from about 6 to approximately 18 thousand PLN monthly to cover costs.

Students of the Poznan University of Technology receive Diamond Grants

2019-08-02

Two Poznan University of Technology students became the laureates of the Ministerial Diamond Grant program, intended for graduates of engineering / bachelor studies or students after the third year of regular Master's studies who carry out research.

The co-financing will allow Grzegorz Miebs to examine new methods of computer-aided decision, resistant to learning data imperfections, and Hanna Orlikowska to implement the project: «Use of forced emission microscopy for imaging systems with very low fluorescence efficiency, in particular selected components of model biological membranes». This year, Deputy Prime Minister Jarosław Gowin awarded over PLN 17 million to finance the projects of exceptionally gifted students. In the 8th competition, an expert jury selected 85 winners. They will receive up to 220,000. PLN for the implementation of their first independent research projects, lasting from 12 to 48 months.

Call for proposals for the CENTRAL university network competition

2019-08-05

Until August 21, 2019, applications can be submitted in the competition for international research teams led by young scientists - PhD students and people with a PhD degree. The competition is organized by the network of CENTRAL universities as part of the CENTRAL-Kollegs project.

Central European Network for Teaching and Research in Academic Liaison (CENTRAL) is a university network that was established in 2014 at the initiative of the Humboldt University in Berlin. The goal of the network is to support international exchange and research work of young scientists. The network includes University of Warsaw, Humboldt University in Berlin, Charles University in Prague, University of Vienna, Eötvös Loránd University in Budapest. Applications can be submitted jointly by young researchers from three universities belonging to the network. Forms should be sent electronically by 21 August. Funding is granted for the organization of workshops during which teams directed by applicants and extended to include students will develop and implement short-term research projects. The call can be attended by representatives of all disciplines. More: https://www.projekte.hu-berlin.de/en/central/central-kollegs-en/central-kollegs-en?set_language=en

Agreement on cooperation between the Krakow University of Technology and the Nowotarski District

2019-08-05

Organization of joint scientific, scientific and research and educational undertakings in areas related to architecture, construction, spatial management, clean air engineering, protection of monuments and transport is one of the main assumptions of the cooperation agreement concluded between the Krakow University of Technology (PK) and the Nowotarski District.

The agreement was signed by the rector of the Krakow University of Technology Prof. Eng. Jan Kazior, Head of the Nowotarski District- Krzysztof Faber and Deputy Head of the Nowotarski District- Bogusław Waksmundzki. -I am very happy that the Krakow University of Technology will have such a great partner as the Nowotarski District. This cooperation will certainly be fruitful for both parties. We are open to any proposals to participate in various projects - declared the Rector of the CP.

Researchers of the Medical University of Wrocław to receive doctoral scholarships

2019-08-05

The National Science Center awarded doctoral scholarships to two scientists from the Medical University of Wrocław under the Etiuda 7 competition.

Łukasz Zadka received funding for the project «Importance of exocytosis and IL10RA receptor against the induction of suppression of immune response in colon cancer through the mechanism of extracellular extracellular transport» in the amount of over 125 thousand PLN. PhD student performs research at the Faculty of Histology and Embryology. Katarzyna Malec received a scholarship in the amount of over 124 thousand PLN for the project «Drug-surfactant interactions in micellar carriers of pharmaceutically active substances», carried out at the Faculty of Pharmacy

with a branch of medical analytics. Katarzyna Malec is a PhD student at the Department of Medicine.

University of Silesia in Katowice to co-organize the conference InterNanoPoland 2019

2019-08-05

The NANONET Foundation for Nanosciences and Nanotechnology Support and the Silesian Nano Cluster are inviting participants on 16 and 17 October to the InterNanoPoland conference - an international forum for scientists, entrepreneurs, business environment institutions and students dealing with nanomaterials and nanotechnology. The scientific co-organizer of the event is the University of Silesia in Katowice.

The conference will enable young scientists to present research and development projects and share research results. This is an opportunity to talk with practitioners dealing with the development of nanotechnology, finding an employer, employee or a scientific or business partner, as well as getting new practical skills. The topics of the meeting include European nanotechnology clusters, optoelectronics and photonics nanomaterials, 3D printing and nanotechnologies, nanomaterials in the environment - challenges and threats, nanomaterials in the energy sector and nanotechnology in cosmetology and medicine.

PhD student of the University of Economics in Wrocław to receive Scholarship of the National Science Center

2019-08-06

Michał Pająk, PhD student at the Department of Mathematical Economics of the Wrocław University of Economics, became the laureate of the scholarship in the Etiuda competition organized by the National Science Center.

The PhD student will receive almost 110,000 PLN for the implementation of the project «Nash equilibrium and optimal solutions in the sense of Pareto in dynamic representations of shared resources». Etiuda is

a competition aimed at scientists who take their first steps in research. Persons preparing a PhD dissertation are awarded scholarships in the amount of 4.5 thousand PLN monthly. In addition, the laureates can take internships at a foreign research center of their choice. They will receive from approx. 6 to 18 thousand PLN monthly to cover costs related to a stay abroad.

Projects with the participation of Polish research teams awarded in the QuantERA consortium competition

2019-08-08

In the prestigious competition for research in the field of quantum technologies, organized by the QuantERA consortium, 12 international projects were awarded, including five with the participation of researchers from Poland.

The awarded projects with the participation of Polish research teams include:

- Quantum super-resolution in spatial and frequency measurements, coordinated by Dr Łukasz Rudnicki from the International Center for Theory of Quantum Technologies of the University of Gdańsk (in cooperation with teams from the Czech Republic, France, Spain and Germany)
- Qsens-C'MON! Quantum sensors monitored continuously: Intelligent tools and their applications with the participation of Dr Jan Kołodyński from the Center of New Technologies at the University of Warsaw (in cooperation with teams from Denmark, Spain, Israel, Sweden and Great Britain);
- Experimentally-oriented Device Independent Cryptography (NCBR funding) with the participation of Dr Marcin Pawłowski from the International Center for Theory of Quantum Technologies of the University of Gdańsk (in cooperation with teams from Austria, the Czech Republic, Hungary and Switzerland);
- Quantum simulators using magnetic atoms with the participation of Prof. Mariusz Gajda from the Institute of Physics of the Polish Academy of Sciences (in cooperation with teams from Austria, France, Spain, Germany and Italy);
- Quantum information and communication using multidimensional coding with the participation of Dr Michał Karpinski from the Faculty of Physics of the University of Warsaw (in cooperation with teams from France, Germany, Great Britain and Italy).

Scientist of the West Pomeranian University of Technology in Szczecin wins Etude 7

2019-08-08

Wojciech Ignaczak, PhD student at the West Pomeranian University of Technology in Szczecin, became a laureate of the Etiuda 7 competition. Thanks to funding from the National Science Center, the young scientist will go to a foreign research internship.

The acquired grant will allow the doctoral student to travel to Denmark for 4 months, to Danish Polymer Center located at Denmark University of Technology in Copenhagen and to study the fiber-polymer matrix in basalt fiber reinforced composites using the method of broadband dielectric spectroscopy. The subject of the doctoral dissertation of a young scientist from the Szczecin university are «Thermoplastic PP / PBT composites reinforced with basalt fiber». The doctoral student's promoter is Prof. Eng. Mirosława El Fray, director of the Nanotechnology Didactic and Research Center, director of the Polymer Institute and head of the Department of Functional Materials and Biomaterials of the Szczecin University.

Researcher of the University of Silesia joins the international project of sustainable plant production

2019-08-08

Dr Agata Daszkowska-Golec from the Faculty of Biology and Environmental Protection of the University of Silesia is participating in the international project „Advanced tools for intensified and sustainable cultivation of barley in the face of climate change / BARISTA”.

The project of scientists from Italy, Finland, Spain, Germany, Denmark, Great Britain, Estonia and Poland received almost 835,000. PLN co-financing under the first ERA-NET Co-Fund SusCrop Program competition. SusCrop is an action under Horizon

2020, which aims to strengthen the European Research Area in the field of sustainable plant production through closer cooperation and coordination of national and regional research programs. SusCrop brings together owners and managers of national and regional research and development and innovation programs in Member States and associated countries of the EU and third countries with extensive experience in financing and coordinating research.

Scientists of the University of Silesia won the Sonatina 3 competition

2019-08-09

Two scientists from the University of Silesia received funding for research projects at the Faculty of Earth Sciences. The money - almost 1.7 million PLN is allocated from the Sonatina 3 competition, organized by the National Science Center.

Thanks to co-financing, Dr Dawid Surmik will implement the project «Osteopathology in the fossil record as a carrier of paleoecological and paleoepidemiological information» (co-financed with the amount of PLN 772 070), and Dr Ashley Gumsley will examine «Implications of U-Pb geochronology of apatite for aid processes in the area of Kraton Kaapvaal, Africa» co-financed with the amount of PLN 927 545). The Sonatina is a competition addressed to scientists with a PhD title held for no longer than 3 years. The grant covers full-time employment of the laureate in a Polish research unit, implementation of a research project and an internship in a foreign research center lasting from 3 to 6 months. The project implementation period may last 24 months or 36 months.

Swiss government scholarships also for Poles

2019-08-12

The government of the Swiss Confederation offers scholarships, research stays, doctoral studies and postdoctoral internships for Polish citizens for the academic year 2020/2021. These scholarships are awarded annually to

promote international academic exchange and scientific cooperation between Switzerland and 180 other countries of the world.

Scholarships are intended for young researchers from abroad who have a master's degree or a PhD title. The purpose of Swiss scholarship programs is to select candidates who will complete a post-doctoral scholarship or research stay or begin their studies at one of 10 Swiss Canton universities, two Swiss technology institutes or scientific institutes and higher vocational schools. More: www.sbf.admin.ch/scholarships_eng

Polish-German ecological solution for industrial laundries

2019-08-12

The Polish-German consortium is developing a solution that will bring savings and reduce environmental pollution in industrial laundries. The REWARD project involves scientists from the Faculty of Chemical and Process Engineering of the Warsaw University of Technology (PW).

In industrial laundries, for 1 kg of dry textiles, up to 10 liters of water and 6 g of detergents are used for washing - says Dr Eng. Maciej Szwał, head of the team from PW. The Polish-German team wants to recover most of the water and also some of the detergent. The recovered water could go back to the washing process (at the prewash stage), and the detergents - reduce the amount of new washing agents added to subsequent washing cycles. The aim of the REWARD project is to develop the technology and its economic assessment.

National Center for Research and Development to launch two calls for innovative companies

2019-08-16

The National Center for Research and Development has announced two 'fast track' call. The call „Path for Mazovia” with a budget of PLN 600 million is intended for companies from Mazovia, and the other call with a budget of PLN 1.1 billion is for companies from other provinces.

The Path for Mazovia Competition is addressed to enterprises, consortia of enterprises and consortia of enterprises and scientific units conducting industrial research and development works. The competition has no thematic restriction. The second is addressed to entities from all over Poland (except Mazovia Region) planning to implement research and development projects. The goal of the projects is to develop an innovative solution that can be implemented in business.

Universities from Warmia and Mazury join the European Network of Regions Cooperation in Research and Innovation

2019-08-19

The State Higher Vocational School (PWSZ) in Elbląg together with the University of Warmia and Mazury (UWM) in Olsztyn joined the European Network of Regions Cooperation in Research and Innovation (ERRIN). The agreement on this matter was signed by Prof. Zbigniew Walczyk - rector of the PWSZ, Prof. Ryszard Górecki - rector of UWM and Dr Gustaw Marek Brzezina - marshal of the Warmian-Masurian Voivodeship.

The European Network of Regions Cooperation in Research and Innovation was founded in 2011. It is a non-profit association which operates under Belgian law. It currently brings together over 130 different organizations from 22 European coun-

tries. The network supports regional cooperation in research and innovation. It provides members with the opportunity to share project ideas, best practices, and personal contacts. The result is a rapid exchange of knowledge for the benefit of all partners. The network is involved in projects financed by the European Union.

Scientists from Olsztyn looking for a way to detect tsunami early

2019-08-22

A team of researchers from the University of Warmia and Mazury (UWM) in Olsztyn and research centers in Spain, Germany and Greece are looking for a way to detect tsunami early.

The team of researchers Dr Eng. Wojciech Jarzembowski, Dr Eng. Paweł Wielgosz, prof. UWM, Dr Eng. Anna Krypiak-Gregorczyk and Tomasz Sidorowicz, IT specialist are investigating the impact of the tsunami on the ionosphere. Soon, 2 more students will join the team. UWM is the leader of a scientific consortium that has received a grant from the European Space Agency (ESA) for this research. The consortium also includes scientists from the Barcelona University of Technology, the Technical University of Munich and the National Observatory in Athens. The initial research grant is 160,000 euro, of what UWM is receiving 45 thousand euro. The project implementation period is 16 months. - Tsunami, although it is a surface phenomenon, is very extensive and also causes waves in the atmosphere. These waves reach the ionosphere, up to several hundred kilometers high. We want to find out why the tsunami causes noticeable changes in the ionosphere, what is the scale of these disorders, what mechanisms govern it and ultimately find an effective way to detect tsunami based on the observation of the ionosphere - explains Prof. Wielgosz.

Research center for renewable energy sources to be created in Piła

2019-08-22

A Research and Development Center for Renewable Energy Sources is being created in Piła. The laboratory will help Piła become a zero-emission and energy self-sufficient city. It will start working this year.

The center will be built in the municipal sewage treatment plant. The project is implemented by the Piła company GWDA together with the State Higher Vocational School in Piła and the Chamber of Commerce of Northern Wielkopolska Region. The laboratory will examine the possibility of using renewable energy sources in the urban economy. The whole project is co-financed from the Wielkopolska Regional Operational Program. The subsidy amounts to 551 thousand PLN, and the entire investment is almost PLN 1 million. In addition, scientists and experts will develop new, cheaper and more economical solutions in the field of solar and wind energy. Currently, solar panels and an office container have already been launched to carry out researches on new technologies related to renewable energy sources. Dr Eng. Wojciech Kamieniecki: Wider opening to innovations is needed

2019-08-23

Implementing the economy of the future in Poland needs even greater openness to innovation and greater courage of entrepreneurs to co-create the entire development support ecosystem - writes Dr Wojciech Kamieniecki, President of the National Center for Research and Development (NCBR).

The President of NCBR is convinced that research and development are an important part of the modern economy. In his opinion, behind the dry numbers the recipe for long-term prosperity is hidden, set on very solid foundations. The conviction about this comes from many studies and analyzes - it's enough to say that Paul Romer, the 2018 Nobel Prize laureate in economics, received this award for proving that R&D has become a key component of the success of individual economies. Dr Eng. Kamieniecki believes that Polish business, by using prosperity and available tools, should enhance the investment for research and development, ultimately facing the challenge of Western companies. Otherwise, we will remember the missed opportunities instead of becoming a European economic tiger.

Łukasiewicz Research Network selected the first business projects

2019-08-26

The Łukasiewicz Research Network bringing together research institutes in Poland has selected 350 projects to further implementation for last 4 months. It aims to effectively receive benefits for business from science.

- So far we have looked through 67 projects thoroughly, each of them was evaluated by 500 people, and we selected the 10 best projects. And it's really a lot - said Piotr Dardziński, president of the Łukasiewicz Research Network in «RDC Morning». They will be presented to entrepreneurs at the beginning of October in Poznań. - Speaking the business language, we want to check if we can sell these projects, whether

we can find a partner who will submit an application to the National Center for Research and Development to make the first step in the development of a technology - explained Piotr Dardziński.

Researcher of the University of Silesia becomes a laureate of the Leader competition

2019-08-27

Dr Eng. Karolina Jurkiewicz from the Institute of Physics of the University of Silesia became a laureate of the tenth Leader competition of the National Research and Development Center.

With a grant of over PLN 1.4 million, the young researcher will implement the project «Alternative catalytically graphitized carbon materials for anodes for lithium-ion batteries». The National Center for Research and Development Leader program is addressed to young scientists representing various scientific fields. Its purpose is to develop skills in independent planning of research works and managing their own team during the implementation of research projects, the results of which can be of practical application and can be implemented in the economy.

Discovery of scientists from the Gorzów Wielkopolski Academy

2019-08-28

Scientists from the Gorzów Wielkopolski Academy embedded the first spatial graphene structures. Gorzów scientists have obtained them from rapeseed oil.

The process is created in an oil precursor. Graphite electrodes submerged under the surface of the oil are brought to the distance of ignition of the electric hatch. Then the electrodes slide apart and spatial structures are obtained. Until now, studies on the deposition of the first spatial graphene structures have been carried out with expensive and time-consuming methods. This time they were obtained from rapeseed oil, which can be of great importance for the development of pharmaceuticals. The discovered

type of graphene can be a carrier for anti-cancer drugs without harmful side effects, it can be used to build very efficient electric cells and to construct a filter for sea water. More: <http://www.ajp.edu.pl/wydarzenia/4365-konferencja-prasowa-la-nowosci-naukowych-w-ajp.html>

Consortium of Łukasiewicz Research Network, institutes, universities and industry completed the ReCover project

2019-08-28

The consortium including Łukasiewicz Research Network institutes, universities and entrepreneurs has completed the project „Layers and coatings with rhenium, its compounds or alloys - their properties, applications and application methods” (ReCover). The project was implemented as part of the CuBR Program and was run by the National Center for Research and Development and KGHM Polska Miedź.

The project developed new rhenium coatings for tools and machine components operating in complex operating conditions in the aviation, tooling and energy industries. The project was aimed at expanding the scope of rhenium application - metal of which Poland is one of the key producers. The activities were conducted jointly by Institute of Non-Ferrous Metals, Institute of Sustainable Technologies and Institute of Welding, and Rzeszów University of Technology, Wrocław University of Science and Technology, Warsaw University of Technology, AGH University of Science and Technology, Nicolaus Copernicus University in Toruń and Plasma SYSTEM S.A.

Scientists from the Wrocław University of Science and Technology successfully participated in the tenth „Leader” program

2019-08-30

The National Center for Research and Development announced the results of the tenth „Leader” program. Most grants and the largest funding for projects were awarded to scientists from the Wrocław University of Science and Technology.

The «Leader» program serves to stimulate the cooperation of scientists and entrepreneurs by carrying out research with implementation and commercialization potential, and encourages cross-sectoral, inter-university and inter-institutional mobility. The Wrocław University of Science and Technology obtained the most winners in this year's program. In total, they received a record PLN 10 million for their research. Thanks to the funding, they can realize projects: «eMotion - a computer system for supporting training and rehabilitation using motion tracking technology and virtual reality» by Dr Eng. Magdalena Żuk and «Ultramizer - a system for producing powder materials using ultrasonic atomization» by Dr Eng. Paweł Sokołowski. Young scientists to apply for the International Emerging Action competition

2019-09-02

Only until September 17, 2019, young scientists can apply for the International Emerging Action (IEA) competition. This is an initiative of the French National Center for Scientific Research (CNRS) – a partner of the Polish Academy of Sciences (PAN).

The goal of the IEA program is to support new partnerships (with the participation of young scientists) and develop new areas of scientific cooperation. No previous scientific contacts or joint publications are

required to submit applications. The projects will be evaluated by CNRS and PAN experts. The following criteria will be evaluated: scientific quality of the project (weight of expected scientific effects); scientific quality and complementarity of teams; participation of young scientists. The results of the application process will be announced in December 2019. More: <https://international.cnrs.fr/en/campagne-pics/>

Students to apply for the ME310 Sugar program

2019-09-02

Application process for the ME310 Sugar program will take place until September 9, 2019. Within this program students from around the world are working in international teams on creating groundbreaking innovation.

ME310 Sugar is a project developed and coordinated by the Sugar Network based on a concept originally derived from Stanford University. As part of ME310, international teams of students are working on challenges reported and sponsored by business partners. Topics often relate to the vision of future products, services or solutions with a breakthrough potential in a given field. Each project team will consist of students from two different universities from the Sugar Network, which currently includes about 30 leading universities from the Americas, Asia, Australia and Europe, also Warsaw University of Technology. Project Regulations: https://www.nervw.pw.edu.pl/Media/Files/REGULAMIN-ME310_2019

Poznań Science and Technology Park becomes the coordinator of projects under Horizon 2020

2019-09-03

Poznan Science and Technology Park will be the coordinator of three projects under the Horizon 2020 program. Their implementation will begin immediately in September.

The first, largest project is focused on supporting «deep tech digital startups» in entering international markets, establishing cooperation with corporations and scaling their activities. It will take 24

months and its budget is almost 1.5 million euros. The second project is the exchange of experience and knowledge in the field of communication and marketing activities with foreign innovation centers from Tallinn, Kaunas and Malaga. As a result, new solutions will be created to support Park tenants and to reach potential customers. The third project, Create4value, will allow participants to test an innovative methodology of working with enterprises from the Wielkopolska Region. It assumes cooperation with companies through co-creation in order to release their innovative potential and clarify the needs in the area of implementing new products. More: <https://ppnt.poznan.pl/3-nowe-projekty-dla-ppnt-z-horyzontu-2020/>

Competition for international research projects on biodiversity and climate change

2019-09-04

The National Science Center (NCN) in cooperation with the BiodivERsA network are announcing the BiodivClim Biodiversity and Climate Change competition for international research projects on biodiversity and climate change.

International consortia consisting of at least 3 research teams from at least 2 countries participating in the competition may apply for this funding. The head of the Polish team must hold at least a PhD title. The participating countries include: Austria, Belgium, Brazil (Sao Paulo State), Bulgaria, the Czech Republic, Denmark, Estonia, Finland, France, Greece, Spain, Ireland, Israel, Lithuania, Latvia, Germany, Norway, Poland, Portugal, South Africa, Romania, Slovakia, Switzerland, Sweden, Turkey. In the competition scholars can receive funds for remuneration for the research team, remuneration and scholarships for regular or PhD students, purchase or production of research equipment and they can cover other costs necessary to implement the research project. The total amount of funds allocated by the National Science Center for the implementation of tasks by Polish research teams in the competition is 500 thousand euro. More: <https://www.biodiversa.org/1587>

Lublin University of Technology to launch High-voltage engineering research and development center

2019-09-04

Lublin University of Technology with EnergoTech Lublin established a Research and Development Center for High Voltage Engineering.

The new center will deal with advanced research on the development and implementation into the power industry of innovative methods of diagnostics and monitoring of medium and high voltage cables and overhead lines as well as switchgear dedicated to these networks. Employees and students of the Lublin University of Technology will gain new, innovative scientific and educational facilities. In addition to specialized research, the center will also serve students and PhD students to acquire knowledge based on new technologies. - Teaching is very important to us and we want to educate students in accordance with the latest technological achievements - said Prof. Piotr Kacejko, rector of the Lublin University of Technology.

Polish company InPhoTech wins a grant from the European Commission

2019-09-06

InPhoTech is another Polish company, after Scope Fluidics, supported by the Foundation for Polish Science (FNP), whose potential has been noticed and awarded in the European Commission competition. The company will receive a grant of EUR 2.153 million.

InPhoTech deals mainly with optical fibers. The biggest challenge is to construct an optical fiber that also works precisely in extreme conditions, i.e. resistant to radiation or high temperatures. - Our project, NODUS, involves the development of an optical fiber that could also work in the presence of radioactive materials or very high temperatures. We want to achieve this effect by changing the internal fiber structure. Our unique optical fiber will be constructed of tiny capillaries and glass rods, i.e. specific air-glass micro and nanostructures - says Dr Eng. Tomasz Nasikowski,

who manages a team of scientists in the project. The European Commission grant will be allocated to the further development of our technology and the commercialization of our innovative multi-core optical fiber, which will be the key solution for the widespread introduction of the 5G network.

Warsaw University of Technology developing a new generation of nanocrystalline steel

2019-09-06

Scientists from the Faculty of Materials Science of the Warsaw University of Technology (PW) under the supervision of Eng. Krzysztof Wasiak are working on the development of a new generation of nanocrystalline steel. The development of such steel has a good chance of being implemented primarily for the production of tools, but also for important parts of machines and products exposed to operational wear.

Conventional steels currently used for tool making (so-called tool steels) are hard and durable, but at the same time fragile. The industry is therefore looking for alternative materials. They could be nanobainitic steels. They provide the right combination of high strength and flexibility and can be used for the production of many steel elements. For the implementation of the project „Development of a new generation of steel with nanocrystalline structure with carbides” Krzysztof Wasiak received funding from the National Center for Research and Development under the LIDER IX program.

V Polish-French Forum on Science and Innovation

2019-09-09

The French Embassy in Poland and the Ministry of Science and Higher Education are inviting participants to the 5th Polish-French Forum for Science and Innovation, which will take place on November 19, 2019.

The Forum's task is to strengthen Polish-French cooperation in the field of research and innovation,

including within the bilateral exchange program of PHC Polonium scientists. The leading theme of the event will be the cooperation of research teams with the innovative industry as well as the creation and role of international research centers in Europe. The forum is addressed to scientists, university employees and institutes, officials, innovators and students. More: <https://www.institutfrancais.pl/pl/evs/v-forum-nauki>

V4 Training for research project managers

2019-09-09

The Polish Academy of Sciences is inviting participants to a free training for research project managers, organized by the Science Promotion Office of the PoISCA PAN in Brussels together with the Visegrad Group (V4).

The autumn V4 Training will take place on November 18-20 in Brussels. It is addressed to the employees of the institutes of the Polish Academy of Sciences, universities and research institutes from Poland, who deal with project management on a daily basis under the European Union's framework programs. Lectures and workshops (in English) will be conducted by officials and specialists from the European Commission and institutions working for research and innovation. Experts will tell the participants about the Horizon 2020 and Horizon Europe programs.

Scientists from the Lodz University of Technology join an international research project

2019-09-10

Scientists from the Lodz University of Technology will conduct innovative research as part of the international project HIPERION (Hybrid Photovoltaics for Efficiency Record using Integrated Optical technology). The European Union has allocated EUR 10.6 million for its implementation.

The coordinator of the project Dr Eng. Jacques Levrat from Center Suisse d'Electronique et de Microtechnique SA - Recherche et Developpement (CSEM) from Switzerland emphasizes that the implementation of the project will enable the construction of a pilot installation for the implementation of breakthrough photovoltaic technology. - Our role in the project is to determine the environmental effects associated with construction, operation, maintenance, as well as waste management after the end of the system's life cycle. The specific task concerns the determination of the «environmental payback period», after which clean energy produced by the panels will compensate for the environmental expenditure incurred for the construction and operation of the system - explains Prof. Ireneusz Zbiciński, project coordinator.

Gdańsk scientist receives the prestigious grant of the European Research Council

2019-09-11

Dr Michał R. Szymański from the intercollegiate faculty of biotechnology of the University of Gdańsk and the Medical University of Gdańsk received a prestigious grant of the European Research Council in the amount of EUR 1.5 million.

The European Research Council (ERC) grant was awarded within the program ERC Starting Grant for the project «Dissecting the mechanism of DNA repair in human mitochondria». The project will be implemented for five years. Research will allow under-

standing of the fundamental principles of repair of human mitochondrial DNA, which may contribute to understanding the basics of mitochondrial diseases. Getting a grant in the ERC competition is a special distinction. ERC's mission is to finance pioneering groundbreaking research, and the only criterion for evaluating ideas is scientific excellence. The guiding motto of ERC grants is "High risk - high gain". More: https://ug.edu.pl/media/aktualnosci/90358/prestizowy_grant_europejskiej_rady_ds_badan_naukowych_dla_dr_hab_michala_r_szymanskiego

Representatives of the Chinese embassy pay a visit to the University of Warmia and Mazury in Olsztyn

2019-09-13

At the beginning of September, two joint Polish-Chinese research projects started at the University of Warmia and Mazury (UWM) in Olsztyn. On this occasion, the University was visited by representatives of the Chinese embassy, headed by Jiang Sudong, adviser on science, technology and education.

The visit of Chinese guests was associated with the great success of scientists from Olsztyn. In the first Polish-Chinese bilateral competition conducted by the National Center for Research and Development (NCBR) together with the Ministry of Science and Technology of the People's Republic of China (MOST), two projects from UWM received funding. Researchers from Olsztyn in cooperation with Chinese scientists will implement at the Faculty of Food Sciences the project: „Innovative technologies for the production of functional ingredients of dairy origin and development of new products” (Dairy-FunInn). The second project entitled „Artemis. Development of advanced methodology for real-time multi-system ionospheric services” will be implemented at the Center for Radio Diagnostics of the Space Environment of the Faculty of Geodesy, Spatial Engineering and Construction.

Gdańsk scientists' projects co-financed under the Innovation Incubator 2.0

2019-09-16

Four projects of scientists of the Medical University of Gdańsk received funding under the Innovation Incubator 2.0 program implemented in consortium with the Gdańsk University of Technology, the University of Gdańsk and the special purpose company of the Gdańsk University of Technology Excento Sp. z o.o.

The co-financed projects include «Innovative device for applying intelligent markers in medicine, including surgical treatment of cancer», «Research on substances with potential anti-Parkinson activity», «Development of a toothpaste recipe for children containing probiotic bacteria that reduces the risk of developing caries» and «New antibacterial peptidomimetics as potential drugs to help heal infected wounds.» The Innovation Incubator 2.0 is a program of the Minister of Science and Higher Education, financed from European funds. Its implementation supports the development of entrepreneurship and strengthening of technology transfer from public scientific centers to the economy. More: <https://gumed.edu.pl/57808.html>

First Dioscuri Centers launched

2019-09-19

Aleksandra Pekowska and Grzegorz Sumara studied biology in Poland, for many years they conducted research in the best institutes abroad, and in 2018 they won an international competition in a new program initiated by the Max Planck Society. Now they will create their own research teams at the Institute of Experimental Biology of the Polish Academy of Sciences in Warsaw.

Jarosław Gowin, Minister of Science and Higher Education, Anja Karliczek, German Minister of Education and Research, Martin Stratmann, president of the Max Planck Society and Zbigniew Błocki, director of the National Science Center took part in the opening ceremony. Aleksandra Pekowska and Grzegorz Sumara are engaged as two world-class scientists in the field of molecular biology in Poland. This is an important element of our efforts to internationalize the Polish scientific landscape - said Jarosław Gowin, Minister of Science and Higher Education. The financing of the Dioscuri Centers is supported by scientific partners from Germany and equally by the Polish Ministry of Science and Higher Education and the German Federal Ministry of Education and Research. Dioscuri is a program developed by the Max Planck Society to support the development of Centers of Scientific Excellence in Central and Eastern Europe.

University of Agriculture in Krakow to launch Center for Innovation and Health and Safe Food Research

2019-09-23

At the beginning of 2020, the University of Agriculture in Krakow (URK) will launch the construction of the Center for Innovation and Health and Safe Food Research. The value of the investment is estimated by the university authorities as over PLN 64 million.

The creation of a new center is to help URK develop scientific activity and enable more intensive work on

solutions for entrepreneurs. A new baker's and pastry line with a warehouse and a mill will be created in the new building, a microbrewery with a beer maturing unit, a meat and fish line, a milk line and a line for the production of juices, drinks and wines. Within the centre, there are separated areas of scientific activities: economic, focused on cooperation with the agri-food industry and commercialization of the results of innovative research, and non-economic, dealing with own research.

Second Polish-British Science Forum takes place in London

2019-09-24

The Second Polish-British Science Forum took place at the Polish Embassy in London. It was a meeting of Polish and British agencies operating in the field of research, innovation, science and mobility.

The meeting was also attended by representatives of the National Science Center, the National Agency for Academic Exchange, the National Center for Research and Development, the National Contact Point for European Union Research Programs, the Foundation for Polish Science and representatives of the British agencies: British Council, Medical Research Council, Innovate UK, UK Research and Innovation, Universities UK International, British Academy, Royal Society. The meeting was moderated by Dr Aleksander Dańda - director of the Department of Science at the Ministry of Science and Higher Education. The meeting participants discussed how the United Kingdom and Poland support the development of national research, innovation and academic mobility, as well as the possibilities of cooperation between Polish and British scientists and higher education institutions.

Rzeszów University of Technology cooperates with Liugong Dressta Machinery

2019-09-27

Rzeszów University of Technology (PRz) has signed a cooperation agreement with Liugong Dressta Machinery Sp. z o.o. The agreement promotes the exchange of experience

and cooperation of science and business centers.

The purpose of the contract is to fully utilize its possibilities and experience that will provide optimal cooperation between science and business centers. In the agreement, the parties are undertaking to cooperate in particular in the following areas: conducting scientific research, research and development works, trainings, apprenticeships and student internships in Stalowa Wola and other companies and plants belonging to the Liugong Capital Group, including those in China, as well as training highly qualified personnel by Rzeszów University of Technology for the needs of Liugong Dressta Machinery. Liugong Dressta Machinery Sp. z o.o. is a manufacturer of heavy construction equipment and powerful machines for the toughest applications, including mine loaders, bulldozers or pipe layers.

Scientists of the University of Silesia join the transnational DEEPWATER-CE project

2019-09-27

Researchers from the Department of Hydrogeology and Engineering Geology at the Faculty of Earth Sciences of the University of Silesia are participating in the transnational DEEPWATER-CE project „Developing an integrated approach in implementing solutions for the management of additional groundwater supply to facilitate the protection of Central Europe's water resources threatened by climate change and user conflicts”.

The main goal of the project funded under the Interreg Central Europe program is to support water resource planning and management by implementing Managed Aquifer Recharge systems as a solution to the problem of water scarcity caused by climate change. The project involves 8 partners from Hungary, Croatia, Slovakia, Germany and Poland. Their meeting will take place on 30 September in Sosnowiec, which will be an opportunity to get acquainted with the opinion of participants and their experience related to additional groundwater supply.

University of Gdańsk and Energa S.A. to cooperate

2019-09-30

The University of Gdańsk has signed a co-operation agreement with Energa S.A. The main areas of cooperation are the exchange of scientific and technical information and documentation, publication and research documentation, and organization of joint educational and scientific projects.

The agreement provides for the development of analyzes, expertise and opinions for the needs of Energa S.A., exchange of scientific and technical information and documentation, publication and research documentation as well as the publication of research results resulting from the cooperation of the parties and the organization of lectures and trainings. The signatories also agreed to cooperate in the organization of scientific conferences, symposia and other forms of knowledge and experience transfer, the possibility of organizing internships for students by Energa S.A., as well as joint scientific-technical and R&D projects, as well as joint use of research and development equipment and scientific apparatus.

Gaming industry in Poland to receive nearly PLN 105 million

2019-10-02

The National Center for Research and Development (NCBR) announced the results of the 3rd competition for the largest support program for the gaming industry (GameINN) in Poland. Companies creating innovative solutions will receive nearly PLN 105 million in funding.

The National Center for Research and Development will support the projects: Development of a platform for creating field games based on an AR game engine that creates a map of the real world together with an application that allows users to send data; Test and training platform for verification of practical skills in the workplace and professional development using VR and AI technologies; Construction of an engine for the wheeled motor vehicles and generating charts based on artificial intelligence algorithms; Innovative game simulating the man-

agement of real production processes using an innovative gameplay model based on the interaction of the virtual world with the real world using the concept of industry 4.0. The goal of the GameINN sector program is to increase the competitiveness of the Polish video game producers sector on the global market by 2023.

Spin-out company of Gdansk University of Technology receives money for the development of chitosan hydrogel technology

2019-10-03

Spin-out company of the Gdańsk University of Technology "Chitone" obtained approx. PLN 5.5 million under the „Fast Track” National Research and Development Center competition for the development of ChitoVelum® Pro technology - a patented method of dissolving chitosan using carbonic acid.

The method developed at the Faculty of Chemistry of the Gdańsk University of Technology is applicable in the agri-food industry. The company is working out an edible coating to extend the freshness of food products such as fruit, fish and vegetables. Thanks to its unique composition, the envelope will be 100% natural, and its use is intended to slow down the rate of water loss, as well as protect products from bacterial and fungal infection during transport and storage. The company has also finalized talks with a private investor who will finance a long-term investment program under a contract worth over PLN 21 million. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/spolka-chitone-pozyskala-ponad-25-mln-zl-finansowania-na-rozwoj-technologiei-hydrozeli-chitozanu

University of Technology and Humanities in Bielsko-Biała to examine the graphene concentrates for 3D printing

2019-10-04

The Institute of Textile and Polymer Materials Engineering of the University of Technology and Humanities in Bielsko-Biała will implement the project „Graphene concentrates for applications in 3D printing technology”. The works are co-financed by the National Center for Research and Development (NCBiR) as part of the Intelligent Development Operational Program for 2014-2020.

The aim of the project is to produce concentrates based on thermoplastic polymers containing graphene and its derivatives, which will be used to produce new, innovative filaments used in 3D printing. The project for PLN 900,000 allows to purchase of high-class research equipment for physicochemical analysis of materials. The research will be conducted jointly with consortium members - Finotech Sp. z o.o. with its registered office in Katowice and InnoPlast Sp. z o.o. with headquarters in Katowice. The total value of the project is almost PLN 3.8 million, of which almost PLN 3.4 million is funded by the National Center for Research and Development. More: <https://www.ath.bielsko.pl/duze-dofinansowanie-dla-projektu-iitimp/>

Institute of Non-Ferrous Metals to implement the project for over PLN 14 million

2019-10-08

Research Network Łukasiewicz - Institute of Non-Ferrous Metals The Light Metals Division in Skawina began the implementation of the project entitled „Welding extrusion of high-strength aluminum alloy sections of the 7xxx series“.

The aim of the project is to develop and implement technology for extruding closed profiles from hard-deformable aluminum alloys. The project is co-financed by the National Center for Research and Development under the Modern Materials Technologies - TECHMATSTRATEG program. The project is implemented by a consortium composed of: Research Network Łukasiewicz - Institute of Non-Ferrous Metals Light Metals Division (leader); AGH University of Science and Technology in Kraków, Department of Non-Ferrous Metals; Albatros Aluminum. The total cost of the project is over PLN 14 million.

Consortium of universities and companies to search technology reducing road construction costs

2019-10-09

The Warsaw University of Technology, Gdańsk University of Technology and the Road and Bridge Research Institute in Warsaw together with Orlen Asphalt, Lotos Group and Budimex have created a consortium for the development of technologies that increase durability and reduce road construction costs.

The consortium is implementing the research project «Optimizing the asphalt structure of the road surface through the use of modified asphalt». The producers and scientists want to confirm the impact of use of polymer on modified and highly modified bitumens, i.e. asphalt HiMA (Highly Modified Asphalt) on the durability of the road surface, and consequently on reducing the costs of road construction and maintenance. The results of the research will be known next year and should show the advantages

of building roads with use of polymer-modified asphalt. Scientists will examine, also impact of using modified bitumen and PMB HiMA for different layers of road construction.

Universities Kuyavian-Pomeranian Voivodeship join the Implement Hub 2019 project

2019-10-10

The universities of Bydgoszcz and Toruń will take part in the project „Implement HUB - acceleration program of scientific solutions and patents at universities in the Kuyavian-Pomeranian Voivodeship“. Money for activities comes from the „DIALOG“ program of the Ministry of Science and Higher Education.

The University of Technology and Life Sciences and the University of Kazimierz Wielki from Bydgoszcz as well as the Nicolaus Copernicus University, University of Banking and the State Vocational University of Toruń will take part in the project. The project is to support activities aimed at implementing solutions leading to increasing the quality and competitiveness of scientific research related to internationalization, effective evaluation of undertaken activities and strengthening of the scientific and teaching staff. It is also to stimulate innovation and create mechanisms for cooperation between science and the economy.

Researcher at the Gdańsk University of Technology receives Diamond Grant for phosphine research

2019-10-14

Krzysztof Pyrchla, PhD student at the Gdańsk University of Technology Doctoral School has won the Diamond Grant competition and will receive 220,000 PLN for the implementation of the first independent research project „Research on the impact of deformation on optoelectronic parameters of phosphorus

nanostructures using quantum mechanics methods“.

The aim of the research is to design sensory structures that will be used to develop research and measuring devices using phenomena occurring at the nanoscale and enabling measurements of gravitational acceleration or mass of nanoobjects. Research will be conducted with use of quantum mechanics methods. Due to the chemical instability of phosphorus and the high costs of its synthesis, the effects of the project will be implemented experimentally in the final stages of implementation, in cooperation with experimental groups in the USA and China. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7KO/content/diamen-towy-grant-na-badania-nad-fosforenem

Scientist of the Warsaw University of Technology working on a technology that protects against surface icing

2019-10-14

Dr Eng. Rafał Kozera from the Faculty of Materials Engineering of the Warsaw University of Technology (PW) and his team implements the IceSurfer project. Researchers are developing technology to produce ice-phobic (i.e. ice-inhibiting) surfaces for use in polymer composite components.

The project is implemented as part of the LIDER IX program organized by the National Center for Research and Development. The composites for decorative and protective reasons are covered with a layer called the gel coat - explains Dr Eng. Kozera. -We want to modify this layer in such a way that ice does not stick to it or that the nucleation of ice crystals is delayed as much as possible. And if the ice settles, however, it should have less adhesive strength and be easier to remove - adds a scientist from PW.

Medical University in Wrocław receives over PLN 6.6 million for scientific and research projects

2019-10-15

The Medical University of Wrocław obtained financial resources for the implementation of two scientific and research projects from the funds of the National Center for Research and Development under the competition „Lower Silesian Zone of Biomedical Technologies” (OP Intelligent Development).

Co-financing was obtained for the project «Bio-nanosatellite using miniaturized lab-on-chip instruments and methodology for conducting bio-medical research using it in microgravity conditions» by a consortium including: SatRevolution SA, Wrocław University of Science and Technology, Wrocław University of Environmental and Life Sciences and the Institute of Immunology and Experimental Therapy Polish Academy of Sciences. Its total value is almost PLN 4 million. The second project is «Developing a method for obtaining and isolating mesenchymatic stromal cells (MSCs) from teeth for the regeneration of bone defects in dentistry». The money is received by University and the Dental Center for Technology Transfer. The value of this project is almost PLN 2.7 million.

University of Opole to cooperate with the Łukasiewicz Research Network

2019-10-16

The University of Opole will cooperate with the Łukasiewicz Research Network - the Polish Center for Technology Development (PORT). The agreement signed by the partners concerns the activity of the Research and Innovation Center for Civilization Diseases, which is being created at the University Clinical Hospital.

The letter of intent was signed by the director general of USK Dariusz Madera and director Łukasiewicz

- PORT Andrzej Dybczyński. - This cooperation is very important to us, it gives us a chance to cooperate, to create value for each other and both benefit. For our entity operating in the field of medical biotechnology, direct contact with the world of medicine and doctors is extremely important - says Dybczyński. The University Clinical Hospital is applying for funds for the Center for Research and Innovation in Civilization Diseases, which is to be created in the building of an old hospital laundry. After the reconstruction, there will be opened new laboratories, magnetic resonance imaging, tomography and teaching rooms. More: <http://www.uni.opole.pl/page/3104/bedzie-wspolpraca-uniademicego-szpitala-klinicznych-z-siecia-badawcza-lukasiewicz-port>

Polish-German research teams to receive over PLN 30 million

2019-10-17

As part of the third Beethoven Classic competition for Polish-German research projects scientists will receive a total of over PLN 30 million in the field of humanities, social and art sciences and selected disciplines of exact and technical sciences.

The Beethoven Classic competition is organized by the National Science Center in cooperation with the German Research Community (Deutsche Forschungsgemeinschaft; DFG). This year, scientists submitted 130 applications for funding research projects, of which 63 in the humanities, social sciences and art (HS), and 67 in selected disciplines of exact and technical sciences (chemistry, mathematics, physics, materials science). From those applications, experts selected 34 best projects. The awarded projects will be implemented jointly by Polish and German research teams. The research could be scheduled for 2 or 3 years, and the amount requested for the implementation of the Polish part of the project could not be lower than 150,000. PLN.

Student of the Nicolaus Copernicus University in Toruń becomes a laureate of the L'Oréal Polska program

2019-10-17

Beata Zjawin, a student of physics at the faculty of physics, astronomy and computer science at the Nicolaus Copernicus University in Toruń (Nicolaus Copernicus University) became one of the winners of the 19th L'Oréal Polska program „For women and science”.

The young researcher received an annual scholarship of 20,000. PLN as the only student in the MA category (the remaining five scholarships were awarded in the doctoral and postdoctoral categories). She is a laureate of the scholarship of the Ministry of Education for the Best Students in Poland, scholarship of the Mayor of Toruń for the Best Students of the Nicolaus Copernicus University, scholarship for the Best Students of the Nicolaus Copernicus University, as well as the prestigious international scholarship SPIE Optics and Photonics Education Scholarship. This year, a record number of 144 candidates from 39 scientific institutions applied for L'Oréal scholarships. The winners were selected on the basis of an assessment of their scientific achievements, experience and the possible practical use of their research.

Grupa Azoty ZAK S.A. to create a Research and Development Center

2019-10-21

Grupa Azoty ZAK S.A. is creating a Research and Development Center supporting innovations in the OXO segment and plastics processing. The Kędzierzyn company from Grupa Azoty has obtained the corporate approvals necessary to implement the strategic investment.

The Research and Development Center is another step towards the expansion of the company's research infrastructure, strengthening the staff potential in creating innovative solutions and safeguarding intellectual property. The project is a continuation of the Application and Development Research Laboratory launched in 2018, which gave Grupa Azoty ZAK S.A. the possibility of reproducing production processes on a laboratory scale and conducting comprehensive tests of obtained samples. The investment is part of the updated Strategy of the Azoty Group. It will contribute to expanding the Company's product offer with additional special esters and extending the product chain and processing of aldehydes into special products.

Researcher of Wrocław University of Science and Technology receives grant for a Polish-German research project

2019-10-21

Professor Krzysztof Bogdan from the mathematics department of the Wrocław University of Science and Technology will receive nearly 600 thousand PLN from the National Science Center as part of the Beethoven Classic competition for Polish German research projects.

Professor Bogdan is an outstanding specialist in probability theory. He deals with issues such as boundary potential theory, Schrödinger halfgroup estimations, and Littlewood-Paley-Stein halfgroup theory. His project «Sensitivity analysis for non-local operators with applications for step processes»

will be implemented in cooperation with Prof. Rene Schilling from the Technical University in Dresden. The Beethoven Classic competition is organized in cooperation with the German Research Community, an organization that finances basic research in all scientific disciplines. Co-financing is granted from projects in the fields of humanities, social and art sciences as well as from selected disciplines of exact and technical sciences.

Physicists of the Nicolaus Copernicus University in Toruń receive a grant under the Beethoven Classic 3 competition

2019-10-22

The Faculty of Physics, Astronomy and Applied Computer Science of the Nicolaus Copernicus University in Toruń in cooperation with Ludwig-Maximilian University Munich received a grant as part of the Beethoven Classic 3 competition. The National Science Center has received one million PLN for the project „Optical detection and control of heat flow at the nanoscale”.

The Beethoven Classic competition is organized by the National Science Center in cooperation with the German Research Community (Deutsche Forschungsgemeinschaft). Scientists can submit their Polish-German research projects in the field of humanities, social and art sciences and selected disciplines of exact and technical sciences. In this year's competition, scientists submitted 130 applications for funding research projects. Experts of the National Science Center chose 34 best projects and awarded them with a total of over PLN 30 million.

Polish-German research team to receive National Science Center grant

2019-10-23

Scientists of Bergische Universität Wuppertal, (Walbusch Chair of Multi Channel Management) and the Department of Marketing

of the University of Economics in Katowice have received a grant in the Polish-German Beethoven Classic competition.

Thanks to funding of almost PLN 300,000 Dr Marcin Komor and Prof. Stephan Zielke will implement the project «Impact of shopping motives, preferences regarding trade channels and cross-channel technology on cross-channel behavior - a comparative analysis between Germany and Poland». The competition is organized by the National Science Center in cooperation with the German Research Community. The awarded projects will be implemented jointly by Polish and German research teams. The research could be scheduled for 2 or 3 years, and the amount requested for the implementation of the Polish part of the project could not be lower than 150,000 PLN. In this competition, researchers submitted 130 applications for funding research projects. The jury experts selected 34 best projects.

Grant to study the journey of cosmic rays through the galaxy

2019-10-25

The Polish-German project „Measurements of cross-sections in fragmentation processes necessary to interpret the effects of cosmic rays traveling through the Galaxy” by scientists from the University of Silesia and the Karlsruhe Institute of Technology was qualified for funding under the Beethoven Classic 3 competition.

The goal of the project managed by Dr Seweryn Kowalski and Dr Michael Unger is the measurement of cross sections in the processes of fragmentation of light and medium atomic nuclei. The results obtained will be useful in understanding and interpreting the data obtained in experiments on the study of cosmic rays, and in particular its journey through the galaxy. The competition is organized by the National Science Center in cooperation with the German Research Community. In the current part, 130 were submitted by Polish-German research teams of which 34 projects received funding.

Scientists from the University of Life Sciences in Wrocław receive grants Opus 16

2019-10-29

Researchers of the Wrocław University of Environmental and Life Sciences will study the metabolic pathways of *Yarrowia lipolytica* yeast, the interaction of soil organic matter with pesticides, the birds' resistance to Shiga toxins and the properties of sterol glycerides. Research grants are provided under the Opus 16 competition by the National Science Center.

Researchers of the Department of Biotechnology and Food Microbiology will study the metabolic pathways of *Yarrowia lipolytica*. The spectroscopic and chemical properties of the soil fraction of humines in relation to their mutual interactions with pesticides will be examined by a consortium in which the leader is the Institute of Soil Sciences and Environmental Protection of Wrocław university. Another consortium will study the physicochemical and biological properties of sterol glycerides and their products formed during thermal oxidation. Wrocław researchers will also look for the answer to the question why birds are resistant to Shiga toxin produced by *Escherichia coli*. More: http://www.glos.upwr.edu.pl/aktualnosci/50141/naukowcy_upwr_z_grantami_opus_16.html

Institute of Precision Mechanics cooperates with the Bulgarian Academy of Sciences

2019-10-30

Institute of Precision Mechanics (Łukasiewicz network) has concluded an indefinite cooperation agreement with the Bulgarian Academy of Sciences (BAS).

This is the result of previous projects carried out by ŁUKASIEWICZ-IMP and BAS, also with the participation of the Institute of Metallurgy and Materials Science of the Polish Academy of Sciences in the field of manufacturing and implementation of composite coatings based, among others on DLC

nanodiamonds. - Łukasiewicz research network is open to all forms of networking and cooperation leading to the development and commercialization of projects. We have extensive competences in the field of automation, chemistry, biomedicine, teleinformatics, material engineering and advanced manufacturing techniques. Our 4.5 thousand best specialists, research workers and a unique research infrastructure make us an attractive partner for both business seeking innovation and scientific institutions wanting to develop their R&D projects - said Michał Janasik, vice president of the Łukasiewicz Research Network.

National Center for Research and Development offers PLN 80 million to support universities of medium-sized cities

2019-10-31

The National Center for Research and Development (NCBR) has started the call for projects supporting the development of human resources in the business services sector. In the competition financed from European Funds - Operational Program Knowledge Education Development (PO WER), NCBR allocated PLN 80 million to support universities from medium-sized cities.

The aim of the NCBR is to support universities from medium-sized cities in developing education that allow students to increase their competences or qualifications in accordance with the needs of employers from the business services sector. -Medium-sized cities should not only maintain their socio-economic functions, but also use their potential to a greater extent than before. By directing public funds for specific activities, we improve the quality of life of residents, increasing the investment attractiveness of their cities. A higher level of education and good conditions for cooperation between universities and entrepreneurs are important elements of supporting regional development, which is so important for the development of the whole country - emphasizes Deputy Prime Minister Jarosław Gowin, Minister of Science and Higher Education.

Success of Polish scientists in the BiodivERsA Call 2018 competition

2019-10-31

Competition „Biodiversity and its influence on animal, human and plant health” (BiodivERsA Call 2018), co-organized by the National Science Center, has been successful for Polish research teams.

49 applications were submitted in the competition, of which 10 received funding for a total amount of approximately EUR 11.9 million. Six projects will be implemented with the participation of Polish scientists, including two in consultation with the Warsaw University of Life Sciences. These two projects are «VOODOO. Eco-evolutionary dynamics of viral infections of wild and domesticated pollinators under the pressure of global change» with the participation of Dr Hajnalka Szentgyörgyi from the University of Agriculture in Krakow (in consultation with the Warsaw University of Life Sciences and in cooperation with teams from France, Germany and Switzerland) and «FunProd. Relations between functional diversity and food production and quality under the influence of ecological intensification» with the participation of Prof. Werner Ulrich from the Nicolaus Copernicus University (in consultation with the Warsaw University of Life Sciences and in cooperation with teams from Germany, France, Hungary, Ireland, the Netherlands and Slovakia).

Scientists from the University of Gdańsk won grants in the Miniatura competition

2019-10-31

Six employees of the University of Gdańsk will implement their scientific projects thanks to funding from the Miniatura competition.

The winners of the National Science Center competition are: • Dr Magdalena Płotka for the project «Analysis of the structure and function of synthetic peptides constituting N-terminal regions of lytic proteins with particular emphasis on the new antibacterial peptide Intestinalin»; • Dr Łukasz Pietruszyński for «Scientific internship in the field of groundwater flow modeling in peat bogs»; • Dr Agnieszka Szmelter-Jarosz for the project «Patterns of mobility of Baby Boomers, X, Y and Z generations in Poland»; • Dr Łukasz Marek Sobolewski for «Determination of Lande coefficients of Niobium atomic levels»; • Dr Krzysztof Stasiak for «Effectiveness of executing the penalty of restriction of liberty and socially useful work»; • Dr Hanna Wolska from the Faculty of Law and Administration for «Implementation of public tasks in the sphere of geology and hydrogeology by Polish and Scandinavian institutions». More: https://ug.edu.pl/media/aktualnosci/91600/laureaci_trzeciej_edycji_konkursu_narodowego_centrum_nauki_miniatura

Researchers of the Adam Mickiewicz University in Poznań receive grants under the Miniatura competition

2019-11-04

Researchers at the Adam Mickiewicz University in Poznań received grants for their research under the Miniatura 3 competition organized by the National Science Center.

Winners of the competition are: Dr Karolina Jolanta Leszczyńska - for the project «Geochemistry and Holocene chronology of volcanic glazes in the Linje peat bog (Kuyavian-Pomeranian Voivodeship, Poland)»; Dr Małgorzata Adamiec for the project «Assessment of the significance of Egy3 protein in re-

sponse to *Arabidopsis thaliana* for high temperature and exposure for high light intensity»; Dr Martyna Nowak -for «Etidronic acid and its complexing reactions with competing metal ions» and Dr Adrian Kovachev -for «Wilhelm Mach's letters to colleagues from Poland and Bulgaria as a basis for studying the microhistory of literary anti-homophobic communities». The purpose of the Miniatura competition is to support financially a scientific activity for the preparation of a future research project.

Podkarpackie Innovation Center awards Rzeszów high schools with nearly PLN 4 million grants

2019-11-05

Podkarpackie Innovation Center applied for projects co-financed under the grant program for research and development (R&D) scientific units. Rzeszów University of Technology received 14 grants (most of all applicants) with a total amount of over 1.7 million PLN.

Grants worth almost PLN 4 million were received by 25 best research teams from the Rzeszów University of Technology, the University of Rzeszów and the University of Information Technology and Management in Rzeszów. The maximum amount of project co-financing was 200,000. PLN, and the minimum - 20 thousand PLN. - The goal of this project is not only to award grants, but also to conduct later cooperate with research teams to meet the market expectations. We want to further support such activities - said Jacek Kubrak, president of the Podkarpackie Innovation Center. In his opinion, out of 25 awarded applications, as many as 16 projects have a chance for commercialization.

Polish-German consortium began work on modern composites

2019-11-05

Faculty of Mechanical Engineering at the Białystok University of Technology is launching a new international research and devel-

opment project „ New metal matrix composites reinforced with natural diatoms”.

The project will be implemented by a consortium whose partners are Polish Metalworking Cluster and Białystok University of Technology, and German Fraunhofer Institute and Stifterverband Metalle. The Polish part of the project is financed by the National Center for Research and Development (as part of the international competition for research projects of the CORNET 26 initiative) with nearly PLN 1 million 300 thousand allocated for this purpose, of which Białystok University of Technology will receive PLN 745 thousand. The task of scientists from the Białystok University of Technology is to produce, and later examine and describe modern composite materials of metallic matrix with natural reinforcement in the form of diatom shells.

Adam Mickiewicz University researchers won the Beethoven Classic and Beethoven Life competitions

2019-11-06

Researchers at the Adam Mickiewicz University in Poznań are winners of the Beethoven Classic and Beethoven Life competitions organized by the National Science Center and Deutsche Forschungsgemeinschaft.

The winners of Beethoven Classic are Dr Eng. Jędrzej Walkowiak, who together with Prof. Dr Walter Leiter from the German RWTH Aachen University will lead the project «Catalytic hydrosilylation in the SILP / scCO₂ system - an innovative approach to the reduction and functionalization of alkynes, imines and carbonyl compounds» and Dr Maciej Karpiński, who with Prof. Cornelia Müller from the European University Viadrina will lead the project «Occupation: Expressive movement and affective attitude. Political debates in the German Bundestag and Polish Sejm. « Among the winners of the Beethoven Life competition are Dr Sławomir Stanisław Cerbin with the project «Can the evolution of parasites enhance the effects of global warming?» and Prof. Artur Michał Jarmołowski with the project «U1 snRNP and polyadenylation - new connections».

How to raise funds for research projects in the „Space” programs?

2019-11-13

On 13-14 November, the University of Warsaw (UW) will held „International Information Day and brokerage meetings in the field of Space”. The meeting will be devoted to the possibilities of obtaining funding under Horizon 2020 competitions.

The purpose of the event is to present funding opportunities for projects under the recent Horizon 2020 Space competitions, the EU's largest research and innovation program. The competitions' budget is EUR 223 million. The organizers of the International Information Day include National Contact Point for EU Research Programs, COSMOS2020plus (SPACE Contact Points Network) and the University of Warsaw. During the event, experts will present the rules of competitions and the initial assumptions of the new EU framework program Horizon Europe, which will replace Horizon 2020.

Specialists to work on innovative motor insurance risk assessment system

2019-11-14

Świętokrzyski University of Technology, Łukasiewicz Research Network - Automotive Industry Institute and Globtrak will join forces for the providing safety of drivers on the road. The consortium will develop an innovative motor insurance risk assessment system.

The Kielce University of Technology will study drivers' habits and driving techniques. For different categories and in different weather conditions. Special devices will be installed in the cars that will send data to the central computer. On their basis, university employees will develop an assessment for a driver. Research is interesting for transport and insurance companies - says Prof. Tomasz Lech Stańczyk, dean of the Faculty of Mechatronics and Machine Building and project manager. The work on creating the system has already begun. The value of the entire project is over 4.3 million PLN. Co-financing in the amount of PLN 3.8 million is granted by the National Center for Research and Development.

Scientists of the Wrocław University of Environmental and Life Sciences obtain Sonatina grants

2019-11-15

Scientists from the Wrocław University of Environmental and Life Sciences obtained grants under the Sonatina, Sonata and Miniatura programs of the National Science Center. They will study the genetics of legumes towards the creation of new varieties and the impact of electromagnetic fields on flax. They will also check how to treat breast cancer more effectively and use brewer's grain.

Dr Sandra Rychel-Bielska in her research will deal with white lupine and the possibilities of creating new varieties of this protein-rich plant. Dr Marta Preisner will also work on plants - she will analyze the impact of the electromagnetic field on the expression of certain genes. Dr Jarosław Suchański works on the possibilities of increasing the effectiveness of breast cancer treatment, and Dr Laba works on extracting bioactive substances from brewing wood. More: http://www.glos.upwr.edu.pl/aktualnosci/50182/kolejne_granty_dla_upwr.html

Researcher of the West Pomeranian University of Technology in Szczecin to receive Fulbright scholarship

2019-11-15

Professor Mirosława El Fray from the West Pomeranian University of Technology in Szczecin received a prestigious scholarship from the American Fulbright program. Thanks to it, she will be able to conduct research in the United States for four weeks.

The laureate is a specialist in the field of polymer biomaterial engineering. Thanks to the scholarship, she will implement the project «Enzymatic Catalysis of Green Polymers». At The Ohio State University she will work under the guidance of an outstanding specialist in polymer engineering and chemistry

Prof. Judit E. Puskas. They will provide experimental works on new polymer materials, for the synthesis of which enzymes will be used as natural catalysts. The Fulbright STEM Impact Award is a scholarship program for active researchers representing the fields of STEM (Science, Technology, Engineering, Mathematics). Its purpose is to support cooperation for the development of science, culture and interpersonal and inter-institutional relations. More: <https://www.zut.edu.pl/zut-strona-glowna/informacje-biezace/article/prof-el-fray-z-amerykanskim-stypendium.html>

Mergers of institutes in the Łukasiewicz Research Network

2019-11-18

The institutes belonging to the Łukasiewicz Research Network are joining forces to compete more effectively on the R&D market. This month, the Warsaw Institute of Applied Optics merged with the Tele and Radio Technical Institute also based in Warsaw, and further mergers will take place in the near future.

On January 1, 2020, the COBRO Packaging Research Institute in Warsaw will merge with the Institute of Biopolymers and Chemical Fibers in Łódź. In Warsaw, April 1, 2020 the Pharmaceutical Institute and the Institute of Biotechnology and Antibiotics will merge with the Institute of Industrial Chemistry. - It is a natural process and a noticeable international trend. Such joined institutes have greater commercialization potential, are stronger in terms of organization and have greater capabilities in providing value within large consortia. Building strong organizations on the R&D market leads to more effective development and facilitates doing business with business - said Piotr Dardziński, president of the Łukasiewicz Research Network.

Young researchers of the University of Silesia won scholarships for outstanding young scientists

2019-11-19

Five employees of the University of Silesia in Katowice have won the scholarship competition of the Minister of Science and Higher Education for outstanding young scientists (up to 35 years old).

Ministerial scholarships were awarded to scientists from the faculty of exact and technical sciences: Dr Magdalena Tarnacka and Dr Jakub Spiechowicz in the field of physical sciences and Dr Karolina Jurkiewicz in the field of materials engineering, as well as Dr Michał Kłosiński from the faculty of humanities in the field of literature and Dr Eng. Justyna Knapik-Kowalczyk from the faculty of exact and technical sciences in the field of pharmaceutical sciences. Scholarships of the Minister of Science and Higher Education are awarded to persons conducting innovative research at a high level and possessing international scientific achievements.

Researchers of the Medical University of Wrocław to examine 2.5 thousand city residents

2019-11-19

Researchers at the Medical University of Wrocław are starting extensive research on the health status of the inhabitants of Wrocław. They are planning to examine 2,500 people. The research is co-financed by the City of Wrocław.

The study will concern a child and one of the parents, its participants were chosen randomly. Data from the PESEL database were provided to researchers by the Ministry of Digitization. Each participant will be laboratory tested (i.e. blood test, glucose, glycosylated hemoglobin, creatinine level, lipidogram: total cholesterol, LDL cholesterol, HDL cholesterol, triglycerides, electrolyte level: sodium and potassium and thyrotropic hormone TSH). Additionally, ECG

tests, spirometry, blood pressure measurement, anthropometric tests will be performed, including body mass composition analysis, ENT and audiometric tests. Self-research would cost the family about one thousand PLN. More: <https://www.umed.wroc.pl/content/picture-welcome-wroclawian-na-badania>

Six scientists from the Nicolaus Copernicus University receive grants from the Miniatura program

2019-11-19

Six researchers of the Nicolaus Copernicus University in Toruń (UMK) become laureates of the „Miniatura” program funded by the National Science Center.

Dr Agata Pacuła will implement the project «Water-soluble seleniates - a solution to the problem of low bioavailability of selenoorganic compounds», Dr Tomasz Jasiakiewicz will conduct a research «Interpretation of wills in Polish and foreign law» and Dr Karolina Sikorska will examine «Life narratives of contemporary visual artists - preliminary research». Dr Tomasz Jędrzejewski will implement the project «Coriolus versicolor extract as a potential modulator of the M1 / M2 macrophage phenotype - study of interactions between breast cancer cells and macrophages», Dr Sonia Szymańska will develop the project «Searching for biologically active compounds limiting the colonization of crop plants by human pathogenic microorganisms», and Dr Dawid Szostek, Prof. of NCU will attempt to develop a validated scale to measure counterproductive behavior at work.

Polish researchers to receive over PLN 390 million in the concluded competitions of the National Science Center

2019-11-20

The National Science Center (NCN) has completed the following competitions: OPUS 17 for research projects, addressed to all researchers, and PRELUDIUM 17 for projects

implemented by the researchers with no a PhD title. The ranking lists include over half a thousand projects worth almost PLN 390.3 million.

A total of 3,145 applications were submitted for the contests, which will receive to almost PLN 2.14 billion. NCN experts qualified exactly 520 projects worth PLN 390 268 309 for financing. On average, 16.5% of submitted applications received funding. Representatives of exact and technical sciences will implement the majority of projects in OPUS 17 and PRELUDIUM 17 competitions. Out of 1,165 applications submitted, 193 projects with a budget over PLN 142.3 million were qualified for funding. Representatives of life sciences received slightly less funding, 170 grants (of 1026 submitted), but the value of these grants amounted to as much as PLN 186.6 million. Representatives of the humanities, social sciences and the arts received 157 grants (of 954 submitted) with a total value of 61.3 million PLN.

Ministerial scholarships for outstandingly talented young researchers of the Wrocław University of Science and Technology

2019-11-21

Five young scientists from the Wrocław University of Science and Technology received scholarships from the Minister of Science and Higher Education of the amount of PLN 5,390 per month for three years.

The applications were evaluated by an advisory team selected from candidates proposed by the Main Council for Science and Higher Education, the Science Evaluation Commission and the Young Scientists Council. 211 scientists from all over Poland received scholarships - including 29 doctoral students. The jury honored were five researchers from the Wrocław University of Science and Technology: Dr Eng. Marcin Kaszuba (mechanical department), Dr Adam Narbudowicz and Dr Eng. Róża Goścień (electronics department), Dr Eng. Michał Baranowski (faculty of basic technical problems) and Jan Zaręba (chemical department). Ministerial scholarships are granted to the young scientists who conduct innovative, high-level scientific research and enjoy high-profile and international scientific achievements.

Opole University of Technology scientist becomes an expert of the European Commission

2019-11-21

Dr Anna Jasińska-Biliczak from the Faculty of Economics and Management of the Opole University of Technology has once again been appointed to the commission assessing research and development projects submitted by European consortia - The Executive Agency for Small and Medium-sized Enterprises (EASME).

Dr Jasińska-Biliczak participates in the evaluation of projects in the FTI and INNOSUP programs. The aim of the INNOSUP program is commercialization, and

the co-financed projects are treated as pilot projects and receive the direct patronage of the European Commission. The FTI - Fast Track to Innovation - is a competition planned for 2018-2020, whose budget for is 100 million euros per year. The European Commission through FTI supports advanced and specialized solutions, including related to setting standards, advanced testing, piloting and demonstrations, validation in real conditions, certification and validation of the business model. More: <https://wu.po.opole.pl/nasz-naukowiec-ekspertem-komisja-europejskiej/>

Opole University nominated for the Polish Intelligent Development Award

2019-11-22

The University of Opole has been nominated for the Polish Intelligent Development Award for 2019 in the „Studies of the Future” category for the implementation of the „Paleobiology. Internationalization of the masters specialization in Biology at the Independent Department of Biosystematics at the Faculty of Natural Sciences and Technology of the Opole University”.

The project was implemented by paleobiologists from the Independent Department of Biosystematics (now the Institute of Biology) and ended this year with the promotion of 17 masters. The Polish Intelligent Development Award is a nationwide award appreciating the most innovative projects implemented as part of EU and national programs by Polish scientific institutions, institutions and companies dealing with research and development activities, which by their innovative investments and solutions will apply to Poland's sustainable development.

University of Silesia researchers won the Preludium competition

2019-11-25

Four researchers from the University of Silesia have won the prize for students starting their careers with no PhD title under the Prelude competition.

Young researchers will implement the projects: «The right to privacy and the right to be forgotten in the process of choosing personalized internet advertising - a legal model»; «Alternating care and parental authority of parents living apart»; «Assessment of reproductive potential, expression of vitellogenins and telomere length in the model organism *Acheata domestica* from the wild line and selected for longevity, after exposure to graphene oxide and ascorbic acid» and «Development of symmetrical 3,9-disubstituted perylenes via cycloaddition reactions - new nanographic structures.» 1094 projects were submitted to the competition organized by the National Science Center, of which 212 applications were qualified for funding.

Scientists of the University of Silesia awarded in the Opus competition of the National Science Center

2019-11-26

Five researchers of the University of Silesia will be able to implement their projects thanks to the Opus competition of the National Science Center. The total value of their research funding is over 4.1 million PLN.

The co-financed projects include: «Water fictions: refugees and the sea»; «Socio-legal justice for women. Analysis of female vertebrae» and «Correlation between limited size and surface interactions and their impact on the molecular dynamics of two-dimensional space limited materials. Does the size of the spatial limitation apply?» Funding was also awarded to the following projects: «TreesBEEs - Trees as a biogeomorphological factor of ecosystem transformation - biological weathering, initial soil development and slope formation under the influence of tree roots, rhizospheric bacteria and mycorrhizal fungi» and «How many glaciations? Neoproterozoic countdown to the biological «big bang».

National Science Center to launch new competition for research teams from Poland, Austria, the Czech Republic and Slovenia

2019-11-27

In February 2020, the international CEUS-UNISONO competition will be launched for research projects in the field of basic research in all scientific disciplines, planned to be implemented in bi- or tripartite cooperation by research teams from Poland, Austria, the Czech Republic and Slovenia.

Projects should be scheduled for 24, 36 or 48 months (excluding cooperation with the Czech Republic), starting from 2021. The competition will be announced as part of the CEUS program, organized by the National Science Center (NCN) in cooperation with foreign partner institutions from: Austria (FWF - Austrian Science Fund - Fonds zur Förderung der wissenschaftlichen Forschung), Czech Republic (GAČR - Czech Science Foundation - Grantová agentura České Republiky) and Slovenia (ARRS- Slovenian Research Agency - Javna agencija za raziskovalno dejavnost Republike Slovenije). More: <http://ncn.gov.pl/sites/default/files/pliki/CEUS-pre-announcement.pdf>

Four projects of the Poznań University of Technology co-financed in the Preludium competition

2019-11-29

Four projects of young researchers of the Poznań University of Technology received funding under the Prelude competition. This competition of the National Science Center is intended for scientists who have not yet obtained a PhD title.

The co-financed projects include: «Development of the construction of crane equipment in Poland from the 19th to the mid-20th century» – by Katarzyna Olga Pietrzak from the faculty of transport engineering and «Two-dimensional magnetic surface

alloys based on rare earths and platinum. Research on electronic and magnetic properties with atomic resolving power «- by Eng. Marta Izabela Przychodnia from the faculty of technical physics. The funding was also offered to support two projects of researchers from the chemical technology department: «Bis-ammonium, bis-phosphonium and third-generation ammonium-phosphonium ionic liquids» – by Eng. Damian Krystian Kaczmarek and «Components based on biopolymers for an electrochemical capacitor» – by Eng. Dawid Kasprzak.

Great Challenges: Energy project launched

2019-12-04

Over 200 people interested in submitting ideas for the new initiative of the National Center for Research and Development (NCBR) - the Great Challenge: Energy, took part in the conference supported by the Ministry of Science and Higher Education.

The project's pattern are American technology competitions like the DARPA Grand Challenge and it aims to develop solutions that will allow the use of wind in the most effective way. The prize is as much as PLN 1 million. The participants' task is to develop solutions that will allow low-speed wind to be used in the most efficient way: for production, storage and energy transfer. The devices that will be designed are intended to be used at home and they should be quiet and compact. More: wielkiewyzwanie.ncbr.gov.pl

Three scientists from the Gdańsk University of Technology became the winners of the Opus 17 competition of the National Science Center

2019-12-09

They will receive almost PLN 4.8 million in total for the implementation of research projects.

Thanks to the funding Prof. Eng. Zofia Mazerska will implement the project «Specific interactions

of new anti-tumor asymmetrical bisacridines with DNA and ABC proteins and their ability to modulate enzymatic activity and transcription of nuclear receptors as part of the molecular mechanism of their action.» The research will be carried out jointly with the Medical University of Białystok. Professor Eng. Michał Piotr will implement the project «New phaser filters and passive multi-functional systems for future radio systems», and Dr Eng. Małgorzata Zięba, Prof. of Gdańsk University of Technology will complete her project «Threats related to knowledge in contemporary organizations».

Gdańsk University of Technology researchers win grants in the Prelude 17 competition

2019-12-10

Two researchers from the Gdańsk University of Technology won grants in the Prelude 17 competition organized by the National Science Center. Young researchers who do not yet have a PhD title can participate in the competition.

Karolina Anna Górnicka from the faculty of technical physics and mathematics, thanks to funding in the amount of over 190 thousand PLN, will implement the project „Superconductivity in Laves compounds based on alkaline earth metals”. Joanna Badach from the architecture department received almost 130 thousand PLN for the project „Spatial aspects of city ventilation management and air quality monitoring: integrated assessment method. Gdańsk, Poznań and Warsaw case studies”.

Five scientists from the Poznań University of Technology win grants in the Miniatura 3 competition

2019-12-11

Poznań University of Technology researchers have won 5 grants in the Thumbnail competition of the 3rd National Science Center.

The winners are Dr Beata Mądrecka from the Institute of Environmental Engineering for «Determination of the possibility of growth of antibiotic-resistant bacteria in biologically active carbon filters used in water purification processes», Dr Paweł Mendant from the Institute of Automatic Control, Robotics and Computer Engineering for «Application of graph theory methods to classify unbalanced data», Dr Eng. Łukasz Knypiński from the Institute of Electrical and Industrial Electronics for «Comprehensive optimization of synchronous motors with direct start», Dr Ziemowit Domański from the Institute of Mathematics for «Quantum mechanics in non-commutative spaces in terms of deformation quantization» and Dr Eng. Przemysław Głowacki from the Institute of Materials Research and Quantum Engineering for «Preliminary studies of the superfine structure in the manganese atom for applications in quantum metrology and engineering».

Nearly 2/3 of Poles throw away bread

2019-12-11

Only every fourth adult person in Poland has a habit of checking the amount of food in the kitchen before shopping and preparing a list of necessary products – says the research conducted at the Warsaw University of Life Sciences (SGGW).

Quantitative research on a representative sample of households regarding food waste was carried out as part of the project entitled «Developing a system of monitoring wasted food and an effective program to rationalize losses and reduce food waste». The project is financed by the National Center for Research and Development under the GOSPOSTRATEG program. Only 1/3 of Poles properly manage food products

during their storage to limit food wasting, i.e. they apply the FIFO (First In - First Out) principle «first in - first out». The researches identified the products that are most often thrown away in Polish households. Although with different frequencies, 62.9% of adults Poles admitted to throw away bread, 57.4% throw fresh fruit and 56.5% admitted to throw vegetables (excluding potatoes and other root crops).

National Science Center to launch the third Dioscuri competition

2019-12-11

The National Science Center (NCN) has launched the third Dioscuri competition. Foreign scientists can apply for the creation of three centers of scientific excellence in units in Poland.

The Dioscuri competition was created on the initiative of the Max Planck German Society and it is organized in cooperation with the National Science Center for the third time. Its purpose is to enable the creation of research teams in Poland capable of successfully competing on the international arena. The competition is open to researchers from all fields of science. The call for proposals lasts until March 23, 2020. The Dioscuri Center is supposed to be developed by an outstanding scientist. The leader selected in the competition will establish and lead a research group that will achieve significant results in its field. The amount of 300,000 euro per year for a period of five years will be allocated to the operation of one center. More: <http://ncn.gov.pl/dioscuri/dioscuri3/call-announcement>

Hydromech S.A. acquired the right to use the invention of scientists of the Gdańsk University of Technology

2019-12-11

Gdańsk University of Technology and Hydromech S.A. signed an agreement under which the company acquired the rights to use the invention regarding the precise mechanisms of satellite engines, developed at the Department of Mechanics and Mechatronics of the Faculty of Mechanical Engineering.

- We are glad that in our development plans we can support the research and development potential of the leading research university in the country- Gdańsk University of Technology. The solution to which we have acquired license rights is a perfect example of such innovation - says Karina Gronkowska, president of the board of Hydromech S.A. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGNcmoQv7K0/content/umowanilicencyjna-na-wynalazek

University of Humanities and Natural Sciences Jan Długosz in Częstochowa offers Grants for researchers

2019-12-13

University of Humanities and Sciences in Częstochowa has received funds for the implementation of scientific activities as part of the Miniatura 3 competition organized by the National Science Center.

Thanks to the co-financing, projects will be implemented by: Dr Katarzyna Kowal - „Rare genetic disease in the patient’s experience - sociosomatic study of type 1 neurofibromatosis”, Dr Piotr Rychter - „Development and preparation of a multilayer coating from environmentally friendly polymeric materials, ensuring proper seed growth and development in degraded soils and drought-covered” and Dr Grzegorz Sitek - “Degree of abstraction of mathematical concepts and its reduction based on pointless geometry systems - consultation trip”. Grants under the Miniatura 3 competition amount from 5 to 50 thousand PLN and may be allocated to the implementation of preliminary / pilot studies, inquiries, scientific internships, research trips or consultative trips.

National Center for Research and Development to offer PLN 150 million in the competition for supporting research and development projects

2019-12-13

As part of the Intelligent Development Program, the National Center for Research and Development (NCBR) has launched a competition to support research and development projects implemented by scientific and industrial consortia. PLN 150 million has been allocated for this purpose.

This is the second such competition this year and this sixth competition in the history of the «Application Projects» program. It enables joint implementation of research and development projects by enterprises and scientific units. The goal is to increase the scale of use of new native technologies by Polish companies. Consortia consisting of a maximum of 5 entities can apply for co-financing, and both the scientific unit and the enterprise can be the consortium leader. There are no thematic restrictions in the «Application Projects» program - it suffices if the subject of the project is under the National Smart Specializations. This gives a number of possibilities to applicants who can also submit interdisciplinary projects. <https://www.ncbr.gov.pl/programy/fundusze-europejskie/poir/konkursy/konkurs-2-4-1-4-2019/>

RNA Biology Laboratory to be launched in Warsaw

2019-12-16

On January 9, 2020, the International Institute of Molecular and Cell Biology in Warsaw will make an official presentation of the RNA Biology Laboratory.

The new research group will be led by Prof. Andrzej Dziembowski, and the RNA Biology Laboratory will deal with research on the regulation of gene expression on so-called post-transcript level. Professor Andrzej Dziembowski is a world-class molecular biologist, biochemist and geneticist, a corresponding member of the Polish Academy of Sciences. He is a laureate of the prestigious ERC Starting Grant (2012) and the Foundation for Pol-

ish Science Award (2018). The project is implemented under the European grant ERA Chairs Horizon 2020 «Molecular signaling pathways in health and disease - Interdisciplinary Center of Excellence» (MOSaIC).

Researcher of the Poznań University of Life Sciences becomes an expert in the Research Executive Agency

2019-12-17

Dr Eng. Janetta Niemann from the University of Life Sciences in Poznań has been appointed an expert of the Research Executive Agency (REA) acting within the powers delegated by the European Commission.

Dr Eng. Janetta Niemann works at the Department of Genetics and Plant Breeding of the Faculty of Agriculture and Bioengineering at the Poznań University. She will advise on issues related to the Horizon 2020 program. She will take part in the process of assessing projects submitted to the Executive Agency for Sustainable Food Security under Horizon 2020 - Work Program 2018-2020. Horizon 2020 is a framework program for research and innovation, which was adopted by the European Parliament and the Council of the European Union in December 2013. This is the largest EU project to date in research and innovation. The program's budget is EUR 80 billion, of which EUR 2.8 billion will be allocated to research and innovation.

Researcher of the Poznań University of Economics receives Polish Smart Development Award

2019-12-17

Dr Ewa Sikorska, Prof. of the Poznań University of Economics received the Polish Smart Development Award 2019 in the 'Scientist of the Future' category for the implementation of the "Spectral fingerprints as a tool for testing the quality of fruit juices" funded by the National Science Center.

Scientists of the Department of Technology and Instrumental Analysis of the Institute of Quality

Sciences of the Poznań University of Economics, under the direction of the laureate, studied fruit, apple and berry juices as well as their mixtures. In their research, scientists used optical spectroscopy methods. The winners of the Polish Intelligent Development Award are entities and persons who demonstrate a future-oriented approach in their work, and their activities constitute the basis for sustainable economic development of Poland. The partner of the award is the Silesian Center for Business Ethics and Sustainable Development at the Silesian University of Technology, and the organizer is the Center for Smart Development.

University of Warsaw presented 5 priority research areas

2019-12-18

Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin, as well as Anna Budzanowska, Deputy Minister of Science and Higher Education, met with the authorities of the University of Warsaw (UW), who won the „Initiative of Excellence - Research University” competition.

During the meeting, the UW presented development plans for 5 priority research areas, which will be implemented within the competition. They include: - Research for Earth - an integrated multidisciplinary approach to identifying threats to the environment, biodiversity, climate and health, and searching for implementable solutions, - At the heart of the micro and macro world - searching for breakthrough innovations for the future: materials, energy sources and technologies ensuring sustainable development, - Petabytes challenge - advanced mathematics and computer science tools in analyzing large data sets - from random processes on the stock exchange to medical diagnostics, - Expanding the borders of the humanities - humanities research crossing discipline boundaries, developing innovative tools and models, expanding understanding of the mind, language and culture, - In search of regional solutions for global challenges - multidisciplinary teams examining the consequences of increasing mobility, multi-dimensional inequalities and digital transformation.

National Science Center to launch new competitions for young scientists

2019-12-18

The National Science Center (NCN) announced the process of applications for the fourth time within the SONATINA competition, and for the eighth time in the ETIUDA competition. Polish scientists will be able to apply for funding for research projects and doctoral scholarships.

The total budget of both competitions is PLN 30 million. SONATINA 4 is a competition for people with a PhD title who have obtained it up to 3 years before the year of submitting the application, or who will be awarded it by the end of June 2020. The aim of the competition is to enable the employment of young researchers in Polish scientific units. On the other hand, ETIUDA 8 is a competition aimed at people who only start their scientific careers are doctoral students at the Polish universities authorized to offer doctoral titles. Young researchers may receive a scholarship of PLN 5,000 per month for a period of 6 to 12 months.

Polish research teams to receive half a million euros for in the international competition on urban planning

2019-12-23

The National Science Center (NCN), in cooperation with the JPI Urban Europe network is holding a competition for international research projects as part of the ERA-NET Co-fund Urban Accessibility and Connectivity (EN UAC) initiative, regarding thematic areas related to the development of modern cities and urbanized areas.

According to NCN, international consortia consisting of at least 3 research teams from at least 3 countries participating in the competition may apply for the funding. The head of the Polish team must hold at least a doctoral title. The participating countries

include: Austria, Belgium, Cyprus, Denmark, France, the Netherlands, Latvia, Germany, Norway, Poland, Romania, Slovenia, Sweden, Turkey, United Kingdom, Italy. The total amount of funds allocated by the National Science Center for the implementation of tasks by Polish research teams in the competition is 500 thousand. EUR. More: <https://jpi-urbaneurope.eu/calls/enuac/>

Foundation for Polish Science awarded away scholarships

2019-12-24

The Foundation for Polish Science (FNP) offered the academic scholarship for the MIS-TRZ laureates within seventh competition. The scholarship may sponsor a trip to a prestigious foreign scientific center in order to conduct research work.

The winners of this year's competition are: Bronisław Marciniak from the Faculty of Chemistry of the University of Adam Mickiewicz in Poznań, who received a scholarship of USD 5,500 per month for a 4-month trip to the University of Notre Dame in the USA; Wojciech Bałus from the Faculty of History of the Jagiellonian University in Krakow, who received a scholarship of EUR 5,000 per month for a 3-month trip to the Zentralinstitut für Kunstgeschichte, Munich in Germany; Marek Domański from the Faculty of Electronics and Telecommunications, Poznan University of Technology, who received a scholarship of USD 5,500 per month for a 3-month trip to Nagoya University in Japan.

Employees of the Silesian University of Technology receive Polish Intelligent Development Awards

2019-12-24

Professor Tomasz Tański, head of the Department of Engineering and Biomedical Materials at the Faculty of Mechanical Engineering and Prof. Przemysław Data from the Department of Physical Chemistry and Polymer Technology at the Faculty of Chemistry of the Silesian University of Technology received

the Polish Intelligent Development Award in the Future Scientist category.

The awards were presented during the 4th Intelligent Development Forum in Uniejów - an economic event dedicated to new technologies, innovations, inventions and innovative investments changing the country. The Forum included discussion panels and lectures as well as presentations regarding the latest technologies, automation and artificial intelligence. The Intelligent Development Center was the main organizer and initiator of the Intelligent Development Forum. Among the honorary patrons were, among others Ministry of Science and Higher Education, Ministry of Health, Ministry of Energy, Ministry of Digitization, National Center for Research and Development and the Patent Office.

Discovery of Polish and German scientists published in Nature Communications

2019-12-27

The Polish-German team of quantum physicists and chemists, coordinated by Dr Karolina Słowik from the Institute of Physics of the Nicolaus Copernicus University in Toruń, pointed to a new possibility of extending the life time of atomic systems in the nano-antennas environment. The research results were published in the journal Nature Communications.

The object of research was the interaction of atomic systems with light in close proximity to metallic nanostructures. Such nanostructures, a thousand times thinner than the cross section of a human hair, act as tiny antennas tuned in size to optical light lengths (fractions of micrometers). The research was conducted in cooperation with the research teams of the University of Toruń and the Karlsruhe Institute of Technology in Germany. The research received financial support from the Foundation for Polish Science, the National Science Center and Deutsche Forschungsgemeinschaft. More: <https://www.umk.pl/consciousosci?id=26504>

Nicolaus Copernicus University in Toruń to create modern ways of teaching foreign languages

2019-12-30

The Faculty of Humanities of the Nicolaus Copernicus University in Toruń and 3WAY Dynamic Language Center will jointly create modern ways of teaching foreign languages. The parties signed an agreement on undertaking joint activities in the field of commercialization of research results and conducting research and development projects.

The goal of cooperation is to develop modern language learning methods based on the achievements of neuroscience and experimental linguistics and cooperation with spin-offs operating at the Faculty of Humanities of the University of Toruń. Both institutions have already made steps to prepare personalized mobile textbooks for learning English and are fully convinced that the development of modern technologies opens new, previously unknown ways in teaching. Under the agreement, the parties undertook to exchange knowledge and jointly apply for money from institutions financing research and development works. Conference on Polish cinematography in Bydgoszcz

2018-02-20

The Department of Creative Industries of the University of Economy in Bydgoszcz and the scientific journal „Culture and Education” invite to participate in the interdisciplinary conference „Creative Minds. New roads of Polish cinema „, which will be held on 6-7 March 2018 in Bydgoszcz. During the conference, participants will be able to listen to over a dozen lectures on Polish cinematography. Professor Arkadiusz Lewicki from Wrocław University will present the «Image of the Eighties in the Polish Newest Cinema (2007-2017)», Dr Krzysztof Kopczyński from the University of Warsaw presents the topic «Irony and harmony. The search for author's identity in the Polish creative document of the 21st century », Dr. Magdalena Bergman from the University of Economy in Bydgoszcz will analyze «Images of social exclusion in contemporary Polish cinema in a sociological perspective » and Artur Petz, MA from the University of Łódź will introduce the phenomenon of a Polish scriptwriter, director and writer Patrick Vega. He will also make a lecture «How to raise the viewer and achieve commercial success». The conference will start on March 6, 2018 at University of Economy in Bydgoszcz at Naruszewicz str.11, building K, ground floor, room K001.

Wrocław scientists assess the language of Polish offices in the Internet

2018-02-23

Two scientists from the University of Wrocław Grzegorz Zarzeczny and Tomasz Piekot research accessibility of official texts in the Internet. After providing a cross-sectional analysis they wrote the first report. - Offices rarely adapt their articles to a specific medium, and the texts prepared by the institutions are usually difficult to learn and understand - such conclusions are drawn from a report prepared by Dr Grzegorz Zarzeczny and Dr Tomasz Piekot from the Laboratory of Polish Language at the Institute of Polish Philology of the University of Wrocław. In their research, Wrocław's linguists had taken into account three properties of texts that testify to their

affordability: the average sentence length, the percentage of long words in the text and the FOG index of visibility, i.e. educational indicator (it simulates how many classes one needs to complete in order to read the text with no problems). In terms of the percentage of difficult vocabulary, the top ten results of the report are quite even. The least accessible are sites of the president's and prime minister offices, two of ministries and three of provincial marshal offices. More: <http://ppp.uni.wroc.pl/ranking.html>

Polish literature researchers use digital methods to analyze literary texts

2018-02-27

The complete digital bibliographic database of Polish literature in 1939-2002 was created. The project „Polish Literature and Bibliography - a laboratory of knowledge about contemporary Polish culture” is realized by the Digital Humanities Center of the Institute of Literary Research of the Polish Academy of Sciences from the funds of the National Program for the Development of Humanities. - Digital humanities expand the research point of view - said Dr. Maciej Maryl from the Digital Humanities Center. The Polish-American Fulbright Commission finances in Stanford Literary Lab his project «Literary breakthrough seen from above. Quantitative history of Polish literature (1989-2000)». Polish researchers Dr Maciej Eder and Dr Jan Rybicki have a significant contribution to the development of stylometry, the fastest growing field of digital philology. It involves the quantitative examination of texts to capture the unique characteristics of their authors' styles. With the big data techniques, new 5,000 bestsellers were analyzed, determining what readers value the most in such works. Professor Krzysztof Nowicki believes Minoan civilization to be different than generally thought

2018-02-27

The collapse of the Minoan civilization was not the result of a massive volcanic eruption on the island of Santorini - believes Prof. Krzysztof Nowicki from the Institute of Archeology and Ethnology of the Polish Academy of Sciences - it followed gradually and it was initiated by terrible Greek invasion of the Crete. The scholar, after 30 years of research, revised views on key moments in the history of Minoan civilization. He emphasizes that there was no cult of rulers. The distance between citizens and rulers was much smaller than in the countries of the ancient Near East. - There was no obsession with honoring dead rulers, such as in Egypt - said Prof. Nowicki - in Crete they were rather guardians and priests, not warriors. Minoan culture was one of the most powerful and original ancient civilizations; it developed from the second half 4 millennium BC until 1200 BC. It is distinguished by art and architecture, as well as advanced techniques of metalworking, stone and ceramics. Congress of Polish Geography

2018-02-28

From April 12 to 14 2018, the Congress of Polish Geography will take place. This is the most important event of the Polish Geography Year. The celebration was announced by the Committee of Geographical Sciences of the Polish Academy of Sciences, referring to the 100th anniversary of the Polish Geographical Society and the 100th anniversary of teaching geography at the University of Warsaw. During the congressional debates, an overview and assessment of the achievements of Polish geography in the past century will be made and the most important problems and research challenges faced by the Polish geographers will be indicated. The last, open day of the congress will be celebrated as the Geographer's Day. The Jubilee Geographic Competition will be held and the best, young geographers will be selected from among 200 students representing 228 schools in the contest. Poznan University prepares its building for the Enigma Museum

2018-02-28

University of Poznań donates the building of the old Collegium Historicum for the construction of the Enigma Museum. The German cipher was broken by Marian Rejewski, Henryk Zygalski and Jerzy Różycki, who majored from mathematics at the Poznań university. In 1932, they learned the secret of the German electromechanical Enigma encryption machine operations. They did it with use of mathematical methods. Until that time only linguistic methods had been used in cryptology. Originally, Enigma was supposed to serve for the purposes of secreting business correspondence. However, it was used in the German armed forces. The three Polish mathematicians designed a copy of the encryption machine. Copies of this device were made at the AVA Radio Production Station in Warsaw. In the summer of 1939, the Polish military authorities sent copies of the machine to France and the United Kingdom along with information on the broken code.

National Program for the Development of Humanities invited for competitions

2018-03-01

Two contests National Heritage and Universalia 2.2. were settled as part of the National Program for the Development of Humanities. The Minister of Science and Higher Education in the National Heritage competition qualified for funding 28 best projects for the total amount of nearly 32.5 million PLN. Within the Universalia 2.2. 11 projects will be financed for the amount of nearly 2.5 million PLN. Among the financed projects were, among others: «Alma Mater Leopoliensis. History of Lwów humanities 1661-1946.» By the team led by Prof. Anna Janina Dąbrowska from the Faculty of Philology of the University of Wrocław, «Encyclopedia of the Warsaw Ghetto», by Prof. Andrzej Żbikowski from the Emanuel Ringelblum Jewish Historical Institute and «Translation, critical edition and analysis of the content of the Płock Pontifical from the 12th century» by the Professor Henryk Seweryniak from the Cardinal Stefan Wyszyński University in Warsaw. Seminar on air quality at the Cracow Pedagogical University

2018-03-02

Department of Sustainable Development and Geographical Shaping, Krakow Institute of Geography of the Pedagogical University and the Polish Geophysical Society organize an open seminar on „Air pollution and meteorological conditions”. During the seminar, several lectures concerning mainly air quality in Krakow will be presented. Participants will be able to listen to lectures on the analysis of individual atmospheric aerosol particles, PM 2.5 and PM 10 dust concentration in selected urban agglomerations in Poland and meteorological conditions in 2006-2016 and to find out how climate change affects the modification of physical and chemical properties of snow cover on Spitsber-

gen. The seminar takes place on March 7, 2018 in the new building of the Pedagogical University in Krakow at Podchorążych 2.

„Days with psychoforensics” at the Katowice University of Social Psychology

2018-03-02

As part of the series „Meetings with science”, the Social and Social University of Social Sciences and Humanities in Katowice organizes on 7-8 March 2018 an open, popular-oriented event „Days with psycho-forensic studies”. The initiative is addressed to all students and teachers of upper secondary schools who are interested in psycho-forensics. During the event, the researchers from the University of SWPS will seek together with the participants answers to the questions: Do weather and humor influence the crime? What are the possibilities of forensics in search of missing persons? Can you really detect lies using new technologies? More information about the event can be obtained from the Youth Zone Project Coordinator in Katowice at the email address: strefa.katowice@swps.edu.pl

Seminar of Collegium Civitas on terrorism in political terms

2018-03-09

The Center for Terrorism Studies Collegium Civitas in Warsaw and the History Meeting House are organizing a scientific seminar „From a terrorist to a politician” on March 23, 2018. The seminar is a part of the interdisciplinary project «Look at terrorism» run by Collegium Civitas. It aims to present the history of terrorism and shows its complexity from the perspective of various sciences: economics, political science, security sciences, media studies, literary studies, sociology and psychology. During the seminar a discussion panel was planned with the participation of the Member of the Polish Sejm, Joanna Kluzik-Rostkowska, a political scientist and expert on South America Dr. Piotr Łaciński and an expert on security and the author of the «Encyclopedia of terrorism» Dr. Krzysztof Karolczak. The event will take place on March 23, 2018 at 18.00 at the

Dom Spotkań z Historią in Warsaw at ul. Karowa 20. Admission is free. The organizers ask for confirmation of their presence at the address: cbnt@civitas.edu.pl

Inauguration of the „Polonia Restituta” project

2018-03-13

Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education, announced the start of the project „Polonia Restituta. Decalogue for Poland on the 100th anniversary of regaining independence.” The ten scientific conferences that make up the project are intended to deepen reflection on Polish history and the present situation in the context of independence. - We came to the conclusion that in celebrating the 100th anniversary of regaining independence, the most important thing is looking into the future, thinking about what Poland should be like. My co-workers proposed to look at the past, present and future of Poland from the perspective of Catholic social science - said Deputy Prime Minister Jarosław Gowin, announcing the inauguration of the conference. The President of Poland Andrzej Duda accepted the Honorary Patronage of the event. More about the project in the previous article: <http://polishscience.pl/en/series-of-scientific-conferences-polonia-restituta-decalogue-for-poland-on-the-100th-anniversary-of-independence/>

University of Lodz launches Study of medieval literature of Orthodox Slavs

2018-03-14

Linguists, literary scholars and historians from several departments of the University of Lodz, in cooperation with foreign scientists, will research „Polemical literature of the Orthodox Slavs in the Middle Ages“. The research will be carried out thanks to a grant from the „Harmonia“ program of the National Science Center. The aim of the project is to present this important part of the European cultural and historical heritage in terms of the complexity of medieval literature of the Orthodox Slavs. This involves gathering, describing, analyzing and releasing medieval anti-heretic, anti-Jewish, anti-Latin and anti-Tatar texts. These sources are important to comprehend the complex history of Eastern Christianity, and at the same time - extremely diverse in terms of genre. There are polemical treaties, liturgical texts, polemical stories and speeches, as well as anathemas or tips on how to punish apostates from Orthodox Church.

Lecture of Professor Pineau at the University of Lower Silesia

2018-03-14

The Faculty of Pedagogical Sciences of the Lower Silesian University in Wrocław invites participants to an open lecture by Professor Gaston Pineau entitled „Current trends and new perspectives in applying the biographical method as a research and practical approach“. Professor Pineau will also lead the methodological workshop «How to conduct biographical research? Research experience and methodological solutions applied in the francophone countries». These events will take place as part of the International Scientific Conference titled «In the space of biography. Identification of experiences, processes and changes on the occasion of the 100th anniversary of the publication of the «Polish Peasant in Europe and America» by Florian Znaniecki and William Thomas. The work of William Thomas and Florian Znaniecki is still a source of inspiration for scientists, due to the pioneering way of analyzing and interpreting authentic documents that emphasizes

the importance of the biographical dimension of human life. The lecture of Professor Pineau will take place on May 9, 2018 at the Faculty of Educational Sciences, Lower Silesian University in Wrocław, ul. Strzegomska 55, at 9:30 am, room 111.

Sergey Kovalev: Revolution of the 1980s was organized by the Gdańsk Shipyard and the University of Warsaw

2018-03-16

- Years later, we can finally tell the world that the revolution in Poland in 1980-81 was organized by the Gdańsk Shipyard and the University of Warsaw - highlighted Dr Sergey Kovalev, receiving the title of doctor honoris causa of the University of Warsaw. One of the reviewers presented a summary of Sergey Kovalev's achievements and called him «the conscience of Russian society and the conscience of the world.» Dr Kovalev's achievements were also presented by Dr Wojciech Pawlik. He pointed out that the Faculty of Applied Social Sciences and Resocialization applied for the award for him. «The title is awarded on behalf of all faculties of the University of Warsaw, because human rights are important for representatives of all disciplines» - explained Pawlik.

General Andrzejczak to hold a lecture at the University of Szczecin

2018-03-19

As part of the series of lectures „Szczecin Humanistic“, the dean of the Faculty of Humanities of the University of Szczecin invites participants to a lecture of Maj. Gen. Rajmund Andrzejczak „Leadership - passion and vision. Modern leadership in a comprehensive security environment“. General Andrzejczak is the commander of the 12th Szczecin Mechanized Division. In 1991 he graduated from the Higher Officers School of Panzer Armies in Poznań and later the Military Academy of Defense of the Czech Republic. He was a participant in many foreign missions. He was decorated with the Star of Iraq and the Star of Afghanistan. The lecture will take place

on Thursday, 22 March at 12.00 at the Faculty of Humanities. This will be a summary of the Legia Akademicka program - a pilot program of military student training launched in 2017 by the Ministry of National Defense.

Scientists from Torun studied Peter Rubens' paintings in London

2018-03-20

Professor Piotr Targowski from the Institute of Physics at the Nicolaus Copernicus University in Toruń and Dr. Magdalena Iwanicka from the Institute of Monuments and Conservation carried out research on the monumental paintings of Peter Paul Rubens on the vault of the Whitehall Banqueting House in London - informs the University of Toruń. Torun scientists stayed in London from 12 to 16 March 2018 at the invitation of the Historic Royal Palace. Using OCT optical tomography, they analyzed the structure and the condition of repeatedly restored pictures. It is part of a multidisciplinary campaign conducted within the MOLAB offer (mobile laboratory) of the international research project IPERION CH (Integrated Platform for the European Research Infrastructure ON Cultural Heritage) implemented in the Horizon 2020 program.

Talks on freedom, culture and identity during the 5th Night of the Humanists

2018-03-21

The relations between freedom, culture and identity were discussed during the 5th Night of Humanities at the University of Wrocław. Experts discussed on the influence of music on culture-forming and identity processes - on the example of the Polish anthem and the jazz from the 1950s. The Night of the Humanists is a regular event organized by the Faculty of Historical and Pedagogical Sciences of the University of Wrocław. The theme of this year's event was community and personal freedoms, their limitations and dependencies related to socio-historical determinants and cultural norms, patterns and symbols. Medievalists talked about the importance of Silesia in the politics of the Central European countries in the 9th and 10th centuries, and about how the «God's Pure Word» was the mainstay of Silesian rights and freedoms under the Habsburg rule. Audience's attention was also attracted to the problems of Polish democracy in 1918-1939, as well as the question who in fact triggered the 1989 changes.

Norman Davies to hold a lecture at the Jagiellonian University

2018-03-27

The Interdisciplinary Research Center, the Jagiellonian University and the City of Krakow invite participants to the lecture „Events in History”, which will be presented on April 5, 2018 by the world-renowned historian Prof. Norman Davies. Is there a logic of history? What was the role of unpredictable events in the past? Is the history written by events, not by winners? How can you deal with the event problem in historical studies? Do historians try to be too rational looking for justifications for events that were mainly decided by the accident? - these are some questions about the role of incidents in the history of Poland and the whole world. The lecture will take place on April 5, 2018 at 18.00 in the auditorium of the didactic building of the Faculty of Law and Administration of the Jagiellonian University in Kraków, ul. Krupnicza 33a.

100 works in the Krystyna Bochenek competition

2018-03-27

More than one hundred works were enrolled for Nationwide Journalist Krystyna Bochenek Competition. The jury evaluates the works that were created and appeared in 2017. The aim of the competition is to promote the region and to commemorate Krystyna Bochenek - a Silesian journalist known for many social initiatives. The competition is open. The works should present the issues of Silesia in a literal or a universal way and Silesia is not necessarily a main focus. This year a new category- Student is added. It is addressed to university students from all over Poland. The works related to Upper Silesia, Zagłębie, Podbeskidzie or Ziemia Częstochowska will be assessed. The prize funded by the Rector of the University of Silesia is PLN 5,000. The envelope of all prizes is PLN 50,000. The competition jury consists of scientists, journalists, artists and local government officials.

Professor Ewa Łętowska holds a lecture on the twilight of the liberal state of law in Poland

2018-03-29

Professor Ewa Łętowska will give a lecture on „The Twilight of the Liberal State of Law in Poland” on April 5, on the invitation of the student government of the Faculty of Law and Administration of the University of Szczecin. The event is organized as part of the university program „Shades of Justice”. Professor Ewa Łętowska specializes in civil, administrative and constitutional law. In her career, she was the first Ombudsman in Poland, a judge of the Supreme Administrative Court and the Constitutional Tribunal, she is a member of the Polish Academy of Sciences. She received the title of doctor honoris causa of the University of Gdańsk, the Academy of Special Education and the University of Warsaw. The lecture will take place on Thursday, April 5, at 11:00 am, in the lecture hall of the Faculty of Mathematics and Physics at the University of Szczecin, ul. Wielkopolska 15.

Award for book „S jak Śląsk – Superbohaterowie po śląsku”

2018-04-03

The book „S jak Śląsk – Superbohaterowie po śląsku” by Dr Marek Głowacki was awarded in the competition of the Edward Pudełko Association of School Publishers. It was published by the University of Silesia Publishing House. The book contains drawings, illustrations and texts created as part of the artistic project «S stands for Silesia - Superheroes in Silesia». The project includes a series of comic illustrations about the characters created on the basis of biographies of real inhabitants of Silesia, who through their achievements approached the ideal of the superhero. Dr Głowacki describes these figures, referring to the graphical scheme of black and white comics realizations, presenting their stories in the form of individual illustrations rich in detail. The project was implemented as the subsidy supporting the academic staff of the Artistic Department of the University of Silesia. Detailed information about the publication on the website: www.wydawnictwo.us.edu.pl.

Students of the University of Silesia to organize the Węgiel Film Festival

2018-04-05

Short films and animations from the entire world will be presented on April 12 and 13 during the 15th Węgiel Film Festival organized by the students of the Radio and Television Department at the University of Silesia. The aim of the festival is to present student works from the world universities, as well as exchange the experience and enhance the integration of the high schools. This year's festival will take place on April 12 and 13 in the new headquarters of the Radio and Television Department of the University of Silesia in Katowice, at ul. Sw. Pawła. The student contest will be a great opportunity to observe the techniques and skills of their colleagues and discuss about the films qualified for the competition. The list of films qualified for the festival is available at: www.wegielfestiwal.us.edu.pl

Recollection of the Podlasie victims of the Smolensk disaster at the University of Białystok

2018-04-11

Jerzy Giedroyc University Library of the University of Białystok invites to a solemn meeting devoted to the memory of the Podlasie victims of the Smolensk disaster on April 10, 2010. During the meeting, the lecture on Karolina Kaczorowska and the fragments of film recordings from the archives of President Ryszard Kaczorowski will be presented to commemorate the victims. The results of the competition named «Ryszard Kaczorowski from Białystok. Last President of the Second Polish Republic in Exile» will also be announced. After the meeting, the participants will visit the President Ryszard Kaczorowski's Office, located in the campus. The meeting will take place on April 13, 2018 (Friday) at 11.00 at the Institute of Biology, University of Białystok (room 2058, campus at K. Ciołkowskiego Street).

Center for Literary Research for Children and Youth at the University of Wrocław

2018-04-12

The Center for Literary Research for Children and Youth has been launched at the University of Wrocław. At the inauguration, a seminar „Literary research for children and youth at the University of Wrocław - modern perspectives” was organized. Studies of literature and books for children and youth at the Wrocław University have been conducted since the 1960s. The first scientist to deal with this topic was Prof. Jerzy Cieślowski. The idea of the Center appeared in 2015 during the conference «Literary Margins and Digital Media» organized by the University and the Academia Europea Knowledge Hub Wrocław. In 2016, the university organized the international congress «The Child and The Book». The Wrocław part was entitled «Children's Literature and Play» and referred to the heritage of Prof. Cieślowski. The event was attended by 150 researchers from around the world. The Center began operating on Tuesday 10 April.

News reading in the disinformation era at the University of Gdańsk

2018-04-13

Theoreticians and practitioners of information - scientists, experts, journalists and students - participated in the debate on reading news in the disinformation era. The meeting was organized by the Polityka Insight analytical center, Facebook and the Faculty of Social Sciences of the University of Gdańsk. The participants of the debate - mostly students of journalism - got acquainted with the short guide to the information intended to mislead the recipient and learned how to try to limit the damage caused by fake news. The debate took place as part of a nationwide project - meetings of experts, representatives of «Polityka Insight», Facebook, journalists and academics with journalism students at universities in Poland. The aim of the meetings and workshops is to familiarize students - future opinion leaders - with the problem of disinformation, false information and the ability to critically analyze the sources.

Prof. Przemysław Czapliński to hold a lecture on freedom without equality

2018-04-13

The Adam Mickiewicz University in Poznań, the UAM Foundation and the Zamek Cultural Center invite participants to a meeting at the „University Lectures in the Castle”. April 17 Prof. Przemysław Czapliński from the Faculty of Polish and Classical Philology will give a lecture on „Freedom without equality? Literature in the face of social conflicts. „ After the change of political power in 2015, the following statement appeared: «Freedom went well, only something did not work out with equality.» Its author of the lecture separated the two basic values of modern society, suggesting that they can exist separately. The story of how the isolation took place, what role it played and what ideas for re-joining freedom and equality can be found in culture will be presented by Prof. Czapliński. Professor Przemysław Czapliński is a historian of XX and XXI century literature, essayist, translator, literary critic; co-founder

of the Department of Anthropology of Poznań University. The subject of his research is literature and the problems of late modernity.

Tischner Days in Krakow

2018-04-17

In Krakow, the 18th Tischner Days will begin on April 18th. The organizers of the event are: Institute of Józef Tischner Thoughts, Znak Social Research Institute, Jagiellonian University, Pontifical University of John Paul II and the State Drama School in Krakow. The special guest is Prof. Timothy Garton Ash from Oxford. During the Days, the sponsors Znak and ERGO Hestia present the Tischner Award to selected journalists and writers in three categories. In the category of religious or philosophical literature, the prize will be received by the philosopher Ireneusz Ziemiński. In the category of journalism on social issues the winner is a journalist Ewa Siedlecka, and in the category of pastoral and social initiatives the award will be presented to Father Mirosław Tosza, founder of the community of Bethlehem in Jaworzno. The head of jury is Father Adam Boniecki. More: <http://dni.tischner.pl/>

IX Festival “Between”

2018-05-10

The 9th Festival of Literature and Theater “Between” will take place in Gdańsk, Gdynia and Sopot from the 14th to the 20th of May. The main topic of the event is “MAPS”. The organization is provided by staff, PhD students and students of the Faculty of Philology at the University of Gdańsk. Festival of Literature and Theater “Between” is a meeting place for fans of literature, theater, music and other forms of art. Festival events are planned primarily in Sopot - in the BOTO Theater, Teatr na Plaży, The Sierakowskis Mansion and in the Wybrzeże Theater - informs Dr Beata Czechowska-Derkacz, spokesperson of the University. During the festival there will be meetings with writers and poets - Monika Sznajderman, Andrzej Stasiuk, Mieczysław Abramowicz and Michael Edward, as well as concerts, exhibitions, performances and theater workshops, film presentations, scientific sessions and discussions. The event opening is planned on Monday, May 14, at 10.00 in the building of the Modern Languages of the University of Gdańsk.

University of Lodz receives Polityka journal History Prize 2018

2018-05-11

The University of Lodz Promotion Center reported that research „Diary from Łódź ghetto Rywka Lipszyc”, developed by Dr Ewa Wiatr from the Center for Jewish Research of the University of Lodz received the Historical Prize 2018 of the journal „Polityka”. - My adventure with the dairy of Rywka Lipszyc began in 2009. It was then that a copy of an anonymous manuscript was sent to the Jewish Research Center. The name Rywka and her family appeared in the course of work on the edition of the journal. We were lucky to find Rywka's cousins living in Israel. For me, dealing with the history of the Lodz ghetto on a daily basis is a source of exceptional value - says Dr Ewa Wiatr. The Center for Jewish Research of the University of Lodz has been operating since 2005. Its tasks include examining the history of Jews in Poland.

Cultural diversity of Silesia expressed in language literature and traditions

2018-05-11

The University of Opole has launched the project „Cultural diversity of Silesia in language, literature and traditions”. The Polish-German undertaking is carried out by the Opole Institute of German Philology in cooperation with the Studierendenwerk Trier (SWT). The aim of the project is to capture the regional phenomenon of cultural diversity in Silesia. Its participants, students from Germany and Poland, plan to learn and document historical and current aspects and dimensions of Polish, German, Silesian and Jewish cultures. Cultural diversity enriches, inspires, and allows to overcome restrictive beliefs and habits. The specificity of Silesia is that constituting a mix of national and ethnic minorities, cultures, traditions and languages, it still forms one community - explain project implementers. The project is co-financed by Polish-German Youth Cooperation Office Potsdam.

Conference on emotions in language and communication at the University of Warmia and Mazury

2018-05-14

The Institute of Polish Studies and Logopedics at the University of Warmia and Mazury in Olsztyn organizes on May 14-15 a nationwide conference in the series „New phenomena in language, text and communication”. This year's conference will be held under the motto «Emotions in language, text and communication» - informs the university in Olsztyn. During the conference, linguists, psychologists and media language researchers will deal with the relationship between language (text) and emotions and between emotions and communication participants. The organizers plan to explain new forms of expressing emotions in language, emotions in the semantic and pragmatic expressions, emotionality of the politics language, emotion expressions in journalistic messages and cyberemotions - emotionality in the Internet.

Conference „Reportage in the World - Reporting World” at the University of Silesia

2018-05-14

The International Polish Studies and the School of Polish Language and Culture at the University of Silesia in Katowice organize the international scientific conference on the 23 and 24 May as part of „Polish Literature in the World”. The theme of this year's edition is „Reportage in the World – Reporting the World”. The subject of discussion will be a reportage as an intercultural interference evolving under the influence of civilization phenomena. The participants of the conference will deal with the problems of the foreign reception of Polish reportages including the discrepancies in its understanding in Poland and in the world. They will also consider its relation to global technological, geopolitical and socio-cultural processes - digital revolution, tabloidisation of the media, globalization and multiculturalism.

Researchers from Hong Kong to hold lectures at the University of Silesia

2018-05-15

Dr. Dorothy Tse Hiu-hung and Dr. Christophe Tong Yui from the department of humanities and creative writing of the Baptist University in Hong Kong will be guests of the Institute of Polish Literature of the University of Silesia from 16 to 18 May. Visitors from China will give lectures on Hong Kong literature and culture. They will also present films about the city and the specific historical and cultural situation after its return to China. The lecturers will analyze the literature and art of Hong Kong from the perspective of the so-called Time Zero, the moment of the final takeover of Hong Kong by the People's Republic of China. Dr Dorothy Tse Hiu-hung and Dr. Christophe Tong Yui combine didactic work and creative writing workshops with research work on the latest literature of Hong Kong. They conduct translation and artistic activities. They are well-known and award-winning writers in China as authors of stories, novels and poems.

Intercultural communication at the University of Rzeszów

2018-05-16

The recruitment of students for the next academic year began at the University of Rzeszów. This year, the educational offer of the Rzeszów university expanded with a new study - intercultural communication at the Department of Sociology and History. The new field of study is dedicated to people who want to develop their skills not only in the Podkarpace Region, but also to build their professional career in the global world - says Dr Maciej Ulita, a spokesman at the University of Rzeszów. Professor Paweł Grata, dean of the Faculty of Sociology and History, emphasizes that the advantage of the new field of study is the possibility of pursuing a professional career in many positions related to external and internal communication in the company and HR management. In the new academic year, 25 candidates can apply to the study. More:<https://irk.ur.edu.pl/WR/>

PhD studies in Psychology and Computer Science at the Polish-Japanese Academy of Information Technology

2018-05-21

The Polish-Japanese Academy of Information Technology in Warsaw in cooperation with SWPS University of Humanities and Social Sciences launches inter-university interdisciplinary PhD studies in Psychology and Computer Science. - Our PhD studies combine psychology with the computer science and they are a response to the dynamically changing situation of psychology and IT science and to the challenges faced by scientists from both fields. The University emphasizes that computer science is increasingly dealing with research problems in the field of psychology. As an example, it provides automatic detection of emotions or generation of faces expressing the various emotions. In turn, psychology has to face the problem of establishing virtual relations and the impact of new technologies on social interactions. More: <http://www.pja.edu.pl/informatyka/doktoranckie/studia-doktoranckie-informatyka-psychologia>

University of Silesia Publishing House awarded in the „Academia 2018” competition

2018-05-25

The Publishing House of University of Silesia (Wydawnictwo Uniwersytetu Śląskiego) was awarded in the competition for the best academic book „Academia 2018” in the field of social sciences and humanities for the publication „S as Silesia - Superheroes in Silesia” by Marek Głowacki. The awarded book is a collection of illustrations and texts that were created as part of the artistic project «S as Silesia - Superheroes in Silesia». The publication contains more than thirty drawings created in the cartoon convention using traditional and digital techniques. Drawn characters were inspired by biographies of real inhabitants of Silesia, who approached the ideal of the cartoon superheroes. The awards were presented during the Academic and Scientific Book Fair organized as part of the 9th

Warsaw Book Fair. Dr Marek Głowacki is an adjunct at the drawing institute of the Art Institute at the University of Silesia in Cieszyn.

University of Lodz to hold open lecture „Man and new technologies. The Humanistic Perspective”

2018-05-28

The Social Innovation Center of the University of Lodz invites participants to an open meeting as part of the „For Practice” program on May 30. During the event, Dr. Marta Songin-Mokrzan will give a lecture on „Man and new technologies. The humanistic perspective.” The lecture will address issues of human identity in opposition to non-human factors - animals and products of technology such as robots or androids. The scholar will also explore the issue of the practical application of the humanities in new technologies. Marta Songin-Mokrzan is a PhD in the field of ethnology, assistant professor at the Laboratory of Practical Anthropology at the Institute of Ethnology and Cultural Anthropology at the Faculty of Philosophy and History of the University of Lodz. She deals with the anthropology of materiality, anthropology of technology, ethnography of production processes, philosophy and ontology of machines.

New PhD studies: Digital Humanities

2018-05-30

Literary Research of the Polish Academy of Sciences and the Polish-Japanese Academy of Information Technology started recruitment for a new interdisciplinary PhD program Digital humanities. Candidates must have a university degree in any field of humanities or IT and should have a good command of English in speech and writing (minimum level B2 certified by an appropriate document). By the end of August 2018, the documents provided by the candidates will be evaluated. In the first half of September future students should present the idea of their research project in the field of digital humanities before the recruitment committee. PhD student at the University of Bydgoszcz wins the prize of the Polish Pedagogical Society

2018-06-21

The jury of the 4th Polish Pedagogical Society decided to award the Grand Prix PhD holder Katarzyna Grzesiak from the Institute of Pedagogy at the University of Kazimierz the Great in Bydgoszcz - for the dissertation: Experiencing success in science by PhD students. The dissertation is in the form of pedagogical ethnography, its subject is the collective case of success in science of students of PhD studies at Åbo Akademi in Vaasa in Finland. The dissertation has theoretical and empirical nature and contains three parts and eight chapters. The Polish Pedagogical Society has been awarding the best PhD dissertations since 2014. The aim of the competition is to promote pedagogical scientific projects characterized by the highest quality.

PM Gowin’s Reform to develop science in Poland

2018-06-25

The PM Gowin’s Reform gives an opportunity for the development of science disciplines that today are lost in large departments of universities - writes philosopher Dr. Mieszko Tałasiewicz in the „Rzeczpospolita” daily and emphasizes that the new law on science and higher education opens up a good perspective for Polish humanities. In his article, Tałasiewicz rejects the accusation that the law «favors large and metropolitan universities against the small and provincial high schools.» The philosopher describes this as half-truth, because - in his opinion - the law favors simply good universities. - Not always what is big is good and what is smaller is worse. There are great universities in smaller cities and weaker ones - in bigger ones. The new Act will allow universities to see what strengths and weaknesses they have and what is completely useless. And then, thanks to the regional university development fund, implemented with the law, the universities will know their best to develop, the worse to improve, and the weakest simply to cut off - writes Dr. Tałasiewicz. Prof. Roman Czernecki Competition for the best article on education

2018-06-26

Until June 30, participants can apply to the Prof. Roman Czernecki competition for the best article on education. The competition should have a positive impact on the development of education in Poland through the appreciation and dissemination of the work of specialists conducting scientific and journalistic activities in this field. Submitted articles must be published in Polish or English and be authored or co-authored by the applying person. Only articles that have been published in the period from January 1, 2016 to June 30, 2018 can be submitted for the competition in both categories. The prizes in the first Competition in 2018 will be awarded in two categories - for a scientific article (with prize of PLN 20,000) and for a journalistic article (funding a participation fee in an education event up to PLN 10,000). More: <https://efc.edu.pl/>

Deputy PM Gowin: Humanistics is essential for the cultural and spiritual development of society

2018-06-28

In the new educational system, the scientific achievements of philosophers or lawyers at one university will be compared with the achievements of philosophers or lawyers at other universities. Future evaluation will be much more fair and reliable than the current one - writes in newspaper „Rzeczpospolita” Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education. In the article «Does the Constitution for science threaten humanists?» the Deputy Prime Minister argues that the future evaluation system will take into account the specificity of the humanities and the new rules are good information for Polish humanists. - Humanities have their specificity. It is also necessary for the cultural and spiritual development of society. The new model of evaluation will equally favor publications that develop national culture, as well as those that will incorporate the results of Polish

humanist research into the global circulation of ideas - explains Gowin. More: <http://www.rp.pl/Publicystyka/306259930-Czy-konstytucja-dla-nauki-za-graza-humanistom.html>

Dr Łucja Bieleninik from the University of Gdańsk received Polish Academy of Sciences Award

2018-07-11

Dr. Łucja Bieleninik from the Clinical Psychology and Neuropsychology Department of the Institute of Psychology of the University of Gdańsk received the Andrzej Malewski Polish Academy of Sciences Award. The award is granted to young scientists (aged up to 35 years) for outstanding scientific achievements in the field of psychological theory, psychological research, methodology of social sciences and interdisciplinary research (one of the disciplines should be psychology). This year it was awarded for the 14th time. Dr Bieleninik is the second person from the Institute of Psychology at the Gdańsk University, who received this prestigious award. In 2015, the prize was awarded to Prof. Michał Harciarek also from the clinical psychology and neuropsychology department of the University of Gdańsk.

Information Refining Center - a new University of Warsaw spin-off company

2018-07-16

The Information Refining Center (CRI) is the latest spin-off company established at the University of Warsaw. Its founders are scientists from the Faculty of Journalism, Information and Bibliology. The company deals with Big Data analysis - large collections of information available in cyberspace. This is the eighth company that operates at the university and the first representing the humanities. For 7 years, researchers from the Department of Information Technology of the Media of the Faculty of Information Journalism and Bibliology have been conducting research related to the Big Data analysis. Using thousands of robots, they collect information from

the indicated Internet sources. Data is collected in thematic databases. There, they are refined and analyzed. Thanks to technology, the scholars managed to predict the results of the presidential and parliamentary elections in 2011 and 2015 and to analyze economic, technological and scientific trends. The founders of CRI are Prof. Włodzimierz Gogołek, Dr Wiesław Cetera, Piotr Celiński and Dariusz Jaruga. More: <http://uwrc.pl/nowy-spin-off-centrum-rafinacji-informacji/>

Discovery of a scientist from the Institute of Polish Philology of the University of Adam Mickiewicz

2018-07-17

Professor Wiesław Wydra from the Institute of Polish Philology at the Adam Mickiewicz University in Poznań found an unknown printed edition of the text „Conversations of the Master Polycarp with Death”, published in Kraków in 1542 by Maciej Szarfenberg. The printed text was discovered in one of the European university libraries and was preserved in its entirety, unlike the previously known version of the conversation of the Płock manuscript, and it is a true philological revelation. The critical edition of «Conversations ...» from 1542 will be published in autumn by Wydawnictwo Poznańskie Studia Polonistyczne. Professor Wydra is the author of over one hundred articles in magazines and collective books as well as several books. The subject of his scientific interests are the history of literature and books in the Middle Ages and the early modern period, research on songs in the late Middle Ages and the edition of unknown or unreleased Polish works from that period. He is also an expert in incubula and old prints.

Program „Support for scientific journals” consulted

2018-07-19

The „Support for scientific journals” program, created for the humanities and social sciences magazines, is a fragment of the reform of science and higher education. It is aimed at providing financial support for Polish scientific journals, allowing them to be included in the international bibliometric databases with the largest coverage - informs the Ministry of Science and Higher Education in the communication. Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education emphasized that «Polish magazines and achievements of Polish science should influence the world science as much as possible.» - Humanistic sciences are always rooted in native culture and in the national language. This assumption is based on the principles of evaluation that we propose in relation to the humanities - explains Minister Gowin. The draft of the «Support for scientific journals» program is currently consulted with representatives of Polish science.. More: <https://legislacja.rcl.gov.pl/projekt/12313602/katalog/12520500#12520500>

Dr Maria Katarzyna Lasatowicz becomes the chairwoman of the Association of Polish German Studies

2018-07-24

Dr Maria Katarzyna Lasatowicz, Prof. University of Opole became the chairwoman of the Association of Polish German Studies. The general assembly of the organization unanimously entrusted her with this function. Professor Lasatowicz is the director of the Institute of German Philology at the Opole university. - This is, on the one hand, a proof of great trust, and on the other, it opens a lot of different possibilities to our German university. It must be remembered that the association is an organization that brings together the German studies community from all over Poland, which gives great opportunities for scientific cooperation, exchange of experiences, establishing contacts between universities - says the chairman. The task of the Association is to support

research work, disseminate scientific achievements in the field of German studies, organize cooperation between Polish institutes of German studies and foreign institutions.

Researcher of the University of Silesia awarded the Honorary Badge for Merit

2018-07-25

Prof. Zbigniew Kadłubek, head of the Department of Comparative Literature at the philological faculty of the Silesian university, was awarded the Golden Badge of Honor for the Merits for the Silesian Province. Prof. Zbigniew Kadłubek is a classical philologist, a comparative linguist and essayist. He is the author of sketches and books about the old and contemporary culture of Silesia, as well as the selection of essays «Saint Medea» and the geopoetical novel «Fado. A song about the soul. « His «Letters from Rome» from 2008 (epistolary novel in the Silesian ethnolect) was performed at the theatre scenes. Honorary Badges for Merits for the Silesian Voivodeship are awarded to persons (or institutions, local government units, entrepreneurs and organizations), who contributed to the economic, cultural and social development of the voivodship.

Poznański scientist at the International Commission on the History of Geological Sciences

2018-07-27

Professor dr hab. Janusz Skoczylas from the University of Adam Mickiewicz in Poznań became an honorary member of the International Commission on the History of Geological Sciences as part of the International Union of Geological Sciences (INHIGEO IUGS). INHIGEO IUGS is an organization that promotes current research on the history of Earth sciences. It sponsors the annual symposium, promotes publications of individual and collective works on the history of geology and historical research in the field of earth sciences. It was established in 1967 and currently associates about 300

members from 57 countries. Professor Skoczylas is a member of the Institute of Geology of the Faculty of Geographic and Geological Sciences of the University. His scientific interests include petroarcheology (archeometry), regional geology, dynamic geology, zoology (geoecology), history of geology, exploration, exploitation and use of rock raw materials.

Postgraduate Studies in Regional Knowledge at the University of Silesia

2018-07-30

Philology Department of the University of Silesia in cooperation with the Marshal's Office, Silesian University and the Upper Silesian Association organizes the two-semester, interdisciplinary, post-graduate studies on knowledge about the region. The studies are addressed to people who are particularly interested in Silesia. Graduates will obtain competences to carry out regional education classes at schools and cultural institutions. They will also be equipped with the ability to use effective and attractive methods and forms of education acquired during academic, field and workshop classes. The plans include exercises in important places in Silesia, visiting cities and getting to know people who are a source of knowledge about the region. Graduates will be regional education leaders. They will create original classes, regional programs and other forms of education related to knowledge about Silesia.

University of Casimir the Great in Bydgoszcz receives funding for dual studies

2018-07-30

At the University of Kazimierz the Great in Bydgoszcz, students will be able to study at dual studies in the new academic year. Two courses from the didactic offer of the university have received over PLN 2.5 million co-financing from the National Center for Research and Development. The first of the projects concerns the direction of resocialization pedagogy. Students can participate in paid internships extending their professional competences. Internships will alternate with education at the university. From the 3rd semester, students will choose one of the internship locations where they will take practical classes under the care of a tutor for two days a week. The second project concerns the humanities of the second-generation, specialty research and game design. Students will have a total of over 12 months of paid internships in gaming enterprises. This is the first in Poland offer of dual studies in game design.

Gdańsk students want to explore the Polish countryside in Siberia

2018-08-02

of the University of Gdańsk want to start a research expedition to Wierszyna - a unique Polish village in Siberia. Enthusiasts of anthropology want to save from the oblivion the history of the village founded in 1911 by voluntary settlers from the Małopolska who emigrated in search of a prosperous life. Wierszyna is a unique Polish village in Siberia - about two hundred kilometers north of Lake Baikal. Today, about five hundred Poles live in it. For over one hundred years they managed to preserve their native language and customs. Wierszyna inhabitants have a strong sense of cultural and religious identity - they speak and write in Polish and remember songs, stories, fairy tales and even jokes brought by their parents and grandparents from far-away Poland. Gdańsk students intend to conduct field studies involving conversations with residents, they want to ask them about their daily lives, worries and

joys, fears and reflections and plans for the future. More: https://ug.edu.pl/media/aktualnosci/77622/studentka_wyprawa_wierszyna_2018

Professor Żukowski becomes a member of the Executive Committee of the International Political Society

2018-08-09

Professor Arkadiusz Żukowski, director of the Institute of Political Sciences of the University of Warmia and Mazury in Olsztyn, became a member of the Executive Committee of the International Political Society (IPSA). This choice is a success and appreciation of Polish political science and its contribution to the development of this discipline on the international arena. The elections took place on July 25, 2018 during the XXV World IPSA Congress in Brisbane, Australia. Professor Żukowski was also elected to two committees: Academic Freedom and Participation and membership. He was also invited to the Scientific Council of the scientific journal «International Political Science Abstracts» and the Editorial Board of «World Political Science». IPSA, established in 1949, is the only world scientific society that gathers political scientists.

„Test of Polish Language” - international spelling competition held in Cieszyn

2018-08-14

The University of Silesia for the 21st time is organizing an international spelling competition „Test of Polish Language”. The aim of the competition is to select the Foreign Master of Polish Language. The competition will start on Wednesday, August 15 at 10.30 in the Conference Center of the University of Silesia in Cieszyn. Students will compete for the title of the Foreign Master of Polish Language and for free participation in the XXIX summer school of Polish language, literature and culture. The Jury will also award the titles of Eagle and Little Eagle of Polish Spelling and the prizes «5+» for students who are just beginning their Polish courses. «Test of Polish Language» is one of the most important events

for the summer schools of language, literature and Polish culture. The competition task is a dictation of the text, which is prepared especially for the needs of the competition by Polish linguists and specialists in the field of spelling.

Discovery of archaeologists from the University of Gdansk

2018-08-14

Archaeologists from the University of Gdańsk during the excavations in the East Ramparts of the Wisłoujście Fortress discovered the remains of the barracks, foundations of the church of St. Olaf and about 2 thousand exhibits. Researchers during the two-week archaeological excavations found fragments of ceramics with the Gdańsk coat of arms and numerous objects made of metal - bullets, metal ornaments, knives, cleaver, coins and a luncheon. The archaeological works will last the next three years. They are implemented as part of the Archaeobalt project, co-financed from the European Union under the South Baltic Program 2014-2020. The project leader is the University of Gdańsk and the partners are the Gdańsk Museum, the Bornholm Museum, the University of Aarhus (Denmark) and the University of Lund (Sweden). The Wisłoujście fortress is a complex of defensive buildings on the right bank of the Martwa Wisła. It was established in a place where in the medieval coastal guards operated controlling the estuary of the Vistula to the Baltic Sea.

Institute of Psychology of the Jagiellonian University launches a special psychological guide

2018-08-16

The Institute of Psychology of the Jagiellonian University published a special quarterly journal „I, we, they. Political Guide to Politics” devoted to psychology in the era of neuroscience. The publication was created in cooperation with Institute of Psychology at the Jagiellonian University in Krakow. The guide contains more than a dozen articles and interviews with scientists associated with the Institute. One of the university's mission is to go beyond the walls of the university and share knowledge in a way that facilitates understanding of modern science, its methods and achievements. - We are happy that thanks to cooperation with « I, we, they», the Institute of Psychology of the Jagiellonian University has gained access to a wide range of readers - said Dr. hab. Przemysław Bąbel, deputy director of the Institute of Psychology. In the articles, Krakow researchers described topics related to pain, consciousness, brain plasticity, modern neuroimaging technologies, role of psychology in legal processes and religiousness.

Professor Barbara Kozusznik becomes President of the Division 1 International Association of Applied Psychology

2018-08-20

Professor Dr Barbara Kozusznik, head of the Department of Work and Work Psychology at the Faculty of Pedagogy and Psychology of the University of Silesia, became the president of Division 1 International Association of Applied Psychology (IAAP). IAAP is the largest and oldest international organization of psychologists, and its largest section is Division 1 - a section of work and organizational psychology. The main goal of the section associating psychologists from most countries of the world is to influence the policy of international organizations e.g. the United Nations, the World Health Organization and Inter-

national Labor Organization. Professor Kozusznik specializes in organization and management psychology. She is the author or co-author of 16 monographs and over 100 scientific articles devoted to the issues of managing, improving the work of employee teams and developing and improving the effectiveness of operations.

Scientific symposium „History in the post-truth world”

2018-08-30

Collegium Civitas in Warsaw invites participants on Friday, September 14 at the scientific symposium „History in the world of post-truth”. The introductory lecture will be delivered by Dr. Benjamin Jones from the Australian National University. During the symposium, which will be conducted in English, participants will seek answers to the question: what post-truth is and how it affects historical research. The «post-truth environment» is a particular problem for historians who are trained to deal with evidence, data and facts. Does the historian have a special role to play in protecting public memory against «alternative facts»? Are academics obliged to combat false messages both at universities and in social media? More: <https://www.civitas.edu.pl/wp-content/uploads/2018/08/Programme.docx>

Researchers from the Jagiellonian University discover priceless documents in the Jesuit monastery in Kłodzko

2018-09-03

While working in the archives of the Jesuit monastery in Kłodzko, scientists from the Institute of Art History at the Jagiellonian University in Kraków discovered priceless medieval documents including papal bulls and documents related to indulgences. According to Dr. Michał Kurzej from the Institute of Art History at the Jagiellonian University, this is one of the most valuable collections found out of the state archives in central Europe. Several dozen medieval parchment documents have been preserved here including a lot of materials concerning the history of

the region. This is a priceless material for research on the history of the Kłodzko Valley - adds Dr. Kurzej. Currently, the archive is described and cataloged. Then the conservators and historians will start their work.

Szczecin Mayor's competition for the best humanistic PhD thesis

2018-09-04

Until the first of October students can apply for the competition of the Mayor of the City of Szczecin for the best PhD and master thesis in the humanities in 2018. The competition aims to increase the interest of students and young scientists in the issues related to Szczecin and create conditions enabling young, creative people to shape the creative and innovative development policy. One of the goals is also development and promotion of the city, as well as increasing the interest of the inhabitants in activities aimed at economic, cultural, scientific and social revival of Szczecin. The competition will be run by the Award Committee appointed by the Mayor of Szczecin. The authors of the awarded works will receive cash prizes and diplomas. Regulations of the competition: http://www.szczecin.eu/sites/default/files/Info_NN_regul_humanist.5.04.18.pdf

Mediation of art - a new study at the Academy of Fine Arts in Wrocław

2018-09-05

In the new academic year the Academy of Fine Arts in Wrocław is launching a new, unique in Poland study of Mediation of Art - combining practice and theory of art. The study was created as a reaction to the latest art phenomena, the impact of the network, the latest technologies and the changing reality of the art market. Students of the new field will gain workshop skills in professional art studios. They will also deepen knowledge of art theory and history, artistic criticism, contemporary culture as well as media and trends related to the functioning of the art market. Classes will be conducted by outstanding artists, critics, curators and culture animators. Graduates of mediation in art are to understand the issues of artistic and market strategies. They should be able to write critical texts about art, organize a place for exhibitions and a gallery, design a long-term animations and workshops, write a project and implement it.

Conference of linguists in Poznań

2018-09-10

On September 13-15 the Department of English Studies at the Adam Mickiewicz University in Poznań invites participants to the 48th Poznań Linguistic Meeting. The theme of this year's conference is „Language and evolution: issues and perspectives”. The main lecture: «The evolution of language: at the interface of biology and culture» will be delivered by W. Tecumseh Fitch from the University of Vienna. Daniel Everett from Bentley University will deliver the plenary lecture «Homo erectus, symbols and origin of language» and discuss his research „How Language Began”. Both scientists will also take part in the plenary dialogue and in the debate with other speakers presenting the results of their research during plenary sessions: Ljiljana Progovac, Geoffrey Schwartz and Przemysław Żywicznyński, Piotr Gąsiorowski and Nikolau Ritt. More: <http://wa.amu.edu.pl/plm/>

Archaeologists from the University of Rzeszów investigating the Scythian stronghold in Podkarpacie

2018-09-11

Fragments of Greek amphorae, vessels, a dozen Scythian arrowheads and bronze ornaments are the discoveries of archaeologists from the University of Rzeszów in Chotyniec (Podkarpackie) found during the study of the settlement from about 2,500 years ago belonging to the Scythian family. As Maciej Ulita, a press spokesman at the University of Rzeszów, said on the air of TVN24, that currently the team of archaeologists is continuing research carried out last year in Chotyniec on the ash spot, located in the settlement from the early Iron Age. - With each layer of earth removed, it turns out that the discovered seat of the Scythian people hides many secrets. The sensation of last year was the Greek amphora for wine, which seems to be the only such artefact in Poland and became the hallmark of the Chotyniec expedition - added Dr. Ulita.

4th National Political Science Congress in Lublin

2018-09-12

The Faculty of Political Sciences of the University of Maria Curie Skłodowska in Lublin, the Polish Political Sciences Society and the Political Sciences Committee of the Polish Academy of Sciences organize the Fourth National Political Science Congress, which will be held from 18 to 20 September. The theme of the Congress is «The State in Times of Change». According to Aneta Adamska, spokesman of the Lublin university, the participants of the event will focus on the basic, «traditional» political categories of state and power, taking into account the dynamics and variability of qualitatively new features of the social environment in the states. 726 researchers from 85 research centers will participate in the Lublin Congress, of which 30 participants represent foreign universities. The participation in the commencement of the event was announced by Jarosław Gowin, Deputy Prime Minister Minister of Science and Higher Education. The inaugural lecture

will be given by Prof. Stefano Guzzini, outstanding German-French political scientist, specialized in the theory of international relations. More: www.kong-respolitologii.umcs.pl

1918 from the Polish, Lithuanian, Belarusian and Ukrainian perspectives

2018-09-13

How were the circumstances, the significance and assessment of Poland's independence presented in historiography and in school textbooks? What was „1918 year” from the Polish, Lithuanian, Belarusian and Ukrainian perspectives? These are the most important issues to be dealt by the participants of the international scientific conference, which will be held on September 13-14 at the Faculty of History and Sociology at the University of Białystok - informs Katarzyna Dziędzik, a spokesman for the university. The conference will be led by well-known historians from Poland, Lithuania and Belarus. The discussions in the hall of the Historical-Sociological Department of the University of Białystok are open to all participants. The organizers of the conference are the Institute of History and Political Sciences of the University of Białystok, the Polish Historical Society and the Regional Center for International Debate in Białystok.

Researcher at the University of Economics in Katowice receives Award of the City of Częstochowa

2018-09-14

Dr Barbara Pabian, Prof. University of Economics in Katowice received the City of Częstochowa Award in the field of Culture for 2018 in the category of „literature and history”. The award was given for the overall research and popularizing activity in the history of the city and the Częstochowa region. Barbara Pabian is a PhD holder in literary and cultural studies, professor of the University of Economics in the Department of Marketing Management and Tourism. She has published 65 scientific papers, including two books on the cultural heritage of the Częstochowa region. She conducts field research describing and popularizing cultural phenomena that testify the uniqueness, regional specificity and the cultural identity of Częstochowa’s inhabitants. Prizes of the City of Częstochowa are awarded for special achievements in five categories: literature and history, theater and film, music and dance, fine arts, and promotion and protection of culture.

Conference „Theory, organization and practice of law making process” at the Lazarski University

2018-09-18

On September 22-23, 2018, the Lazarski University in Warsaw will host the international conference „Theory, organization and practice of the law-making process”. The organizers of the event are the Board of the Association for Research on the Sources and Functions of Law, the Lazarski University and the monthly journal „Przegląd Prawa Publicznego”. The conference will include four plenary sessions: Descriptive and normative models of law-making; Legal and institutional dimension of the law-making process; Law-making practice and a special session in English. The conference will be accompanied by the General Assembly of Members of the Association for Research on Sources and Functions of Law and the announcement of the results of

the contest «Legal interpretation as a derivative of understanding the purpose and mode of operation - 2017/2018» together with the presentation of the best awarded works.

Scientific conference „Family - education - work in search of well-being”

2018-09-20

The Institute of Psychology of the Faculty of Educational Sciences of the University of Lodz organizes on 24-25 September 2018 a nationwide scientific conference „Family - education - work in the search for well-being”. The aim of the conference is to exchange research experiences concerning positive human functioning in the main spheres of its activity, that is in the family, education and work. Proposed topics include: Family and professional career - balancing or conflict of roles, The sense of well-being of career-oriented people, Women and men in family roles and professions related to education, Education at various stages of life and a sense of well-being and Inclusive education - the role of a parent, teacher and student. More: <http://www.rodzinaipraca2018.uni.lodz.pl/>

Conference in Bydgoszcz: “Critically with Foucault. Anarcheology of education and public space”

2018-09-20

Universities in Bydgoszcz, Gdansk and Lodz invite participants to a nationwide scientific conference: “Critically with Foucault. Anarcheology of education and public space”. Anarcheology is the concept coined by Foucault in his lectures at Collège de France in 1980. He used the word game of «anarchy», «archeology» and «genealogy». Anarcheology is understood here as a characteristic, critical «theoretical-practical attitude» and a «rule» concerning the non-necessity of power and understanding of the orders of knowledge. The concept of anarcheology provides the analysis of truth, power, discourse and subjectivity / identity. The value of the conference is its interdisciplinary profile and disput-

able character. It is addressed to teachers, sociologists, psychologists, political scientists, philosophers and representatives of other scientific disciplines. The conference will take place on November 27-28, the applications should be submitted by September 23.

Documentary film of a student from the AGH University of Science and Technology about Polish missing locomotives in Lebanon

2018-09-24

Michał Bis, a student at the AGH University of Science and Technology in Krakow, made a documentary entitled „Praise from Beirut.” It presents the history of Polish locomotives produced in the 1970s in Poznań and purchased to the Lebanese Railways. Michał Bis started his film in 2012 and explored the history of three locomotives sold to the Lebanon Railways. Polish locomotives survived the civil war in Lebanon and remained in use until 1997. Over the next 20 years, however, the machines were missing. Michał Bis discovered them for the needs of his documentary. In 2015, the author flew to the capital of Lebanon, where he received permission to film the locomotives. Currently, the machines are located at the military base in Beirut. The film presents the history of machines from the moment of their transport to Lebanon, up to today. In the student's document AGH there are Lebanese railwaymen remembering SU45 locomotives, as well as former employees of the Polish Cegielski factory. The première of the film is scheduled for September 24 at 12.00 in the Main Auditorium of the AGH University of Science and Technology in Krakow.

Interdisciplinary conference in Bielsko-Biała „Femininity and masculinity in the media”

2018-09-24

The Institute of Modern Languages, Faculty of Humanities and Social Sciences, Department of Economic and Social Sciences, Faculty of Management and Transport, University of Bielsko-Biała and the Faculty of Humanities and Social Sciences of the Polish Naval Academy in Gdynia invite participants to the ninth interdisciplinary scientific conference „Femininity and Masculinity in the Media”. The conference, scheduled for November 5 at the campus of the Academy of Technology and Humanities, is devoted to the role of the media in the process of social definition and reconciliation of the meanings of such cultural constructs as femininity and masculinity. Mass media affect the normalized understanding of femininity and masculinity. They give not only a sense of what it is meant to be «feminine» or «masculine», but also how people should behave in this regard, what to look for, what to desire. More: www.konferencjamedia.ath.bielsko.pl

Scientific conference „Problems of literature anthropology” held in in Białystok and Grodno

2018-09-26

Literary researchers from the University of Białystok and Janka Kupala Grodno University from Belarus organized the International Scientific Conference „Problems of literature anthropology”. For three days, from September 21 to 23, the event was held in Grodno, and for following two days (September 24-25) the scientists moved to Białystok. The topic of the Białystok conference was „Literary work in the cultural space”. Conference participants listened to dozens of presentations, including: „Between the word and the image - literature on television” by Dr Alicja Kisielewska, Prof. University of Białystok, „Drama text in the theater” by Dr. Jadwiga Gracla from the University of Warsaw, „Anthropological aspect of Lidia Zinovieva’s Annibal” Dr Agnieszka Gozdek from the Maria Curie Skłodowska University

in Lublin and „Space in contemporary Belarusian literature” by Katarzyna Drozd from the University of Warsaw.

Hieronimki 2018 - celebration of translators at the Maria Curie Skłodowska University

2018-09-27

This Friday, September 28, 2018, the Department of Applied Linguistics at the Maria Curie Skłodowska University (UMCS) in Lublin invites participants to the fifth celebration of translators - Hieronimki 2018. The name of the initiative comes from Saint Hieronim, the patron of translators and the author of the first translations of the Bible - explains Aneta Adamska, UMCS press spokesman. The program of the event includes lectures, language workshops and language contests, meetings with linguistics staff, students and successful graduates in Poland and Europe. The specifics of the simultaneous interpreters’ work will be experienced during workshops conducted in modern simultaneous translation laboratories, and thanks to the presence of translators-practitioners, participants will learn about the translator's work in court, during a conference, when translating a film or a literary work.

In October, secondary school students to join the „Antiquarian League” in Toruń

2018-09-27

Applications for the 12th „Antiquarian League” - an educational program for secondary school students from the Kujawsko-Pomorskie voivodship will be accepted until October 5. The event is co-organized by the Chair of Classical Philology at the Nicolaus Copernicus University in Toruń. The league has the form of a competition. Its aim is to popularize knowledge about ancient culture, to stimulate and deepen interest in antiquity and to shape among young people the awareness of common European tradition. Classes are scheduled for one Saturday per month from October 2018 to May 2019 (except December). The program provides for 7 meetings in the buildings of the Nicolaus Copernicus University.

The series is organized thanks to the cooperation of university classical philologists, the Toruń branch of the Polish Philological Society, the Traditio Europae Foundation and the Marshal’s Office of the Kuyavian-Pomeranian Voivodeship. More: <https://www.umk.pl/wiadomosci/?id=25662>

Researchers from the Cardinal Stefan Wyszyński University printed a 3D copy of a skeleton from 6.5 thousand years ago

2018-09-28

Researchers from the Institute of Ecology and Bioethics in cooperation with the Center of Information Technology of Humanities and Social Sciences of the Cardinal Stefan Wyszyński University in Warsaw printed a 3D copy of the oldest skeleton found in Poland, the so-called Man from Janowice, which is over 6,500 years old. As the Warsaw University informed, the aim of the undertaking is to preserve a valuable finding for future generations and provide the opportunity to present it at museum exhibitions. The project was created thanks to the cooperation of the State Archaeological Museum, Cardinal Stefan Wyszyński University in Warsaw and the 3D Master company and was financed from the National Science Center funds as part of the «Old material with new methods» program.

Prof. Małgorzata Mikołajczak receives Silver medal of Meritorious for Culture Gloria Artis

2018-10-01

Professor Małgorzata Mikołajczak from the Department of Theory of Literature and Literary Criticism of the Institute of Polish Philology, Faculty of Humanities of the University of Zielona Góra received the silver medal „ Meritorious for Culture Gloria Artis” from Piotr Gliński, Deputy Prime Minister and Minister of Culture and National Heritage. Professor Mikołajczak joined among 22 outstanding writers, scientists and activists associated with the works of Zbigniew Herbert. The ceremony of awarding her took place at the Royal Castle in Warsaw during the inauguration of the First International Congress of Contemporary Polish Literature and the 15th Herbert Workshops. Professor Mikołajczak is the head of the Department of Theory of Literature and Literary Criticism and the Laboratory of Research on Regional Literature at the Institute of Polish Philology. She is a member of the Committee of Literary Sciences of the Polish Academy of Sciences, author of 5 scientific books, an editor and co-editor of 10 scientific books and 2 anthologies of poetry, as well as the author of approximately 160 articles. Conference on the multicultural heritage of the former Polish-Lithuanian Commonwealth held in Rzeszów

2018-10-05

The participants of the International Scientific Congress talked about the state of research on the multicultural heritage of the former Polish-Lithuanian Commonwealth. Over one hundred historians, archivists, art conservators and librarians from Poland, the Czech Republic, Ukraine, Belarus and Lithuania presented the results of their research conducted

on the former borderlands of Poland. As Dorota Janiszewska-Jakubiak, director of the National Institute of Polish Cultural Heritage Abroad POLONIKA, said in Radio Rzeszów, it was about the exchange of experiences of people who dealt with documenting and preserving the heritage of their ancestors. The aim of the event was to present the current state of research and research needs regarding the heritage of the former Polish-Lithuanian Commonwealth, in particular outside Poland.

Five nominees for the Prof. Kotarbiński Award

2018-10-08

The Jury of the Prof. Tadeusz Kotarbiński Award chose five authors of books that will compete for the title of the best book in the humanities. This is the fourth nationwide competition organized by the University of Lodz. The grand finale will take place on November 25, 2018 at the Łódź Philharmonic Theatre. The works nominated for the prize include: Islamophobia as a technology of power. Study on political anthropology by Monika Bobako, (Society of Authors and Publishers of Scientific Works UNIVERSITAS); Theoretical disputes in jurisprudence. Perspective of holistic pragmatism by Adam Dyrda, (Scientific Publisher SCHOLAR); Case of the Eleven. The imprisonment of the leaders of NSZZ «Solidarność» and KSS «KOR» 1981-1984 by Andrzej Friszke (Znak Horyzont publishing house, in cooperation with the Institute of Political Studies of the Polish Academy of Sciences); A dream of a perfect nation. Between biopolitics and ethnopolitics by Piotr Madajczyk, (NERITON Publishing House and Institute of Political Studies of the Polish Academy of Sciences); Is there something that we call moral character and virtue? by Natasza Szutta, (Academic Scientific Publisher).

Conference “Church, media, society” at the Catholic University of Lublin

2018-10-09

The Catholic University of Lublin together with the editorial staff of the „ Gość Niedzielny” invite participants to the national scientific conference „Church,

Media, Society”. The event will take place on October 11, 2018 at the Lublin Center for Knowledge Transfer. The conference will include three panel discussions: An image of the Church created by the people of the Church; Faith in the media and Media about the Church. The conference takes place on the 20th anniversary of the Lublin edition of the « Gość Niedzielny» and on the 100th anniversary of the Catholic University of Lublin. The Archbishop Stanisław Budzik, Metropolitan of Lublin, took the honorary patronage over the conference.

International Communication in the Network Society conference in Wrocław

2018-10-09

The Department of International Communication at the Institute of International Studies of the University of Wrocław invites students to participate in the International Communication in the Network Society conference, which will take place on October 11-12 in Wrocław. The conference will be attended by scientists who in their research deal with the impact of new technologies on social communication. On the first day, the organizers planned a plenary session with the participation of scientists from Poland, Germany, the United States and Italy. The second day will bring panel sessions devoted to new phenomena in global communication, intercultural communication and human rights, political and network communication as well as international PR and marketing. The debate will be closed by a round table meeting, during which media and communication researchers from the leading Polish research centres will discuss the media issues. Season of archaeologists from the University of Warsaw in Armenia ended

2018-10-11

The expedition of the Center of Mediterranean Archeology and the Institute of Archeology of the University of Warsaw has completed another season of research at Metsamor in Armenia. Polish archaeologists have been conducting research in this area for six years, providing important information about the functioning of the settlement, whose history dates back to the beginnings of the Iron Age, i.e. the 12th century BC. The mission is directed by Dr Krzysztof Jakubiak from the Institute of Archeology in the season of 2018. The scientists discovered half-kilogram brown bracelets, ceramics, glass beads, a bone-head with a duck-shaped head and three graves. This year, archaeologists have been able to identify the remains of the building for the first time in the area of the lower city where the mission worked.

Workshops in the field of copyright law at the University of Economics in Poznan

2018-10-12

The Association for the Collective Management of Copyright of Authors of Scientific and Technical Works of KOPIPOL invites participants to workshops on copyright for researchers. Workshops, under the auspices of the Minister of Science and Higher Education, will take place on October 16 at the University of Economics in Poznan. The Association's experts will talk about organizations for the collective management of copyright and reprographic fees as compensation for the use of a scientific work by the third parties for personal use, and authorizations of the author of the work, including the work of the author, taking into account the copyright aspects of the law on higher education. The other topics of the workshop are: A piece as a manifestation of the creative activity of a researcher, including the idea of protection of the idea and Transfer of proprietary copyrights.

Researchers from Collegium Civitas to participate in the symposium of London School of Economics

2018-10-15

Researchers from the Warsaw Collegium Civitas on October 26-27, 2018 will take part in the symposium „We, the people: Political, media and popular discourses of ‚us‘ and them”, which will take place in the Department of Media and Communications of the London School of Economics. Prof. Stanisław Mocek, rector of the Collegium Civitas will present there the topic: «Opposed Poles: Political and Social Discourses on the Nation, Democracy and Europe», and Dr. Marek Troszyński will talk about «Liberal and illiberal Polish encounters with refugees». The two-day London Symposium will explore communication strategies and populist discourses in the society. The seminar will be devoted to the politics of identity, political, media and social narratives concerning «us» and «them» in Europe and beyond.

Polish-German study of the language of science

2018-10-15

From June 2017, the staff of the Faculty of Humanities of the University of Warmia and Mazury in Olsztyn, together with German scientists, will carry out an international research project, which aims to describe the Polish and German language of science. The project is financed by the Polish-German Foundation for Science and will be implemented by May 2019. The partner of the Polish university in its implementation is Friedrich-Schiller-Universität in Jena. The main goal of the project is to examine and describe the Polish and German language of science in terms of the occurrence of various types of classed word combinations characteristic for the scientific style of both languages. As a result, an electronic database of phraseologies typical of the language of science will be created, which will be available to both private persons and institutions. The access to the base is free.

Professor Brożek becomes the laureate of the National Center for Science Award

2018-10-15

Professor Bartosz Brożek from the Faculty of Law and Administration of the Jagiellonian University in Krakow has been awarded this year's National Science Center Award (NCN). He received this prestigious prize for the innovative concept of normativity of law and other normative systems. Established in 2013, the award is given to researchers up to 40 years of age. The idea of the NCN Award is to support the most outstanding scientists conducting research in the field of basic research in Polish scientific units. The jury appreciated the innovative concept of normativity of law and other normative systems, based on philosophical argumentation and the use of findings of cognitive and evolutionary sciences. Scientific interests of Prof. Brożek include the theory and philosophy of law, as well as the philosophy of science, language and mind.

Second season of the Interdisciplinary Scientific Seminar of the Wrocław University of Technology starting

2018-10-16

Wrocław University of Technology begins the second series of meetings as part of the university Interdisciplinary Scientific Seminar. On Tuesday, October 23, the lecture „Historical coexistence of Poles and Jews and the challenge of reconciliation” will be given by Zeev Baran - architect and honorary consul of the Republic of Poland in Jerusalem. Zeev Baran was born in Vilnius in 1935. He survived the Holocaust thanks to the help of Helena and Bronisław Krzyżanowski. After the war he emigrated with his mother and brother to France, and in 1948 the family reached Israel. He graduated in architecture and urban planning at the Technological University in Haifa. He specializes in selective projects and in projects for developing countries and for minorities in Israel. For many years she has been involved in the promotion of Poland as well as dialogue and cooperation between our nations. The Interdisciplinary Scientific Seminar is a series of lectures for students, PhD students, academics and anyone interested in deepening knowledge of exact sciences.

Theophrastus Prize awarded for the best popular psychological book

2018-10-17

The „psychological lexicon of psychology” by Jolanta Pisarek and Dr. Paweł Fortuna from the Department of Experimental Psychology at the Catholic University of Lublin received this year's Theophrastus Award for the best popular science psychological book. As reported by the Charaktery publishing house, which has been awarding the prize for 10 years, it is an expression of appreciation for Polish psychologists for their research, knowledge and willingness to share it. - We know how difficult it is to describe the complex mechanisms that guide the psyche and behavior of people. One of the first scientists to do this was the patron of the Prize, Theophrastus of

Eresos - Greek natural philosopher and author of Character. The honorary patron of the Theophrastus Prize is Prof. Jerzy Duszyński, president of the Polish Academy of Sciences.

Olsztyn scientist vice-president of the Polish Historical Society

2018-10-19

Dr Andrzej Korytko from the Institute of History and International Relations of the University of Warmia and Mazury in Olsztyn became the vice-president of the Polish Historical Society. He will be responsible for historical contests and popularization of history. The Polish Historical Society is one of the largest and oldest associations in Poland. It was established in 1886 in Lvov. It has over 40 active branch offices and has about 4,000 members. Dr Andrzej Korytko is scientifically involved in modern history, examining the seventeenth-century gentry elite of the Polish-Lithuanian Commonwealth and the old Polish parliamentarianism.

Scientists from the Polish Academy of Sciences discovered a castle in Mazovia

2018-10-23

Researchers from the Institute of History of the Polish Academy of Sciences discovered a medieval castle in Żelechów, Mazovia. It was possible thanks to the use of the most modern exploration techniques, including airborne laser scanning. - We knew that the castle existed, though information about its location, size and construction had not been preserved anywhere - said the archaeological research director, Wojciech Bis from the Institute of Archeology and Ethnology of the Polish Academy of Sciences. The castle was a regular quadrangle surrounded by a moat filled with water. The stronghold was protected by the earth embankment reinforced with wood and stones. Most of the structures were made of wood, although one buildings was raised on stone foundations. Scientists suppose that it was the seat of the ruler.

Conference on the future of humanities at the Ignatianum Academy

2018-10-24

The Ignatianum Academy in Krakow invites participants to a scientific conference on October 29 entitled „What is the future of humanities?”. The conference will be attended by Jarosław Gowin - deputy prime minister, minister of science and higher education. The event will start with an introductory lecture delivered by Deputy Prime Minister Gowin. It will be devoted to the Constitution for Science in the aspect of opportunities and challenges that it brings for the social sciences and humanities. The Krakow conference is part of the project «Humanities have a future» realized by the Ignatianum Academy as part of the «Dialogue» program. The aim of the project is to improve the image of social and humanistic sciences, highlight the socio-economic importance of the humanities, show it as an attractive career path and popularize the humanities as a science area.

Cultural Tourism Quo Vadis? - conference at the University of Physical Education in Poznan

2018-10-24

Researchers, educators and practitioners from Brazil, Hungary, Uganda, Portugal, Australia, Canada, Kosovo and Poland will discuss the issues of cultural tourism during the conference „Cultural Tourism - Theory and Practice. Research status, practical applications and development perspectives” at the University of Physical Education in Poznań. The scientific goal of the conference is to assess the world of cultural tourist, both in the perspective of social sciences (social communication, sociology, management sciences) and humanities (cultural anthropology, philosophy, history, cultural studies). The speakers who will deliver their speeches on October 25 and 26 at the Poznań university include world-renowned scientists. The conference program includes plenary speeches, discussions, speeches in sections and workshops, as well as an accompanying program: visiting Poznań for foreign guests and a study trip to the Piasts Route. Foundation for Polish Science awarded the Leszek Kołakowski Honorary Scholarship

2018-10-29

Dr Caterina Tarlazzi, historian of medieval philosophy from the University of Geneva, received the Leszek Kołakowski Honorary Scholarship granted by the Foundation for Polish Science. - Receiving the prize named after Leszek Kołakowski, outstanding thinker of the 20th century, is a great honor for me. This award will surely strengthen my cooperation with the Polish scientific community - said Dr. Caterina Tarlazzi during the ceremony of presenting the scholarship. Dr Caterina Tarlazzi holds the title of Doctor Europaeus, jointly awarded by the Università degli Studi di Padova in Italy and the Université Paris IV Sorbonne in France. Since 2017 she has been

working at the University of Geneva. The aim of the scholarship is to honor scholars who already at the beginning of their academic career can boast of outstanding scientific achievements in the history of medieval and modern ideas and philosophy until 1939.

Pomeranian Historical League of the University of Szczecin

2018-10-29

The third season of the Pomeranian Historical League has begun. The League is a project of the Institute of History and International Relations of the University of Szczecin, with aim to explore the history of Western Pomerania within the history of Poland and Europe. The third League program will include: a tournament «Western Pomerania in the years 1815-1945», a historical route, historical debates, interviews with witnesses of history and creating a museum concept. The participants are to prepare their ideas for each event in their localities, and send the results of their works for evaluation. The organizers will invite the participants to the „face to face” competition with the other participants. The league will end on May 30 next year, when the winners will receive the prizes. The best participants will be also set off for a few days for a scientific trip around historic Pomerania, and the winning school will receive a passing cup. More: <http://plhszczecin.eu/>

Archaeologists from the University of Warsaw started in Sudan a project funded by the European Council for Scientific Research

2018-10-30

Archaeologists from the University of Warsaw started in Sudan the first excavation season within the project called „Urban Metamorphosis of the community of a Medieval African capital city”. Researchers from the Center of Mediterranean Archeology of the University of Warsaw received the Starting Grant of the European Council for Scientific Research. Field work in Dongola, Sudan, will be conducted under the direction of Dr Arthur Obłuski, who in September this year became the chairman of the

International Society for Nubian Studies. The aim of the project is to analyse the process of transformation and nature of the transformation of Dongola from an important Christian center, the capital of the Kingdom of Makuria, into a Muslim city.

Gowin: Social and humanistic sciences as the driving force of socio-economic development

2018-10-31

Socio-human sciences in most developed western countries are treated as a social and economic development flywheel, said Deputy Prime Minister Jarosław Gowin during a conference within the project „Humanities has a future” organized by the Ignatianum Academy in Krakow. Prime Minister and Minister of Science and Higher Education emphasized that many visionary presidents of large international companies are graduates of these majors. -Humanists are the creators of ideas transformed into specific products that change the world, precursors of beneficial social changes, thinkers, inventors and creators. We want the humanities to play a similar role in our country - added Jarosław Gowin. During the conference, Deputy Prime Minister Gowin also informed that within the framework of competitions of the National Program for the Development of the Humanities, he allocated budget of PLN 35 million for further research in the field of humanities.

Archaeologists from Poznań exploring the Piast stronghold in Grzybów

2018-11-02

Archaeologists from the Adam Mickiewicz University in Poznań discovered a church and a cemetery in the city of Grzybów. After 11 years they resumed the research to explain the secrets of the largest city in the Piasts' domain. The researchers hope that the work will explain in part the mystery of the location of a huge city Grzybów located between Gniezno and Giecz. This early medieval stronghold, built in the first decades of the tenth century was the largest city of this type in the Piasts' domain. The four-hectare castle was by half bigger than Lednica and Giecz, and Gniezno reached such dimension only in the 11th century. Why did such a huge fortress function only a hundred years? What were the circumstances of its fall? Why was it created here? Who raised it and what was the reason? - answers to these questions can be provided by excavations conducted by Dr. Marcin Danielewski from the Institute of Archeology. The project received funding from the National Science Center within the Opus 13 program. More: <http://www.uniwersyteckie.pl/nauka/archeologia-uam-wciaz-wiele-tajemnic-w-grzybowie>

University of Wrocław to launch the Center for Cognitive Research on Language and Communication

2018-11-02

The Center for Cognitive Research on Language and Communication is launched at the University of Wrocław. This is a joint project of scientists from the Institutes of Polish and English Philology at the Wrocław University. The aim of the Center is to conduct scientific research, organize methodological workshops, conduct didactic classes and dissemination activities in the field of cognitive linguistics, in particular: cognitive research on meaning, semantics and linguistic pragmatics; cognitive grammar; cognitive ethnolinguistics; cognitive research on bilingualism; assimilation of the second and in-

herited language; research on cognitive aspects of multimodal communication; cognitive corpus and statistic studies. The scope of interests of the Center team will include cognitive research works from semantics, grammar, bilingualism and ethnolinguistics.

University of Silesia invites participants to the conference „Polish Politics 1918-2018”

2018-11-05

The Institute of Political Sciences and Journalism of the Faculty of Social Sciences of the University of Silesia invites participants to the scientific conference „Polish Politics 1918-2018”. The partners of the event are: Society for Scientific Initiatives, Polish Political Sciences Society Branch in Katowice, Upper Silesia-Zagłębie Metropolis, Katowice Special Economic Zone. The organizers of the conference are planning a scientific debate summarizing the political processes taking place in Poland in 1918-2018. The debate will be held on 6 and 7 November in Wiśla. Scheduled thematic panels are: 100 years of Poland in Europe and in the world; politics in Poland in the years 1918-2018; Poland in international relations, including foreign policy in the years 1918-2018; Central and Eastern Europe in the years 1918-2018; Polish media in the years 1918-2018 and Silesia as a region in Poland and Europe. More: www.inpidz.us.edu.pl

International Scientific Conference „Debuts of Mickiewicz. Debuts of the Romantics” at the University of Białystok

2018-11-08

Under what circumstances did the „Urban Winter” appear- the first piece by Adam Mickiewicz published in 1818 in the Tygodnik Wileński? What were the beginnings of the Romanticism poets from Poland, Europe and even America? These are just some of the topics of the conference, which will take place in Białystok from 9 to 10 November. The conference will take place in the 200th anniversary of the poetic debut of Adam Mickiewicz. The event

will inaugurate the cycle of national Mickiewicz Anniversary. The organizers of the Białystok event are the Department of Philological Studies «East-West» (Faculty of Philology of the University of Białystok), Polish Academy of Learning and the Podlasie Library.

University of Silesia to hold 9th conference „Past for the Future”

2018-11-09

The Department of Special Education at the Faculty of Ethnology and Educational Sciences of the University of Silesia and the Regional Center for Social Policy of the Silesian Province invite participants to the conference „Past for the Future” on November 14th. This year's, ninth conference refers to events related to the 100th anniversary of regaining independence and the 100th anniversary of women's electoral rights in Poland. The first part of the conference will deal with historical aspects, and the deputy Konstanty Wolny, who was one of the first Silesian deputies to the Sejm. In the second part, a panel discussion „Activity - prevention and health” is planned with the participation of scientists, doctors, politicians and seniors. Co-organizers of the conference are the Academic Association of Social Assistance, the Association of Active Silesia, and Universities of the Third Age in Cieszyn and Wodzisław Śląski.

Conference on women fighting for social advancement 1700-1918 at the University of Wroclaw

2018-11-09

The Historical Institute and the Institutes of Roman and English Philology from the University of Wroclaw invite participants to the international conference „Freedom, equality ... for everyone?. Women in the fight for social advancement 1700-1918“, which will be held on November 20 and 21. The topic of the conference refers to the flagship postulates of the French Revolution and its democratic aspirations changing the world order. These demands are also valid today - on the hundredth anniversary of the end of the First World War, what largely contributed to the fuller implementation of Enlightenment slogans, through to the electoral rights granted to women and the introduction of gender equality in most European countries. The organizers of the conference will focus on the «long ages» of the eighteenth and nineteenth century. It was the time of political, economic and, above all, mentality transformations that preceded and enabled the twentieth century breakthrough.

Conference in Wroclaw about WWI

2018-11-12

The Historical Institute of the University of Wroclaw and a branch of the Institute of National Remembrance in Wroclaw invite participants to the international scientific conference „The Breakdown of Empires. Shaping the post-war order in Central and Eastern Europe in 1918-1923 „, which will take place on November 22 and 23. The conference will be dedicated to the turbulent times after the First World War - crumbling empires, the new states and struggles for their borders. The event is open to all participants, the languages of the conference are: Polish, Ukrainian, English. The starting point for the discussion will be the hundredth anniversary of the end of World War I and the regaining of independence by Poland. The organizers want to highlight the development of the eastern border of the Poland

and the state-forming processes of nations formed on the ruins of the Russian Empire and Austria-Hungary. More: <https://upadekimperioiw19181923.wordpress.com/>

Archaeologists from the University of Warsaw discovered in Kuwait the ruins of the temple from 7,000 years ago

2018-11-14

Archaeologists from the University of Warsaw (UW) discovered the ruins of the oldest Persian temple. The building is 7,000 years old and was built in Kuwait, in the Al-Subijah desert. It was located in the prehistoric settlement from the end of the 6th century BC. It was surrounded by a circular wall, which highlights its religious character. Researchers from the Center of Mediterranean Archeology of the University of Warsaw working under the supervision of Prof. Piotr Bieliński finished their season of the Kuwaiti-Polish Archaeological Mission. The ruins of the Persian temple are not the only discovery of the Polish-Kuwaiti team. They found large fragments of the square surrounded from three sides by buildings, located in the center of the settlement,. This is an example of quite advanced architecture, unknown to scientists before.

„Woman in the 21st century - between liberalism and conservatism“

2018-11-14

The Department of Ethics and Social Philosophy of the Department of Philosophy at the University of Economics in Krakow organizes on 22-23 November 2018 a scientific conference „Woman in the XXI century - between liberalism and conservatism“. The organizers want to start the debate about the place and social role of a modern woman against the background of significant trends in political thought: liberalism and conservatism. Both trends appear as theories having fundamental importance for shaping the current position of women. The discussion during the conference is to focus

on the following issues: the impact of mainstream political philosophy on the way of thinking about a woman; conservative and liberal vision of a woman; What is feminism? (definitions, trends, polemics); What is the difficulty with social understanding and assimilation of the feminist tradition?; What do we mean by discrimination against women?

Catholic University of Lublin to hold Conference for Spanish language teachers

2018-11-16

Foreign Languages Center of the Catholic University of Lublin (KUL), Spanish Language School „Dialogo“ and the Development Foundation of the Catholic University of Lublin are organizing a conference for Spanish language teachers Expertos ELE on November 17-18, 2018. The goal of the event is to promote Spanish and to present prototype solutions supporting the didactic process in the field of foreign language teaching. During the conference, participants will take part in workshops conducted by experts from Spain, professionally active Polish teachers and representatives of scientific publishing houses. More: <http://www.expertosele.com/>

Scientific conference about the beginning of the Neolithic period in Poland

2018-11-21

The Institute of Archeology of the Maria Curie Skłodowska University (UMCS) together with the State Archaeological Museum in Warsaw and the Institute of Archeology and Ethnology of the Polish Academy of Sciences are organizing a scientific conference on November 22, 2018 entitled „The Neolithic Beginnings in Poland.” The conference will be held on the occasion of the centenary of the birth of Dr Jan Kowalczyk - an outstanding archaeologist, an expert on Neolithic issues, a researcher in the prehistory of the Lublin region and a long-time scholar of the UMCS Chair of Archeology. Papers at the conference will be given by eminent Polish stone age researchers: Prof. Stefan K. Kozłowski (Cardinal Stefan Wyszyński University in Warsaw), Prof. Sławomir Kadrow (University of Rzeszów), Prof. Marzena Szmyt and Prof. Aleksander Kośko (Adam Mickiewicz University in Poznań) and Prof. Stanisław Kukawka (Nicolaus Copernicus University in Toruń).

21 scientists from the Wrocław University of Technology receive grants from Opus and Preludium calls

2018-11-21

Almost PLN 15.5 million from the National Science Center for the implementation of their research projects were received by 21 scientists from the Wrocław University of Technology as part of Opus and Preludium calls. Previously, the Wrocław University of Technology received a total amount of over PLN 8 million. The most significant aid has been given to Dr Eng. Marcin Sieńczyk from the chemical department. His project «O'yyong-nyong virus CP protease: substrate profiling, design and synthesis of inhibitors and molecular probes with their biochemical analysis» gained over two million PLN within the Opus call. Opus and Preludium are the most popular calls organized by the National Science Center. 2970 applications were submitted in both calls, of which 618 projects received fund-

ing. They are announced twice a year, and in November the Polish researchers were awarded almost PLN 400 million. More: <http://pwr.edu.pl/uczelnia/aktualnosci/rekordowe-granty-narodowego-centrum-nauki-dla-naukowcow-z-pwr-11033.html>

Professor Saloni to hold a lecture as part of the „Master Lectures” at the University of Białystok

2018-11-22

Professor Zygmunt Saloni will be the guest of the next meeting from the series „Lectures of Masters” at the Faculty of Philology of the University of Białystok. On November 22, 2018 at 15:00 he will tell the listeners about a century of independence and „fixed” Polish spelling. Professor Zygmunt Saloni is an outstanding linguist, honorary member of the Polish Linguistic Society and an honorary member of the Society of Polish Language Lovers. His research interests are focused on Polish grammar and lexicography. He is the author or co-author of many fundamental and repeated works: «Syntactic features of the Polish verb», «Introduction to Polish conjugation», «Polish verb: variation, dictionary», academic textbook «Syntax of contemporary Polish language» and a grammar dictionary of the Polish language.

Prof. Maria Lewicka to hold lecture Recovering memory. The role of memory in the identity of the place

2018-11-23

University of Szczecin and the City of Szczecin invite participants to the lecture of Prof. Maria Lewicka „Recovering the memory. The role of memory in the identity of the place.” The conference takes place within the program Explosions of Knowledge. The idea is to present the most interesting issues from the world of science to the general public. During the lecture, the professor will analyse whether and to what extent the consciousness of the towns' past is present in the memory of contemporary inhabitants of the cities of Central and Eastern Europe;

how strong ethnocentrism is in the perception of the past of own towns and what psychological factors are developing and hindering the inclusion of foreign identities in their own national and / or local identity. Special emphasis will be placed on the role of two types of national identity - attachment to the country (patriotism) and glorification of one's own country (nationalism). The lecture will take place on November 26 in the hall of the mathematics and physical faculty. More: <http://usz.edu.pl/eksplozja-wiedzy-odzyskiwanie-pamieci-rola-pamieci-w-tozsamosci-miejsc>

Inauguration of the program „Great Questions in Science” in Rzeszów

2018-11-26

On 5 December 2018, the University of Information Technology and Management in Rzeszów and the „Tygodnik Powszechny” Foundation are organizing the third conference „Great Questions in Science”. The event will be attended by Prof. Jerzy Bralczyk and journalist and columnist Michał Ogórek. Within the meeting entitled «The Art of Conversation» Prof. Bralczyk and Michał Ogórek will advise listeners how to master the art of conversation, how to make the conversation a pleasure and how important is the ability to listen, apart from the ability to express their thoughts efficiently.

Researchers of the Maria Curie Skłodowska University win the „Historical book of the year” competition

2018-11-26

The scholars of the Institute of History at the Maria Curie Skłodowska University (UMCS) in Lublin have become the laureates of this year's „Historical book of the year” competition. In the category «The best source publication devoted to the history of Poland and Poles in the 20th century», the jury awarded Dr. Prof. Associate Mariusz Korzeniowski, Dr. Prof. Associate Krzysztof Latawiec and Dr. Dariusz Tarasiuk for the book titled «Polish Refugees in Russia during the First World War in the Light of Documents» published by UMCS Publishing House. During the final of the eleventh competition, the prizes were awarded to the laureates. The organizers of the event were: Polish Television, Polish Radio, Institute of National Remembrance and the National Center for Culture. Scientific conference „Traditional culture in the perspective of protection of heritage and regional identities”

2018-11-29

The national scientific conference „Traditional culture in the perspective of protection of heritage and regional identities” will take place on 29 November 2018 at the Maria Curie Skłodowska University (UMCS) in Lublin. The event is connected with the 70th birthday anniversary of Prof. Jan Adamowski - the founder of the Institute of Cultural Studies of UMCS and a long-term research worker at the Institute of Polish Philology. During the jubilee celebrations, the laudation will be delivered by Prof. Jerzy Bartmiński to gathered friends and students of Prof. Adamowski. The conference program will include debates, thematic sessions, discussions and

presentations on traditional culture. The event is organized by the Institute of Cultural Studies and the Institute of Polish Philology at UMCS, Polskie Towarzystwo Ludoznawcze, the Polish Society of Folklore in Lublin in cooperation with the Association of Folk Artists.

Prof. Rita Felski to hold a lecture at the University of Wrocław

2018-11-30

The Literature Department after 1989 at the Institute of Polish Philology at the University of Wrocław invites participants to a lecture by Prof. Rita Felski (University of Virginia), „Hooked. Art and Attachment”, based on a new, unpublished book by this outstanding American critic and theoretician of literature. The lecture will be delivered on December 7 in the Nehring Room (library reading room) at the Institute of Polish Philology at Nankier Square 15. The organizers provide simultaneous interpretation. Rita Felski was born in Birmingham, in a family of emigrants (father was a Pole, mother was a Czech). She worked at universities in Australia, the United States, and recently in Denmark. She deals with feminist criticism, concepts of modernism, postmodernism and avant-garde, a phenomenon of reception of literature and literary criticism. Her latest book, *The Limits of Critique*, deals with suspicion as the basic feature of reading in its today's critical reception.

Researcher at the Jagiellonian University wins the prize of the Art Historians Association

2018-12-03

Dr. Dobrosława Horzela from the Institute of Art History at the Jagiellonian University (Jagiellonian University) in Krakow has been awarded the Prof. Jerzy Łoziński's prize granted by the Association of Art Historians. She received the honorable award for her scientific work on the history of Polish art, with particular emphasis on documentary and cataloging work and for the book: «Die mittelalterlichen Glasmalereien in der Stadtpfarrkirche Mariä Himmelfahrt in Krakau.» Mit einer kunstgeschichtlichen Einleitung von Marek Walczak». This research is devoted to stained glass windows in the St. Mary's church in Kraków, one of the most important urban churches in Central Europe. Stained-glass windows were created at the end of the reign of Casimir the Great and in the initial period of the reign of the Jagiellonians and they are the largest set of stained-glass painting in Poland.

Prof. Piotr Sztompka to hold an open lecture at the Jagiellonian University

2018-12-10

The Department of Contemporary Culture Research at the Institute of Sociology at the Jagiellonian University in Krakow invites participants to a lecture by Prof. Piotr Sztompka „On the notion of culture once more: The classical concept of culture in a new, original approach”. The meeting will take place on December 11 at the Institute of Sociology. Piotr Sztompka is a retired professor at the Jagiellonian University and an active professor at the Father Józef Tischner Higher European School in Krakow. He is a member of the Polish Academy of Sciences and the Polish Academy of Learning, Academia Europaea (London) and the American Academy of Arts and Sciences (Cambridge, Massachusetts). In the years 2002-2006 he was the president of the International Sociological Association (ISA). He is a laureate of the New Europe Prize (1995), the Foundation Award for Polish Science (2006) and twice

the prizes of the Prime Minister of the Republic of Poland. Professor Sztompka is a doctor honoris causa of four universities: in Moscow, Stockholm, Krakow and Warsaw. He is the author of 30 books and over 300 scientific articles that were published in 15 languages.

Collegium Civitas to hold a debate „Will democracy regress?”

2018-12-11

On the anniversary of the imposition of martial law in Poland, on December 13, 2018 at 5:00 PM the Collegium Civitas in Warsaw is holding a debate entitled „Will democracy regress?”. The event is based on the book by Steven Levitsky and Daniel Ziblatt „How Democracies Die”, also recently published in Polish. The participants of the debate will try to compare the mechanisms limiting democracies on the example of countries with a different history and political culture. The debate will be attended by: Prof. Bohdan Szklarski - political scientist, Americanist, Dr Piotr Łaciński - political scientist, specialist in the policy of South American countries, Dr Dominik Hej, a political scientist, specialist in Hungarian politics.

Catholic University of Lublin to hold a conference on culture and identity

2018-12-12

The Catholic University of Lublin (KUL) is holding a conference within the program „Polonia Restituta. The Decalogue for Poland on the 100th Anniversary of Regaining Independence „, dedicated to culture. -It is necessary to repeat after Pope John Paul II: Man lives a truly human life thanks to culture. His life is culture and he cannot live without culture. He is a creator of culture, it expresses him and he is confirmed in it - said Jarosław Gowin, deputy prime minister, minister of science and higher education. The participants of the event discussed the importance of national culture and Polish patriotism during the period of the partitions, and then occupation and Soviet domination. The conference

was accompanied by the exhibition «KUL University of Independent Poland», an exhibition of postage stamps «Fathers of Independence» and an exhibition of the Baroque sculptures from the collections of the Museum of the Catholic University of Lublin. More: <https://polonia-restituta.pl/>

II Ignacy Domeyko Latin American Congress

2018-12-12

On 15 and 16 December, the Department of Latin American and Comparative Studies at the University of Lodz and the Main Board of the Polish Association of Latin American Studies are organizing the Second Ignacy Domeyko Latin American Congress. The Congress, combined with the celebrations of the 40th anniversary of the Society and the 100th anniversary of Poland's independence, will be an opportunity to analyse the Polish presence in Latin America, summarize Polish scientific accomplishments in the field of Latin American issues and continue dialogue on the possibilities of its further development. The meeting will start with a session with honorary guests representing Polish-American scientific communities in Latin America, followed by Polish-American, cultural, political, archaeological and anthropological thematic panels. 2018-12-14

On December 14, 2018, the 25th anniversary of the Faculty of Political Science at the Maria Curie-Skłodowska University (UMCS) in Lublin will be held. During the event, the medals of the 25th anniversary will be awarded for long-term cooperation with the Faculty. Individual medals will be received by Krzysztof Żuk - Mayor of Lublin, Piotr Franaszek - director of the Center for the Meeting of Cultures in Lublin, Małgorzata Piasecka - Editor-in-Chief of the Polish Radio Lublin, Zbigniew Sobczuk - Art curator and President of the Society for the Encouragement of Fine Arts in Lublin and Katarzyna Kępa - director of the Municipal Labor Office in Lublin. Awards will also be given to the following institutions: NN Theater, Cultural Center, Homo Faber, Misericordia, Center for Eastern Europe and editorial offices of the Gazeta Wyborcza, the Kurier Lubelski, Radio Centrum, the Dziennik Wschodni and TVP Lublin.

Dr hab. Wojciech Sowa becomes the chairman of the Scientific Council of the international HERA program

2018-12-18

Dr Wojciech Sowa, coordinator of disciplines in the humanities, social and art department of the National Science Center, became the chairman of the Scientific Council of the international HERA program (Humanities in the European Research Area). The President of the Council is responsible for the coordination of ERA-Net HERA's strategic activities, representation of the network's position on issues of contemporary humanities and conducting a dialogue with the scientific community. HERA is a network supporting research in the humanities. The consortium is to initiate the cooperation of scientists from various European research

centers and to draw attention to the social, cultural and political challenges of contemporary Europe.

Polish-Japanese conference on the Holocaust and Hiroshima held at the University of Nagoya

2018-12-18

The „Memory of World War Two in Poland and Japan: The Holocaust and Hiroshima in Comparative Perspectives” Conference was organized by Prof. Ariko Kato from World Liberal Arts Center. The topic was a comparison of the effects of two national disasters: Hiroshima for the Japanese and the Holocaust of Jews for Poles. Scientists from the Polish Academy of Sciences spoke about Polish attitudes towards Jews during the Holocaust (Prof. Barbara Engelking, Prof. Jacek Leociak), new research concerning the Kielce pogrom (Prof. Joanna Tokarska-Bakir) and the meanders of post-war historical policy (Prof. Piotr Forecki). The conference was a fruitful platform for exchanging experience and a similar meeting in Poland will probably be organized.

Toruń scientist becomes the laureate of the Association of Historians of Antiquities

2018-12-20

Dr Karol Kłodziński, a scholar of the University Library in Toruń, became the laureate of the Association of Historians of Antiquities for the book „Officium a rationibus. A study on the history of the Roman administration during the principate period”. The book was published by the Scientific Publisher of the Nicolaus Copernicus University in Toruń as part of the prestigious series «Monographs FNP». It was devoted to the «a rationibus» («accountancy / bills») office - the main central institution managing the finances of the early Roman Empire, and the officials who held the post. The aim of the award is to honor the achievements of Polish researchers in the field of broadening and popularizing knowledge about antiquity. In the annual competition procedure, authors of scientific or popular science books with a high research level may take part in the contest.

Archaeologists of the University of Warsaw receive nearly PLN 2 million from the program Dialogue

2018-12-21

The Center for Mediterranean Archeology of the University of Warsaw received a grant of almost PLN 2 million as part of the Dialogue program of the Ministry of Science and Higher Education. The money is allocated to the project „ArcheoCDN. Archaeological Center of Scientific Excellence „. The grant will allow Warsaw archaeologists to create archaeological center of scientific excellence for 2 years, which will use the most modern methods of work and the resources accumulated over several decades of research in North Africa and the Middle East. A modern repository will be created with wide access to archaeological documentation collected over decades. This will not only allow scholars to present visual collections, but also allow them to share.

Scientist of the Adam Mickiewicz University in Poznan receives the prize of Prof. Hofmokl

2018-12-24

Professor Jacek Pyżalski from the Adam Mickiewicz University in Poznań received the prize of Prof. Tomasz Hofmokl in the „Information Society” category. The award was presented during the gala on the occasion of the 25th anniversary of the Scientific and Academic Computer Network - the National Research Institute (NASK). Professor Jacek Pyżalski works at the Faculty of Educational Studies of the Poznań university. He is the author of numerous publications, a member of scientific networks and a coordinator of many research projects, a coach in communications and difficult behaviors. His research interests include: electronic aggression, new media, communication at school, health promotion and cyberbullying among young people. Professor Tomasz Hofmokl was the creator and first director of NASK, a research institute supervised by the Ministry of Digitization, which for 25 years has been working on the development of the information network and society in Poland.

Fulbright Slavic Award Scholarships

2018-12-31

Until 18 January 2019 students can apply for a Fulbright Slavic Award for a scholarship to the US in the academic year 2019-2020. The scholarship is intended for scholars employed at Polish universities and scientific units who specialize in the culture and history of Poland and Central and Eastern Europe. It enables conducting classes with students at one of two universities cooperating with the Polish-American Fulbright Commission: University of Washington in Seattle, where the trip lasts 3 months and includes courses on literary studies, film studies or culture studies, in a historical, social or political perspective, in the context of Polish and Central and Eastern Europe culture, and the University of Illinois in Chicago - a trip for 4 months covering courses on cultural studies, gender studies or film studies and media studies in the context of Central and Eastern Europe. More: <https://fulbright.edu.pl/slavic/>

European award for the cultural heritage education project

2019-01-02

The Erasmus Plus ANHER project - Innovative format of education and training in integrated archaeological and natural heritage, headed by Prof. Arkadiusz Marciniak from the Adam Mickiewicz University in Poznań received the award of the Directorate General for Education, Youth, Sport and Culture of the European Commission. The project from the Poznań university is the only Polish project awarded by the Directorate General. The award was granted for the development of innovative forms of education for groups of professionals in the field of cultural heritage. As a result of the recognition of its educational value and good practices, the project has become part of the information and promotion strategy of the European Commission for the European Year of Cultural Heritage and Erasmus Plus projects.

International conference Shapes of Futures in Bielsko-Biala

2019-01-03

The Institute of Modern Languages at the University of Technology and Humanities in Bielsko-Biala invites participants to the third international conference „Shapes of Futures”. The subjects of the conference are issues related to various dimensions, conceptualizations and visions of the future in culture, art, film and literature as well as political and social sciences. The following topics are scheduled for March 1 and 2: visions of the future and their dynamics; futurism and studies about the future; functions of the future and processes shaping the future (shaping of trends, simulations, modelling, anticipation and planning of the future). The organizers are also planning a discussion on the politics of time and temporality of politics, relations between the past, present and future, and a block of topics «future and narrative» (narrations and metaphors of the future, science fiction and speculative fiction as catalysts in studies on the future, history of the future). More: <https://shapsoffutures.wordpress.com/>

Conference „Cultural heritage of the borderland” to be held in Gorzów Wielkopolski

2019-01-03

Department of the Polish Language of the Faculty of Humanities and the Academic Center of Ukrainian Studies of the Academy in Gorzów Wielkopolski in cooperation with the Tourism Department of the Carpathian National University in Ivano-Frankivsk (Ukraine) invites participants to the International Scientific Conference „Cultural heritage of the borderland”. The aim of the conference planned for 14 and 15 May at the University of Gorzów is to present the broadly understood cultural heritage of the borderland in terms of its impact on cultural and scientific development, ethnic and national identity, religious and mutual relations. The conference is addressed to cultural researchers, linguists, historians, sociologists, political scientists, literary scholars, eu-

roregional officers, pedagogues, catechists, theologians, psychologists and others.

Scientific Award of the Polish Academy of Sciences for a Poznań scientist

2019-01-03

Dr Michał Klichowski from the Adam Mickiewicz University in Poznań received a scientific prize from the Faculty of Humanities and Social Sciences of the Polish Academy of Sciences (PAN) for the book „Learning in CyberParks. A theoretical and empirical study”. - The considerations in the book revolve around constitutive concepts for the idea of learning in CyberParks. Theoretical analysis, however, led to a surprising discovery: one of the latest concepts of neuroscience, the concept of double-task costs, suggests that this type of learning may not only be inefficient, but also in some way dangerous for students. To clarify this issue, I carried out two experiments in the paradigms of cognitive neuroscience, whose assumptions and results were presented in the second, empirical part of the book. The PAN scientific prizes are awarded for outstanding and creative works published in the four years preceding their granting.

Deputy Prime Minister Gowin: Free Polish science from waste paper

2019-01-04

- Humanities should be practiced primarily in the national language. At this point I can reveal that the first list of publishers of scientific monographs will be composed mostly of Polish entities - writes Deputy Prime Minister Jarosław Gowin in the „Rzeczpospolita” daily in the article „Free Polish science from waste paper”. Minister Gowin emphasizes that the activities of his ministry are motivated by the desire to raise the level of Polish science, broaden its impact on world science and eliminate pseudoscientific publications. First of all, the humanistic environment has for many years demanded to appreciate monographs as the basic channel of humanities. Secondly, appreciating the importance of the monograph, we must ensure their appropriate level - writes the Deputy Prime Minister. More: <https://www.rp.pl/Opinie/181239902-Uwolnic-polska-nauke-od-makulatury.html>

University of Toronto to offer scholarships to humanities students

2019-01-10

Polish Language and Literature Program conducted by the University of Toronto offers the call for applications for short-term scientific internships. As the National Academic Exchange Agency informs, during the Canadian trip scholars will have the opportunity to use the library resources of the University of Toronto, as well as take part in the intellectual life of the university. Joanna DeMone's scholarship is addressed to humanists who are completing their PhD or master's studies at Polish universities. Until February 28, they can submit applications for a 12- or 24-week stays. The visit may take place from mid-September 2019 to mid-May 2020. The offered scholarship covers the cost of living, university fees, including health insurance. The amount of the scholarship will depend on the length of stay. More: <https://nawa.gov.pl/images/users/629/JoannaDeMone-IVGS-Ogloszenie.pdf>

Researchers at the Adam Mickiewicz University in Poznań to research the Indian film industry

2019-01-10

University researchers of Adam Mickiewicz University in Poznań have won the EqUIP (EU-India Platform for Social Sciences and Humanities) competition for international research projects in the humanities and social sciences implemented in cooperation with India. Professor Krzysztof Stachowiak and Dr Marcin Adamczak will research the relationship between space and spot in the film and the role that the film industry plays in creating cultural and economic ties between India and Europe. Researchers will analyze the locations in which Indian films are produced, and the social and economic impact of the Indian film industry on these locations. The research consortium includes: University of Basel (Switzerland), Novia University of Applied Sciences (Finland), Research Center of the Slovenian Academy of Sciences and Arts (Slovenia), Jawaharlal Nehru University (India). More: <http://igsegp.amu.edu.pl/filmind/>

Scientific conference on the social role of the film to be held in Katowice

2019-01-11

The University of Silesia in Katowice and the SWPS University invite participants on April 4th and 5th to the third national scientific conference „Film psycho-tropy”. The motto of this year's meeting is „The Social Role of the Film”. The program includes thematic sessions, a student and poster sessions, lectures of invited experts, a discussion panel with the participation of researchers, practitioners and creators, as well as certified workshops for teachers. The meeting will be an opportunity to exchange experiences and good practices. The conference is addressed to a wide range of researchers from various disciplines, PhD students of various fields of study, teachers, school pedagogues and psychologists, people using film in education, prevention and therapy, filmmakers, as well as film enthusiasts.

Researcher at the University of Gdańsk receives Haiman Award

2019-01-16

Dr Anna Mazurkiewicz, Prof. Associate from the Faculty of History at the University of Gdańsk, was awarded the Haiman Prize. The award was given during the 75th jubilee conference of the Polish-American Historical Society. This is the most prestigious award granted by the Polish American Historical Association, an American scientific society that has existed since 1944. The Haiman award has been granted since 1966 for «an outstanding contribution to the development of research in the field of Polish-American studies». The laureate conducts research on the history of Central European political emigrants after World War II. She is the author of the monograph «Political refugees from Central and Eastern Europe in the American Cold War Policy 1948-1954» and a number of articles devoted to Polish political emigration in the United States. At the University of Gdansk, she teaches history of the US and world history after the Second World War and the history of migration.

Scholar of the University of Gdańsk nominated for the award of the Association of Journalists of the Republic of Poland

2019-01-18

Alina Kietrys from the Institute of Philosophy, Sociology and Journalism at the Faculty of Social Sciences of the University of Gdańsk was nominated for the Bolesław Prus award of the Association of Journalists of the Republic of Poland for lifetime achievements in journalism. Bolesław Prus Award, for many years had been the highest and most prestigious distinction of outstanding journalists, members of the Association of Journalists of the Republic of Poland. After years of interruption, the Association resumed awarding these prizes, according to the new modified regulations in 2015. Journalists from the entire journalistic community, members of all journalistic associations and organizations can apply for the Award. The prize has two forms: the main prize for lifetime achievements in journalism («Golden Prus») and an award for a young journalist up to the age of 35 («Green Prus»).

Competition for the most interesting PhD dissertations in the field of humanities devoted to modernity

2019-01-29

Until February 22, students can apply to the competition for the most interesting PhD dissertations in the field of humanities, dedicated to modern times. Prof. Alina „Inka” Brodzka-Wald competition is organizing the Academy for the Development of Philanthropy in Poland. Alina Brodzka-Wald was one of the most recognizable Polish historians and theoreticians of literature. To commemorate her life and merits, the Fund named after her was created. Its objective is development of science, education, culture, health care and social assistance. For the past six years it has been organizing a competition for the most interesting PhD dissertations defended in the year preceding the recruitment. The jury of the

competition consists of well-known representatives of the humanist community: Prof. Maryla Hopfinger-Amsterdamska; Prof. Grażyna Borkowska; Prof. Jan Kordys; Prof. Marek Zaleski and Dr Tomasz Żukowski from the Institute of Literary Research of the Polish Academy of Sciences. Prof. Juliusz Chrościcki to hold a lecture in the Museum of the University of Wrocław

2019-01-30

The Museum of the University of Wrocław invites participants on February 1 for a lecture by Prof. Juliusz Chrościcki „READING LETTER of Jan Vermeer van Delft”. Professor Chrościcki is one of the greatest Polish historians of modern art and a specialist in the field of iconography of power. The lecture will be devoted to a chosen motif in the work of one of the most famous painters in history: Jan Vermeer van Delft. This Dutch artist is considered to be the master of genre scenes, especially the pictures of women in residential interiors, occupied with everyday activities, such as reading. Professor Chrościcki has been associated with the University of Warsaw, where he has been the deputy dean and dean of the Historical Department. He was the director of the Polish center at the Sorbonne in Paris. He is a co-creator and editor-in-chief of the journal «Barocco. History-Literature-Art» and the author of numerous scientific publications on the history of art and culture of modern Europe.

Institute of Polish Philology of the Pomeranian Academy to hold a conference „Sacro-pop. Expressing holiness in mass culture „ in Słupsk

2019-02-07

The Institute of Polish Philology of the Pomeranian Academy in Słupsk, the Baltic Gallery of Contemporary Art in Słupsk and the PhD students and students of the Polish Language Society invite participants to the national scientific conference „Sacro-pop.

Expressing holiness in mass culture”. An interdisciplinary seminar meeting will take place on 22-23 May 2019 in Ustka. The organizers are planning to analyse issues within the scope of literary studies, in the Polish tradition, but they are also open to foreign literature. They would like to gather researchers from various academic centers in Poland to interpret issues existing in various areas of human activity.

5th competition for the Kotarbiński Award launched

2019-02-13

The Professor Kotarbiński University of Lodz announced the fifth competition for the works in the humanities. They can be submitted by scientific institutions from all over the country. The author of the winning work will receive 50,000 PLN for further research. The Competition Chapter will evaluate and reward the best scientific works in the field of the humanities. The aim is to emphasize the importance of humanistic reflection in Poland and to show that Polish science produces works of the highest scientific quality. Works should be submitted by 5 April 2019 to the following address: Office of Rector of the University of Lodz, ul. Narutowicza 68, 90-136 Łódź, with one copy of the work together with a written recommendation from the head of the reporting unit.

Polish-Ukrainian scientific conference to be held in Gorzów Wielkopolski

2019-02-13

Department of Polish Language, Academic Center of Ukrainian Studies of the Academy in Gorzów Wielkopolski and the Faculty of Tourism of the Carpathian National University in Ivano-Frankivsk (Ukraine) will invite participants on May 14 and 15 to the International Scientific Conference „Cultural heritage of the borderland”. The aim of the conference is to present the cultural heritage of the border area in the aspect of its impact on cultural and scientific development, the sense of ethnic and national identity, religion and to develop mutual relations. The conference is addressed to cultural researchers, linguists, historians, sociologists, political scientists, literary scholars, euroregional officers, pedagogues, catechists, theologians, psychologists and all interested participants.

Exhibition and lecture on Dutch masters and their paintings at the University of Wrocław

2019-02-18

The Center of Culture of the Dutch University of Wrocław invites participants to the exhibition „With a dream and reality”: Copies of Dutch masters. Enthusiasts will be able to admire copies of paintings by the Dutch masters - Bosch, Vermeer and Van Gogh, who inspired Polish poets. The exhibition was inspired by two women: Agnieszka Traczyńska, artist-painter, teacher at the Wrocław High School, who creates wonderful copies of the paintings of Hieronymus Bosch and Magdalena Śniedziewska, researcher of Polish literature, author of the book *The Seventeenth century Dutch painting*. The official opening of the exhibition with the participation of the representative of the Embassy of the Kingdom of the Netherlands, Martin van Dijk, will take place on March 7 at 17. After the opening, a lecture «It's not quite bad with us if we can admire Dutch painting» by Magdalena Śniedziewska was planned.

Polish scientists win the competition organized by the HERA consortium

2019-02-19

Four research teams from Poland became the laureates of the competition organized by the HERA consortium (Humanities in the European Research Area). 203 international research applications were submitted in the Public Spaces: Culture and Integration in Europe competition. Polish winning 20 projects include: BESTROM: Over stereotypes: cultural exchange and Roma people's contribution to the European public space led by Dr Anna Piotrowska (Jagiellonian University). HCPubS: Healthcare as a Public Space: Integration and social diversity in the context of access to healthcare in Europe led by Prof. Paweł Łuków (University of Warsaw). FestiVersities: European music festivals, public spaces and cultural diversity led by Dr Karolina Golemo (Jagiellonian University) and en/counter/points: en/counter/points: contact, culture and (re)negotiating in the public space led by Dr Grażyna Szymanska-Matusiewicz (University of Warsaw).

Philosophical seminar at the University of Silesia „Imagined space - created space”

2019-02-19

The lecture entitled „Space of Humanism in Ancient Philosophy” will start a series of meetings organized as part of the general philosophy seminar „Spatial Imaging - Space Created” at the University of Silesia in Katowice. The series of lectures will begin on February 19 and will last until June 4. Speakers include scientists from the University of Silesia, the Jagiellonian University, the Silesian University of Technology and the Silesian Medical University - philosophers, historians, sociologists, cultural experts, architects, theologians and lawyers. The lectures are addressed to students of the humanities and social sciences and all interested. The subject matter of the meetings concerns reflection on various aspects of the understanding of space - especially in relation to the virtual world, changing the approach to the ways of

understanding words: close, far, strange, unknown, safe in various contexts.

Archaeological discovery in Tuchola Forests

2019-02-19

PhD students of archeology - Mateusz Sosnowski from the Institute of Archeology of the Nicolaus Copernicus University in Toruń (UMK) and Jerzy Czerniec from the Institute of Archeology and Ethnology of the Polish Academy of Sciences in Warsaw made an extraordinary discovery in the Tuchola Forests. Thanks to the use of innovative methods of spatial analysis of the digital image of the earth's surface, they were able to observe relics of the human settlement from about 2 thousand years preserved on the surface. - Thanks to the use of innovative methods of digital terrain model analysis, we managed to register the complete spatial layout of the human settlement, where we are able to indicate cropland relics, the space in which the life of the estate took place - says Jerzy Czerniec. The authors are still waiting for the results of analyzes and dating. If everything is confirmed, the discovered estate is probably the only completely preserved and visible prehistoric human settlement in Europe. More: <https://www.umk.pl/wiadomosci/?id=25948>

Loeb Classical Library Foundation offers grant for the translation of Lukian's dialogues

2019-02-20

Professor Przemysław Marciniak from the Faculty of Philology of the University of Silesia received a grant from the Loeb Classical Library Foundation (Harvard University) for the translation of Lukian's dialogues. The project concerns a new Polish, commented translation of selected works of a satirist from the second century along with preserved Byzantine scholia to his texts. Scholarships awarded by the Loeb Classical Library support research activities, publications and projects in the field of classical studies. The co-financing amounts from 1000 to 35000 USD. According to the wish of the founder of Loeb Classical Library - James Loeb the money from the proceeds from the sale of editions of Greek and Latin texts published by Harvard University Press is offered to the contemporary translators. Professor Marciniak is the head of the Center for Literature and Reception Studies at the Byzantine University of Silesia and the coordinator of the Byzantine Reception Network - a scientific network financed with funds awarded by Alexander von Humboldt Stiftung.

Masonic treasures presented in the library of the Adam Mickiewicz University in Poznań

2019-02-25

University Adam Mickiewicz in Poznań possesses the largest collection of Masonic items in Europe. There are over 80,000 books in the university archives including real publishing gems e.g. the Anderson Constitution of 1723 - considered the canon book of the Freemasonry law. Collections in 1949 were delivered to Poznań from Sława Śląska. Earlier, they were collected by Himmler. The Germans had no problem with finding Masons because of the obligation to list members of particular lodges. A special team of SS librarians studied the collections, catalogued them and studied. Later, in the end of the war, the collections were transported away. Books

and documents are stored in the Special Collections Department of the University Library. Currently, the University is raising funds for the digitization of the collections and their publication. More: <http://uniwersyteckie.pl/kultura/masonski-skarb-ze-zbiorow-liblotekiu-uam>

City Academy launched in Wrocław

2019-02-25

Wrocław Culture Zone in cooperation with scientists from the University of Wrocław - invites participants to a series of lectures within the third semester of the City Academy. The first lecture is titled: How does urban democracy work? will be delivered on February 20 by Prof. Leszek Koczanowicz. The city is an extremely complicated and living organism. The organizers of the Municipal Academy are planning to analyze the key processes that shape the urban space and the living conditions of residents and discuss: the issues of escaping from the suburbs and new bourgeoisie; urban democracy; embarrassing spaces, as well as the importance of literature in creating the city's identity. The aim of the series is to try to understand the changes that Wrocław has undergone in recent decades. The meetings will consist of two parts: lectures conducted by cultural scientists and sociologists, and discussions on the discussed topics.

Professor Jerzy Limon from the University of Gdańsk wins the Pragnell Shakespeare Award

2019-02-25

Professor Jerzy Limon from the Faculty of Philology at the University of Gdańsk, initiator and director of the Gdańsk Shakespeare Theater became a Pragnell Shakespeare Award winner. This is a prestigious distinction awarded for outstanding achievements in popularizing and developing knowledge about the works of William Shakespeare and a significant contribution to understanding his work. The Pragnell Shakespeare Award is an international award funded by the famous Jeweler Geoge Pragnella

from Stratford upon Avon. The award is presented for the achievements of the past year or in recognition of lasting achievements for popularizing Shakespeare's works in the field of theater, critics, research or education. Professor Limon is an English historian, translator of English literature, a theatrolgist and a writer. He is recognized as an outstanding expert on Shakespeare and the Elizabethan era. He is a member of Polish Academy of Learning, Polish Academy of Sciences and the International Shakespeare Society. Panel of the University of Silesia scientists included in the Byzantine Studies Association of North America conference

2019-02-25

Prof. Przemysław Marciniak and Dr Katarzyna Warcaba from the University of Silesia organized the panel „Byzantine Animal Studies: Texts, Contexts, Methodologies” and submitted it for the annual conference „Byzantine Studies Association of North America”. They obtained funding for it from The Mary Jaharis Center for Byzantine Art and Culture. The panel will gather also Byzantine specialists from the Czech Republic, Germany and France, will be devoted to the issues of interaction between humans and animals in Byzantium and ways of presenting animals in Byzantine literature. Lecture by Prof. Przemysław Marciniak will be entitled «(Micro) history of Byzantine insects». This year's conference The Byzantine Studies Association of North America, which gathers Byzantine researchers from around the world every year, will be held in American Madison (Wisconsin) from 17 to 20 October. Detailed information is available at: <https://maryjahariscenter.org>.

Jagiellonian University to launch the Mexican Center

2019-02-28

The Jagiellonian University (Jagiellonian University) in Kraków, in cooperation with the largest Latin American university - the National Autonomous University of Mexico, opened the Mexican Center. The main objective of this new university unit will be the dissemination of Mexican science and culture, student exchange, and meetings with Mexican researchers who specialize in experimental, social and humanities sciences. The ceremony of the inauguration of the Center was preceded by a lecture for students of the Institute of American Studies and Polish Diaspora of the Jagiellonian University, entitled «USA-Latin America: the time of the test», which was given by Dr Ryszard Schnepf. The opening of the Mexican Center of the Jagiellonian University took place with the participation of the rector of the Jagiellonian University, prof. Wojciech Nowak and the Mexican ambassador to the Republic of Poland Alejandro Negrín Muñoz.

Iliad days in Poznań

2019-03-04

The Raczyński Library, the Institute of Classical Philology of the Adam Mickiewicz University and the Poznań branch of the Polish Philological Society invite participants to the Iliad Days on March 21 and 22, which will take place in Poznań as part of the Iliad International Festival. On March 21, a scientific session Around the Iliad: topics, characters, language is planned. The inaugural lecture «Theogonic Motifs in the Iliad» will be delivered by Dr Bruno Currie from the University of Oxford. In the evening, a concert will take place during which fragments of the operas: Deidamia Georg Friedrich Händel and Il ritorno d'Ulisse in Patri Claudio Monteverdi will be presented. On March 22 at 10 a.m, the Adam Mickiewicz University's Collegium Maius will begin international reading of selected episodes of the Iliad, and from 17 in the Raczyński Library and students of the Institute of Classical Philology will read lecturers and excerpts from book VI (Farewell to Hector and Andromache) and book XXII (Death of Hector).

Researcher of the Adam Mickiewicz University in Poznań becomes member of EASA

2019-03-13

Professor Marek Kwiek from the Institute of Philosophy of the Adam Mickiewicz University in Poznań, director of the Center for Public Policy Studies, became an ordinary member of the European Academy of Sciences and Arts (EASA). EASA is one of the most prestigious scientific and artistic organizations in Europe. It associates over 2,000 the most outstanding scientists and artists from all over Europe, among whom there are 32 Nobel Prize winners. Its members are divided into groups of humanities, medical, artistic, natural, social, technical, religious sciences and management experts. Professor Kwiek was admitted to the „social sciences, law and economics” group. The EASA includes 34 Polish professors Jerzy Buzek, Andrzej Zoll, Andrzej B. Legocki, Jacek Namieśnik and Jerzy Woźnicki. In 2015, Prof. Michał Kleiber, the former president of the Polish Academy of Sciences, became the vice president of the Academy.

New Program for foreigners studying Polish and Polish studies

2019-03-19

The National Academic Exchange Agency (NAWA) has started the call for proposals in a new program addressed to foreigners - POLONISTA Program for students of Polish and Polish studies 2019. The aim of the Program is to popularize the Polish language in the world and to support foreigners studying as part of Polish studies and programs carried out in foreign academic centers by allowing them to spend one or two semesters at a selected public university in Poland. The program is addressed to students of foreign Polish studies or Polish programs implemented as part of Slavic studies (in the field of Polish language, Polish culture and knowledge about Poland). Also winners and finalists of the Polish Language and Literature Competitions organized outside of Poland are eligible for participation in the

Program. More: <https://nawa.gov.pl/jezyk-polski/program-dla-studentow-polonistyki-i-studiow-polskich-2019/ogloszenie>

PhD student at the Adam Mickiewicz University in Poznań wins the philosophical essay competition

2019-03-22

Dawid Rogacz, PhD student of the Institute of Philosophy at the Adam Mickiewicz University in Poznań, was awarded in an international competition for a philosophical essay. As a reward, he received the opportunity to attend a scientific conference organized in Great Britain. The PhD student's essay «The Art of Understanding of What Is No Longer Present: The Zhang Xuecheng's Philosophy of History» obtained the first prize in the competition for the best essay of a young scientist organized by the Society for Asian and Comparative Philosophy (SACP) founded in 1968. One of the awards is to fund participation in the international SACP conference, which will take place in June 2019 in British Bath. Dawid Rogacz will have the opportunity to give his presentation during a special panel.

New book of Prof. Marek Bernacki published by Universitas

2019-03-25

Monography of Prof. Marek Bernacki: „Tracking for Miłosz. The Hermeneutical bio-graphics of the Poet” appeared in the prestigious series “Modernism in Poland” of the Universitas publishing house. « Tracking for Miłosz.» is another work devoted to the interpretation of Czesław Miłosz's works and biography. The publishing review of Prof. Jarosław Ławski emphasizes that it is one of the most important reproductive works on Miłosz of the beginning of the 21st century. The Universitas is one of the most important and highly valued scientific publishing house in Poland. It specializes in publishing scientific and popular science books in the field of the humanities, with particular emphasis on the history and theory of literature, history of art, and language science. “Modernism in Poland” is a series edited by Prof. Włodzimierz Bolecki and Prof. Ryszard Nycz, devoted to the study of modern Polish literature, art, culture and humanities.

University of Silesia to hold a conference Literature evaluation - criticism, theory, history

2019-03-26

The PhD Students' Scientific Group of the Faculty of Philology of the University of Silesia invites participants on 8 and 9 April to the conference „Evaluation of literature - criticism, theory, history”. The meeting will be devoted to changes in the valuation and evaluation of phenomena in the space of literature and literary studies - critical accounts, theoretical issues and interpretive exchanges. The reception of the literature is in permanent change. The texts are subject to a constant movement of reinterpretation and re-reading; searching in dusty archives and displaying the light of daylight or just the opposite - forgetting and skipping. The topics of the conference include literary evaluations, literature valuation, evaluation in literature; reception optics, criticism of old and new works; overestimated and

underestimated literature and methods in the heat of criticism; canon and periphery about the (un) popularity of works, as well as new perspectives: the state of research and other research strategies. More: <https://www.us.edu.pl/konferencja-pt-ewaluacja-literatury-krytyka-teoria-historia>

University of Silesia to hold a seminar Vegan narratives: representations / interpretations / inspirations

2019-03-27

The Department of Theory of Literature and Culture and the Philological Research Group BESTO operating under the patronage of the Animal Studies Laboratory - Third Culture University of Silesia invite participants to the seminar on „Vegan Narratives: Representations / Interpretations / Inspirations”, which will be devoted to research on veganism in literary and cultural contexts. The event is addressed to researchers from various areas of knowledge to enable them to discuss how veganism inspires activities and statements – in literary, artistic and cultural contexts. The organizers invite the participants to share the reflection on the language that literature speaks about veganism and the means of expressing vegan identity. The topics will include elements of vegan experience that inspire writers, filmmakers and artists, and how individual experience translates into a universal language of artistic expression.

Pedagogical University of Krakow to host a conference on the language of the media

2019-03-28

The Pedagogical University (UP) in Krakow organizes on March 28-29, 2019, the 3rd National Interdisciplinary Scientific Conference „Language and Media. Perspectives and threats to language and communication in contemporary media”. The aim of the conference is to create a platform for the substantive discussion of researchers in the field of linguistics, cultural studies, media studies, as well as journalists, political scientists, sociologists, and anthropologists. – The organizers are interested in a broad research

approach to language and communication in the media and analysis of all their manifestations; both theoretical-methodological considerations and material analyzes of specific cases. The participants of the event will discuss e.g. Contemporary areas of media discourse, Barriers and threats to language and communication in contemporary media, Mediatization of politics and media policy and Polish on the Internet - Phrase in new media.

2019-03-28

Next year Szczecin university will award the prize of Joanna Kulmowa – a poetess, author of theatre pieces and books for children. It will be awarded to authors of children's literature with high artistic and educational values. This is a joint initiative of the University of Szczecin, the City of Szczecin and the Szczecin Artistic Agency. The aim of the Award is to promote authors who in the given year refer to the highly artistic achievements of Joanna Kulmowa. Joanna Kulmowa was honoured with Medal of National Education, Medal of Korczak, Medal of the Polish Section IBBY for lifetime achievement for children, Order of Smile, Award of the President of the Republic of Poland „Young Art”, Special Award of the Foundation „Poland reads to children”, Pegasus Award in the category of children's book for “opening children to the world of dreams , sensitivity”.

VII Days of Old Books to be held at the Cardinal Stefan Wyszyński University in Warsaw

2019-04-01

On 8 - 12 April 2019, the Faculty of Humanities and the Main Library of the Cardinal Stefan Wyszyński University in Warsaw (UKSW) invite participants to the 7th Days of Old Books at UKSW. The theme of this year's event is „Former school and academic book”. The exhibition will be presented in the lobby at the Auditorium of St. John Paul the Second on the campus at ul. Dewajtis 5. The opening of the exhibition will be accompanied by lectures by Dr Joanna Dimke-Kamola from the Adam Mickiewicz University in Poznań entitled «A difficult thing to show in the book. Actio as a subject of teaching in Italian textbooks for adepts of preaching (the second half of the 16th century - the first half of the 17th century)”. Prof. Andrzej Dąbrówka from the Institute of Literary Research of the Polish Academy of Sciences will present «The oldest Polish school textbook» and Dr Marta Wojtkowska-Maksymik from the University of Warsaw will talk on «Elementaria (1575) of Maciej Wirzbięta. From the primer to the textbook of good manners».

Night of the Humanists to be held on April 6 at the University of Wrocław

2019-04-01

Archaeologists, anthropologists, historians, art historians, cultural scholars, musicologists, pedagogues and psychologists will take part in the 6th Night of the Humanists - 6 April at the University of Wrocław. The motto of this year's meeting is: „Is this the world in which we want to live? Rebellion in culture.” The crisis of traditional forms of democracy, increase in social (especially economic) differences, global trade wars, fears related to migration movements, ethnic conflicts, shortages of irrigation and water, ecological catastrophes, safety as the chief quality and value of human life (instead of freedom), hatred in speech and widespread violence - these are just some of the threats and challenges facing

the world today. Students from the Wrocław faculty of historical and pedagogical sciences, want to remind participants how important is the scientific truth and how important social role it has to play. More: <https://uni.wroc.pl/czy-to-jest-swiat-w-kto-rym-chcemy-z-CC%87yc-bunt-w-kulturze/>

University of Białystok to hold a lecture on the periodization of the development of the Polish language

2019-04-08

Professor Stanisław Dubisz will be the guest of the next meeting from the series „Lectures of Masters” at the Faculty of Philology of the University of Białystok (UwB). On 10 April 2019, he will talk about the periodisation of the development of the Polish language, in particular after 1939. Professor Stanisław Dubisz is an eminent Polish linguist, researcher of the old and present Polish language, editor-in-chief of the «Language Handbook» and the «Universal Dictionary of the Polish Language», co-author of renowned «Historical Grammar of the Polish Language». He is a recognized author of several hundred articles and many extensive works belonging to the strictest Polish canon, for example: «Between old and new years. Essays about language»; «Archaisation in the 20th Century Polish Historical Novel»; «Language and politics. Sketches from the history of rhetorical style». He is an employee of the Institute of Applied Polish Studies at the University of Warsaw.

University of Silesia to hold a conference „Man in relation to animals. Myths - stereotypes - prejudices”

2019-04-08

The Animal Studies Laboratory - Third Culture at the Faculty of Philology and the Institute of Philology of the East Slavic University of Silesia invite participants on September 26 and 27 to the 4th International Interdisciplinary Scientific Conference „Man in relation to animals. Myths - stereotypes - prejudices.” The organizers want to research the complex

human-animal relationship in its various aspects: cultural, ethical, philosophical, historical, religious, social, ethnographic - with particular emphasis on accompanying myths, stereotypes and prejudices about animals. The topics of the conference include: traditional ideas about animals; animals in contemporary communications; animal as a subject / object of scientific reflection and relation to animals in the past and today. The honorary guest of the conference will be Karol Darwin's great-great-granddaughter - Ruth Padel - poet, laureate of many prestigious awards, who is interested in natural sciences and ecology. Prof. Jarosław Włodarczyk to deliver a lecture on Shakespeare's Space: between the history of astronomy and digital humanities

2019-04-09

The Institute of Polish Philology of the Adam Mickiewicz University in Poznań invites participants to the Sniadecki Hall on the 10th of April for a lecture by Prof. Jarosław Włodarczyk, „Shakespeare's Cosmos: between the history of astronomy and digital humanities.” Professor Jarosław Włodarczyk is an outstanding expert on the history of astronomy, director of the Institute of the History of Science of the Polish Academy of Sciences in Warsaw and a historian of astronomy. His research include issues of the history of astronomy, the links between the history of science and the history of culture, and the relationship between natural sciences and humanities. His publications comprehensively illuminate the relationship between astronomy, Polish literature and general literature, and one example of it are his books: «Moon in science and culture of the West»; «Wandering blue, or the Universe, not only for poets»; «Mystery of the Bethlehem Star»; «Sherlock Holmes and the code of the universe»; and «Astrology. History, myths, secrets». More: <https://amu.edu.pl/wiadomosci/wydarzenia/kosmos-szekspira-miedzy-historia-astronomii-a-humanistyka-cyfra-wyklad-prof.-jaroslawa-wlodarczyka>

Dr Anna Foltyniak-Pękala becomes a laureate of the Maria and Kazimierz Brandys competition

2019-04-10

Dr Anna Foltyniak-Pękala from the University of Technology and Humanities in Bielsko-Biala becomes a laureate of the scholarship program of the Maria and Kazimierz Brandys in the International Center for Dialogue in Krasnogruda. Maria and Kazimierz Brandys scholarship is dedicated to the memory of its patrons and the whole generation they represent, and to the works of Kazimierz Brandys. It supports writers, scientists and translators dealing with the issues of cultures and nations, creating literature in the languages of Central and Eastern Europe, or translating. 11 candidates took part from Poland and abroad in the first of the Maria and Kazimierz Brandys program. The winner, Dr Foltyniak-Pękala wrote her PhD thesis devoted to the work of Kazimierz Brandys, one of the most interesting Polish writers of the 20th century a few years ago.

Researcher of the University of Gdańsk becomes the laureate of the Willi Paul Adams Award

2019-04-11

Dr Anna Mazurkiewicz, Prof. Associate of the history department of the University of Gdańsk has become this year's winner of the prestigious Willi Paul Adams Award granted by the Organization of American Historians (OAH) - the world's largest professional association dealing with researching American history. OAH awarded the book «Political refugees from Central and Eastern Europe in American Cold War Policy 1948-1954». The Commission appreciated the monograph for «impressively detailed investigation of the origin and dynamics of US involvement on behalf of refugees from Central and Eastern Europe in the early years of the Cold War.» The Willi Paul Adams Award is awarded every two years to the author of the best book on American history published in a foreign language. The prize

(formerly the Foreign Language Book Prize) comes from Willi Paul Adams, who was an active member of OAH in Germany and a supporter of the internationalization of American history. More: https://ug.edu.pl/media/aktualnosci/87406/dr_hab_anna_mazurkiewicz_prof_nadzw_laureatka_willi_paul_adams_award

University of Lodz to hold a conference on religion and magic in culture

2019-04-12

The Scientific Club of the Enlightenment Lovers of the University of Lodz is organizing a nationwide scientific conference „Religion and magic in culture”, which will take place on 13 April 2019 at the Faculty of Philology of the University of Lodz. The organizers invite all representatives of the humanities and social sciences interested in the issue of religion, magic, rituals in ancient and modern culture. During the conference, the participants will discuss the role of religion in past and contemporary communities; religious rituals, rituals and magical practices in literature, film and fine arts; religion and power; picture of a priest in culture; the social and political role of the priest in the past and modern communities; image of a deity in culture and pop culture; functioning of ancient mythology in contemporary culture.

International conference „Migration - ecumenism - integration”

2019-04-15

Faculty of Theology of the University of Silesia in Katowice, Facultatea de Teologie Universitatea Ovidius din Constanta in Romania and Czech Gréckokatolícka Teologická Fakulta Prešovská Univerzita v Presove, and Cyrilometodějská teologická fakulta Univerzity Palackého v Olomouci are inviting participants to the VIII International Ecumenical Conference entitled „Migration - ecumenism - integration”. The two-day meeting will be held in Katowice (April 25) and in Brenna (April 26). It gathers representatives of national research centers and sci-

entists from Austria, Germany, Slovakia, the Czech Republic, Romania and Italy. The organizers are planning to discuss the following issues: migration - ecumenism - integration; Lutheran service to migrants; Delphic Sentences as a source of openness to newcomers; migration and the perspectives of intercultural education and interreligious dialogue as well as cultural integration of immigrants as a bilateral process.

Koszalin University of Technology to hold a conference on the phenomenon of beauty in advertising

2019-04-17

Student Scientific Society „Badamy Reklamy” and the Department of Social Communication and Journalism of the humanities department of the Koszalin University of Technology are inviting participants to the scientific conference „Areas of advertising II. Beauty in advertising.” This is the second conference on various aspects of advertising activities, dedicated to the phenomenon of beauty in advertising. The meeting will be an opportunity to reflect on the harmfulness of broadcasters using promotional solutions based on beautiful, perfect images. This issue is important in the context of numerous manipulations in this area, which repeatedly led to the bans on broadcasting specific ads. The organizers invite representatives of various scientific fields, including anthropologists, cultural experts, linguists, philosophers, media experts, sociologists, pedagogues, biologists, art theoreticians and historians, and advertising communication practitioners to run their presentations.

Adam Mickiewicz University in Poznań to launch Bilingualism Center Matters @ Poznan

2019-04-18

Adam Mickiewicz University in Poznań has launched the Bilingualism Center Matters @ Poznań. It is one of the 23 international branches of the Bilingualism Matters Center located at the University of Edinburgh in Great Britain. Bilingualism Matters @ Poznań is a research and information center operating at the faculty of Poznan University of English, dealing in multilingualism and language learning. The newly opened BM @ Poznan will offer a space for discussion between teachers, educators, parents and scientists studying bilingualism. The Center's offer includes training and workshops in the field of bilingualism and language learning, support for projects related to the introduction of language teaching, raising the awareness of teachers, parents and children in matters related to bilingualism, answering questions about raising bilingual children, providing access to information and resources.

International archaeological conference in Lublin

2019-04-23

The Institute of Archeology of the Maria Curie-Skłodowska University (UMCS) and the Lublin Museum are organizing on April 25-26, 2019, the XXXV international conference entitled „Archaeological research in Central and Eastern Poland, Western Belarus and Ukraine“. The conference is a forum for the exchange of experiences of archaeologists and other specialists from other fields of science from Poland, Belarus, Moldova, Russia and Ukraine. They will present the latest results of archaeological, mostly interdisciplinary researches. During this year's event, three lectures will be delivered in the plenary session and over thirty papers in two (prehistoric and early-historical), sections and about twenty posters will be presented. The participants of the conference represent several dozen scientific institutions- universities, research institutes and museums from Poland and abroad.

University of Silesia in Katowice to launch University of Humanities

2019-04-23

The University of Silesia, together with the Agere Aude Foundation of Knowledge and Dialogue, the Regional Cultural Institute, the Regional Teachers' Training Center and the Marshal's Office of the Silesian Voivodship, will carry out the project „University of Humanities at the University of Silesia in Katowice“. The project is addressed to teachers of Polish studies, employees of cultural institutions and students aged 15 to 19, and will be conducted by 5 new institutions: the University of Polish Studies; University of Cultural Studies; University of Dialogue; Mobile University of Youth and University of Young Scientists. The project will enable preparation of unique education programs, lectures, laboratory classes, study visits, as well as educational events, discussion panels and expert consultations raising the competences of non-standard higher education recipients responding to the needs of the economy, the labor market and society. House of Polish Culture in Vilnius to hold the scientific conference „From the Union of Lublin to the European Union“

2019-04-24

From the 25th to the 27th of April 2019, the 6th International Interdisciplinary Scientific Conference entitled "From the Union of Lublin to the European Union" (historical, socio-political, legal and cultural aspects) will take place in the House of Polish Culture in Vilnius, Lithuania. The conference is organized by the Association of Lithuanian Poles Scientists (SNPL). The partners of the conference are Aleksander Gięsztor's Akademia Humanistyczna in Pułtusk, Faculty of Economics and Information Technology in Vilnius, University of Białystok, European Federation of Polonia Scientific and Technical

Associations, House of Polish Culture in Vilnius. The conference aims to analyze the Lublin Union's conclusion 450 years ago and its impact not only on the development of the Polish-Lithuanian Commonwealth, but also on contemporary geopolitical relations in Europe. It will be attended by 120 participants from Poland, Lithuania, Germany, Great Britain, the Czech Republic, Italy, Ukraine and Belarus.

Jagiellonian University to hold XI Days of American Culture

2019-04-25

The Scientific Club of American Studies of the Jagiellonian University in Krakow in cooperation with the International Migration Club of the Jagiellonian University and the Institute of American Studies and Polish Diaspora of the Jagiellonian University are inviting participants to the XI American Culture Days - students and PhD students scientific conference. This year, the organizers are planning to focus on those parts of the history of the United States, which Americans prefer not to talk about, and history would prefer to forget. To understand the problems plaguing the USA, the participants of the conference will address uncomfortable, embarrassing pages of USA's history. The speeches presented at the conference are to deal with such issues as: consequences of American military interventions, criticism of American political culture, criticism of American culture, criticism of entertainment industry, problems of ethnic, racial and national minorities, problems related to social care and education.

Polish Academy of Sciences to organize the „ERC Mentoring Initiative” workshop in Vienna

2019-04-25

The Institute of Human Sciences (Institut für die Wissenschaften vom Menschen - IWM) and the Polish Academy of Sciences (PAN) are organizing the „ERC Mentoring Initiative” workshop in Vienna from 14 to 15 June 2019. The event is supported by the Ministry of Science and Higher Education. The workshops are aimed at researchers representing humanities and social fields who plan to apply for grants from the European Research Council (ERC) Starting and Consolidator, i.e. from 2 to 7 years and from 7 to 12 years after receiving the PhD title. The grants will be allowed to refine the concept of a research project that the researcher intends to present in the ERC project application. Candidates for ERC grants will have the opportunity to present the research idea and consult it with invited experts. The workshops will be conducted in English. Registration for the workshop is possible until May 19 via the online form available at: <https://forms.gle/GXvtSoY7rojHfhC4A>

Researcher from the Maria Curie-Skłodowska University in Lublin receives the prize „Helion International 2019”

2019-04-26

Dr Magdalena Grabias from the Department of Visual Culture of the Maria Curie-Skłodowska University (UMCS) in Lublin has been awarded the „Helion International 2019” for her contribution to the development of science and culture. The International Association of Culture Helion is an organization established in Timisoara, Romania in 2010. It brings together writers and researchers of science fiction and fantasy subjects, and continues the thirty-year activity of the Helion Club. The Helion Cultural Association is the organizer of the annual scientific conferences entitled: «Frontiers of the Possible: Borders and Openings in Speculative Fiction», operating with the support of the City Council and the Western University of Timisoara.

Polish archaeologists discovered a mosque on the Faylak island of Kuwait

2019-04-30

The Kuwaiti-Polish team of archaeologists led by Dr Agnieszka Pieńkowska from the Center of Mediterranean Archeology of the University of Warsaw (CAŚ UW) discovered the ruins of a monumental mosque on the island of Faylak in Kuwait. According to their estimates, the building was erected in the late Islamic period (XVI-XIX centuries). During this year's excavations, the Kuwaiti-Polish archaeological mission found the remains of a monumental mosque in the north-eastern part of the large Faylak island in the Persian Gulf. Its outline is a square about 20 meters long. The building consists of a large courtyard (almost 200 m²) leading to the main hall with dimensions of 17 to 7 meters. In the hall, the scientists have discovered remains of four large pillars supporting the roof.

Polish Society for Social Communication award Jakubowicz Prizes

2019-05-02

The Polish Society for Social Communication elected the winners of the second Karol Jakubowicz Prizes. The prizes were awarded to Dr Małgorzata Adamik-Szysiak from the Journalism Department of the Maria Curie-Skłodowska University in Lublin for the book „Strategies for communicating political subjects in Poland in social media” and Dr Maria Łoszevska-Ołowska from the Department of Media Law at the University of Warsaw for the work „Prohibition of publishing data and the image of public figures suspected or accused of a crime in the press”. Karol Jakubowicz Media and Democracy Prize has been granted since 2017 on the initiative of the Małgorzata Semil-Jakubowicz foundation with the support of the Polish Society of Social Communication. The aim of the Prize is to commemorate an outstanding researcher and media practitioner, an expert of the State Radio and Television Council, UNESCO, chairman of the Management Committee for Media and New Communication Services of the Council of Europe.

University of Silesia to hold seminar on the works of Edmund Niziurski

2019-05-02

On 15 May, the Department of Literary Theory of the Institute of Polish Literature, Faculty of Philology at the University of Silesia in Katowice and the Historical and Literary Commission of the Polish Academy of Sciences - Branch in Katowice invite participants to the scientific seminar „What's left after Niziurski?”. Edmund Niziurski's prose left a permanent mark on Polish youth literature. This popular author even in the gloomy communist Poland offered the young readers a lot of amazing adventures. However, the recognition for each writer lasts as long as people remember his works. Niziurski, who wrote from the mid-1950s to the mid-1990s, may turn out to be a writer who is out of date today. Hence the question mark is put in the title of the seminar. The seminar is supported by the Polish section International Board on Books for Young People and it is addressed to scholars, PhD students and students.

University of Lodz to hold the 6th International Conference on the Philosophy of Language and Linguistics

2019-05-06

The Department of English Linguistics and the General Institute of English Studies of the University of Lodz is organizing the 6th International Conference on Philosophy of Language and Linguistics (PhiLang2019) on May 10-12, 2019. The conference, organized every two years, is devoted to the philosophy of language and linguistics and is addressed to linguists, philosophers, logicians, cognitive scientists, researchers interested in argumentation and communication, as well as the philosophy of mind and literature. This year's leading topics will concern the philosophical foundations of semantics and pragmatics, names in language and fiction, negating and denying processes, the significance of the Lvov-Warsaw school for contemporary philosophy of language, as well as the question of progress and development of language philosophy.

XVII Podlasie Festival of Science and Art

2019-05-08

The organizers of the 17th Podlasie Festival of Science and Arts have prepared over 500 events. The Festival will start in Białystok on May 20, 2019 and will be continued in Łomża, Suwałki, Kleosin and even Vilnius, where there is one of the faculties of the University of Białystok (UwB). The motto of the Festival is «Algorithms of reality». Prof. Izabela Świącicka from the University of Białystok, chairwoman of the organizing committee, emphasizes that algorithms are ubiquitous in our lives. They rule on Wall Street, manage medical devices, associate friends on the Internet, they can create information, but also spread disinformation. Algorithms also help to create a virtual world. The program of the Festival includes workshops, presentations, lectures, scientific conferences and discussions, as well as performances, competitions, exhibitions and music concerts. There will be outdoor events, outdoor activities, educational games, experiments, medical examinations and demonstrations.

Researcher of the University of Opole carrying out a project of critical analysis of the discourse on the popularization of science

2019-05-09

Dr Katarzyna Molek-Kozakowska from the Institute of English Philology at the University of Opole is carrying out a research project concerning a critical analysis of the discourse on the popularization of science. The articles describing her research have appeared in prestigious scientific journals. Her last article is «Making Biosciences Visible for Popular Consumption: Through a Critical Multimodal Analysis» published in the the American Qualitative Inquiry. Research conducted by Dr Molek-Kozakowska includes elements of linguistics (stylistics, pragmatics, rhetoric), media studies and communication. The results can contribute to increasing the awareness of the impact of information media on the knowledge-based society and to develop better

methods of reducing fake news and clickbait. They can also support the training of journalists, PR specialists, moderators and information administrators in the interest of ethical standards in popularizing scientific knowledge. University of Wrocław to hold an international conference Media in the digital environment

2019-05-10

The Institute of Journalism and Social Communication of the University of Wrocław invites participants on May 13 and 14 to the international media conference Media Studies and Perspectives. This year's conference will be held under the slogan „Media in the digital environment”. Specialists of media and communication from the most important academic centers in Poland as well as from foreign universities from the United States, Great Britain, Italy, Norway, Finland and Germany will take part in the event. The topics of the discussions include relations between digital media and the so-called traditional media; hybridization processes of contemporary media; changes in the way of communication related to access to digital media; journalism and journalists in the conditions of digital media; social changes caused by the digital character of the media, changes in the media ecosystem, changes in attitudes and social behavior.

„Congress of the Two Union - From the Union of Lublin to the European Union”

2019-05-13

In Lublin from 13 to 15 May 2019, the „Congress of Two Union - From the Union of Lublin to the European Union” will take place. It will be a series of international conferences, debates and meetings with the participation of Polish and foreign intellectuals, scientists, politicians and publicists. Congress will be inaugurated with the panel «The foreign policy. The Polish-Lithuanian Commonwealth a burden or an

obligation? « Prof. Waldemar Paruch in Lublin and head of the governmental Strategic Analysis Center, Dr Marcin Kędzierski, chief expert of the Center for Analyses of the Jagiellonian Club, and Bartłomiej Sienkiewicz, former head of the Ministry of the Interior will deliver their speeches. On May 14, the Session of the European Heritage «The Feast of Two Unions - from the Union of Lublin to the European Union» will be held, gathering historians from Poland, Lithuania, Belarus, Ukraine and Great Britain. The event will be concluded the conference on «Community and self-government» at the Faculty of Political Science at UMCS.

University of Lodz to hold XVI Arab Days

2019-05-14

On 15-16 May 2019, the Department of Middle East and North Africa of the University of Lodz is organizing the conference „Days of Arabia. The Middle East in terms of the challenges and threats of modern times”. The conference is interdisciplinary. It is addressed to representatives of the humanities and social sciences from all academic centers, researching the Middle East region with its policy, culture and economy. The aim of the conference is to answer the question to what extent demographic, economic, political and cultural processes affect the prospects of development in the Middle East.

Opole University to run philosophical projects for young people

2019-05-14

In May, the employees of the Institute of Philosophy of the Opole University ended up educational projects. They were addressed to the students of the former junior schools and secondary schools. Almost 500 students participated in them. The teachers conducted 30-hour elective courses, developing general competencies of critical, independent thinking, correct argumentation, logics and heuristics. Classes were mainly conducted by research and teaching staff of the Institute of Philosophy of the Opole university, who have experience in working with schoolchildren. During the classes, various methods were used to stimulate cognitive curiosity in students, improve analysis and synthesis skills, develop skills in correct inference and argumentation, develop the ability to ask questions and answer them, taking into account different points of view. University of Silesia to hold the XXXI conference „Acquisition of Second / Foreign Language”

2019-05-15

The Institute of English Language at the University of Silesia invites participants to the 31st conference from the series „Second Language / Foreign Language Acquisition”. The title of the conference is „From code-switching to translanguaging”. The event will be held from 16 to 18 May in Szczyrk. Code-switching means a change of language code and translanguaging, means using the language interchangeably in different contexts of verbal interaction consciously or not, pursuing various communication purposes. They relate both to the situation of natural and class interaction, in which case the teacher interchangeably uses a given language (first or foreign) to achieve specific educational goals. The program includes workshops for PhD students studying in the field of applied lin-

guistics, as well as meetings and trainings with the participation of editors of prestigious academic journals. The university professors from Austria, Spain, Ireland, Hungary and Great Britain will participate in the conference. PhD student of the University of Gdańsk receives a special prize at the SCRIPT PRO 2019 competition

2019-05-17

Elżbieta Benkowska, PhD student at the Faculty of Philology at the University of Gdańsk, received the Special Award in the prestigious script competition SCRIPT PRO 2019. Reward of 10 thousand PLN was awarded to the script of the feature film „Orunia 4ever”. SCRIPT PRO is the most important Polish competition for screenwriters beginning of their careers. The submitting writer can send at most two full-length feature films made according to his texts. The integral element of the competition is the opportunity to develop the final texts in the Wajda School under the supervision of leading Polish filmmakers, screenwriters and consultants. The most successful scenarios include «Dancing's Daughters», «Gods», «Last Family», «Panic Attack» and «You're God».

University of Wrocław to hold a conference on German phraseology and paremiology in contact and contrast

2019-05-17

The Institute of German Philology of the University of Wrocław invites participants from 23 to 25 May for the second international scientific conference Deutsche Phraseologie und Parömiologie im Kontakt und Kontrast / German phraseology and paremiologia in contact and contrast. The conference will be attended by 87 participants, including 34 scientists from 17 European countries (Germany, Czech Republic, Slovakia, Slovenia, Croatia, Spain, Hungary, Austria, Ukraine, Greece, Kosovo, Switzerland, Russia, France, Norway, Poland) and the Unit-

ed States. They are recognized scientists from recognized German language centers in the world. The meeting is organized by the Department of Applied Linguistics. Its co-organizer is the Institute of Slavic Studies at the University of Leipzig. The conference is also supported by the Phraseological Section of the Linguistics Committee of the Polish Academy of Sciences. More: <https://uni.wroc.pl/o-niemieckiej-frazeologii-i-paremiologii-w-ifg/>

Professor Jerzy Sperka becomes the chairman of experts team in calls of the National Program for the Development of Humanities

2019-05-20

The Minister of Science and Higher Education appointed Prof. Jerzy Sperka, director of the Institute of History at the University of Silesia, to the position of the chairman of the expert group for the evaluation of the applications for Universalialia 2.1 and Universalialia 2.2 competitions organized as part of the National Program for the Development of Humanities (NPRH). NPRH is a grant program addressed to humanists, which is to facilitate the integration of Polish humanities with European and world humanities, and young scientists to enable the development of a scientific career in cooperation with foreign scientific centers. The program is also intended to disseminate the achievements of Polish humanities in the world and ensure stable conditions for the implementation and financing of key, long-term research, editorial and documentation projects requiring the creation and maintenance of highly specialized and stable research teams.

Scientists of the Wrocław University of Environmental and Life Sciences to examine the cultural and natural heritage of Upper Lusatia

2019-05-20

Anthropologists from the University of Life Sciences in Wrocław will receive 300,000 euro for an educational and research project „1000 years of Upper Lusatia - people, towns, cities”. The money comes from the EU Regional Development Fund under the Cooperation Program INTERREG Poland-Saxony 2014-2020. The scientific and educational project is carried out by researchers from the Department of Anthropology of the UPW. Its main purpose will be to show the cultural and natural heritage of Upper Lusatia in the context of changes that have taken place in the region over the last thousand years, that is, from the time when it became the Polish-Czech-German borderland. The project is a continuation of previous research on the natural and cultural heritage of Upper Lusatia carried out in the disappearing villages of Toporów and Nowoszów, thanks to which scientists managed to trace human and environmental relations over the last 11,500 years - from the beginning of the Holocene to the present day. University of Warsaw to launch Polish-Spanish meetings

2019-05-21

On 21-22 May 2019, the Faculty of „Artes Liberales” of the University of Warsaw, the Spanish Embassy in Poland and the Cervantes Institute are organizing the second Polish-Spanish meetings. During the two-day international scientific conference, the participants will discuss the situation of Spain in the time of the Versailles treaty, Polish-Spanish parallelisms in art and the life of Poles in Madrid during World War I. Invited experts include: Prof. Alfonso Bullón de Mendoza from the University of San Pablo CEU in Madrid, writer and art critic Juan Manuel

Bonet Planes, and Dr Jan Stanisław Ciechanowski and Prof. Jan Kieniewicz from the «Artes Liberales» Faculty of the University of Warsaw. Welcome speech will be given by Prof. Robert Sucharski, dean of the Faculty of «Artes Liberales» UW and Francisco Javier Sanabria Valderrama, Ambassador of Spain in Poland.

Wielkopolska Center of Advanced Technologies to launch Laboratory of Language Neuroscience

2019-05-22

The Wielkopolska Center of Advanced Technologies in Poznań has launched Laboratory of Language Neuroscience. Scientists of the Faculty of English Studies at Adam Mickiewicz University will study, using electroencephalographs, what happens in the brain when we speak, read and learn new words. The subject of research will include bilingualism, creativity, as well as emotions evoked by language and its learning. Currently, two research projects are carried out in the laboratory, including executive functions of the brain responsible for creating, maintaining, supervising, correcting and implementing the action plan and processing the meanings of words in the mother tongue and the foreign language. The research results will be used for the development of learning methods of foreign language and also in the therapy of various disorders such as, for example, aphasia (loss of speech ability in a person who had no problems with it before, e.g. due to diseases or brain damage).

Student of the Nicolaus Copernicus University becomes a laureate of the Scholarship of the Cultural Heritage Foundation

2019-05-22

Zuzanna Jarmulska, a student at the Faculty of Fine Arts at the Nicolaus Copernicus University in Toruń is this year's laureate of the Scholarship of the Cultural Heritage Foundation. The winner is

studying the conservation and restoration of works of art in the fifth year (specializing in conservation and restoration of stone sculpture and architectural detail). The student was awarded for the implementation of the diploma thesis, the subject of which is a seventeenth-century crucifix made of alabaster, from a valuable epitaph altar in the church in Ryńsk. Work on the subject required understanding the art of preservation of monuments and knowledge of the historical context of the creation of a work of art and stylistic analysis. The Cultural Heritage Foundation was established in 2012 at the initiative of Dr Michał Laszczkowski and Paweł Wilski. Its aim is to protect and promote Polish national heritage as an element of the European cultural heritage.

University of Silesia to hold conference on the perception of mythology for centuries

2019-05-28

The Club of Young Classics operating at the Department of Classical Philology at the University of Silesia invites participants on May 31 to the nationwide scientific conference „Between myth and man. Perception of mythology for centuries.” The theme of the event will focus on the Greek, Roman and Scandinavian mythology and its reception in later times. The guests of the conference will be representatives of Polish research centers, including from Warsaw, Łódź, Kraków, Rzeszów and Lublin. Students from IV Secondary School in Sosnowiec are also invited to participate. The participants will discuss the following topics: problems of contemporary myth; Scandinavian vision of the end of the world; the reception of the myth about Icarus in Italian literature; various reflections of Narcissus and Egyptian religion as the meaning of human life.

Poznan Summer School of Living Latin and Greek

2019-05-29

The Adam Mickiewicz University in Poznan invites participants from July 29 to August 11 to participate in the next Poznan Summer School of Latin and Latin (Schola Aestiva Posnaniensis MMXIX). Classes in Latin will take place at 5 or 6 levels: Tirones I - classes for people who have never studied Latin; Tirones II - for those who have already learned the basics of Latin and Tirones III and Tirones IV. The organizers of the school are also planning the creation of a group for intermediate persons - Tirones proveciores and Veterani - for people with advanced knowledge of Latin. Greek classes will take place on three levels: Tirones - for people who have never studied Greek; Media tirones - for people who have studied Greek but do not speak and do not read fluently in this language without a vocabulary and Veterani - for people with advanced knowledge of ancient Greek.

Historical Institute of the University of Warsaw to hold Scientific conference on the 30th anniversary of the first partly free elections in Poland

2019-05-30

On June 3, 2019, the Historical Institute of the University of Warsaw (IH UW) is organizing a scientific conference devoted to recalling the memory and circumstances of conducting the first partially free parliamentary elections in Poland on 4 June 1989. The so-called contractual elections took place on June 4 and 18, 1989. The rules of their organization were agreed within the so-called Round Table talks. As a result, candidates not from then ruling communist party and satellite parties applied for 35% of seats in the Sejm and for all Senate seats. These were the first free parliamentary elections in Poland after the Second World War. The participants of the event will include Dr Łukasz Niesiołowski-Spano, director of IH UW, Dr Paweł Kowal (Eastern European Studies at the University of Warsaw), Prof. Jan Skórzyński (Collegium Civitas), Prof. Andrzej Friszke (Institute of Political Studies of the Polish Academy of Sciences)

and Prof. Tomasz Nałęcz (Academy of Humanities in Pułtusk).

Days of the University of Economics in Krakow

2019-05-30

Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin took part in the Days of the University of Economics in Krakow (UEK) held on May 28, 2019. Opening the ceremony, the rector of the Krakow University Prof. UEK Dr Eng. Andrzej Chochół quoted Barack Obama: „Today, more than ever before, science seems to be the key to survival. Both for our world and for ourselves as a nation and for our well-being and security. The time has come for us to treat science as one of the most important areas of life.” During the speech, the rector also drew attention to the importance of science and inventiveness for the development of humanity. In his opinion, «though development is inscribed in human nature, it has never been as intense in contemporary history as it is today».

University of Silesia to hold the conference „Polish didactics and its teachings”

2019-05-30

The Faculty of Philology at the University of Silesia in Katowice invites participants on October 9 and 10 to the interdisciplinary scientific conference „Polish didactics and its teachings”. The participants will try to answer the following questions: what are the unused possibilities of Polish didactics in the use of other sciences, how to use the knowledge of particular sciences in Polish lessons in a methodically aware, effective and responsible manner, which Polish language didactics can offer the didactics of other sciences and whether other disciplines are the auxiliary sciences of didactics of literature. The participants will watch a contemporary Polish short film and meet with directors, as well as participate in workshops devoted to interdisciplinary teaching: «Poland on screen. Contemporary short film on cultural and literary education», «Games in the service of didactics» and «Muses’ door is open», i.e. an interdisciplinary journey with a work of art.

Adam Mickiewicz University in Poznan to open its branch in Athens under the Polish Archaeological Institute

2019-06-04

The branch of Adam Mickiewicz University in Poznan (UAM) will be opened by the Polish Archaeological Institute in Athens. Its task will be to represent Polish scientists who intend to conduct research in Greece. The Central Archaeological Council of the Ministry of Culture and Sport of the Hellenic Republic officially recognized the existence of the Polish Archaeological Institute in Athens. - Establishment of such an institution is particularly important for Polish archaeologists, because according to Greek law, independent excavations or other field research can be conducted there only by a foreigner whose country opened its own research institute - says its director, Prof. Janusz Czebreszuk from UAM. The Institute will have its headquarters in the center of Athens. Real estate purchases including a library, administration and guest rooms are in progress. The establishment of the facility would not be possible without the support of the Ministry of Science and Higher Education and the Ministry of Foreign Affairs, including the Polish Embassy in Athens. More: <https://amu.edu.pl/wiadomosci/aktualnosci/uam-otworzy-w-atenach-polski-institute-archeological>

Researcher of the University of Wrocław nominated for the NIKE Literary Award

2019-06-05

Professor Urszula Glensk from the Department of Literary and Journalistic Forms, Institute of Journalism and Social Communication of the University of Wrocław was nominated for the NIKE Literary Award for the book „The Hirszfelds- Understanding blood”. The book was written by Prof. Glensk. It tells the story of Ludwik Hirszfeld, an outstanding physician, world-renowned immunologist, candidate for the Nobel Prize and his wife Hanna, also an outstanding doctor, creator of the Wrocław pediatric school. Ludwik Hirszfeld came to Wrocław with his wife in July 1946. He was the first dean of the Faculty of Medicine and the head of the Department of Microbiology and Immunology. His greatest achievements include the discovery (in cooperation with E. von Dungere) in 1910 of the rules of heredity of blood groups marked by him as A, B and O. His achievement is also the introduction of blood groups recognized by world institutions in 1927 and still in use.

Lublin University to launch the 4th Test of English

2019-06-06

By June 10, 2019, participants can submit their entries to the fourth Test of English Challenge. It is the largest initiative of this type in the Lublin Province organized by the Promotion Center and the Center for the Teaching and Certification of Foreign Languages at the Maria Curie-Skłodowska University (UMCS) in Lublin. The test will be held on June 14 and is addressed to secondary school and university students from all over the country who are 16 years old and less and are not students, graduates and employees of English, American and applied linguistics, and related fields. The participants are to answer 60 test questions at B2 / C1 level in 45 minutes. Participation in the test is free, and the number of participants is limited to 400 people. More: <https://www.umcs.pl/pl/enqForm,iv-edycja-wielkiego-testu-jezyka-angielskiego-challenge-accepted-14-06-2019-r-formularz-zgloszeniowy,505.html>

University of Silesia to hold the fifth conference „Translation spaces”

2019-06-06

The Institute of Philology of the East Slavic University of Silesia and the Translation Commission at the International Committee of Slavists invite participants to the fifth conference „Translation spaces” on October 24 and 25. The conference will be an opportunity to meet translators representing numerous centers in the country and abroad. A broad approach to the subject, included in the conference title, will allow to take into account different methodological approaches. The subject will be both general issues, as well as detailed phenomena analyzed on the basis of translations of literature and specialist texts. The fifth program will include a new section devoted to the problem of the use of new technologies in the translation. The working languages of the conference will be Polish and Russian. The papers should be sent by 20 June by email to the following e-mail address: przestrzenieprzekladu@us.edu.pl

Lublin Institute of Cultural Studies to hold the Day of Cultural Studies

2019-06-07

The Maria Curie-Skłodowska University (UMCS) in Lublin is organizing the Culture Day on 11 June 2019. The main goal of the event is „a presentation of the role and importance of modern cultural studies for the development of a modern and open society”. The Maria Curie-Skłodowska University has prepared six thematic panels, including lectures, debates and workshops on computer animation, as part of the Cultural Day celebrations. The organizers also prepared meetings with creators and animators of culture as well as graduates of Cultural Studies at UMCS. The event will include artistic events prepared by students. The culmination of the Culture Day will be thematic walks in the Lublin Open-air Museum and on the Jewish Lublin route.

University of Białystok to hold conference on celebrities and celebrity management

2019-06-07

The Inter-faculty Institute for Cultural Studies and Art of the University of Białystok (UwB) will inaugurate on June 12, 2019 a series of cultural lecturing guest lectures. The first will be delivered by Prof. Wiesław Godzic from the University of Humanities and Social Sciences in Warsaw. Professor Wiesław Godzic is a mediator and cultural scientist. The title of his lecture is «Celebrities and us, or the management of fame». He announces his lecture: «Who are the main actors of today's media: who is on the stage? They do not watch tv, but they use it.”

Katowice Faculty of Philology to hold the conference on the disturbances in the communication process

2019-06-07

The Faculty of Philology and the Institute of the Polish Language of the University of Silesia, the Scientific Association of Young Speech Pathologists, AGERE AUDE - Foundation for Knowledge and Social Dialogue and the Scientific Information Center and Academic Library are inviting participants to a speech therapy conference „Dialogue without barriers. Effective communication in the context of EBP - evidence-based practice”. The event will be held in the Scientific Information Center and the Academic Library. The scientists will talk about issues related to the diagnosis and therapy of communication disorders, the role of contemporary technologies in communication and the relationship between the quality of interpersonal communication and the quality of life. The aim of the conference is to disseminate the achievements and research results in the field of communication science. Its recipients are theoreticians and practitioners in the field of speech therapy, linguistics, communication sciences and its disorders, as well as representatives of social sciences and health sciences.

Archaeologists of the Adam Mickiewicz University in Poznań find the unique item

2019-06-07

Archaeologists' research from the Institute of Archeology of the Adam Mickiewicz University in Poznań excavated a unique discovery in the Kolegiacki Square in Poznań. They found the „pearl bonnet“ in the eastern part of the former collegiate church of St. Mary Magdalene. The conservation of a unique European item was carried out also by the Warsaw experts, where until August 4, 2019, the bonnet will be shown as an attraction of the exhibition «Rule and Dazzle. Jewels and jewellery in Poland in the 16th and 17th centuries». The bonnet was found in the grave of a noblewoman of the Nałęcz noble family, dated back to the 16th century. Until now, this kind of bonnet could only be admired on paintings, and the Poznań discovery significantly enhances the knowledge about how the ancestors made them, and wear them. A similar bonnet was worn by Barbara Radziwiłłówna. A priceless item can be viewed on the project's website: <https://www.facebook.com/ProjektKolegiataPoznan/>

Archaeologists of the University of Warsaw completed the excavation season in Albania

2019-06-13

Researchers from the Center for Research on the Antiquity of Southeastern Europe of the University of Warsaw (UW) have completed their excavation season in Albania. Archaeologists continued their work as Shodra-Bushati, where last year they found ruins of an unknown ancient city. This year, Warsaw researchers discovered successive sections of 3.5 m wide defensive walls made of large blocks of stones and a second entrance gate to the settlement. They also pre-examined the top of the hill above the city, where they discovered a stone platform made of stone blocks. They also found numerous fragments of Hellenistic pottery, including luxury one, which allow to determine the date of the creation and destruction of the fortifications. More: <http://www.novae.uw.edu.pl/>

International platform for humanities and social sciences

2019-06-13

Creating a platform for humanities and social sciences that will improve communication between researchers - this is the goal of the TRIPLE project, awarded with EUR 5.6 million from the Horizon 2020 program. One of the project's executors is the Digital Humanities Center of the Institute of Literary Research of the Polish Academy of Sciences. The project is to create a multilingual and multicultural platform for humanities and social sciences to exchange information about their activities and projects, as well as search for scientific materials and research data published in different languages. Works on TRIPLE will last 3.5 years and will start in autumn 2019. 18 institutions from 12 European countries (Austria, Belgium, the Czech Republic, France, Greece, the Netherlands, Germany, Norway, Poland, Portugal, Great Britain and Italy) participate in the project.

Catholic University of Lublin to hold the conference „The Bible in Literature, Art and Language“

2019-06-14

The Faculty of Contemporary Literature of the Institute of Polish Philology of the Catholic University of Lublin (KUL) is organizing on June 15, 2019 a nationwide scientific conference „The Bible in Literature, Art and Language“. The organizers emphasize, that the Bible as a work of culture «invariably strongly affects artists and writers. New works are emerging that constitute fresh interpretations of both the New and the Old Testament. « The conference will focus on the following areas: The Bible in contemporary works of literature and art; presence of the Bible in the works of literature and art in the past; presence of the Bible and biblical motifs in the theater; presence of the Bible in pop culture; the Bible and performance and the Bible in language.

Scientific conference „Treasures of Mexico“ to be held in Krakow

2019-06-17

The Mexican Embassy in Poland, the Jagiellonian Library, the Mexican Center of the Jagiellonian University (UJ) in Krakow and the Mexican Center of the National Autonomous University of Mexico with a branch in Berlin are organizing on 19 June 2019 the scientific conference „Treasures of Mexico“. The event will include the presentation of manuscripts from the archive of Alexander Humboldt and objects from the collection «Manuscripta americana» from the former Prussian State Library in Berlin, which is kept in the Jagiellonian Library. The celebrations of the 250th anniversary of the birth of the eminent scientist and researcher, Alexander Humboldt will include the «Treasures of Mexico» conference that will contribute to the scientific discussions about this great humanist and the history and conquest of Mexico.

15. Philosophical Rally in Krakow

2019-06-21

The Institute of Philosophy of the Jagiellonian University in Krakow co-organizes the 15th Philosophical Rally, which will be held on 28-30 June 2019. The conference is organized annually by the Center for Philosophical Research together with one of the universities. This year, the Jagiellonian University is the co-organizer and host of the Rally. Philosophical Summit is a conference addressed to students, PhD students and researchers dealing with philosophy and related fields. The aim of the Rally is to present the state of the latest research conducted within the philosophy. The conference is also to promote the integration of participants with different experience levels and from different research centers. The lectures of students and PhD students are accompanied by the appearance of significant researchers.

Marcin Nowrotek becomes the author of the best musical animation of the „Golden Kuker Sofia” Animation Festival

2019-06-26

Animation „Nebula” by Dr Marcin Nowrotek from the Academy of Fine Arts in Katowice was recognized as the best music film during the 10th International Animation Festival „Golden Kuker Sofia” in Bulgaria. The film Nebula is an experimental attempt to find a common point between two tendencies in the history of film - the Lumiere's concept of film as a recording of reality and Melie's philosophy to use it as a tool for creating fanciful worlds. Nebula draws from both these attitudes and becomes a combination, where a registered figurative picture intertwines with abstract compositions. Using the technique of volumetric filming allows for registration of the event - meetings of musicians playing the work of Maciej Obara and to obtain a visual experience of music by using the soundtrack of the recorded work. Nebula on the Internet: <https://vimeo.com/nowrotek/nebula>

Historians from Lublin created a mobile application on the Routes of Independent Poland in 1914-1922

2019-07-01

The historians of the Institute of History of the Maria Curie-Skłodowska University (UMCS) in Lublin have launched the first mobile application entitled Trails of Independent Poland 1914-1922. The application includes an Interactive Historical Atlas, addressed mainly to the young generation and history enthusiasts. It was prepared by a team from the Institute of History of UMCS under the scientific supervision of Prof. Jan Pomorski. The authors attached great importance to the educational values of the application as well as to the methodology of visual history, thanks to which a unique source of knowledge and entertainment was created. The application users will be able to see an animated report from the Bat-

tle of Warsaw, hear the voice of Józef Piłsudski, and get to know two visions of the reconstruction of Poland. Through the five independence routes of formation of the Second Polish Republic, the user will learn about various historical concepts. Each route includes one history lesson with dedicated 3D maps and extensive historical knowledge in the form of multimedia, photos and source documents. The application can be downloaded on Google Play and the App Store. More: www.umcs.pl/pl/szlakami-niepodleglej.html

World Congress of Historians to be held next year in Poznan

2019-07-01

Poznań will be the host of the XXIII International Congress of Historical Sciences 2020. Agreement on cooperation in the organization of the congress was signed by: mayor of Poznań Jacek Jaśkowiak, rector of the University of Adam Mickiewicz in Poznań, Prof. Andrzej Lesicki and the president of the Poznań Local Tourist Organization, Jan Mazurczak. The organizer of the congress is the International Committee of Historical Sciences - an association of historians from around the world established in Geneva in 1926. The event takes place every five years in different parts of the world. The congress will include over 100 various thematic panels, specialist sessions and discussions on important issues from antiquity to the present day. The Poznań partners will launch the so-called Research Forum, during which universities, research institutes and foundations will present their research projects. The Congress will also be accompanied by the International Historical Book Fair. More: <https://amu.edu.pl/dla-mediow/komunikaty-prasowe/swiatowy-kongres-historikow-w-poznaniu>

Dr Bartosz Wcisło from the University of Warsaw receives the E.W. Beth Prize

2019-07-04

Dr Bartosz Wcisło received the E.W. Beth Prize for his PhD thesis defended at the Institute of Philosophy of the University of Warsaw (UW) in 2018 Fri „Understanding the strength of compositional

truth”. PhD thesis of Bartosz Wcisło was created under the direction of Dr Cezary Cieśliński from the Institute of Philosophy of the University of Warsaw and was one of 15 other works submitted to the competition. The award ceremony will take place on 15 August 2019 in Riga during the European Summer School in Logic, Language and Information. The Beth Prize, awarded since 1988 by the Association for Logic, Language and Information, is the world's most important reward for doctoral theses in the field of logic. The dissertation of Dr Bartosz Wcisło is the third doctoral dissertation from the University of Warsaw, which received the Beth Prize. Only the University of Amsterdam can boast a larger number of winners than the University of Warsaw.

ArchaeoBalt project has been launched discovering the heritage of the Baltic Sea region

2019-07-08

The University of Gdańsk, the Gdańsk Museum, the University of Aarhus, the Bornholm Museum and the University of Lund are carrying out the ArchaeoBalt project. Due to the project it will be possible to jointly discover the heritage of the Baltic Sea region, hidden under the surface of Denmark, Poland and Sweden. The project partners will create a network of archaeological centers to disseminate knowledge about archeology and the development of archeotourism. The website „Virtual Museum of the South Baltic” will also be created with the most important information on the heritage of the Baltic Sea region. Thanks to the ArchaeoBalt project, it will be possible to discover the heritage of the Baltic Sea region, hidden under the surface of Denmark, Poland and Sweden through educational events such as festivals, games, lectures and open archaeological research. The project is co-financed by the European Regional Development Fund as part of the Interreg South Baltic Program 2014-2020. Archaeologists of the University of Warsaw in autumn 2019 to start works in Ethiopia

2019-07-18

In the autumn of 2019, scientists from the Center of Mediterranean Archeology of the University of Warsaw (OŚ UW) will begin excavation works in a completely new area - in the Ethiopian region of Tigray, bordering Sudan and Eritrea under the joint program between the University of Warsaw and the University of Mekele. The project manager is the Italian researcher Dr Michela Gaudiello, who has experience in conducting archaeological research in Ethiopia, and her knowledge of archaeological material and historical issues will be crucial for selecting future research sites for the first Polish excavation project in Ethiopia. North-East Africa in antiquity and the Middle Ages, although divided into several political organisms was one cultural community. Speaking in different languages, the communities were in constant contact with each other by competing or cooperating. In certain moments in history, this region was a center of civilization for Europe, Africa and West Asia - says Dr Artur Obłuski, director of the Central School of Warsaw University.

Lecturers of Collegium Civitas participate in Pol'and'Rock Festival 2019

2019-07-23

Collegium Civitas lecturers in Warsaw will give lectures and take part in festival discussions at the Academy of Fine Arts during Pol'and'Rock Festival 2019 in Kostrzyn on the Oder in the tent of the Ombudsman on the 1st and 2nd of August 2019. During the lecture «Escape from Democracy» Dr Roland Zarzycki will attempt to answer the following questions: What mechanisms decide about the fact that we lose faith in the possibility of influence and change? What is the future of the democracies in which we live and who decides about this future? Dr Adam Zemełka will try to attract listeners with the topic «The emotional life of the brain» and Dr Paweł Maranowski will give a lecture «Are exit polls false?»

Extraordinary discovery of Kraków archaeologists in the Bielske Tatras

2019-07-25

Krakow archaeologists, participating in the Polish-Slovak project, discovered traces of the settlement of the people established several thousand years ago inside the Huczawa Cave in the Bielske Tatras. The Polish-Slovak research began in the Huczawa Cave on the slopes of Kobyli Wierch at the beginning of July this year. The researches are run under the supervision of Prof. Paweł Valde-Nowak from the Institute of Archeology of the Jagiellonian University and Dr Marian Sojak from the Institute of Archeology of the Slovak Academy of Sciences in Nitra. The works are carried out as part of the project „Paleolithic ritual project in the Cave in Obłazowa”, financed from the grant of the National Science Center. As a result of previous work, dozens of stone blades of hunter spears were discovered in one piece or in fragments, including specimens typical of Magdalenian culture from its late development phase, dated to 13-12 thousand years BC.

Conference in Opole „Fashion in the mirror of culture. LANGUAGE - LITERATURE - CULTURE”

2019-07-25

The Faculty of Philology of the University of Opole is inviting participants to the national scientific conference, which will be held on 8 and 9 October, „Fashion in the Mirror of Culture. LANGUAGE - LITERATURE - CULTURE”. The conference is addressed to scholars, PhD students, graduates of higher education and students. The organizers of the event are proposing a twofold understanding of fashion - both in the context of the importance of fashion and changes in clothing, as well as in the identity and subject perspective. They are planning a multi-directional approach to the subject engaging researchers from various fields of the humanities - literary scholars, linguists, and cultural studies. The two-day meeting will also be devoted to considerations in the context of discourses on fashion in literature, film, theater, visual arts, popular culture, media, as well as in the field of aesthetics, fashion studies and performance. More: www.mrzedzwierciadlekultury.pl

Conference „What’s new in new media. The future begins today” to be held in October in Katowice

2019-07-30

The Institute of Cultural Sciences and Interdisciplinary Studies at the University of Silesia is inviting participants to the national scientific conference on „What’s new in new media? The future begins today.” The subject of the conference was taken from the futurological perspective and is an invitation to reflect on what current trends, trends and communication behaviors form the foundations of what is new and unknown, announcing further changes in media culture determined by the media. Meeting at the Scientific Information Center and the Academic Library in Katowice will also be an opportunity to try to answer the following questions: what will be the future of new media, what devices we will use, what

will be the future of mobile media or what form they may take. The invitation to participate in the event is addressed to theoreticians, researchers of contemporary culture, media experts, communicologists, and media anthropologists, as well as practitioners from the new media industry.

Cardinal Stefan Wyszyński University to document the legacy of Polish immigrants in the USA

2019-07-31

In July 2019, documentation works have been conducted by the Institute of Art History (IHS) of the Cardinal Stefan Wyszyński University (UKSW) in the United States as part of the project „Polish Parishes and Churches in the USA”. The work of Warsaw scientists consisted of a source and photographic inventory of the «Polish Cathedrals», under a grant awarded by the Ministry of Culture and National Heritage and supported by the POLONIKA Institute. The project manager is Dr Jacek Gołębiowski from Catholic University of Lublin, and the Institute of Art History is represented by Dr Katarzyna Chrudzimska-Uhera, Prof. UKSW Dr Anna Czyż, Dr Bartłomiej Gutowski and Norbert Piwowarczyk. The work is aimed at documenting the disappearing heritage of Polish economic and political emigres, who came to the America at the turn of the 19th and 20th centuries.

University of Silesia to launch a course for foreign language teachers

2019-08-01

Until August 22, the School of Polish Language and Culture at the University of Silesia will conduct a course for foreign lecturers of Polish as a foreign language. It is attended by people who teach Polish every day in schools, colleges and various cultural institutions in Ukraine, Russia, Japan, Slovenia, China and Azerbaijan. Participants take part in several specialist panels: linguistic, literary and cultural, realist and methodical meetings. Classes are aimed to teach them the latest methods and techniques of

working as a foreign language teacher, suggesting methodically attractive solutions to selected issues and presenting textbooks, workbooks, lexicons, collections of tasks that have appeared in recent years. Lecturers will also take part in the practice, conducting classes with students participating in the summer school of language, literature and Polish culture. The course is organized on behalf of the National Academic Exchange Agency.

University of Silesia in Katowice to talk on literature, documentary and humanistic education

2019-08-06

Department of Didactics of Polish Language and Literature and the Institute of Library and Information Science of the University of Silesia in Katowice are inviting participants to the scientific conference in October on „How to make facts understandable? Literature, document, humanistic education and (de) assembly of cultural representations of reality”. The conference will be an opportunity to reflect on beautiful literature as a narrative proposing various paradigms of reality description, a document like seismograph responsive to all changes and the shape and role of humanistic education incorporating this type of texts into school practice. The discussion topics will include literary texts, non-fiction literature, personal documentary literature as an attempt to give meaning to facts, non-fiction / personal documentary literature as an opportunity for the presence of important contemporary questions in school education (e.g. climate crisis, issues related to migration). Pomeranian Academy in Słupsk to hold the 5th National PhD Students' Scientific Conference

2019-08-06

PhD students of the Institute of History and Political Sciences of the Pomeranian Academy in Słupsk are inviting students to participate in the 5th National Doctoral Conference of „Poland and neighbors over the centuries”. The conference will take place on 28 September. The theme of the fifth conference will be the processes taking place in Poland and in neighboring countries, as well as the mutual relations between Poland and its neighbors. This year's conference is part of the calendar of the Jubilee celebrations of the 50th anniversary of the Pomeranian Academy in Słupsk. The organizers are planning to discuss the following issues: multifaceted human activity in Polish and neighboring territories; everyday life of an inhabitant of Polish lands and its neighbors throughout history; skirmishes, wars, armed conflicts taking place on Polish and neighboring lands in history and issues of economic, social and political relations taking place in Polish and neighboring lands over the centuries.

Center of Mediterranean Archeology to offer archeological scholarships in Egypt

2019-08-09

Students and graduates can apply for scholarships for conducting scientific archeological research in Egypt or neighboring areas. Scholarships offered by the Center of Mediterranean Archeology (CAŚ) of the University of Warsaw (UW) are financed from the funds of the National Agency for Academic Exchange. The scholarship creates the opportunity for scientific development and participation in the work of Polish archaeological missions in Egypt. Students and graduates of Polish universities can apply for them - regardless of their citizenship. The scholarship is PLN 1,600 per month. The CAŚ UW Cairo station provides free accommodation and access to the reading room, office equipment,

infrastructure and the library of the Station. Scholarship holders can also count on help in facilitating contact with Polish and foreign archaeological missions or scientific institutions. More: <https://pcma.uw.edu.pl/2019/08/05/nabor-na-stypendia-w-kairze-2019-2020/>

Polish language teachers set off to the world

2019-08-09

From August 2-4, 2019, a group of teachers teaching Polish as a foreign language held a conference in Krakow. They were selected by the National Agency for Academic Exchange under the „Lectors” program. The event was attended by over 70 Polish language teachers who will teach Polish at universities from almost all over the world in the 2019/2020 academic year. The conference was a preparatory workshop for the trip and it was also an opportunity to meet for Polish language teachers who work in different parts of the world on a daily basis.

Scientists from the Polish Academy of Sciences studying changes in the Polish countryside in 1918-2018

2019-08-16

Researchers from the Institute of Rural and Agricultural Development of the Polish Academy of Sciences (PAN) collected memories describing the fate of rural families. They will share the conclusions during the conference „One Hundred Years of Polish Village Development”, organized on October 10 and 11, 2019 in Warsaw. During the event participants will be able to see an exhibition of the diaries. The beginning of the program was the competition «One hundred years of my farm». It was announced by the Institute of Rural and Agricultural Development of the Polish Academy of Sciences (IRWiR PAN) together with the Polish Agricultural Publishing House. 55 people shared their private stories and unique photos. The collected material describes personal experiences and events creating the image of the Polish village over the last century. Pre-war poverty, wandering due to displacement during World War

II, difficult returns after 1945 are just some of the topics in the diaries. Conference «One hundred years of Polish village development. Interdisciplinary inter-generational dialogue” will be the culmination of a research project implemented by the IRWiR PAN, whose theme was the development of the Polish country in 1918-2018.

Poznań archaeologists discover coins at the Legionnaire camp in Novae

2019-08-16

Nearly 50 bronze coins from 1700 years ago were discovered by Poznań archaeologists during excavations at the Legionnaires' camp in Novae in northern Bulgaria. Scientists speculate that the treasure was hidden by one of the Roman soldiers because the coins were found in legionary barracks. The treasure was hidden in the barracks wall in a wooden box. A significant part of the discovered coins were minted during the times of Emperor Licinius I (308-324). Earlier, only six coins of this ruler were found in Novae. The most discovered coins of Licinius I were minted in the years 312-315. Shortly after 315 the first military confrontations took place between Licinius I - ruler of the eastern part of the Roman empire and Constantine I, who ruled its western part. After the defeat at the Battle of Adrianopoly in 324, Licinius was imprisoned in Thessaloniki and then strangled.

Archaeologists from the Cardinal Stefan Wyszyński University discovered an ancient settlement in the Białowieża Forest

2019-08-19

As part of the National Science Center project, Prof. Przemysław Urbańczyk and the archaeologists from the Institute of Archeology of the Cardinal Stefan Wyszyński University (UKSW) in Warsaw discovered an ancient settlement in the Białowieża Forest. During the research, numerous antique items were discovered - mainly fragments of clay vessels, flints, objects of metal and glass. On this basis, it can be concluded that human activity was concentrated there primarily in the last centuries BCE, as well as in the first centuries AD and belonged to the culture of stroke-ornamented ceramics and the later Wielbark culture. Another period of the human activity in the site studied by archaeologists is modernity (the 17th century). Researchers managed to find coins from this period.

Poznań University to hold the Congress of the International Union of Anthropological and Ethnological Sciences

2019-08-19

About 800 scientists will participate in the congress of the International Union of Anthropological and Ethnological Sciences, which will be held in Poznań on August 27-31. Scientists from 75 countries around the world will meet at the Collegium Historicum of the Adam Mickiewicz University in Poznań. The theme of the congress is «World Solidarities». The concepts of compassion, community and solidarity are now particularly important at a time when global warming and social inequalities are forcing entire populations to migrate and causing the growth of exclusion ideologies. Participants in the event include many prominent representatives of science: Prof. Chris Hann from the University of Cambridge, director of the Max Planck Institute in Halle in the field of social anthropology, who will

give an inaugural lecture, and Prof. Alisse Waterston from the City University of New York - former president of the American Anthropological Association. More: <https://www.iaaes2019.org/>

Lublin to hold Portuguese literary competition

2019-08-20

The Portuguese Language Center / Camões at Maria Curie Skłodowska University (UMCS) in Lublin is inviting participants to take part in the fifth Portuguese literary competition. The purpose of the competition is to commemorate the 500th anniversary of a sea voyage around the world of sailor Ferdinand Magellan by creating a literary text in Portuguese on travel topics in the form of a chronicle or fictional story. The competition is directed to people for whom Portuguese is not a native language. It is open, which means that people from all non-Portuguese speaking countries can participate and it is not limited to Polish citizens only. Works should be sent by November 30, 2019. More: <https://phavi.umcs.pl/at/attachments/2019/0731/143937-regulamini-pl-v-konkurs-literacki-2019.pdf>

School of French Law at the University of Gdańsk started application process

2019-08-20

Application process for the VIII School of French Law at the University of Gdańsk has begun. Classes will be conducted by lecturers at the University of Gdańsk, at the University of Warmia and Mazury and at the University of Toulouse Capitole 1. The organizers are inviting everyone who wants to learn more about French and European law. The course is addressed to students or graduates of universities (in particular law, administration, economics, management, Roman philology, history, diplomacy, political sciences), as well as to PhD students, trainees, practitioners of French law and language interested in learning the French and European law system and wishing to become acquainted with French legal terminology. Applications will be accepted until January 15, 2020, the order of applications decides about their acceptance. Participants who successful-

ly complete the classes will receive the university's «Certificat d'introduction au droit français et européen».

Scientists investigating the Piast monuments on the bottom of Lednickie Lake

2019-08-20

Researchers from the Center of Underwater Archeology at the Nicolaus Copernicus University in Toruń together with researchers from the Jagiellonian, Warsaw and Gdańsk Universities are conducting research on the bottom of the Lednickie Lake. In this area probably the first baptisms of dignitaries from the surroundings of Mieszko I were performed. The Center of Underwater Archeology has continued its research on the islands of the Lednickie Lake conducted since the 1980s by the Department of Underwater Archeology UMK. The island of Ostrów on Lake Lednickie was one of the most important centers of the state of the epoch of the early Piasts. It was here that Bolesław the Brave was probably born, and the stone chapel next to the palatium was the place of baptism of the entourage of Mieszko I, and maybe himself. This year, researchers focused mainly on the bridge from Ledniczka island discovered 2 years ago, which in the time of Mieszko I connected the knight's watchtower to the mainland. Although only wooden fragments of the structure were left, it was possible to create its digital reconstruction. More: <https://www.umk.pl/consciousci/?id=26280>

Wrocław University of Science and Technology to hold exhibition and discussion about modernism - „Concrete monsters”

2019-08-21

„Concrete Monsters” is an exhibition of 18 original posters depicting Eastern European stadiums, which over time grew into the landscape of their cities. The exhibition will be available for viewers from August 23 at the Wrocław University of Science and Technology. The event will be accompanied by a discussion panel with the participation of artists, scientists, sports journalists and musicians. Until recently, buildings made of concrete constituted the main element of the landscape of Polish cities and towns. Today they are slowly becoming a thing of the past, but 30 years ago many of Poles grew up in this space. One of the most important facilities of those days were stadiums, which gathered crowds of people supporting their beloved team every weekend. On August 23, invited artists, scientists, sports journalists and musicians will discuss the concrete relics of the past, their feelings and memories related to them, as well as the history of modernism in the world on August 23, in Wrocław, Poland or the world. More: <https://pwr.edu.pl/uczelnia/aktualnosci/wychowani-na-betonie-wystawa-i-dyskusja-o-modernizmie-w-sierpniu-na-pwr-11307.html>

University of Gdańsk to hold World Deans of Law Forum and the International Association of Law Schools conference

2019-08-27

On September 18-22, the Faculty of Law and Administration of the University of Gdańsk will host the Global Law Dean's Forum and the annual conference of the International Association of Law Schools (IALS). This is the first such congress organized in Poland. IALS is a prestigious academic association of science and higher education institutions providing legal education. During the Global Law

Dean's Forum, the deans of law departments will discuss strategic visions and standards for global legal education, and issues related to the role of universities and the judiciary system in shaping legal reasoning. After the Forum, guests will participate in the annual IALS conference to discuss the problems of methodology of law teaching, selected issues related to specific areas of law as well as interaction of law with business, culture and new technologies.

University of Warsaw to hold archaeological exhibition on Easter Island

2019-08-28

Until November 9, 2019, the MAPSE Rapa Nui Museum on Easter Island will hold an exhibition of archaeological works from the University of Warsaw (UW) entitled „The Third Dimension of Archeology”. The visitors can see copies of monuments made in 3D holoprojection and 3D printing, as well as take part in a virtual walk around a cave full of cave paintings. The exhibition is of multimedia and interactive character. The exhibition is directed to the local community and tourists. Visitors have the opportunity to take part in a virtual walk around the cave Ana Kai Tangata - one of the most famous caves on Easter Island, the only one where cave paintings have been preserved. Currently, the cave is not available to tourists, so a virtual walk is the only opportunity to explore its interior. The organizer of the exhibition is Dr Maciej Sobczyk from the Center for Pre-Columbian Research UW. The exhibition was created thanks to funds from the Ministry of Science and Higher Education.

University of Silesia to launch „Between interaction and innovation - creating a communication space in the digital world”

2019-08-28

The Faculty of Philology at the University of Silesia in Katowice received 180 thousand euro funding for the project „Between interaction and innovation - creating a communication space in the digital

world”. Researchers from the Silesian University together with researchers from Cyprus, Malta and Lithuania will work on strengthening the digital competences of humanistic-oriented students and increasing the communication competences of science students. The project involves the University of Silesia, European University Cyprus, University of Malta and Kazimiero Simona Viciaus Universitetas. As part of the project, digital textbooks will be created for both students and academic scholars, presenting how to communicate effectively and safely in the world of WEB 2.0, as well as an educational strategic game based on the concept of mapping knowledge and the idea of gamification.

University of Zielona Góra to hold Congress of Deans of Law Faculties of Public Colleges

2019-08-30

The Faculty of Law and Administration of the University of Zielona Góra will host the Congress of Deans of the Law Faculties of Public Colleges on September 4-6. The meeting will be accompanied by the scientific conference „Science and law teaching in the light of Act 2.0. First experiences and perspectives.” The choice of the topic of the conference was dictated by the urgent need to exchange views and experiences and to discuss the effects of new solutions as the provisions of the so-called Constitution for science are a novelty for the entire academic community, including lawyers representing legal sciences and teaching young lawyers. The leading introductory papers for the discussion will be given by eminent members of the bodies appointed on the basis of the new Act - the Scientific Excellence Council and the Scientific Units Evaluation Committee. The assessment of the practical effects of the higher education reform and its impact on each of the scientific centers represented in the Congress is also expected. State Higher Vocational School in Sanok to hold the conference „On the border of cultures and nations. Society - Economy - Culture”

2019-09-05

The State Higher Vocational School (PWSZ) in Sanok is organizing the 7th International Scientific Conference „On the border of cultures and nations, on September 12-14, 2019. Society - Economy - Culture. „ The conference aims at meeting and dialogue between researchers on historical, social, cultural and artistic issues, especially in the context of border phenomena. The event will be attended by researchers from Poland and abroad interested in socio-economic and cultural problems. During the conference, participants will discuss the following topics: ways to identify the group, community, individual in relation to the «other» and «their» - conflicts or tolerance; social and cultural relations on the borderlands and at the interface of ethnos, denominations, cultures, nations; diffusion of cultures on the borderlands; value system (and anti-values) of borderland residents; sense of national identity and national minorities on the border; transformations of folk culture in the borderland; folk artist in the local community; forms of religiosity: between continuity of tradition and secularization; economic and social dilemmas of border areas; tourism as a branch of the economy of the border regions.

Pomeranian University in Słupsk to hold a conference „Poland and its neighbors over the centuries”

2019-09-16

PhD students of the Institute of History and Political Sciences of the Pomeranian University in Słupsk are inviting participants to the 5th National Scientific Conference of PhD Students „Poland and its neighbors over the centuries’. The conference will take place on September 28 at the Academy’s headquarters. The theme of the fifth conference remains the subject of processes in Poland and neighboring

countries, as well as Poland’s mutual relations with its neighbors. This year’s conference is part of celebration of the 50th anniversary of the Academy. The organizers are planning a discussion on: Multifaceted human activities on Polish and neighboring lands; Everyday life of a resident of Poland and its neighbors throughout history; Skirmishes, wars, armed conflicts taking place in Polish and neighboring territories in history, and issues of economic, social and political relations that have taken place in Polish and neighboring territories over the centuries.

Lublin to hold XX Universal Congress of Polish Historians

2019-09-17

From 18 to 20 September 2019, the jubilee 20th Universal Congress of Polish Historians under the National Patronage of Andrzej Duda, the Polish President, will take place in Lublin. Particular items of the program of the 20th Universal Congress of Polish Historians will take place at the Center for the Meeting of Cultures, Lublin Conference Center and the Arena Lublin, as well as in the Council Hall of the Faculty of Humanities at the Maria Curie Skłodowska University (UMCS) and at the Catholic University of Lublin (KUL). The organizers are planning that the event will bring together over 800 scientists, teachers and students from Poland and abroad. The program of this year’s Congress includes debates and discussions of scientists in nine sections and five thematic panels as well as a poster session for PhD students. Panels include the seminar dedicated to the Union of Lublin with the participation of only foreign participants, a debate on the history of Poland told from the perspective of women and a panel about what history is needed by Poles today.

Conference and meeting of the Religious Language Commission and the International Congress of Slavists

2019-09-18

The Institute of Polish Studies and Cultural Studies and the Institute of Slavic Studies of the Opole Uni-

versity are inviting participants to an international scientific conference „Religion and style” on September 19 and 20. As part of the conference, the organizers are planning a meeting of the Religious Language Commission at the International Congress of Slavists. The program includes speeches by 30 lecturers - linguists, literary scholars, culture scholars and theologians from five foreign centers (China, Czech Republic, Russia, Serbia, Slovakia) and several Polish centers (Kraków, Lublin, Opole, Toruń, Warsaw). An important part of the conference will be the meeting of the Religious Language Commission at the International Congress of Slavists. The Committee is a 37-member body of specialists that will define the framework and specific goals of joint research on the varieties of individual national languages that support the sphere of religion-related culture. More: <http://www.uni.opole.pl/page/3057/miedzawodowski-konferencja-naukowanireligia-i-styl>

New Wrocław Philosophy University launched

2019-09-19

The Wrocław Philosophy University is inviting participants to open meetings which will provide philosophical reflection on vital problems originating from the heritage of Western philosophy. Each meeting will consist of a lecture / debate and discussion. Until the end of the year, the Institute of Philosophy of the University of Wrocław, Secondary School No. IX in Wrocław and the Wrocław branch of the Polish Philosophical Society are planning the following topics: October 7 - How is the world without war possible ?; November 4 - Is the idea of the university still valid ?; December 2 - Are animals slaves of man? To participants who will be present at least at 6 of 9 planned meetings, the organizers will offer certificates confirming their participation in the project. All meetings will take place in the assembly hall of the Secondary School No. IX.

University of Lodz announces the finalists of the Competition for the Professor Kotarbiński

2019-09-23

The University of Lodz announced a final list of books under the Competition for the Award of First Rector Prof. Tadeusz Kotarbiński of the University of Lodz for an outstanding scientific works in the field of humanities. The first prize amounts to PLN 50,000. The list of the fifth competition includes: «Herbert. Biography And Anxiety. Biography II Mr. Cogito» by Andrzej Franaszek, «Kol isze - the voice of women in Yiddish poetry (from the sixteenth century to 1939)» by Joanna Lisek, «City in Action. Warsaw Housing Cooperative - a common good in the modern era» by Magdalena Matysek-Imielińska, «Constructing social representation of borrowings until the end of the 18th century» by Zuzanna Zbóg and Piotr Zbróg, and «Cruel self-immolation theater. Suicide protests on fire and their echoes in contemporary culture» by Grzegorz Ziółkowski. The winner of the competition will be announced on November 24, 2019 during a gala ceremony that will take place in Łódź.

Scientists of the Adam Mickiewicz University in Poznan receive awards in the field of film studies

2019-09-25

Professor Marek Hendrykowski and Dr Justyna Czaja from the Institute of Film, Media and Audiovisual Arts of the Adam Mickiewicz University in Poznań were honored with the most important Polish scientific awards in the film studies. Both authors received awards for the best film books of the year. Professor Marek Hendrykowski was honored for the book «Polish Film School». The award was granted by the jury of the Polish Film Institute. Dr Justyna Czaja was awarded the main prize of the Polish Film and Media Research Society for the monograph «Screen life of myth. Warsaw Uprising in Polish feature film». Both awards are Polish awards to enoble the special achievements of people who support

their scientific and research work in the development of Polish cinema, promoting its achievements, facilitating the society's access to native film creativity and popularizing film art.

Researcher of the Nicolaus Copernicus University in Toruń receives a prestigious award

2019-09-26

Dr Violetta Wróblewska, Prof. of the Nicolaus Copernicus University in Toruń from the Faculty of Philology of the university is a winner of the „Literature in the World” Award - one of the most important Polish literary awards. A researcher from the Department of Cultural Studies received the award for the scientific edition of the „Polish People’s Fairy Tale Dictionary”, published by the Nicolaus Copernicus University in Toruń. Dr Violetta Wróblewska is the head of the Department of Cultural Studies and the Department of Folklore and Popular Literature at the philological department of the University of Toruń. Her scientific interests include traditional and contemporary folklore, children’s and popular literature and culture. She loves folk and literary fairy tales and detective stories. She has over 100 own publications. She participates as an expert in many national and international scientific conferences.

„Historical Book of the Year” competition completed

2019-10-01

Professor Włodzimierz Borodziej from the Historical Institute of the University of Warsaw and Dr hab. Maciej Górny from the Institute of History of the Polish Academy of Sciences became the laureates of the „Historical Book of the Year” competition, for the book „Our war. Volume 2, Nations 1917-1923”. The publication is a monograph of the First World War, with particular emphasis on the role of Poland in these events. The second volume discusses the context of the collapse of the powers and the process of formation of nation states. The «Historical Book of the Year» competition was established by the Polish Historical Society. The award is granted for the best scientific publications in the field of history without division into epochs and specialties,

which in the opinion of the historical scientists represented by the Directors of History Institutes deserves recognition because of its scientific value.

Slavonic linguists from the University of Lodz working on publishing a book for Lexington Books

2019-10-04

Slavonic linguists from the Department of Slavonic Philology at the University of Lodz (UŁ) became the laureates of this year’s National Program for the Development of Humanities (Universal 2.1 module), financed by the Minister of Science and Higher Education. The winning project was «English Translation and the publication of the American monograph» Lexington Books» by I. Petrov «From incunabula to the first grammars. Contexts for the development of the Bulgarian literary language (late 15th - early 17th century).» The two-year grant assumes a professional translation of the monograph of Dr Ivan N. Petrov, published by the University of Lodz Publishing House. It will be published in the American scientific publishing house Lexington Books, which is part of the international Rowman & Littlefield Publishing Group. This publishing house specializes in publishing high-quality scientific publications covering primarily humanities and social sciences.

University of Gdańsk to hold „Memorials-history-tourism” conference

2019-10-10

The Laboratory of Touring and Historical Tourism of the Institute of History of the University of Gdańsk and the Historiographic Society are inviting participants on 17 and 18 October to the international tourist and sightseeing and historiographic scientific conference „Memorials - history-tourism”. 29 representatives of various scientific disciplines will participate in the conference, including history, art history, literary studies, archeology issues. Guests will represent the most important scientific Polish and abroad centers from Poznań, Lublin, Warsaw, Toruń, Vilnius, Lviv, Kiev and Kharkiv. The leading theme of the meeting is to make issues related to memorial sites, their history and their impact on tourism. The organizers emphasized that basing on the achievements of science and appreciating the contribution of many scientists, they want to expand the research area, link research from various disciplines and areas and give them a more complementary dimension.

Olga Tokarczuk, psychology graduate of the University of Warsaw receives Nobel Prize

2019-10-11

- This is an extraordinary opportunity to write to our graduate of the University of Warsaw: I cordially congratulate Olga Tokarczuk on being awarded this year's Nobel Prize !!! - tweeted Prof. Marcin Pałys, rector of the Warsaw university. Olga Tokarczuk won the Nobel Prize in 2018 in literature. The author of such novels as «The Books of Jacob» or «Flights» is a graduate of psychology at the University of Warsaw (UW). By the decision of the Swedish Academy and the Nobel Foundation, two literary Nobel Prizes were awarded this year. Olga Tokarczuk received the award for 2018 and Austrian writer and translator Peter Handke got the prize for 2019. Olga Tokarczuk is a writer, essayist and scriptwriter professionally. She is also a psychologist. Her works include novels, essays, poetry and film scripts. Olga Tokarczuk has been honored with many awards for her work, in-

cluding The Man Booker International Prize 2018 for the novel «Flights» and the Literary Award «Nike» for the novels «Flights» (2008) and «The Books of Jacob» (2015).

Scientist of the Pomeranian University in Słupsk nominated for the „Historical Book of the Year” Award

2019-10-11

Prof. Robert Kuśnierz from the Institute of History and Political Sciences of the Pomeranian Academy in Słupsk, „There is no defence for us, Poles. The repression of Poles in the Soviet Union in 1935-1938 in the materials of the Ministry of Foreign Affairs and military intelligence of the Second Republic of 2018” was nominated in the prestigious competition „Historic Book of the Year”. The competition is organized by Polish Television, Polish Radio, the Institute of National Remembrance and the National Center for Culture. Book of Prof. Kuśnierz was nominated in the category «The best source publication dedicated to the history of Poland and Poles in the 20th century». The winners will be announced during a gala in November in Warsaw. Professor Kuśnierz is the author of the monograph «In the world of Stalinist crimes», for which he was nominated for the Jerzy Giedroyc Scientific Award. He is also a laureate of the competition of the Minister of Science and Higher Education in the National Program for the Development of Humanities.

Deputy Prime Minister Gowin announces an increase of funds for the humanities

2019-10-15

- We must look for solutions that will give a new impulse to Polish humanities said Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin commenting the assumptions of the „Pact for Polish Humanities”. According to Deputy Prime Minister Gowin, such an impulse means increase of the fundst for the humanities studies. He emphasized that a National Science Center (NCN) finances research at a high level. -When I proposed

the NCN Council 2 years ago to increase funds for grants in the field of humanities, I heard that this is not a good idea, because too few high-class projects are supplied to distribute larger amounts. Therefore, it is necessary to think about what makes it difficult for Polish humanists to conduct research at such a level to let National Science Center increase the number of humanistic grants – added Gowin.

First Polish-Tunisian archaeological research since the 70s

2019-10-21

The Center of Mediterranean Archeology and the Institute of Archeology of the University of Warsaw are implementing a new project of archeological research in Tunisia in cooperation with the Institut National du Patrimoine (Tunis). In early October, they have completed their first full-scale excavation season in the Roman city of Mustis, located 130 km from ancient Carthage. This is the first Tunisian-Polish archaeological research since the late 70s. The aim of the research is to comprehensively learn about the city's past and its rural background to determine the economic importance of the region. The project is managed by Prof. Tomasz Waliszewski from the University of Warsaw and Dr. Jamel el Hajji from the Institut National du Patrimoine. The agreement on Polish-Tunisian cooperation was concluded in 2017, in 2018 a geophysical prospect was carried out to identify the topography of the site. The first full excavation season at Mustis ended for six weeks. Research is to be conducted for many years, based on a transdisciplinary approach using the latest research techniques. The archaeologists from the University of Warsaw emphasized that the project is extremely promising. It covers not only the city but also dozens of settlement points around the city.

Dieter Schenk to talk about a 1939 murder trial at the University of Lodz

2019-10-23

„Polish Post in Gdańsk. History of German Judicial Murder” is the title of the lecture that will be given on October 23 by Dieter Schenk, a criminologist and writer, and also a former director of the German criminal police and researcher of the history of national socialism. The event will take place at the Institute of History of the University of Lodz (UŁ). 38 Polish Post Officers, who defended the Polish Post Office building in Gdańsk against German invasion on September 1, 1939, were sentenced to death by a German military court, which recognized them as «criminal partisans». Dieter Schenk influenced modern court of the Federal Republic of Germany to recognize this conviction as a judicial murder through his book, which echoed in the world of historians and lawyers. His book presents the historical and legal aspects of jurists' criminal liability for this crime. The lecture will be translated from German into Polish. In 2017, Dieter Schenk received the title of doctor honoris causa of the University of Lodz.

Rzeszów University of Technology to hold a historical conference

2019-10-28

On October 23-25, Rzeszów University of Technology together with the Department of Historical Research Office of the Institute of National Remembrance in Rzeszów organized a scientific conference entitled „Power once acquired ... The beginnings of the communist system in Poland 1944-1947”. -We try to present historical elements related to our identity and recent history to students or to propose such scientific events. This is not the first initiative of this type with our participation - said during the inauguration of the event Prof. Grzegorz Ostasz, Vice-Rector for International Cooperation at Rzeszów University of Technology. The conference was attended by: Bogusław Buda, Chairwoman of the NSZZ „Solidarność” Regional Section of Education and Upbringing; Beata Michałuszko, Director of

the Provincial Pedagogical Library in Rzeszów and Colonel Mariusz Stopa, Chief of the Provincial Military Staff in Rzeszów.

University of Silesia in Katowice to hold conferences „Sources of European culture”

2019-10-30

The humanities faculty of the University of Silesia in Katowice will hold lectures for secondary school students. Every month meetings under „Sources of European Culture” will concern a different topic. The program begins with a lecture «Ethical aspects of medical experiments involving people.» The other topics of subsequent meetings in the auditorium at ul. Bankowa 11 also include: «Law as one of the sources of European culture»; «Ecpphrase - between tradition and modernity»; «The diversity of ecosystems and the quality of human life» and «Media image of the world» and «From Załęże to Paris Saint-Germain - symbols of Christianity in Europe alive.» Scientists from the Silesian University will also tell the youth about philosophical advisers and will try to answer the question «Is it true that there is no truth? The idea of truth as the foundation of Western civilization. «

Extension of the deadline for submitting applications for the National Program for the Development of Humanities

2019-11-04

The Ministry of Science and Higher Education has extended the possibility of submitting applications in competitions organized under the National Program for the Development of Humanities. Submission in the modules: National Heritage, Universal 2.1, Universal 2.2 and Foundations has been extended until November 30. The National Program for the Development of the Humanities is a unique grant program, targeted exclusively at humanists, which is to facilitate the integration of Polish humanities with European and global humanities, and to enable young scientists to develop a scientific career in cooperation with foreign research centers.

The program is also to promote the achievements of Polish humanities in the world and provide stable conditions for the implementation and financing of key, long-term research, editorial and documentary projects requiring the creation and maintenance of highly specialized and stable research teams.

Scientists of the University of Kazimierz Wielki in Bydgoszcz join the consortium of the DIGITENS project

2019-11-06

Scientists from the Department of English-language Literatures of the University of Kazimierz Wielki in Bydgoszcz implements the DIGITENS project - financed by the European Commission under the RISE-Horizon 2020 program. The grant will last until 2021 and enables internships abroad at the institutions of the consortium. The main effect of the project is to be «The Digital Encyclopaedia of Enlightenment Sociability» (Digital Encyclopedia of Social Life in Enlightenment). The DIGITENS project focuses on the category of «sociability» in British Enlightenment and the influence of British models on social models in Europe and America and their cultural and literary representations. The international research consortium includes representatives of the University of Brittany, the Sorbonne, the French Library, the National Archives in London and the McGill University in Montreal - we read on the website of the University of Bydgoszcz.

Jan Długosz University in Częstochowa to hold a conference on the role of tears in literature

2019-11-13

The Institute of Literature at the Jan Długosz University in Częstochowa is inviting students on November 14-15 to participate in the national scientific conference „Tears in literature. Transfer - Reception - Translation (Polish, Austrian, German and Swiss literature).” The research goal of the meeting will be an attempt to diagnose the differences and similarities in the forms of transfer, translation and reception of literary depictions of crying and tears (prose, poetry, drama, essay, children's literature, popular literature) in contemporary German and Polish literature (20th and 21st century) in Polish, German, Austrian and Swiss cultures. The organizers want to search the phenomena studied in the context of socio-historical and cognitive conditions. At the same time, they will assume a multi-faceted perspective of viewing literary phenomena, starting from the interdisciplinary nature of literary science and comparative research. The conference languages are Polish and German. More: <http://www.ujd.edu.pl/news/view/instytut-literatury-oznawstwa-zapkuje-do-udzialu-w-konferencji-zy-w-literatura>

Professor Andrzej Nowak received the Order of the White Eagle

2019-11-14

Professor Andrzej Nowak, who manages the works of the Department of History of Eastern Europe at the Institute of History of the Jagiellonian University in Krakow and the Department of History of Eastern Europe and Studies on the Empires of the 19th and 20th Century at the Institute of History of the Polish Academy of Sciences, was awarded the Order of the White Eagle. President Andrzej Duda awarded Prof. Nowak with the highest Polish distinction in recognition of his outstanding merits in disseminating historical knowledge and propagating patriotic values, for achievements in the field of humanities and social sciences, and for popularizing Polish science in the world. Professor Nowak is a member of the Council of the College of Eastern Europe, as well as the Polish-Russian Historical Commission; The Central European and East European Commission of the Polish Academy of Arts and Sciences. Since 2016, he has been a member of the College of the Institute of National Remembrance.

Researcher of the University of Wrocław becomes a laureate of a competition for a scientific publication on the history and culture of Jews

2019-11-18

Dr Joanna Lisek from the University of Wrocław received Józef A. Gierowski and Chony Shmeruk Award for the best scientific publication in the field of Jewish history and culture in Poland. She was awarded for the monograph „Kol isze - the voice of women in Yiddish poetry (from the 16th century to 1939)”. - The monograph is characterized by research ambition to build a broad - and at the same time rich in details - panoramic description, full of erudition, a great combination of literary workshop and research methodology on women's literature - wrote Prof. Eugenia Prokop-Janiec and Prof. Magdalena Ruta. The Józef A. Gierowski and Chony Shmeruk Award, whose amount is 20 thousand PLN, was established on the initiative of academic organizations related to Jewish studies at the Jagiellonian University in Krakow and the Maria Curie-Skłodowska University in Lublin, with the financial support of the Marcella and Maria Roth.

University of Rzeszów to hold lectures on humanities

2019-11-19

The University of Rzeszów (UR) is inviting participants to a series of lectures on history, archeology, culture, literature and language, philosophy, art. A series of lectures in the field of humanities is organized by the Institute of History together with the Institutes of Archeology, Philosophy, Polish Studies and Journalism and Art, as part of the College of Humanities of the University of Rzeszów, in the academic year 2019/2020. Lectures organized by the University of Rzeszów are of great interest to the students of secondary schools of the region. Participation in the first meeting was confirmed by 525 participants. The ceremonial inauguration of the new lectures will take place on November 21, 2019. On this day the following lectures will be held: Dr Andrzej Niemczuk, - «The sense of human freedom», Dr Jan Pisuliński, - «Freedom and human rights», Dr Bożena Taras, - «Freedom of speech as a testimony to human maturity».

Scientists from Belarus and Israel become laureates of the Polonicum 2019 Award

2019-11-20

The scientist who received 2019 Polonicum Awards are professor Svetlana Musijenko from Belarus and professor Gabriel Moked from Israel. The Center for Polish Language and Polish Culture for Foreigners «Polonicum», which is part of the Faculty of Polish Studies at the University of Warsaw (UW), has been awarding distinctions since 2006 for outstanding services in promoting Polish culture and Polish language abroad. The awards can be received by people and institutions that popularize knowledge about Poland and the Polish language. Winners receive a bronze statuette and a commemorative diploma. Professor Musijenko is the creator of the first department of Polish philology in Belarus (Department of Polish Philology at the Janka Kupała State University in Grodno). Prof. Moked investigates the cultural, linguistic and literary relations of Poland and Israel and the impact of Polish literature on Israeli literature.

Researcher at Adam Mickiewicz University honored by the ambassador of the Federal Republic of Germany

2019-11-20

Professor Edyta Polczyńska from the Adam Mickiewicz University in Poznań received a diploma of recognition „for special merits for Polish-German cooperation” from the ambassador of the Federal Republic of Germany, Rolf Wilhelm Nickel. Professor Polczyńska is a literary scholar, the author of pioneering scientific work on the culture of German in Greater Poland, a few-volume bibliography of translations of German literature into Polish, vice-dean of the Faculty of Modern Languages, director of the Institute of German Philology for many years, tireless and committed organizer of life of the Institute of German Studies, Master and Teacher for generations of Germanists. The laureate is the promoter of 16 doctoral dissertations in the field of literature and over 200 MA theses, also a lecturer at the universities in Regensburg, Kiel, Hanover and Potsdam. She has been the chairwoman of the Main Committee of the German Language Olympics for many years.

Polish Society for Irish Research established with headquarters in Katowice

2019-11-21

The Polish Association for Irish Studies (PAIS) was established at the Irish Embassy in Warsaw. Thanks to the support of the University of Silesia, Katowice has been designated as the seat of the organization. The association brings together Irish studies researchers from many universities and cultural, educational and educational institutions. Soon the registration process will end and then PAIS wants to inaugurate its activity in Upper Silesia. Dr Leszek Drong employee of the Institute of Literary Sciences of the Faculty of Humanities at the Katowice University was elected the president of the association., The PAIS board includes also: Dr Katarzyna Bazarnik from the Jagiellonian University, Dr Michał Lachman from the University of Lodz, Dr Joanna Jarzab-Napi-

erała from the University of Adam Mickiewicz in Poznań and Dr Paweł Hamera from the Pedagogical University of Krakow.

Grzegorz Ziółkowski to receive Kotarbiński Award

2019-11-27

The Jury of Prof. Tadeusz Kotarbiński Award announced that this year's best humanities book in Poland is „Cruel self-immolation theater. Suicide protests on fire and their echoes in contemporary culture” written by Prof. Grzegorz Ziółkowski from the Adam Mickiewicz University in Poznań. The Prof. Tadeusz Kotarbiński Award for outstanding scientific work in the field of the humanities was established to support and promote the work of Polish scientists and also to remind about the unflagging nature of the tasks of the humanities themselves. The award was established on the occasion of the 70th anniversary of the University of Lodz. Following the outstanding founder of the university, philosopher and ethics specialist Prof. Kotarbiński, it seemed natural for us to create a prize for a humanities work. One of the assumptions was to reward books, not the entire scientific work, to give a chance to young scientists, - said Prof. Antoni Różalski, chairman of the Jury and Rector of the University of Lodz.

Conference „Folklore in art, music, literature and theater“

2019-11-28

The Institute of Polish Philology at the Maria Curie Skłodowska University (UMCS) in Lublin, the UMCS Student Ethnolinguists Scientific Club, the UMCS Academic Culture Center „Chatka Żaka“, „Folk Writing“ and the Association of Folk Animators are organizing a national scientific conference entitled „Folklore in art, music, literature and theater.“ The event will take place on November 29, 2019 at the UMCS Academic Culture Center «Chatka Żaka» and will be part of the XXIX International Folk Music Festival «Mikołajki Folkowe». During the conference, participants will discuss the following topics: the genesis and manifestations of folk art in music, art, literature and theater; folk artistic style; folk art yesterday and today: between folklore, folklorism and folk; art in the service of the «people» - folk art, folk groups, socialist realism; folk inspirations in contemporary art - ethno-design, folk music, ethno- movement; peasant literature and literature about the peasantry and the folk vision of the world in art.

Scientific conference on religious education

2019-12-03

On December 6, the Institute of the History of Science of the Polish Academy of Sciences (PAN) is organizing the conference „Religious education and its impact on the socio-cultural life of the state and the regions in the 20th century“. The aim of the conference is to draw attention to the history and contribution of confessional education of various religions to the education and socio-cultural life of selected countries and regions in the 20th century. Conference organizers will focus on approaching the problem both in macro- and micro-scale: general sketches, history of selected educational institutions and schools, characteristics of educational environments, managerial and teaching staff, teaching and upbringing programs, description of organizations supporting the functioning of denominational education institutions of individual churches and associations religious organizations. PAN informs, that

the end result of the undertaking will be a scientific publication in the form of a collective work.

University of Wrocław to hold conference on narrative strategies in culture

2019-12-03

The Center for Interdisciplinary Research on the Relationships between Oral and Literature Culture at the University of Wrocław is inviting from 4 to 6 December to the international interdisciplinary scientific conference „Changes in Narrative Strategies in Context of the Specificity of the Oral and Written Tradition“. The conference will be devoted to interdisciplinary considerations on narrative strategies in oral culture and writing culture. Prominent world researchers will take part in the event. Particularly interesting for researchers are the issues of mutual relations at the interface of both cultures, e.g. in the liminal phase observable in ancient and medieval literature. The manner in which the narrative is conducted and its meanings also lead to reflection on the interaction between recipients and the author of the message.

Scientists to receive almost 16 million PLN in competitions of the National Program for the Development of the Humanities

2019-12-04

Almost 16 million PLN will be awarded to the winners of the competitions within the modules ‚National Heritage‘ and ‚Universalia‘ of the National Program for the Development of Humanities. The winners were selected from nearly 200 applications. In total, 135 applications were submitted to the ‚National Heritage‘ competition II / 2018. Based on the recommendations of the Council of the National Program for the Development of the Humanities, the Minister of Science and Higher Education qualified for financing the 15 best rated projects for a total amount of PLN 13.9 million. The biggest sum, PLN 1.74 million is received by the Institute of History of the Polish Academy of Sciences for the project

«Cartography serving the reforms of the Stanisławs' era - a critical study», «Geographical and statistical description of the parishes of the Kingdom of Poland» and “Maps of the crown provinces of Charles Perthées”. 57 applications were submitted to the Universalia 2.2 II / 2018 competition. Nine projects received financing for a total amount of almost PLN 2 million. The highest funding was awarded to the University of Warsaw for the „Damage and Sacrum” project (PLN 435.3 thousand).

Scientist from the Adam Mickiewicz University in Poznań to translate the Chinese philosophical treatise

2019-12-04

Dr Dawid Rogacz from the Faculty of Philosophy of the Adam Mickiewicz University in Poznań has received a research grant within the competition Universalia 2.2 II / 2018 as part of the National Program for the Development of Humanities. The grant will allow him to translate into Polish of «Balanced Essays» («Lunheng») by Wang Chong (27-97 CE). It is a systematic philosophical treatise that is a monument of the Chinese sceptical and natural philosophy. It will be the first translation of a Chinese philosopher in history published in the PWN Library Classics Philosophy series, which has been published since 1952. Dr Rogacz's work is also significant because so far only translations of Confucius, Laozi and Zhuangzi were available to the Polish readers. There was no Polish edition of the work written after the second century BC. To compare to Western philosophy, it is as if only the works of ancient Greek philosophers were available in Polish, and works written for several following centuries were unavailable.

University of Lodz to hold „Saint Nicholas dictation”

2019-12-09

On December 9, the Linguistic Science Club of the Contemporary Polish Language Department of the University of Lodz (UŁ) and the „wKóło Języka” Research Club operating at the Department of the History of Polish Language of the University of Lodz will organize „Santa’s Dictation”. Previous competitions for the correct Polish language gathered about 150 participants every year, who were writing texts read by well-known personalities: Tomasz Boruszcak, Tomasz Zimoch, Mirosław Henke, Paweł Śpiechowicz and Magdalena Michalak. This time, Radosław Popłonikowski, actor and film lecturer, will read the text. The dictation will take place on December 9 at 17:00 in hall A3 at the Faculty of Philology of the University of Lodz at ul. Pomorska 171/173 in Łódź.

Archaeologists from Toruń investigating a medieval port in Puck

2019-12-09

The team of the Center of Underwater Archeology at the Nicolaus Copernicus University in Toruń is investigating the sunken medieval port in Puck. Scientists’ activities are carried out as part of the „Interreg Central Europe VirtualArch - Visualize to Valorize for better utilization of hidden archaeological heritage in Central Europe” project. The goal of archaeologists’ activities is to perform a virtual reconstruction of the medieval port at the mouth of the Płutnica River. During the last expedition, the team checked anomalies observed under the bottom of the Puck Bay thanks to the use of parametric bottom sediment profilograph. The underwater site in Puck was discovered in 1977, when archaeologists found wrecks of medieval boats there. Two years ago, a team of scientists decided to collect research results and supplement them with prospects using modern technologies. On this basis, they created a virtual reconstruction of the port, which in 2020 will be available to be seen in the form of applications for mobile devices.

University of Wroclaw nominated in the ELSEVIER Research Impact Leaders Award competition

2019-12-09

The University of Wroclaw was nominated in the field of humanities for the ELSEVIER Research Impact Leaders Award competition. The competition is addressed to universities whose researches make the greatest contribution to the visibility of Polish science in the world. Prizes are awarded in six disciplines: agricultural and natural sciences; engineering and technical; humanities; health and medical sciences; exact and social sciences. The jury takes into account the increase in the number of publications in prestigious scientific journals, publications with the participation of foreign co-authors and the citation index in a given discipline. Publications in the field of humanities make up 6.1 percent of all publications of the Wroclaw university. Over 11% documents were created as a result of cooperation with foreign authors, and 18.3% are publications in journals in the first decile of the best in terms of CiteScore.

Graduate of psychology of the University of Warsaw receives the literary Nobel

2019-12-11

On 9 and 10 December, the University of Warsaw (UW) launched the action „UW congratulates Olga Tokarczuk”. Members of the University academic community congratulated the Nobel Prize winner. The author of the novels the „Books of Jacob” and „Flights” is a graduate of the Faculty of Psychology, University of Warsaw. On December 10 in Stockholm, Olga Tokarczuk received the Nobel Prize for Literature in 2018. The writer is considered one of the most outstanding representatives of modern literature in Poland and in the world. Her achievements include novels, essay collections, poetry and film scripts. For her work she has been honored with many awards, including The Man Booker International Prize 2018 for the novel «Bieguni» (Flights) and the «Nike» Literary Award for the novels:

«Books of Jacob» and «Flights» (2008) (2015). Anyone participating in the action shared the photos in the social media, tagging them with the name of the University profile and hashtags #UWgratulujTokarczuk and #NoblistkajestzUW. The organizer of the campaign was the Warsaw University Press Office.

Nicolaus Copernicus University in Toruń to promote the Polish language in Kaliningrad

2019-12-11

Dr Małgorzata Gębka-Wolak, Prof. of The Nicolaus Copernicus University in Toruń received a grant from the National Agency for Academic Exchange in the competition „Promotion of the Polish language” for the implementation of the project „Polish Language Days in Kaliningrad. Art and philosophy”. The project aims to promote the Polish language and knowledge of Polish history and culture in the Russian-speaking environment by organizing popularizing events taking place during the week in Kaliningrad, which will thematically refer to the artistic and scientific heritage of two patrons of the year 2020 appointed by the Sejm of the Republic of Poland: the painter Teodor Axentowicz and philosopher Roman Ingarden. The result of the program will be to deepen knowledge of Polish culture and encourage students to study Polish at the Nicolaus Copernicus University. The project will contribute to developing a positive image of Poland in a neighboring country and will support the quality of teaching Polish at a partner university. More: <https://www.umk.pl/consciousosci/?id=26468>

University of Warsaw signs agreements with the Camões Institute and Bank Millennium

2019-12-16

The University of Warsaw (UW) has signed agreements with the Camões Institute and Bank Millennium, allowing students of Iberian studies to receive scholarships for trips to Portuguese universities. «The University of Warsaw will provide its lecturers and students with opportunities to develop their knowledge of Portuguese language and culture, in particular by supporting student mobility.» This is one of the provisions of the cooperation agreement concluded between the University of Warsaw, the Camões Institute and Bank Millennium. The purpose of the agreements is to develop teaching Portuguese language and culture in Poland. Thanks to the cooperation of the signatories, the best students of Portuguese undergraduate studies at the Institute of Iberian and Ibero-American Studies of the University of Warsaw will get a chance to receive a scholarship that will allow them to participate in the courses organized by Portuguese universities.

Student of the University of Wroclaw becomes a laureate of Premio Iberoamericano de Ensayo en Polonia

2019-12-20

Anna Maria Dobiecka, a student of Spanish philology at the University of Wroclaw, received the first prize in the second competition Premio Iberoamericano de Ensayo en Polonia 2019. For her essay entitled «Breslavia en 1438. El viajero castellano Pero Tafur y su obra Andanças e viajes». The work describes the account of the Spanish traveler Pero Tafur from his stay in Wroclaw in 1438. The laureate is a first year student of Master's Degree in Spanish Philology at the Faculty of Philology at the Wroclaw University. The competition is addressed to students and doctoral students of Polish universities. It is organized by the embassies of Argentina, Brazil, Chile, Colombia, Spain, Panama, Peru, Portugal and Uruguay in Poland. The entries submitted for the competition should relate to relations between Poland and Spanish and Portuguese-speaking countries.

Nicolaus Copernicus University in Toruń to create modern ways of teaching foreign languages

2019-12-30

The Faculty of Humanities of the Nicolaus Copernicus University in Toruń and 3WAY Dynamic Language Center will jointly create modern ways of teaching foreign languages. The parties signed an agreement on undertaking joint activities in the field of commercialization of research results and conducting research and development projects. The goal of cooperation is to develop modern language learning methods based on the achievements of neuroscience and experimental linguistics and cooperation with spin-offs operating at the Faculty of Humanities of the University of Toruń. Both institutions have already made steps to prepare personalized mobile textbooks for learning English and are fully convinced that the development of modern technologies opens new, previously unknown ways in teaching. Under the agreement, the parties undertook to exchange knowledge and jointly apply for money from institutions financing research and development works. More: <https://www.umk.pl/wiadomosci/?id=26514>

Students of the Cardinal Stefan Wyszyński University inventoried the synagogue in Georgia

2019-12-31

Students from the Institute of Art History of the Cardinal Stefan Wyszyński University (UKSW) in Warsaw took part in the implementation of the international project „Synagogue in Oni (Georgia) - traces of Polish and Georgian heritage in Israel”. The organizer of the initiative was the Jewish Historical Institute in Warsaw, Ben Gurion University in Beer Sheva (Israel), the State University in Tbilisi (Georgia), Polish Institutes in Tbilisi and Tel Aviv and the Polish Modern Art Foundation. The goal of the project was to inventory the synagogue in Oni together with the cemetery. In Israel, the students did art works that will soon become their joint artistic memory sign.

INNOVATIONS
IN POLISH SCIENCE

2018-2019

Invention of researchers from the Lodz University of Technology awarded in the Netherlands

2018-02-01

Eng. D. Magdalena Owczarek from the Institute of Textile Architecture and M.Sc. Eng. Ewelina Pabjańczyk-Wlazło from the Department of Materials Science, Commodity Science and Textile Metrology of the Lodz University of Technology won the international program LaunchLab European Institute of Innovation and Technology at YESDELFT in the Netherlands.

Their invention myHydro is a textile band with a printed electronic circuit. The device's task is to control the hydration of people actively involved in sports, small children or seniors, whose thirst declines with age. Polish researchers have found an innovative solution to combine textiles with electronics and medicine. The device is targeted to solve the problem of hydration control. The prototype tests will begin soon and the completed product is expected on the market for approximately three years. More: <https://www.p.lodz.pl/pl/projekt-myhydro-pl-nagrodzony-holandii>

Warsaw Accelerator starts soon

2018-02-01

Applications for the Warsaw University of Technology Accelerator will be accepted until February 26, 2018. The program can be joined by the creators of technological startups from Mazovia Region, with the record no longer than 24 months as well as the authors of technological projects, who desire to commercialize their technology soon.

The four-month program includes classes on the commercialization practices and development of companies, working with mentors and advisors, presenting projects to investors and venture capital funds (VC). The project is carried out in cooperation

with BTM Innovations, Innovation Management and Technology Transfer Center of the Warsaw University of Technology and the Polish Cluster Association. Registration form: <https://goo.gl/forms/2tnvxonCP-gnnjQcO2>

Polish robot will fly to Mars this year

2018-02-01

The robot constructed by a Polish company Astronika will be one of the three main measuring devices taken by the Mars probe as part of the InSight mission.

NASA and ESA target to launch the probe on November 26, 2018. The main objectives of the mission are to conduct geophysical research of Mars and to check the nature of the planet's nucleus. It prepares the ground for the first manned mission. The probe will be equipped with three measuring instruments. One of them is HP3 (Heat Flow and Physical Properties Package), which is a core sampler for measuring the heat from the interior of the planet. It will be drilled up to 5 meters into the soil. The device is 25 mm thick, weighs about 500 grams, and is made from titanium alloys, steel and tungsten. Also other Polish entities were involved in the production processes including: Space Research Centre of the Polish Academy of Sciences, Institute of Aviation, Institute of Welding, Technical University of Lodz and Warsaw University of Technology. You can find more about the HP3 device here: <http://www.astronika.pl/hp3-mole>

Robot plays the piano, AGH student plays the violin

2018-02-01

Wojciech Świtała, a student of Automation and Robotics at the AGH University of Science and Technology in Krakow, programmed the Mitsubishi RV-2F-D industrial robot to play the piano.

He graduated from the music school and decided to combine his two passions - music and robotics.

Robot with a graceful nickname Staszek is linked to a specially written computer software. The student can play the instrument using the robot. In addition, Staszek can remember the melody played, saving it to a file that can be replayed at any time. The program allows the robot to play with two fingers, hitting a cymbal and making its bow. The playing device of the robot has been printed in 3D technology. See how Wojciech Świtała and the robot Staszek perform the Polish carol:

<https://www.youtube.com/watch?v=bH-S02WueTA>

Polish material for space sails

2018-02-01

In the future, space ships will be moved by huge, very thin sheets of special sailcloth. The consortium including the Toruń ABM Space, the Lodz Amepox company and engineers from the Warsaw University of Technology has developed a method of producing cheap and durable material for such sails called the Golden Fleece.

Golden Fleece is the concept of an intelligent solar sail. Its active structure provides increased control and performance and allows the partial integration of spacecraft electronics with the sail. It will be covered with a very thin metallic coating. Raw materials for its production may be mined in space - on asteroids. Technologies used by designers from ABM Space can also be used on Earth, for example for the production of flexible electronic circuits.

The company ABM Space deals with modern technologies related to the space sector and with the transfer of solutions to non-space sectors. Key areas include: mobile and orbital robotics, remote control systems, positioning algorithms without GPS application, design and prototyping of electronic devices and mechanical systems.

More about the project <http://goldenfleece.pl/>

Polish cradle of the European satellite

2018-02-02

Polish engineering company Sener will deliver to Italy 13 devices called MGSE (Mechanical Ground Support Equipment) designed to support the assembly of satellites.

The GroupThales Alenia Space Italy will use them to build a 2.3 ton Euclid probe for the European Space Agency. It is the largest satellite assembly set in Poland. It was constructed with the participation of 18 Polish enterprises; they provided components for production, logistics and carried out endurance tests. MGSE equipment is used for precise changing the position of the satellite during assembly processes, transport, including the transport into the rocket. The Euclid probe will study so-called inflation or the expansion of space; its sensors will study the history of Universe 10 billion years ago.

Algorithm versus osteoporosis

2018-02-02

Scientists from the Silesian Medical University in Katowice and the Silesian University of Technology in Gliwice developed the first Polish calculator to assess the risk of fractures caused by osteoporosis. The idea of the calculator comes from Prof. Wojciech Pluskiewicz from the Medical University in Katowice. He led the team that for 8 years gathered data on health status of nearly a thousand female patients at the age over 55 years. Each examined person provided over 200 information on factors of clinical risk in osteoporosis treatment.

Basing on the research, EngD Aleksandra Werner and EngD Małgorzata Bach from the Silesian University of Technology developed the special algorithm that assesses fracture risks. It can be used in everyday medical practice, as well as by women themselves, especially at the age of increasing osteoporosis risks.

Quick and less painful diagnosis of breast cancer

2018-02-02

The Polish innovative company SDS Optic has constructed a prototype of microprobe for the early diagnosis of breast cancer, particularly the receptor of epithelial growth factor - HER2.

- Our technology - says Dr Magdalena Staniszewska, the creator of microprobe and director of science at SDS Optic - saves the patient from pain and stress associated with biopsy and long-term expectancy. The device allows for an objective diagnosis, without the risk of error in the interpretation of the results. Dr. Staniszewska estimates that the new technology of breast cancer diagnostics will allow to reduce cancer mortality by 30%. Microprobes will appear in doctors' offices in 2021. (Kp)

Robot constructed by AGH students will deliver parcels without obstacles

2018-02-02

Students of the AGH University of Science and Technology in Krakow have constructed an autonomous delivery robot. Its task is to deliver parcels to designated places. This is one of the first student structures of this type in Poland.

ADR (Autonomous Delivery Robot) is an autonomous electric robot that uses intelligent control algorithms. This means that the device, depending on the current external situation, is able to make the right decisions, e.g. it can overpass obstacles. It is assisted by the lidar sensors to scan the surrounding environment. In this way the robot creates maps that are automatically saved in its system. After selecting the delivery spot, the robot sets the optimal route and accomplishes the task. The robot moves at a maximum speed of 0.5 m / s and can carry a load up to 10 kg. See the robot of AGH students in action: <https://youtu.be/FLONojkzoxE>

Polish student app will help blind people

2018-02-02

Polish students developed an application that will help blind people to move in the university.

24 hours, 14 teams, over 20 thousand lines of code and the result is an application for people with visual disabilities. It can be controlled only by simple gestures and an intuitive interface, which allows to pass to various lecture halls. The innovative idea of students from Warsaw and Krakow was awarded by the hackathon jurors at the Campus App Challenge. Now, the winners are developing the software under the guidance of professionals, and they target more than 40 its implementations at Polish universities and schools abroad.

See the report from the event:

Electronic stethoscope from Poznań

2018-02-02

Auscultation of the patient's lungs is one of the most frequently performed examinations in doctors' offices, but it requires so-called expert's ear. The MyWhizzy.com company from Poznań decided to provide this skill with artificial intelligence.

As a result, the electronic stethoscope StethoMe was created, which can be used at home, for example, by parents of children. It is enough to put the device to little patient's chest to realize if your toddler's coughing requires physician intervention. StethoMe also measures body temperature and operates with a mobile application on the smartphone. It can also be used to monitor such chronic respiratory diseases as asthma. The research of the electronic stethoscope was carried out in cooperation with the Medical University of Poznan and the Institute of Acoustics of the University of Adam Mickiewicz in Poznan. You can read more about this solution here: <http://stethome.com/pl>

In silico will save millions of laboratory animals

2018-02-02

Dr Agnieszka Gajewicz, a specialist of chemoinformatics from the University of Gdańsk, became a laureate of the scholarship program L'Oréal-UNESCO For Women and Science. She was awarded for elaborating methods of assessing the risks of using nanoparticles in medicine. Chemoinformatics is a new field of knowledge combining mathematics, computer science, chemistry and theoretical physics.

A researcher from the University of Gdańsk deals with so-called cross-cutting estimation, which is one of the most important in silico methods. It uses IT techniques to evaluate the activity and properties of new chemical compounds and technologies as well as the risk of their use. Also it selects compounds suitable for drugs. In silico methods are cheaper and faster than traditional ones and they eliminate experiments on animals. Such approach can reduce the number of animals used for testing up to 50% in Europe (Kp) <http://naukawpolsce.pap.pl/aktualnosci/news%2C28077%2Cniebezpieczne-zwiazki-okiem-chemika.html>

New Polish e-cars expected this year

2018-02-05

The first contracts with 200 Polish companies that present the best proposals for a prototype of a passenger electric car will be signed in February.

The competition was announced by ElectroMobility Poland (EMP) Partnership, which will construct the first Polish e-car at the end of November 2017. Its shareholders are the largest Polish energy companies: PGE, Tauron Polska Energia, Enea and Energa, which acquired a 25% stake. More than dozen projects have been submitted. Now they need to be assessed for their business potential and compliance with technical requirements. There is a big amount of money at stake, offered by the State Treasury to launch the production of an electric car in Poland. ElectroMobility Poland

declares that this year it will start building prototypes of Polish e-cars. <http://www.wnp.pl/wiadomosci/315967.html>

Swedes prefer Polish perovskite

2018-02-05

The Skanska construction company (as the first in the world) will start using Polish semi-transparent photovoltaic cells with perovskite for covering commercial buildings erected in Scandinavia, Europe and the USA this year.

Perovskites are crystalline materials that have a great chance to outclass silicon - the semiconductor most commonly used in photovoltaic cells so far. Currently, the Polish company Saule Technologies is working on a prototype line of large-scale production of perovskite photovoltaic modules, thanks to support of Japanese investor, the National Center for Research and Development and several research grants of EUR 20 million. More: http://www.wnp.pl/wiadomosci/saule-technologies-dostarczy-ogniwa-fotowoltaiczne-dla-skanski,315433_1_0_1.html

Agriculture focuses on innovation

2018-02-05

Constructing gas networks and biogas plants in rural areas, support for renewable energy and agricultural biogas production as a source of renewable energy are among the main projects of the National Center for Agricultural Support in the field of innovation.

- One of innovation strategies is power industry in rural areas. With Polska Spółka Gazownictwa, we want to construct many gas networks of island type. They could be supplied from biogas plants, developed in rural areas. Such a network may supply customers within a certain radius, where it is not profitable to build a classic gas pipeline - says Witold Strobel, General Director of the National Center for Agricultural Support. More: <http://www.kowr.gov.pl/biuro-prasowe/aktualnosci/rolnictwo-w-polsce-stawia-na-innowacje>

Only zero-emission buses have a future

2018-02-06

Increasing number of electric buses appear in the streets of Polish cities. Local self-government authorities appreciate the ecological and economic advantages of using zero-emission means of public transport.

According to Zbigniew Palenica, vice-president of Solaris - after 2025 only zero-emission buses will be purchased. The company Solaris Bus & Coach is the largest supplier of buses in Poland and well-known in Europe. It increases its production rate, recently it sold 40 electro buses to the Czech Republic. This year, Solaris will start manufacturing a new electric bus model - Urbino 18 which increases production by 10%. In 2017, it produced 1,400 buses.

RNA Composer supports the imagination of scientists

2018-02-06

We are the best in creating of automatic systems for predicting RNA structures and their three-dimensional presentation - said Dr Marta Szachniuk. She and a team of Prof. Ryszard Adamiak from the Institute of Bioorganic Chemistry PAS in Poznań have developed system of the RNA Composer. It is a free, publicly available, quick IT tool. It deals with both short and very long chains of RNA molecules with complex architecture.

During the 6 years of functioning of RNA Composer it has already performed 1 million tasks. This way many scientists got the first idea of how the molecule looks in three dimensions. The Polish results of RNA research are well-known worldwide. In this field, innovative experiments are conducted by a team of Prof. Janusz Bujnicki from the International Institute of Molecular and Cell Biology in Warsaw. Prof. Ryszard Kierzek from the Institute of Bioorganic Chemistry PAS in Poznań described the thermodynamic rules of RNA folding. (kp)

Agreement „Silesia under the blue sky” enters the implementation phase

2018-02-06

Local administration of Silesia Region has prepared a short online survey to identify the preferences and needs of companies regarding research and development related to anti-smog technologies.

The results are to be helpful in implementing the agreement signed on January 22, 2018 «Silesia under the blue sky» between the Silesian Region and the National Center for Research and Development. Companies may obtain the co-financing of their projects in the fields of energy, environment, IT, transport or medicine. The survey is available at the address: https://docs.google.com/forms/d/e/1FAIpQLScuKqIHdq3r7WjHPTw2hIKsubDeQTFp-nO7-vN71OF_wdczlOw/viewform more: http://www.slaskie.pl/strona_n.php?jezyk=pl&grupa=10&art=9346

Consolidation of ICT facilities

2018-02-06

The Institute of Mathematical Machines, the oldest Polish IT institution for research and development of computer systems has merged with the NASK National Research Institute in Warsaw, supervised by the Ministry of Digitization.

As a result of integration, a new strong organization has been created for providing the Ministry's program Digital Poland, in particular for the development of digital education and research on methodology of biometric and electronic signatures. They are particularly important in state and public safety policies. The merger will also enable the development of works on BigData, IoT and digital robotics. More: <http://naukawpolsce.pap.pl/aktualnosci/news%2C28094%2Cinstytut-maszyn-ma...>

Program „Loan for technological innovation” is launched

2018-02-06

The project is addressed to micro, small and medium enterprises. It is intended to implement new innovative technologies and to increase the competitiveness of Polish companies on the international market.

Entrepreneurs can finance in such way the purchase of fixed and intangible assets. The subsidy is non-returnable and can amount even 70% of the eligible costs value. The loan may amount to 75% of the investment. The maximum of co-financing can be PLN 6 million. The call for applications starts on February 15 and will last until May 24, 2018. More information about the program here:

<https://www.bgk.pl/przedsiębiorstwa/kredyt-na-innowacje-technologiczne/skorzystaj-z-programu-poddzialanie-322-kredyt-na-innowacje-technologiczne-po-ir/>

App for a peaceful old age

2018-02-06

Sara Koślińska, a graduate in linguistics at the University of Warsaw and the founder and CEO of start-up company Limitless is the author of the Limitless application, which makes a sensation in the European and Asian markets. The application „forces” people to save and invest.

It is mainly used by young people interested in an easy, long-term system of saving even modest sums, e.g. for retirement. Since September 2017 the license to use Limitless app is granted to banks, insuring companies and asset managers. They can offer it to customers free of charge, under their store brand. Sara Koślińska is also a co-founder of the Startup Poland foundation, a winner of the Central European Startup Award („Founder of the Year”). more:

<https://limitlessapp.io/>

PLN 15 million for social innovations

2018-02-06

In February Ministry of Development launches the first call for social innovation projects. Municipalities and inter-municipal associations may apply for co-financing of their projects. The total sum of funds allocated for co-financing projects amounts to PLN 15 million.

The support aims to develop model solutions that will determine the program of Social Rental Agencies (SANs), and then their implementation in practice. SANs are non-profit organizations. They act as intermediaries between the owners of apartments and the part of society that cannot afford high loan installments or rent for an apartment. More about Social Rental Agencies:

<http://najemspoleczny.pl/>

Program PYTHIA at Warsaw Military University of Technology

2018-02-07

The Institute of Optoelectronics of the Military University of Technology began in February works within the PYTHIA research program, a strategic project of the European Defense Agency.

The military science and research facility is part of an international consortium headed by Italian Engineering Ingegneria Informatica, which won the EU bid contest. PYTHIA's task is to prepare intelligent tools for forecasting and assessing trends in the development of technologies that are of strategic importance for the defense of EU countries. The EU PYTHIA will automatically collect information from various public sources, e.g. patents databases, scientific publications, prototype descriptions. They will be processed with using analysis techniques dedicated for large data sets. More: <http://www.wat.edu.pl/?p=14536>

Polish chemical computer

2018-02-07

Scientists from the Institute of Physical Chemistry of the Polish Academy of Sciences in Warsaw proved that a chemical computer is not a dream of futurologists.

They built a pioneer device of this kind; currently one of the best in the world, where chemical signals replaced electronic ones. To process information in a similar way to traditional computing machines, the scientists used a system of contacting drops, in which repetitive chemical reactions take place. This allows - with high accuracy - to recognize, for example, three-dimensional shapes, and classify cancer cells. Polish scientists with their colleagues from the University of Jena, showed that the 5x5z droplet system classifies cancer cells from the Breast Cancer Wisconsin Dataset with an accuracy of 97%. (Kp). More: <https://informacje.pan.pl/index.php/informacje/2023-komputery-chemiczne-...>

Institute of Electronic Materials Technology develops a white laser

2018-02-07

Laser sources of white light can revolutionize the screens of TVs and smartphones, car headlights and they can be even the successor to the standard of wi-fi communication.

Polish scientists work on new methods of producing sources of white light laser. One of the basic elements of the white light lasers is the ceramic lumiphore Ce: YAG- currently developed at the Institute of Electronic Materials Technology in Warsaw. Lumiphore is a chemical compound causing the effect of luminescence, that is to say, emitting light waves not under the influence of high temperature. White light can be used, among others in LEDs, in laser lights, in the car industry or in energy-saving street lamps. More: <https://innowacje.newseria.pl/news/bialy-laser-moze,p772965438>

Secure quantum dots

2018-02-07

Researchers from the Institute of Physical Chemistry of the Polish Academy of Sciences in Warsaw and the Faculty of Chemistry of the Warsaw University of Technology have developed an innovative method of producing quantum dots of zinc oxide, one of the most commonly used nanomaterials.

New ZnO nanoparticles are safe. They can be introduced into biological and medical laboratories, e. g. for imaging processes or applied in materials exposed to humans, like paints. Such solutions are carried out, among others in the NANOXO start-up company. The research was financed by the Foundation for Polish Science and the National Science Center. The results were published in the well-known scientific journal «Chemistry - A European Journal» with participation of Krakow scientists from the Jagiellonian University. (kp) more <https://informacje.pan.pl/index.php/informacje/2022-zenskie-ptasie-wycho-...>

The Warsaw Air Index has started operating

2018-02-08

A team of scientists from the Department of Building Installations, Hydrotechnics and Environmental Engineering at the Warsaw University of Technology has developed a mathematical model for analyzing and forecasting air index levels in Warsaw. The index methodology and measurement scale was based on the Canadian Air Quality Index, the London Air Quality Index and the European Air Quality Index. More: wip.um.warszawa.pl

Polish startups receive public and private money

2018-02-08

In 2017, money from the programs of the Polish Agency for Enterprise Development were transferred to 103 Polish start-ups and innovative companies. Investments amounted to approx. PLN 80 million.

Particular subsidies should have not surpassed PLN 800,000. Such support is provided also from acceleration programs and incubators run by Polish private sector companies. For example mBank allocated 50 million euros to the mAccelerator venture capital fund last year. It financed the software Robotic Process Automation (RPA) development projects for banks and companies from the financial sector. This is the first such project in Poland and in Central and Eastern Europe.

Twelve start-ups with PricewaterhouseCoopers support

2018-02-08

The 12 most promising start-ups from Poland, the Czech Republic, Estonia, Spain and the UK perform in the next Startup Collider program, run by PricewaterhouseCoopers (PwC).

They were selected in a competition among nearly 300 innovative companies from 30 European countries, the Middle East and even both Americas. The condition for participation in the current edition of Startup Collider was to have a product or service ready to be launched in particularly fast-growing fields of computer science: artificial intelligence, data analytics, fintech, Internet of Things, e-commerce, virtual and augmented reality. Start-ups will receive PwC support in the preparation of the first sale. In April 2018 they will take part in Demo Day before investors and potential clients. (Kp) <https://www.pwc.pl/pl/media/2018/2018-01-18-pwc-startupcollider-2018-fin-...>

Innovative endoscope from the Lodz University of Technology

2018-02-09

The endoscope with extended range, allowing doctors to diagnose the entire digestive system has been developed at the Faculty of Mechanical Engineering of the Lodz University of Technology.

This innovative solution makes possible to examine the patient within one visit. Today, if during a traditional colonoscopy or gastroscopic examination, the doctor does not detect the cause of the disease, patients are directed to further examinations, e.g. ultrasound or computer tomography. Such a situation significantly delays the correct diagnosis of the disease and its treatment. - We are developing individual elements of the device, and next year we plan to build a ready-made prototype - says Dr. Eng. Łukasz Frącczak from the Lodz University of Technology. However, patients will have to wait for a new endoscope for several years, because of medical procedures and the need to conduct clinical trials. More:

Sea drone with ultramodern propulsion sets off on the first cruise

2018-02-09

„Autonomous, bionic carrier of sensors” - this is how Michał Latacz calls the NOA Sentinel underwater submarine drone, constructed in his NOA company.

The device is used for research and searching for raw materials both on the bottom and under the sea bottom. It is efficient, safe, maneuverable and economical. It operates alone - even two months - without the assistance of the base ship. It reduces search costs by 40 percent. The NOA Sentinel is equipped with the modern NOA wave propulsion, designed and patented by Michał Latacz. He was inspired by the way the squids moved. The drone propulsion is set in motion with the special NOA DRIVE wings

that move the vehicle. They operate in a quiet, safe for man and the environment way, providing high power and maneuverability. In the first mission NOA Sentinel will look for freshwater sources under the bottom of the Baltic Sea. In the coming years, the market for autonomous submarine vehicles may grow by more than 22 percent annually. (Kp)

Inventions of Polish students at the Geneva exhibition

2018-02-09

The winners of the „Student-inventor” competition will present their works during the 46th International Exhibition of Inventions in Geneva and the 12th International Warsaw Exhibition of Inventions IWIS 2018.

The competition commission awarded five inventions carried out by Polish students. This year's competition was organized by the Kielce University of Technology and co-financed by the Ministry of Science and Higher Education. Among 78 submitted applications were 123 innovative solutions from 24 universities and research institutes from all over Poland. The competition was addressed to students, PhD students and graduates who during their studies became the creators of the invention (utility or industrial design), protected by an exclusive right or patent in Poland or abroad. More about the competition and the list of awarded works here: <http://www.nauka.gov.pl/aktualnosci-ministerstwo-studenci-wynalazcy-jada...>

Railway Industry Accelerator has been launched

2018-02-09

The innovation accelerator was created by Agency of Industrial Development with the POLREGIO railway company. The accelerator is aimed to support start-ups and the sector of small and medium-sized enterprises. The railway will be looking for software to sell tickets at stationary cash desks, on-board entertainment system, or mobile applications for passenger integration.

According to the assumptions, the implementation of innovative products will also increase the level

of passenger safety and improve management processes. ARP and POLREGIO are planning further events promoting the development of innovation and entrepreneurship. More: <https://www.arp.pl/dla-mediow/aktualnosci/kolej-na-innowacje-rusza-akcel...>

Innovation is not a fashion, it is a must

2018-02-09

Without introducing innovations and increasing expenditures on research and development (R & D), any rapid and dynamic development is practically impossible.

These statements are particularly true in the industrial sector, which is particularly exposed to international competition - says the report on the innovation of Polish industry. The authors indicate that the pace of development of the entire economy depends on the condition of Polish industry. According to the Central Statistical Office data, Polish expenditures on innovative industries are provided for PLN 28.3 billion, i.e. by 9% less than a year earlier. In the EU ranking «European Innovation Scoreboard 2017» Poland took the 25th position (together with Croatia) and remained among so-called moderate innovators. More on the report: <https://www.magazynprzemyslowy.pl/zarzadzanie-i-rynek/Innowacyjnosci-pols...>

Digital Teammates automates routine office work

2018-02-09

The Polish company Digital Teammates supported by mAccelerator venture capital fund, specializes in automation systems for simple repetitive office work, executed in the back office of banks and financial institutions.

Their advantages are „tailor-made” systems, for clients’ specific requirements. Poland is an emerging market for such solutions similarly to other countries of Central and Eastern Europe. According to experts, the demand for such service will grow rapidly. The mAccelerator fund exists only for less than a year, but with 50 million EUR for investments it already supported the secret startup launching the security systems. Two further investments are being prepared. (Kp)

Financial innovation support program

2018-02-12

The Polish financial innovation market is valued at around 850 million euros. In terms of value, it is the largest market in Central and Eastern Europe. Polish FinTech will be supported by the Polish Financial Supervision Authority.

The call is launched for the Innovation Hub program. Innovation Hub is directed to two groups of entities. The first group includes entities planning to start operations as part of the financial market supervised by the Polish Financial Supervision Authority (including start-ups) that have an innovative product or financial service based on modern information technologies. The second group consists of entities supervised by the Polish Financial Supervision Authority, planning to implement an innovative product or financial service based on modern information technologies. Using the Innovation Hub, the Polish Financial Supervision Authority intends to conduct a dialogue with the FinTech sector entities by providing them with relevant explanations on the questions regarding legal or financial regulations. To participate in the Program, please fill out the contact form: https://www.knf.gov.pl/dla_rynku/fin_tech/Innovation_Hub/formularz?artic...

Polish companies enter the market of innovative maritime services

2018-02-12

The global market for innovative maritime services is worth USD 4 billion. According to experts, it will grow up to tenfold in just over 20 years. Polish companies are also trying to appear on this market.

The Polish oil company Lotos and the Mars Shipyards & Offshore Group (gathering construction, shipbuilding, innovative, constructional and technological companies) have signed an agreement on cooperation in recycling and utilization of off-shore marine platforms and infrastructure located on depleted hydrocarbon deposits. Liquidation of offshore drilling platforms is a complicated engineering task. It requires special care for safety and compliance with the principles of environmental protection. The works include the liquidation of the platforms installed on and below the water surface as well as the dismantling of extensive pipeline networks. (Kp)

The Swedish Ministry of Health ordered a Polish application

2018-02-12

MovereX - a mobile application, designed to read the user’s heart rate, was developed by a Polish Cybercom company commissioned by the Swedish Ministry of Health. In Sweden, pro-health programs were implemented many years ago.

One of them is «a recipe for physical activity». When a patient receives such a prescription, he simultaneously gets the MovereX application and a band that measures his heart rate. Thanks to this, the doctor can follow the physical activity of the patient and control whether he is carrying out the planned physical activity plan and checking his progress. Devices that monitor our physical activity and health not only increase the quality of life and facilitate treatment, but also are able to reduce the cost of health care. The MovereX application was created for people struggling with heart disease, diabetes,

cardiovascular diseases and those whose physical activity is low. It should motivate to play sports and support in the treatment process. More about MovereX: <https://www.cybercom.com/pl/Poland/projekty/moverex/>

Polish innovation leaders build an advanced control system for drones

2018-02-12

Drones control systems have a weak point. They do not react, for example, to changing weather conditions. How to control them precisely, stabilize the flight over difficult terrain in bad or changing weather with strong wind?

Dr Eng. Bogusław Szlachetko and Dr Eng. Michał Lower from Wrocław University of Technology’s work on the technology that will meet these challenges as Sky Tronic will deal with the commercialization of the new prototypes. One of the first orders carried out by Sky Tronic is the construction of a specialized fire and rescue drone (the so-called Fire-Copter FLC) intended for action during fires, construction and ecological disasters, rescue of missing and injured people. Sky Tronic has existed for less than a year. The company won the main prize in the New Economy Heroes 2017 competition. It was selected as one of the most innovative startups in the world at Wolves Summit 2017 (kp)

Polish space platform

2018-02-12

Polish technological company Creotech Instruments S.A manufacture all subsystems, including telecommunications, power supply and an on-board computer for a universal satellite platform in the new HyperSat MINI standard. Its task is a part of the RENESANS project (Intelligent Development Program 2014-2020).

Creotech Instruments S.A also plays a leading role in the consortium that is building the first Polish industrial satellite. The new platform will be used to carry larger size instruments in short, inexpensive space missions, including the construction of so-called constellation. HyperCube devices are modular. Depending on the needs, they can be expanded from 30x30x10 cm (weight 10 kg) to 30x30x60 cm (weight 60 kg). Creotech Instruments SA is the only company in Poland that has technologies and a production line for space electronics, which are certified by the European Space Agency ESA. (Kp) <http://creotech.pl/pl/renesans/>

Information meeting about the support of companies in the implementation of innovative projects in Stalowa Wola

2018-02-13

The Ministry of Investment and Development invites entrepreneurs to participate in the information meeting dedicated to the support of companies in the implementation of innovative projects.

The meeting, which will take place on February 20, 2018 at 10:00 am in the auditorium of the Rzeszów University of Technology in Stalowa Wola, will be attended by Adam Hamryszczak, deputy Minister of Investment and Development. He offers the Ministry's support for start-ups and companies using the results of R & D research, innovation with the use of industrial design, introduction of products and services to foreign markets. The support includes also promotion programs for small and medium-sized

enterprises on foreign markets. The meeting is organized in cooperation with: Polish Agency for Enterprise Development, Bank Gospodarstwa Krajowego, National Center for Research and Development, Marshal Office of the Podkarpackie Region, Polish Investment and Trade Agency, Export Credit Insurance Corporation. The registration form and more information about the meeting can be found here: <https://www.funduszeuropejskie.gov.pl/stroyny/o-funduszach/szkolenia/fir...>

In 5 years, Polish microsatellite in space

2018-02-13

The Polish microsatellite of Earth observation called Intuition-1 will be launched at the turn of 2022 and 2023. The KP Labs and FP Instruments with Future Processing as members of the FP Space consortium elaborate on this project.

The venture is financially supported by the National Center for Research and Development. Intuition-1 will be the first such advanced Earth observation satellite in the world. Its design is so innovative that the planet's surface images will be processed by the satellite's on-board computer. This solution will significantly reduce the stream of data sent to the ground receiving station. The microsatellite will be a 6x CubeSat with dimensions of 10 x 22 x 36 cm. It weighs from 15 to 20 kg. More about the FP Space project and consortium <https://www.fpspace.com/pl>

A heart in three dimensions - an innovative application at the University of Opole

2018-02-13

Medical students at the University of Opole as the first in Poland will learn the secrets of the human heart in a three-dimensional virtual reality. They received Virtual Heart, a newest didactic application.

A realistic picture of the heart is viewed using goggles. It can be rotated, enlarged; simulate different body conditions: its healthy, uninterrupted work or changes in different situations, as a result of dam-

age, disease progression or the action of stimuli or chemicals. This is useful for precise planning of operations. Opole Virtual Heart will enable better education of future doctors in clinical subjects, anatomy and physiology. It was created as a result of cooperation with the Foundation for the Development of Cardiac Surgery (Kp) <http://www.uni.opole.pl/page/2100/wirtualne-serce-na-uo-mowi-o-nim-cala-polska>

Polish programmer co-authored the success of SpaceX

2018-02-13

On 6 February 201, SpaceX launched the world's most powerful - weighing nearly 1,500 tons - Falcon Heavy rocket. One of the software engineers who worked on the SpaceX control systems was Tomasz Czajka - a graduate of the Faculty of Mathematics, Computer Science and Mechanics at the University of Warsaw - informs the Polish Information Processing Society.

Already during his studies in Stalowa Wola, Tomasz Czajka achieved outstanding successes, winning silver and double gold medal in the International IT Competition. During his studies - firstly at the University of Warsaw, and then at the American Purdue University - he won even more laurels in the most prestigious IT competitions. In 2003 he won ACM International Collegiate Programming Contest with his colleagues from the University of Warsaw, in a team led by Prof. Jan Madeya. In 2003, 2004 and 2008 he was the best in the TopCoder Open competition, and in 2004 he and the team won the TopCoder Collegiate Challenge. From 2007, he worked as a software engineer in Google's headquarters, from where he moved to SpaceX in 2014.

Research on graphene at the University of Lodz

2018-02-13

The team of Prof. Zbigniew Kluska from the Faculty of Applied Physics and Computer Science at the University of Lodz investigates the properties of the electronic structure of the graphene in connections (hybrid systems) with the so-called transition metals like yttrium or zirconium.

The experiments will allow to describe the laws and mechanisms governing the transport of electric charges at the nanometer scale. This will open the way to creating a new class of hybrid materials that will be used in new generation of computers. Graphene is characterized by unusually high strength and flexibility. Its properties create conditions for electric charge carriers to move at very high speeds. Professor Zbigniew Kluska also deals with determining the methods of marking these carriers of electric charge, which will enable them to overcome distances comparable to superconductors. This makes graphene interesting for applications in spintronics, a new branch of advanced electronics. (Kp)

MIT Enterprise Forum Poland helps startups

2018-02-14

Fund of Technological Entrepreneurship (Fundacja Przedsiębiorczości Technologicznej) informs that recruitment for the 4th edition of the MIT Enterprise Forum Poland acceleration program is underway.

The program is based on the know-how of one of the world's best technology universities - the Massachusetts Institute of Technology. The goal of the project is to help startups that develop unique technologies to accelerate the commercialization of their solutions. MIT Enterprise Forum Poland envisages acceleration in the general path and in four specialized industry paths. The Let's Fintech path with PKO Bank Polski! is organized in cooperation with the main partner of the program - PKO Bank Polski. The PGNiG Group is a partner of the Energia acceleration path. The „Zdrowie” path is co-created by the Adamed Group, while

the Agri-tech path, which appears for the first time in the program, is supported by AgriTech Hub. Also a new path in the accelerator is the Industry 4.0 path dedicated to technology startup companies interested in cooperation with partners from the Lower Silesia Region. Applications to the project can be submitted until February 28 on the website <https://www.mitefpoland.org/>

New technologies in education

2018-02-14

Over 85 percent teachers appreciate importance of new technologies, almost all use digital devices as learning aids; many use special educational applications- report studies commissioned by the Polish educational platform.

Similar opinions are expressed by the parents. 68 percent of them confirm that their children use digital devices as a learning aid, 73 per cent of parents believe that the Internet helps to acquire new knowledge. Squla.pl is a modern educational platform adapted to many devices. It provides 60,000 interactive quizzes, educational tasks and videos adapted to the age and pace of the child's learning. This platform covers all school subjects in grades 1-6 and pre-school education. It complies with the core curriculum of the Ministry of National Education for the 2017/2018 school year. Quizzes and tasks for Squla.pl are created by experienced subject teachers and pedagogues. One week of using the Squla.pl educational platform costs PLN 15. One can use it on computer, tablet and smartphone. (Kp)

University drone examines air quality in Wroclaw

2018-02-15

The Department of Climatology and Atmospheric Protection at the University of Wroclaw is testing air quality with a modern drone. The device was purchased thanks to a subsidy from the Municipal Office in Wroclaw.

The idea for the purchase of a drone by the University of Wroclaw appeared already in 2015, when the

LIFE-APIS / PL project implemented by the Department of Climatology and Atmospheric Protection was awarded with the Polish Innovation Prize. It was a great opportunity to establish scientific cooperation with Optimum Tymiński Company, which in 2017 created the first unmanned flying platform. In environmental monitoring, drones are very popular and have different applications. The University drone is used as a platform for measuring air quality and basic meteorological parameters. The range of measurements is several hundred meters. The drone is equipped with the so-called environmental warhead, measuring dust and ozone concentration; in addition, it measures the temperature and humidity of the air. More about the LIFE-APIS / PL project: <http://life-apis.meteo.uni.wroc.pl/>

Former director of NASA Ames Research Center visits Toruń

2018-02-15

Former director of NASA Ames Research Center in Silicon Valley, General Simon Peter Worden visited the Torun University.

General Worden met the Vice-Rector for Research Prof. Jacek Kubica, director of the Astronomy Center Prof. Michał Hanasz and vice-dean of the Faculty of Physics, Astronomy and Applied Computer Science, Dr. Winićjusz Drozdowski, Prof. NCU. The meeting was also attended by Mateusz Józefowicz from the ABM Space company in Toruń. The topics included the development opportunities for the space industry in Toruń, plans to create a selection committee for candidates for the scientific award granted by Simon Worden's foundation and research projects regarding the search for planets carried out at the Astronomy Center of the Torun University.

Space help for farmers

2018-02-15

In 2018, about 2 percent of arable land in Poland will be monitored from space. The Polish startup, SatAgro, enables farmers to access the results of NASA and the European Space Agency satellite observations, including those from the latest constellation of Sentinel observational satellites.

SatAgro offers, mainly to owners of farms of 20-30 thousand hectares, space observations of the state of fields and crops, precise appointment of field works, agrotechnical procedures and notification of sudden changes in weather or the condition of plants. The use of satellite monitoring in agriculture brings increased yields and increases crop efficiency, e.g. as a result of precise determination of the optimal level of fertilization. Thanks to SatAgro even 30 percent fertilizers have been saved in 11,000 hectares of farm Top Farms Głubczyce in the Opole region. (kp)

Prototypes of Polish e-cars next year

2018-02-15

Two hundred companies applied for the production of the first Polish electric car. Its concept is prepared by ElectroMobilityPoland. Will it be an electric crossover?

ElectroMobilityPoland experts say it is too early to answer this question. - We should now decide whether our e-car should be big or small, cheap or expensive - said Zbysław Szwał, a constructor and expert of the „Polish Electricity” commission - there are various technical and financial dilemmas. We evaluate business concepts, competences of companies and teams that submitted them. Functional prototypes of the Polish e-car will appear in several months. This does not mean, however, that they will be produced on a larger scale, but future users will have opportunity to test the cars. At the end of last year, the competition for e-car body designs was concluded at ElectroMobilityPoland HQ. (Kp)

Researchers from the Warsaw University of Technology help in analyzing data of bank clients

2018-02-16

Researchers from the Faculty of Mathematics and Information Sciences of the Warsaw University of Technology will build a model of credit risk assessment for a retail client.

This is a part of a joint project with FinAi company, which received PLN 7.3 million from the National Center for Research and Development under the Intelligent Development program. FinAi is a Polish startup founded in 2016, operating on the Fin-Tech (financial innovation) market. The goal of the company's cooperation with Polish scientists is to combine scientific achievements and work on new customer databases so as to create real business solutions. - The idea is to collect data on potential customers from a much wider range than before. Using social media in the first place. Of course, everything is in accordance with the law. There will be a lot of data, additionally connected with time. Time graphs are our tool for the analysis - explains Prof. Jarosław Grytczuk from the Warsaw University of Technology.

Gold medals for Polish scientists at the exhibition of inventions in Bangkok

2018-02-16

Polish innovation projects have been recognized with gold medals at the International Exhibition of Technology and Innovation IPI-TEX 2018 in Bangkok (Thailand).

A team of scientists from the Institute of Information Systems of the Military University of Technology in Warsaw received two gold medals for mobile ICT systems iSULIN and PATRON for diagnostics and monitoring of diseases using biomedical sensors. The iSULIN sensory application received the Grand Prix of the National Research Council of Thailand for the best invention and a special distinction for the best presentation of the solution. Research teams of scientists from the Academy in Częstochowa and the Institute of Nuclear Physics of the Polish Academy of Sciences in Krakow, Center of Polymer and Carbon Materials from Polish Academy of Sciences in Zabrze, Silesian University of Technology in Gliwice, Lodz University of Technology, AGH University of Science and Technology in Kraków and Silesian Medical University in Katowice were also awarded with gold medals. Maciej Kowalski, a student of the 4th grade of technical school in the School in Połaniec, also returned to Poland with a gold medal. He received it for the innovative project „Safe bath system”. The device is useful in caring of the elderly, sick and disabled people. It triggers an alarm if there is no movement in the bathroom for 30 seconds. (Kp)

Poland uses EU funds efficiently

2018-02-16

The Ministry of Investment and Development together with the National Center for Research and Development summarized the year 2017.

It is clear that Poles want to invest. Potential investors applied for EU co-funding in 75,000 investments worth PLN 474 billion - said Jerzy Kwieciński - Minister of Investment and Development. The

share of Poland in the EU funds for the years 2014-2020 is 22.6 percent. The European Commission has already paid out EUR 7.7 billion, or 27 percent of the whole amount so far transferred to all Member States. - From this result it may be concluded - said Minister Jerzy Kwieciński - that Poland is efficiently implementing projects provided with the European Union funds. Only in 2017 for the innovation support, the National Center for Research and Development allocated almost PLN 7.5 billion to implement research and development works within over 1000 projects.

Polish scientists working on the landing system on Phobos

2018-02-16

Researchers at the Krakow AGH University of Science and Technology are involved in the project of the European Space Agency, which aims to launch the lander on Phobos - one of the moons of Mars. Researchers from the Faculty of Mining and Geoengineering, together with the Space Research Center of the Polish Academy of Sciences, started the project «LOOP - Landing Once on Phobos».

Research conducted at the AGH University of Science and Technology is a part of the European Space Agency (ESA) project. Designing construction works on the surface of Phobos is one of the tasks of the research team from the Faculty of Mining and Geoengineering. The experimental laboratory works include reconstructing the conditions prevailing on Phobos and examining the reaction of various types of ground to the lander's foot. Simulations of the lander's contact with the Phobos surface will be carried out on a mobile platform in one of the halls at the Faculty of Mining and Geoengineering. The team of the AGH University of Science and Technology together with the Space Research Center of the Polish Academy of Sciences has two years to carry out the project.

Miners also need innovative technologies

2018-02-19

Jastrzębska Spółka Węglowa Innowacje develops the „Intelligent Mine” project. It aims to introduce advanced technologies at every stage of coal mining as well as to improve management, logistics, transport and monitoring of the mine.

Researchers predicting the future of the Polish hard coal mining industry believe that without the use of innovative technologies it will not be possible to increase profitability or increase the safety of underground works. Exploration of the deposits will be conducted deeper and deeper, and in more difficult geological conditions. Jastrzębska Spółka Węglowa intends to launch a pilot of «intelligent» mine and then verified solutions to be introduced into mining plants of the company. The project was included in the Strategy for Responsible Development and placed in the Program for Silesia. It is financed from the resources of the Polish Development Fund, from the National Center for Research and Development and the capitals of Jastrzębska Spółka Węglowa.

Innovative tools to fight cancer

2018-02-19

Can magnetic resonance work without gadolinium? This element is harmful to the body, especially for the brain.

Team of Dr. Michał Godlewski from the Faculty of Veterinary Medicine of the Warsaw University of Life Sciences in cooperation with the Institute of Physics of the Polish Academy of Sciences and the Veterinary Research Center has developed its own type of nanoparticles and conducts research on their use in the diagnosis and treatment of cancer.

- Our nanoparticles are able to detect any cancer - says Dr. Godlewski – e.g. lung cancer with 100 percent confidence.

They are not toxic, they can be administered orally, so they are excellent carriers of drugs. They are suitable for use in magnetic and fluorescence resonance. They will bring relief to patients during oncology procedures and biopsies. Precise imaging cancer changes will minimize the removal of healthy tissue. (Kp)

More on this topic: <http://www.media.sggw.pl/pr/383015/nanoczystka-w-raka>

Researchers from Kraków develop emotion detection technology

2018-02-19

The team of Dr. Przemysław Witaszczyk from the Faculty of Physics, Astronomy and Applied Computer Science of the Jagiellonian University in Krakow undertook an attempt to create a professional software that examines the emotions of computer game players.

These are innovative research on the so-called emotional interface based on artificial intelligence. Researchers want to define the emotions of the of virtual games players as precisely as possible. - It is necessary to use not only the equipment, but above all, modern machine learning methods, in order to create so-called game emotion engine. Data on the player's emotional level are collected by means of a 12-channel medical EKG device, an electroenceph-

alograph, a sensitive mouse, and gameplay markers from the game - explains Dr. Witaszczyk. Emotion detection technology can have many applications also out of computer games, for example in medicine, education, entertainment or social media. The team members are applying for 5 million PLN from the National Center for Research and Development and from the Foundation for Polish Science.

Polish start-up platform starts to create professional live broadcasts

2018-02-19

By the end of March, the Liveact.me platform created by Poles will be launched. It will be able to conduct professional live broadcasts in the Internet through a web browser, without the need to install additional software and purchase of expensive equipment.

The solution can be used by both individual users and business, including in internal and external communication in the corporations. Using the application will be based on the subscription model. Every month, users will pay a fee for the set of functionalities offered. - The advantage of this tool is the fact that it is a browser platform, and therefore creating live video transmissions does not require creating a studio with advanced software and hardware. In practice, a computer with Internet access is enough - claims Leszek Bogdanowicz – CEO and founder of Liveact.me. The company has already conducted two trial online transmissions at the Polish Post. More: <http://liveact.me/>

Polish innovation in the treatment of arrhythmias

2018-02-19

One electrode inserted into the patient's heart instead of two used so far. This is how the ablation procedure will change with the innovative MiniMax electrode developed in the Polish company Medinice by Prof. Sebastian Stec.

Due to the built-in 3D mapping system, the electrode is adapted to perform heart ablation proce-

dures without using X-rays. Ablation, or the method of treatment of cardiac arrhythmias involving the insertion of an electrode through the artery or femoral vein to the patient's heart, was first carried out in Poland in April 1992 by Prof. Franciszek Walczak. Since then, the technology of the tools used in the procedure has been constantly improved. New technology can improve the safety of the procedure and shorten its duration. The first patients will use this method at the end of the year as part of a clinical tests.

Britons tempt the Polish creators of the digital pen

2018-02-20

Representatives of the British Ministry of International Trade are holding talks with nearly 200 Polish innovative companies, encouraging them to transfer their activities to the United Kingdom.

They inform about the development opportunities and benefits of cooperation with investors and partners from the British Isles. During the last meeting, among 50 representatives of financial and technological companies from Europe there were heads of 4 start-ups from Poland. One of them was IC Solutions, the company, which developed an innovative system for recording text written manually on paper in electronic form. Its «heart» is a digital pen - IC Pen. It resembles the classic rollerball pen. It has a processor, camera and flash memory card. This set of add-ons enables automatic digitization and processing hand-written data in real time, including creating and analyzing documents. (Kp) <https://icsolutions.pl/produkty/> Video showing the operation of IC Pen technology: <https://icsolutions.pl/produkty/>

Wroclaw's first guide is a chatbot

2018-02-20

The chatbot in Wroclaw automates a large part of the work performed by the employees of the municipal Promotion Office.

He works almost 5 months and has more and more duties. During the day it answers dozens of questions. It's fast and precise. It gives information about events in the city, accommodation places, restaurants, cinema and theater programs or the city's sightseeing tours. Employees of the promotion office deal only with those questions of tourists when chatbot cannot cope. Chatbot is a computer program whose task is to conduct conversations using natural language. - Our chatbot is working on the visitwroclaw.eu fanpage, the website for tourists visiting Wroclaw and handles questions in Polish - says Mariusz Pelechaty from KODA Bots Studio, the creator of the device. It is decided that soon a new English speaking chatbot appears; after it new versions using German, Spanish and Czech languages start working for tourists in Wroclaw. (Kp)

In March Warsaw hosts a global expert conference on supercomputers

2018-02-20

The international conference presenting the most innovative solutions in computational science for large-scale operations will take place in Warsaw from 12 to 15 March.

Supercomputing Frontiers Europe 2018 is a meeting of world-class experts in the field of supercomputers. The organizer of this event is the Interdisciplinary Center for Mathematical and Computational Modeling of the University of Warsaw (ICM UW). Previous conference took place in Singapore. During Supercomputing Frontiers Europe 2018 Prof. Karlheinz Meier from the University of Heidelberg will provide the research results on a neuromorphic computer, whose system is inspired by the human brain structure, and Prof. Dimitri Kusnezov, scientific advisor to the US Secretary of State, will present the US program of building the most powerful comput-

ers in the world and their impact on individualized medicine, where each patient is treated as a separate diagnostic and clinical case, including the creation of individualized medications and their doses. More: <https://supercomputingfrontiers.eu/2018/>

Crane of the future

2018-02-20

40 academic scientists and students from the Faculty of Mechanical Engineering and Mechatronics of the West Pomeranian University of Technology in Szczecin are working on the project of the innovative crane.

The «Crane of the Future» is a project implemented thanks to the financing of the National Center for Research and Development. The consortium implementing the project consists of Cargotec Polska and three universities: West Pomeranian University of Technology from Szczecin as the project leader, Koszalin University of Technology and Poznan University of Technology. Each organization has its own scope of work. Researchers from the Koszalin University of Technology work on the voice control systems for use of everyday speech. As they explain, the aim is to replace strictly specified commands to control the crane with speech. The crane may be controlled in both Polish and English languages. The operator will not have to learn a special language, but simply he will be able to „talk to the crane”. In the project assumptions cranes of this type will be also used in harvesters.

Scholars from Krakow build a new generation magnetic resonance

2018-02-21

Research of Dr Szymon Pustelny and his team from the Department of Photonics, Institute of Physics of the Jagiellonian University paves the way to create new nuclear magnetic resonance devices without the disadvantages of currently used equipment.

Heavy and expensive magnets will not be necessary. - We propose a new approach - explains Dr. Pustelny - use of none or very weak magnetic field and optical magnetometers. Researchers from

the Jagiellonian University check the possibility of changing the preparation of samples or objects intended for resonance studies. They use a physical basis for signal analysis other than currently used. Due to that, they achieve information about the structure of molecules, the strength of chemical bonds, without using expensive, superconducting magnets. - In the perspective, it will allow to recognize chemical substances - stressed Dr. Pustelny - and to detect liquid explosives. (Kp) http://www.nauka.uj.edu.pl/aktualnosci/-/journal_content/56_INSTANCE_Sz8leL0jYQen/74541952/138953535

Students from Poznań in the SAE Aero Design competition

2018-02-21

Students of the Poznan University of Technology Aviation Club have constructed an unmanned aerial vehicle that will take part in three competitions of the SAE Aero Design. February 23-24, 2018 - as the only European team - PP students will participate in Mexican competition (SAE Aero Design Mexico 2018).

Later, on March 9-11, 2018, they will travel to Florida for SAE Aero Design USA East 2018, and on April 6-8, 2018 - to California for SAE Aero Design USA West 2018. Prestigious academic aviation competition has been held since 1986. The organizer is the International Association of Transport Engineers SAE (Society of Automotive Engineers). The partners of academic competitions are such companies like F-16 aircraft manufacturer, Lockheed-Martin, Boeing and NASA (members of these organizations are in the jury). Poznan students worked on the competition model about half a year. The design task covers the whole production process of the aircraft. It consists of developing a concept, making a prototype and then presenting the final version for the competition.

Largest Polish insurance company creates innovative solutions with the AGH University of Science and Technology

2018-02-21

Powszechny Zakład Ubezpieczeń and Akademia Górniczo-Hutnicza in Krakow signed a letter of intent regarding establishing long-term cooperation in the field of research and development projects.

The largest financial group in Central and Eastern Europe and the Krakow University will jointly create innovative solutions connecting science and business. Both sides want to join forces, including in the field of technological innovation, research, didactics, as well as the use of technology and laboratory base. The cooperation of the insurance company and university assumes scientific and research studies, implementation of joint research and development of the projects. The first joint project of Powszechny Zakład Ubezpieczeń and Akademia Górniczo-Hutnicza is the implementation of the TANGO 2 project entitled «Active-safety system for motor vehicles based on an individual driver model». The total cost of the project is estimated at PLN 1.2 million, of which PLN 1 million is financed from the resources of the National Center for Research and Development. The Universal Insurance Company will cover 15% of the project costs.

IT system will check if the prosthesis is safe for the patient

2018-02-22

A team of young scientists from the Lodz University of Technology and the Medical University of Lodz is working on the apparatus and algorithm for analyzing the effects of the use of various types of endoprosthetic prostheses (stent grafts) on patients.

- The doctors - even before the procedure - will check what type of prosthesis in which configuration will be most useful for the patient due to its

condition and the risk of complications - explained Dr. Eng. Andrzej Polańczyk from the Faculty of Process Engineering and Environmental Protection at the Lodz University of Technology. The evaluation of the suitability of prostheses is carried out in several stages. First, on the basis of radiological examinations, the patient's aorta models are produced in 3D printers. Different types of dentures are introduced to them; by simulating blood flow, the functioning is monitored, the safety level and the potential risks are assessed. The system is currently undergoing a patent procedure. In addition to Dr. Eng. Andrzej Polańczyk, MSc. Michał Krempski-Smejda, MD Michał Podgórski, Dr. Eng. Maciej Polańczyk work on the prosthesis. The project is financed by the National Center for Research and Development. (Kp)

Industry 4.0 Conference - Innovative applications for enterprises

2018-02-22

The latest Polish achievements in Industry 4.0 and IT solutions for automation and robotization of enterprises were presented at the Industry 4.0 conference „Innovative applications for enterprises”.

The conference was organized by the Rzeszów University of Technology and the National Industry Cluster 4.0, which was established as a result of an initiative in cooperation with the Rzeszów University. What is Industry 4.0? It is a collective term meaning the integration of intelligent machines, systems and introducing changes in production processes that aims to increase production efficiency. This term applies not only to technology, but also to new ways of working and the new role of people in industry. During the conference, the latest Polish achievements in Industry 4.0 were presented. One of them was the premiere presentation of the first Polish industrial printer 3D SYS PROBE based on selective sintering of polymer powders. This Polish device successfully competes with 3D printers from world-renowned companies. The machine has Ethernet, USB, also uses Wi-Fi and remote connectivity through mobile devices.

Wrocław inhabitants need a planetarium

2018-02-22

Construction of a planetarium equipped with the most modern projection and sounding devices and with a multimedia educational center will be an ideal space for popularizing knowledge and organizing cultural events - plans the Astronomical Institute of the University of Wrocław.

The authorities of the Wrocław university have already handed over the initial estimates of investment costs to the authorities of the Provincial Parliament. University of Wrocław will provide the area as its own contribution. The cost of building a planetarium amounts to several million PLN (with a large astronomical education center it can amount to PLN 8 million). The idea of creating a modern, large planetarium in Wrocław promoting not only astronomy, appeared already in the 1970s. In 2004, the mayor of Wrocław signed the letter of intent, but no funds were found for the implementation of the project. In December last year, the main assumptions of the planetarium construction project were presented during the meeting of the Culture, Science and Education Committee of the Provincial Parliament and will be soon discussed by whole Provincial Parliament.

Success of scientists from Bydgoszcz and Toruń at the Bangkok inventions fair

2018-02-22

The team of the Bydgoszcz University Prof. Mariusz Kaczmarek, Dr Marek Macko, Dr Dariusz Mikołajewski and Zbigniew Szczepański and Prof. Aleksandra Gocha and Dr Emilia Mikołajewska from the Toruń University was awarded with a gold medal. They constructed a passive exoskeleton for the treatment of children with upper limb myalgia, using 3D printing technology.

The device is built individually for each patient; and it is an element of personalized patient-tailored therapy. Lack of engine and computer lowers its weight, which reduces the effort of the limbs. The exoskeleton was awarded with special prizes by the leaders of the Canadian and Romanian delegations. The gold medal was also awarded to Dr Marek Macko and MA Zbigniew Szczepański for elaborating the innovative, fast procedure of creating teeth replica. Earlier, we informed that research and development teams from the Military University of Technology in Warsaw and the Academy of Science and Technology in Częstochowa were also awarded with gold medals in Bangkok. The IPITEx 2018 «Intellectual Property, Invention, Innovation and Technology Exposition» was organized by the National Council for Scientific Research of Thailand (NRCT) on 2-6 February 2018 in Bangkok (Thailand). (Kp)

Innovative application supports therapy of aphasia

2018-02-23

The first, completely free, application supporting speech therapy for people with aphasia is now available in the Internet.

The Afast application was created thanks to cooperation between Technopark in Gliwice, Collegium Medicum of the Jagiellonian University and the Salus Publica Foundation as part of the Social Innovation program co-financed by the National Center for Research and Development. The Afast application, operating from March 2017 at <http://www.afast.pl>, is a multimedia rehabilitation tool. The solution provides patients, their caregivers and logopedics specialists with the free access to therapy. It also allows to conduct classes in cooperation with a caretaker or speech therapist. The program contains over 30 exercises designed for rehabilitation for three types of aphasia - loss of speech, understanding and the ability to read and write. It is intended for people affected by aphasia in a light or medium degree. It can also be used in the treatment of other neurological diseases, such as Alzheimer's or Parkinson's disorders.

Professor Udalski is the winner of the European Astronomical Society prize

Professor Andrzej Udalski from the Astronomical Observatory of the University of Warsaw has been awarded with the European Society of Astronomical Society (EAS) - Tycho Brahe Prize 2018.

2018-02-23

Professor Udalski received the award in recognition of his main role in the OGLE (Optical Gravitational Lensing Experiment) project - one of the most successful and longest-running photometric sky variability surveys. The results of the OGLE project have had a significant impact on the development of modern astrophysics - says the press release of the European Astronomical Society. The Tycho Brahe prize is awarded for outstanding achievements in the construction and operation of European astronomy instruments, as well as significant discoveries made using such instruments. Professor Andrzej Udalski is a member of the Polish Academy of Sciences, the Polish Academy of Learning, the National Academy of Sciences of the USA and the International Astronomical Union. In the years 2008-2016 he was the director of the UW Astronomical Observatory. more: http://eas.unige.ch/tycho_brahe_prize.jsp EAS press release: http://eas.unige.ch/documents/eas_prizes_2018.pdf

National Center for Research and Development will support the Polish railway in the implementation of innovative projects

2018-02-23

Polskie Koleje Państwowe Intercity (PKP Intercity) signed a letter of intent with the National Center for Research and Development.

Both institutions will cooperate in the implementation of innovative projects for sake of passengers of Polish railways. A letter of intent signed under the joint implementation of the „Luxtorpeda 2.0” program assumes implementations of the innovative rail initiatives. Dr. Sebastian Skuza, deputy minister of science and higher education emphasized that «just undertaking the effort of innovative partnership in this field, is an innovation itself». In turn, Prof. Marek Chorowski, director of the National Center for Research and Development, said that together with the Polish State Railways, they will analyze current state of technology. Also the specific technological challenges and the market for innovation are being defined. According to the director of the National Center for Research and Development, «creating a market and setting specific technological and economic requirements will guarantee that a valuable final product will be created». In February 2016, Prime Minister Mateusz Morawiecki announced that the railway industry will be one of the Polish „smart specializations”. - The government wants to withdraw from the concept of developing a country based on supporting the metropolis for sustainable development. Development cannot be only in big cities. We need to create more perspectives for medium towns and small towns- highlighted- Prime Minister Morawiecki.

Researchers of the Technical University of Lodz invented sand with no permeability

2018-02-23

The technology of coating sand grains with a special layer that protects them against water penetration was developed at the Faculty of Civil Engineering, Architecture and Environmental Engineering of the Lodz University of Technology.

Hydrophobized sand prevents from the penetration of water through sand and it does not mix with water. Dr. Eng. Patrycja Baryła from the Lodz University of Technology explains «the repulsive force between grains of sand and water is so large that the grains in the water form closed groups, so-called water cages ». The main application of hydrophobized sand is to create layers of several dozen centimeters thick for protecting underground parts of buildings in areas where periodic increase of groundwater level is expected. In this application, the hydrophobized sand plays a dual role - it protects against water and transfers weight from the structure of the building. It can also be used to seal water reservoirs, dams, and also as a sealed layer of waste landfills.

Leading Polish manufacturer of 3D printers enters the Italian market

2018-02-26

The innovative company Omni3D from Poznań, a leading Polish manufacturer of 3D printers, is entering the Italian market. It signed a contract with WL3D, a division of the WorkLine Store brand, offering 3D printers, scanners and services in Italy for 20 years.

The flagship product - Factory 2.0 is a 3D printer intended for the industry. In May this device will appear in the WL3D offer during the Technology Hub Fair in Milan. This year, the Polish producer plans to develop a sales network in the Nordic countries and the United States. In Poland, it will show its products on the tenth 3D Printing Days in Kielce and INNOFORM fair in Bydgoszcz. Italians are the fifteenth

foreign trade partner of Omni3D. Poznań company sells in the Czech Republic, Russia, France, Germany, Switzerland, Great Britain, Australia and New Zealand. (kp) More: www.omni3d.com/pl

Scientific consortium Pol-Stor-En was established

2018-02-26

The Pol-Stor-En research consortium was founded under the patronage of the Ministry of Energy. I

ts members included the AGH University of Science and Technology, the Institute of Non-Ferrous Metals, the Gdańsk University of Technology, the Poznań University of Technology, Warsaw University of Technology, the Jagiellonian University and the University of Warsaw. The main goal of the consortium is to increase the scientific potential for the development of energy storage and cooperation with the industry. It highlights the combining the strength of scientific and research centers in order to develop a comprehensive product that can be used by industry. Pol-Stor-En is part of strategic programs developed in the Ministry of Energy, such as the Electromobility Development Plan and the Directions for the Development of Energy Innovation. It is also a complementary activity with EU projects.

New research center at the Wrocław University of Technology

2018-02-26

In October 2018, the new research center „GEO-3EM Energy, Ecology, Education” of the Wrocław University of Technology will be opened. All 12 laboratories are located on 4,500 square meters.

The total value of the investment is approximately PLN 100 million. The aim of the project prepared by the Wrocław University is to create a unique center of research and technology transfer in the aspect of sustainable use of raw materials and energy from various sources. Research conducted in this center e.g. spatial mobility, natural and secondary raw materials, machinery and equipment as well as

materials processing, are to be used by the Lower Silesian industry. The authors of the project assume that ideas developed here will be commercialized.

New laboratory of the Silesian University of Technology established in cooperation with the industry

2018-02-26

Research on the impact of post-accidental spine injuries and creating robots helping medical staff to care for the sick will be possible thanks to the Leonardo Lab, established at the Faculty of Biomedical Engineering at the Silesian University of Technology.

The solutions created in the Leonardo Lab are interdisciplinary and practical applications, providing better care for health and the support for medical personnel in the fight against diseases. Leonardo Lab is an example of cooperation between Polish universities and industry. It was established due to the cooperation of the Faculty of Biomedical Engineering at the Gliwice university with the APA Group, which is one of the leaders on the intelligent industrial automation market.

Innovative sightseeing with the student application from the Wrocław University of Technology

2018-02-27

Dariusz Dzikon, Paweł Janowski and Oleksandr Yeroshkin, students of the Faculty of Computer Science and Management at the Wrocław University of Technology, have created a mobile telephone application to support tourists visiting museum exhibitions.

Their solution since February 27, 2018 will be used in practice during the „Wrocław mannerism” exhibition that starts this day at the National Museum in Wrocław. In October 2017, the students of the Wrocław University of Technology became the winners of the team competition for student projects. They presented the basic version of the «Guide Me» application for the first time. The application has been placed on the Google Play platform. It can be downloaded for free, it takes less than 60 MB. Operating the program is intuitive and is based on a network of micro transmitters located at specific exhibits and Bluetooth technology. Thanks to them, individual exhibits are identified and appropriate content is selected for the screen. More: <http://guideme.cba.pl/>

Tests of a new Polish drone for gas and oil exploration

2018-02-27

Soon the tests of an advanced drone for exploration of gas and crude oil begin. The drone was constructed by a Wrocław BZB UAS startup and commissioned by Polskie Górnictwo Naftowe i Gazownictwo. It will replace the older type of device, which has been used by the Geology and Exploitation Department searching for gas and oil resources for three years.

The companies established cooperation within the MIT Enterprise Forum acceleration program. - Aerial photos of the terrain taken by the drone may be transformed into a three-dimensional map - said Kacper Budnik from BZB UAS - which will facilitate the planning of exploration, location of drilling and reduce the

cost of seismic surveys. The device equipped with an optoelectronic head is autonomous, light and small. The components were made in 3D printing technology; the structure was reinforced with composite materials. (kp) <https://mamstartup.pl/spolka/12879/pgnig-nawiazalo-wspolprace-z-wroclawskim-startupem-przetestuje-drony-od-bzb-uas>

Polish scientists take part in the hunt for dark matter

2018-02-27

Scientists from the Institute of Nuclear Physics of the Polish Academy of Sciences and the Jagiellonian University researched the properties of axions, hypothetical particles of dark matter.

- If the axions exist - summarized Dr. Adam Kozela from the Institute of Nuclear Physics of the Polish Academy of Sciences, - there are fewer and fewer places in theoretical models where they could hide. The pioneer of the discovery of dark matter was the Polish astronomer Marian Kowalski. In 1859 he noticed that movements of stars close to us cannot be explained only by the movement of the Sun. The universe has almost 5.5 times more dark than ordinary matter. Its nature remains unknown. (Kp) <https://informacje.pan.pl/index.php/informacje/14-nauki-scisle-i-nauki-o-ziemi/2053-poszukiwania-ciemnej-materii-coraz-mniej-kryjowek-dla-aksjonow>

Polish literature researchers use digital methods to analyze literary texts

2018-02-27

The complete digital bibliographic database of Polish literature in 1939-2002 was created. The project „Polish Literature and Bibliography - a laboratory of knowledge about contemporary Polish culture” is realized by the Digital Humanities Center of the Institute of Literary Research of the Polish Academy of Sciences from the funds of the National Program for the Development of Humanities.

- Digital humanities expand the research point of view - said Dr. Maciej Maryl from the Digital Human-

ities Center. The Polish-American Fulbright Commission finances in Stanford Literary Lab his project «Literary breakthrough seen from above. Quantitative history of Polish literature (1989-2000)». Polish researchers Dr Maciej Eder and Dr Jan Rybicki have a significant contribution to the development of stylometry, the fastest growing field of digital philology. It involves the quantitative examination of texts to capture the unique characteristics of their authors' styles. With the big data techniques, new 5,000 bestsellers were analyzed, determining what readers value the most in such works. (Kp) <https://informacje.pan.pl/index.php/informacje/12-nauki-humanistyczne-i-...>

Electronic nurse helps to save patients in Przemyśl

2018-02-27

The „electronic nurse” conducts the first, basic examination of patients in the emergency department of the Regional Hospital in Przemyśl. It examines blood pressure, heart rate, temperature, saturation, as well as chest pains and capillaries filling time.

The results are processed by a special algorithm, which allows for an objective assessment of the patients' condition and determines the order of further procedures provided by real doctors. The full diagnosis lasts from 60 to 90 seconds. The «electronic nurse» deals with patients of all ages, including newborns. It improves work, usually crowded hospital emergency departments. Quick diagnosis increases patient safety, facilitates the management of medical personnel and speeds up decisions on the further course of treatment. (Kp) More: <https://www.portalprzemyski.pl/elektroniczna-pielegniarka-w-przemyskim-szpitalnym-oddziale-ratunkowym/>

Polish scientists develop solutions for Phobos and asteroids probe landers

2018-02-28

The researchers want to find answers to questions what forces affect the chassis of the lander while touching the ground of the Phobos and how the dynamics of this chassis will affect the active steering?

The implementation of the projects commissioned by the Space Research Center of the Polish Academy of Sciences by the European Space Agency should provide the answers. The proposed solutions will also be used in vehicles settling on light, almost devoid of gravity asteroids, celestial objects on which there are deposits of valuable raw materials. In the first project Polish Industry Incentive Scheme Landing Once On Phobos - Space Research Center of the Polish Academy of Sciences cooperates with the Faculty of Mining and Geoengineering of the AGH University of Science and Technology in Krakow. In the second project concerning the impact of active steering on the chassis dynamics, the partners are GMV Romania and AVS United Kingdom. (Kp) More: <https://informacje.pan.pl/index.php/informacje/14-nauki-scisle-i-nauki-o-ziemi/2057-ladowanie-na-fobosie-z-udzialem-cbk-pan>

Photoreactors will purify the water and provide substances for pharmacy

2018-02-28

Smartphone-size devices, capable of treating water for one person with the help of sunlight and desktop modules producing valuable pharmaceutical substances from chemical waste are the innovative devices produced thanks to the ultrasonic technology of applying titanium dioxide layers to the inner walls of pipes with micrometric diameters - informs the Institute of Physical Chemistry of the Polish Academy of Sciences in the press release.

Scientists from the Institute of Physical Chemistry of the Polish Academy of Sciences were the first

to research and describe the technique of depositing TiO₂ nanoparticles on the inner walls of tubes with micrometer diameters in an article in the journal Ultrasonics – Sonochemistry. The research was financed from the SONATA BIS grant from the National Science Center. More http://ichf.edu.pl/press/2018/02/IChF180222a_PL.pdf

Students of Gdańsk University of Technology developed a mobile application for paramedics

2018-03-02

Students of the Faculty of Electronics, Telecommunications and Informatics of the Gdańsk University of Technology have developed a mobile application that replaces paper intervention reports completed by paramedics.

The work was commissioned by the Pomorski Regional Branch of the Polish Red Cross in Gdańsk under the supervision of Dr Sławomir Ambroziak. The system developed by students is also supposed to solve problems related to storing medical intervention cards. Students of the Faculty of Electronics, Telecommunications and Informatics of the Gdańsk University of Technology have been preparing projects that meet the needs of the market or are commissioned by companies for over a dozen years. 20th competition „Polish product of the future”

2018-03-05

- The development of innovation is one of the pillars of the Strategy for Responsible Development. The „Polish product of the fu-

ture” competition shows that Polish innovations are going in the right direction.

All awarded projects are to strengthen the Polish economy and raise the standard of living in Poland - emphasized Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. The following winners were awarded: National Center for Nuclear Research for Intraline-IOERT, a medical electron accelerator won the competition in the category Product of the Future for the scientific unit. Instytut Mechanizacji Budownictwa i Górnictwa Skalnego together with NTI Modern Technologies for the technology of managing fly ashes, including industrial and municipal waste, in the production of light aggregates for construction was awarded in the Product category of the Future for the scientific unit and entrepreneur with a special award for the product in the area of eco-innovation: Triggo Spółka Akcyjna for Triggo won the special award of the Patent Office for a double, four-wheeled electric vehicle in the Product of the Future category for the entrepreneur. Medical Simulation Technologies won Special prize for the product submitted by a young and innovative entrepreneur for the simulator used to train specialist doctors in the field of transesophageal echocardiography. Special Award Minister of Entrepreneurship and Technology was handed to FLASH Robotics for EMYS robot teaching children foreign languages.

Summer space school in Austria

2018-03-05

Students and young scientists from Poland will have the opportunity to design space missions under the supervision of specialists and engineers from the European Space Agency in July 2018.

Until March 31, 2018, the second year students, as well as young scientists, may submit applications to the summer school in Alpbach, a city in western Austria. The workshop will last from 17 to 25 July 2018, and its participants will be involved in the creation of a mission with aim to provide a planetoid sample to Earth. In Poland, information on the program is provided by Dr Anna Łosiak from the Institute of Geological Sciences of the Polish Academy of Sciences at the following e-mail address: anna.losiak@twarda.pan.pl More about the summer school in Alpbach: <https://www.summerschoolalpbach.at/>

Competition for the educational board games creators at the Warsaw University of Technology

2018-03-05

The Center for Innovation Management and Technology Transfers of the Warsaw University of Technology organizes Science Game Jam on March 10, 2018.

Science Game Jam is a marathon of creating board games about science. The event will start at 10:00 at the building at 4 Rektorska Street in Warsaw. Teams have a task to develop a game prototype within a few hours. Then, the jury will select the best solutions that will be further developed. They will also be presented in October 2018 at the «Planszówki na Narodowym» event, which will take place at the National Stadium in Warsaw. Registration for the event: <https://docs.google.com/forms/d/e/1FAIpQLScWlidSj-uNAh2Dlv59uIkJIPOL-VuvMIN81k3qKgRPqiKLOWg/viewform>

PLN 500 million for innovations in agriculture

2018-03-06

Modern technologies and innovations are not only intended to modernize European industry, but also agriculture. The program „Biostrateg”, run by the National Center for Research and Development, allocated PLN 500 million for this aim.

Deputy Minister of Agriculture Ryszard Zarudzki emphasized that it is the first and only such a financial instrument in research and development for agriculture and forestry. Currently, 45 projects are implemented under the program. One of them is the project under the name «Strategy for preventing weed resistance to herbicides as an important factor in ensuring sustainable development of the agro-ecosystem» run by the Institute of Plant Protection of National Research Institute in Poznań. With more than PLN 8 million, scientists are examining ways of controlling weeds that occur in the cultivation of crops.

University in Bydgoszcz launches e-learning

2018-03-06

The University in Bydgoszcz plans to join the group of universities conducting on-line classes. Online teaching will be facilitated by the e-learning platform.

The funds for the purchase come from the funding granted to the university by the Ministry of Science under the „Modern University” program. The University of Bydgoszcz intends to buy a disk array to support distance education and an e-learning application to cover 38 fields of study at the university with remote teaching. In addition to the online learning platform, the money will be spent on improving language competences and obtaining certificates by both students and academic staff.

Symposium on the directions of Polish development at the College of Social and Media Culture in Toruń

2018-03-06

Startups, 5G technology, using innovation in the defense sector - such development directions for Poland were indicated by the Minister of Investment and Development Jerzy Kwieciński during the Symposium „Digital Independence.

Polish technological thought, from idea to success. „ It took place at the Higher School of Social and Media Culture in Toruń. The biggest problem for startups is currently breaking into the market, rather than simply raising capital for development - said Prime Minister Mateusz Morawiecki during the symposium. In turn, the Minister of Investment and Development, Jerzy Kwieciński, pointed out that half of the startups „flee from Europe” and is bought by other countries, including the United States or Israel. The latter country takes over more startups from the European market than several times bigger France. This shows that a small country, with strong support from the state, is able to build a strong innovation policy. We want to build such a policy - emphasized Minister Kwieciński. More about the symposium: <https://wksim.edu.pl/m-blaszczak-absolvenci-wksim-najleps/>

Polish-Chinese cooperation in the development of electromobility

2018-03-07

UNIMOT joint-stock company, the largest Polish independent importer of liquid fuels, plans to actively participate in the development of electromobility in Poland.

UNIMOT considers extending the product range with charging stations for electric vehicles. The company's board of directors signed a preliminary agreement with Wanbang Charge Equipment Co. Ltd. (Star Charge) - the largest independent operator of electric vehicle charging stations in China. As part of the agreement, UNIMOT will also analyze the possibility of producing electric chargers based on Star Charge solutions, as well as launching a joint research and development center to develop those technologies.

Ministry of Science selected beneficiaries of the „Dialog” program

2018-03-07

The Ministry of Science and Higher Education published the list of projects approved for funding within the „Dialog” program.

The «Dialog» program includes co-financing of activities in three areas: «Scientific excellence», «Science for innovation» and «Humanities for development». Its purpose is to support activities aimed at building cooperation and strong relationships between entities operating in science and the socio-economic areas. The beneficiaries are the Polish Press Agency Foundation, which received nearly PLN 2 million for running and developing the website «Science in Poland», Copernicus Center Foundation, whose project «Humanities in dialogue» will be supported with almost PLN 1.5 million and the Pedagogical Faculty of the Ignatianum Academy in Krakow, which will receive over PLN 1 million for the «Inclusive Society in the Catholic Social Studies» project. More: http://www.nauka.gov.pl/g2/oryginal/2018_03/17f9882f-2d057e7047ff1ffcf16598bf.pdf

Dual studies are effective combination of learning and work

2018-03-07

Our goal is to more precisely adapt curricula to the needs of the market. Dual studies allow students to combine learning with work effectively through simultaneous participation in teaching at the university and working at the workplace.

This way, students acquire new skills faster and more effectively - said Deputy Prime Minister Jaroslaw Gowin, Minister of Science and Higher Education during the Second Conference on Dual Education - EDUAL in Gliwice. In December 2017, the National Center for Research and Development, the executive agency of the Ministry of Science, announced a competition aimed at adapting curricula to the expectations of future employees and their employers. The recipe for success is to run an effective combination of learning and work, in terms of implementation of the Edual education programs. The contest's budget is PLN 100 million. The EDUAL conference was organized by the Silesian University of Technology and the Katowice Special Economic Zone and the city of Gliwice.

Polish delegation visits Japan to cooperate in the energy storage technologies

2018-03-07

Michał Kurtyka, Undersecretary of State in the Ministry of Energy visited Japan. The delegation with Polish representatives of state companies and key institutions supporting the implementation of innovative solutions in Poland visited a factory producing cells for lithium-ion batteries.

The delegation members were acquainted with the technologies used in this industry. During the talks, Deputy Minister Kurtyka assured that Poland is ready to cooperate for the development of energy storage technologies. Deputy Minister also took part in the 9th International Rechargeable Battery Expo - Battery Japan. The fair is recognized as the global

meeting for representatives of the battery industry. In February 2018, the Polish scientific consortium Pol-Stor-En was founded, established by seven scientific units, whose goal is cooperation in the research on energy storage.

Competition for Polish-Luxembourgian service innovations

2018-03-07

The National Center for Research and Development has opened an on-line application for the CORE 2018 competition announced by the Luxembourg agency Fonds National de la Recherche.

Applications for bilateral, Polish-Luxembourgian projects in the category «Innovation in Services» can be submitted to the Fonds National de la Recherche. The National Center for Research and Development allocates PLN 2 million to co-finance Polish entities for the projects that will be accepted for funding under the competition procedures. Applications can be submitted by 18 April 2018 only in electronic version, in English. More: <https://www.fnr.lu/funding-instruments/core/>

Polskie Gornictwo Naftowe i Gazownictwo will use innovative drones

2018-03-08

PGNiG, the largest gas company in Poland, will use special drones to create precise maps and plans necessary for oil and gas exploration and for detection of gas leaks.

The company has been running an InnVento startup incubator for several years. The part of this project, startup BZB Uas develops, among others, drones with special sensors. Such drones are of particular interest to Polska Spółka Gazownictwa - the operator of the gas distribution network as according to the regulations, gas pipelines must be inspected from the air at least once a year. Currently, helicopters are used for this purpose. Controlling by drones is believed to be faster and cheaper. More on BZB Uas drones: <http://bzbuas.com/pl/home/>

Vehicle for the disabled

2018-03-08

Students of the Warsaw University of Technology are constructing a vehicle, which can be driven by disabled people.

Creation of such an innovative vehicle has been conducted since October 2017. Students are currently at the design stage. The construction of the machine is still ahead, but the car is promised to be ready in July 2018. The vehicle is to be driven with a joystick. Thanks to this solution, people with partial disability will be able to manage it. With the help of the stick, the driver will be able to control the steering system and the brakes. The car will be electrically powered, it needs about 8 minutes to charge the engine, and its range will be 30 km on one charge. To realize their goal, students of the Warsaw University of Technology conduct fundraising on the Internet. You can support them at: <https://polakpotrafi.pl/projekt/e-makspower>

National Center for Research and Development announces a competition for projects within the TECHMATSTRATEG program

2018-03-08

The director of the National Center for Research and Development has announced the second competition for projects under the strategic program of scientific research and development work within „modern material technologies” - TECHMATSTRATEG.

The main objective of the Program is to develop knowledge that will transfer innovative solutions to the socio-economic environment and raise international position of Poland in scientific research and development works. The competition covers five strategic problem areas: technologies of construction materials, technologies of photonic and nanoelectronic materials, technologies of functional materials and materials with designed properties, non-waste material technologies, technologies of biodegradable engineering materials, materials technologies for energy storage and transmission.

The budget allocated for selected projects in the competition is PLN 200 million, and applications can be submitted from April 9 to June 8, 2018. More: <http://www.ncbr.gov.pl/programy-strategiczne/nowoczesne-technologie-materialowe---techmatstrateg/techmatstrateg-ii-konkurs/aktualnosci/art,6013,techmatstrateg-ii-konkurs.html>

Talk & Tech 2018 Conference for women from the IT and new technologies

2018-03-08

On 9-10 March 2018, the Talk & Tech 2018 Conference will be held at the Center of Audiovisual Technologies in Wrocław. This is the first meeting of women from the IT and new technologies industries under the patronage of the Association for Computing Machinery.

The aim is to promote the involvement of women in all aspects of the IT industry. The first day of the conference will be filled with lectures of the women working in the new technologies industry. The second day is to be devoted to workshops that will bring closer career opportunities in the IT industry. The special guest of the event will be Dr. Aleksandra Przegalińska, assistant professor at the Center for Research on Organizations and Workplaces at the University of Warsaw, currently working and conducting research at the Massachusetts Institute of Technology in Boston. More: <http://talkandtech.pl/>

Researchers from Poznań work on innovative technology to combat cancer

2018-03-08

Poznań researchers developed a method for obtaining from hemp drugs supporting the treatment of patients with cancer.

The project was conducted for four years by the University of Life Sciences in Poznań, in cooperation with the Institute of Natural Fibers and Medicinal Plants of the University of Medicine in Poznań and the Institute of Human Genetics of the Polish Academy of Sciences in Poznań. They developed an inno-

vative technology for obtaining from hemp agents that support the treatment of cancer patients with a low content of psychoactive substances. Results show that the chemical compounds contained in this plant (cannabinoids) can inhibit or even destroy cancer cells. However, before the drug hits the market, many years of analysis, clinical and observational studies are necessary.

New obstetrics and gynecology laboratory at the State Higher Vocational School in Płock

2018-03-08

Mayor of Płock Andrzej Nowakowski and Prof. Maciej Słodki, rector of the State Higher Vocational School in Płock, opened a new obstetrics and gynecology lab.

It will be part of the Medical Simulation Center, which is being created at the Płock University as part of a project financed by the European Union. The studio also received support from the city in the amount of PLN 200,000 to equip the laboratory. The center is to provide the education for nursing and midwifery students using the latest global technologies. The Płock contribution was targeted to adapt and extend the simulation center. This allowed to purchase the training simulators of body organs and areas, phantoms and simulators of artificial patients with functioning systems and organs. The equipment will enable students to master technical qualifications and will support learning how to communicate with the patient correctly.

Satellite designed by Warsaw University of Technology students ready to fly into space

2018-03-09

The PW-Sat2 space satellite designed by students of Warsaw University of Technology is ready for the final tests before transferring it to space flight.

The conceptual work on the PW-Sat2 project began in 2013, and several months later the first prototypes of the deorbiting sail and the designs of several basic subsystems were created. The satellite was created by the Student Astronaut Circle, operating at the Faculty of Power and Aeronautical Engineering of the Warsaw University of Technology. In recent months, it underwent tests of electronic components and integration of the whole in the CEZAMAT laboratories of the Warsaw University of Technology and the Space Research Center of the Polish Academy of Sciences. The main mission of the satellite will be to test the deorbiting sail. In May 2018 it will be delivered to the company, which put the device for the Falcon 9 rocket. The launch of the rocket is planned for the second half of 2018.

Poland in the European lead in terms of patent applications

2018-03-09

According to the annual report of the European Patent Office in 2017, the number of patent applications filed by Polish inventors, companies and scientific institutes increased by 14 percent.

Poles submitted 469 patent applications. In terms of the growth rate of applications, Poland ranks among the European leaders. In the Polish ranking of patent leaders run by the European Patent Office, the Synthos company with 12 patent applications came first. Unlike in other European countries, Polish patents in 2017 were provided by universities and research institutes. As many as four of the seven largest applicants are universities or research institutes. The second most active Polish applicant (7 applications) was the Jagiellonian University, then the

University of Gdańsk, the Flaris aircraft manufacturer and the Institute of Biochemistry and Biophysics of the Polish Academy of Sciences (6 applications) and the Warsaw Medical University (5 notifications).

Institute of Aviation completed work under the European project for the construction of a hybrid rocket engine

2018-03-09

Department of Space Technology at the Institute of Aviation completed the tasks under the European project „Hybrid rocket engine for orbital transfer to LEO, MEO and GEO” (HYPROGEO), co-financed by the European Commission under the Horizon 2020 program.

The goal of the project was to develop a satellite propulsion module based on a hybrid rocket engine that uses 98 percent hydrogen peroxide as the oxidant. The final result of the project is a demo-version of hybrid rocket engine. The consortium of the project was coordinated by Airbus D & S, and consisted of 12 partners from 7 European countries (Belgium, France, Germany, Italy, Norway, Poland and Great Britain). The project started in February 2015 and lasted 36 months. More about the HYPROGEO project: <https://www.hyprogeo.eu/>

National Center for Research and Development supports research and development in the shipbuilding industry

2018-03-09

The National Center for Research and Development announced the first competition as part of the pilot program of the INNOship sector program.

The program is designed to support research and development in the shipbuilding industry. We have great shipbuilding traditions and well-educated engineers in Poland. If we add to this the increase in expenditure on research and development, we will

achieve our goal: shipbuilding can again become a showcase of the Polish economy - said Deputy Prime Minister Jarosław Gowin, Minister of Science and Higher Education. The reconstruction of the shipbuilding industry is one of the priorities of the government's activities. The first stage of the INNOship program will last two years. Two competitions have been planned with a total budget of around PLN 240 million. The call for applications in the first competition will start on April 30 and will last until June 29, 2018.

Open day of the MOST Wiedzy project at the Gdańsk University of Technology

2018-03-12

On March 14, 2018, the Open Day of the MOST (Bridge of Knowledge) project will take place at the Faculty of Management and Economics of the Gdańsk University of Technology.

MOST Wiedzy is a portal for a multidisciplinary, open system of knowledge transfer allowing scientists to present their scientific achievements. The Open Access (OA) enables free and unlimited access to scientific works in digital version. The goal of the project is to increase the availability, coherence and re-use of learning resources. These resources are made available to representatives of the world of science, entrepreneurs and the public in an open, simple and transparent form via the portal. More: <https://mostwiedzy.pl/>

European Innovation Council to be a new opportunity for Polish industry in Horizon 2020

2018-03-12

On 12 April 2018, the Centrum Kreatywności Targowa in Warsaw will host a conference and workshops: „European Council for Innovation - a new opportunity for Polish industry in Horizon 2020”.

Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education accepted the honorary patronage on the event. The partners include National Center for Research and Development, Enterprise Europe Network, Employers' Union Polish Clusters, Lewiatan Confederation and National Contact Point for Financial Instruments of European Union Programs. Participants will learn the rules of applying for EU grants, they also receive practical tips related to applying for co-financing from framework programs. The European Innovation Council particularly invites companies interested in applying to the Horizon 2020 Framework Program, Polish research and development units, beneficiaries of grants, as well as representatives of public and local administration. Registration for the event: <http://www.kpk.gov.pl/?event=europejska-rada-ds-innowacji-eic-nowa-szansa-dla-polskiego-przemyslu-w-horyzoncie-2020>

Foundation for Polish Science to allocate over PLN 11 million to young researchers

2018-03-12

The Foundation for Polish Science has agreed further competitions in the HOMING and RETURN programs. Funding in the total amount of PLN 11.2 million will be shared by fifteen young scientists who implement innovative research and development projects in Poland.

The HOMING program is addressed to researchers from abroad who want to implement a research project in Poland. Within this program 12 young doctors will be enabled to develop their careers in Poland.

They will receive a total of PLN 8.8 million for the implementation of post-doctoral internship projects. The RETURNS program will allow three researchers to return to academic work after a break related to maternity. The winners will receive PLN 2.4 million for conducting research. Funds for financing grants in both programs come from the Intelligent Development Operational Program. List of winners in the HOMING competition: <https://www.fnp.org.pl/grantobiorcy-homing-konkurs-42017/> List of winners in the RETURNS competition: <https://www.fnp.org.pl/grantobiorcy-powroty-konkurs-42017/>

Changes in teacher education

2018-03-12

When the new act (Constitution of Science) comes into force, only those universities that conduct research and use the latest scientific achievements in the field of teacher education and student education will have the right to educate teachers - said Piotr Müller, deputy minister of science and higher education, in an interview for the daily newspaper Rzeczpospolita. Universities that undertake education of the teaching profession are obliged to achieve at least the scientific category B in the discipline of the study. Deputy Minister Müller also announced that pre-school and early-school education as well as special pedagogy will be conducted as a unified master's program. All changes are to be introduced gradually from the next academic year.

Krakow University launches new intellectual property and new technologies studies

2018-03-12

The Jagiellonian University has established cooperation with the World Intellectual Property Organization (WIPO), which is an agency of the United Nations and the Polish Patent Office. Vice-rector of the University responsible for research and structural funds, Prof. Stanisław Kistryn, director of the World Intellectual Property Organization Academy based in Geneva Sherif Saadallah, and the President of the Patent Office, Dr. Alicja Adamczak, signed a letter of intent. The document provides for the launch of the second Master's program «Intellectual Property and

New Technologies» in English at the Faculty of Law and Administration of the Jagiellonian University. The new direction is addressed to both Polish and foreign students. It will increase the attractiveness of the teaching offer and will increase the internationalization level of the Kraków university.

Comprehensive development program of the Technical-Humanistic Academy in Bielsko-Biała

2018-03-13

In April 2018, the project „Academy of the Future - Comprehensive Development Program of the Academy of Technology and Humanities in Bielsko-Biała” will begin. The project was qualified for co-financing by the National Center for Research and Development under the POWER program (Operational Program Knowledge Education Development). Its main goal is to increase the efficiency of education at the University of Technology and Humanities in Bielsko-Biała and to improve the quality of university management. This objective is to be achieved by expanding the educational offer allowing to acquire competences and qualifications expected by employers, increasing educational competences, integrating internal and external systems related to university management and improving the competences and qualifications of the management and administrative staff. In addition, the academy in Bielsko-Biała intends to introduce an integrated university management system.

Innovative medical devices at the Congress of Health Challenges

2018-03-13

- I would like innovative telemedicine solutions to be increasingly included in the scope of guaranteed services. We will work on this - said Minister of Health Łukasz Szumowski during the panel discussion about innovations in medical devices, organized by the Polish Chamber of Commerce of Medical Devices POLMED. The discussion on the state of medical innovation and development barriers in the commercialization of projects took place as part of the Congress of Health Challenges in Katowice, which lasted from 9 to 11 March 2018. - We have Polish cardiological products that are sold in the world, but not in Poland, because they are not among the products refunded by the state. It is difficult to talk about commercialization until there is a fast path from commercialization to reimbursement - said Minister Szumowski. At the end of the panel, the Polish Chamber of Commerce of Medical Devices POLMED announced the commencement of work on the report on the market of medical devices in Poland.

International competition for innovations in electronics

2018-03-13

The call for innovation proposals is currently being held within an international competition organized as part of the ECSEL Joint Undertaking. The competition is intended for authors of innovative projects in electronics. The ECSEL Joint Undertaking is a public-private partnership in electronic components and systems. The institution manages a research and innovation program to build and develop a strong, globally competitive electronic components and systems industry in the European Union. PLN 1.5 million has been allocated for co-financing the participation of Polish entities in projects selected as part of the National Center for Research and Development competition. More: <http://www.ncbr.gov.pl/programy-miedzynarodowe/wspolpraca-wielostronna-inne-inicjatywy-wielostronne/ecsel-ju/aktualnosc/art,6018,wspolne-przedswiezcie-ecsel-otwarcie-naboru-wnioskow-w-konkursie-2018.html>

Innovative technologies at the Lodz University of Technology

2018-03-14

Professor Anna Kogut will present opportunities for cooperation between universities, entrepreneurs and the National Center for Research and Development at the Lodz University of Technology. Professor Kogut, the President of the Council of the National Center for Research and Development, will open a conference on innovative technologies. The aim is to match the world of science and business for providing successful research, development and commercialization of innovative solutions and technologies. The organizers of the event are Center of Technological Transfer Ltd and the Center for Cooperation with the Economy, Innovation and Technology Transfer of the Lodz University of Technology. The meeting will take place on Tuesday, 20 March 2018, at the Bay of Sport of the Lodz University of Technology at Politechniki 10.

R&D National Center to allocate over 5 billion zlotys for research and development

2018-03-14

The National Center for Research and Development will allocate over PLN 5 billion for research and development projects this year - said Piotr Dardziński, deputy minister of science and higher education. As part of the "Fast Track", - the Center's flagship program, five competitions will be provided. Their budget amounts to almost PLN 3 billion. The program is horizontal, there are no industry restrictions, and various projects are allowed to apply for co-financing. - «Fast track» supports all those entrepreneurs who have the courage to undertake innovative projects. Those that will change the reality - said Professor Aleksander Nawrat, deputy director of the National Center for Research and Development. Deputy Minister Dardziński announced the return of competitions within the «Social Innovation» program. The previous program brought an application allowing blind or visually impaired people to listen to alternative soundtracks at the cinema, such as audio description or the lecture version.

Conference Man-Business-Technologies at the Lodz University of Technology

2018-03-15

The Faculty of Management and Production Engineering of the Lodz University of Technology organizes since March 15, 2018 a series of meetings „Man-Business-Technologies”, which will be devoted to the overall vision of society, economy and technology. The following meetings are planned: March 15 – Prof. Maciej Soin, Corporate Social Responsibility. Ethics or rhetoric? April 19 - Dr. Szymon Wierzbński, Personal Heroism or Collective Responsibility? Organization of the Byzantine army. 17 May - Dr Joanna Sońnicka, Ethics and technology - contemporary dilemmas. June 14 - Dr Inga Kuźma Cein, Social aspect of innovation. Seminars will be held at 18.00, in Łódź at ul. Wólczańska 215 (Building of Three Faculties) room 422.

Medical University of Silesia develops an innovative technology of craniofacial reconstruction

2018-03-15

Department of Laryngology, Faculty of Medicine of the Silesian Medical University in Katowice begins the implementation of the project „Introduction to the surgical practice of new technologies for the reconstruction and regeneration of damaged tissues in the facial area”. The undertaking will be co-financed by the National Center for Research and Development with almost PLN 7 million. The project will be implemented by a consortium including Medical University of Silesia in Katowice, Institute of Non-Ferrous Metals in Gliwice, the company «Solveere» Ltd and Kardio-Med-Silesia in Zabrze. The main task of the consortium will be to develop technology for receiving personalized tissue scaffolds that will be used in facial reconstruction.

Invitation to participate in a project on sharing economic

2018-03-16

The Lublin Foundation for Development invites future and current entrepreneurs to participate in the international SharEEN project implemented by eight partners from the European Union. The goal of the project is to identify and connect sharing economy platforms, exchange experiences and help companies, including social entrepreneurs to take advantage of the opportunities offered by sharing economy. The project includes a series of trainings on sharing economy, coaching and mentoring support, networking for the internationalization of business platforms and promotion of sharing economy initiatives in Europe. More: www.shareen.eu

Poznań Science and Technology Park aids to create innovative startups

2018-03-16

As part of the „Merlin” project, the Poznań Science and Technology Park of the University of Adam Mickiewicz organizes a series of workshops „Lean startup” that help innovators in the ICT industry to create and develop companies to deal with the commercialization of scientific research. The ICT sector is an industry of communication and IT devices as well as accompanying services. The Merlin project, apart from workshops, also includes webinars, meetings with potential clients and investors, networking and the chance to be included in the Startup Europe network. Participation in the Merlin project is free of charge, thanks to financing from the Horizon 2020 Program. More: <https://merlin-ict.eu/>

PLN 19 million for the Vilnius branch of the University of Bialystok

2018-03-16

Almost PLN 19 million will be allocated by the Ministry of Science to co-finance the Vilnius branch of the University of Bialystok. Deputy Prime Minister Jarosław Gowin signed an agreement between the Ministry of Science and Higher Education and the University of Bialystok regarding co-financing the reconstruction and extension of the building of the Faculty of Economics and Information at the Bialystok branch of the university in Vilnius. Since October 2007, the Faculty of Economics and Information Technology in Vilnius has enabled the Polish to study in Vilnius at the academic level, in Polish. Over 600 graduates have already graduated from the Faculty, currently, 293 students are studying there. At the beginning of its activity, the University educated at two bachelor's degrees: economics and informatics, in the academic year 2014/2015, second-degree studies were also launched. For the last few years there are also first-degree studies available in European studies.

New fields of study in English to launch at the Warsaw University of Life Sciences

2018-03-19

The Warsaw University of Life Sciences in Warsaw received PLN 28 million from the National Center for Research and Development for adjusting and implementing academic education programs in line with socio-economic needs as part of the POWER (Knowledge and Education Development Operational Program). The main objective of the project «Success by nature - a comprehensive program to improve the quality of management of the education process and the quality of teaching at the Warsaw University of Life Sciences» is to implement changes in the management of the education process and to improve the quality of teaching at the Warsaw university. Particular emphasis will be placed on increasing the level of internationalization of new majors and specialties taught in English including

Organic Agriculture and Food Processing, nutritional business manager, Civil Engineering, and Computer Science and Econometrics - Big Data Analytics.

Report to the Global Impact Challenge if you know how to influence the lives of a billion people

2018-03-19

The application for the first Polish Global Impact Challenge has been started. The contest aims at selecting the most innovative ideas. The idea must be unusual, because presented startup or prototype must positively affect the lives of a billion people over a decade. The prize in the competition is a two-month stay in the Silicon Valley, where the laureate will be able to implement his idea. Applications will be accepted until April 26, 2018. The organizer of the Polish contest is the Digital University Foundation, the sole representative of Singularity University in Poland. Talented scientists, engineers, startup entrepreneurs and entrepreneurs are invited for the competition. The final with a maximum of 10 projects will take place on May 24 and 25 in Warsaw. The jury consists of: Sebastian Kulczyk; Regina Njima (Singularity University); Supreet Singh Manchanda (business angel, Silicon Valley) and Jowita Michalska (Digital University Foundation) <https://su.org/gic/>

Hybrid bicycle from 3D printer wins „Soczewki Focusa” competition

2018-03-20

Students of the Silesian University of Technology won the competition „ Soczewki Focusa 2017” presenting their spokeless hybrid-powered bike . The young engineers „printed” their invention on a 3D printer and won the main prize in the category of technical innovations. The innovative bike has a foot drive, if necessary supported by an electric motor. The battery has been placed in the frame of a two-wheeler. The prototype consisted of over 300 plastic parts printed on 3D printers. The target structure is to be made of aluminum or carbon fiber - bicycle designers are looking for a business partner to start its production. „Soczewki Focusa” is a competition aimed at selecting the best Polish innovations. The organizers choose the most interesting technologies created in Poland.

Dragonfly and Red Bomber will fly to the USA

2018-03-20

Dragonfly and Red Bomber - unmanned airplanes constructed at the Academic Air Club of Wrocław University of Technology - will take off in April in the SAE Aero Design West 2018 competition in California. 75 teams from around the world announced the participation in this competition. SAE Aero Design tournaments have been organized for 30 years. The task of the participants is to construct unmanned airplanes that meet stringent standards. Machines are designed to lift as much weight as possible while weighing as little as possible. Constructed by members of the AKL «Red Bomber» will start in the Micro class, in which the ratio of the raised weight to the weight of the aircraft itself is thoroughly calculated. The model weighs only 423 grams, but it can lift up to 1.3 kilograms weight. The second plane - «Dragonfly» - will start in the Advanced class. It weighs 8 kilograms and it will be able to carry a load of 15 kilos, and then drop it onto the designated target. During the construction, students used laser cutting and 3D printing.

Wroclaw University of Economics to switch to renewable electricity by 2030

2018-03-20

Wrocław University of Economics is the first university in Poland, which declared its willingness to use only renewable sources of electricity. Rector of the University, Prof. Andrzej Kaleta, signed the plan „100% Committed” . of the Climate Reality Project team. Professor Kaleta declared that by 2030, the energy used at the university campus will come exclusively from renewable sources, which will contribute to reducing carbon emissions, mitigating climate change and increasing air quality. The University wants to be part of this process both theoretically – through scientific and didactic work - and practically, creating a green campus. The Climate Reality Project is a venture set by the Nobel Peace Prize laureate and the former US vice president Al Gore to accelerate the transition to clean energy and solve the climate crisis.

Broadband Internet in the Baltic

2018-03-21

Researchers from the Faculty of Electronics, Telecommunications and Informatics at the Gdańsk University of Technology have developed innovative solutions that ensure wireless, broadband communication in maritime areas. The results of their work will be available on Thursday, March 22 during the seminar, which will start at the Institute of Oceanology of the Polish Academy of Sciences in Sopot. The seminar will summarize three years of work under the project «netBaltic: Internet in the Baltic - Implementation of a multi-system, self-organizing broadband ICT network at sea to increase the safety of navigation through the development of e-navigation services” . The project was carried out by a consortium consisting of research teams of the Faculty of Electronics, Telecommunications and Information Technology at the Gdańsk University of Technology, the Institute of Communications of the National Research Institute, the Institute of Oceanology of the Polish Academy of Sciences and the companies DGT LAB and NavSim Polska. The whole project was fi-

nanced by the National Center for Research and Development as part of the Applied Research Program.

Silesian University of Technology receives nearly PLN 29 million for modernizing education

2018-03-21

Nearly PLN 29 million was obtained by the Silesian University of Technology for the implementation of an educational project within the first part of the Integrated Programs of the University program, organized by the National Center for Research and Development. This is the second largest funding among all Polish universities. Under the first part, universities will receive funds intended primarily for new education programs, PhD studies, training sessions for teaching staff and improving students' competences through high-quality internship programs and additional courses, including courses in foreign languages. The goal of the Integrated University Programs program is to develop higher education to meet current social and economic needs of Poland. This year - under the first program part - NCBiR subsidies amount to nearly PLN 700 million. About one hundred universities in Poland received money for educational projects.

Students of the Warsaw University of Technology construct a motorcycle prototype for competitions in Spain

2018-03-22

Students of Mechanics and Mechanical Engineering at the Faculty of Automobiles and Working Machines of the Warsaw University of Technology are working on a prototype of the preMoto3 class motorcycle. They are preparing it for the MotoStudent competition, which will take place in October in Spain. According to the schedule, the construction of the motorcycle is expected to be completed at the end of July to allow the team to test their machine. The prototype of Warsaw students will be presented in two categories: static and dynamic ones. Static category includes presentations of the project and its business assumptions – whether motorcycles can be introduced into series production. Dynamic category tests braking, acceleration, top speed as well as steering features. However, the greatest emotions will be aroused by a 40-kilometer race on the full stretch of the MotorLand Aragon track, where the registered motorcycles are tested by professionals. This year MotoStudent will be held for the fifth time. 74 teams from 17 countries will take part in it. This is the first start of the Warsaw University of Technology in this event. More: <http://www.motostudent.com/>

Researchers from Koszalin to develop modern woodworking tools

2018-03-22

Researchers from the Faculty of Technology and Education and the Mechanical Faculty of the Koszalin University of Technology will participate in the implementation of the project, which will allow to modernize technological processes and production procedures in the company owned by KPPD - Szczecinek S.A. in Kalisz Pomorski. The task of Koszalin researchers is to develop and implement production of tools for processing wood and wooden composites. The project „Improvement of process

and material efficiency in sawmill industry” will be implemented as part of the strategic research program and development within „Environment, agriculture and forestry” - BIOSTRATEG. The aim of the program, which was prepared by the National Center for Research and Development, is to increase the innovation and competitiveness of Polish companies. The project leader is the University of Life Sciences in Poznań, and the consortium of the Koszalin University of Technology, KPPD-Szczecinek SA and the Warsaw University of Life Sciences.

„Protein of immortality” to help in the treatment of glaucoma

2018-03-22

Scientists of the Department of Physiology of the Faculty of Medicine of the Medical University of Silesia in Katowice received over PLN 1 million for research of innovative therapies including the use of protein of immortality in the treatment of glaucoma. The therapy bases on delivering an additional gene responsible for the production of HuR protein into the eye to increase its content in retinal ganglion cells. HuR is called the immortality protein, because the cells with high concentration of it are more resistant to damaging factors. Glaucoma is a chronic, neurodegenerative disease that causes damage to retinal ganglion cells and to higher levels of the visual pathway. If untreated, it can lead to total and irreversible blindness. Studies on animals have shown that the methods developed in Katowice allow to slow down significantly the progression of the disease.

Energy flower to be placed on the building of the Wrocław University of Environmental and Life Sciences

2018-03-23

Students of the BioEnergia Scientific Circle of the Wrocław University of Environmental and Life Sciences have designed and produced an „energy flower” by combining photovoltaic panels and wind turbine with a vertical axis of rotation. Now, every-

body can charge the phone or tablet from the device. Environmentally friendly charging station will start operating this spring. Students emphasize that their idea fits into the idea of a «green university» - projects aimed at increasing the use of the renewable energy. The energy flower is also to show that it is possible to install renewable energy sources in urban space. Such solutions can be very useful and integrated well into the environment. Another idea of Wrocław's students is an energy bench with a roof made of photovoltaic panels. More: http://www.glos.upwr.edu.pl/aktualnosci/47587/energetyczny_kwiatek_na_upwr.html

Wrocław University of Technology at the World Summit of the Information Society

2018-03-23

Students and scientists at the Wrocław University of Technology presented their inventions at the World Summit of the Information Society (WSIS Forum) 2018 in Geneva, Switzerland. They showed six projects - including an unmanned and autonomous air system for blood transport. Wrocław University of Technology students also presented a 3D scanner controlled by a mobile application that enables quick and easy reproduction of three-dimensional elements (3D photocopying), a Martian rover Scorpio and a robotic chessboard - a device for playing chess games, both with a live partner and with artificial intelligence. Other Wrocław projects on the co-organized by UNESCO WSIS Forum 2018 were a robot with a manipulator that detects obstacles, working in conditions inaccessible to people and an innovative rental service through the application powerbank from any location in the city.

Six Polish teams in the final of the Martian rovers competition in University Rover Challenge 2018

2018-03-26

Teams: University of Warsaw Rover Team from the University of Warsaw; Impulse from the Kielce University of Technology; KNR Team from the Warsaw University of Technology; Raptors from the Lodz University of Technology; Legendary Rover Team from Rzeszów University of Technology; PCz Rover Team from the Czestochowa University of Technology have been qualified for participation in the Mars Rovers Challenge University Rover Challenge 2018. 95 design teams participated in the qualifying rounds for the competition this year. The jury qualified 36 most interesting solutions from the USA (11 teams) Canada and Poland (6 teams). In addition, teams from India, Bangladesh, Great Britain, Egypt, Mexico, Australia and Turkey will take part in the finals. The University Rover Challenge (URC) is the most prestigious international competition for Mars rovers built by students and it takes place in the Utah desert. This year the competition will last from May 31 to June 2. See the film presentation of the University Rover Challenge 2018 and in it all final prototypes: <https://youtu.be/RfHNODonLeQ>

Warsaw Medical University to establish Academy of Innovative Didactics

2018-03-26

One of the beneficiaries of the competition for Integrated University Programs organized by the National Center for Research and Development has been the Warsaw Medical University. The winner plans to allocate over PLN 11 million to the Academy of Innovative Didactics. One of the objectives is to strengthen the rank and international position of didactics at the Warsaw university. In addition, the university plans to develop the didactic competence of the academic staff, increase innovation programs and methods of education, and provide better tailored offer, programs and learning outcomes to the needs of the labor market. As part of the project, the

Warsaw Medical University plans to organize Summer Public Health Schools, develop and implement methodology and interactive materials for classes of Biostatistics in clinical practice and Clinical Informatics and Telemedicine and introduce a new field of study «Toxicology with elements of forensics».

Polish innovative application for farmers conquers Europe

2018-03-26

SatAgro - a company founded by Przemysław Żelazowski, a researcher at the University of Warsaw and a graduate from Oxford - is already famous due to his application for monitoring arable fields on six European markets. SatAgro has been the winner of the POLAGRA-PREMIERY International Agricultural Fair in Poznań. The company's application for monitoring the agricultural land received positive feedback, bringing significant savings to farmers through enabling the current preview of the productivity of the cultivated land, as well as the analysis of historical aspect, including meteorological data. Currently, it is used in over 10,000 farms. The application was created and developed thanks to subsidies from the European Regional Development Fund, More: <https://satagro.pl/>

Gold medal at the Valencia fair for Toruń scientists

2018-03-27

The location system called „ Method of finding positions of objects, in particular humans, and human positioning equipment” is an invention of scientists Michał Meiny and Dr Krzysztof Rykaczewski from the University of Nicolaus Copernicus in Torun who won the Gold Medal of the INNOVA 2018 Inventiveness Fair in Valencia. The invention was constructed for supporting fire services. The invention of Torun scientists was implemented as part of the project «KUBUS - Commercialization of University Research and Services» run by the Academic Business Incubator of the Nicolaus Copernicus University within the program of the Ministry of Science and Higher Education «Incubator of Innovation +». The location system has been designed to support fire services and taking into account the specificity of work dur-

ing rescue and firefighting operations. Determining the position of firefighters in real time increases the safety of the rescue team and provides better coordination of fire-fighting activities - informs the University of Toruń.

Another gold medal for Poland at the INNOVA 2018 Fair

2018-03-28

During the International Exhibition of Innovation, Research and New Technologies INNOVA 2018 held in Valencia, the Institute of Aviation- Department of Remote Sensing (Space Technology Center) was awarded the Gold Medal of Invention, for the development of the tools for processing satellite images, data aggregation and creating easy-to-interpret maps of the physical phenomena. At the same fair, the gold medal was also won by scientists from the Nicolaus Copernicus University in Toruń for the location system supporting the fire service. The INNOVA fair is the oldest event in the field of inventiveness and scientific research in the world. For 65 years the fairs were held in Belgium, and last year they were transferred to Spain. The previous event took place in Barcelona while the current one took place in Valencia. Over 160 exhibitors from around the world participated in it. Parallel to the INNOVA Fair, the FORINVEST International Forum was also held. This was an exhibition of products and services in the fields of finance, investment, insurance and new technologies from various fields.

„Compostomat” from the Silesian University of Technology awards the Stena Circular Economy Award

2018-03-28

The compostomat developed at the Faculty of Environmental and Power Engineering of the Silesian University of Technology to increase the efficiency of bio-waste collection received the main prize of the Stena Circular Economy Award - the Leader of Closed Circuit Economy. Compostomat constructed by a student Karolina Ceglaz is an energy self-sufficient and easy-to-use device that enables increasing the efficiency of bio-waste collection from urban multi-storey blocks. The device is to be located near local rubbish containers. The residents bring kitchen waste in special chipped containers. In return, they receive points that they can exchange for a home composter, compost, a discount for waste disposal, gadgets that help reduce the amount of waste generated, and discounts to cooperating companies.

Agnieszka Sobczak-Kupiec from the Cracow University of Technology won „Inventor 2017”

2018-03-29

Dr Eng Agnieszka Sobczak-Kupiec from the Faculty of Chemical Engineering and Technology at the Cracow University of Technology won the „Inventor 2017” competition. All competitors were applied by the research institutes, technical universities, scientific and technical associations as well as innovative companies and laureates of previous editions. Dr Eng. Agnieszka Sobczak-Kupiec deals in obtaining nanometals, nanosilver and nanogolds. Her research combines material engineering, chemical technology and nanotechnology. She develops biomimetic implant materials, modeled on biological structures and created a synthetic bone substitute with anti-bacterial properties. The «Inventors 2017» competition was organized by the Association of Polish Inventors and Rationalizers and the Federation of Scientific and Technical Associations of the Supreme Technical Organization together with the «Przegląd

Techniczny» magazine with the support of the Patent Office.

New information about the TRAPPIST-1 system

2018-03-29

Scientists are more and more positive about the living conditions that can exist on the planetary system TRAPPIST-1. Research with the use of the Hubble telescope shows that the planets are rich in water. As a result of the precise observations, the physical parameters of the central star and the planets orbiting around were more accurately estimated, and their density and the amount of water included in their composition was determined. Some planets may contain an amount of water equivalent to 5 percent of their masses. For comparison, the mass of water on Earth is around 0.02 percent of its mass. The main goal of the research is to determine the abundance of hydrogen in their atmospheres. The results show that at least three planets do not have thick hydrogen atmospheres, which gives hope for life. With each new discovery the system TRAPPIST-1 seems to be more and more «alive». Dr Tomasz Mrozek from the Institute of Astronomy of the University of Wrocław writes about the latest research: <https://uni.wroc.pl/2018/02/23/coraz-bardziej-zywy-uklad-trappist-1/>

Students and graduates of the Silesian University of Technology are laureates of the Fiat competition

2018-03-29

Six works of students and graduates of the Silesian University of Technology were awarded the prize of the Fiat Chrysler Automobiles group for the best diploma and research works. The aim of the 19th competition is to support young scientists who are passionate about the automotive industry and its modern construction solutions. The awarded works are: «BATT2CARS electric vehicle - traction calculations»; «BATT2CARS electric vehicle - prototype construction»; «A new generation of energy-saving permanent magnet synchronous motors

for automotive applications»; Test Thermo-Shock application on the cDAQ platform in the context of IIOT (Industrial Internet of Things); «The influence of boron on the structure and hardness of ductile iron» and «Optimization and numerical analysis of the strength properties of the connecting-rod of an internal combustion engine». This last job also won the prestigious Giovanni Agnelli prize, awarded by the Fiat Research Center in Torino.

University of Opole to create a research and development center for agriculture and agri-food industry

2018-03-29

The University of Opole is building the International Research and Development Center for Agriculture and Agricultural and Food Industry. The facility will operate in two places - at the campus of the university in Opole and in near Prószków - where the Royal Academy of Sciences operated at the turn of the 19th and 20th centuries. In the Prószków, the University launches laboratory performing paid research in the field of toxicology, ecotoxicology, soil science and precision agriculture. There will also be educational plots, paths and a special space for events related to agriculture, e.g. fairs. The research center will be established in Opole, in the building of the Faculty of Natural Sciences and Technology. The project costs over PLN 42 million. PLN 32 million are granted from the Regional Operational Program, 10 million is own contribution of the University, the local governments and Opole industry. The construction starts in spring, the Center will be ready by the end of 2019 to start its research activities in 2020.

First in Poland transplant of corneal epithelial stem cells in a child

2018-03-29

Professor Edward Wylęgała and Dr. Dariusz Dobrowolski, from the Silesian Medical University in Katowice, conducted the first in Poland and the third in the world transplant of corneal epithelial stem cells in a child. The patient was a 10-year-old Kuba, who four years ago suffered from scalding the left eye with lime. A month after the operation, the boy regains his sight in the damaged eye, he can already see the letters. The District Railway Hospital in Katowice with its University clinical department of ophthalmology is the only place in Eastern Europe where ophthalmic patients have been provided with the latest stem cells therapy. The main stages of therapy are meticulous qualification processes, taking material from a healthy eye; carrying out the breeding at the reference center in Modena, Italy and then transplanting to replace the damaged tissue.

Autonomous vehicles from the Wrocław University of Technology considered as the best at competitions in the Czech Republic

2018-03-30

Students of the Wrocław University of Technology advanced to the finals of international competitions of autonomous vehicles NXP Cup. They took the first two places in the final elimination tournament in the Czech Republic. NXP CUP is an international series of competitions in which student teams compete on designated routes with autonomous vehicles. The machines are made up of parts provided by the organizers, and the young constructors must develop the engine control module and the vehicle control software themselves. Teams from the Scientific Circle of Mechatronics and Robotics prepared two models of autonomous vehicles. After a fierce battle, the Synergy team won. Their vehicle made the entire route in 17.2 seconds while the Synergia team with the score of 20.8 seconds took second place and also qualified for the final tournament in Germany.

Newest medical simulators to operate at the University of Opole

2018-03-30

The Center of Gynecology, Obstetrics and Neonatology in Opole presented the latest generation of medical simulators obtained by the University of Opole. «Our university is finalizing the agreement with the Ministry of Health, which allocates the significant part of funding for these medical simulation centers» - assured Prof. Zenon Halaba. In Opole, the latest generation of a newborn simulator, an adult Hal simulator, a simulator to learn how to intubate a patient, and simulators for learning and improving laparoscopic surgery are available. «Being a doctor requires constant striving for perfection to eliminate the possibility of mistakes. This is the possibility provided by educational simulators, when, for example, a patient simulator can be intubated up to fifty times in order to do it flawlessly at the fifty first time» - explained Prof. Halaba.

New technology to reduce emissions of nitrogen oxides and sulfur dioxide in Opole

2018-04-03

Energetyka Ciepła Opolszczyzny with the Energy Institute and the companies Budimex and Mostostal Kraków are developing new technologies for cheap and effective reduction of nitrogen oxides and sulfur dioxide emissions in the process of coal combustion in the boilers. In the WR25 boiler- screens in Opole, preparatory works have already been carried out to carry out temperature measurements to determine the so-called temperature window. It is an area of optimal temperature that allows the reduction of nitrogen oxides and sulfur dioxide. The solution requires little interference in the structure of the boiler and low installation costs. The research effect can bring the important effect for the heating industry i.e. reduction of nitrogen oxides at a level of at least 60%. and reduction of sulfur dioxide even above 90%. - depending on the reagent used and the implemented optimization. Such efficiency enables compliance with new emission standards for gas-eous pollutants in the full capacity range of boilers.

High Flyers from the Silesian University of Technology to fly to the USA for the SAE AeroDesign competition

2018-04-03

Students of the Silesian University of Technology associated in the Inter-Faculty Scientific Society of Unmanned Aerial Vehicles „High Flyers” are flying to California for the SAE AeroDesign competition. They will compete with 74 teams from around the world. The competition consists in designing and building an unmanned aircraft with the highest possible lifting capacity, and then completing the competition flight. The following tasks are evaluated: technical documentation prepared by the team during preparations, technical presentation during the competition and competition flight - transporting cargo of the largest possible mass and precise discharge of its part for the purpose indicated. The High Flyers team will take part in the SAE AeroDesign competition for the first time. However, the university team has already started successfully in similar professions. In 2011, 2013, 2015, young engineers took part in the Air Cargo Challenge in Europe.

Offer of Gdańsk universities for startups

2018-04-04

The Medical University of Gdańsk with the University of Gdańsk and the Medical Innovation Center plan to become the regional coordination center for the Regional Innovation Scheme (RIS) as part of the EIT Health Hub program. The EIT Health Hub program supports innovation in healthy living and active aging. Gdańsk universities offer their support to startups (operating in the field of life science) as part of InnoStars Award acceleration programs (for beginner startups having a ready-made prototype) and European Health Catapult (for startups and small enterprises with a product ready to the successful production). Interested startups are invited to contact the Technology Transfer Center of the Medical University of Gdańsk by email: naukaibiznes@gumed.edu.pl

Center for Medical Simulations at the University of Bydgoszcz

2018-04-05

The Collegium Medicum of the University in Bydgoszcz officially opened the new Medical Simulation Center. This completely renovated and equipped facility cost PLN 17 million. Almost 11 million is an EU subsidy, whereas the Ministry of Health offered PLN 6 million. The Center has well-equipped simulation rooms of high-fidelity with advanced simulators - an intensive care unit, a hospital emergency department, a delivery room, an operating room, an ambulance room and a nursing room. Low-fidelity simulation rooms use different simulators and models. There are special rooms for teaching technical and surgical skills, for laboratory teaching of clinical skills. There is also a room with a simulated patient to form interpersonal skills between the patient and the medical team, and a computer-teaching spot with virtual patients.

Ministry of Science offers PLN 21 million for the construction of a new runway for the Center of Aviation in Chełm

2018-04-05

Under the decision of Deputy Prime Minister Jarosław Gowin, over PLN 21 million was allocated from the Ministry of Science and Higher Education for the construction of a concrete runway at the Aviation Center of the State Higher Vocational School in Chełm. The concrete runway is necessary for the full functioning of the University Center of Aeronautics and the airport used by it in Deputycze Krolewskie. First of all, it will allow pilots to perform all air operations, even in bad weather conditions. - The runway is also necessary aeronautical infrastructure to increase the attractiveness of our Aviation Center and it opens new development opportunities. It is also an impulse that will stimulate the development of Chełm and the entire region. We know that the city's transport accessibility is one of the important aspects that investors consider when choosing the location of new projects. Thanks to our investment,

we will be able to meet the expectations for the convenient communication even for the most demanding clients- said Prof. Eng. Arkadiusz Tofil, the rector of the State Higher Vocational School in Chełm.

Startup house II at the State Higher Vocational School in Elbląg

2018-04-05

From March 2018, for 10 months, the „Startup house II - incubation of enterprises in Elbląg” project will be implemented at the State Higher Vocational School in Elbląg. The project aims to help young entrepreneurs start their business. The current offer is addressed to the SME companies (from the sector of small and medium enterprises), being in the initial stage of development, that is, operating on the market for no longer than 3 years. The free incubation program will include: access to 15 equipped office rooms, specialist trainings (brand building, commercialization of products and services), ICT services, specialist services related to promotion, legal services, accounting services, consultancy in the field of raising funds for business development and support from a dedicated company's angel. The „Startup House II - Incubation of enterprises in Elbląg” project received funding from the Regional Operational Program for the Warmińsko-Mazurskie Voivodeship for 2014-2020. Its total value is nearly PLN one million.

Ambulance and car simulators at the Center for Medical Simulation in Poznań

2018-04-06

Researchers of the Medical Simulation Center of the Medical University in Poznań created the ambulance and car simulators. It will provide the full mapping of the work environment for future doctors and paramedics. The ambulance simulator is a faithful copy of real ambulances adapted to working conditions at the Simulation Center. The driver's cabin is cut, the medical compartment with the Venetian mirror to let the lecturer watch the work of the res-

cue team. In addition to the ambulance, there will be a real passenger car, in which special emergency mannequins of the weight of an adult person will be placed, enabling to practice the medical procedures in traffic accidents. Simulation equipment is implemented with the help of European funds under the Operational Program Knowledge Education Development. The co-financing value exceeds PLN 16 million.

Gliwice Technopark invites to Science and Industry Days

2018-04-06

Science and Technology Park Technopark Gliwice and the city of Gliwice invite students to participate in the 8th Science and Industry Days. The exhibitors - companies, institutions, scientific circles and anyone interested in innovative solutions can apply for this event until 27 April. Participation in the event is a great opportunity for Silesian companies and scientific units to promote for free their innovative solutions. Exhibitors come from various industries, including automation, robotics, IT, telecommunications, automotive and biotechnology. Every year, over 50 exhibitors participate in the event and more than a thousand guests visit it. Future exhibitors are asked to open the Science and Industry Day website: <http://dnip.pl/> fill out the application form and send it to the e-mail address: targi@technopark.gliwice.pl

Mazovia Innovator Competition for entrepreneurs and young scientists

2018-04-09

Masovian entrepreneurs and young scientists can apply for the title of Mazovia Innovator for innovative solutions in business and science. The competition is addressed to entrepreneurs of small and medium-sized enterprises, who operate in the Mazovia Region for no more than 10 years and can demonstrate innovative solutions introduced in the last 5 years and used on a daily basis in their company. Also the scientists can apply for if they are no more than 39 of age, have completed a PhD during the last 3 years and live in the Mazovia Region. The Innovator of Mazovia contest is under the honorary patronage of the Marshal of the Mazowian Region. More: <https://innowacyjni.mazovia.pl/dzialania/informator-mazowska/x-edycji-konkursu-innowator-mazowska.html>

Jagiellonian University Medical College wins Polish Intelligent Development Award in 2018

2018-04-09

The Jagiellonian University Collegium Medicum won the Polish Intelligent Development Award 2018 in the category „Future innovative solutions at the university” for the project „Didactics, Innovation, Development. Improving the quality of education through the development of innovative education”. The goal of the project is to develop and implement a university development program that includes various complementary forms of medical simulation. Besides, it develops the skills of teachers, provides developed teaching materials and well- equipped classrooms. The project will be carried out for two years, The project « Didactics, Innovation, Development. Improving the quality of education through the development of innovative education» is co-financed from European funds. It is headed by Dr Michał Nowakowski from the Department of Medical Didactics of Collegium Medicum.

Agreement on cooperation between the Warsaw University of Technology and the Main Inspectorate of Road Transport

2018-04-10

Joint implementation of IT projects and cooperation in the implementation of IT systems by the Chief Inspectorate of Road Transport are tasks included into an agreement signed by Warsaw University of Technology and the Main Inspectorate of Road Transport. The contract was signed by the Rector of the Warsaw University of Technology Prof Eng Jan Szmidt and Chief Inspector of Road Transport Dr Eng Alvin Gajadhur. The cooperation focuses primarily on the joint implementation of IT projects, analysis, development, implementation of IT systems by the Chief Inspectorate of Road Transport. The aim of the agreement is also to support scientists from the Warsaw University of Technology in the training employees of the Inspectorate. On the other hand, the Main Inspectorate of Road Transport accepts students of the Warsaw university for internships.

Polish innovative company Neuro Device to receive 1 million \$ in global competition

2018-04-10

Neuro Device, a startup from Warsaw, has developed a method of stimulating damaged areas of the brain after a stroke. Its innovative solution was qualified for the final of the world competition Chivas Venture and it will compete for the main prize of \$ 1 million. Every year, the authors of the competition invest in projects that change the world for better and permanently affect the quality of human life. As explained by the president of Neuro Device Paweł Soluch, the competition solution is based on neuromodulation, that is stimulation of relevant areas of the brain with electrical impulses, thanks to which proper processes are consolidated in it and alternative centers and connections in the brain are created. The key stage of the startup has been completed, as it won the Polish eliminations and thus it was qualified for the world final, which this year takes place in Amsterdam. However, in order to get the main prize in the global Chivas Venture competition, the Warsaw company needs Internet users' votes from April 25 through the website: www.chivasventure.com

Sunday Shopping App to check which stores are open on Sundays

2018-04-11

Students of the Opole University of Technology and the University of Wrocław created the application Sunday Shopping to check what stores are open on Sundays. They came up with an idea on March 11 - on the first Sunday when Polish stores were closed. On April 5 the application was ready. The students started with the database of 1,200 outlets in Poland, but they count on the help of users to broaden the database and make the application as functional as possible. The application, which can be downloaded for free on an Android, is simple and intuitive. The users can indicate their location and find all the open stores in the neighborhood.

The information is verified on a regular basis and enhanced every day. The creators are planning the development of their work, they also create a version for iPhones.

University of Silesia joined the International Entrepreneurship Incubator

2018-04-11

The University of Silesia will be a participant of the International Entrepreneurship Incubator - a network connecting universities, local government units, chambers of commerce and employers' associations from five cities around the world. The incubator opens up wide opportunities for academic companies, which will be able to promote their offer abroad and to appear on the international market. The network agreement was signed during International Entrepreneurship Forum organized in Sierre in Switzerland and in Saint-Étienne in France. The Forum members talked academic entrepreneurship and startups and it was an opportunity to discuss and exchange experiences of delegations representing five cities: Monastyr (Tunisia); Tamatave (Madagascar); Saint-Étienne (France); Sierre (Switzerland) and Katowice (Poland).

Applications for EIG CONCERT-Japan competition

2018-04-11

The applicants submit their offers for the 5th competition under the EIG CONCERT-Japan initiative. EIG CONCERT-Japan is an international joint initiative supporting and developing cooperation in the field of science, technology and innovation between European countries and Japan. For the first time, the National Center for Research and Development takes part in the organization of the competition. As part of the competition, scientific units, enterprises and scientific consortia may apply in the contest. The support will be dedicated to basic research, industrial research and development works on the topic of the competition «Functional porous materials». The National Center for Research and Development allocated a budget of 750,000 euro to co-finance the participation of

Polish entities in the project. More: <http://www.ncbr.gov.pl/programy-miedzynarodowe/wspolpraca-wielostronna-inne-inicjatywy-wielostronne/eig-concert-japan/aktualnosci/art,6085,eig-concert-japan-informacja-dotyczaca-otwarcia-naboru-inference-WV-konkursie.html>

Polish Intelligent Development Award 2018 for Gdańsk University of Technology

2018-04-12

Gdańsk University of Technology is the laureate of the Polish Intelligent Development Award 2018 in the category „Innovative solutions of the future at the university” for the project „Multidisciplinary Open Knowledge Transfer System - MOST Knowledge”. The distinction is given to entities that show a constant focus on the future, creating the basis for the balanced economic development of the country. The prizewinners include Prime Minister Mateusz Morawiecki, the National Center for Research and Development and PGNiG Obrót Detaliczny. The media partner and the initiator of the prize is the editors of the section «Rzecz o Innowacjach» and «Rzecz o Inwestycjach» of the newspapers «Rzeczpospolita» and «Puls Biznesu». The substantive partner is the Silesian Center for Business Ethics and Sustainable Development, operating at the Silesian University of Technology. The awards ceremony will be held during the International Forum of Intelligent Development 3.0 Uniejów 2018, October 18-20 in Uniejów.

Conference on new technologies in Gliwice public transport

2018-04-13

Representatives of science, local government organizations and energy companies as well as specialists of public transport will gather on Monday 16 April at the Silesian University of Technology to discuss the implementation of modern technologies in public transport. The conference - organized by the Polish Association of Municipalities and Counties, Silesian University of Technology and the city of Gliwice will be held at the Center of New Technologies at the University at ul. Konarskiego 22B. Its aim is to present and compare various solutions used in bus public transport and discuss the conditions for the implementation of new technologies. The matter of the conference is becoming more and more important due to legislative changes. One of the most important change is the adoption of the Act on electromobility and alternative fuels at the beginning of the year. The first consequences of this regulation will be noticed by local governments and energy companies in 2018. Application form: <https://www.silesia.org.pl/formularze/formularz-zgloszenia-udzialu-w-konferencji-pn-nowe,152>

Conference on innovation in education in Gdańsk and Sopot

2018-04-16

Professor Jerzy Hausner - politician and economist, originator of the concept of enterprise management „Company-idea”, will participate in the conference „Competitive education. University-idea: digital transformation. „ The conference under the honorary patronage of the Ministry of Science and Education will be held in Gdansk and Sopot on 17 and 18 April. The event includes combining lecture, power speech, Oxford debate and the mentor's box. The audience is also invited to participate in the discussion, including representatives of scientific, business, administrative, non-governmental and media communities. The conference is part of activities carried out under «Competitive education» concept, com-

bining the intellectual and organizational potential of academic and business environments, to jointly develop the best, innovative ideas and solutions for the development of education.

Wrocław University of Technology and AWF in the Common Architectural Initiative

2018-04-16

Architecture students of the Wrocław University of Technology with physiotherapists from the University of Physical Education and the Association for Support of the Development of Disabled People create an innovative project to help people with disabilities to remove architectural, technical and communication barriers. The goal of the Joint Architectural Initiative is to help people with various disabilities and cognitive functions to adapt the apartment to their specific needs. This support can also be used to improve the accessibility of public buildings - centers and social welfare homes. In order to obtain support, eligible person reports to the Social Welfare Center to carry out architectural works and facilitate their daily functioning. Co-financing for such tasks comes from the State Fund for the Rehabilitation of the Disabled.

AGH University of Science and Technology in Krakow has its own mobile telephony network

2018-04-17

It operates in the same ways as commercial networks. It is fully functional and has a licensed frequency provided by the Office of Electronic Communications. The first mobile student network in Poland was created by the students of the Telecommunications Department of the AGH University of Science and Technology in Krakow together with Nokia. The 4G / LTE network is a scientific-demonstrative model and consists of servers located outside and inside the base station buildings belonging to the Department of Telecommunications and the area adjacent to them. It has received recently a license for the ra-

dio frequency. Krzysztof Persona, director of Nokia's Research and Development Center in Krakow, emphasizes that researchers and students received „ a complete solution that is as close as possible to the actual cellular network”. It allows to conduct experiments and scientific research on the latest solutions in mobile radio technologies (for example Mobile Edge Computing) as well as Internet of Things applications.

Letter of intent regarding the creation of Szczecin Automotive Hub

2018-04-17

The West Pomeranian University of Technology together with BrightONE, the IT leader based in Szczecin, the P3 group - a supplier of solutions for car manufacturers and the city of Szczecin, will build the competence center of Szczecin Automotive Hub. The parties have signed a letter of intent to make the academic offer and the labor market more attractive by launching exchange programs with the participation of students and staff of Szczecin's universities and business in Poland and Germany. The BrightONE specializes in providing software for the automotive industry - from cars and planes to advanced sports equipment. It is used by drivers, pilots of rescue helicopters and even trainers of the best football clubs. The P3 Group is a provider of solutions for automotive information and entertainment systems, e-mobility, assistance systems for the driver and autonomous driving.

Three gold and one silver medal for Bydgoszcz universities in Moscow

2018-04-17

University of Technology and Life Sciences and the Bydgoszcz University were awarded with gold and silver medals at the Moscow salon of innovative inventions, Archimedes 2018. Two solutions from the University of Technology and Life Sciences were awarded with gold medals: «Construction of a mixer for granular materials with vibratory propulsion and helical drive system» and «Stationary stirrer for a dryer and granular materials mixer, working with vibratory helical propulsion». The Bydgoszcz University prototypes of passive exoskeleton for children with weakness of upper limbs were developed and printed in 3D. The Bydgoszcz University also won a silver medal for light-cured dental implants. The 21 Moscow International Salon of Inventions and Innovative Technologies Archimedes 2018 was organized from 5 to 8 April, and almost 700 inventions from 28 countries were presented.

University of Silesia develops a new method of producing oxide layers on aluminum

2018-04-17

Researchers from the University of Silesia developed a method for the production of oxide layers enriched with nanolubricant on aluminum or alloys of this metal. The invention is applicable to the production of protective layers of machine parts, so that their operating costs can be reduced. Aluminum and alloys of this metal are relatively light materials. They are often used in the design of cylinders and compressors or engine pistons. However, they are characterized by limited hardness and easy deformation. To improve their properties, scientists are developing different layers for sliding associations - including oxide layers enriched with nanolubricants, thanks to which the hardness and corrosion resistance of materials can be increased. The authors of this already patented invention are Dr. Joanna Korzekwa and Dr Władysław Skoneczny from the Faculty of Computer Science and Materials

Science, University of Silesia. More about the invention: <http://www.us.edu.pl/news-bozwiazanie-uozliwiajace-obnizenie-ksztow-eksploatacji-urzadzen>

Warsaw students to develop an electric racing car

2018-04-18

Team Proton Dynamic was established in October 2017. It consists of students of the Warsaw University of Technology and the Warsaw School of Economics. Since then they have been building an electric racing car for the Formula Student competition. This fully electric car is one of the first of its kind in Poland. A car weighing 230 kg will be powered by an electric motor generating 80kW. Acceleration to 100 km / h should be reached within less than 4 seconds. Formula Student is an international racing competition for university teams organized since 1979 by the Association of Automotive Engineers (Society of Automotive Engineers). Students from world leading universities design and complete a car to race on the most famous racetracks in the world after the testing phase. Visitors can take a closer look at the car on 18 April in the Parachute Hall of the Warsaw School of Economics.

Crystal Brussels Sprout Prize

2018-04-18

Since 2001, the Crystal Brussels Prize has been awarded for successes in the European Union Research and Innovation Framework Programs strengthening scientific excellence and increasing economic competitiveness. This distinction is presented to scientists and entrepreneurs for innovation and contribution to the development of Polish science and economy. The Chapter awarding the Prize is chaired by Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education. This year, the winners will be selected in the following categories: science (universities, research institutes, scientific institutes of the Polish Academy of Sciences); business (enterprises); local government; non-profit entities. The names of the winners will be announced on June 6 in Warsaw during the Gala of the Brussels Sprout Award.

Polish design office constructs a turbojet engine for the HondaJet

2018-04-18

One of the most modern HondaJet HA-420 business aircraft was presented at the Warsaw Okęcie Airport. GE Honda HF120 turbojet engine for this modern unit was designed at the Engineering Design Center, a design office being a joint venture of General Electric Aviation and the Institute of Aviation in Warsaw. The HF 120 engine for HondaJet is not the only project run by the Engineering Design Center. The Polish engineers carry out comprehensive projects related to the most modern devices for various industries - including aviation and energy. Key achievements include the latest aircraft engines, efficient turbines and installations for extracting oil and gas from the seabed. Projects have been carried out in Warsaw starting from the concept phase and under the Polish engineers' lead.

PhD student to develop cosmic sewage treatment at Wrocław University of Technology

2018-04-18

Anna Jurga - PhD student at the Wrocław University of Technology - develops a water treatment system for extraterrestrial colonies. The system is to work in conditions of reduced gravity and provide components necessary for plants in aeroponic cultivation. The PhD student is working on the construction of a biological reactor, in which sewage would be purified using bacteria forming a conditioner used for fertilizing aeroponic crops. The concept assumes the use of «gray water» - previously used by colonists, e.g. for washing. This is the first step towards closing the entire water cycle in the extraterrestrial colony. The wastewater goes to a biological reactor to run the process of oxidation of ammonia and ammonium salts to nitrites and nitrates - they are transformed into the nutrient supplying the plants. Also the scientists from the University of Life Sciences in Poznań jointly develop this project conducting research on aeroponic cultivation of tomatoes and potatoes. More about the project: <http://pwr.edu.pl/uczelnia/aktualnosci/kosmiczna-oczyszczalnia-powstaje-na-pwr-10821.html>

„E-technologies in Engineer Education” at the AGH University of Science and Technology in Krakow

2018-04-19

Integration of the academic environment involved in didactics supported by technologies, exchange of experience and good practices, as well as searching for inspiration for further activities - these are the goals of the conference „eTEE (e-Technologies in Engineers Education)”, which from 19 to 20 April 2018 takes place at the AGH Academy in Kraków. The topics of the conference are the impact of modern technologies on the training of engineers, theory of learning and e-learning models, good practices of e-learning in technical universities, teaching with the use of mobile devices (m-learn-

ing), and e-learning foreign languages for students of science and engineering. During the event, Agnieszka Wykowska, Giorgio Metta (Italian Institute of Technology), Anna Turula (Pedagogical University in Krakow) and Christopher Sweeney and Andrzej Pieńkowski from the Katalyst Education Foundation will hold their lectures.

University of Toruń to receive PLN 1.7 million for the development of quantum technologies

2018-04-19

A team of scientists from the Faculty of Physics, Astronomy and Applied Informatics at the University of Nicolaus Copernicus in Torun will receive PLN 1.7 million for the project „The cryogenic system for the development of new optical quantum technologies”. Torun researchers from the team headed by Dr Piotr Wcisła received a grant for the purchase of a cryogenic installation for controlling the temperature of experimental systems, such as an ultra-stable optical cavity or a confocal microscope. The investment enables to start new research programs in the areas of atomic and molecular physics, simple molecules chemistry, quantum information, ultra-precise optical metrology, and the search for new physics going beyond the Standard Model - as informs the University on its website. Dr Piotr Wcisła is a graduate of the Inter-Faculty Individual Studies in Mathematics and Natural Sciences (specialization in atomic physics) at the Jagiellonian University. He has completed an internship at the Harvard-Smithsonian Center for Astrophysics in Cambridge.

Graduate of the Poznan University of Technology wins the TAURON company competition

2018-04-19

Jacek Kamiński, a graduate of the Poznań University of Technology won the competition for the best MA thesis of TAURON Dystrybucja - informs the university on its website. The main prize was awarded for the work „Optimal power distribution in a

solar-wind power plant with energy storage”. Jacek Kamiński developed the concept and made the software implementing the process of optimization of the hybrid structure of the solar-wind power plant with the energy storage. He also conducted optimal distribution of power in objects with a specific 24-hour load profile. The use of renewable energy sources in combined hybrid systems with storage can solve one of the biggest problems of modern energy - a continuous increase in demand for electricity with scarcity of conventional sources. Hybrid systems can accumulate surplus energy when demand is lower than the current level of production and return it when demand exceeds this level.

Debate on cooperation between business and science at the 11th Investment Forum in Tarnów

2018-04-20

If we plan to achieve development based on innovation we must create a spirit of the dialogue between companies and scientists. Such conclusions result from the debate of entrepreneurs and representatives of science, which took place during the 11th Investment Forum in Tarnów. The more dynamically developed economy, the greater the percentage of gross domestic product is spent on science. If science receives money, the greater is the chance to implement innovation in business. In order for this correlation to work in practice, it is necessary to integrate both environments that set common goals - said Dr. Stanisław Kowalski, rector of the University of Economics and Computer Science in Kraków. The panel discussion was also attended by Dr. Eng. Jadwiga Laska, rector of the State Higher Vocational School in Tarnów, Paweł Buszman, president of the board, American Heart of Poland and Leszek Nowicki, president of the board of the Tarnowska Agencja Rozwoju Regionalnego.

Yacht from recycled materials wins international competition

2018-04-20

The design of the yacht by Dr Wojciech Wesolek from the Academy of Fine Arts in Wrocław won the Millennium Yacht Design Award 2018 in the professional category. The awarded project was presented at the „Hybrid and electric propulsion” conference in the Italian Carrara. The project involves the use of recycled materials for the construction of the yacht protected from marine conditions. The outer shell is made of recycled cutters and ships, the teak floors come from decommissioned yachts, and the interiors are made of elements of beams from the demolition of houses. According to the author's plan, the construction of the yacht should be carried out near the demolition site of old ships. «It is also an opportunity for the scrapping community. It gives chances for better working conditions and much higher incomes in the industry commonly recognized as luxurious,» says the author of the project. The winning design on the author's website: <http://wwdesign.eu/html/rat120.html>

Declaration of the Visegrad Group on economic cooperation in the field of innovation

2018-04-23

Ministers of the Visegrad Group countries (Poland, Hungary, the Czech Republic and Slovakia) signed a declaration in Budapest on economic cooperation in the areas of competitiveness, innovation and digital transformation. The declaration assumes the use of shared data resources in a modern approach to conducting research and development works, and the implementation of the idea of «Industry 4.0». The countries of the Visegrad Group would also like to include startups in the technological modernization process and deepen the work on cybersecurity and modernizing Internet technologies. - We are observing what the more advanced economies are doing and we are participating in the EU initiative "Digitization of the European Industry". We are

building the Platform for the Future Industry, which will stimulate industrial transformation - said Marcin Ociepa, deputy minister of entrepreneurship and technology, who signed the Budapest Declaration on behalf of Poland.

European Rover Challenge 2018

2018-04-23

65 teams from 20 countries will take part in international races of the European Rover Challenge 2018. The final part is planned from September 14 to 16 at the Museum of Nature and Technology in Starachowice. The event is under the patronage of the European Space Agency and the Ministry of Science and Higher Education. The competition will be attended by students from the best technical universities in the world. Teams from Poland include universities and high schools in Białystok, Bydgoszcz, Chełm, Kielce, Częstochowa, Gliwice, Kraków, Łódź, Opole, Rzeszów, Szczecin, Toruń, Warsaw and Wrocław. The teams from Germany, Great Britain, India, Italy, Canada, the United States, Norway, Mexico and Bangladesh will also compete. The organizers inform that the European Rover Challenge is one of the world's largest international robotics and space competitions, gathering not only specialists in the field of planetary robotics and rover constructors, but also representatives of the world of science, business and the new-tech sector. The organizer of the event is the European Space Foundation, and the co-organizers of the Special Economic Zone „Starachowice” S.A., Powiat Starachowicki, Museum of Nature and Technology in Starachowice and Mars Society Poland. More: <http://roverchallenge.eu/pl/home/>

Over PLN 100 million for innovative projects in the power industry

2018-04-23

The National Center for Research and Development offers over 100 million PLN for the implementation of innovative projects run by entrepreneurs from the power industry. This is the result of the second competition of the PBSE sector program. Its main

objective is to increase the innovation of the national electricity sector in the perspective of 2023 - informs the National Center for Research and Development. - Projects implemented under sectoral programs of NCRD are to bring benefits not only to the given industry, but to the entire economy and citizens. Over PLN 100 million, which we offer to Polish entrepreneurs for the development of better, more effective and ecological solutions, is an investment that will pay back and serve next generations of Poles - says Piotr Dardziński, deputy minister of science and higher education. Thanks to the support of the National Center for Research and Development, 19 companies will be able to implement projects - among others: «The use of low-dimensional structures to broaden the absorption spectrum and increase the efficiency of silicon cells in the IBC or BIFACIAL architecture» by ML System SA, «Development and implementation of the technological process processing of waste from fluidized bed boilers using CO2 for the production of cement substitute «proposed by the Tauron group or» Development of innovative biomass treatment technology to improve fuel parameters and increase the possibility of biomass utilization « by OZE 11.

Mobile Robot rolling from the Poznan University of Technology wins the Robot Show 2018

2018-04-23

Three students of automation and robotics at the Poznan University of Technology won the main prize of the Robot Show competition 2018 for a four-legged, crawling and jumping robot. The device will be able to replace people during the inspection of waterworks and underground channels in the future. The invention is to help the company having a problem with monitoring the condition of waterworks, because the previous robots did not meet this task satisfactorily. Jakub Bartoszek, Łukasz Antczak and Jakub Matyszczak worked on the prototype for almost a year. The victory in the competition brought PLN 10,000. - I can assure that we will use this award well and in a year our robot will perform even better - says Jakub Matyszczak in an interview quoted on the university website. The Robot Show took place as part of the 11th Investment Forum in Tarnów. More about the contest: <http://inwestforum.pl/zwyciezcy-startup-award-i-robot-show-nagrodzeni/>

Agreement between the Pomeranian Medical University and Bank Zachodni WBK

2018-04-23

The Pomeranian Medical University in Szczecin will cooperate with Bank Zachodni WBK - Santander Universidades. The bank will support academic, technological and scientific initiatives, programs, projects or services. The framework agreement was signed by the Vice-Rector for Science of the University – Prof. Jerzy Samochowiec and manager of Santander Universidades in Poland - Wojciech Leśniewski. Its scope includes projects improving the quality of education, supporting research activities, improving institutional management of academic centers, increasing the availability of training programs, promoting international exchange and popularizing cooperation programs. Polish universi-

ties are to be modern, innovative and to cooperate with the economy and business - says Prof. Samochowiec. The Vice-Rector adds that the possibility of using Santander's contacts around the world is also an opportunity for scientists.

PLN 200 million for joint innovations of scientists and entrepreneurs

2018-04-24

The National Center for Research and Development announced the fourth „Application projects” competition, the aim of which is to support research and development works - carried out by consortia composed of scientific entities and enterprises. The activities of the Ministry of Science and Higher Education and the National Center for Research and Development precisely match the Responsible Development Strategy of Prime Minister Morawiecki. The aim is to enable Polish economy to develop as much as possible basing on research conducted by Polish scientists - said Jarosław Gowin Deputy Prime Minister, Minister of Science and Higher Education during the announcement of the competition. Only consortia consisting of a maximum of 5 entities including at least one scientific unit and one enterprise, may apply for co-financing research and development works. The applications can be submitted from May 16 until July 16 - informs the National Center for Research and Development. More: <http://www.ncbr.gov.pl/fundusze-europejskie/poir/konkursy/projekty-aplikacyjne2018/>

Competition supporting startups in eastern Poland

2018-04-24

Innovation centers, science parks, science and technology parks, and incubators from Eastern Poland may submit applications in the competition „Starting platforms for new ideas” from April 30. The Polish Agency for Enterprise Development (PARP), the organizer of the competition, will allocate PLN 130 million with aim to transform ideas into business. The competition is to select several Platforms, i.e. partnerships of specialized centers operating as program operators. Each of the Platforms will be lo-

cated in at least one province of Eastern Poland: Lubelskie, Podkarpackie, Podlasie, Świętokrzyskie or Warmian-Masurian Province. The support will be available to novice entrepreneurs who want to transform their ideas into innovative products or services. The main task of the Platform is to organize «local ecosystems supporting start-up entrepreneurship». More: <http://popw.parp.gov.pl/dokumentacja/dokumentacja-do-poddzialania-1-1-1-platformy-startowe-dla-nowych-pomyslow-2018-r>

Innovative diamond optical sensor developed at the Gdańsk University of Technology

2018-04-24

A team of scientists from the Gdańsk University of Technology has constructed a fiber optic sensor using thin diamond layers. The device allows measurements in less accessible places and in difficult working conditions, in particular in the presence of strong electromagnetic fields. The sensor was developed at the Faculty of Electronics, Telecommunications and Informatics. The device, due to the innovative covering the part of the mirror with a diamond layer becomes competitive in comparison to similar sensors available on the market. The invention also has other advantages: high sensitivity of measurements, wide range and good resolution. Mirrors in traditional sensors are made of silver and are susceptible to scratches. The use of diamond coating gives the device resistance not only to mechanical damage, but also electromagnetic interference and aggressive chemical environments. The solution has been submitted for legal protection in the Patent Office.

Maritime University of Szczecin launches a modern laboratory simulating the logistics processes

2018-04-25

The Maritime University of Szczecin officially opened the laboratory for the automation of logistics and production processes. The ceremony was attended by Marek Gróbarczyk, the Minister of Maritime Economy and Inland Waterway transport. There are three industrial robots and a production line in the laboratory at the engineering and economic department of transport. The installed equipment demonstrates palletisation of the load, its loading and reloading. This is the first laboratory in the region that simulates the entire logistics processes «in a nutshell». The laboratory was financed from the funds of the Ministry of Maritime Economy and Inland Navigation. It enables students to learn about modern technologies currently used in automation and robotization of industry and logistics processes. Practice in the didactic processes provides the graduates with best possible preparation for work.

English smartphone app for university students in Wrocław

2018-04-25

Students and candidates for English-language studies at the Faculty of Law, Administration and Economics of the University of Wrocław can use a special application for smartphones. We do not want candidates and students from abroad to feel abandoned - says one of the application developers. The application is a compendium of practical knowledge, with descriptions of majors and individual subjects and biographies of lecturers. There is even an option of a virtual walk through the faculty, as well as the «Jungle Book» - a practical guide prepared for students starting their studies at the Wrocław university. The application is constantly updated and expanded. It works on devices with IOS and Android systems. We are teaching more and more foreigners. The new application is a useful source of information about life and studying in

Wrocław - emphasizes Łukasz Machaj from the law and administration department.

SATIM spin-off company of the AGH University of Science and Technology wins grant from the Industrial Development Agency

2018-04-27

SATIM Satellite Monitoring, a spin-off company from the AGH University of Science and Technology in Kraków received a grant over PLN 170,000. The University receives it under an agreement signed with the Industrial Development Agency as part of the Open Innovation Network project. According to the press release of the AGH University of Science and Technology, the SATIM company was founded by scientists from the Faculty of Geology, Geophysics and Environmental Protection and deals with satellite surveys of subsidence of land in mining and post-mining areas. Funds obtained under the grant of the company's creator will be allocated to software that will improve the services of satellite monitoring of movements of the area. SATIM is one of many successful examples of commercialization of scientific research at the Krakow university. For several years, the company has been conducting research and development projects in cooperation with the European Space Agency.

Startup Weekend in Olsztyn

2018-04-27

On May 11-13, 2018 the University of Warmia and Mazury in Olsztyn organizes Startup Weekend Olsztyn. The participants will be able to create projects and instantly verify their business ideas during this 54-hour marathon. Mentors, businessmen-practitioners, as well as graphics and programming specialists will help with their experience. Anyone who has an innovative idea can participate in the event. More info on page: <http://communities.techstars.com/poland/olsztyn/startup-weekend/12252>

Professor Aleksander Nawrat about innovations

2018-05-07

The changes proposed by the Ministry of Science and Higher Education are intended to release the potential of Polish science. Two new legislation acts on innovation and the Constitution for Science enable Polish universities to commercialize research results, set up their own companies spin-offs or establish their cooperation with business - says Prof. Aleksander Nawrat, deputy director of the National Center for Research and Development in the journal „Wszystko co najważniejsze”. In his article «Course on Innovation» Prof. Aleksander Nawrat presents examples of successful Polish projects financed by the National Center for Research and Development. Last year, 64 competitions were announced and the Center supported 3702 projects with a total funding of PLN 18.5 billion. The role of public administration is to stimulate and support the activities of the scientific, economic and financial environment - concludes Prof. Nawrat. More: <https://wszystkoconajwazniejsze.pl/prof-aleksander-nawrat-kurs-na-innowacje/>

Warsaw and Lodz students develop an innovative diver locator

2018-05-08

Student team of the Warsaw University of Technology and the Lodz University of Technology took the first place in the national finals of the Microsoft Imagine Cup 2018 competition in the Big Data category - informed the Polish Press Agency. They are the authors of the innovative locator Wavy System for recreational divers. The system, developed by the students, provides information on the position of the diver in real time. The collected data goes to the Azure cloud, where they are analyzed and visualized using the application on the smartphone. The students are currently working on the fastest possible completion of the prototype to launch the product on the market. There are a few million people diving around the world that will be surely interested in the solution that will increase their safety. The students from the Warsaw University of Technology and Lodz will represent Poland in the world finals of the competition, which will take place in Seattle in the United States in July this year.

New workshops at the Center for Practical and Continuing Education in Zabrze

2018-05-08

The Center for Practical and Continuing Education in Zabrze launched a new car workshop equipped with a hybrid car. The workshop was opened during the conference „New quality of vocational education“. During the ceremony, the Vice-Rector for cooperation with the socio-economic environment of the University Prof. Janusz Kotowicz gave a lecture on innovative technologies. Later the participants and the Center specialists discussed the need of constant education. The car workshop with a new and fully functional Toyota hybrid car joins the other laboratories operating in the Center for Practical and Continuing Education in Zabrze. In the Hall of New Technologies there are already workshops of numerically controlled machines from American company HAAS, models of renewa-

ble energy sources from the Finnish company FOR-TUM, as well as the ROCA assembly and operation installations.

Gdańsk University of Technology awarded in „Innovations for the Polish Armed Forces“

2018-05-08

The Pomeranian Crisis Management Laboratory at the Gdańsk University of Technology was awarded in the competition „Innovations for the Polish Armed Forces“ organized by the Inspectorate of Implementation of Innovative Defense Technologies. The awarded design is a navigational simulator for special operations. The device is used to create and implement advanced scenarios of soldier training for individual and team navigation in special operations. It operates with aim of a full-size cube virtual CAVE system - 6 screens of 3.4 metres with simultaneous stereoscopic back projection. The cave is located in the Laboratory of Immersed Spatial Visualization. The soldiers have the impression of being completely immersed in a virtual world that is generated on an ongoing basis. This enables the implementation of realistic training scenarios prepared in the Pomeranian Crisis Management Laboratory.

International scientific center of excellence to be created in Łódź

2018-05-09

The Foundation for Polish Science has granted funding for the creation of a new scientific and research center in Łódź. „The International Center for Research on Innovative Bio-based Materials“ (ICRI-BioM) will be constructed in Łódź Bionanopark. This project results from the involvement of the Łódź University scientists and the support of the Max Planck Institute from Mainz. - Establishment of a research institution in Łódź within the International Research Agenda (IRA) means bringing excellent scientific staff, global leaders in unique, interdisciplinary research to our city - emphasized

Prof. Stanisław Bielecki - the former rector of the Lodz University of Technology and the initiator of the MAB's application.

Warsaw University Center of Dentistry to construct new facility

2018-05-09

The Medical University of Warsaw will be provided with a new facility in 2019. The construction of the University Center of Dentistry is underway. The celebration of signing and laying the foundation act is scheduled for May 14 at the investment site at the Banach Campus at ul. Żwirki i Wigury 81 in Warsaw. The new facility will have five floors. Its total area will amount to almost 19,000 square meters. The authors are architects of the Archibis Architectural and Executive Office, while its construction will be carried out by Warbud. In close proximity to the emerging Dentistry Center there is already the Center for Pre-Clinical Research and Technology, a complex of the Pediatric Hospital of the Medical University of Warsaw and the Library and Information Center of the Warsaw Medical University.

Scientist from the Gdańsk University of Technology to create new energy storage technologies

2018-05-11

Dr Eng Monika Wilamowska-Zawłocka from the Department of Apparatus and Chemical Engineering at the Faculty of Chemistry of the Gdańsk University of Technology is developing innovative energy storage technologies. Her project won the competition of the Foundation for Polish Science. - The two main types of energy storage devices are batteries and supercapacitors. The first work for a long time, but they slowly release energy. The supercapacitors can accept and give away more energy, but for a short time. In my project, I try to combine different types of materials to create a device that could store more energy than a supercapacitor, while maintaining its high power - explains Dr. Eng. Wilamowska-Zawłocka. The technology of a Gdańsk scientist can be particularly useful in storing energy from renewable sources. Using them often presumes the storage of large amounts of energy in a short time - when the wind is blowing or the sun is shining.

Poznań Adam Mickiewicz University students to launch pro-ecological projects

2018-05-14

Three projects of Poznań students received funding in the call „IDEAMU!”. The aim of it is to develop „green” and social innovations to strengthen lasting relations between the University and the environment. The winning project is «Morasko is worth of Poznań». The students plan placing boxes and animal houses in the Morasko campus. The installations will contain descriptions of the species for which they are intended and information on the research teams involved. The second project - «Living mural» will present the green aspect with artistic presentation of Maria Skłodowska-Curie. It will connect the university with the inhabitants, it is also a bridge between human and nature elements. The third project „Greenhorns in it” is a cycle of radio university broadcasts promoting attitudes, ideas

and pro-ecological activities – e.g. modern recycling and home-made methods for use of renewable energy sources.

PLN 300 million for innovations in the automotive industry

2018-05-15

The National Center for Research and Development has started the call for proposals in the 2nd competition of the INNOMOTO program. The executive agency of the Minister of Science and Higher Education allocates PLN 300 million for innovative projects in the automotive industry. The INNOMOTO sector program announced in September 2016 by Deputy Prime Minister Jarosław Gowin aims to support innovative solutions for the automotive industry to ultimately increase the competitiveness of the Polish automotive sector in the perspective of 2026. As part of the program, based on the research agenda established in consultation with entrepreneurs, the Center will finance projects implementing innovative solutions for vehicles and drives, production technology, regeneration and recycling as well as innovative parts, components and vehicle systems. The call for proposals in the INNOMOTO competition will last until July 10. The minimum project value is PLN 1 million, and the maximum is PLN 30 million. More: <http://www.ncbr.gov.pl/fundusze-europejskie/poir/konkursy/innomoto2018/>

MedTrends - European Forum for Modern Health Protection

2018-05-15

On 23 and 24 May in Zabrze the participants of the 4th international MedTrends- European Modern Healthcare Forum conference will discuss the current trends, problems and challenges in modern health care in Poland and Europe. The first day of the conference will focus on issues related to the implementation and development of digital health in Poland. The discussants will discuss the use of artificial intelligence and machine learning in education, diagnosis and treatment of civilization diseases also in the context of new challenges and expectations in the Polish healthcare system. The second

day program is dedicated to startups in health care. There are planned lectures to be given by experts and practitioners as well as workshops and case studies. The conference will also host the MedTrends TOP TRENDS competition to select the best startup in health care. Applications for participation in the conference / workshop: www.rejestracja.medtrends.pl

Nicolaus Copernicus University joins Consortium ATHENA-PL

2018-05-15

The Nicolaus Copernicus University in Toruń joined the Consortium ATHENA-PL. The main purpose is to develop project documentation and to build and integrate ATHENA satellite components (The Advanced Telescope for High-Energy Astrophysics). The ATHENA satellite is a new generation of X-ray telescope gathering information about the formation and evolution of galaxies, star clusters, galaxies and black holes. Consortium ATHENA-PL will deal with technologies for space observation and observations in the field of astrophysics. The consortium is formed by the Nicolaus Copernicus Astronomical Center of the Polish Academy of Sciences (PAN), Space Research Center PAS and Center for Theoretical Physics PAS in Warsaw, National Center for Nuclear Research in Otwock as well as Jagiellonian, Wrocław, Szczecin, Łódź Białystok, Kielce and Toruń universities.

Conference on science based innovations at the Lodz University of Technology

2018-05-16

The Association Top 500 Innovators and the Technical University of Lodz invite the participants on 17-18 May 2018 to a conference devoted to science-based innovations. The event will be attended by British and Polish specialists in start-ups - informs the Łódź university. As part of the event, Professor Allan Barrell from Cambridge Worldwide Associates will talk about his observations in British and Polish innovation clusters. Nicholas Coutts will present programs supporting startups, which he co-created in various parts of Europe and Mark Tyl, founder of the Innovation Forum organization, will present an offer for young startups acceleration and support in international development. During the conference a discussion panel on fundraising for start-ups and commercialization of research results is planned. The panel will be attended by Bartosz Sokoliński, Director of the Development and Innovation Bureau of the Industrial Development Agency, Daniel Maksym, Project Director in the Polish Energy Group New Energy and Prof. Alan Barrell. The conference will be held in the Bay of Sport at the Lodz University of Technology at Aleja Politechniki 10.

Researchers from the University of Silesia developed nanoparticles of copper oxide with biocidal properties

2018-05-16

Researchers from the University of Silesia's physics institute have developed a new method of producing copper oxide nanoparticles with fungicidal and bactericidal properties. The solution has been patented. Nanoparticles obtained with the method of Dr Jerzy Peszke and Anna Nowak are characterized by high biocidal effectiveness against various microorganisms - fungi, bacteria and algae. They can be used, for example, to protect building ceramics as well as external and internal surfaces of buildings against the development of pathogenic agents.

Their main advantage is a several times longer duration of action in comparison to preparations based on chemical compounds. In addition, their low production cost and ease of application to various types of surfaces allows for its versatile application in the form of powder - says Dr. Jerzy Peszke.

Medical University of Wroclaw launches Medical Simulation Center

2018-05-16

The Wroclaw Medical University launched officially Medical Simulation Center. The investment cost is almost PLN 23 million. Full-time classes will start in October. There are 6 high-fidelity rooms (operating theater, intensive care unit for newborns, children and adults, hospital emergency department, delivery room, ambulance simulator and nursing room) in the Center. The Center is provided with the real hospital equipment and the patient simulators (phantoms). During the classes students will participate in the simulation scenarios and will work directly with the phantom. The Medical Simulation Center also has a virtual reality room where students will learn to perform ultrasound tests on simulators of the highest class and perform simulated operations in the field of laparoscopy, endoscopy and procedures on blood vessels.

Students of the Wrocław University of Technology win medals at RoboGames 2018

2018-05-17

One gold and four silver medals were won by students from the KoNaR Scientific Circle of the Wrocław University of Technology at the RoboGames 2018 robotics Olympiad in the USA. 828 robots from over 20 countries competed in the tournament. Wrocław students won gold in the Best of Show category for a robot chessboard project, in which the role of the opponent was played by the social robot EMYS built in the Wrocław University and developed as a commercial product by FLASH Robotics. Three silver medals were won by «Sky-Wave» and «Navy» robots built by Rafał Cymiński.

The fourth silver was won in the Nano Sumo category, where robots were tasked to push each other off the ring. This part was won by the robot «Stasio» constructed by Michał Piotrowicz and Michał Burdka. RoboGames is the largest robotic tournament in the world that takes place every year in the Silicon Valley. The Scientific Circle «KoNaR» has operated at the Department of cybernetics and robotics, at the Faculty of Electronics of the Wrocław University of Technology, continuously since 2003.

National Center for Research and Development checks if Polish Hyperloop can be constructed

2018-05-18

The National Center for Research and Development, together with the Ministry of Enterprise and Technology set up a working team to check the possibilities of launching a railway construction in vacuum tunnels in Poland. Prof. Maciej Chorowski, director of the National Center for Research and Development, highlights in an interview with the newspaper «Puls Biznesu», that the possible construction would be based on the standard developed in Poland, but it would not be a competition for Hyperloop in other corners of the world, because the same technology can have a variety of technical solutions. The National Center for Research and Development works on new solutions allowing to accelerate the traditional railways. As part of the Luxtorpeda 2.0 project, this year a letter of intent was signed with the Polish State Railways on the construction of new locomotives prototypes.

Olsztyn University to use first two-sided angiograph in Poland

2018-05-18

The University Clinical Hospital of the University of Warmia and Mazury uses the most modern in Europe and the only two-dimensional angiograph in Poland. It is a device that shows 3D blood vessels in real-time. Two-plane angiograph is used in neurosurgery, neurology and cancer surgery. - With its help, we can close the flow of blood to the cancer cells, which will cause them to die, or to clear the arteries in the brain in conditions after ischemia - explains Prof. Wojciech Maksymowicz, vice-rector of Collegium Medicum at the University of Warmia and Mazury in Olsztyn. Angiograph is the most important item of equipment purchased for Surgery of Radiology Interventions and Endovascular Neurosurgery at University Clinical Hospital, which was open on May 15. .

Integrated circuits from the Kraków AGH University of Science and Technology to be in devices all over the world

2018-05-18

The AGH University of Science and Technology is an absolute leader among Polish universities in the design of integrated circuits. For many years, its scientists have been involved in their development using high-energy physics, X-ray imaging and neurobiology. This opened the way for cooperation with the Japanese company Rigaku Corporation. As a result, integrated circuits designed in Krakow are used in devices all over the world. The design of integrated circuits is carried out at three faculties: Electrical Engineering, Automatics, Computer Science and Biomedical Engineering; Physics and Applied Computer Science, and Information Technology, Electronics and Telecommunications. According to the Europractice report, which supports the design and production of integrated circuits in Europe - AGH University of Science and Technology is the absolute leader in their design among Polish universities. More about the successes of Krakow scientists in

the field of integrated circuit design in the article written by Weronika Szewczyk: <https://www.agh.edu.pl/info/article/uklady-scalone-z-agh-w-urzadzeniach-rigaku-corporation-swiatowego-lidera-produkujacego-aparature-ba/>

Open Innovation Week at the Wrocław University of Technology

2018-05-18

On Monday, May 21 the Wrocław University of Technology launches Open Innovation Week. For four days, lectures and workshops on design thinking, 3D printing, crowdfunding, building a network of contacts and combining science and business are planned. The conference is addressed to everyone interested in open innovation and the commercialization of knowledge. The scholars will present concepts of closed economy and Lower Silesian Smart Specializations. The organizers also announce the presentation of companies from the Academic Entrepreneurship Incubator and the introduction of the topic of crowdfunding. Open Innovation Week is organized as part of the NUCLEI project (Networks of Technology Transfer and Advanced Processing Industry). It is attended by ten universities and business support institutions from Austria, the Czech Republic, Germany, Italy, Poland and Slovakia. More at <http://openinnovationweek.pl/>

Professor Chorowski claims new technologies to be coupled with traditional industries

2018-05-21

Poland will use its chance for sustainable development if investments in startups and R & D programs will have a real chance of commercialization, and they will not face any walls separating them from the market - highlighted Prof. Maciej Chorowski, director of the National Center for Research and Development in his latest article in the magazine of the leaders of the opinion „Wszystko co najważniejsze”. Professor Chorowski believes that Poland has to combine new technologies with tra-

ditional industrial industries. In his opinion, „it will be possible to become a leading modern economy in new areas, not by imitating today’s undisputed leaders - Google, Facebook, Bookingcom or Uber.” More: <https://wszystkoconajwazniejsze.pl/prof-maciej-chorowski-jak-polska-gospodarka-moze-wykorzystac-nowe-technologie/>

Polish research apparatus aboard the Chinese spacecraft

2018-05-22

According to the Ministry of Science and Higher Education, the Polish research apparatus constructed by the Space Research Center of the Polish Academy of Sciences will be launched aboard the Chinese space probe as part of the Chang’E-4 mission at the end of May 2018. The Ministry of Science emphasizes that this is the effect of a visit to China paid by Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education and the talks conducted in 2016 with the National Space Science Center of the Chinese Academy of Sciences. - Let us not be confused by the disproportion between China and Poland. The Chinese treat us as an equal partner, we are for them a bridge leading to Central and Eastern Europe – said Deputy Prime Minister Jarosław Gowin. in October 2016 at the conference on the visit to China. The main goal of the Polish-Chinese experiment is the radio observation of the Universe. Investigators are interested in the outermost and oldest regions of the cosmos, as well as the closest surroundings of the Earth and other parts of the Solar System - informs the Ministry of Science and Higher Education.

Space 4.0 conference in Krakow

2018-05-22

The Space 4.0 Conference "Solution From The Sky" will be held in Krakow on May 25-26. The event is organized by the Krakow University of Technology together with the Krakow Technology Park. During the conference, the specialists will present satellite data, its acquirement, the use in science and opportunities of commercial use. Students will learn about the acceleration of startups, the processing of satellite data, financing and support of space technologies in Poland. The guest of the conference will be Lluc Diaz, coordinator of the European Space Agency's technology transfer network. The conference can be attended by representatives of scientific communities, government institutions, large companies implementing programs based on satellite databases, representatives of space business and young companies that are just beginning their adventure using satellite data. Registration for the event: <https://solution-from-the-sky-2018.evenea.pl/>

University of Toruń scientists succeed at the Paris inventions fair

2018-05-22

The inventions of scientists from the Nicolaus Copernicus University in Toruń have been recognized at the 117th International Exhibition of Invention „Concours Lépine 2018” in Paris. Michał Meina from the Faculty of Physics, Astronomy and Applied Informatics and Dr Krzysztof Rykaczewski from the Faculty of Mathematics and Computer Science won Medal of the Minister of Internal Affairs of France and the gold medal „Concours Lépine 2018” for „The method of determining the position of the object, in particular of man, and the device for determining the position of man”. A team of scientists from the faculty of biology and environmental protection headed by Dr Grażyna Dąbrowska was awarded the International Eiffel Award from the French Federation of Inventors for «Method of seed preparation using a biological stimulator». Prof. Jerzy Łukaszewicz and dr Anna Ilnicka from the Department of Materials Chemistry, Adsorption and Catal-

ysis received the he bronze medal for the «Method of producing carbon nanotubes».

Warsaw University of Technology students construct a rocket engine for liquid fuel

2018-05-23

The Warsaw University of Technology students from the MELprop Scientific Group at the Faculty of Power and Aeronautical Engineering have constructed one of the first rocket engines for liquid fuel in Poland. - We prepared it thoroughly. We carried out calculations, simulations, analyzes, we checked every subsystem step by step and only when we were sure that all was operating, we organized a full test - says the main constructor Alexander Gorgeri. He emphasizes, that the engine is a technology demonstrator and is not a product ready for use in the space industry. Despite of it, at relatively low cost, students are able to refine the technology so that it can be fully utilized. They intend to introduce the necessary modifications to the engine, limit its mass, and carry out further tests. The ultimate goal of the project is to adapt the engine to industrial use. See the engine test of Warsaw University of Technology students: <https://youtu.be/MSdUNSSZeas>

National Center for Research and Development allocated PLN 7 million to a startup analyzing content on the Internet

2018-05-23

Three Polish residents living in New York have created a startup that offers web publishers the software to check the interest of content published on the Internet. Jarosław Góra, Wojciech Woziwodzki and Sebastian Zontek founded Deep.BI in the USA, because from the very beginning they wanted their product to be global. They collected almost PLN 12 million for their undertaking. The Polish fund Black Pearls VC and the National Center for Research and Development and businessmen Piotr Walter and Adam Sawicki put together PLN 7 million for the startup's development.

PM Gowin: TANGO 3 to improve the conditions for conducting research and development works in Poland

2018-05-23

The TANGO 3 competition is a joint venture of the National Science Center and the National Center for Research and Development. It is to finance projects that will increase the use of the results of basic research. Its aim is to build a bridge between basic and applied research and industrial research. TANGO 3 will allow both national agencies to improve the conditions for conducting research and development in Poland. The competition gives the opportunity to introduce products, services or technologies into market. Scientific organizations, universities, scientific centers of the Polish Academy of Sciences, and even natural persons can participate in the competition. - We want to enable better transfer of knowledge to the industry and thus fully use the opportunities of Polish science - says Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. The call for proposals will run from June 14 to December 20, 2018.

Szczecin scientists win grants from the program „Incubator of Innovation +”

2018-05-23

Five research teams of the Pomeranian Medical University and the Maritime University of Szczecin received nearly PLN 2.5 million from the „Incubator of Innovation +” program for their projects. The grants were awarded for «The prototype of the impression tray for unilateral missing teeth in the mandible» - under the supervision of Dr. Małgorzata Tomasik, «An innovative kit for umbilical cord blood collection in premature babies» - under the supervision of Prof. Bogusław Machaliński, «Development of dry bath technologies in a mixture of CO₂ and O₃ gases» - under the supervision of Dr Anna Lubkowska, «Innovative composite materials with a halloysite filler for the production of reinforced dental prostheses» under the supervision of Dr Ewa Sobolewska and «Total Free Station- Autonomous Measurement System” under the supervision of Dr Eng Grzegorz Stepień. The awarded teams can count on 2-year support, in particular in the area of commercialization of research results.

Krakow University AGH to hold the conference „Science - Start-up - Industry”

2018-05-24

On 5-6 June 2018, the Institute of Technology and Innovation organizes the conference „Innovative ideas of young scientists: Science - Start-up - Industry”, which will take place at the Academic Center for Materials and Nanotechnology of the AGH University of Science and Technology in Krakow. The event will take place as part of the Małopolska Festival of Innovation. Young scientists, PhD students, students and scientific circles will take part in the conference. During it, they will present their own innovative solutions of a scientific-research, technical, organizational, financial and marketing. The purpose is to develop and implement new or improved products, processes or management and sales systems. More: <http://iati.pl/iv-edycji-bezplatnej-konferencji-pt-innowacyjne-pomysly-mlodych-naukowcow-nauka-startup-przemysl/>

Polish-German Center for Hybrid Lightweight Structures established in Gliwice

2018-05-24

Experts from Germany and Poland will jointly conduct research on new materials and hybrid constructions. The agreement on the establishment of the Polish-German Center for Hybrid Lightweight Structures was signed in Gliwice. The agreement was concluded by Silesian University of Technology, city of Gliwice, Katowice Special Economic Zone, Federation of Aviation Firms «Bielsko» Institute of Light Engineering and Technology Polymer Technical University in Dresden, as well as Technical University Bergakademie in Freiberg. Cooperation between representatives of science, industry and self-government from Poland is to help in the development of modern technologies for the design of lightweight constructions. The creation of the center is a response to the expectations of modern industry regarding the development of innovative material technologies and the rapid commercialization of research results.

Charger of electric cars on the campus of the Bydgoszcz University of Technology and Life Sciences

2018-05-25

Rector of the University of Technology and Life Sciences in Bydgoszcz, Prof. Eng. Tomasz Topoliński and co-owner of the RAWICOM company - Adam Hłond signed an agreement on the launch of the so-called fast charger for electric cars in the university campus. The university charging point will be adapted to perform operational and energy tests. The University of Technology and Life Sciences and RAWICOM have been conducting research for many years. At present, the university is designing a new fast charger, which will enable charging of cars using various charging systems and standards. According to the report of the Polish Automotive Industry Association in Poland, there are currently only 2 thousand electric cars. One of the reasons for this is the lack of infrastructure allowing charging electric vehicles in Poland.

Polish start-ups at the Viva Technology fair in Paris

2018-05-28

Polish start-ups supported by the Orange Fab acceleration program were presented at the Viva Technology 2018 international technology start-up fair held in Paris. The company Whirla, proposing a system of wireless phone charging for cafes, offices and shopping centers, Seedia - a manufacturer of solar benches, NaviParking, focused on systems for optimizing and searching for free parking spaces, and JT Weston - application creator Makigami to optimize time-consuming business processes such as invoicing presented their solutions at the fair in Paris. As part of the accelerator, the French telecommunications company Orange supports Polish start-ups in testing solutions, developing a model of cooperation and commercial activities. It offers access to mentors and experts and participation in conferences, fairs and international promotion.

Silesian University of Technology cars to come fastest on the Kirkistown track

2018-05-28

The Silesian Greenpower team won the first and second place in the electric cars race of F24 + formula at the Kirkistown track in Northern Ireland. Students of the Silesian University of Technology proved once again that their cars are unrivaled. Gliwice students put up two cars for the race: SG Bullet II and SG Bullet240W. Both performed well on the track and took the first and the second places in the race. The fastest was SG Bullet II, followed by SG Bullet240W, which was also awarded for the fastest lap. Greenpower Formula F24 + competitions are held on professional Formula 1 tracks. Cars are tasked with overcoming the maximum distance in an hour. The whole competition consists of nine races on various tracks, including the final round. Teams can participate in all races, but in the general classification the three best results count. The final round is obligatory.

Rotunda in the center of Warsaw with an innovative plant control system iPlant

2018-05-29

According to the Warsaw University of Life Sciences (SGGW), Prof. Hazem M. Kalaji of SGGW has developed a remote system iPlant for monitoring the physiological state of plants. It was created to monitor the condition of plants adorning the walls of the revitalized Rotunda Bank building in the center of Warsaw. The remote plant monitoring system is based on non-invasive measurement of chlorophyll fluorescence. As Dr Hazem M. Kalaji explains «plants change the fluorescence all the time informing about the stress they are exposed to. This information can be read using a special device - flourimeter. When problems arise, the sent signals are different from the optimal values. Thanks to the fact that we measure them, we find out that the plant is in bad condition».

Lower Silesian Capital Club awards „Young Talents”

2018-05-29

Students and PhD students of the University of Life Sciences in Wrocław won in the 3rd „Young Talents” competition organized by the Lower Silesian Capital Club. The aim of the competition is to promote and reward the students achieving significant scientific, artistic, social and sports success in innovative and entrepreneurial activity. Kinga Pilarska, a biotechnology student, won in the category «Success in social activities». In the same category, the second winner was Safoura Reza, a veterinary student. PhD student Żaneta Król received the distinction in the category «Success in innovation» and in the category «Success in science» - PhD students Katarzyna Kornicka and Sabina Lachowicz were awarded. The «Young Talents» competition was organized for the third time. Its jury includes the rectors of Wrocław's universities, representatives of the Lower Silesian Capital Club, entrepreneurs, local and regional authorities. Ecological energy sources at the University of Environmental and Life Sciences in Wrocław

2018-05-29

Photovoltaic panels at the Didactic and Scientific Center and the swimming pool of the School of Physical Education and Sport at the Wrocław University of Life Sciences are the largest photovoltaic installations in Wrocław. The entire front wall of the Didactic and Scientific Center building at pl. Grunwaldzki is covered with photovoltaic modules, which should give over 80 kWp (kWpeak, maximum peak power). It is assumed that a solar panel directed to the south with a capacity of 1 kWp will produce within a year from 900 to 1100 kWh of electricity). Solar installations on university buildings provide the opportunity for researchers of renewable energy sources. Scientists and students carry out measurements and check the effectiveness of various construction variants. The University of Wrocław also counts on savings; it replaced old lamps with LED lighting and installed a modern lighting and heating control system. More: http://www.glos.upwr.edu.pl/aktualnosci/47906/na_upwr_energije_czerpiemy_ze_slonca.html

Advanced simulator for law students of the University of Wrocław

2018-05-29

In the Faculty of Law, Administration and Economics of the University of Wrocław, the „Virtual Crime Room” was opened. It is an advanced simulator for didactic classes using virtual reality equipment that will help future lawyers to learn their professional activities during the inspecting or securing traces. - Our students can «participate» in the investigation of the crime scene and make a detailed analysis of it. All they need are special goggles. Thanks to two hand controllers they can gather evidence and secure traces in the virtual reality - says Damian Mroczyński from the law, administration and economics department. The Crime Room is not the end of «virtual» projects of the University. It plans

to create soon the Center for Virtual Reality Technology. The development of virtual techniques is a possibility of cooperation in the field of technology transfer as well as the implementation of research projects and the commercialization of research results. Scientists from Bydgoszcz win EUROINVENT Fair of Creativity and Invention Awards

2018-06-01

The invention of scientists from the University of Technology and Life Sciences in Bydgoszcz „The roller mill with an inter roller plate” won two medals during the 10th European Fair of Creativity and Invention of EUROINVENT in Romania. The invention developed by Prof Józef Flizikowski, Dr Eng Andrzej Tomporowski, Dr Eng Adam Mroziński and Eng Weronika Kruszelnicka won the EUROINVENT 2018 gold medal and the Indonesian Invention and the Innovation Promotion Association medal. The EUROINVENT fair in the Romanian Iasi was devoted to promoting creativity in the Europe by presenting the activities and achievements of technical schools, higher education institutions, research units, individual inventors and companies. Poland took part in the fair for the sixth time, presenting 6 inventions. The jury awarded Polish exhibitors a total of 6 medals - four gold and two silver medals.

Małopolska Festival of Innovation in Krakow

2018-06-04

The Museum of Japanese Art and Technology „Manggha” is holding the Małopolska Festival of Innovation. The main topic is social innovation and solutions that improve the quality of life of entire social groups. The festival is held in Krakow from June 4, 2018. The event will begin with the conference «The Social Dimension of Innovation», which concerns issues of innovative technologies and their social dimension. During the festival there will be presented inventions of students and scientists from the Małopolska Region. Visitors will be able to see an intelligent Find Air inhaler that allows users to predict dyspnoea, a nanocapsule that supplies the body with selected substances such as drugs or food supplements and a geopolymer- unusual material produced from volcanic tuff, which is cheap, extremely durable, and absorbs moisture and odors.

GovTech Polska - opening public procurement for innovations

2018-06-04

The GovTech Polska project has been launched. It will be implemented by seven ministries: Finance, Defense, Health, Investment and Development, Entrepreneurship and Technology, Internal Affairs and Digitization Ministeries. This project develops the successful FinMinTech project, which involved the IT programmers' help in sealing the tax system. The best IT experts selected in the competition found employment in the finance department and prepared IT solutions aimed at combating tax fraud. GovTech Polska is to be a project that will allow to offer public contracts for small and medium companies and for startups that have innovative solutions, but the scale of their operations does not allow them to start in tenders.

Lublin University of Technology is the most innovative university in Poland

2018-06-05

The Lublin University of Technology has been announced the leader of innovation in this year's ranking of higher education schools prepared by the „Perspektywy” journal. - It is a great honor for us. Once again, we took the first place in the category of innovation. Our advantages are numerous inventions, whose authors are both university employees and students. Their solutions have been repeatedly awarded in national and international competitions. Also, our students since 2011 are the laureates of the „Student-Inventor” competition and win medals at the International Exhibition of Inventions in Geneva - said Prof. Piotr Kacejko, rector of the Lublin University of Technology. Over the past six years 441 patents have been submitted by the Lublin University of Technology, of which 383 were obtained. In terms of the number of inventions reported (93 in 2017) and obtained patents (71 in 2017) the university ranks among the top universities. By the number of applications and patents per employee, the Lublin University of Technology takes the 1st position in Poland.

Polish-French Forum of Science and Innovation at the University of Warsaw

2018-06-05

On 12 June 2018, the „Polish-French Forum of Science and Innovation” will be held at the Library of the University of Warsaw. The aim of the project is to promote Polish-French cooperation in the field of research and innovation, celebrating 60 years of the existence of the French Culture Center and the Francophone Studies of the University of Warsaw and emphasizing the opportunities offered by European research programs. The event will start with the speeches of Dr Maciej Duszczczyk, vice-rector for scientific affairs of the University of Warsaw, Piotr Dardziński, undersecretary of state in the Ministry of Science and Higher Education, and Pierre LEVY,

the ambassador of France in Poland. The participants will also discuss the internationalization of higher education and research, the perspectives of Polish-French cooperation in the field of science in 2013-2018 and the bilateral program of PHC Polonium. Forum registration until June 6, 2018 at: https://docs.google.com/forms/d/e/1FAIpQLSehAkIdQmZ01_T2TZbngSfKaDMIs5Mv8sTp-gj1g-V7Tf42cRQ/viewform

PLN 230 million for the increase of competitiveness and innovativeness of Polish pharmacy

2018-06-06

The National Center for Research and Development announced the InnoNeuroPharm call, which aims to increase the competitiveness and innovation of the Polish pharmaceutical sector, including neuromedicine, in the perspective of 2026. PLN 230 million has been allocated to the program. The InnoNeuroPharm sector program was created on the initiative of the Polish Association of Employers of the Pharmaceutical Industry and the Polish Innovation Platform of Neuromedicine. The research areas of the InnoNeuroPharm sector program include innovative medicinal products, innovative technologies for the production of medicinal products, innovative diagnostic methods and new biomarkers with practical diagnostic-predictive applications in the field of neuromedicine, innovative methods of rehabilitation of neuromedicine patients, development of tools supporting research on medicinal products. More: <http://www.ncbr.gov.pl/fundusze-europejskie/poir/konkursy/innoneuropharm-2018/>

Polish students dominated the Martian robot competition University Rover Challenge 2018

2018-06-06

The Martian rover from the Czestochowa University of Technology won the University Rover Challenge 2018 competition. The Kielce University of Technology team was third, the fourth place was taken by the Technical University of Lodz. The best in the world Martian rover designed and led to victory Students of the scientific circle of computer design of mechatronic devices and machines of the Czestochowa University of Technology, who form the PCz Rover Team constructed the best Martian rover in the world. In the final of this year's competition of Martian robots held in the desert in the US state of Utah there were 36 teams from 10 countries, including 6 from Poland. The winning rover received the title World's Top Martian Rover - the best rover in the world. The prize in the competition includes the possibility of presenting the robot at the international meeting of the International Mars Society Convention.

International conference on the cities impact on competitiveness in the modern economy

2018-06-06

The World Economy Institute of the Warsaw School of Economics is organizing an international scientific conference on innovation and competitiveness. This year, on June 15, participants of the event will try to answer the question how cities can contribute to a competitive advantage in the modern global economy. The conference will analyze the theoretical and practical aspects of international competitiveness and urbanization, including the concepts of metropolitan innovation systems, smart cities, internationalization and cultural diversity. The results of research on the competitive position of selected economies, successful urbanization patterns and the development trends of the largest cities in Poland and in the world will be discussed.

University of Life Sciences in Poznań wins Polish Intelligent Development Award

2018-06-07

The Center for Innovation and Technology Transfer of the University of Life Sciences in Poznań has been awarded the Polish Intelligent Development Prize 2018 in the category of Innovative Future Solutions for the University. The prize was awarded by the Polish Patent Office for the implementation of the EkoBioFood project - PULS PLANTINOVA PPNT. The Polish Intelligent Development Award is a nationwide prize awarded to the most innovative projects implemented under EU and national programs by scientific institutions and companies involved in research and development. It is given to entities which contribute to the sustainable development of the country and increase the standard of living of the local community. The prize-giving ceremony is planned at the Gala of the Polish Intelligent Development Award during the International Forum of Intelligent Development 3.0 Uniejów 2018. More about the project: <http://www.ciitt.up.poznan.pl/Projekt-ININ,p82.html>

Lower Silesian Cluster of Cybersecurity established

2018-06-08

Protection and security of key IT resources as well as design and development of secure software are the main tasks of the Lower Silesian Cybersecurity Cluster, established at the initiative of the Wrocław University of Technology. The cluster's tasks include protection of institutions, business systems and control in industry; management, law and auditing - managing the security and risk analysis team and conducting technical audits of the most important IT systems within applicable legal regulations; forensic science - acquisition and analysis of evidence from digital systems to find traces and obtain evidence relevant to the security of information and information systems, and electromagnetic security. The creators of the cluster also announce penetration research - identification and evaluation of potential attacks and vulnerabilities in information systems and implemented defense systems. More: <http://>

Innovative Economic Development Forum established

2018-06-08

Industrial Development Agency launched the Innovative Economic Development Forum, whose aim is to create conditions for stimulating the cooperation of science and business with the active participation of the state. The Industrial Development Agency emphasizes the Innovative Economic Development Forum that will focus on the identification of breakthrough technologies that have the greatest potential for global commercialization, due to the Polish potential of innovation and international cooperation. The Forum is also to create specialized „innovation ecosystems” in such fields as: mechatronics, ICT, shipbuilding, aerospace, automotive and 3D printing. Tomasz Szejner from Cambridge University became the first President of the Innovative Economic Development Forum.

AGH University of Science and Technology in Krakow to develop new drilling technology

2018-06-11

The AGH University of Science and Technology in Krakow and the Polish Oil and Gas Company have completed the first demonstration phase of the MiniDrill project developing a new drilling technology. It is an innovative solution that can increase hydrocarbon production and reduce drilling costs. Innovative technology involves drilling a large number of parallel small diameter holes using a high pressure jet of water. Prof. Rafał Wiśniowski, dean of the Faculty of Drilling, Oil and Gas emphasizes that employees of the Faculty have been creating innovative solutions in drilling technologies for over 50 years. Thanks to this, it is possible to drill in new areas such as ocean depths or extraterrestrial celestial bodies. Currently, it is extremely important to improve existing methods and create new solutions in the field of acquiring liquid resources on our planet.

Silesian University of Technology receives over PLN 4 million in the MOTO POWER competition

2018-06-11

The Silesian University of Technology has received over PLN 4 million as part of the MOTO POWER competition organized by the Ministry of Investment and Development. This is the highest grant received among all higher education institutions. As part of the project „Silesian University of Technology as a research center in the field of education for the automotive industry”, five education programs will be developed and tested at the fifth level of the Polish Qualifications Framework. It joins vocational education with secondary and higher education. The education will be implemented in five fields: automation and robotics at the faculties of Automation, Electronics and Information Technology and Mechanical Technology, electrotechnics at the Faculty of Electricity, transport at the Faculty of Transport, mechanics and mechanical engineering at the Faculty of Mechanical Engineering, as well as management and production engineering at the Faculty of Organization and Management.

Summer School on Democracy at the University of Wrocław

2018-06-12

The Institute of Political Science at the University of Wrocław invites participants to the Summer School on Democracy. They will be discussing the role of the information in the modern world and various forms of populism. The classes will start on Sunday, June 17. The organizers announce that during summer school classes its participants will discuss the functioning of contemporary media, how information is used and how it affects the society, issues in the field of social media, the problem of disinformation, populism and media development opportunities in the future. In times when access to information has become unlimited, it is extremely important to select properly and verify the content that the readers receive. In this way, the importance of competencies needed to create and receive ubiquitous

information increases significantly. Summer School on Democracy will last until June 28. More: <http://summerschool.politologia.uni.wroc.pl/Programme>

University of Zielona Góra in the Polish Consortium ATHENA-PL

2018-06-12

University of Zielona Góra became a part of the Polish Consortium ATHENA-PL. The aim of the Consortium is to coordinate the activities of scientists and engineers from Poland within the project of construction and use of the ATHENA satellite (Advanced Telescope for High-Energy Astrophysics) - informs Ewa Sapeńko the university spokesman. ATHENA will observe the sky in the soft X-ray radiation and add the knowledge about the evolution of clusters of matter in space. The Polish team will take care of construction of subassemblies of one of the two main instruments and simulations allowing to assess the possibilities of observation of various phenomena and objects. The consortium is formed by the Nicolaus Copernicus Astronomical Center of the Polish Academy of Sciences (PAN), Space Research Center PAS and Center for Theoretical Physics PAS in Warsaw, National Center for Nuclear Research in Otwock, as well as Jagiellonian, Wrocław, Szczecin, Łódź, Zielona Góra, Białystok, Kielce and Toruń universities.

PhD student of the University of Economics in Poznań wins the EFC Academy competition

2018-06-14

Marcin Flotyński, PhD student from the Department of Monetary Policy and Financial Markets at the University of Economics in Poznań, became the winner of the competition for the most interesting essay within the EFC Academy (European Financial Congress). His essay „Poland in the eurozone - yes - we should join in because we have no choice” was selected from over one hundred works from Poland and abroad. The victory in the competition ensures the young scientist to participate in the panel opening the EFC Academy, as part of the European Fi-

nancial Congress at the European Solidarity Center in Gdańsk. The Congress is a debate on good solutions for the joint success of Poland and the European Union. Its purpose is also to present the Polish point of view in international discussions on development and security. About 1,300 representatives of the business management, media, state administration, consulting companies, scientists, politicians, supervisors and regulators will take part in it.

Seminar on the uberization of business, economy and work

2018-06-14

the auspices of the Rector of the University of Łódź and the Marshal of the Łódź Province on June 15, 2018, the seminar „Uberization of business, economy and work” will be held in the Łódź Special Economic Zone. The organizers of the event Polish-American Center of Management (PAM Center) and the Faculty of Management of the University of Łódź inform that the participants will discuss following questions: How does the dissemination of uberization affect the development of business and the labor market? What will the new class of „on-demand workers” bring us? Also, they will discuss the identification of new solutions and business models that undermine traditional business patterns; anticipating the consequences and impact of „uberisation” on employment, payment systems, legal regulations and market activities of companies; analysis of opportunities and threats in the changing labor market. More: <http://pam.uni.lodz.pl/w-pam-center/>

PM Gowin: Investing in artificial intelligence is always investing in a human being

2018-06-15

- Investing in artificial intelligence is always investing in humans - in those who are the creators of intelligent machines. And it provides the direction and sets priorities for us. And for our government. Firstly, we must invest in talented people - said Deputy Prime Minister Jarosław Gowin during the Impact 18 conference. As the Minister of Science and Higher Education emphasized in his speech, a major civilizational change is taking place, and Poland must use its opportunities and potential in this global race. Poland has become a hotbed of technical talents, our developers are world leaders. We do great at computer Olympics, we get grants, our young scientists and IT specialists win over and over again in international competitions. The Ministry of Science and Higher Education tries to create the best conditions for their development - said Deputy Prime Minister Gowin.

Sophia robot receives the student transcript of the AGH University of Science and Technology in Krakow

2018-06-15

Sophia, a humanoid robot is the special guest at the largest congress of new technologies in Central and Eastern Europe Impact'18, held in Krakow. It received a student transcript of AGH University of Science and Technology (AGH) during the event. Sophia, who visited Poland for the first time, last year received the citizenship of Saudi Arabia as the first robot in the world. According to Anna Żmuda-Muszyńska, a spokesman for the AGH University of Science and Technology in Kraków, the university has been carrying out very advanced works related to implementing solutions based on artificial intelligence for several decades. Vice-rector for cooperation of the AGH University of Science and Technology in Kraków Prof. Jerzy Lis handing the student transcript to the robot emphasized: - This gesture, apart from its symbolic expression, is also a signal

for the world that technical sciences are ready to face the challenges of artificial development intelligence. Vice-Rector also added: - Developing issues related to the implementation of artificial intelligence is a must and a duty of the university to answer the challenges of the future.

Białystok University of Technology to implement the project „Programming from scratch”

2018-06-18

Białystok University of Technology has been running the project „Programming from scratch” for a year. It summarized previous activities within the conference „Let children think - mathematics and programming from scratch”. The University received a grant from the Digital Poland program for the «development of digital competences among teachers and students from grades 1-3 of the Białystok and Sokółski counties». The project is implemented by the IT department of the Białystok University of Technology until the end of 2019 and its value is over PLN 1 million - informs the university. The main goal of the program is to introduce programming (as extracurricular activities, and in the longer term as integrated education) to 1-3 classes of primary schools in rural and rural-urban communes of the Białystok and Sokółski counties. As part of the lessons, primary school teachers can acquire the skills necessary to teach programming.

Student from Poznań Medical University developed new App

2018-06-18

Piotr Danielewski - a student at the Medical University of Poznań - developed a mobile phone application that allows students to learn the basics of auscultation. The „Hear yourself” mobile app contains both physiological and pathological sounds from the lungs and heart. Thanks to it, students can broaden their skills of correct auscultation and obtain information about the origin and characteristics of a given sound. The application also gives them

the opportunity to test the knowledge; it includes two types of questions about sound recognition and information about its etiology and characteristics. The questions are divided into two sections - cardiology and pulmonology question sets. The application was welcomed by specialists from the Poznan university. Positive opinions were expressed by Dr Szczepan Cofta (pulmonology) and Dr Przemysław Mitkowski (cardiology).

Students of Wrocław University of Technology design running trolleys for disabled children

2018-06-18

Students of the Wrocław University of Technology prepared about 30 designs of running wheelchairs for disabled children as part of an action organized with the Medical University of Wrocław. - We thought it would be a fantastic thing to create a special stroller for disabled children. We were not able to do it ourselves, so I started working with scientists from the Wrocław University of Technology and I found the volunteers easy to help - says Dr Tomasz Zatoński from the Medical University, one of the initiators of the competition. The stroller for children with disabilities must be safe and comfortable, protect the spine and provide stability during turns and on uneven terrain. The structure should also be resistant and light, protected against wind and rain, easy to assemble, and be equipped with a mechatronic diagnostic system – covering overloads and vibration, which a disabled athlete is subjected to while running.

Lodz University of Technology launches new laboratory to help smart buildings

2018-06-19

The Smart Home Grenton system laboratory was opened at the Department of Electrical Equipment of the Lodz University of Technology. It will enable students to learn the concept, design and programming of building management systems. The laboratory is the result of cooperation between the University and the Krakow-based company Grenton, one of the leading designers and producers of innovative building automation systems. The laboratory has been equipped with Grenton drivers, which allows students to visualize the effects of the system in the real object. Smart Home Grenton will be included in the first in Poland program of studies Intelligent Building Control Systems, which allows students to obtain interdisciplinary competencies required for effective designing, programming and integration of management systems in intelligent and energy-efficient buildings.

Dardziński about research on zero-emission bus technology

2018-06-21

Research on the development of zero-emission bus technologies will change not only the profile of Polish cities, but also Polish scientists - said Piotr Dardziński, deputy minister of science and higher education in an interview with Energetyka24. - We want to make a bus that allows the development of healthy, public-friendly public transport, that is simply a zero-emission bus - said Deputy Minister Dardziński. This should show the role of scientists to all inhabitants of big cities and small cities. And the scientists, who conduct research in those cities and who are maintained from public taxes, should remember that their research should be dedicated to local problems - he added.

Financial support for 400 Polish start-ups

2018-06-22

The development of the program for start-ups, the productivity strategy and national smart specializations, as well as the Platform for Industry of the Future Foundation are current initiatives of the Ministry of Enterprise and Technology. Robert Nowicki, deputy director of the Department of Innovation at the Ministry of Enterprise and Technology, announced that the productivity strategy will soon be made public and the ministry intends to support up to 400 Polish start-ups under the ScaleUp acceleration program. The ScaleUp acceleration program will be a continuation of the pilot project as part of the Start In Poland project. Young, innovative companies can receive co-financing in the amount of up to PLN 250 thousand, and the total budget of the entire acceleration program is PLN 120 million. The program is to operate until 2021.

Young scientists patent a device for beach foot cleaning

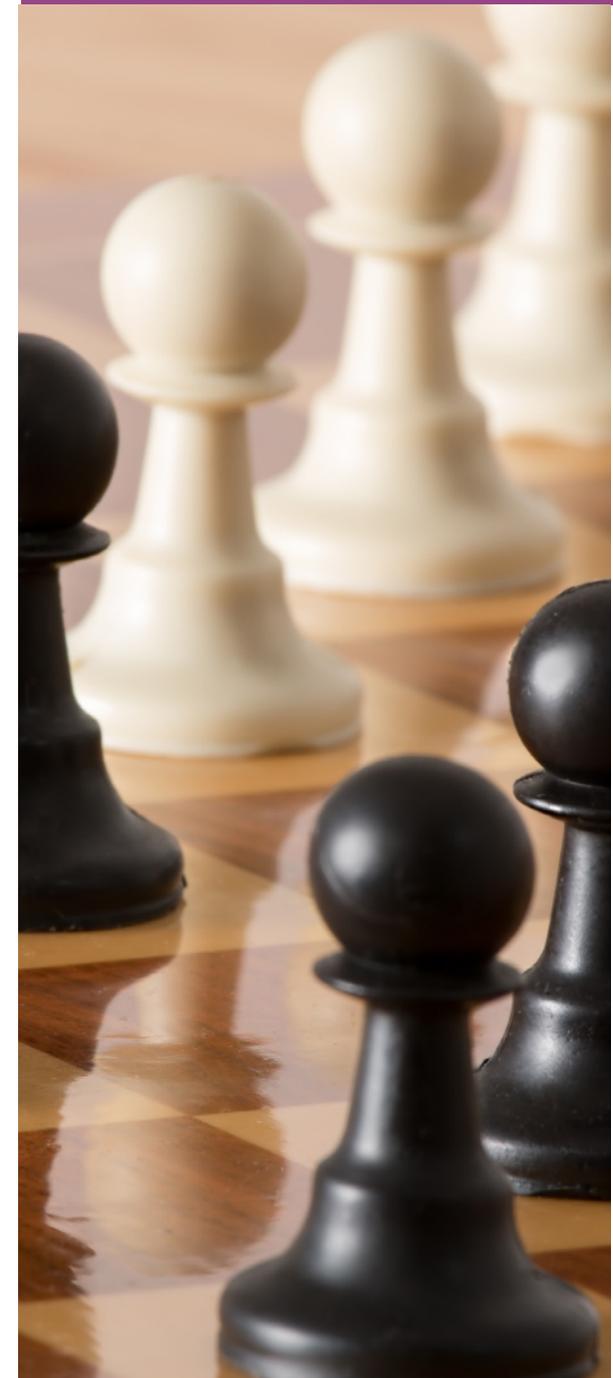

2018-06-22

Graduates from the University of Silesia, the Silesian University of Technology and the AGH University of Science and Technology in Kraków have designed a foot cleaning device, which can be used by people leaving the beaches. The device is already protected by patent. It also enables disinfection of the feet in swimming pools - informed the spokesperson of the University of Silesia Jacek Szymik-Kozaczko. The device created by Joanna Śróbka, Łukasz Cyganik, Paulina Cyganik and Jolanta Rajca consists of a platform with a built-in cleaning chamber and a seat. The cleaning chamber is equipped with a set of at least six nozzles supplied with a low pressure air stream ended with silicone fibrils to facilitate cleaning of the feet. The authors consider the use of bactericidal and fungicidal agents or materials, disinfecting the skin of a man leaving the beach, a pool space, or other places where bare feet come into contact with the ground.

Gdańsk University of Technology resolved the Entrepreneurship Swallows Contest 2018

2018-06-22

The best business idea in this year's competition carried out by the students and PhD students of the Gdańsk University of Technology was the MedTagger project, a platform for collecting and labeling medical data, created by students of the electronics, telecommunications and computer science department. The winning project combines learning with business. Its main assumption is to create public and open data sets that will allow the development of artificial intelligence in medicine. The idea is to provide the platform in the cloud and provide a group of volunteers to label the images. The second place was taken by a team of chemists who elaborated PiaŻel - a high-energy material made of polyurethane foam and a liquid-absorbing hydrogel. The creators of the Stripes Care project - an innovative body care product took the third position. The product fights cellulite, its innovation is based on the use of black tea caffeine extract.

Jan Kochanowski University in Kielce to establish Media Communication Center

2018-06-25

The Jan Kochanowski University in Kielce laid a cornerstone for the Center for Media Communication and Information Science. The ceremony was attended by Jarosław Gowin, Deputy Prime Minister Minister of Science and Higher Education. The Center, which will be commissioned in the second quarter of 2019, will include three institutes of the Humanities Department at the Kielce University. The Ministry of Science and Higher Education has donated PLN 18 million for the construction. During the ceremony, Deputy Prime Minister Gowin emphasized that the Jan Kochanowski University in Kielce is one of the fastest growing universities in Poland and recently the Kielce high school has joined the group of the best universities in Poland. - As a doctor of philosophy, I am especially pleased that the new building will contribute to the development of humanities. Together with social sciences, they are the basis for building national consciousness and relations with other people - said the deputy prime minister.

Recruitment for the MIT Enterprise Forum Poland program

2018-06-26

MIT Enterprise Forum Poland - one of the largest accelerators for technological start-ups in Poland, is recruiting students for the next program based on the know-how of the Massachusetts Institute of Technology. According to MIT Enterprise Forum Poland, start-ups that qualify for the program will have the chance to receive support from leading Polish and international companies, present their technologies to investors from the USA and win 100,000 PLN in the Young Innovator Awards CVC competition. A novelty of this MIT Enterprise Forum program is the InsurTech program addressed to start-ups developing technologies that can be used in the insurance sector. Applications are accepted until July 10, 2018 through the website: www.mitefpoland.org

Congress innoSHARE'18 - LET'S INSPIRE POLAND

2018-06-26

On 27-29 June the Warsaw Palace of Culture and Science is hosting the innoSHARE'18 Congress - LET'S INSPIRE POLAND. Almost 1,000 people from over a dozen countries will share their knowledge and experience in the field of innovation development, cooperation between science and business, internationalization of business, development of start-ups and spin-offs, commercialization of research and creation of new technologies or ground-breaking research. Event organizer - Polska Innowacyjna Foundation plans to build an international network of innovators, scientists and entrepreneurs through the congress and support the internationalization of startups and science. During the congress, the participants will talk about: artificial intelligence, space technologies, electronics, biotechnology or modern materials. innoSHARE'18 will be visited by scientists and entrepreneurs of Polish origin who create new technologies, conduct groundbreaking research or develop business in various parts of the world. More: <http://www.innoshare.pl/>

Pupils of the Wrocław primary school win Inventors Academy competition

2018-06-26

The design of the drive system for supporting the stroller won the Robert Bosch competition of the Academy of Inventors. Its authors are students of the Wrocław elementary school No. 25. The Academy aims to arouse young people's interest in science and encourage them to think creatively. Wrocław University of Technology joined the project for the eighth time. This year, the jury recognized the design of an independent drive system for supporting a pram, which was created by students of elementary school No. 25 in Wrocław. The trolley is driven by two electric motors providing power to adjust the speed of the trolley to the pace of the walk. The device is safe - the motors turn off automatically when you take your finger off the start button. The prize for the winners was electronic equipment, the school received a voucher worth 5,000 PLN

for equipping the technical studio. More about the competition: <http://pwr.edu.pl/uczelnia/aktualnosci/gala-finalowa-akademii-wynalazcow-boscha-na-pwr-10916.html>

National Center for Research and Development and energy companies to develop a zero-emission delivery vehicle

2018-06-27

The National Center for Research and Development and energy companies Enea SA, Energa-Operator SA, PGE Dystrybucja SA and Tauron Dystrybucja, signed a letter of intent concerning multilateral cooperation for the development of electromobility in Poland. Cooperation under the initiated e-VAN program aims to develop an innovative, emission-free delivery vehicle. The vehicle will be adapted to the needs of energy companies so that it can be used in companies' fleets to carry out everyday tasks. As part of the cooperation, a project team will be established to coordinate all activities, including research and development. The delivery vehicle, which will be created as a result of the project, will be ordered and incorporated into the fleets belonging to the signatories of the letter. The completion of activities under the «e-VAN» program is scheduled for 2022.

Warsaw University of Technology launches project Warsaw Design Factory

2018-06-27

The Warsaw Design Factory has been launched in the Center of Innovation Management and Technology Transfer at the Warsaw University of Technology. This is special program to help students and university staff to create innovations and develop cooperation with the environment. The goal of Warsaw Design Factory is to build a modern and innovative university, interdisciplinary, creative teams of young scientists and fully engaged academic staff. The Warsaw Design Factory will host courses, workshops, trainings and programs for students and employees. The projects implemented here are to foster the development of cooperation between science and business and the teaching skills of the staff of the Warsaw University of Technology as well as to develop students' professional skills. More: <https://www.wdf.pw.edu.pl/>

University of Gdańsk to cooperate with the District Court

2018-06-27

The University of Gdańsk has signed a cooperation agreement with the District Court in Gdańsk. The document was signed by Prof. Jerzy Gwizdała, rector of the University and Rafał Terlecki, the president of the court. The agreement provides for the development of analyzes, expert opinions and opinions for the needs of the judiciary, including issuing paid opinions for the needs of proceedings and the organization of postgraduate studies in the areas indicated by the Regional Court in Gdańsk, training in legal and economic issues as well as management and experimental sciences. The parties of the agreement will also cooperate in the organization of scientific conferences, symposia and other forms of transferring knowledge and experience, and jointly inspire the conduct of research directions relevant to the justice system, as well as organize internships for best students.

Polish scientific instruments aboard the Chinese lunar probe

2018-06-28

Polish scientific instruments aboard the Longjiang-2 lunar probe operate without a hitch - informs the Space Research Center of the Polish Academy of Sciences, which was responsible for the development of the apparatus. The Longjiang-2 spacecraft, launched into space on May 20, 2018 from the Xichang spaceport in China, has on board a radio device for observing the universe. It was made by research teams from the Space Research Center of the Polish Academy of Sciences and the National Center for Space Research of the Chinese Academy of Sciences. Tests of equipment in space showed that the instruments are working properly. After calibration measurements, the device will start regular scientific observations. Polish works are carried out as part of the «Discovering the Sky at Longest Wavelength-Pathfinder» project. Cooperation between the Space Research Center of the Polish Academy of Sciences and Chinese partners was financed by the Ministry of Science and Higher Education.

University of Economics in Katowice scholars succeed at an international conference

2018-06-28

Prof. Sławomir Smyczek, Prof. Aleksandra Burgiel, Dr Jolanta Zrałek were honored with the „The best paper” award at the international conference on Global Business Research Symposium (GBRS) in Rome. Professor Smyczek also received the „The best discussant” award for preparing the best paper review. This year's international GBRS conference was organized by St. John's University under the motto «The Future of Business: Technology, Innovation, and Regulation.» Awarded papers «Sustainable consumption and values for consumers» by Prof. Sławomir Smyczek and «Access-based consumption: Its technological determinants and implications for the future business - the Polish example» by Prof. Aleksandra Burgiel and Dr Jolanta Zrałek will be published in the international journal Review of Business. More: <https://www.gbrsconference.org/>

Applications that make life easier won the Samsung LABO program

2018-06-28

The 4th Samsung LABO program at the West Pomeranian University of Technology in Szczecin has been completed. Conceived as facilitating students' start-up in their professional life, the program has become a hotbed of ideas and projects of interesting local entrepreneurs. The first place was won by Rambler - an application for tour guides. Thanks to it, you can quickly and easily get in touch with members of a tourist group and create and share a trip plan or a note. The second place was won by a similar application - Clever Tracker. It allows, for booking a seat in a coach and in hotels. The third place was taken by the GYM4YOU application that helps finding gyms, personal trainers and dieticians. Samsung LABO is the result of an agreement between Samsung, the University of Technology and regional authorities. It aims to develop students' strategic digital competences and support the construction of a knowledge-based economy.

Rzeszów University of Technology to support State Higher School of Eastern Europe in Przemyśl

2018-06-29

Both schools will cooperate in science, education, promotion of modern solutions, scientific research, innovation and entrepreneurship. The agreement was signed by Prof. Tadeusz Markowski the rector of the Rzeszów University of Technology, and Dr Paweł Trefler, rector of the State Higher School of East European in Przemyśl. It assumes cooperation in the field of the quality of education, creating and conducting postgraduate studies, additional courses. The agreement also covers joint initiation, organization and development of contacts with foreign universities, in particular from Eastern Europe.

University of Warmia and Mazury scientists discover healthy cheese

2018-06-29

Researchers from the Faculty of Food Sciences of the University of Warmia and Mazury in Olsztyn are working on the recipe for a new ripening cheese. The product is to be healthy and intended for people struggling with civilization diseases. A dozen or so recipes of ripening and curd cheeses have been developed in the Olsztyn university laboratories, including the well-known Kortowski cheese. This time, work on the cheese for people with heart and diabetes problems is underway. According to the University of Olsztyn, the cheese recipe developed by scientists from the Faculty of Food Sciences is in line with the latest trends in food production technology. - Nowadays, it's trendy that dairy products are placed to specific groups of consumers. And we want to respond to the needs of the market, which demands that food products also should have pro-health properties. Our cheese with increased content of casein beta should interest to people with cardiovascular disease, at risk of heart attack- emphasizes Dr Justyna Żulewska, who develops the technological process of producing a new cheese.

Rover from the Częstochowa University of Technology win the University Rover Challenge 2018.

2018-06-29

The Mars rover designed and built by students of the scientific circle of computer design of mechatronic devices and machines of the Częstochowa University of Technology won the University Rover Challenge 2018 competition. Over 500 students from 35 teams from around the world participated in the competition at Mars Desert Research Station in the US state Utah. The construction of Częstochowa students triumphed significantly and overtook the defenders of the title - Missouri University of Science & Technology team - by over 30 points. The third place was taken by the team of the Kielce University of Technology. The leader of the winning

team of constructors is Piotr Ptak - a student of the Faculty of Mechanical Engineering and Computer Science, and the whole project is headed by Prof. Eng Dawid Cekus from Częstochowa University of Technology. More about the competition: <http://urc.marsociety.org/home/urc-news>

University of Warmia and Mazury and Michelin Poland to start dual education

2018-07-02

From October 2018, the University of Warmia and Mazury in Olsztyn along with the Michelin Polska S.A. will launch dual education. On June 28, the first students qualified for the program received the nomination letters. The studies will be carried out by the Faculty of Technical Sciences and the Faculty of Economic Sciences of the Olsztyn university. The University of Warmia and Mazury is the first Polish university that incorporates this educational model into its educational offer. - It's a new approach to learning. We offer students dual studies. It means that they normally carry out their program of study with our participation as an employer and the studies are partially run at our factory. Thanks to this, students can practically solve the problems that they taught in the university in theory- explained the director of the Michelin factory staff in Olsztyn, Agata Trzcianowska.

Maritime University of Szczecin to construct unmanned ship

2018-07-02

The constructors of the Department of Ocean Engineering and Shipbuilding of the Maritime University of Szczecin are creating an ecological unmanned ship. The unit's hull is created, the drive will soon be installed and tests will begin on the water. Photovoltaic cells and fuel cells will be used for power supply. In parallel with the construction of the model, also laboratory work on an autonomous control system is underway. Once completed, the system will be installed in the ship. The tests will begin at the experimental pool of the Maritime University of

Szczecin. After the successful completion of tests with autonomous control, another model of the unmanned vehicle will be built and tests will be carried out to provide the exchange of information between floating unmanned ships. Then, research and design work on the ecological unmanned transport ship will start - announced the constructors.

Digital revolution in the library of the Wrocław University of Environmental and Life Sciences

2018-07-03

The Main Library of the University of Life Sciences in Wrocław launches new instruments that will allow the academic community to more easily use and search resources. The new instruments are a multi search engine - one «window» for searching library resources - and HAN (Hidden Automatic Navigator), new remote access to e-resources. The existing library card will be replaced by the employee ID card. Thanks to the multi-search engine, the users can search all printed and electronic resources in one place, get search results, access full texts of electronic books, magazines and databases, order books from all catalogs and check the status of their library account. The HAN system will provide access to electronic resources in the network and outside the university network to employees, PhD students and students of the university. It is available 24/7 from anywhere in the world and works on computers and smartphones. More: http://www.glos.upwr.edu.pl/aktualnosci/48052/nowe_narzedzia_w_bibliotece_rewolucja_w_przeszukiwaniu_zasobow.html

University of Silesia patents a new method for the preparation of polyether diols

2018-07-03

Researchers from the University of Silesia have developed a new method of obtaining polyether diols - products for the production of polyurethanes, commonly used in the footwear, automotive, furniture and construction industries. The solution has been patented. The new method is more efficient - polymers with increased molecular weight are created with lower energy consumption of the process and reduction of side reactions. The polyether diols obtained in this way find application as surfactants, moisturizing agents, lubricants and impact modifiers. The authors of the solution are scientists of the Faculty of mathematics, physics and chemistry Dr. Eng. Zbigniew Grobelny and Kinga Skrzeczyna, and Dr. Andrzej Swinarew, Dr. Justyna Jurek-Suliga and Jadwiga Gabor from the Faculty of computer science and science about materials.

National Center for Research and Development launches first „Dual Studies” call

2018-07-04

In a new academic year students of several dozen Polish universities will gain new opportunities to combine theoretical classes with employment in business. As part of the first call for „Dual Studies”, more than PLN 123 million will be allocated to Polish universities - informs the National Center for Research and Development. As part of the «Dual Studies» call 84 applications were submitted and 69 projects received funding. The project of Kozminski University in Warsaw to educate students in the field of health economic and big data analytics and dual course for design in the field of mechanics and mechanical engineering at the Faculty of Mechanical Engineering at the Silesian University of Technology were assessed as the best solutions. The next position was received by project of the Lodz University of Technology in the field of practical design. The University of Environmental and Life Sciences in Poznań took the third position, with a new course animal

nutrition and fodder production. More: <http://www.ncbr.gov.pl/fundusze-europejskie/power/aktualnosci/art.6310,informacja-o-wyniki-oceny-merytorycznej-w-konkursie-nr-powr-03-01-00-ip-08-00-duo18-the-studio-dual-about-development-pro.html>

PLN 100,000 support for video game authors

2018-07-04

Do you want to create a video game and need support for your idea? Apply to the ARP Games acceleration program. You can receive up to 100,000 for the implementation of the idea. As announced by the Polish Development Fund, the 4th ARP Games accelerator has been launched. This is an offer dedicated to teams, having an interesting and unique idea for the game, and at the same time people with high creativity. The initiative may involve teams of two or more people of any nationality who have the opportunity and willingness to set up a company in Poland. Applications are accepted until July 31, 2018. More: <https://www.startup.pfr.pl/pl/aktualnosci/ruszyla-4-edycja-akceleratora-arp-games>

Passive exoskeleton wins a prize at the Inventions and Innovation Fair in Katowice

2018-07-04

A passive exoskeleton made in 3D printing technology to support the strength of weakened upper limbs in children - authored by researchers from Bydgoszcz, won three prizes at the 11th International Fair of Inventions and Innovation INTARG 2018 in Katowice. The joint project of the employees of the Collegium Medicum of the Nicolaus Copernicus University in Toruń and the Kazimierz Wielki University in Bydgoszcz won the Grand Prix in Katowice, the Platinum Award (together with the diploma of the Minister of Investment and Development) and the Special Award granted by the Croatian delegation. Exoskeleton is supposed to support muscle activity in children with the possibility of extending its application to adults. Thanks to the use of 3D printing, each exoskeleton is made individually, according to the dimensions of the future user based

on 3D scans of its torso and upper limbs as part of a personalized therapy (patient-tailored therapy). More: <https://www.umk.pl/wiadomosci/?id=25533>

Support for start-ups that create innovations for the automotive industry

2018-07-05

The second Impact Connected Car accelerator has started. If you create innovative solutions for the automotive industry, this program is just for you. You can receive up to 60,000 euro. The Impact Connected Car program is an international acceleration program aimed at start-ups that work on solutions in the field of intelligent cars, especially in the categories of safety and security, driver assistance, effective navigation or vehicle management. By taking part in the program, you can receive up to 60,000 euro financial support and business and technical mentoring or a package of additional services (including legal and marketing). Applications should be submitted by October 18, 2018. The IMPACT Connected Car Coordinator is FundingBox Ltd. One of the project partners is the Polish Agency for Enterprise Development. More: <https://www.startup.pfr.pl/pl/program/akcelerator-impact-connected-car>

Students of the AGH University of Science and Technology construct an electric racing car

2018-07-05

On Thursday, July 5, students at the AGH University of Science and Technology in Krakow will present their latest construction, an electric race car. After four cars with internal combustion engines, students working in the AGH Racing Team will present a racing machine powered by nearly a thousand lithium-ion cells. The students will test the full potential of the latest design next week - during the international Formula Student competition in the Netherlands - says Anna Żmuda-Muszyńska, spokesman for the Krakow university. See the movie advertising the premiere of the car: www.bit.ly/PremieraBolidu

Innovative intravascular stent created by scientists from the Nicolaus Copernicus University

2018-07-05

The invention of scientists from the Faculty of Medicine at the Collegium Medicum of the Nicolaus Copernicus University „Intravascular stent with properties that accelerate the healing of the implant site and reduce the occurrence of thrombosis” won the gold medal at the International Fair of Inventions and Innovations INTARG 2018. The award-winning invention is a revolution in intravascular cardiology. The endovascular stent allows to support the implantation at the site of narrowing of the blood vessel to maintain its proper light. In addition to the gold medal, the invention of Dr Maciej Gagat, Dr Dariusz Grzanka and Prof. Alina Grzanka was honored with the Award of WIIPA World Invention Intellectual Property Associations and the special prize Politechnica of Bucharest. The invention will increase the efficacy of vasodilation procedures, especially coronary arteries, by balloon angioplasty with stent implantation and reduce postoperative complications. More: <https://www.umk.pl/wiadomosci/?id=25538>

Researchers develop a new method of palladium recovery from used catalysts

2018-07-05

Researchers from the University of Silesia, the Institute of Non-Ferrous Metals in Gliwice and the University of Adam Mickiewicz in Poznań have developed a new method of palladium recovery from used catalysts. Researchers from three centers have developed an effective and cost-effective method of recovery of palladium from old catalysts by separating the element from the post reaction mixture by sorption with silica gel subsequently treated with sulfuric, nitric and hydrochloric acids, thereby recovering the palladium in the form of tetrachloropalladate, finally transformed into palladium dichloride - the most convenient raw material for the synthesis of homogeneous catalysts. Thanks to the solution,

which has been patented, it will be possible to reuse the recovered metal for the production of new catalysts, which will reduce the costs of their production and will be less burdensome for the natural environment.

University Clinical Hospital in Opole has a hybrid operating room

2018-07-05

A new hybrid operating room was opened in the University Clinical Hospital in Opole. The investment, which combines the elements of the operating room and the cabinet for treatments with low invasion processes will significantly improve patient safety. The hybrid operating room is a place where surgeons, cardiologists, cardiac surgeons and anesthesiologists can work simultaneously. The room allows to perform treatments combining classic open surgery with minimally invasive surgery. It is possible thanks to the special equipment. This allows for minimally invasive procedures and speeds up diagnostics, reducing the time of surgery. The room significantly increases the patient's safety - in the case when during the procedure it turns out that it is necessary to perform the traditional surgery, it can be done immediately, without having to transport the patient to another location.

Applications for grants in the Open Innovation Network program

2018-07-06

Until July 31, 2018, applications may be submitted to receive a grant for technology transfer within the Open Innovation Network program. According to the Industrial Development Agency, as part of the Open Innovation Network program, micro, small and medium enterprises can apply for grants for technology transfer. Grants may be allocated to the purchase of patents, know-how and other intellectual property rights (patent applications, utility models, applications for utility models, industrial designs, industrial designs, copyright, rights to protected plant species, topography integrated circuits).

Under the program, applicants can receive financial support up to 200,000 euros. More: <https://siecotwartychinnowacji.pl/transfer-technologie/>

Bydgoszcz scientists win gold medals at INTARG 2018

2018-07-06

Teams from the University of Casimir the Great in Bydgoszcz received two gold medals at the INTARG 2018 fair in Katowice. Prof. Marek Macko University of Bydgoszcz and MA Zbigniew Szczepański were awarded for the development of light-cured dental implants. Prof. of Bydgoszcz University Joanna Paciorek-Sadowska, Eng. Marcin Borowicz, Prof. Eng. Bogusław Czupryński, Dr Eng Joanna Liszkowska, Eng. Ewa Tomaszewska received a gold medal for the development of pro-ecological industrial technology for waste management of polylactic acid as an alternative polyol raw material for the production of polyurethanes for the construction industry. The INTARG fair has an interdisciplinary character - it presents a wide range of novelties in the area of ecology, medicine or IT, as well as new solutions for various industries and everyday objects.

Student of the Wrocław University of Technology creates an apartment management application

2018-07-06

A student of the Wrocław University of Technology created an application that will settle bills in a simple way and allow the users to control their home budget. It can be used not only by owners and managers of apartments, but also by tenants. The creator of the application, Paweł Abramowicz, emphasizes that Naym is to a certain extent the result of his own experiences, because during his studies he happened to live with six roommates. The application allows the users to settle bills in a simple way, develop a residential budget with automatic calculation of receivables for each tenant and remind about the approaching payment date by e-mail or SMS. The Naym will also help owners and managers of apartments in precise calculation of monthly fees, including rent, electricity and water. The user only fulfills the charts, and the application will calculate the receivables itself and additionally send an e-mail or SMS to all tenants with the exact amount. More: <http://pwr.edu.pl/uczelnia/aktualnosci/naym-aplikacja--ktora-pomoze-zarzadzac-mieszkaniami> 10917.html

Cross EU WBA program for women's start-ups

2018-07-09

If you are a founder or manager in a start-up or you target your products to women and seek funding, you can submit your start-up to participate in the Cross EU WBA program (Women Business Angels) and present your business idea in front of the Business Angels network from Poland, Germany, Spain, Greece and Slovakia by August 20. To participate in the project, you must run a start-up in the early stages of development (less than three years). You must also have full copyright for your idea or innovation. Cross EU WBA program directs support for start-ups that meet one of the conditions: the founder of the start-up is a woman; the start-up manager is a woman; women are the target consumers of

the company's products or services. Participation in the project is free, but its participants cover the costs of travel, accommodation and meals. If your application is assessed positively, on September 19, 2018 you will have the chance to present your idea to Business Angels. More: <http://www.parp.gov.pl/crosseuwba>

Polish DESIS instrument reaches the International Space Station

2018-07-09

The Dragon ship with the DESIS instrument on board reached the International Space Station. The device will be used for satellite observation of the Earth. The engineers of the Space Research Center from the Polish Academy of Sciences participated in its construction. DESIS (DLR Earth Sensing Imaging Spectrometer) is designed to conduct hyperspectral observations of our planet, which means simultaneous imaging of the surface of the globe in 235 ranges of electromagnetic radiation. Polish engineers were responsible for the design and implementation of the DESIS-POI system, which controls and positions the movable input mirror of the sensor. This mirror is the first element of DESIS, where radiation comes from the surface of the Earth. The task of the mirror is to direct the radiation to the further part of the instrument, including the next immobile mirrors and the telescope - explains the Space Research Center.

Students of the Warsaw University of Technology create an application to monitor the air condition

2018-07-09

The application „Płockostan” of students of the Warsaw University of Technology is used to monitor the state of air pollution. It won the first place in this year's City Coders Hackathon Płock. Team of the three students Łukasz Skarzyński, Bartosz Barwickowski and Konrad Daroch created an application that is to support the city's residents in quickly obtaining information on the current state of air pol-

lution. In addition, it monitors and warns about failures and accidents causing unforeseen traffic jams in the city. The theme of this year's edition of City Coders Hackathon Płock were mobility, security and entrepreneurship. In July 2018, after the meeting with the authors of the project, the organizers plan to start implementing the application.

First in Poland Innovation Box Report

2018-07-10

The Coalition Foundation for Polish Innovation and experts from the Crido company prepared the first report on the Innovation Box mechanism in Poland. They collected case studies of the implementation of the Innovation Box in over a dozen European countries and in Israel. In Poland, entrepreneurs can already benefit from a exemption for research and development. However, there are many other ways to support innovations and one of them is primarily Innovation Box, used in many countries around the world. This is the first study on this issue in Poland. The work group was inspired by the results given by the representatives of many organizations that shared their knowledge and experience - writes in the introduction to the report Dagmara Krzesińska, president of the Coalition Foundation for Polish Innovation. The Innovation Box mechanism (in some countries operates under the name Patent Box, Intellectual Property Box or IP Box) is a tax incentive that allows participants to pay significantly lower income tax by enterprises that earn revenues from commercialization of intellectual property rights resulting from research and development. See the report: https://koalicjadlainnowacji.pl/wp-content/uploads/2018/06/Raport_Innovation_Box_KPI_Crido.pdf

Inventions of the University of Technology and Life Sciences in Bydgoszcz awarded in Třinec

2018-07-10

Two inventions of the University of Technology and Life Sciences in Bydgoszcz received gold medals at the INVENT ARENA 2018 Exhibition of Technical Innovation of Patents and Inventions in the Czech city of Třinec. The department of technology and chemical engineering and the department of mechanical engineering of the University of Technology and Life Sciences presented their works and innovations. The first awarded invention is: «The design of the valve for emptying the tank from granular materials for a vibrating apparatus with a propeller-screw drive system» by Dr Eng Marek Domoradzki, Dr Eng Wojciech Poćwiardowski and Eng Joanna Szulc. The second gold medal was received by Dr MS Stanisław Jung, MSc. Marek Andryszczyk and Eng. Marcin Głowacki for «Device for the rehabilitation of the radial-wrist joint».

Innovative flight simulator to be created at the Silesian University of Technology

2018-07-11

Scientists from the Silesian University of Technology are developing a prototype of an innovative flight simulator. The project obtained a grant from the Horizon 2020 program as part of the Research and Innovation Staff Exchange (RISE) funding scheme. The WrightBroS project (Working in a Collaborative Factory of the Flight Simulators Branch of RISE) will be coordinated by the Virtual Flying Laboratory at the Faculty of Automation, Electronics and Computer Science. The University of Technology will implement it together with partners from Austria - LG Nexera Business Solutions AG from Vienna and from Slovakia - Virtual Reality Media from Trencin, professional flight simulators manufacturers. The simulator uses the latest developments in augmented reality technology, based on the system created in the project to acquire and process expert procedural knowledge related to service and maintenance.

Gdańsk University of Technology becomes a partner of the International Fair for Young Innovators

2018-07-11

The Europe's largest exhibition for Young Innovators Expo Sciences Europe (ESE), organized for over 20 years, will be held for the first time in Poland. The host of ESE from July 16 to 22 will be Gdynia. The partner of the event is Gdańsk University of Technology. 339 participants from 29 countries from around the world applied for participation in the fair. They will be able to see 135 innovative projects. Poland will be represented by the finalists of the Scientific E(x)plory, who were selected during last year's event finale - Gdynia E(x)plory of the Week 2017. ESE are organized every two years since 1996. The main organizer of the fair is the non-governmental non-profit organization MILSET-International Movement for Leisure Activities in Science and Technology, whose aim is to develop scientific culture and promote innovation among young people. Until now, the hosts of ESE were Czech Republic, Portugal, France, Belgium, Russia, Spain, Slovakia, Germany and Hungary. More: www.es2018.milset.org

Polish Development Fund launches a mentoring program for start-ups

2018-07-13

The new program of the Polish Development Fund (PFR) is addressed to start-ups and companies seeking support in working on the most important business competences. The initiative under the name PFR Network of Mentors is to provide access to experienced experts from various fields who will share their knowledge and support the startups in working on specific challenges. As emphasized in the communication of the Polish Development Fund, the PFR Network of Mentors will influence the development of the innovation ecosystem in Poland. The group of 30 mentors included carefully selected, experienced entrepreneurs and managers who have already succeeded in their business. The applications for PFR Mentors Network will be accepted until August 5, 2018. During this time, the start-ups must complete the application form, choose a preferred mentor and motivate the need for mentoring. More: <https://www.startup.pfr.pl/pl/siec-mentorow>

Million PLN to develop the application for printing photos directly from Facebook

2018-07-13

Podlaski Fundusz Kapitałowy has invested one million PLN in the start-up of Moony Lab, whose application allows to print photos directly from Facebook or Instagram. The number of smartphones in Poland has doubled over the past five years. Currently, over 60 percent of society use them. One of the advantages of smartphones is the high quality of built-in cameras. This feature makes many people to take pictures with smartphones. This trend has induced the creators of Moony Lab to create an application that allows to print images directly from the phone. The company wants to allocate funds from the fund into development and expansion in the most forward-looking global markets, as well as to improve internal processes and the development of the sales team. More: <https://moonylab.com/pl>

Polish scientists create a bionic pancreas printed in 3D

2018-07-13

Polish scientists are developing a revolutionary solution. They want to create a bionic pancreas, printed in 3D, that would function like a real organ, producing insulin and glucagon. Bionic pancreas would be built in a similar way as bone elements are printed. Currently, printing of vessels and the creation of the entire vascular system are underway. Creating a bionic pancreas is a chance for a normal life for people with type 1 diabetes, when the pancreas stops producing insulin. The project «Bioprinting 3D of the bionic pancreas» is financed by the National Center for Research and Development. It is to end in December 2019 and its value is estimated at PLN 24.7 million. Research is carried out by the Bionic Consortium, whose leader is the Foundation for Research and Development of Science. The consortium also includes Warsaw University of Technology, Warsaw Medical University, Nencki Experimental Biology, Polish Academy of Sciences, Infant Jesus Clinical Hospital and MediSpace company. More: <https://fundacjabirn.pl/projekty/projekt-biodrukowane-3d-bionicznej-trzustki/>

Ten medals for scientists at the Wrocław University of Technology at the exhibition of inventions and innovations

2018-07-13

Scientists from the Wrocław University of Technology have won 10 medals at the International Fair of Inventions and Innovation INTARG 2018 in Katowice. The gold medals were awarded for «New antistatic agents obtained from vegetable natural resources»; «New natural surfactants - safe and effective wood preservatives»; «Ionic liquids with a pharmacological component: the direction to obtain new bioproducts»; «The use of resonance in impact machines» and «Core drill for drilling in concrete» works. Silver medals were received for inventions: «A mobile platform for a device to study the morphology of flat surfaces, especially concrete ones.» And «Natural antioxidant compounds produced

from medicinal plants». The bronze medals were awarded for the projects: «Non-contact quality control of plates in motion using ultrasonic Lamba waves», «Innovative hydraulic bumper» and «Agent for making epoxy resin coatings and its application».

Bone marrow transplantation without blood transfusion at the University Clinical Hospital in Wrocław

2018-07-13

The team of the Department of Hematology, Blood Tumors and Bone Marrow Transplant of the University Clinical Hospital in Wrocław performed a bone marrow transplantation in a patient who refused transfusions on religious grounds. The patient - a young man who recently became a father, refused a transfusion on religious grounds. He was suffering from Hodgkin's lymphoma. Blood transfusions are used in such operations to support the organism, in which the «new» marrow is not yet functioning, after the devastating chemotherapy and implantation of stem cells taken from the patient before. The transplantation, probably the first in Poland, took place in December 2017. The treatment took place without complications, the patient was in good shape, we gave him drugs increasing production of red blood cells, we took care of the hemoglobin level - says Prof. Tomasz Wróbel from the Medical University in Wrocław. More: <https://www.umed.wroc.pl/content/przeszczep-szpiku-bez-transfuzji>

Physicists from the University of Lodz looking for a safer way to produce nuclear energy

2018-07-16

Researchers from the Department of Nuclear Physics and Radiation Security at the University of Lodz, participate in an international research project using the n_TOF device. The project aims to develop a safer way of producing nuclear energy. Research is being carried out at the European Organization for Nuclear Research (CERN) in Geneva. The n_TOF device, which is located at CERN in Geneva, allows for accurate observation of neutrons, i.e. particles, occurring in the atomic nucleus. The n_TOF machine is the only such construction in the world. About 150 researchers from 43 scientific institutes and universities participate in the project. Three nuclear physicists from the University of Lodz are the only Poles participating in it. The research of physicists from Lodz is financed from the grant of the National Science Center.

Student at Krakow University of Technology designs tilting bike

2018-07-16

Wojciech Janas, a student of the Faculty of Mechanical Engineering of the Krakow University of Technology, as part of his engineering and master's thesis, developed bicycle designs with special devices that change the regular single-track bike into a stable three-seater bicycle or a racer for a teenager. The tilting bike has been patented in the Polish Patent Office. Creating a three-wheeled vehicle was the first idea for an engineering work. The main idea was the changing an ordinary bike into a three-wheeled vehicle, which is more stable, and its use would bring more pleasure to people of all ages. The change had to be smooth without any changes in the construction of the bicycle - Janas explains. His solution was modeled on the French KIFFY vehicle. The difference is that the French bicycle is produced as a ready tricycle, and his construction easily passes from two to three wheeled and vice versa.

PhD student at the University of Life Sciences in Wrocław to rejuvenate cells

2018-07-16

Katarzyna Kornicka, PhD student at the Faculty of Biology and Animal Production at the University of Life Sciences in Wrocław, is implementing the project „Mitochondrial transfer as an innovative method of restoring stem cells to stem cells isolated from adipose tissue suffering from metabolic syndrome (EMS)”. The research of a Wrocław PhD student is a consequence of an earlier project, in which the researchers tried to rejuvenate stem cells of horses using resveratrol and 5-azacytidine. - In my project I want to rejuvenate the same cells, only by another method, through artificial transfer of mitochondria, which I isolate from «healthy cells» - explains Katarzyna Kornicka. She adds that in the future there is a chance to use this method in human medicine, especially in transplantology. For her project, the scientist obtained a grant - almost 140,000 PLN. The money is received from the Prelude 14 program of the National Science Center.

KITS Opening Innovations in Krakow

2018-07-17

Foundation Kraków Miastem Startupów, Marshal's Office of the Małopolska Region and the Swiss bank UBS invite participants to the Krakow City Hall on 20 July, where KITS Opening Innovations will take place. This initiative is to help introduce new technologies developed at Kraków's universities into the business world. The meeting is addressed both to large business - enterprises that have the ability to absorb innovative technologies in practice as well as to small and medium-sized companies or start-ups. During the event, lectures, discussion panels and a series of individual meetings will be held to establish new direct business contacts. More: <https://www.facebook.com/events/1844847399150924/>

Hydrogen-powered car from the Silesian University of Technology comes fourth at the Shell Eco-marathon in London

2018-07-17

Students of the Silesian University of Technology designed a car that won the 4th place in London competition in the category of Urban Concept Hydrogen vehicles. This is the best result among all Polish teams participating in the competition. The task of the teams taking part in the competition was to design the most efficient vehicles in terms of energy saving, and then to drive them as far as possible on one fuel unit. The car, constructed by the SmartPower team, was presented in the category of hydrogen-powered urban vehicles and resulted in o 117 km / m3 of hydrogen. Shell Eco-marathon is one of the most prestigious professions for students of technical universities organized every year in America, Europe and Asia. Nearly 180 teams from 24 countries applied for this year's edition - including 7 teams from Poland.

Scientists of the Wrocław University of Technology become Innovation Leaders

2018-07-18

The researchers of the Wrocław University of Technology received the titles of the Innovation Leaders in the competition under the honorary patronage of Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education. The prizes were awarded for special merits in the inventiveness. Dr Joanna Feder-Kubis from the chemical department won in the category of „Female Inventor”. She was awarded for her scientific activity of significant importance not only for the development of science, but also for an innovative economy, for participation in numerous Polish and European patents and patent applications, as well as many awards received both in the country and internationally. In the „Technology” category, the jury appreciated Prof. Wiesław Fiebig from the Faculty of Mechanical Engineering for „The use of mechanical resonance to drive impact machines”. The invention was awarded with numerous international medals and distinctions, contributing to the reduction of energy consumption in the propulsion systems of such machines.

Scientists from the University of Silesia create new loudspeaker

2018-07-18

Researchers from the University of Silesia have developed a new loudspeaker for study rooms. Their invention- a set of speakers occupying a small space and at the same time ensuring very good sound quality has been protected by the European Patent Office. Dr Eng Robert Koprowski and Prof. Eng. Zygmunt Wróbel, scientists from the Faculty of Computer Science and Materials Science, University of Silesia, constructed an innovative loudspeaker, in which empty waveguides and chambers were used and thus the processing range was increased. This guarantees that the music is played with a satisfying quality, and users will be able to receive a high-quality set that takes up less space than constructions currently available on the market.

Scientists from the AGH University of Science and Technology develop a device to bring sunlight to shady rooms

2018-07-20

How to illuminate dark offices or flats with natural light and thus save on electricity charges? The problem of shaded rooms is solved by the design of scientists from the AGH University of Science and Technology in Krakow. The spherical heliostat will bring sunlight to the dark corners of our homes. The device was prepared by Paweł Wajss from the Faculty of Energy and Fuels as part of his PhD program. The spherical heliostat brings sunlight into the room. In the center of the house, the flat mirror reflects the sunlight. There is also a mechanism for setting the device in the right direction and this way permanently illuminating the dark kitchen or corridor. The proposed construction also solves the problem of wrongly located rooms, with small windows or shaded by other objects.

Minister of Science honors the invention of the Białystok University of Technology

2018-07-20

Hermes - a hybrid attachment for the wheelchair drive of a disabled person constructed by students of the Białystok University of Technology, was awarded with a special diploma of Minister of Science and Higher Education Jarosław Gowin. Hermes was created for disabled people using wheelchairs. It is a lightweight wheelchair, equipped with electric and manual drive. Thanks to it, the disabled persons wheelchair can be driven either manually, through a crank mechanism included in the steering wheel or thanks to a programmable electric motor with an energy recovery system during braking. The electric drive makes it possible to continue driving in the event of fatigue and it helps to overcome uneven terrain and curbs. The project was carried out in the student scientific club Orthos at the Faculty of Mechanical Engineering of the Białystok University of Technology.

PhD student at the Opole University of Technology wins the competition for an innovative solution in the field of energy

2018-07-20

Dawid Piwowarski from the Faculty of Mechanical Engineering at the Opole University of Technology won the Warm up Your Business with ECO & PNT contest for an innovative solution in the field of energy. The winning idea - «Analysis of heating systems using unmanned aerial vehicles equipped with a thermal imaging camera», i.e. diagnostics using a drone - defeated projects from all over Poland in the final and was rewarded with PLN 10,000 prize. The competition was organized jointly by the Opole University of Technology, the Opole Science and Technology Park and the Incubators site pl. More: <https://warmupbiznes.pl/>

Invention of scientists from the Gdańsk University of Technology enables the production of ecological soles

2018-07-20

The invention developed at the Department of Polymer Technology of the Faculty of Chemistry of the Gdańsk University of Technology will allow the company MSU S.A. from Grudziądz to produce footwear soles with the use of polyurethane waste. The solution of prof. Dr. Eng. Janusz Datta and Prof. Dr. Eng. Józef Haponiuk has already been patented and commercialized. It enables the recycling of polyurethane wastes generated from post-production cuts, as well as from other used products that usually are a significant burden for the natural environment. The implementation of eco-soles will allow the company MSU to use the production waste in an profitable manner. In the long term, the solution may enable the development of technologies of full processing polyurethane wastes from other enterprises.

Invention of scientists from the Polish Academy of Sciences and Dr Irena Eris company becomes the basis of a new series of cosmetics

2018-07-23

In the last days, three cosmetics from AUTHORITY series have been sold in Poland. The basis for their creation was the project of the Nencki Institute of the Polish Academy of Sciences (PAN) and the Dr Irena Eris Center for Science and Research financed by the National Center for Research and Development. AUTHORITY is the latest anti-wrinkle series by Dr Irena Eris Company. The unusual effectiveness of creams is guaranteed by the original combination of colloidal gold peptide and the unique technology of activating potassium channels. This is a world-wide discovery made by a multidisciplinary team of scientists from the Dr Irena Eris Scientific and Research Center and the Nencki Institute of the Polish Academy of Sciences. The results obtained as part of the project were published in the Journal of Investigative, Dermatology and the Biochemical Journal. The Patent Office has granted patent No. P.416041 to the invention «The use of naringenin and a naringenin-containing preparation and a method of slowing down, counteracting and preventing the process of skin leathery spots».

Students of Gdansk University of Technology awarded in the „Student-Inventor” competition

2018-07-23

The Polish Patent Office summarizes the 8th national competition „Student-Inventor”. The award was received by Zuzanna Bielan from the Faculty of Chemistry of the Gdańsk University of Technology. Adam Dąbrowski from the mechanical faculty received the Rector's Award of the Kielce University of Technology in the same competition. The special diploma was also awarded by the Gdańsk University of Technology. Zuzanna Bielan was awarded for her method of obtaining a layered magnetic photocat-

alyst. The special prize of the Rector of the Kielce University of Technology was awarded to Adam Dąbrowski for the method of measuring the fluctuation of the heat flux from the tested surface - especially in the case of the space rockets cover. Rector of the Kielce University of Technology also awarded a diploma to the Gdańsk University of Technology «for the participation of university students in the National «Student-Inventor» Competition, which is to support the culture of innovation and the idea of intellectual property protection in the academic youth environment».

Unique master's course at the Jagiellonian University

2018-07-24

In the academic year 2018/2019, the Jagiellonian University together with the World Intellectual Property Organization (WIPO Academy) and the Polish Patent Office introduce a unique Master's degree „Intellectual Property and New Technologies” in English. The new study is addressed to people interested in intellectual property law in the context of new technologies. It allows students to acquire comprehensive knowledge and answer to practical questions related to violation of intellectual property rights on the Internet, patent protection in the area of new technologies, digital content and protection of privacy and personal data online at the national, EU and international levels. More: <http://www.wpia.uj.edu.pl/ip>

Invention of Krakow scientists wins the gold medal of the Inventions Festival in the USA

2018-07-24

The invention „New Photoinitiating Systems for Processes of Cationic, Free-radical and Hybrid Photopolymerization under UV and Visible Light”, developed by a scientific team under the supervision of Dr Eng Joanna Ortyl from the Faculty of Chemical Engineering and Technology of the Krakow University of Technology, was awarded the gold medal of the Silicon Valley International Invention Festival - SVIIF. The team of Dr Eng Ortyl invented new photosensitizers. It also developed «new photoinitiating

processes for radical, cationic and hybrid photopolymerization based on new photosensitizers». The innovation of the solution is based on the use of completely new chemical compounds as photosensitizers. The research results of the Krakow scientific team have a huge impact on the production of paints, varnishes and light-curing adhesives, which are used in the cosmetics, automotive, printing and furniture industries.

Team of the Częstochowa University of Technology wins the Polish Smart Development Award

2018-07-24

The PCz Rover Team team from the Częstochowa University of Technology became the laureate of the Polish Intellectual Development Award 2018 in the category „Young innovative leaders of Polish science”. The prize was awarded for the most spectacular success of Polish student society- victory of the University Rover Challenge 2018. The Polish Smart Development Award is a nationwide prize appreciating local governments, subordinate companies and enterprises contributing to sustainable development through their innovative investments and solutions. The second group of laureates are universities, scientific units, centers, institutions and enterprises implementing innovative projects.

PLN 100 million for projects to improve the quality of life in the Lodz region

2018-07-25

The Lodz Region and the National Center for Research and Development (NCRD) will allocate PLN 100 million for projects that will improve the quality of life and support active and healthy aging. The projects will be implemented as part of «joint venture» i.e. financing research and development works will be carried out by NCRD in cooperation with external entities. The NCRD chose the Łódź Voivodeship because this region has significant scientific and research potential. The National Center for Research and Development is looking here for partners to implement long-term undertakings that fit in with their development strategies - said prof. Maciej Chorowski, director of the National Center for Research and Development.

University of Environmental and Life Sciences in Wrocław to improve the resistance of plants

2018-07-25

Dr Magdalena Wołoszyńska from the faculty of biology and animal husbandry at the University of Life Sciences in Wrocław will carry out the research project „Regulation of Arabidopsis thaliana photomorphogenesis by Elongator - a protein complex epigenetically regulating gene expression”. «To put it simply, it's a complex that regulates gene expression, but does not change the DNA sequence, it only modifies chromatin. Such modifications can take place in various ways, and the complex works in such a way that it changes histones, which causes the chromatin looser and genes are more easily transcribed - explains the researcher. In her research, for which she obtained a grant from the National Development Center, Dr Wołoszyńska will be modifying the Arabian thistle - a plant with a very small genome, which can be transformed relatively easily. The results of her work may be important in the future as a key to improve plant resistance to drought or low temperatures.

Multimodal heart phantom created at the Krakow AGH University of Science and Technology

2018-07-26

At the AGH University of Science and Technology in Krakow, a multimodal heart phantom was created. The model created by Dr Eng Katarzyna Matusiak from the Faculty of Physics and Applied Computer Science is used to calibrate diagnostic devices used in hospitals. This is the first phantom that allows reading and correct application of medical images, with particular emphasis on cardiac images acquired on devices of various types. In addition, it allows to determine which patient's position during the test is the most advantageous, to obtain the best result. In the model developed by Dr Eng Matusiak the most important element is the heart made of organic glass. The artificial organ is of the same size as the human heart and is made of transparent material with a density similar to human tissues.

Recipe of the first sea buckthorn jam developed at the University of Warmia and Mazury

2018-07-26

Researchers from the Department of Chemistry and Raw Materials Processing of the University of Warmia and Mazury in Olsztyn are co-authors of the original recipe for sea buckthorn and carrot jam. The jam won the gold medal at this year's World Food Warsaw Fair. The jam recipe was established last year at the request of the company «Szarłat», which has an experimental field of sea buckthorn and deals in the processing of this fruit. The product has been developed by Dr Eng Beata Piłat and it is the first jam on the market in which sea buckthorn is the main ingredient. Dr Eng Piłat devoted a few years of scientific work to the sea buckthorn. She is a co-author of two patents related to the processing of this plant, including a patent for the preparation of a phospholipid-carassinode preparation from sea-buckthorn berries.

One million PLN for the project of the University of Humanities and Natural Sciences in Częstochowa

2018-07-26

Jan Długosz University of Humanities and Natural Sciences in Częstochowa received over PLN 1 million for the project „Design your future - dual studies in the field of Innovative Technologies and Modern Materials”. The main goal of the project is to modify the curriculum and to implement dual practical studies that meet the expectations of potential employers and future employees. The university wants to achieve this through the implementation of programs of alternate education - in parallel in the form of theoretical classes carried out at the university and practical classes carried out at the employer's place. The result of the project will be increasing the competence of students on unique specializations of Virtual Prototyping or Design and Industrial Design, conducted within the study of Innovative Technologies and Modern Materials.

Joint discovery of scientists from Silesia and Poznań

2018-07-26

Researchers from the University of Silesia, the Institute of Non-Ferrous Metals in Gliwice and the Adam Mickiewicz University in Poznań have developed a new, cheap and efficient way to obtain low boiling ethers and 1-propenyl sulfides. The method has been patented. Low-boiling 1-propenyl ethers can be used as monomers from which light-cured resins are used, for example in 3D printing. They are also used as starting materials for the synthesis of the compound for the preparation of B-carotene, neutralizing free radicals of vitamin A provitamin and lycopene - a dye used in the food industry. In turn, 1-propenyl sulphides are used as stabilizers and antioxidant additives for rubber and monomers for obtaining polymers with a high refractive index used in the production of fiber optics. They can also be ingredients of aromas with onion flavor. More: <http://www.us.edu.pl/nowy-sposob-mrzymywanie-zwiazkow-ktore-znajda-zywosowanie-w-przemysle-pharmaceutycznej-andspozywczego>

Modified yeast can help fight for environment

2018-07-26

Dr Aleksandra Mirończuk from the Faculty of Biotechnology and Food Sciences at the University of Life Sciences in Wrocław will examine the possibilities of the yeast *Yarrowia lipolytica* to biodegrade plastics. She received almost PLN 1.1 million from the National Science Center for her research. Yeast will be genetically modified, artificial genes encoding enzymes that can hydrolyze plastics will be introduced to yeast cells. The combination of the natural yeast properties of *Y. lipolytica* with the engineering of their metabolism should enable the biodegradation of plastics. Research can contribute to the fight against environmental contamination - I hope that we will achieve an effect in which modified yeast will exude enzymes that break down plastics, thanks to which they will build their own biomass, speaking colloquially, they will grow on these plastics - says Dr. Mirończuk.

Poland to receive 8 billion euro from the Horizon Europe program

2018-07-27

The budget of the Horizon Europe research and innovation framework program will amount to nearly 100 billion euros in the years 2021-2027. This is the European Commission's proposal for this largest research and innovation program in Europe in history. According to preliminary estimates, up to EUR 8 billion may be allocated to Poland. Horizon Europe consists of three areas. Open Science (open science) is to support research projects conducted by scientists, fund scholarships and scientific exchanges, and invest in top-class research infrastructure. In turn, the area called Global Challenges and Industrial Competitiveness (global challenges and industrial competitiveness) is to support research related to social and industrial changes. Support in this area is to be divided into six thematic clusters: health, safe society, digitization and industry, climate, energy and mobility as well as food and natural resources. The last area is Open Innovation, which aims to make Europe the leader in innovation. Detailed dis-

tribution of funds to individual EU countries will be made in 2019.

University of Casimir the Great in Bydgoszcz receives funding for dual studies

2018-07-30

At the University of Kazimierz the Great in Bydgoszcz, students will be able to study at dual studies in the new academic year. Two courses from the didactic offer of the university have received over PLN 2.5 million co-financing from the National Center for Research and Development. The first of the projects concerns the direction of resocialization pedagogy. Students can participate in paid internships extending their professional competences. Internships will alternate with education at the university. From the 3rd semester, students will choose one of the internship locations where they will take practical classes under the care of a tutor for two days a week. The second project concerns the humanities of the second-generation, specialty research and game design. Students will have a total of over 12 months of paid internships in gaming enterprises. This is the first in Poland offer of dual studies in game design.

3D printing is new postgraduate study at the University of Technology and Humanities in Radom

2018-07-30

Faculty of Mechanical Engineering at the University of Technology and Humanities in Radom in cooperation with the Radom Center for Innovation and Technology plans to launch post-graduate studies under the name „3D Printing”. The studies are to start from the semester of the academic year 2018/2019. Their participants will be prepared for work supporting the construction of manufactured parts, selection of materials depending on the use of parts, implementation of manufacturing processes using 3D printing, geometry measurements and testing of mechanical properties of manufactured machine parts. Additionally, in the Radom Center for Innovation and Technology, the students are to

learn the principles of supervision over the operation of 3D printing equipment, production management, coordination of work, evaluation of their results, as well as the principles of efficient use of software for computer aided design.

Autonomous underwater robot presented by the Wrocław University of Technology in San Diego

2018-07-30

Students of the Wrocław University of Technology have constructed a robot that will take part in the prestigious competition of autonomous robotic submarines RoboSub in the United States. The machine will face competitors from leading American technical universities - informs Michał Ciepelski from the information and promotion department of the University. The robot has been made of aluminum and laminate. The machine is equipped with a gripper, 4 cameras, 7 engines, as well as specialized position sensors. The robot also has pressure and leak sensors - signaling the smallest moisture. The strategic partner of the project is the National Center for Research and Development The RoboSub Competition in San Diego will also include teams from leading American technical universities - Caltech and MIT. The leitmotif of the event will be the casino, and the robots will have seven tasks to complete with increasing difficulty. All competitions will be played in a pool with a depth of 3 to approx. 15 m.

Call „Social and technological innovations in the process of activation of the disabled”

2018-07-31

The State Fund for Rehabilitation of Disabled People has announced the third open call „Social and technological innovations in the process of activating disabled people” for financing research, expert opinions and analyzes concerning the vocational and social rehabilitation of disabled people. Applications in the call may be submitted by universities, Polish Academy of Sciences, research institutes and other entities with documented research achievements in the field of vocational and social rehabilitation of disabled people, operating on the market for a minimum of 3 years and conducting research activities. The deadline expires on August 27, 2018. The planned amount of funds for co-financing the implementation of projects submitted as part of the competition is PLN 2.5 million. More: <http://www.pfron.org.pl/instytucje/badania-i-analizy-naukowe/ogloszenie-z-dnia-27-lipca-2018-trzeciego-otwartego-konkursu-pt-innowacje-spoleczne-i-technologiczne-w-procesie-aktywizacji-osob-niepelnosprawnych-na-finansowanie-badan-ekspertyz-i-analiz-dotyczacych-rehabilitacji-zawodowej-i-spolecznej-osob-niepelno/>

Construction of the Institute of Computer Science at the University of Gdańsk begins

2018-07-31

The expansion of the Faculty of Mathematics, Physics and Computer Science at the University of Gdańsk has begun, including the modern building of the Institute of Computer Science. The University of Gdańsk received funding for the project implementation under the Regional Operational Program of the Pomorskie Voivodeship for the years 2014-2020. The new building of the Institute of Computer Science will be a modern, five-storey building with one underground and four above-ground storeys. There will be seminar and computer rooms, auditoria, teaching and research rooms as well as office and social rooms. The building will be adapted to

the needs of the disabled - informs the University press spokesman, dr Beata Czechowska-Derkacz. The facility will be connected to the existing building of the Faculty of Mathematics, Physics and Computer Science with linking passages at the level of the second and third floors. The completion of the investment is planned for the end of 2020.

Students of the University of Torun to carry out social innovation

2018-07-31

Members of the Scientific Society of Young Special Counselors at the University of Nicolaus Copernicus in Toruń received a grant for the implementation of social innovation „Challenges of life”. Celina Kamecka-Antczak, Anna Nowak, Anna Pawlak, Mateusz Szafranski, Krystyna Popowska, Sandra Wojtas and Klaudia Wos from the Faculty of Pedagogical Sciences will use the received grant for creating and testing a board game as a tool of sexual education for adult students of special schools with moderate and severe intellectual disability. During seven months of grant application process young scientists took part in scientific research and numerous professional trainings. The grant will be implemented for half a year as part of the project «Innovation for Human Measure - support for the development of microinnovations in the area of care services for dependent persons» co-financed from the European Social Fund.

Tourist business - dual studies at the University of Information Technology and Management in Rzeszów

2018-08-01

The University of Information Technology and Management in Rzeszów launches dual studies Tourist Business from October 2018, which will be conducted jointly with entrepreneurs. The program of new studies has been consulted with practitioners and is targeted precisely at the tourism industry sector. It gives direct contact with potential employers not only during internships, but also during classes for

almost half of the didactic hours. In addition, the large part of the classes will take place directly in companies at specific job positions, which gives a unique opportunity to gain work experience already during the studies - emphasizes Dr. Krzysztof Szpara, dean of the Faculty of Medicine at the University of Information Technology and Management. More: <https://kandydaci.wsiz.rzeszow.pl/pl/studia-i-stopnia/biznes-turystyczny/#opis-kierunku>

First in Europe studies on the legal aspects of blockchain technology at the Lazarski University in Warsaw

2018-08-01

The Lazarski University in Warsaw started recruitment for the first postgraduate studies Blockchain Technology Law. According to the university, the Blockchain Technology Law is the first post-graduate program in Europe devoted to the legal aspects of blockchain. The study aims to provide students with practical knowledge of the challenges useful for lawyers, tax advisors and entrepreneurs on this market. It is also directed to prosecutors, attorneys, legal advisors, representatives of public administration and all those who want to gain specialist knowledge. The topics of the course will include such issues as: Bitcoin, Ethereum and other cryptocurrencies, digital tokens, smart contracts, taxes, regulations, and crime. More: <https://www.lazarski.pl/pl/oferta/studia-podyplomowe/akademia-praktykow-prawa/prawo-technologi-blockchain/>

Innovative equipment for blood analysis for the University of Life Sciences in Wrocław

2018-08-01

The Faculty of Veterinary Medicine at the University of Life Sciences in Wrocław has gained new, innovative equipment for rapid blood testing of cats, dogs and horses. Vets will use it on the operating and field conditions. The EPOC blood gas analyzer is a small device that fits in the hand, but it significantly improves the work of veterinarians, replaces traditional laboratory machines and gives a chance for quick diagnostics - thus increasing the chances of animals to survive. Just 100 microliters of blood is enough to carry out precise measurements and analysis of gases, electrolytes and biochemical parameters. - This device is necessary to monitor vital functions during operations under general anesthesia in small and large animals. The small amount of blood needed to perform the tests will greatly facilitate the work with really small animals, in which every collected milliliter counts - says Prof. Zdzisław Kielbowicz, head of the Chair and Clinic of Surgery. More: http://www.glos.upwr.edu.pl/aktualnosci/48129/innowacyjny_sprzet_do_analazy_krwi_dla_upwr.html

Satellite of students of Warsaw University of Technology ready to take off

2018-08-02

PW-Sat2 satellite constructed by members of the Student Astronautical Circle of Warsaw University of Technology has been fully integrated, tested and prepared for launch. It has just been connected to the QuadPack, - a container in which the satellite will be located during the launch of the rocket. Successful connection with QuadPack took place on July 26, 2018 at the headquarters of Innovative Space Logistics in Delft, the Netherlands. In autumn, the container will be transported to the United States, where it will be placed in the SpaceX Falcon 9 rocket. PW-Sat2 will be raised on board the Falcon 9 rocket along with SSO-A mission from the Vandenberg base in California. According to the lat-

est data, along with PW-Sat2, more than 70 other satellites will be carried into space.

Ecological implementation doctorate at the Wrocław University of Technology

2018-08-02

Limiting the amount of water used during the filter rinsing and defining the conditions for the reuse of washings are the main goals of the studies conducted as part of the implementation doctorate by Halina Urbańska-Kozłowska. The works are carried out at the Wrocław University of Technology and the Municipal Water and Sewage Enterprise. The result of research conducted under the supervision of Dr. Eng. Małgorzata Wolska from the Faculty of Environmental Engineering at the University of Technology is reduction of water losses in the production processes, protection of water resources, lower production costs and lowering of water charges in apartments. The possibilities of managing the washings were analyzed in Poland several times, however, there is no clear information in the literature on their composition. If the implementation is successful, it will contribute not only to the water production plants in Wrocław, but it allows also to formulate generalizations for other enterprises. More: <http://pwr.edu.pl/uczelnia/aktualnosci/jak-zmniejszyc-zuzycie-wody-w-oczyszczalniach-10939.html>

Students and graduates experimenting in the Pomeranian Science and Technology Park

2018-08-03

Students and graduates of biological sciences participate in InnovaBio Pomorze - a program organized by the Bio Laboratory of the Pomeranian Science and Technology Park. In this year's program, participants are working on projects commissioned by companies from the life science sector. The following projects have reached the stage of experimental works at Bio Laboratorium: Margab - development of an innovative, safe for the environment

and health finishing for candle wicks and Vianat - testing and comparison of polyphenols in fruits and fruit and vegetable juices and drinks obtained with a wine innovative method. InnovaBio participants also include Izabela Ryska -for developing a face cream based on butter and vegetable oils, containing amber extract and the University of Gdańsk for analysis of siderophores produced by bacteria from the rhizosphere using the isoelectric focusing technique. More: <http://ppnt.pl/en/aktualnosci/laboratorium/v-edycja-innovabio-pomorze-nad-jakimi-projektami-pracuja-studenci>

Faculty of Chemistry of the Jagiellonian University to launch the laboratory of innovative technologies

2018-08-06

The construction of an innovative technology laboratory at the Faculty of Chemistry of the Jagiellonian University in Krakow will begin this year. It will include, among others, the most modern equipment for experiments, which will be purchased in 2020 for the money received from the Regional Operational Program of the Małopolska Region for the years 2014-2020. The laboratory of innovative technologies has been designed as a modern, functional, but also architecturally interesting building, overhang on reinforced concrete pillars. It will be linked to the existing building of the Faculty of Chemistry. There will be a special gate to transport the materials and devices directly to the laboratory using a rotating crane. The new building will be completed in the academic year 2020/2021. The total value of the project is almost PLN 30 million.

Submit your start-up to participate in Polish Tech Night in Berlin

2018-08-07

Until August 25, entrepreneurs can submit their start-ups to participate in Polish Tech Night in Berlin. The event will take place on September 26-27, 2018 at the Silicon Allee Campus. As the Polish Development Fund informs, Polish Tech Night has been attracting leading Polish startups to Berlin to present their ideas to German investors, business support institutions and representatives of the innovation ecosystem and the start-up community. The event is an opportunity to show the potential of Polish companies and establish Polish-German cooperation in supporting innovation. To present the start-up to the Berlin community, participants must complete the form at: <https://docs.google.com/forms/d/e/1FAIpQLSdyr4fgs3A3FRRSrd9cxdc8LV8EbzAb9rAn-SuoRmtE6xxvUg/viewform>

Innovative equipment of the Polish company supporting Polish scientists in Spitsbergen

2018-08-07

The Polish Polar Station Hornsund in Spitsbergen, operated by the Institute of Geophysics of the Polish Academy of Sciences, has received a test series of devices: sensors and gates operating on the Internet of Things (IoT) technology, which will monitor the atmospheric conditions on the islands. As reported by the daily newspaper «Puls Biznesu», the devices were developed by Polish engineers from the BCAST company. They have been adapted to work in extreme conditions, even at temperatures down to minus 40 degrees Celsius. Their task is to collect and send data to the data network in a visualized form. BCAST is an independent Polish telecommunications operator that deals with the broadcasting of radio and television programs. The company offers services based on its own broadcasting infrastructure.

Competitions for scientists at the University of Warsaw

2018-08-07

The University Technology Transfer Center of the University of Warsaw organizes competitions for researchers from the Warsaw university who would like to receive financial support for the commercialization of their ventures. Scientists and PhD students from the University of Warsaw as well as research teams whose members are university employees may take part in the competitions. The first competition concerns pre-implementation work, the second call is the idea for creating a spin-off company. The grants amount up to 40,000. PLN for pre-implementation work, and up to PLN 20,000 PLN for the creation of a spin-off company. The competitions are organized as part of the Innovation Incubator + program financed from the Operational Program of Intelligent Development by the Ministry of Science and Higher Education. More: <http://www.uott.uw.edu.pl/60-000-zl-na-prace-przedwdrozeniowe-i-lub-zalozenia-spolki-spin-off/>

Researchers from the University of Silesia design a mouthpiece to help in detecting lungs cancer

2018-08-07

Researchers from the University of Silesia Special designed a mouthpiece that will be used in the diagnosis of upper and lower respiratory tract diseases, for lung and laryngeal tumors and bronchial diseases. The use of analytical chemistry allows to identify and determine the relationship between certain types of proteins in exhaled air and the occurrence of lung or laryngeal cancer. The patient's health status is determined based on the analysis of tumor markers, which are collected using the so-called Tedlar's sacks. The examined person blows up the air with the marked proteins into them. The mouthpiece allows to filter the air inhaled by the patient and direct it to the porous material, which will help reduce the contamination of the collected material and place a larger number of tumor markers in a single study. Awards for the projects of the Land Forces Academy during the festival in Silicon Valley

2018-08-08

The Jury of the Silicon Valley International Inventions Festival at the Congress Center Santa Clara honored the Academy of Land Forces in Wrocław with a gold and silver medals for the presented innovations. The gold medal was awarded for the use of light aircraft, stable in flight and invisible for radars, which allows to obtain tactical advantage on the battlefield as well as in projects implemented as part of crisis management. The silver medal was received by Academy for a cascade converter of ionizing radiation and a device for real-time diagnostic imaging, which allows to monitor the level of radioactive contamination. The Academy was also awarded the World Intellectual Property Organization medal for its activities aimed at protecting intellectual property of the presented technologies and solutions.

Rzeszów University of Technology receives new plane for training pilot students

2018-08-09

The Marshal of the Podkarpackie Voivodship gave the Rzeszów University of Aeronautical Education a subsidy of PLN 350,000 for the modernization of the didactic and scientific base. According to the Rzeszów University, the support will be allocated to the purchase of a new plane for the training of pilot students. The plans of the Air Training Center include the purchase of the «Piper» PA - 28 Arrow airplane, which will be intended for professional training of pilots. It would be the third plane of this type in the fleet of the center. At the moment it consists of: seven «Tampico» TB - 9, two «Piper» PA - 28 Arrow, three «Piper» PA - 34 Seneca V, five «Liberty» XL-2 and one ZLIN - 242L. Rzeszów University of Technology is currently educating 112 pilot students. Most of them after leaving school immediately find a job in the airlines.

Graduate of the University of Toruń creates an application - an atlas of Gothic churches

2018-08-09

Jarosław Czerepowicki - a graduate of the Nicolaus Copernicus University in Toruń - created an application in which he described nearly 100 sacral objects. „Atlas of Gothic churches of the Chełmno Land” has been created as part of the master's thesis. The work of the environmental geoinformation graduate consists of a comprehensive descriptive part and an interactive web map with object cards. The study presents 97 sacred buildings in the Gothic style, located in the historical borders of the Chełmno land. Photographs and descriptions of objects were made using field exploration, conversations with residents, literature study of the subject, queries in monuments registers and collected information from websites of parishes, dioceses and other about monuments, tourism and sightseeing. During the work on Atlas, an effective algorithm was created that can be used to perform other combinations, characteristics or presentations.

Warsaw Medical University to test innovative telemedicine equipment

2018-08-10

The Warsaw Medical University will receive new, innovative technological facilities. The university signed a letter of intent on cooperation with the Krakow-based company MedApp, which assumes the development of the existing cooperation in the field of invasive cardiology and electrophysiology. According to the magazine «Rynek Zdrowia», researchers and students of the Warsaw Medical University will receive innovative telemedicine equipment and will independently test it. Based on their comments and recommendations, MedApp will develop the functionality of its products, finally presenting a product ready for implementation to full clinical practice. The Medical University of Warsaw is another scientific unit among MedApp's partners. Until now, the Kraków-based company cooperated with the Collegium Medicum of the Jagiellonian University.

Students of the Wrocław University of Technology get to the semi-final of RoboSub in California

2018-08-10

Students of the Wrocław University of Technology got to the semi-finals and won a special prize for the best computer simulation in the competition of autonomous robotic submarines RoboSub in California. The team from Wrocław was the only Polish team among 47 teams from technical universities around the world. The body of the underwater robot created by the members of the scientific circle «Robocik» was made of fiberglass laminate. It can go down to the depth of 100 m. It has 7 engines and a number of specialized sensors that determine its location, sensors acting as accelerometer, gyroscope and magnetometer, pressure sensors and leak detectors, signaling even the smallest moisture. It also has four cameras. The RoboSub competition has been held for 20 years, is organized by the Foundation of the Association of Unmanned Automotive Systems and the American Navy Research Office.

Warsaw University of Life Sciences to launch the Innovative Center of Nutritional Sciences

2018-08-13

- In the area of agriculture industry, a technology race is under way. In this race Poland will not be staying at the back. That is why we support research aimed at the development of this extremely important sector - said Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education, during the signing of the agreement enabling the construction of the Innovative Nutrition Center of the Warsaw University of Life Sciences. Under the agreement signed by Deputy Prime Minister Jarosław Gowin, the Minister of Agriculture Jan Ardanowski and the Rector of the Warsaw University of Life Sciences, Prof. Wiesław Bielawski, Ministry of Science and Higher Education will allocate 40 million PLN for the construction of the Innovative Center of Nutritional Sciences. According to the

Ministry of Science, the investment assumes the creation of a didactic-laboratory facilities intended for conducting scientific and educational activities in the field of human nutrition science. The center will also be equipped with a unique laboratory enabling conducting world-class research. The investment is to be completed by 2022.

National Synchrotron Radiation Center Solaris creates the fourth research line

2018-08-13

The National Solaris Synchrotron Radiation Center in Krakow began the construction of the Phelix research line. It will be the fourth line in the university synchrotron. In Krakow, a straight section chamber under the undulator is installed, with the elements manufactured and assembled by the German company FMB Feinwerk- und Meßtechnik GmbH. The investment was supported by the Ministry of Science and Higher Education with nearly PLN 10 million. In the National Synchrotron Radiation Center Solaris at the Jagiellonian University there is a synchrotron - a source of electromagnetic radiation. This radiation will be used for research in many fields of science: from physics, chemistry and medicine to archeology and art history. The Krakow synchrotron is the first and only research infrastructure of this type so far in Central and Eastern Europe.

Agreement on scientific cooperation between the Nencki Institute and Siemens Healthcare

2018-08-13

Professor Agnieszka Dobrzyń, director of the Marcel Nencki Experimental Biology Institute of the Polish Academy of Sciences and Joanna Miłachowska, a member of the management board of Siemens Healthcare, have signed a framework agreement on scientific cooperation. The contract signed between the Nencki Institute and Siemens is aimed at establishing general principles of cooperation between these institutions. The agreement also includes the use of a magnetic resonance scanner in the Brain Imaging Laboratory, for the implementation of joint scientific projects. The principles included in the contract allow for the implementation of scientific and implementation projects based on Siemens Healthcare techniques not yet commercially available.

European patent for solution to treat baldness

2018-08-13

The invention of scientists from the Medical University of Gdansk „Solid lipid nanoparticles of roxithromycin for hair loss or acne” has been protected by the European Patent Office. The innovative pharmaceutical composition containing roxithromycin developed by Gdańsk scientists can be used to treat androgenic and / or acne-induced alopecia. For the production of the proposed preparation, lipid micro- and nanoparticles were used as carriers of roxithromycin in hair follicles. The inventors are Dr Krzysztof Cał, professor at the Medical University of Gdańsk and Dr Hanna Wosicka - a former PhD student at the Faculty of Applied Pharmacy at the Gdańsk University.

Robot from AGH University of Science and Technology plays the ukulele

2018-08-16

Students from the AGH University of Science and Technology in Krakow constructed the robot that can play the ukulele. It can perform the film music from „The Godfather”, „Pirates of the Caribbean” or „Requiem for a dream”. The UkuRobot already gained publicity in the international media. Four students of Mechatronics Engineering at the Faculty of Mechanical Engineering and Robotics at the AGH Jakub Grela, Adrian Gołąb, Mateusz Guzik and Łukasz Jurczak designed and constructed the Uku-Robot during the Mechatronic Design classes. The inspiration for the authors was a Lego Mindstorms robot playing the guitar. Young engineers decided to construct their own version not only playing chords and all strings simultaneously, but also single sounds. See videos of the robots performances: <https://www.youtube.com/channel/UCyEF5MP-jtjXqIKuMOKunXig>

Projects of scientists from the Lublin University of Technology awarded in the LIDER competition

2018-08-16

The National Center for Research and Development announced the winners of the 9th LIDER competition. 51 scientists will receive a total of approximately PLN 60 million. Four scientists from the Lublin University of Technology will receive a total of nearly PLN 4.8 million for the implementation of their innovative projects and managing their own research team. The awarded projects are: «Development of technology for increasing the aerodynamic performance of rotorcraft» by Eng Ksenia Siadkowska, PhD student at the Faculty of Mechanical Engineering; «The use of functional zeolite structures for the production of asphalt mixtures in the asphalt foaming process» – by Dr Eng Agnieszka Woszek from the Faculty of Civil Engineering and Architecture; «New technology of plastic forming of hollow products with flanges for the mining industry» – by

Dr Eng Grzegorz Winiarski from the Faculty of Mechanical Engineering; «The production of ultrapure zeolites and mesoporous siliceous materials from fly ashes for selected environmental applications» - by Rafał Panek, MA, from the Faculty of Civil Engineering and Architecture.

Sumorobots from Bialystok University of Technology receive silver medals in Beijing

2018-08-17

From August 10 to 12, the team SumoMasters from the Białystok University of Technology competed in Beijing in the Robotchallenge 2018. Robots of Białystok's students won 3 silver medals in 3 different categories. Every year, the competition in Beijing gathers an increasing number of participants from many countries of the world. About 1500 robots from 30 countries took part in the challenge this year. Due to such attendance and participation of so many countries, Robotchallenge in China are the second most important competition of the sumorobots in the world. - I am very happy with the attitude and results of our team and the fact that our robots can effectively fight not only in the Mega Sumo, but also in the Mini and Nano Sumo categories - said team supervisor, Dr Eng Rafał Grądzki. More about sumo robots designed at the Faculty of Mechanical Engineering of the Białystok University of Technology can be found at: <https://wm.pb.edu.pl/studenci/kola-naukowe/projekty-studenckie/sumomasters/>

Researchers from Olsztyn developed a new water storage device

2018-08-17

Scientists from the Department of Water Management of Climatology and Environmental Sciences of the University of Warmia and Mazury in Olsztyn have developed a new device for collecting and draining water into the retention reservoirs. The solution will soon receive a patent from the Polish Patent Office. The authors of the patent application are Sławomir Gromadzki, Ireneusz Cymes, Katarzyna Glińska-Lewczuk and Sławomir Szymczyk. The invention is targeted for storing and delivering water when needed. - Our idea is to use tubular tanks to capture water from surface, subsurface and groundwater runoffs from agricultural and forest areas. It enables its collection and sharing when it is needed for irrigating agricultural and forest crops - explains Dr Eng Ireneusz Cymes from the Department of Water Management in Climatology and Environmental Sciences at the Faculty of Environmental Sciences and Agriculture UWM.

Drone to help lifeguards from Gniewino

2018-08-17

The drone, created by the company aiRPAS Machines from the Pomeranian Science and Technology Park Gdynia will help the Water Volunteer Emergency in Gniewino in their work. The unmanned drone is already stationed at the bathing resort in Jastrzębia Góra, its copies will be delivered to Karwia and Ostrowia. The board the machine is equipped with HD cameras with 10x optical zoom, which allows to distinguish whether lifeguards deal with a drowning or just swimming person. The drone is equipped with a rescue buoy with a hall which can be dumped toward the drowning person. If the condition of the victim allows it, the drone tows away to a safe place. In the case of searching in hard-to-reach areas, it is possible to dump the signaling buoy, which through using an audible and visual signal as well as a GPS signal will indicate to the emergency services the location of the missing person.

Polish technology to transform plastic waste into fuel

2018-08-20

The Polish company Handerek Technologies has created a technology that converts plastic waste into diesel and gasoline fractions. The produced fuel can be used to drive traditional internal combustion engines. The technology was awarded during the European Start-Up Days 2018 in Katowice. - Plastic waste is a global problem. We have collected around 5 billion tons of plastic waste around the world. It is stored on the soil, it pollutes the seas and oceans - says Adam Hańderek, the founder of Handerek Technologies. In his opinion, the cost of producing 1 liter of fuel fractions from polyolefin waste is approx. EUR 0.13. - We do not compete on the fuel market, we want to help in the management of plastic waste, and the fuel market is a natural recipient of our solution- he adds.

Students from Toruń created an application for virtual furnishing of rooms

2018-08-20

A team of young programmers from the Faculty of Mathematics and Computer Science at the University of Nicolaus Copernicus in Toruń received the prize of the Mayor of Toruń. Students were awarded for creating the „Arrange” application for arranging the rooms. «Arrange» is a system enabling virtual furnishing of rooms. It was developed a team of students of the third year of computer science: Kamil Bojarski, Mariusz Dzikowski, Artur Nasiadko, Paweł Stabla and Arkadiusz Stańczak. The pioneering technology of extended reality was used to insert furniture into the rooms. Only an Android or iOS smartphone is required to use the application. The project also operates a website where users can browse the catalog of available furniture in a three-dimensional view, and furniture manufacturers can manage their products in an easy and convenient way.

Polish portable laboratory to examine the patient at home

2018-08-21

Thanks to the innovative solution of the Polish company Genomtec S.A., genetic tests that allow to detect dangerous infections can be performed with a portable device during a home visit or in an ambulance - informs Miron Tokarski, co-founder of the company. The portable diagnostic system has been named Genomtec ID. It allows to identify a pathogen in a biological material using molecular biology techniques. The whole analysis is performed on a small chip, which in just 20 minutes detects the presence of DNA or RNA in any biological material. The system can detect different types of infections: upper respiratory tract-, sexually transmitted- and generalized infections, such as MRSA or meningitis.

InterNanoPoland 2018 conference in September in Katowice

2018-08-21

InterNanoPoland 2018 is the largest scientific and business conference in Poland dedicated exclusively to nanotechnology. It will be held in Katowice on 12-13 September. It is an international forum of scientists, entrepreneurs and institutions from the business environment shaping the future of national and global nanotechnology. The organizers are the Foundation for Nanosciences and Nanotechnologies NANONET and the Silesian Nano Cluster, which form a platform for cooperation of entrepreneurs, scientific institutions, public administration and business support organizations to increase the importance of nanotechnology in shaping the innovative economy in Silesia and Poland. The conference offers the possibility of presenting R & D projects, as well as presenting own achievements and sharing the results of work before the media and invited guests. The Nano Startup Challenge is the only in Poland dedicated nanotechnology dedicated startup competition. More: <https://www.us.edu.pl/konferencja-pt-inter-nano-poland-2018>

Warsaw University of Technology to launch the New Technologies Campus

2018-08-22

The Warsaw University of Technology will receive more than PLN 82.5 million of funding from the European Union for the creation of the New Technologies Campus and for the purchase of specialist research equipment. The total value of the project is over PLN 136 million. The funds for the implementation of the project come from the Regional Operational Program of the Mazowieckie Voivodeship. The contract in this matter was signed by Adam Struzik - Marshal of the Mazovian Province and Prof. Dr Eng Jan Szmidt - rector of the Warsaw University of Technology. The New Technologies Campus will cover a dozen facilities and public spaces in the Warsaw University of Technology and in Zamienie near Warsaw. The project will be implemented by a scientific consortium led by the Warsaw University of Technology and Pro-Development and W & B MOLD - WB.

Researcher from the Jagiellonian University developing a new technology in the diagnosis of diabetic complications

2018-08-22

Agnieszka Kamińska from the Faculty of Physics, Astronomy and Applied Computer Science of the Jagiellonian University is working on a new technology that will help in the diagnosis of diabetes complications. A PhD student from the Krakow university is one of the winners of the 9th program "Leader" of the National Center for Research and Development. Her project envisages the construction of a device for the capture of extracellular microvesicles and the assessment of their molecular composition for the diagnosis of diabetic complications. The device will be created in cooperation with the company MeasLine, which is interested in the commercialization of research. The innovative product will be used in the diagnosis of nephropathy in patients with diabetes.

Scientists from the Wrocław University of Technology receive over PLN 4 million for research

2018-08-23

Three researchers from the Wrocław University of Technology will receive funding for their innovative projects as part of the ninth „Leader” program of the National Center for Research and Development. Money will be received by scientists from the university's mechanical department: Dr Eng Rafał Mech for «Magnetostrictive-nano-crystalline composite materials for use in the field of energy recovery and transformation» (co-financing amount PLN 1 193 550); Dr Eng Patrycja Szymczyk for «Incremental production of individualized medical devices based on polymeric biomaterials» (PLN 1,195,000) and Dr Eng Adrian Zakrzewski for «Process control of material treatment with a laser beam using chromatic aberration» (PLN 875,000). The Leader program is addressed to young researchers who want to gain experience in managing the implementation of a research project and improve their competences in building, managing and directing their own research team.

British-Polish Scientific Forum to be held in September in Warsaw

2018-08-24

On September 13-14, 2018, the British-Polish Science Forum will be held at the Warsaw Marriott Hotel. The event is organized by the British Embassy in Warsaw and the Ministry of Science and Higher Education. The Forum will be the main point of the British-Polish Year of Entrepreneurship, Science and Innovation and one of the activities agreed by the Prime Ministers of Therese May and Mateusz Morawiecki during the last Polish-British intergovernmental consultations. During the two-day Forum, the organizers are planning lectures, discussion panels, presentations and workshops devoted to Polish-British cooperation in the field of research, development, innovation and higher education. More: <https://www.gov.uk/government/news/uk-poland-science-forum-to-be-held-in-warsaw>

Bricolage of Economics, Management and Finance - innovative studies at the University of Szczecin

2018-08-27

The Faculty of Economic Sciences and Management at the University of Szczecin has created an innovative PhD program- Bricolage of Economics, Management and Finance. Studies are focused on cooperation with the business environment in the region and the country - informs the university spokesman, Julia Poświatowska-Szumiło. The program includes three basic education modules: general - the theoretical part focused on learning the basic trends in current economic sciences; the researcher's module - with an extensive scientific and methodological element indispensable in conducting scientific research and a didactic module preparing to conduct classes. The studies will be implemented on the basis of a project within the means of the National Center for Research and Development. Within its framework, PhD students will receive 40,000 PLN, which they will be able to spend on: research, purchase of literature, trips to conferences or library inquiries and the costs of publishing his scientific works.

University of Casimir the Great in Bydgoszcz to launch dual studies

2018-08-27

In the new academic year, the University of Casimir the Great in Bydgoszcz will launch dual studies. Two dual courses have received over PLN 2.5 million of funding from the National Center for Research and Development. The first project includes a new pedagogy and rehabilitation within the current offer of the university. Students will be able to benefit from paid internships in institutions, alternating them with classes at the university. From the 3rd semester, they will choose one of the internship places, where they will take practical classes under the care of a guardian for two days a week. The second project includes the specialties of researching and designing games. In the course of studies, from the third to the sixth semester, students will have a total of over 12 months of paid internships in enterprises of the gaming industry. Some of the study topics will be fully included in the tasks carried out with the entrepreneurs. Studies will end with the completing the diploma projects, not only theoretical works.

State Higher Vocational School in Głogów to launch two dual studies

2018-08-28

The State Higher Vocational School in Głogów acquired PLN 2.5 million to launch dual studies at the faculties of „Automation and Robotics” and „Metallurgy”. The money comes from the Operational Program Knowledge Education Development. The acquired funds will be allocated for the implementation of classes, the purchase of equipment, the payment of remuneration for students participating in practical classes, and additional industry courses recognized all over the world. In both studies theoretical classes will be implemented alternately with practical classes in local companies from the industrial sector, related to the field of education. Thanks to dual studies, students can establish and tighten contact with an employer and gain professional experience, while employers have an influence on

the education of candidates for a given position and can work on building correct attitudes and habits at the stage of study.

Polish-German scientific consortium to design a mobile application for patients and doctors

2018-08-29

A scientific consortium of the Warsaw Medical University has received 600,000 euro co-financing for the implementation of the project „Mobile application for patients and doctors of many specialties - a tool for education and support in the decision-making process before the operational treatment”. Co-financing was granted by the National Center for Research and Development in the third call for research and development projects within the framework of Polish-German cooperation. The consortium is composed of the Warsaw Medical University, KardioMedSilesia Sp z o.o., the University of Freiburg- Medical Center and business entities: HID Human Interface Design GmbH, Heart Team Sp o.o. The goal is to create the first comprehensive telemedicine solution on the market - a mobile application «with intelligent decision support algorithms and an education module for patients treated with oral anticoagulants”. The application will help to improve health and quality of life.

University of Warsaw researchers' internet system to shorten research in projects using bacterial DNA

2018-08-29

Three PhD students from the Department of Bacterial Genetics of the Faculty of Biology of the University of Warsaw are finalizing works on the Internet system, which will shorten the stage of identifying and describing the function of bacterial genes from several dozen days to several hours. The solution of scientists from the Faculty of Biology will significantly shorten the initial stage of research in scientific projects using bacterial DNA analysis. The authors plan to launch the website, which will

be available to any scientist using genetic analyzes of bacteria in his research. The system will provide high-quality feedback in a few hours, which is many times faster compared to manually analyzing genomic sequences of bacteria for up to several days. More: <https://oferta.uw.edu.pl/System-informacyjny-przyspieszy-poprawne-opissowanie-sekwencja-genetycznych-bakterii>

2nd European Innovation Week

2018-08-30

From September 17 to 21, the second European Innovation Week will take place in Lublin. Over 1,300 participants will take part in 28 thematic sessions, in which over 80 speakers will perform. The goal of the event is to combine experience and achievements in the world of science and business. The event will start from the Open Day in the laboratories of Lublin universities. The next day the Young Scientists Forum, the Startup Exchange and the debate of cities and partner regions of the Lublin province will be held. As part of the European Innovation Week, there will also be an Innovation Gala, and the thematic sessions where experts from around the world will discuss the Smart Specializations of the Lublin Region: bioeconomy, medicine, low-emission energy and information technology. The event program also included panels and workshops on bioinnovations, 4.0 economy and 2.0 medicine. More: <https://etilubelskie.pl/>

Scientific symposium „History in the post-truth world”

2018-08-30

Collegium Civitas in Warsaw invites participants on Friday, September 14 at the scientific symposium „History in the world of post-truth”. The introductory lecture will be delivered by Dr. Benjamin Jones from the Australian National University. During the symposium, which will be conducted in English, participants will seek answers to the question: what post-truth is and how it affects historical research. The «post-truth environment» is a particular problem for historians who are trained to deal with evidence, data and facts. Does the historian have a special role to play in protecting public memory against «alternative facts»? Are academics obliged to combat false messages both at universities and in social media? More: <https://www.civitas.edu.pl/wp-content/uploads/2018/08/Programme.docx>

IUSER program supports Polish electric power industry

2018-08-31

The National Center for Research and Development as part of the IUSER sector program co-finances innovations in the Polish power sector. The main objective of the IUSER program is to increase the international competitiveness of the sector of producers of intelligent devices and systems for generating energy as well as management of systems and elements of distributed energy. The funded projects include, among others: a self-learning system that reduces energy consumption, an intelligent wind farm management system, water turbines in small hydropower plants and solar farms. Bartosz Konopacki from the National Center for Research and Development explained that EU regulations stipulate Poland to implement new energy production technologies that are not based on coal. This year, the National Center for Research and Development has spent PLN 27 million on investments in research and development projects in the field of power engineering.

Nicolaus Copernicus University in Toruń looking for new tools to fight cancer

2018-08-31

The research group from the Faculty of Chemistry at the Nicolaus Copernicus University will take part in the international project „Airborne Biomarkers for Colorectal Cancer” (ABC-Cancer), which aims to find a minimally-invasive tool for the diagnosis of colon cancer. The consortium that will implement the project is: University of Maastricht (the Netherlands), which acts as a leader; IVV Laboratory of Process Engineering at the Fraunhofer Institute in Freising and Medical Clinics together with Polyclinic III of the University of Munich (Germany) and Nicolaus Copernicus University in Toruń. The main goal is to develop new methodologies and standard operational protocols - including the unification of the methodology for the preparation and analysis of biological samples and the analysis of volatile organic compounds in the feces and intestinal gases and air exhaled by coupled chromatographic techniques and ion mobility spectrometry. More: <https://www.umk.pl/wiadomosci/?id=25601>

Dual studies at the State Higher Vocational School in Tarnów

2018-09-03

The State Higher Vocational School in Tarnów launches new dual studies thanks to the funds obtained from the National Center for Research and Development. Recruitment for dual studies will be carried out among students starting standard studies in the academic year 2018/2019 on the following majors: Electronics and Telecommunications and Mechatronics. Dual studies are a special type of studies, during which students spend part of practical classes (internships) in industrial plants. In the case of Tarnów students, they can visit and study the Grupa Azoty S.A., Zakłady Mechaniczne Tarnów S.A. and ATB Tarnów S.A. After completing dual studies in the field of Electronics and Telecommunications or Mechatronics, the student receives the title of engineer and is prepared to take up a job as a person with experience in the industry.

Students from Bielsko-Biała to co-create a project to protect the natural environment

2018-09-03

Students of the Information Technology Club at the University of Technology and Humanities in Bielsko-Biała in cooperation with the Gemini Park shopping center and the People-Innovations-Design Foundation created the Solar Portal – an installation that aims to draw attention to respect for the natural environment through the use of solar energy. The portal was established at the entrance to the shopping center. It is equipped with photovoltaic cells collecting solar energy. This enables the work of such devices like chargers and interactive multimedia installations. The lighting is made up of several dozen LED points, which in combination with the motion sensor brighten the person passing through the portal. The project also includes the implementation of a website with information about the portal, whose photovoltaic and electronic installations were designed by the students of the Academy.

Chinese concern TCL to launch artificial intelligence center in Warsaw

2018-09-04

The Chinese concern TCL will open its largest foreign research center in Warsaw with aim to develop artificial intelligence research in which the Chinese want to cooperate with scientists from the University of Warsaw. TCL is the third largest producer of televisions in the world. Over 100 scientists will carry out projects in Warsaw related to learning and understanding body language or image analysis. - It is about new functionalities that facilitate human interaction with devices that can be «installed» in home appliances - explained Bartosz Biskupski, head of TCL Research Europe. According to him, projects created in the laboratory will make a technological revolution. - We have focused on Poland because we need people with mathematical and algorithmic skills to work, and Polish scientists present the highest level – adds Bartosz Biskupski.

Neuromanagement - unique postgraduate studies at Collegium Civitas

2018-09-04

Collegium Civitas in Warsaw is launching the first postgraduate studies in Poland for neuromanagers. The aim of the Neuromanagement studies is to improve the individual potential of the manager at all levels based on the latest knowledge in the field of neuroscience. The course is to prepare professional leaders understanding the secrets of the brain, which is the generator of every human decision in order to develop more effective team management. Participants of postgraduate studies will receive 4 international certificates (in Polish and English) of the Swiss STRUCTOGRAM Brain Structure Analysis Tool, recognized in 21 countries around the world. More: <https://www.civitas.edu.pl/pl/uczelnia/aktualnosci/pierwsze-polsce-studia-podyplomowe-dla-neuromenadzerow>

New winners of the MINIATURE 2 competition

2018-09-04

New 95 researchers have been awarded in the MINIATURE 2 competition. They will receive a total of nearly PLN 3.25 million for the implementation of scientific activities such as preliminary research, pilot studies, queries, internships, scientific consultations and conference trips. The laureates are Dr Beata Bielska from the Nicolaus Copernicus University in Toruń, who will receive nearly PLN 40,000 for the implementation of preliminary research in the project «Downloading and plagiarizing. Student culture of copying in terms of massification, commercialization, internationalization and diversification of higher education in Poland»; Dr Zofia Danuta Wóycicka from the Polish Academy of Sciences, who will conduct a research trip for over 30,000 PLN within the project „Rescuing Jews during the Second World War in the narratives of European museums”, and Dr Anna Szpakowicz from the Medical University of Białystok, who will receive 50 thousand PLN for pilot studies in the project „The role of new adipokines in the pathogenesis of atherosclerosis and ‚obesity paradox’ in patients with ischemic heart disease”.

Saxon-Polish Innovation Day at the Medical University in Wrocław

2018-09-05

Technical University of Dresden, Medical University of Wrocław, University Hospital of Carl Gustav Carus in Dresden and the Liaison Office of the Free State of Saxony in Wrocław invite participants to the 2nd Saxon-Polish Innovation Day dedicated to personalized medicine and medical technologies. The Saxon-Polish Innovation Day is an opportunity to present the best examples of knowledge and technology transfer in both countries. The event provides the opportunity for connecting partners, initiation of cooperation, searching for funding and presentation of successes. The Saxon-Polish Innovation Day named «Personalized biomedicine and medical technologies» will take place on September 20, from 9am to 4pm, in the Main Library of the Medical University. The meeting will take place under the auspices of the Consulate General of the Federal Republic of Germany in Wrocław.

Krakow scientists working on a new carrier of oncology drugs

2018-09-06

Researchers from the Krakow University of Technology are working on intelligent carriers of oncological drugs. Special molecules based on zinc and titanium oxides will allow the drug to attack cancer cells more accurately without damaging healthy organs and tissues. Researchers from the University of Technology are supported by scientists from two other Krakow universities: the Jagiellonian University and the University of Agriculture. - Our goal is to create innovative carriers of therapeutic substances based on nanostructured metallic oxides, whose properties would allow their safe use in living organisms - said Dr. Eng. Jolanta Pulit-Prociak from the Krakow University of Technology, who manages the work of the research team. The project is financed from the «Leader» program. The researchers received a grant from the National Center for Research and Development amounting to nearly PLN 1.2 million.

„Nowe Gliwice” Education and Business Center invites participants to the Festival of Innovation and Technology

2018-09-06

Future transport issues, innovative aviation solutions, prospects for the development of the space sector and the future of personalized medicine in Poland are the most important themes of the Festival of Innovation and Technology, which will be held on September 14 at the Education and Business Center „Nowe Gliwice”. Expert meetings in the field of medical technologies, innovative medical engineering projects - «Medica Silesia» and the debate of scientists and representatives of the automotive industry «Future of the Mobility» will be held on the large stage of the Center. At the same time, the Aerospace Forum will be organized on the small stage with the participation of science and business representatives to implement the innovative solutions into industry. The festival will be accompanied by an exhibition of innovative solutions created by scientists and enterprises as well as a summary panel promoting the innovation initiative «Silesian Innovator».

Medals for Toruń scientists at the fair in Japan

2018-09-06

The scientists from the Nicolaus Copernicus University have won prizes at the JIDE International Design and Innovation Fair in Japan (Japan Design & Invention Expo - JIDE 2018). The Gold Medal of the Fair was given to the scholars of the Faculty of Medicine at Collegium Medicum: Dr Maciej Gagat, Dr Dariusz Grzanka and Prof. Alina Grzanka - the authors of the invention «Intravascular stent with properties that accelerate the healing of the implant site and reduce the occurrence of thrombosis». The silver medal and the special prize - the medal from the Macau Association of Innovators were received by Michał Meina from the Faculty of Physics, Astronomy and Applied Computer Science, Dr Krzysztof Rykaczewski from the Faculty of Mathematics and Computer Science of the Nicolaus Copernicus University for «The method of determining the position of the object, in particular of man, and the device for determining the position of man». More: <https://www.umk.pl/wiadomosci/?id=25635>

Report „Polish Startups 2018”

2018-09-07

The lack of qualified staff is the biggest problem of technology companies starting their operations in Poland. This is a conclusion of the report „Polish Startups 2018”, presented by the Startup Poland Foundation during the Economic Forum in Krynica. In the introduction to the report, Julia Krzysztofiak-Szopa, the president of the Startup Poland Foundation, writes that the demand for engineers, programmers and application developers is not keeping up with supply. The most innovative startups that develop machine learning technologies, neural networks, artificial intelligence and blockchain often struggle with the lack of qualified personnel - she adds. The report shows that the most startups are located in Warsaw (29 per cent) in Wrocław (12 per cent) and Kraków (10 per cent). However, when it comes to the «number of high investments» (over PLN 10 million involved in the project), most of them were set up in Kraków (40%) and in Wrocław (30%). Also, in those cities there are the most successful

startups. See the report: <http://startuppoland.org/knowledge/#raport-polskie-startupy-2018>

New fund to invest PLN 100 million in startups

2018-09-07

PGE Polska Grupa Energetyczna, the Polish Development Fund and the National Center for Research and Development (NCBR) have created the Speed-Up Energy Innovation fund (SEI) to invest PLN 100 million in the most innovative startups. The fund's objective is to invest in startups in the advanced growth phase operating in the area of Industry 4.0, digitization, energy storage, electromobility, digitalization, contact with the customer and big data. - We create an investment fund of great importance for the Polish economy, and in particular for increasing the level of innovation in the Polish energy sector. Funds that the SEI fund will have at its disposal will be allocated to the development of the most innovative technology startups, whose value increase may bring tangible benefits for the entire Polish industry - said Henryk Baranowski, president of the management board of PGE Polska Grupa Energetyczna.

Researchers from the University of Silesia and the Lodz University of Technology developed new compounds for dyeing fabrics

2018-09-07

Researchers from the University of Silesia and the Lodz University of Technology developed new chemical compounds for dyeing polyester fabrics for yellow, orange, red and brown colors. The already patented solution guarantees high durability of colors and their intensity. Polyester fabrics dyed in this way will not lose their color over time even under the influence of light. Thanks to this, producers will also be able to obtain fabrics with more vivid colors. Patented 2-methylazoquinoline compounds are quinoline derivatives. They are widely used - they have antimalarial, antifungal and antibacterial properties, many of them are also the starting product in

the synthesis of so-called cyanine dyes used in photography or medicine. Other derivatives can be used in electronics - for the production of OLED displays or for the creation of DVD-R disc layers, as well as in the food industry.

„EIT Awareness Day” in Warsaw

2018-09-10

The National Contact Point for Research Programs of the European Union and the European Institute of Innovation and Technology (EIT) in Budapest invite participants to the „EIT Awareness Day”, which will take place on September 25 in Warsaw. During the conference, the current activity of the European Institute of Innovation and Technology in Poland and in Europe as well as the possibilities of cooperation between entities from both Poland and Europe in the area of research, business and education will be presented. Participation in the conference in Warsaw has been confirmed by: Martin Kern - director of the EIT; Piotr Dardziński - secretary of state in the Ministry of Science and Higher Education and Zygmunt Krasieński, director of the National Contact Point for Research Programs of the European Union. More: http://www.kpk.gov.pl/wp-content/uploads/2018/08/EIT-Awareness-Day-_Poland_Agenda-1.pdf

Researchers at the University of Silesia developed a control switch for smart buildings

2018-09-11

Researchers from the University of Silesia have designed a modern touch switch that is used to operate many electrical devices in smart buildings. The device has been protected by a utility model. The switch can be used in the so-called smart homes and in public buildings equipped with advanced technological solutions. It is the size of a classic light switch and can control properly any home or office equipment connected to the integrated system. It can be used to support entry gates, doors, air conditioners, fireplaces, lighting, audiovisual equipment, blinds, displays, sprinklers and cameras. The switch is easy to use - the user does not have to remember which panel supports the selected device. It has four touch areas with the lit icons symbolizing the functions available at the moment. More: <http://www.us.edu.pl/wlacznik-do-sterowania-wrzadzeniami-elektrycznych-w-budynkach-inteligentnych>

Idea of scientists from the Polish Academy of Sciences to reduce the emission of harmful substances from domestic furnaces

2018-09-12

Researchers from the Polish Academy of Sciences have developed filters that are to collect about 95 percent of harmful substances emitted from domestic ovens- informed Prof. Jan Kiciński from the Institute of Fluid Flow Machinery of the Polish Academy of Sciences. - We have managed to construct electrostatic filters that can be used in single-family houses. It can be edge-cutting solution, because these filters are very cheap and easy to install - said Prof. Kiciński. The designed filters are already installed on furnaces in selected Polish municipalities. They were also presented to the government. The scientists are looking for contractors who would produce them on a mass scale.

Gdynia start-up Ignibit designed a virtual marine combat information center

2018-09-14

Gdynia startup Ignibit designed a virtual ship combat information center (Combat Information Center, CIC). The project was presented at the Saab stand during the International Defense Industry Exhibition in Kielce. The virtual model fits in a room where visitors, wearing 3D glasses, can feel like on a real warship, in the command center, during combat operations. The virtual CIC includes Saab solutions i.e. multi-functional consoles. The model can be used to train crews before the construction or reconstruction of a real ship. It also allows mapping the conduct of marine activities in close- to- real conditions. In addition, the virtual CIC allows simultaneous training of crew members residing in different locations. More: <http://ppnt.pl/pl/aktualnosci/ppnt/saab>

Opole computer scientists created the ziBees - application supporting beekeepers

2018-09-14

Opole computer scientists have created the application of ziBees, which counts bees in the beehives and detects varroasis, a disease that threatens the life of these insects. The application was consulted by Paweł Migdał, PhD student at the University of Life Sciences in Wrocław. The application uses a photo taken with an Android smartphone of bee frame removed from a beehive. After sending it to the server, the artificial intelligence algorithm informs scientists about the number of bees. The application will also help in diagnosing varroasis - one of the biggest threats to bees. Information from the hive is processed and within a few seconds ziBees provides the beekeeper with information about the infection. Varroasis is a dangerous and widespread disease of bees caused by the parasite Varroa destructor. Every year, especially in autumn, all beekeepers in Poland and in the world fight against it. More: http://www.glos.upwr.edu.pl/aktualnosci/48306/zibeas_aplikacja_dla_pszczol_i_pszczelarzy.html

Polish-Australian discovery to slow down neurodegenerative diseases

2018-09-17

Dr Sebastian Glatt from the Jagiellonian University in Krakow in collaboration with researchers from Australia discovered the molecular basis of the progressive degeneration of nerve cells. This discovery gives hope for the future development of ways to slow down the neurodegenerative diseases, such as Alzheimer's or Parkinson's diseases. Dr Glatt is the laureate of the FIRST TEAM program of the Foundation for Polish Science. The results of Polish-Australian research have been described in Nature Communications. As the Foundation emphasizes, the discovery of scientists from Poland and Australia deepens the knowledge about the mechanisms of neurodegenerative disease formation and may be the basis for developing in the future ways to slow down the process of nerve cell death occurring in these diseases. See the publication in Nature Communications: <https://www.nature.com/articles/s41467-018-05765-6>

Toruń Science and Technology Park invites participants to the contest Leaders of Innovation of Pomerania and Kujawy Region

2018-09-17

The Toruń Science and Technology Park invites participants to take part in the 10th Leaders of Innovation contest for Pomerania and Kujawy Region, whose goal is to select and promote innovative solutions of scientists and entrepreneurs from the sector of small and medium enterprises in the province. The competition categories are: micro-enterprise; small enterprise; medium enterprise; an academic enterprise and a research unit / research team. The winners will receive the title of «Leader of Innovation of Pomerania and Kujawy» and prizes funded by the organizers. Only innovations implemented after January 1, 2016 will be evaluated. Particularly outstanding projects can receive the certificate of "The Innovative Brand of the InnoMaRe Region. Made In Kujawsko-Pomorskie". The most innovative entities from the competition will be described in the publication „Innovations in the Kujawsko-Pomorskie”. Applications will be accepted until October 12: <https://liderzy.tarr.org.pl/>

Deadline for submitting applications in the „Eagle of Innovation” to expire

2018-09-19

Until 30 September 2018 R&D companies can apply to the „Eagle of Innovation” call organized by the newspaper Rzeczpospolita and the National Center for Research and Development. This year, in addition to innovative projects implemented by companies in four categories, the organizers have added the Centennial Innovator category. The main goal of the «Eagle of Innovation» is to select and reward companies conducting research and development, introducing new products and services to the market and achieving business successes. From the delivered applications the Chapter will select companies that successfully invest in innovation and thus are competitive not only on the Polish, but also on

the European market. More: <https://orzelnnowacjirp.pl/zgloszenie.html>

Polish-British scientific workshops on artificial intelligence and cities of the future to be held soon

2018-09-19

The Polish-British Science Forum dealing with technology transfer, global innovation and exchange of experience on Polish-British cooperation has ended in Warsaw. The conference, aimed at strengthening cooperation in the field of science and innovation between Poland and Great Britain, was attended by scientists and innovators who discussed the implementation of modern technologies, building relations between science and business, strengthening competences in the area of management and effective commercialization of innovation. Deputy Minister of Science Piotr Müller informed, that scientific workshops on smart cities of the future and artificial intelligence are planned with aid of the embassy of Great Britain and the British Council. - We hope that they will be a source of ideas for new projects in areas of important socio-economic challenges - said Müller.

Invention of Bialystok scientists patented in the USA

2018-09-19

The method of ultrafast photomagnetic recording, developed by physicists from the University of Bialystok - Dr Andrzej Stupakiewicz, Prof. University of Bialystok and Dr. Krzysztof Szerenos was patented by the American Patent Office. The invention of Bialystok scientists can revolutionize the efficiency of future computer systems in the field of digital information storage and processing. The results of the research, which were carried out as part of projects developed at the Department of Physics of Magnetics at the Faculty of Physics of the University of Bialystok, were patented. The essence of the invention is a method and a system for photomagnetic recording using a transparent dielectric medium. Some of the research results have already been published in the journal «Nature». More: <http://bialystok.wyborcza.pl/bialystok/7,35241,23933383,uniwersytet-w-bialymstoku-innowacyjny-zapis-fotomagnetyczny.html>

Researchers from the National Center for Nuclear Research working on the battery of the future

2018-09-21

Researchers from the National Center for Nuclear Research in Świerk together with the United States Army Research Laboratory (ARL.) are working on a battery of the future that would be developed of atomic nuclei. According to Marek Kotłowski, press officer of the National Center for Nuclear Research, the project will be possible thanks to the grant obtained from the US Army laboratory. Researchers are to concentrate on the study of 186m Rhenium isotope. 1 gram of it can accumulate as much energy as a popular battery for powering an electric car. Theoretically, it is a very attractive source of energy, but it still needs to be able to load and unload such a «battery». In the works on the new battery, the «Maria» reactor, located in Świerk, will be used.

Młodzi Innowacyjni - a competition for young scientists

2018-09-21

The Polskie Górnictwo Naftowe i Gazownictwo Capital Group (PGNiG) again organizes a competition for students, PhD students and young scientists. It is to aim to find innovative projects and ideas within PGNiG's operations. This year, the organizers are expecting ideas and solutions in the following areas: Hydrogen technologies - hydrogen and gas; Suggestions for smartphone applications for gas industry and gas consumers; Acquisition of methane from coal (CBM); Robotics and artificial intelligence; Social media - opportunities for the sector; New use of gaseous fuels; Innovative methods of cooperation with the client; Technologies improving the effectiveness of well cementation and directional Drilling: technological challenges. Applications for the Young Innovation contest may be submitted by 31 October 2018 in electronic form to the following address: konkursMIP@pgnig.pl More: <http://pgnig.pl/mlodzi-innowacyjni-dla-pgnig>

International Bioeconomy Congress in Łódź

2018-09-21

The International Bioeconomy Lodz Conference 2018 will be held on Monday - September 24 – in Łódź. The congress will discuss issues related to the fight against smog, closed-circuit digitalisation, modern technologies in the bioeconomy, and high-quality food. As part of the event, the Antismog Forum will be held, organized by the University of Lodz. The organizers invited Prof. Joanna Wibig from the Department of Meteorology and Climatology, University of Lodz; Wiktor Warchałowski, president of the board and co-founder in Airly - a startup that builds a network of air sensors for cities and municipalities, thanks to which it is possible to monitor air status in real time using an online map; Prof. Wojciech Hanke from the Institute of Occupational Medicine and Rafał Czyżewski - president of the board of GreenWay Polska, who is building the first in Poland comprehensive network of publicly available stations for fast charging of electric vehicles to participate in the panel discussion.

Silesian University of Technology to create a modern coal mine with the company HMS Bergbau AG

2018-09-21

Silesian University of Technology has signed an agreement on cooperation with the German company HMS Bergbau AG. It will be mainly carried out in the areas of research, education and human resources. The partners decided to join forces to create a modern hard coal mine. The University of Technology also agreed to educate HMS Bergbau employees, organize trainings using its own didactic base, perform expert opinions and analyzes, and provide engineering staff for a German partner. On the other hand, a German company will provide internships to students, organize recruitment of engineering staff from among the graduates of the University and enable students to write their diploma theses on topics related to the company's operations. Under the agreement, the new partners will also take joint actions to obtain financial resources, including EU funds, that enable the effective cooperation. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListWiadomosci &Page=1&WebPartTitle2=News&Filter1Field2=Identyfikator&Filter1Value2=2387>

Scientists from the Medical University of Białystok patent a pharmaceutical kit

2018-09-24

Researchers from the Medical University of Białystok have patented a pharmaceutical kit that can be used in the treatment of colorectal cancer and other cancers. According to the Puls Medycyna portal, the invention «Erythropoietin and the Bruton's kinase inhibitor in the form of 2-cyano-N-(2,5-dibromophenyl)-3-hydroxy-2-butenamide» as a medicine and its use in the cancer treatment drug «has been developed by Białystok scientists: Prof. Dariusz Pawlak - head of the Department of Pharmacodynamics, Prof. Krystyna Pawlak - head of the Monitoring Pharmacotherapy Unit, Dr Anna Tankiewicz-Kwedlo, Dr Justyna Hermanowicz, Tomasz Kamiński and Dariusz Rożkiewicz. This is not the first patent of scientists from Białystok. Previously, they obtained patent for a complementary feed for bees and verification of anticancer properties of pine root extract.

BBC Arabic report about research conducted at the Jagiellonian University

2018-09-25

BBC Arabic, an Arabic-language BBC television channel, broadcast a documentary about research of a technique for detecting early-stage renal failure in diabetic patients conducted at the Jagiellonian University in Krakow. This technique involves the identification of new biological biomarkers of kidney function. The research is carried out by the Department of Physical Physics, Faculty of Physics, Astronomy and Applied Computer Science, and High Resolution Laboratory of Mass Spectrometry of the Faculty of Chemistry. The project is managed by Dr Ewa Stępień. The material was broadcast as part of the 4Tech program - a series of reportages by BBC Arabic about the latest scientific discoveries and technical inventions. View material BBC Arabic: <https://youtu.be/OlmOk9x2YI8>

European Technology Forum in Katowice

2018-09-25

The European Technology Forum will take place on 26-27 September at the International Congress Center in Katowice. The Forum will be an open platform for consulting European research and technology policy. The event is organized by the Polish Chamber of Commerce for High Technology under the patronage of Prime Minister Mateusz Morawiecki. The program includes discussion on the priorities of European science and technology policy and funding mechanisms for research and technological development, in particular the issues planned for implementation under the seven-year Horizon Europa program and the analysis of synergies between this program and other programs in the field of research, innovation and competitiveness. Participants will also talk about the promotion of creating various types of networks and partnerships by industry, science and public authorities. During the forum, the objectives of the Responsible Development Strategy for Poland in the field of research and innovation will be presented along with a discussion on the ways of their implementation. More: <http://euroforum.iztech.pl/>

Scientists from the Poznan University of Medical Sciences create innovative application

2018-09-26

Researchers at the Poznań University of Medical Sciences have developed the „iWound” application - a tool that through analysis and efficient data management, can help the patient in caring for the wound and improve the treatment process. Developed by a team of physicians, IT specialists and patients from the Department of General, Endocrine and Gastroenterological Surgery at the Poznań University of Medical Sciences, the application is part of a comprehensive patient monitoring system under and after hospitalization. It also allows effective prevention and reduction of the risk of surgical site infection, which is one of the biggest problems of surgical wards. The team under the direction of Prof. Tomasz Banasiewicz managed to create a unique

and innovative tool that can not only significantly help the patient in the care of the wound, but also helps the medical staff, facilitates the contact with a specialist and facilitates the treatment process. More: <http://www.ump.edu.pl/aktualnosci/nowa-torska-aplikacja-iwound>

Medical University of Gdańsk carrying out a project promoting the improvement of air quality

2018-09-27

The Gdańsk Medical University in cooperation with the Polish Association of Health Programs implements a project promoting the improvement of air quality by transforming the transport technologies into healthier ones. The project is conducted in 7 European countries by the European Public Health Alliance - an international organization associating entities acting for public health. In addition to Poland, the project includes organizations from the Czech Republic, Spain, Greece, Lithuania, Romania and Bulgaria. Participants prepare a report and recommendations for the national and local authorities, which are to contribute to the improvement of air quality. The use of diesel technology in densely populated areas of the agglomeration is considered to be a particularly important public health problem. In contrast to the so-called low emissions of households, the problem of air pollution caused by transport remains underestimated at the level of public debate.

Gdynia specialist to deal with flight autonomy systems based on artificial intelligence

2018-09-27

The company to deal with the use of drones for various tasks and to develop flight autonomy systems based on artificial intelligence (AI) was established in the Pomeranian Science and Technology Park in Gdynia. Specialists in the field of unmanned aviation have consolidated forces with aviation industry experts and launched the company PELIXAR S.A. It will continue to develop projects related to: SAR operations (Search and Rescue) - use of drones for search and rescue with the possibility of towing a drowning person to a safe place. The new company will also deal with the use of drones for industrial measurements of metal tankers, bulk carriers and container ships, and other technical infrastructure, industrial port facilities. They can be used for ships inspections, critical infrastructure monitoring, as well as patrolling and property protection.

University of Life Sciences in Poznan to design intelligent furniture for seniors

2018-09-27

The Faculty of Wood Technology at the University of Life Sciences in Poznań coordinates the international research and implementation of the project BaltSe@nioR, whose aim is to encourage designers and enterprises to create and produce furniture that improve the comfort and safety of older people. In a group of 25 countries with the oldest populations, 23 are in Europe. European societies are aging to an unprecedented rate, and thus they become a new and growing group of consumers on the market. In response to this challenge, the group of experts in wood technology, design, information and communication technologies and robotics, from Poland, Denmark, Lithuania, Latvia, Estonia, Germany, Sweden, Norway and Finland, will work on prototypes of intelligent furniture and create trends in furniture design and interior design elements adapted to the needs of seniors. The project is co-financed under the INTERREG Baltic Sea Region Program.

Dr Cezary Możejki honored with the medal of Ignacy Mościcki

2018-09-28

Dr Eng Cezary Możejki, a long-time director of the Institute of New Chemical Syntheses, was honored with the medal of Ignacy Mościcki for outstanding achievements in the field of chemical technology, constituting the basis for industrial implementations of innovative products and chemical processes - informs Anna Tyńska from the Research Support Unit at the Institute of New Chemical Syntheses in Puławy. Dr Eng Możejki is a recognized specialist in the fertilizing industry and an authority in the technology of synthetic ammonia production. He has developed 49 innovative technological solutions in the form of licenses and he implemented them in industry in all plants of the Great Chemical Synthesis sector in Poland and abroad. He is a member of the Chemical and Process Engineering Committee of the Polish Academy of Sciences and the Main Council of Science and Higher Education.

Next year farmers to receive application to optimize irrigation on farms

2018-09-28

At the University of Warsaw, the method of „estimating the spatial differentiation of soil moisture in arable land and water stress of plants” has been developed. It will allow to create a special application for farmers. The method combines meteorological data with information from non-commercial Sentinel satellites created by the European Space Agency. The app for farmers will be created to optimize irrigation on farms through the ongoing work and field tests next year. The project is implemented by a research group operating at the Center of New Technologies at the University of Warsaw. Its members are also the founders of GeoPulse - one of the spin-off companies of the Warsaw university.

New project for innovative companies interested in expansion in Asia

2018-09-28

The call for proposals for the project Polish Technological Bridges (Polskie Mosty Technologiczne) has been launched. The initiative of the Polish Investment and Trade Agency (PAIH) is addressed to innovative enterprises characterized by fast growth dynamics, having potential for internationalization and operating in the area of innovation. The call for proposals for small and medium-sized enterprises (SMEs) interested in China, Japan and Vietnam will last until November 9. The support consists in providing expert advisory services from specific areas and areas, thanks to which the company will receive a jointly developed strategy of expansion into a selected foreign market. The PAIH offers the supply of skills and practical information in the context of the development of operations on foreign markets to the participants. The project also assumes the gathering of knowledge about the expectations of SMEs and building and improving the implementation model of the expansion program.

Medical University of Silesia to train doctors using medical simulation techniques

2018-09-28

The Medical University of Silesia will receive almost PLN 10 million for postgraduate education of doctors using medical simulation techniques. As part of the project, in 2019-2022 1622 people will be trained. The aim of the project is to develop professional skills and qualifications of doctors and resident doctors by organizing trainings that include maps of health needs. The courses will include virtual simulation of laparoscopic techniques in pediatric surgery, enhancing practical skills in minimally invasive surgical techniques; course of virtual simulation of thoracoscopic techniques in thoracic surgery containing the science of manipulation, transfer, capture and preparation of tissues and a course of functional diagnosis of the bone-joint and muscular system with the use of modern technical solutions - with particular emphasis on the age of specialist doctors in medical rehabilitation. More: <https://sum.edu.pl/uczelnia/wiadomosci-z-zycia-uczelnia/8791-dofinansowanie-na-ksztalcenie-podyplomowe-lekarzy-metoda-simulation-medycznej>

Results of „Innovator of Mazovia” contest

2018-10-01

The government of the Mazowieckie voivodeship awarded the most creative scientists and companies of the 10th „Mazovia Innovator” competition. In the Innovative Young Scientist category, the first prize (PLN 15 thousand) was awarded to Dr Adam Okniński for the work «Selection of parameters and optimization of sounding rockets and their drive units». The second prize (PLN 12.5 thousand) was awarded to Dr. Wojciech Krauze for the work «Numerical method of phase analysis of biological micro-objects in the optical tomography with limited angular projection», and the third prize (PLN 10,000) – to Dr. Maciej Trusiak for the work « Processing and analysis of fringe images using Hilbert-Huang transformation for field optical measurement methods „. In the Young Innovative Company category, the first prize (PLN 25,000) was received by

QuickerSim Ltd for the development of simulation software for thermal and flow processes and consulting services.

Polish Innovation Award for the University of Life Sciences in Poznań

2018-10-01

The Center for Innovation and Technology Transfer of the University of Life Sciences in Poznan won the Polish Innovation Award. The prize was presented during the 6th Polish Congress of Entrepreneurship in Poznan. The award was granted for the project InnCOM_PULS- instruments for optimizing the commercialization processes, creating innovation, improving dialogue and increasing the effectiveness of cooperation between science and economy, in particular for developing IP_PULS applications - communication tools in managing intellectual property and commercialization processes and the InnCOM_PULS portal - an open innovation model as a place for making transactions, promotions and exchanging experiences”. The project is financed by the Minister of Science and Higher Education. The Polish Innovation Award is a program run by the Polish Agency of Entrepreneurship and the editors of the Entrepreneurship Forum in the newspaper Dziennik Gazeta Prawna.

Modern laboratory in the modernized part of the Maximum Auditorium of the Gdańsk University of Technology

2018-10-04

The Gdańsk University of Technology created a modern laboratory in the modernized part of the historic Auditorium Maximum building, where the program of the use and learning of the LabVIEW environment will be implemented. LabVIEW environment is one of the most modern programming platforms used by such centers as CERN or NASA. The new laboratory, as part of the teaching classes, will be used primarily by students of faculties related to physics - material engineering (specialty energy con-

version) or nanotechnology. At their disposal there are most modern measurement systems including digital oscilloscopes, arbitrary multi-channel generators, prototype systems, located on 120 square meters. Laboratory groups will develop electronic circuits, using operational amplifiers, integrated digital circuits (microcontrollers) with a wide range of applications, and check the constructed systems at the functional level.

Young Scientists’ Forum: „Innovation - Interdisciplinarity - Interactivity”

2018-10-08

On November 3 - 15, The Maria Curie Skłodowska University in Lublin and the Marshal’s Office of the Lublin Voivodship in cooperation with the Institute of Agrophysics of the Polish Academy of Sciences in Lublin will organize the second Young Scientists Forum „Innovation - Interdisciplinarity - Interactivity”. The meeting is addressed to PhD students and young researchers from Lublin universities (up to 35 years of age) who conduct or would like to conduct interdisciplinary and innovative research and are focused on interactivity. The proposed topics of the workshops during the Forum are Design Thinking, Public Speaking (self-presentation), Stress in the work of a researcher, Creating the image of a scientist and planning the path of a young scientist, Research project management and Scientists in business on the example of photonics. More: <https://www.umcs.pl/pl/fmn.htm>

Gdynia E(x)plory Week in the Pomeranian Science and Technology Park Gdynia

2018-10-08

On October 24-26, the Pomeranian Science and Technology Park Gdynia is launching the seventh biggest celebration of science and innovation for enthusiasts - Gdynia E(x)plory Week. Gdynia E(x)plory Week is the final event of Program E(x)plory, which has been organized by the Foundation for Advanced Technologies for 7 years. In Gdynia, the National Final of the Scientific Competition E (x) will take place, which will select the most talented young scientists. Also the organizers planned the Festival of Science and Technology E(x)plory, where the participants can visit scientific stands and take part in workshops, lectures and scientific discussions. The events are addressed to all enthusiasts of science and new technologies, including school children, teachers and families with children. Another fixed point of the Gdynia E(x)plory is also Congress E(x)plory, whose theme this year will be «Mentoring. Does every student need a master?»

Project of the University of Gdańsk co-financed within the Interreg Region of the Baltic Sea program

2018-10-08

The Monitoring Committee of the Interreg Baltic Sea Program has included the COMBINE project of the University of Gdańsk into the group of 31 most promising transnational projects. The project «COMBINE - Efficient business models and adaptation systems for the strengthening of cargo flows in combined transport in the Baltic Sea Region, taking into account innovative technologies and regional specifics» focuses on combined transport services and improving measures to remove barriers and challenges related to their wider use in the Baltic region. The project manager on behalf of the University of Gdańsk is Dr Aneta Oniszczyk-Jastrząbek, Prof. Associate of Faculty of Economics. The amount of co-financing for the Pomeranian university amounts to nearly PLN 1.3 million.

Conference on the role of navigation in securing human activity at sea

2018-10-09

The Naval Academy in Gdynia and the Polish Navigation Forum invite participants to the 21st Nav-Sup Scientific and Technical Conference „The Role of Navigation in Securing Human Activities in the Sea”. The conference has been carried out every two-years for 40 years. The organizers encourage to present the achievements, products and solutions in the field of maritime as well as land, sea and air transport economies, as well as navy and other types of armed forces. The conference on 15-16 November is an excellent opportunity to exchange experiences, knowledge and views on navigation, transport and security. It is also a great place to present achievements and technological solutions supporting navigation and transport. The conference topics include terrestrial, marine and air navigation, new systems and technologies, hydrography, geoinformatics and satellite geodesy. More: <http://www.navsup.pl/>

University of Economics in Wrocław to launch Bioeconomic Laboratory

2018-10-09

The Bioeconomic Laboratory of the University of Economics in Wrocław has received over 6.7 million PLN of EU funding for BiolnLab project. Its implementation will contribute to strengthening the position of the Wrocław university as a center conducting high-quality research. The BiolnLab bio-economic laboratory will provide research services for entities from the Lower Silesia in the field of physicochemical methods enabling the development of new products or technologies already existing on the bio-waste, bioproducts and high-quality food markets. The investment will require adapting one of the university buildings to the needs of the laboratory and purchasing the necessary equipment. The project will be implemented for two years - starting from January 2019.

Scientists from the Warsaw University of Technology receive silver medal of Exhibition of Inventions Geneva 2018 for their invention

2018-10-10

The invention developed by scientists from the Faculty of Chemistry and the Faculty of Materials Science at the Warsaw University of Technology in cooperation with the company POLSPORT S.A. was awarded a silver medal during the International Exhibition of Inventions of Geneva 2018. As Warsaw University of Technology informs, the jury awarded the protectors that use Shear Thickening Fluids technology (STF). The main advantage of such fluids is that they are flexible, and under the influence of rapid pressure or hit they rapidly harden and become very strong. The team of over a dozen people working on the invention was headed by Prof. Eng. Mikołaj Szafran, Prof. Eng. Gabriel Rokicki and Prof. Eng. Marcin Leonowicz.

Cardiology novelties at the AS KIER Conference of the Medical University of Lodz

2018-10-11

The Clinic of Interventional Cardiology and Heart Rhythm Disorders University Hospital and Medical University of Lodz are organizing on October 25th a scientific conference AS KIER, which will be devoted to cardiac arrhythmias and interventional cardiology. During the scientific sessions, the participants will deal with the following issues: How to recognize myocardial infarction in 2018? How to treat patients after myocardial infarction? News in anti-platelet treatment. Physical activity in patients after myocardial infarction. Speakers will also present new products in cardiology and will try to answer the questions: Can the vest save life? How to treat a patient with heart failure in 2018? Can atrial fibrillation cause myocardial infarction? More: <http://www.askier.kardiolog.lodz.pl/pl>

Dual studies of Electrical Engineering at the Białystok University of Technology

2018-10-12

Białystok University of Technology has signed a contract with 12 companies. Thanks to this, it was possible to run dual studies at the electrotechnical faculty. - We are starting a program that is new not only at the Białystok University of Technology, but also at most universities in our region - said prof. Lech Dzienis, university rector. For students, it will be a unique opportunity to get closer to practice already during their studies. On the other hand, entrepreneurs who have declared their participation in the project will have the opportunity to «educate» their future employees. The contact between students and enterprises will be much closer during these studies than in any other type of education - added the rector of the Białystok University of Technology. Twelve companies from the electrotechnical industry joined the dual degree project at the Białystok University of Technology.

Students of the Warsaw University of Technology working on a two-stage GROT rocket

2018-10-12

Members of the Student Astronautical Circle, which operates at the Faculty of Power and Aeronautical Engineering of the Warsaw University of Technology, presented the project of a two-stage Grot rocket. - This is our new, two-stage construction, aimed to reach the 15 km limit, which is the upper limit of the airspace available to us, and thus beating the Polish record of the flight altitude of the amateur rocket belonging currently to the rocket K1-X of Polish Rocket Society. A slightly modified structure of students' rocket can ultimately fly up to 60 km. The main components of the rocket are a solid propellant engine with a maximum thrust of 7500 N and a narrow hull completed with a brass head. A large engine is supposed to accelerate a smaller tip to almost three times the speed of sound. The tip, thanks to its high inertia and small size can slow down at

a slow pace to Earth. More: <https://www.facebook.com/SKA.PW/>

Projects of the Warsaw Medical University win in the Golden Scalpel competition

2018-10-15

In the 10th Golden Scalpel competition, the jury distinguished two projects implemented in the clinics of the Medical University of Warsaw (WUM). The Gold Scalpel is a competition awarding prizes for outstanding innovations in Polish healthcare. The project «Implementation of an innovative and ultra-modern method of intrauterine fetal surgery with spina bifida in a carbon dioxide environment» took the second place. It was carried out in the 1st Department and Clinic of Obstetrics and Gynecology of the Medical University of Warsaw. The project: «Innovative and unique endoscopic techniques for the treatment of patients with benign and cancerous diseases of the gastrointestinal tract» took the fourth place and was carried out in the Endoscopy Laboratory of the Chair and Clinic of General, Transplant and Liver Surgery of the Medical University of Warsaw. The jury awarded the first prize to the project: „The first implantation of artificial heart in Poland” by scientists from the Silesian Center for Heart Diseases.

Students of Poznań University of Technology win in the EDP University Challenge 2018 competition

2018-10-15

Poznań University of Technology students took the second and third place in the Polish EDP University Challenge 2018 competition organized by the global leader in the renewable energy market, EDP Renewables. The second place was taken by «Electric Vehicles Energy Storage Management System» by Mikołaj Walkowiak and Józef Borys. The third place was taken by Edyta Bosacka and Damian Sikora, authors of the project «Hill heating system to improve the functioning of bee hive» The task of the EDP University Challenge participants was to

prepare the project in one of four areas: Innovation - projects increasing the use of renewable energy sources; Efficiency - researching technological innovations that enable increasing the efficiency of production processes of renewable energy sources; Marketing and strategy - increasing awareness of renewable energy and / or EDP Renewables activity promotion in Poland and Sustainable development - environmental protection and local development.

Ecological agreement of the University of Economics and the Wrocław housing cooperative

2018-10-15

Wrocław University of Economics and Wrocław-Południe Housing Cooperative have signed an agreement, thanks to which the university will obtain energy self-sufficiency until 2030. The international Climate Reality Project is initiating and supporting the energy transformation. It has selected Wrocław's university as the future leader of changes in the field of renewable energy sources. The University will be a participant in this process through scientific research and didactics as well as through ecological investments on the campus. The Wrocław-Południe Housing Cooperative has launched the Wrocław Solar Power Plant - the only distributed power plant in Poland based on photovoltaic cells installed on the roofs of buildings. The researchers will conduct scientific research in the field of electricity production.

Hybrid room opened at the University Clinical Hospital in Wrocław

2018-10-16

At the Department of Cardiac Surgery, University Clinical Hospital in Wrocław, a hybrid room was officially put into operation. The investment for over PLN 7 million will enable the work of interdisciplinary teams and give new treatment options. The room is equipped in quantum technology. It is the most modern device for extracorporeal circulation in the world, which after safe stopping of the heart, allows for accurate and continuous analysis of vital signs and blood tests during surgery. The team of cardiac surgeons thanks to the use of quantum can perform the most complex heart operations. The room can be used by cardiothoracic surgeons and cardiologists. Its functionality is based on the fact that they can perform two different treatments at the same time. The hybrid room also carries the possibility of minimally invasive surgery, thanks to which the patients' treatment time and hospital stay are shortened.

New electric motorcycle designed by students of the AGH University of Science and Technology in Krakow

2018-10-18

On Thursday, October 18, 2018, the presentation of the latest electric motorcycle constructed by students from the E-Moto AGH team will take place on the campus of the AGH University of Science and Technology in Krakow. The «Staszic» motorcycle is the second motorcycle designed by the team from AGH. During the presentation, students will present the possibilities of the motorcycle during a test drive and will talk about the parameters of their machine, comparing it to their previous design. The latest construction of AGH students took part this year at Red Bull Megawatt 111, the most prestigious competition for off-road motorcycles in Poland.

New laboratory at the University of Technology and Life Sciences in Bydgoszcz

2018-10-18

At the University of Technology and Life Sciences in Bydgoszcz, a new laboratory will be constructed to conduct testing of rail vehicle equipment. The cornerstone for the construction of a new research facility was laid on October 16. The results of the tests carried out in the new hall will be used to improve the reliability of rail vehicles manufactured by the Pojazdy Szynowe PESA Bydgoszcz. The main hall's user will be the Faculty of Mechanical Engineering of the Bydgoszcz University. The building is part of the project «Laboratories of technical and exact sciences dedicated to the development of research potential in the field of innovative solutions and technologies of key importance for the economy of the Kuyavian-Pomeranian Voivodeship». The aim of the project is to improve the quality and increase the possibility of conducting high-quality scientific research, including the implementation.

Graduates-innovators from the Gdańsk University of Technology awarded

2018-10-18

Gdańsk University of Technology for the 16th time awarded the Prof. Romuald Szczęśny Prizes to university graduates. The competition jury rewards student works characterized by a high level of innovation. The first award was received by Szymon Grocholski for the project «Platforms for the rehabilitation of children with cerebral palsy». Awards and financial prizes were also given to: Agnieszka Mikołajczyk for her work «The use of computational intelligence methods for diagnosis and classification of abnormal states - Selected applications in medicine»; Mateusz Bryk for «Analysis of the problems of rapid start-ups and withdrawals of high-power turbines» and Mateusz Burtowy for «Antenna with controlled beam for V2X applications in the IEEE 802.11p standard». Professor Romuald Szczęśny graduated from the Electron-

ics Department of the Gdańsk University. His PhD thesis and pioneering research work focused on modeling and simulation of power electronics systems.

Lodz University of Technology to launch pilot 5G network

2018-10-19

On the campus of the Lodz University of Technology, a pilot network of the new generation 5G will be created. This will allow scholars to conduct research that will show the benefits of solutions implemented in new generation systems and create the conditions for testing new services before commercial 5G networks start functioning. The creation of the 5G pilot network was announced by Marek Zagórski, the minister of digitization, during his visit to the Łódź university. - I believe that the scientific potential of employees and students is so large at the University that it is worth making the 5G technology that is to appear in Łódź would be strongly associated with the ideas that will arise here - said Minister Zagórski. According to the assumptions, the 5G network will be launched by 2020 in at least one city in Poland, and in 2025 in all major cities and on main communication routes.

Wrocław University of Technology completes the construction of the GEO-3EM research center Energia, Ekologia, Edukacja

2018-10-22

The construction of a new research center at the Wrocław University of Technology is nearing completion „GEO-3EM Energia, Ekologia, Edukacja”. The new building is being built in the vicinity of the „Polinka” cableway station and the Geocentrum educational and research complex. In a new facility with an area of over 4,500 sq m there will be more than a dozen laboratories, which will be used primarily by scientists from the faculties of land and water construction; chemical; electronics; geoenvironmental; mining, geology and mechanical department. In the laboratories there will be about 150 specialist devices worth approximately PLN 70 million. The whole facility will serve the purpose of conducting research and development works focused on strategic areas for the development of the region, such as: spatial mobility, natural and secondary raw materials, production of machinery and equipment, and material processing. The total value of the project is approx. PLN 100 million. The object is to be put into use in early 2019.

Gdańsk University of Technology opens a new auditorium and laboratories

2018-10-23

An auditorium with multimedia equipment, modern laboratories and special laboratories for corrosion research were ceremonially opened at the Gdańsk University of Technology in the extended and reconstructed building „Chemia C”. The building includes an auditorium with multimedia equipment for 135 persons, and laboratories: Energy Processing Technology; Surface Survey; Molecular Biology and Renewable Energy Sources, as well as a laboratory for classes about corrosion protection technology and electroplating as well as a laboratory for corrosion tests. The building is accessible to people with mobility disabilities. There are students' own

workplaces, a cloakroom and a student bar. The value of the project, co-financed by the European Union from the European Regional Development Fund as part of the Regional Operational Program for the Pomorskie Voivodeship, is almost PLN 11.5 million. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/nowo-wybudowane-audytorium-i-laboratoria-w-budynku-%E2%80%9Echemia-c%E2%80%9D-zostaly-officially-open

Prehabilitation at the University Clinical Center of the Medical University of Gdańsk

2018-10-24

The University Clinical Center at the hospital of the Medical University of Gdańsk is launching a project to support patients in the pre-operation period. „Prehabilitation at UCK” will start with educational activities. The first lecture „Get up before the operation” will be held on October 27. After that, breathing and regeneration exercises are planned. The project's creators want to show patients what actions accelerating the process of recovery after surgery can be taken before it. The moment when the patient learns about the need for surgery is often stressful, but it can also become a moment of awakening. The period of waiting for surgery is worth learning ways of active care for one's health. Scientific research and clinical observations have shown that increasing the psychophysical capacity of the patient in the pre-operative period can shorten the time of hospital stay and speed up recovery. More: <https://gumed.edu.pl/50865.html>

Researcher from the Lublin University of Technology becomes „An innovative young science leader”

2018-10-25

Dr Eng Agnieszka Wozzuk from the Faculty of Civil Engineering and Architecture at the Lublin University of Technology has been awarded the Polish Intelligent Development Prize 2018 in the category

„Innovative young science leader”. Dr Wozzuk was awarded for her project titled «The use of functional zeolite structures for the production of asphalt mixtures in asphalt foaming». The Polish Intellectual Development Award is a nationwide prize to appreciate the most innovative projects implemented with the participation of funds from EU and national programs.

Innovative laboratory tripod developed by scientists from the University of Silesia

2018-10-25

Researchers associated with the University of Silesia are the authors of an innovative tripod project for test tubes or other laboratory containers. The designed system can consist one or several shelves with holes for test tubes and vials. A unique solution in the project that has already been covered by patent protection is the use of a locking mechanism that holds the vessels. It prevents them from falling out when the tripod falls or turns around. The patented solution not only allows to empty simultaneously all containers, but also it enables faster washing and drying. The tripod can be used in analytical laboratories in research and industrial units as well as in school chemical and biological laboratories. The authors of the invention are Dr Robert Musioł from the Institute of Chemistry, University of Silesia and Eng. Paulina Musioł.

Researchers from Poland and Germany developed a fish and a seal - biomimetic submarines

2018-10-25

Scientific-industrial consortium composed of Naval Academy in Gdynia, Krakow University of Technology, Industrial Institute of Automation and Measurements, R&D Company Forkos Ltd, the Bundeswehr Naval Technology Center and the Fraunhofer Institute presented two biomimetic submarines. The constructions were tested in the Gulf of Gdańsk near the pier in Mechelinki. During the show, the underwater vehicles moved autonomously on the set trajectory, bypassing obstacles and recording the set signals. As part of the European Defense Agency project launched in 2015, two BUVs (Biomimetic Underwater Vehicle) imitated a fish and a seal. In the future, both will act as a shoal of biomimetic underwater vehicles. In 2017, the Polish-German consortium was joined by research centers from Portugal, which are developing the third submarine.

Researchers of the Cardinal Stefan Wyszyński University perform at the 9th Mazovia Development Forum

2018-10-26

The possibilities of modern technology, 3D printing, photogrammetry, unmanned aerial vehicles and VR technology were presented to the participants of the 9th Mazovia Development Forum by scientists from the Center for Digital Science and Technology of the Cardinal Stefan Wyszyński University in Warsaw. The Center experts presented in detail «Application of 3D printing in museology, archeology, architecture and medicine on selected examples implemented by UKSW in Warsaw», «Digitization of cultural heritage monuments using photogrammetry» or «Printing in technology CJP, SLA and FDM. Solid and surface modeling. Models created on the basis of 3D scanning». They also answered questions about „Innovative vocational courses for drone operators, enabling the acquisition of VLOS, BVLOS” and also presented new opportunities for professional development with the use of drones.

Łódź University of Technology becomes laureate of the Polish Intellectual Development Award 2018

2018-10-26

Lodz University of Technology became the laureate of the Polish Intellectual Development Award 2018 in the „University of the Future” category. It was granted to the Łódź University for the implementation of the „Innovative Textile 2020+” project. The aim of the Innovative Textile 2020+ project is increasing the degree of commercialization and internationalization of applied research in the field of innovative and modern textile. The project leader is the Faculty of Materials Technology and Textile Design of the Lodz University of Technology, and it is coordinated by Prof. Izabella Krucińska. The consortium includes also the Institute of Safety Technology MORATEX, the Central Institute for Labor Protection - the National Research Institute, the Institute of Biopolymers and Chemical Fibers and the Textile Research Institute.

Dr. Kamila Duś-Szachniewicz to receive Polish Intellectual Development Award

2018-10-26

Dr Kamila Duś-Szachniewicz associated with the Chair and Department of Pathomorphology of the Medical University in Wroclaw becomes a laureate of the Polish Intelligent Development Award in the category „Innovative young science leader” for the project „The use of innovative technology of optical pliers for the development of low-invasive targeted lymphoma therapy”. The prestigious award was won by the most innovative projects implemented under EU and national programs by Polish scientific institutions, institutions and companies involved in research and development, which contribute to the sustainable development of Poland. Dr Duś-Szachniewicz's project was financed in 2015-2018 by the National Center for Research and Development as part of the LIDER program. The project obtained two patents and two applications for the inventions.

Wrocław University of Environmental and Life Sciences is implementing a pocket park project

2018-10-26

University of Life Sciences, City of Wroclaw and Wrocław Agglomeration Development Agency are jointly implementing a pocket park project under the Horizon 2020 framework program „Demonstrating innovative nature-based solutions in cities”. 22 partners from nine countries take part in it, including three leaders from Manchester, Valencia and Wrocław. The innovative model of micro-green systems in Wrocław is to consist of pocket parks, green streets and walls, rain gardens and other green infrastructure solutions. As a result, local quality of life will be improved by increasing the availability of green public space and improving air quality. The aim of the project is to test the possibility of using «nature-based solutions» - enabling local use of rainwater, creating oases to protect against heat and providing shades and local temperature reduction. Invention of scientists from Toruń and Bydgoszcz wins the International Warsaw Invention Show medal

2018-10-26

The wheelchair seat for patients with ossification developed by a team of scientists from the Nicolaus Copernicus University in Toruń and the University of Casimir the Great in Bydgoszcz won a bronze medal at the International Warsaw Invention Show IWIS 2018. The authors of the invention are Dr. Emilia Mikołajewska from the Department of Physiotherapy of the Faculty of Health Sciences Collegium Medicum at the University of Toruń and Dr Eng Dariusz Mikołajewski from the Institute of Applied Mechanics and Applied Sciences of Faculty of Mathematics, Physics and Technology at the University of Bydgoszcz. The award-winning invention enables comfortable and safe use of the wheelchair. It consists of a cartridge installed to the wheelchair seat and a software system supporting the design and its performance. The International Warsaw Exhibition of Inventions is Poland's largest international event promoting inventiveness and innovation. Every year, guests from over 25 countries in the world participate in the exhibition.

Center for Medical Simulation officially opened at the Silesian Medical University

2018-10-29

The Medical Simulation Center was officially opened at the Silesian Medical University (SUM). Students can use 7 simulation rooms equipped with the most modern models - including real dental equipment for future dentists. - The launch of the next Medical Simulation Center is a response to the challenges faced by universities in the era of continuous technological development. I am convinced that this place will meet the expectations of our current students, brought up in the digital world, and also future graduates will be encouraged to study at our University - says the rector of the Medical University of Silesia Prof. Przemysław Jałowicki. The SUM, as the first university in Poland, has launched a work-

shop in the Center to learn comprehensive IT service of the hospital system. This will enable students to acquire skills in the use of IT tools that they will encounter in hospitals and clinics.

Researchers from the Krakow University of Technology working on a new bandage for patients with psoriasis

2018-10-31

A team of chemists from the Faculty of Chemical Engineering and Technology of the Krakow University of Technology is working on a new type of materials for the preparation of dressings for patients with psoriasis. Works at the Krakow university are run under the supervision of Dr Eng Katarzyna Bialik-Wąs. Researchers want to create a biohybrid material hydrogel, which can provide an innovative approach to the treatment of psoriasis using the nanocarrier-drug system. - Thanks to this combination, we will create a new type of dressing with an innovative application system for medicinal preparations used in the treatment of psoriasis. Such a material will provide protection against mechanical damage and a suitable environment for the skin covered by psoriasis, and the dual drug release system will allow gradual delivery of the active substance to the affected skin - explains Dr. Eng. Katarzyna Bialik-Wąs.

University of Poznan to launch Geodetic - Cartographic and Geomatic Garden

2018-10-31

Adam Mickiewicz University in Poznań is launching the first in Europe Geodetic - Cartographic and Geomatic Garden. It will be used by young geodesists, cartographers, geomatists and geographers. There will be a pit located on a square measuring 15 by 20 meters for staking construction poles of the building and performing leveling measurements as part of the exercises related to the geodetic process of servicing construction investments. On the upper terrace there is a solar analematic clock installed, in which a person standing in the appropriate field of the month (gnomon) casts a shadow on the at-

tached hours and thus indicates the local time. The garden was also equipped with a table of augmented reality with a model of the Faculty of Geographical and Geological Sciences printed in 3D technology. At the entrance the guests can see a replica of the border stone from 1653 with a triangle with the letters S-P-B symbolizing the border between Sweden - Poland - Brandenburg.

Course towards MOOC – a call for courses on the Polish educational platform

2018-11-02

The National Center for Research and Development (NCBR) has announced a call - „Course towards MOOC” addressed to universities. It is to support creating new courses on the Polish educational platform MOOC. The courses can be developed in one of two categories: an educational course for students as an additional element of the education for students and a mass, open educational course available to all interested students. The contest's budget is 10 million PLN. The applicant of the project may be a public or private college (or a consortium) and applications for the competition should be submitted online from November 30, 2018 to January 25, 2019.

Over PLN 326 million allocated by the Ministry of Science within the „Regional Initiative of Excellence” program

2018-11-02

The Ministry of Science and Higher Education has granted a total of over PLN 326 million of financial support to 30 academic universities for the implementation of scientific research important for the region within the „Regional Initiative of Excellence” program. 12 million PLN of this amount will be received by the University of Warmia and Mazury (UWM) in Olsztyn. The university has submitted the project «Innovative high-quality food for the health of society and sustainable development - an integrated program for the development of scientific research and innovation in the field of agricultural and veterinary sciences at the University of Warmia and Mazury in Olsztyn». Support will be provided for: agronomy, fishing, food and nutrition technology, zootechnics and veterinary science. The UWM project is part of the «Strategy for socio-economic development of the Warmian-Masurian Voivodship by 2025», which emphasizes the development of an economy based on three smart specializations: water economy, wood and furniture, and high-quality food.

Students of the Wrocław University of Technology to develop a solar boat for the competition in Monaco

2018-11-05

Students of the Wrocław University of Technology are constructing a boat powered by photovoltaic panels, with which they want to take part in international competitions in Monaco. The engine used in the project will have a power of about 5 kW, and the hull is to be made of carbon fiber. The project involves the construction of a single boat with a length of approx. 5.5 m, equipped with photovoltaic panels and hydrofoils - special bearing flaps mounted under the fuselage. Such solutions are used in hydrofoils, but in the case of solar boats it allows for more efficient use of engine power and panels.

After getting the right speed they cause the hull to emerge from the water, thanks to which the resistance decreases and the boat can flow much faster. The competition in Monaco is the largest and most prestigious event of this type in the world. Students and professional teams of constructors compete in three competitions - acceleration, slalom and races. More: <http://pwr.edu.pl/uczelnia/aktualnosci/lodz-solarna-na-zawody-w-monako-11014.html>

Autonomous ship created at the Maritime University of Szczecin

2018-11-05

The Maritime University of Szczecin has completed the first stage of building an autonomous unmanned ship. The ship was developed by the Department of Ocean Engineering and Shipbuilding and passed the first tests on waters. Launching the ship completes the first stage of construction, from the design and construction of the model and equipping it with propulsors on the bow and stern to installing the power, remote control and telemetry systems. In the next stages of constructing, the autonomous ship will be provided with installation of sensors for measuring position, speed, course, distance from the wharf or other objects; development of a mathematical model for controlling the ship and its verification on the water; construction and installation of a computer system of autonomous control of the ship as well as development of algorithms and software for autonomous control of the ship and procedures for its communication with other units.

University of Torun joins a consortium of ultra-precise atomic clocks

2018-11-06

Team of Michał Zawada, Prof. The Nicolaus Copernicus University, from the Faculty of Physics, Astronomy and Applied Computer Science, has joined the European consortium of iqClock, which aims to construct ultra-precise atomic clocks - not only for laboratories, but for general use. Creating more accurate clocks and reducing their size so that they can

be easily transported is the goal set by the iqClock consortium, created by European universities and companies. This is to enable recent advances in the field of quantum mechanics and the combination of know-how in science and industry. The technology developed by the consortium is to be fully portable, to be used in the satellites at the end of the 10-year program it can be used. This is not an easy process, but the benefits are huge. The new clocks can be used, for example, to increase the accuracy of the navigation system to centimeters, which will revolutionize the way of measuring the Earth. More: <https://www.umk.pl/wiadomosci/?id=25737>

Students of the Silesian University of Technology awarded for the electric motorcycle „Elektra”

2018-11-06

Student Scientific Circle of the Silesian University of Technology - PolSI Racing received the Internet users award in the KoKoN Scientific Circles' Competition for the project „Construction of an electric motorcycle PolSI eRacing” Elektra”. The KoKoN competition is addressed to students of technical universities operating in scientific circles. It is to encourage students to take part in scientific and social activities and to help integrate the student community and build dialogue between technical universities in Poland and external companies. The prizes were awarded in six categories: engineering project; conferences; research; innovation and new technologies; IT and Internet users' award. The organizer of the nationwide KoKoN competition is the Technical Universities Forum, which is made up of students' self-governments of Polish technical universities. 46 projects were submitted to the competition for the Internet users' award, with over 3.5 thousand Internet users voted.

Creators of the PW-Sat2 satellite looking for sponsors of their trip to the USA

2018-11-07

Students of the Warsaw University of Technology who have developed the PW-Sat2 satellite, are looking for sponsors of their trip to the United States to see the launch of the rocket with their satellite on board. PW-Sat2 is to be taken out into space on board the Falcon 9 rocket. The currently scheduled launch date of the rocket is November 19. It will be launched from the Vandenberg base in California. PW-Sat2 is a small satellite with dimensions of 10x10x20 cm, whose main goal is to fight space debris. Students can be supported by paying the money for their trip through the site [zrzutka.pl](https://zrzutka.pl/e6gdvw) at: <https://zrzutka.pl/e6gdvw>

Ministry of Science and Higher Education to finance National Center of Electronic Cryomicroscopy

2018-11-07

The Ministry of Science and Higher Education decided to finance the purchase of the latest generation of the Cryo-EM electron microscope (Cryo-EM) and to create the National Center of Electronic Cryomicroscopy at the National Center for Radiation Synchrotron Solaris in Krakow. The creation of the National Center for Electronic Cryomicroscopy will allow Polish scientists to keep pace with other international research centers and will enable joining the group of world leaders in structural biology. Research using structural biology techniques has contributed to a huge advance in the treatment of many diseases, such as cancer, Alzheimer's disease and obesity. Research results obtained with the use of this technology are essential for understanding the functioning of the human body, the formation of diseases or aging processes and the development of effective therapies.

Students of the Wrocław University of Technology to receive a modern flight control simulator

2018-11-07

Students of the Wrocław University of Technology gained access to a modern simulator of traffic management at airports. The agreement on this matter was concluded by the rector of the university, Prof. Cezary Madryas, Andrzej Bisek, head of the Bisek company and a representative of the Lubin commune, where the university aerospace center is located. The simulator enables mapping the appearance and functioning of each Polish airport. - At the moment, we are the only university in Poland that educates aviation engineering and will have such a modern and unique simulator at its disposal - says Prof. Cezary Madryas. Simulator training will be available to aeronautical engineering students. In addition, they will be able to use the area of the airport in Lubin, where the airport center is located. There are plans to conduct didactic classes there and to start using laboratories with aerodynamic tunnels and technical workshops.

University of Zielona Góra to launch Laboratory of Materials Testing Engineering

2018-11-07

The University of Zielona Góra will receive almost PLN 12 million to create a Laboratory for Materials Research Engineering. The money comes from the Ministry of Science and Higher Education as part of the Regional Initiative of Excellence program. The research in the Laboratory will be carried out in the field of nanotechnology; the effect of vacuum and radiation on the properties of materials; methods of coating materials, properties of materials and metamaterials (including strength); research on optical methods of meta, micro and nanomechanical systems. The project is to be used to increase the research potential of current research groups, to further develop international cooperation in the field of science, to develop methods of increasing innovation and greater effectiveness in obtaining funds

for research. It is also intended to prepare young research staff to work in interdisciplinary teams.

Fashion Economy Moda 4.0 conference

2018-11-08

The Lazarski Academy of Business and Fashion Academy in Warsaw invites participants on 13 November to the Fashion Economy 4.0 conference, during which discussion panels will be organized concerning new technologies in the general fashion, men's fashion and fashion marketing. Also, the main conclusions from the KPMG report on the fashion industry in Poland will be presented. The conclusions of the latest KPMG report in Poland will concern consumer behavior and development perspectives of the fashion sector. The report characterizes the condition of the Polish clothing and textile industry, presents shopping habits and decision-making factors of consumers as well as observations of enterprises operating on the market. More: <https://fe.cbp.lazarski.pl/>

Researchers from the Warsaw University of Life Sciences win the main Science Challenge Day award

2018-11-08

A team of scientists from the Faculty of Production Engineering of the Warsaw University of Life Sciences (SGGW) won the main prize in a competition organized as part of the Science Challenge Day. Science Challenge Day is an event aimed at finding interesting technological ideas to solve the problem of plastic in packaging. Teams presented their solutions during the one-day innovation marathon, which took place at the Wrocław University of Technology. A team of scientists from the Warsaw University of Life and Agriculture (SGGW) will be able to devote an award of 10,000 euros to the acceleration of their idea in the Scitech Fund investment fund.

Startup Weekend in Podkarpackie Science and Technology Park- Aeropolis

2018-11-08

From 16 to 18 November, the Startup Weekend will take place at Podkarpackie Science and Technology Park Aeropolis in Jasionka. It is the largest startup event in the Podkarpacie region, supported by the Rzeszów University of Technology. During the three-day event, participants are combined into teams that prepare a startup within 54 hours. The main assumption of the event is the joint work of spontaneously created teams consisting of programmers, graphic designers, UX/UI designers and marketers to create new solutions, products, services and companies. The implementation of projects is supported by mentors who are specialists in various fields of science. More: <https://www.facebook.com/events/1346181608851451/>

Fourth season of Perceptus IT Security Academy launched at the University of Zielona Góra

2018-11-08

The fourth season of Perceptus IT Security Academy started at the University of Zielona Góra. The Academy consists of a series of open lectures and practical classes. Classes in the faculties of computer science, electrical engineering and automation are run by experts-practitioners from the IT security industry. The Academy will cover issues related to cyber security. This year's fourth course will focus on network security, creating network projects and monitoring server infrastructure. The three courses of the Academy were very successful. They attracted not only students but also pupils for whom a special workshop group was created. In this year's, lecture classes can be attended by all interested students but practical classes are held for a narrow group of listeners, due to their character and limited number of participants.

Composite wheels awarded Eagle of Innovation Startup in the „Rzeczpospolita” competition

2018-11-08

The project of the Fibratech company won the Award Eagle of Innovation Startup, in the category „Groundbreaking Technology” within the newspaper „Rzeczpospolita” competition. The Fibratech develops business in the automotive industry in the Pomeranian Science and Technology Park Gdynia. The jury awarded the main prize to the company for designing an ultralight, composite car wheel. The parkers' project from Gdynia outclasses competition solutions by 15% lighter weight and 30 percent higher hardness of the wheel. The purpose of the Eagle of Innovation competition Startup is to select and reward the best Polish startups offering innovative products / services or running operations in an innovative way. The competition is also to promote good practices in the area of innovation and support the young, dynamically developing Polish enterprises. The competition is organized by the paper «Rzeczpospolita» daily, with Google as the strategic partner. More: <http://ppnt.pl/en/aktualnosci/ppnt/przelom-technologiczny-od-fibratech>

Ministry of Science to launch new anti-plagiarism program

2018-11-09

Piotr Dardziński, Deputy Minister of Science and Higher Education, informed that the Ministry of Science is launching a new anti-plagiarism program that will apply to all scientific works. At present, only master's theses are checked by the anti-plagiarism system. - We are creating a database of all diploma theses: bachelor's, master's, PhD's, and all publications, including the Polish Internet, which will be updated every month. The system will search all of these databases and check whether any work is not a result of plagiarism - explained Dardziński. The deputy minister assured that the system would be very effective and would also prevent «more intelligent methods to make plagiarisms» because it contains AI elements.

Gdańsk University of Technology scientists developing an innovative method to determine the trajectory of a rail vehicle

2018-11-09

Scientists from the Faculty of Electrical Engineering and Automation and Faculty of Civil Engineering and Environment at the Gdańsk University of Technology participate in a research and development project of the innovative method for determining the precise trajectory of a rail vehicle. Within its framework, a reliable and precise method for determining the axis of the railway track will be developed using the mobile satellite measurement method, in order to record the geometrical shape of railway lines in the public reference system PUWG2000. Precise identification of railway track axes creates a number of possibilities related to the use of digital data on the location of tracks and accompanying engineering structures. The project implemented by a consortium of the Gdańsk University of Technology and the Maritime University in Gdynia received funding under the BRIK program - Research and Development in Railway Infrastructure. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/naukowcy-z-pg-opracowuja-innowacyjna-metode-momiarow-mobilnych-zycie-anten-atel-itarnych

Invention of the scientists of the Medical University receives Gdańsk European patent

2018-11-09

The European Patent Office has decided to grant a patent for the invention „Oral vaccine containing the Bacillus subtilis spores and its application to immune against Helicobacter pylori”, The creators of the invention are: Prof. Michał Obuchowski and Dr Krzysztof Hinc from the Department of Molecular Bacteriology at the Medical University of Gdańsk and Prof. Ezio Ricca from the University of Naples. The use of spores as vaccine carriers represents a new approach to immunization. The proposed solution has a high potential for therapeutic use as a drug in people already infected with Helicobacter pylori. The beneficial oral form of administration of the vaccine, especially for among children and the elderly people, resistance to low pH prevailing in the stomach and effectiveness of action make the vaccine an interesting solution on the modern pharmacological market.

Silesian University of Technology to discuss on autonomous combat systems

2018-11-12

Center for Advanced Technologies of Security and Defense of the Silesian University of Technology and Zakłady Mechaniczne Tarnów S.A. invite participants to the symposium „Autonomous combat systems - the future or the present?” The Symposium will take place on November 15 in the Bureau of the Education and Congress Center of the Silesian University of Technology at Konarskiego 18B in Gliwice. During the symposium, 12 papers will be delivered. Speakers include representatives of the Ministry of National Defense, industry and scientists from the Silesian University of Technology, AGH University of Science and Technology in Kraków, Military University of Technology in Warsaw and the Pedagogical University in Krakow. The organizers are planning to discuss the ethical and political challenges related to the use of autonomous combat systems and the

presentation of funding opportunities for scientific and research defense projects from the European Union funds.

Silesian Medical University to build the Silesian Medical Platform eCareMed

2018-11-13

Almost PLN 67 million will be awarded to the Medical University of Silesia in Katowice (SUM) for the Silesian Medical Platform eCareMed. The project was created in response to the needs of patients in early diagnostics of oncology, cardiology and neurology diseases. Implementation of the project «Silesian Digital Medical Platform eCareMed - Telemedicine and exploration of medical data» will allow minimizing waiting time for diagnostics, treatment and rehabilitation. It will also increase the access of doctors to the results of patient tests. The platform will allow the use of information and communication technologies in the area of e-health. The project led by the SUM, will be implemented by partners: the Silesian Center for Heart Diseases in Zabrze; Beskidzkie Centrum Onkologii, Municipal Hospital of John Paul II in Bielsko-Biała; Center of Oncology - Maria Skłodowska-Curie Institute in Gliwice, University Clinical Center and Upper Silesian Medical Center SUM. More: <https://sum.edu.pl/uczelnia/wiadomosci-z-zycia-uczelnii/9024-niemal-67-mln-zl-dla-slaskiego-uniwerytetu-medycznego-w-katowicach-na-slaska-platforme-Medical-ecaremed>

Wrocław chemists developing a 3D printing method in hydrogels

2018-11-13

Dr Anna Witek-Krowiak, Dr Anna Dawiec-Liśniewska and Dr Daria Podstawczyk from the Wrocław University of Technology are developing a 3D printing method in hydrogels. Researchers already have sent a patent application for their project and prepare a publication. The works of Wrocław chemists are going in three directions: composing of hydrogel and thermoplastic materials for 3D printing, agro-

chemicals and placing living organisms (algae) in hydrogels. All of these realizations are guided by a common idea - designing structures with specific properties and shapes. In the opinion of chemists, their idea has a chance for commercialization, being the Polish equivalent of filaments currently produced in only a few places in the world - in the Netherlands and Korea. The researchers emphasize that the method is not particularly demanding and can be applied to other composite materials. More: <http://pwr.edu.pl/uczelnia/aktualnosci/co-mozna-wydrukowac-z-hydrozelu-11025.html>

Satellite with the Wrocław telecommunications system to launch into space

2018-11-14

The scientific satellite ESEO S-50 is prepared for a flight into space with telecommunications system, constructed by scientists and students of the Wrocław University of Technology. The launch from the Vandenberg space base in California is scheduled for November 19. The system, developed and created entirely at the University, consists of a microwave transmitter, an on-board computer and a microwave antenna. Its task is to manage the exchange of transmitted data. The whole device weighs 0.8 kg, while the antenna is made of ultra-light materials and weighs less than 40 grams. The transmitter allows to transfer satellite data to a ground station with a speed of 10 Mbit / sec. The ESEO (European Student Earth Orbiter) satellite was created as part of the educational program of the European Space Agency, implemented since 2000. It will be lifted on the SpaceX Falcon 9 rocket to 550 km orbit.

9th National Student-Inventor Competition

2018-11-15

The 9th National Student-Inventive Competition 2018/2019 has started. The competition has been organized since 2010 by the Kielce University of Technology. It is addressed to students, PhD students and graduates who during their studies became creators/co-founders of the invention or utility/industrial design protected by an exclusive right or submitted for the Patent Office of the Republic of Poland or an appropriate office for industrial property abroad. Five winners of the main prizes will present their solutions at the 47th International Exhibition of Inventions in Geneva in April 2019. The organizer will finance the costs of the exhibition stand, travel and stay of the laureates in Geneva. Recruitment of applications for the competition will last until January 25, 2019. More: <https://tu.kielce.pl/start/badania-i-nauka/centrum-ochrony-wlasnosci-intelektualnej/>

Poland in Space - cosmic November

2018-11-15

- We have talented, ambitious students who are passionate about space technologies. Warsaw University of Technology is a leader in this field. Thanks to the PW-Sata mission and, I hope, the successful PW-Sat mission2, it will be possible to activate other academic centers in Poland - said Grzegorz Brona, president of the Polish Space Agency, in an interview for Space24. Grzegorz Brona announced that in the second half of November 2018, apart from launching the Polish student satellite PW-Sat2 into space, launching the Finnish-Polish satellite observation Earth ICEYE-X2, launching the satellite of the European Space Agency with a telecommunications system prepared in Poland, launching the test Polish suborbital rocket to the height of 15 km and Mars landing of the NASA InSight probe with the Polish mechanism are planned. The events will be promoted by the campaign under the slogan «Poland in Space - cosmic November» implemented with the support of the Polish Space Agency and the Ministry of Enterprise and Technology.

Researchers of the University of Casimir the Great receive silver medals at the Nuremberg fair

2018-11-15

Researchers at the University of Casimir the Great in Bydgoszcz won the silver medals of the 70th International Trade Fair „Ideas - Inventions - New Products” iENA 2018 in Nuremberg. Researchers from Bydgoszcz received a silver medal for pro-ecological technology for the industrial management of PLA, polylactide as an alternative polyol raw material for the production of polyurethanes for the construction industry. The second silver medal and diploma of the German Institute was received by scientists for light strengthened dental implants. The iENA exhibition is one of the oldest and largest exhibitions of inventions in the world - the first exhibition took place in 1948. The Polish inventors' stand, including the Bydgoszcz university, was organized under the patronage of the Main Council of Research Institutes and the Polish Women Science Network. More than 800 inventions were evaluated.

Conference „(Dis)abled people on the labor market”

2018-11-16

On November 21, the Medical University of Lodz together with the Łódź Akademska Foundation are organizing a conference entitled „(Dis)abled people in the Labor Market”, which will deal with new technologies and digital exclusion of people with disabilities. The aim of the conference is to enable people with disabilities to meet employees directly and to provide them with activities that will increase their chances of finding the right job, apprenticeship or internship. During the event, participants will listen to a lecture delivered by Prof. Paweł Strumiłło from the Electronics Institute of the Lodz University of Technology, entitled „Electronic systems for supporting the disabled people- now and tomorrow” and learn about the applications of Lodz students dedicated to disabled people.

Ericsson designs the 5G network for the Lodz University of Technology

2018-11-16

The international IT concern Ericsson informed that it designed the 5G network for the campus of the Lodz University of Technology. This is a new generation of the Internet, allowing to transfer data up to 20 times faster than in the existing LTE network. The CEO of the Office of Electronic Communications, Marcin Cichy, who stayed in Łódź, explained that tests of the new Internet may be conducted in a number of locations in Poland, and the government agencies are expecting the best initiatives of various cities. One of these initiatives is also the cooperation of Ericsson and the Lodz University of Technology. Marek Zagórski, minister of digitization declared a month ago that the Lodz University of Technology will receive PLN 8 million for 5G network tests in 2018-2019. The University wants to test new 5G laboratory and lighting control systems.

Ceremonial opening of the Medical Simulation Center at the Medical University in Poznań

2018-11-16

Medical Simulation Center was officially opened at the Medical University of Poznan. This modern, multi-profile center will operate in a new university building –Adam Wrzosek Collegium. The project has received over PLN 16.5 million from European funds. The Center consists of eight high fidelity halls together with control rooms, the operating department, two intensive care rooms, the hospital room of the emergency department; a carriage simulator, delivery room and two nursing rooms. In addition, there are also six rooms of low fidelity and ten didactic rooms - including a room for practicing with standardized patients. Exercises with the participation of standardized patients - actors professionally prepared to play the history of the course of a given disease will be a novelty at the Poznan university. <http://www.ump.edu.pl/universytet/unia-europejska/centrum-symulacji-medycznej>

President of Poland met the creators of Polish innovative projects

2018-11-19

The President of Poland Andrzej Duda and the Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin met the creators of Polish innovation projects in the Congress 590 in Jasionka near Rzeszów. The Congress 590 is the largest event in the Podkarpacie Region dedicated to the science and business. As part of the congress, Deputy Prime Minister Jarosław Gowin participated in the debate entitled «Science condemned to business» regarding cooperation between science and business. Experts discussed issues related to smart city, venture capital market in Poland, foreign investments, cyber security and the armaments industry. Participants of the event met the representatives of the National Center for Research and Development, the Polish Center for Technology Development, the National Academic Exchange Agency, the National Contact Point for Research Programs of the European Union, the Information Processing Center and entrepreneurs who have already benefited from funds to support development and innovation, including European funds.

Center for Didactics and Medical Simulation in Katowice to hold Scientific and business brunch

2018-11-19

SPIN-US Sp. z o.o, a special-purpose company of the University of Silesia, and the Technology Transfer Center of the Silesian Medical University invite participants to the Center for Didactics and Medical Simulation in Katowice on November 28 for the scientific and business brunch „Billion in patent 5”. The meeting will provide the opportunity to present solutions in the areas of medicine and pharmacy and Life Quality Technology in terms of their use in the economy, identify projects for the future commercialization of research results and create new relationships that can become the basis for implementation of research and development projects.

The presented innovations include minimally invasive treatments in the field of aesthetic medicine; a biodegradable dressing nanofiber; a new approach in health care of the youngest patients; 3D technology in modern anatomy education and modern methods of polymer synthesis. More: www.miliard5.evena.pl

University of Life Sciences in Poznań joins the SmartAgriHubs project

2018-11-20

University of Life Sciences in Poznań is one of 108 partners involved in the SmartAgriHubs project, which is to accelerate the digital transformation of the European agricultural and food sector. The project has a budget of 20 million euros co-financed by the European Union and aims to create a broad, Europe-wide network of digital innovations (Digital Innovation Hubs). The implementation of the project began on November 1, 2018. The coordinator of the work is the Dutch University Wageningen. SmartAgriHubs aims to create a mutually connected ecosystem where stakeholders work together at different stages of innovation from early research to farm applications. It is expected that over 4 thousand farms will be involved within 2 thousand experiments that are to adapt the process of digitization to the specific needs of farmers.

XV Polish-German conference „Cross-border power industry of Poland and Germany - the world of tomorrow's energy”

2018-11-21

The Department of the University of Zielona Góra in Sulechów, Lubuskie Association for Energy Development, Chamber of Power Industry and Environmental Protection, Brandenburg State, E.DIS AG and Chamber of Commerce of Eastern Brandenburg invite participants to the 15th Polish-German conference on 29 and 30 November “The cross-border power industry of Poland and Germany - the world of tomorrow's energy”. On the first day of the conference, the topics of the papers include

current challenges of energy recovery in the state of Brandenburg and the energy and climate policy of the European Union, challenges for regions. On the second day, lectures on energy efficiency are planned: «Breakthrough innovations in power engineering including cold production» «New support mechanism for high-efficiency cogeneration in Poland» and «Distributed heat and electricity distribution - Bad Belzig, as electricity and heat island». More: <http://www.pnke.pl/>

Researchers from Lublin awarded at Nuremberg iENA 2018

2018-11-22

In Nuremberg, the 70th International Fair „Ideas, Inventions, New Products” iENA 2018 was held. It is one of the largest European exhibitions of this type. Its awards were received also by the representative of the Maria Curie Skłodowska University in Lublin Dr. Aneta Ptasińska with her team. -Our scientists presented at the Fair solutions intended to treat bees disease - nosemosis. The jury awarded them a silver medal for developing a method of treating a fungal infection and supporting the immune system by enriching the winter diet of insects with Lactobacillus bacteria - says Katarzyna Skąlecka from the Press Office of the Maria Curie Skłodowska University in Lublin.

EURAXESS workshops - a portal for mobile researchers offering grants, scholarships, and jobs

2018-11-22

Regional Center for Innovation and Technology Transfer of the West Pomeranian University of Technology in Szczecin (RCIiTT) invites participants to the „EURAXESS - mobile researchers' portal. Grants, scholarships, jobs” Participants will learn how the portal works, how to search for job offers and grants for researchers, as well as set up their own account to be able to communicate with the scientific world and participate in events addressed to researchers. During the meeting, career planning tools offered by the portal as well as rules for creating and publishing a scientific CV will also be presented. The workshop will take place on November 29 at the RCIiTT in Szczecin at Jagiellońska 20-21. Due to the interactive form of classes, it is necessary for each participant to bring in their own mobile computer. The deadline for applications is Monday, November 26.

Scientists from Bydgoszcz and Toruń receive awards of Inova-Croatia 2018 Fair

2018-11-22

The scientists from Bydgoszcz and Toruń won prizes at Inova-Croatia 2018 Fair. More than 800 inventions from more than 30 countries competed for the medals in Zagreb. The gold medal in the category Best invention for special needs and the special prize of the Iran delegation were received by the scientists from the University of Kazimierz the Great, Collegium Medicum in Bydgoszcz and the Nicolaus Copernicus University in Toruń for the invention «3D printed passive exoskeleton for children with weakness in upper limbs». International Invention Show Inova Budi Uzor are considered the third oldest exhibition of inventions in the world. This year's Zagreb International Fair was visited by inventors, visionaries and scientists, entrepreneurs and representatives of commercial research centers and over 100,000 visitors from around the world.

Park of Space Technologies in Zielona Góra will be launched soon

2018-11-22

The administration of the Lubuskie voivodship announces a call for the implementation of the „Park of Space Technologies in Zielona Góra” project. The park is to be built on a plot in Nowy Kisielin belonging to the University of Zielona Góra. The concept of the Park assumes that the basis for its activities will be modern and professionally equipped laboratories, devices and test stands as well as data processing centers, whose profile will correspond to the directions of research and implementation work expected by companies operating in the innovation and space area. The park is to increase the innovativeness of the region. The Letter of Intent confirming the will to cooperate for the implementation of the project was signed in April by the Lubuskie Voivodeship, the Space Research Center PAS and the University of Zielona Góra. The partner is the HERTZ Systems Ltd. More: <http://www.infoserwis.uz.zgora.pl/index.php?rusza-konkurs-na-budow-parku-technologii-kosmicznych>

Project „Innovation in technology transfer procedures: Science - Industry”

2018-11-23

As part of the Dialog program financed by the Ministry of Science, four Polish research centers: AGH University of Science and Technology in Kraków; Polish Academy of Sciences; Częstochowa University of Technology and Warsaw University of Technology carry out the project „Innovations in technology transfer procedures: Science - Industry”. Prof. Eng. Zbigniew Kąkol from the AGH University of Science and Technology emphasizes, that it is necessary to remodel the view of modern universities to pursue education, research, and the practical use of know-how, where cooperation between science and business becomes one of the most important factors of innovation processes. - Industry expects knowledge transfer from science. We do not expect scientists to

come up with something and open a factory. We do not know this and we do not have to deal with this. The initiator of such activities must be the industry - added Prof. Kąkol.

PKP Group and the Industrial Development Agency S.A. to look for innovation for the railways

2018-11-23

As part of launched „INNOVATIONS - # Kolej2023” the start-ups will be able to submit their modern solutions that may be applicable on the railway. The jury composed of representatives of four railway companies and venture capital funds will select the winners for attractive financial prizes. The organizers will look for modern solutions in the following categories: Railway for a Passenger; Innovative Railway Technology; Modern Marketing and Sales and Ecology, Electro-efficiency, Electromobility. Representatives of start-ups, small and medium-sized enterprises and research and development units may report to the competition. Developers of exceptionally interesting solutions can get the chance to carry out a pilot implementation within the infrastructure of the PKP Group. The competition is organized by PKP S.A., PKP Intercity S.A., PKP Polskie Linie Kolejowe S.A., PKP CARGO S.A. and Agencja Rozwoju Przemysłu S.A.

West Pomeranian University of Technology awarded in the contest „Website without barriers“

2018-11-23

The website of the West Pomeranian University of Technology in Szczecin was awarded in the nationwide competition „Website without barriers.“ The jury awarded the service that complies with WCAG 2.0 requirements and has been consistently maintained and supplemented in a friendly way for people with disabilities. WCAG 2.0 is a wide range of recommendations for creating websites to be more accessible. This award means that the service is friendly and adapted to the needs of people with various disabilities: blindness, partially sighted, deaf or with restricted organs. The prize was won by Anna Czekalska, www.zut.edu.pl website coordinator and administrator, who creates the university website every day implementing WCAG 2.0 standards. She also trains content editors and coordinates their work.

Inventions of researchers from the University of Warmia and Mazury awarded at the fair in Croatia

2018-11-26

Researchers from the University of Warmia and Mazury (UWM) in Olsztyn won medals from Inova inventor's fair - Budi Uzor 2018, which took place in Croatian Zagreb. During the Croatian fair, Prof. Robert Wójcik from the UWM Institute of Civil Engineering received a gold medal for a pneumatic-vibratory feeder for mortar injection. PhD students from the Faculty of Technical Sciences of the UWM - Mateusz Pietkiewicz and Andrzej Ostrowski received a silver medal for a prototype of a breakwater producing electricity. Eliza Popławska-Jodko, director of the Center for Innovation and Technology Transfer of the University of Warmia and Mazury in Olsztyn emphasized, that the UWM has been at the forefront of Polish higher education institutions in terms of the number of patents and innovations.

Scientists from Toruń win the iENA 2018 prizes in Nuremberg

2018-11-26

Inventions of scientists from the Nicolaus Copernicus University have won medals and special awards of the 70th International Fair „Ideas, Inventions, New Products iENA 2018“ in Nuremberg. They won the silver medal for «Method of obtaining hybrid carbon materials containing oligoheterocyclic compounds», the bronze medals for «Intravascular stent with properties that accelerate healing of the implant site and reduce the occurrence of thrombosis» and «Preparation with adaptogenic effect based on extract from Eleutherococcus senticosus and method of preparation with an adaptogenic effect based on an Eleutherococcus senticosus extract.» The special award of the Association of Inventors of Taiwan was received by the authors of the invention: «Method of obtaining a biological preparation of fungal origin accelerating the degradation of polymer materials and biological preparation».

University Clinical Center in Gdańsk wins the „Innovation Code“ competition

2018-11-26

The University Clinical Center of the Medical University of Gdańsk was awarded in the competition „Code of Innovation“ for the use of bar codes for the identification of medical devices, which can provide the elimination of medical errors. Implementation works of the medical barcode identification system started in Gdańsk in 2015. The goal was the efficient assignment in the IT system of a medical device used in the treatment process for a particular patient - based on a global standard for tracking and tracing products (so-called traceability). The competition is organized by the GS1 Polska Foundation - the only institution authorized to accept companies from Poland and the EU to the GS1 System and to grant them the right to use GS1 codes. The global GS1 organization operates in 150 countries around the world. From 2018, it awards prizes to companies and organizations that use GS1 standards to improve their efficiency.

Polish researchers become leaders of the work on artificial intelligence

2018-11-27

Polish experts working on the development of artificial intelligence are considered the world leaders of AI. They participate in many studies in scientific centers, especially abroad. Polish technologies introduced into foreign markets are often better than those which have been offered up to now. The Polish government has a plan to use the potential of specialists in artificial intelligence. In November, the Ministry of Digitization published «Assumptions for AI (artificial intelligence) strategy in Poland». It assumes, among other things, the creation of a central repository of anonymous medical data, which will be completely or partially open. The action plan of the Ministry of Digitalization in 2019 also provides support for the development of a new AI program in the economy, the creation of the Digital HUB of Innovation and the launch of a virtual institute of artificial intelligence.

Nicolaus Copernicus University in Toruń to implement a modern IT system

2018-11-27

The Nicolaus Copernicus University in Torun has signed an agreement with the company SIMPLE SA, which will provide and implement an IT system supporting the university management process - System Integrating Science, Didactics, Research and Administration (SINDBAd). The new tool will cover the areas of finance and accounting, HR and payroll, planning and analysis, purchasing, education and science and projects. Its implementation will reduce the need to repeat the same data into the IT system and enhances the effects of the processing of this data. SINDBAd will also allow electronic introduction of many processes - especially the circulation of accounting documents. The SINDBAd system will be implemented as part of the Universitas Copernicana Thoruniensis In Futuro project - modernization of the Nicolaus Copernicus University as part of the Integrated Program of the University. The project also provides training dedicated to administration employees.

Scholars of the Institute of Aviation participated in the ESA Clean Space Industry Days 2018

2018-11-29

Employees of the Space Technology Center at the Institute of Aviation from November 23 to November 25, 2018 participated in the ESA Clean Space Industry Days 2018 in the Dutch Noordwijk. During the event Eng. Paweł Nowakowski from the Department of Space Technology presented the latest results related to the development of «dedicated propellant», developed by a Polish consortium led by the Institute of Aviation. The consortium includes: Mesko S.A., Institute of Organic Industry and Gamrat Special Production Plant. The Polish solution is very popular in the European industry, and elaborating it is to be continued together with the European Space Agency.

Students' science club of the Wrocław University of Technology wins the Pro Juvenes competition

2018-11-29

The „Robocik” Scientific Association of Automation and Robotics won the Pro Juvenes competition organized by the Students' Parliament of Poland. Students of the Wrocław University of Technology were appreciated for their creative activities and innovative projects. The main project of the young constructors is the autonomous underwater robot. In August 2018, it took part in the RoboSub competition in California, reaching the semi-finals and winning a special prize for the best computer simulation in the Unity environment. Students announce the construction of a new version of the robot to fight for top positions in the competition. The «Robocik» has been operating at the Faculty of Mechanical Engineering since 1997 and is one of the oldest at the university. The student projects included sorting industrial robot using artificial neural networks, a vision system for work, as well as an autonomous vehicle model.

Cooperation agreement between the University of Gdańsk and the STARTER Business Incubator

2018-11-29

The University of Gdańsk will cooperate with the STARTER Business Incubator. The agreement signed by both institutions is the beginning of long-term cooperation on many levels. STARTER organizes industry conferences where specialists meet the representatives of the business, education, start-ups and the port and logistics industry - Signing a contract is a crucial step in the life of our university - says its head Dr Jerzy Piotr Gwizdała. Thanks to it, students will be able to take part in many interesting projects, gain experience and practical skills, and lecturers will receive new development opportunities. The agreement provides for joint organization of scientific conferences, symposia, as well as various forms of knowledge transfer and mutual inspiration in the implementation of relevant research, technology transfer and commercialization of research results.

Polish technology on the Arabian Peninsula

2018-11-30

Dr Rashed Ali Hashem, a public school teacher from the United Arab Emirates, won the prize worth over PLN 1 million in the competition for the best teacher in the Persian Gulf region. The jury appreciated the teacher who funded 12 modern laboratories at his school from his own funds. One of the laboratories was equipped with the „Magic Carpet” from Poland. Michał Zębik from Good One PR informed that the awarded project consisted in laboratories presenting scientific achievements and encouraging physical activity. One of them is equipped with the «Magic Carpet» - an interactive projector from the Polish company Funtronic, supporting physical and mental activity. «Magic Carpet» is a device that is used as a support in pre-school and early school education. The interactive projector, directed by hand and leg movements provides with a set of multimedia exercises, games and motion games, thanks to which children learn the basics of English, maths, history and even programming.

The „Perspectives - Women in Tech Summit 2018” conference held in Warsaw

2018-11-30

On November 27-28, 2018, the conference „Perspectives - Women in Tech Summit 2018” took place in Warsaw. The partner of the event was the Ministry of Science and Higher Education, with the honor guest Maria Gabriel, European Union commissioner for the digital economy and digital society. The aim of the conference organized by the Perspektywy Educational Foundation is to support innovation in the area of IT and new technologies, as well as international promotion of Poland as a place of high quality IT education. Over a thousand talented women from Europe and Central Asia took part in the conference. Plenary sessions, workshops and debates accompanying the event concerned mainly the future of IT and Big Engineering, and enabled the acquisition of industry knowledge, what helped to develop a network of contacts and to plan the next steps of the career. More: <https://womenintechsummit.pl/pl/>

Opole receives over 14 million PLN for modern ICT solutions

2018-11-30

Over PLN 14.3 million will be allocated to 47 companies from the province Opole, which intend to implement modern ICT solutions. Subsidies could be obtained for modern customer service systems or IT and communication systems to improve the operations of enterprises. The ideas that have received funding include design of a microprocessor production, casting line monitoring system, sales platform and IT system supporting the recruitment company. This is the second call in which Opole Center of Economy Development supports modern solutions. In the first call it supported mobile training platform, virtual trade fair system, videolearning platform, implementation of a specialized online sales system and an IT system for automating internal processes and innovative laboratory software.

Innovative method of modelling tree growth developed at the University of Agriculture in Krakow

2018-12-03

The team of Prof. Jarosław Socha from the Faculty of Forestry University of Agriculture in Krakow developed an innovative method of modelling tree growth with use of the results of aerial laser scanning. - Until now, the estimation of tree growth in large areas of the country was imprecise and based on obsolete models. We have shown as the first in the world that repeated aerial scanning allows to work out the tree growth models and observations of trees on tens of thousands of hectares or even throughout Poland. Previously, this was impossible due to logistical reasons - says Prof. Socha. The new method was developed thanks to funds obtained from the National Center for Research and Development.

Graduates of the Gdańsk University of Technology design a high-performance cooling system for vehicle batteries

2018-12-03

Byotta - a spin-off company created by graduates of the Gdańsk University of Technology has designed a high-performance cooling system for batteries of electric vehicles. The solution will be tested in cooperation with Przedsiębiorstwo Komunikacji Trolejbusowej in Gdynia. The designed system is to be a combination of an active liquid cooling system using the heat exchangers of the original design and passive cooling using variable phase materials. It is to shorten significantly the time of charging the battery and extend its performance. It also has to recover part of the waste heat to warm the vehicle. - The aim of our project is to create a temperature management system of the battery that will allow to maintain the optimal temperature of the battery even in extreme situations, i.e. during very fast charging or very dynamic driving - explains the company's

president Mariusz Smentoch. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/nowa-spolka-spin-off-pg-pracuje-nad-sytemem-chlodzenia-baterii-do-jazdzajdow-elektrycznych

Institute of Psychology of the Polish Academy of Sciences developed an application that supports the fight against addictions

2018-12-04

Researchers from the Institute of Psychology of the Polish Academy of Sciences have started the Nationwide Study of Addictions. For this purpose, they have created a special application Nalogometr. The application is to collect data about compulsive hunger from people with addictions. Every day, people willing to participate in the study will be asked about the perceived exacerbation of compulsive hunger with the use of a special scale. The ophthalmologist will also ask participants about well-being and ask to complete surveys concerning our life. This will allow researchers to understand the scale of the addiction problem and develop support methods. Data collected in the Nalogometer will be forwarded to the Institute of Psychology of the Polish Academy of Sciences. They are fully anonymous, and access to the application is protected by a PIN code. Download the application: <https://play.google.com/store/apps/details?id=pl.badanienalogow.nalogometr&hl=pl>

Center for Genetic Engineering established at the University of Environmental and Life Sciences in Wrocław

2018-12-04

The Center for Genetic Engineering equipped with modern and unique research infrastructure was opened at the Faculty of Veterinary Medicine at the University of Life Sciences in Wrocław. The creation of the center cost nearly PLN 5.5 million. The Center's equipment allows students to breed and

conduct biomedical basic and preclinical research in vivo on small animal models, in an environment free of specific pathogens and in the conditions of good laboratory practices (GLP). The Center will also be a place for training students and PhD students. Scientists of the University of Life Sciences in Wrocław have many years of experience in the application of genetic engineering techniques to create genetically modified cells and animal research models. Currently in cooperation with the Wrocław Medical University it conducts research on the molecular mechanisms of resistance to chemotherapy of breast cancer cells. More: http://www.glos.upwr.edu.pl/aktualnosci/48665/centrum_inzynierii_genetycznej_upwr.html

Laureate of the Foundation for Polish Science program becomes also Entrepreneur of the Year

2018-12-05

Dr Filip Granek, the winner of the HOMING PLUS program, as well as the founder and president of the XTPL nanotechnology company, was awarded the Entrepreneur of the Year prize in the 16th competition organized by Ernst & Young. Dr. Granek is one of the world's best specialists in modern solar cell manufacturing and nanomaterial-based technologies. The jury honored him with the title Entrepreneur of the Year 2018 for «working on breakthrough technology that has a serious chance to change the world for the better.» Dr Granek will represent Poland during the international final of the EY World Entrepreneur of the Year 2019 competition, which will take place in June next year in Monaco. More: <https://przedsiębiorcaroku.pl/news/filip-granek-prezes-xtpl-s-a-zostal-przedsiębiorca-roku-2018/>

University of Gdańsk opens Laboratory of simulation of television recordings and film documentation

2018-12-05

University of Gdańsk launched a modern simulation laboratory for television recordings and film documentation. The laboratory is interdisciplinary and first of all it will serve students from two practical faculties - journalism and social communication as well as knowledge about film and audiovisual culture. This is one of the most modern film laboratories in Poland. For its creation, the University received funding under the Regional Operational Program of the Pomorskie Voivodeship for the years 2014 - 2020 in the amount of over PLN 4 million, while over PLN 1 million is own contribution. During the opening ceremony, a live program was recorded and the laboratory's possibilities could be assessed. The guests listened to information from the University of Gdańsk, conducted by spokeswoman Dr Beata Czechowska-Derkacz and weather forecasts, presented by the university's chancellor Dr. Mirosław Czapiewski. https://ug.edu.pl/media/aktualnosci/80613/uroczyste_otwarcie_laboratorium_symulation_nagran_telewizyjnych_i_dokumentacji_filmowej_uniwersytetu

Satellite of students from Warsaw University of Technology launched

2018-12-06

On December 3, 2018, the Falcon 9 rocket from SpaceX launched from the United States Air Force base in Vandenberg, California. It brought into Space also a satellite constructed by members of the Student Astronautic Circle that operates at the Faculty of Power and Aeronautical Engineering at Warsaw University of Technology. The students have been working on the PW-Sat2 satellite for almost six years. This is the fourth Polish satellite, and the second one constructed by students of the Warsaw university. PW-Sat2 is a CubeSat satellite. It has a rectangular shape measuring 10 × 10 × 22 cm. Its mission will last 40 days. During the mission time,

it will do four experiments. The most important is to test the innovative deorbiting sail. The designed solution is to prevent the satellites that have already completed their mission from remaining in orbit. More: <https://pw-sat.pl/>

University of Gdańsk of Technology to launch Power of dispersed sources - interdisciplinary studies

2018-12-06

The University of Gdańsk and the Gdańsk University of Technology will create a joint interdisciplinary and unique field of study - Energy of dispersed sources. Both universities have signed an agreement on this matter. Establishing this new field of study is a response to the needs of the development of a modern state. In the opinion of experts, the dispersed power industry provides much more security to the state's energy security than the centralized one. At the same time, the role of conventional energy is decreasing, while the share and importance of renewable energy sources are growing. The new field of study will be run by both universities, a joint program will also be prepared. Access to the best specialists as well as laboratories of the University of Gdańsk and the Gdańsk University of Technology will ensure a high level of education quality.

Students of the Białystok University of Technology win Robotex 2018 competition

2018-12-07

Students of the Białystok University of Technology won the second and third place in the finals of the Robotex robotics competition 2018. The competition took place in Estonian Tallinn. This is another success of students from Białystok, the world champions in constructing and fighting robots on the ring. Students from the mechanical faculty of the Białystok University of Technology have already won at international robotics competitions in China, the United States and Romania. Financial support for the construction and improvement of their constructions and participation in the competition was given to the team as part of

the project of the Ministry of Science and Higher Education „The best of the best! 3.0.”

Poznań Science and Technology Park runs a genomic laboratory

2018-12-07

The Poznań Science and Technology Park of the Adam Mickiewicz University Foundation opens a genomic laboratory. A modern equipped lab will conduct research in the field of molecular biology. The laboratory's tasks will include processes aimed at preparation of sequencing material, mainly DNA / RNA isolation from the supplied material and its purification, e.g. isolation of genetic material from contaminated culture or from a fragment of tissue. The laboratory will conduct research, development and commercial research. In the case of genetic crosses and transgenic plants, DNA sequencing and reading of the genetic code can be used to select individuals with a characteristic that can be transferred to the next generation. It speeds up the research process of introducing new varieties of useful plants, recognizing bacterial species, and exploring the mechanisms of genetic diseases.

Electric cars and charging stations on the campuses of the University of Silesia

2018-12-07

Electric cars and charging stations will be available on the campuses of the University of Silesia. It will be possible thanks to the cooperation of the university with the company GreenGoo Ltd, a local car-sharing operator and the owner of electric car charging station. The company will install charging stations in Katowice, Sosnowiec, Chorzów and Cieszyn, and will provide several dozen electric cars on a car-sharing basis for the academic community, residents and tourists. Users will be able to drive the vehicles by renting them for minutes using the mobile application. The charging station for electric vehicles is already commissioned on the premises of the Chorzów campus. In the near future, investments will be completed in subsequent locations.

Satellite with a communication system created at the Wrocław University of Technology already launched in space

2018-12-10

The ESEO S-50 scientific satellite with a telecommunications system constructed by scientists and students of the Wrocław University of Technology has been launched into space from the Vandenberg base in California. The system is an original development with technical solutions created entirely at the Wrocław University of Technology. It consists of a microwave transmitter, a satellite onboard computer and a microwave antenna. His task is to manage the exchange of transmitted data. The whole device weighs 0.8 kg, and the antenna, made of ultra-light materials, weighs less than 40 grams. The transmitter allows scientists to send a large amount of satellite data to a ground station with a speed of 10 Mbit / sec. The ESEO (European Student Earth Orbiter) satellite was created as part of the educational program of the European Space Agency, implemented since 2000. It was attended by 30 European universities, including the Wrocław University of Technology.

Platform to combine science and business

2018-12-11

The University of Warsaw has held a conference dedicated to the Universality platform, which is an intelligent system supporting the improvement of competences in the new or unique technologies among students, combining learning with business. It provides for direct contact between companies and academic staff. - Solutions such as Universality can make lecturers and universities look at the teaching process differently than before. The platform shows us in which direction teaching could go - said Piotr Dardziński, deputy minister of science and higher education during the conference. The main goal of the project is to train competencies for business needs. Entrepreneurs, students and universities benefit from this solution. The platform is

already used by 13 universities from all over Poland and nearly 1,000 students. Currently, 14 companies have established cooperation, including Microsoft. More: <https://www.gov.pl/web/nauka/universalnosc-polski-start-up-laczy-studentow-informatyki-z-pracodawcami>

Chemical department of the Wrocław University of Technology equipped with mass cytometer

2018-12-11

The Laboratory of Imaging is launched at the Faculty of Chemistry of the Wrocław University of Technology. The facility has been already equipped with the mass cytometer, the most modern device for the analysis and diagnosis of cellular samples and advanced proteomics. This is only one device of this type in Poland. Mass Cytometry is an analytical technique that has recently revolutionized modern medical diagnostics in academic laboratories and the pharmaceutical industry. It uses mass spectrometry, sample testing by means of mass spectra analysis of metal atoms, which are used as markers. With the mass cytometer, scientists can test, for example, cancer cells or leukemia cells, blood cells, and even cells from parasites and bacteria. At the Wrocław University of Technology, the device will be used primarily for the study of proteolytic enzymes (proteases) - specialized proteins that break down peptide bonds. More: <http://pwr.edu.pl/uczelnia/aktualnosci/cytometr-masowy--ultranowoczesny-aparat-pomozew-diagnostyce-11042.html>

AGH University of Science and Technology becomes a leader in the competition „Modern material technologies - TECHMATSTRATEG”

2018-12-12

The National Center for Research and Development has announced the results of the second competition as part of the strategic research and development program „Modern

material technologies TECHMATSTRATEG”. Half of the 12 projects recommended for financing will be carried out by the consortia with the participation of the AGH University of Science and Technology in Kraków.

The TECHMATSTRATEG program covers five strategic areas: construction materials technologies, technologies of photonic and nanoelectronic materials, technologies of functional materials and materials with designed properties, waste-free material technologies and technologies of biodegradable engineering materials and material technologies for energy storage and transmission.

TECHMATSTRATEG is to stimulate the growth of innovation and competitiveness of the Polish economy. The total budget of the program is approx. PLN 200 million.

Mars rover developed by students of the Wrocław University of Technology awarded in Estonia

2018-12-12

The Unconventional Vehicles Circle OFF-ROAD took first place in the prestigious Robotex 2018 competition in Estonia. Students of Wrocław University of Technology were awarded for their Mars rover Scorpio X. Scorpio X is the sixth rover created by members of the OFF-ROAD circle. It has a modular structure, and its construction was made mainly of aviation aluminium and polyamide, light materials with excellent mechanical properties. The tires of the vehicle have very good adhesion features due to being made of corduroy and filled with foam granulate. The rover has four-wheel drive, each wheel is powered by a separate BLDC 250W engine. Thanks to this, it has enough power to overcome even the most demanding terrain and obstacles, such as holes and steep approaches. Robotex is the biggest international event addressed to fans of robotics. It takes place in the exhibition center in Tallinn. More: <http://pwr.edu.pl/uczelnia/aktualnosci/scorpio-x-nagrodzony-w-estonii-11049.html>

Researchers of the University of Economics in Poznan help design a vehicle for the police

2018-12-12

At the beginning of January, a patrol and intervention vehicle co-created by scientists from the University of Economics in Poznań will be tested by the police. Work on the project lasted almost a year. The prototype that changes the current way of thinking about the functionality of the police fleet was created as part of a research and development project. It was developed by a consortium of three partners: the Polish Internal Security Platform (coordinator), the Special Purpose Vehicle of the University of Economics in Poznań (scientific partner) and the GERMAZ Automobile Home (industrial partner). The project was financed in 100 percent from the consortium's own resources. The aim was to create a vehicle best tailored to the Police's needs, with a thorough consideration of the officers' opinions and expectations, strictly as an innovative research and development project.

Polish suborbital rocket from the SIR segment designed in Gdynia

2018-12-12

Engineers from the SpaceForest company are working on a suborbital project of SIR (Suborbital Inexpensive Rocket) rockets. Their rocket Perun will compete with other rockets of this type. The Perun is designed and developed by SpaceForest as part of a project co-financed by the National Center for Research and Development. The aim of the project is to create the first Polish rocket capable of 50 kg of cargo to the altitude of 150 km. The launch of a full-size rocket model is planned for the fourth quarter of 2019, while the ready rocket is to be launched in 2022. According to the president of Space Forest - Robert Magiera - Perun will be able to offer a profitable platform for research in the microgravity environment and can become an attractive commercial choice for clients on the Polish and foreign markets, offering the lowest prices for such services in the world.

Innovative method of producing a titanium nitride layer on metal substrates developed at the National Center for Nuclear Research

2018-12-13

Dr Eng. Marek Barlak from the National Center for Nuclear Research (NCBJ) in cooperation with scientists from the Institute of Electronic Materials Technology patented an innovative method of producing the titanium nitride layer on metallic substrates. The aim of the project was to «develop a method for the production of titanium nitride layer with uniform phase composition, high durability and abrasion resistance with maintaining the lowest possible coefficient of friction and good adhesion to the substrate». An example of practical application of the patent is the production of bearings. The patented method is based on combining two techniques into one technological cycle: techniques of intensive plasma impulses and isothermal methods of heating in a nitrogen atmosphere.

Warsaw University of Technology to launch CENAGIS - Center for Scientific Geospatial Analysis and Satellite Calculation

2018-12-13

Warsaw University of Technology is planning to establish a center of world-class geospatial scientific analyses that will use the latest geoinformatic and IT technologies. This is the goal of the CENAGIS project carried out by the Warsaw University of Technology together with the companies OPEGIEKA Elbląg, Hexagon and Cloudferro. The project «Center for Scientific Geospatial Analysis and Satellite Calculation (CENAGIS) and laboratories for testing / certification of geomatic products» will be co-financed from the Regional Operational Program of the Mazowieckie Voivodeship. The value of the project is nearly PLN 25 million, of which the European Union will allocate PLN 18.8 million. The main idea of geospatial scientific analyses within the CENAGIS

framework will be the development of new models and algorithms for data analysis for industry, services and offices.

Innovative product created by scientists of the Jagiellonian University strengthens the resistance of fish

2018-12-13

An innovative product created by researchers from the Jagiellonian University (Jagiellonian University) in Krakow strengthens the immune system of fish. Since imported fish have to endure the inconvenience of a long-term transport, breeders prophylactically give them antibiotics, which may also have side effects - explains Dr Wojciech Fiałkowski. Meanwhile, the new product, patented by scientists from the Jagiellonian University: Dr Wojciech Górecki, Dr Wojciech Fiałkowski, Dr Łukasz Pijanowski and Dr Eng. Monica Komorowska strengthens the immune system of fish and antibiotic therapy is not necessary. The product is used externally, it is mixed with the water in which the fish are transported. It is absorbed through the skin and digestive system. This is a completely innovative way of administering this type of drugs.

Polish researcher to test the unusual properties of Haller's cress

2018-12-17

Dr Alicja Babst-Kostecka from Władysław Szafer Institute of Botany within Polish Academy of Sciences in Kraków won the award of the Ministry of Investment and Development 'Polish investments of the future' in the 'Innovations for the environment' category. The aim of the prize is to award people who successfully implement ambitious projects for environmental protection. The subject of the awarded project is the Haller's cress (Latin *Arabidopsis halleri*) - a white-flowering perennial which has spread to mining heaps and mines, i.e. contaminated areas with high concentrations of heavy metals in the soil. Haller's cress attracted the attention of scientists thanks to its ability to survive in such conditions. It turned out that it is a so-called hyper accumulator and can accumulate from 100 to 500 times more heavy metals than other plants. Dr Babst-Kostecka's team prepared an EU project to check its features and how it can be used.

Project of scientists from the Krakow University of Agriculture awarded in the international competition

2018-12-17

The project developed with the participation of Polish scientists was awarded in the international competition in the field of forest management under the name „ForestValue - Innovating the forest-based bioeconomy”. The project «Innovative strategies of forest management for sustainable bioeconomy in the era of changing climatic conditions and weakening of the stability of forest stands (I-MAESTRO)» will be implemented by a Polish team from the University of Agriculture in Krakow under the direction of Prof. Eng. Jarosław Socha in cooperation with research groups from France, Germany and Slovenia. The coordinator of the international consortium is the National Research Institute of Science and Technology for Environment and Agriculture (IRSTEA) from France. More: <https://forestvalue.org/>

New biofuel production technology developed at the Poznan University of Technology

2018-12-17

Dr Eng. Piotr Oleśkowicz-Popiel from Poznan University of Technology won the AgroBioTop competition. The award committee appreciated the development of an environmentally friendly new technology for producing biofuels from wastes from cheese and yogurt production. The developed technology is single-stage and based on the use of acid whey. Poland ranks fourth in Europe (after Germany, France and Italy) in the production of cottage cheese. The by-product of the production is whey, which is usually simply drained to sewage, and sometimes is directed to lakes or rivers. EU countries have pledged to reduce food waste to 30% in 2025 and 50 percent by 2030. The technology developed by Dr Eng. Piotr Oleśkowicz-Popiel for the production of biofuels supports the achievement of this objective, also affects the diversification of sources of energy production. The AgroBioTop award committee is appointed by the Biotechnology Committee of the Polish Academy of Sciences. More: <https://www.agropolska.pl/o-firmach/nagroda-agrobiotop-za-technologie-wytwarzania-biopaliw-z-odpadow,1450.html>

Modern animal laboratory opened in Poznań

2018-12-17

In the Wielkopolska Center of Advanced Technologies in Poznań Animal Laboratory was launched. It is one of the most modern facilities in Poland that creates opportunities for in vivo and in vitro research in biomedical sciences, with particular emphasis on pharmacology, toxicology, oncology and pathophysiology. The facility is housed in a building adapted to SPF (Specified Pathogen Free) animals and transgenic animals. It is equipped with a continuous and emergency ventilation system with three types of filters, pass-through autoclaves, automatic washers and locks with air shower for staff, as well as imaging equipment in vivo, computer tomographs,

analytical and histological laboratories. The Animal Laboratory enables the molecular and physiological examination of pathomechanisms of human diseases (infectious, cancerous, genetically determined) with the use of appropriate animal models.

Scientist of the Medical University in Wroclaw creates an innovative wound treatment workshop

2018-12-17

The scientist of the Medical University of Wroclaw is creating an innovative wound treatment workshop to use ESW - Extracorporeal Shock Wave. The project will be implemented as part of the Mozart program 2018/2019. The leader of the project «Decumed: Organization of an innovative workshop for treating chronic wounds with shock waves» is Dr Robert Dymarek from the Department of Nervous System Diseases. The aim of the project is to shorten the duration of therapy, reduce pain and exudate from the wound, as well as reduce the stress associated with impaired healing, minimize the occurrence of complications, and improve the quality of life. The Mozart - Municipal Program of Supporting Partnership for Higher Education and Science and the Economic Activity Sector is a program adopted in 2012 by the City Council of Wrocław. Its aim is to support the Wrocław labor market by enabling companies to access the intellectual potential of scientists. More: <https://wca.wroc.pl/dr-robert-dymarek-decumed-organizacji-innowacyjna-pracowni-leczenia-ran-przewleklych-skory-z-aposowania-fali-uderzeniowej>

State Higher Vocational School in Zamość opens a laser shooting range simulator

2018-12-19

The State Higher Vocational School (PWSZ) in Zamość has opened a national security studio, equipped with a laser shooting range simulator. The laser shooting range was created to familiarize students with the basics of shooting training. It includes learning of shooting attitudes, learning to handle weapons and aiming. It is to prepare students for shooting with combat ammunition. - We introduce innovative solutions that aim to improve the quality of education and preparation of young people who will graduate. We are constantly developing and improving our didactic base. The moment has come that we are opening a modern workshop, which includes a laser shooting range and other elements related to the sphere of security for the faculty of national security - said Prof. Andrzej Samborski, Rector of the State Higher Vocational School in Zamość.

Researcher at the University of Technology and Humanities in Bielsko-Biała wins the Quarry Life Award

2018-12-19

Dr Damian Chmura prof. Academy of Technology and Humanities in Bielsko-Biała (ATH) in cooperation with Dr Tadeusz Molenda of the University of Silesia won the Quarry Life Award for the work „Environmental determinants of succession in mineral aggregate mines as the basis for their reclamation”. The authors based on the conducted botanical and hydrological studies and presented the concept of restoring the natural value of the «Wójcice» mineral aggregate mine after possible discontinuation of operation. Their work was awarded in the category of biodiversity management and research on habitats and species. The Quarry Life Award is a science and didactic contest aimed at promoting the diversity of local flora and fauna, raising awareness of the biological value of mining areas and seeking ways to increase their biodiversity. In the fourth con-

test 6 of over 20 projects were selected for funding and 4 of them were awarded.

Wrocław University of Environmental and Life Sciences to participate in the international project RUBIZMO

2018-12-19

University of Environmental and Life Sciences in Wrocław, together with 15 partners from 10 European countries will implement the RUBIZMO rural development project. Project participants are to identify and select 50 successful business cases and 20 new business models to analyze replication conditions and develop tools: a virtual business case library; guidance on creating favorable conditions for the implementation of innovative business models; a set of tools for creating clusters and development of networks in rural areas and tools for support for transformation. The aim of the project is to contribute to the creation of new jobs and development in very diversified rural areas by stimulating and implementing innovative business models based on the value chains biology, environmental protection and the idea of sustainable development. More: http://www.glos.upwr.edu.pl/aktualnosci/48758/rubizmo_nowoczesna_gospodarka_wiejska

Students of the Warsaw University of Technology found a solution to turn the film into a comics book

2018-12-20

Comixify - a solution of students of the Warsaw University of Technology (PW) transforms the film into comics. The project interested film producers and comic book publishers in Europe and the USA. Comixify was created by students of the Faculty of Electronics and Information Technology at the University of Technology: Eng. Maciej Pęsko, Adam Svystun and Eng. Paweł Andruszkiewicz under the scientific supervision of the employees of the Department of Computer Graphics of the Institute of Computer

Science: Prof. Eng. Przemysława Rokita and Dr Eng. Tomasz Trzciński. On the Comixify website (<https://comixify.ii.pw.edu.pl/?ref=steemhunt>) viewers can see the comics generated from the fragments of the films „Pulp fiction” and „Star Wars: Part I - Dark Spectrum”. The tool can also be tested free of charge by uploading files (up to 50 MB) or by using links from YouTube.

Polish scientists and engineers to take part in the study of Jupiter's moons

2018-12-24

Polish scientists and engineers from the Astronika company and the Space Research Center of the Polish Academy of Sciences will take part in the JUICE mission (JUperiter ICy moon Explorer) implemented by the European Space Agency. In 2022, a space probe will be sent to Jupiter, which will investigate four of its moons: Io, Europe, Ganymede and Callisto. The probe is to conduct a search for liquid water under the surface of these objects, in terms of the possibility of life occurring on them. - Missions like JUICE have a taint of great geographic discoveries. Climbing to the heights of technological possibilities, we take up challenges that exceed our imagination. In the 15th and 16th centuries, overseas expeditions were sponsored by kings, today this function was taken over by modern governments. This function was also taken by the Polish government, noting the role of space projects in the Strategy for Responsible Development and adopting the Polish Space Strategy - said Deputy Prime Minister Jarosław Gowin.

Academy in Gorzów Wielkopolski to launch the physico-chemical laboratory and integrated data security center

2018-12-24

The Academy in Gorzów Wielkopolski opened a physicochemical laboratory with an integrated data security center. The facility will work for government and self-government institutions as well as the socio-economic environment. The mission of the laboratory and the Data Security Center will be implementing innovative solutions and services in the field of chemical technologies and information security and business continuity in accordance with the applicable legal status and specialist standards for the needs of government, self-government and socio-economic institutions. The students of the Academy's technical faculty will use the laboratories. In addition, thanks to cooperation with the socio-economic environment, research conducted in the laboratory will contribute to designing and creating solutions that will satisfy the needs and requirements of enterprises.

International study program based on practice developed at Gdańsk University of Technology

2018-12-24

The Faculty of Mechanical Engineering at the Gdańsk University of Technology launched a training program based on the Work-based learning (WBL) formula. Studies modelled on Austrian researches will be conducted first of all at the Technical University in Gabrovo in Bulgaria. In addition to the study program, a cluster of practices will be created - an electronic platform for companies to advertise vacancies and for students to apply and work on the basis of real industrial situations. In addition, e-workshops will be introduced, i.e. trainings for company mentors and academic teachers. There will also be a discussion forum devoted to the exchange of ideas, experience and best practices.

The aim of the project is to create a new partnership structure that promotes effective cooperation between technical universities and production companies, supported by local authorities and social partners. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/na-wydziale-mechanicznym-tworzony-jest-miedzynarodowy-program-studiow-opartych-na-praktyce

5 inventions from the Lodz University of Technology awarded at the Seoul International Invention Fair 2018

2018-12-27

Five inventions from the Department of Microelectronics and Information Technology of the Lodz University of Technology were awarded at the Seoul International Invention Fair 2018 in South Korea. Three inventions received gold, and two silver medals. The gold medal was received for the system of optimization of construction costs and exploitation of underground high voltage cable lines by Dr Eng. Andrzej Cichy, Dr Eng. Bartosz Sakowicz, Prof. George Anders and Dr Eng. Marek Kamiński. The second medal was awarded for the ARUZ project - Real-Complex Systems Analyzer, which is a chemical process simulator using FPGA (Field-Programmable Gate Array) technology by Dr. Eng. Jarosław Jung, Dr Piotr Polanowski, Dr Eng. Rafał Kielbik, Dr Eng. Krzysztof Hałagan, Dr Eng. Witold Zatorski, Prof. Jacek Ulański, Prof. Andrzej Napieralski and Prof. Tadeusz Pakuła, Marek Cieślak. The third gold medal was obtained by MSc. Piotr Perek, Dr. Eng. Dariusz Makowski, Dr. Eng. Aleksander Mielczarek and Prof. Andrzej Napieralski for the stereoscopic image registration.

Solar panels imitating plants - an innovative project of a student of the AGH University of Science and Technology

2018-12-27

Karolina Gocyk, student of the AGH University of Science and Technology in Krakow has developed an innovative device for controlling solar panels. The structure imitates the movements of plants following the most favorable sunshine. The project assumes placing a solar panel on a stem-shaped skeleton, which has smaller solar cells and the mechanisms controlling the structure connected to them. The skeleton is flexible and can move freely towards the changing position of the sun. It allows the panels to change the angle of inclination depending on the incidence of light, in order to use solar energy as effectively as possible. Karolina Gocyk won her award for the project during the Gdynia E(x)plory Week Festival 2018.

Researchers from the University of Warsaw to participate in EIT Food projects

2018-12-27

Researchers from the faculties of psychology, mathematics, computer science and mechanics and management at the University of Warsaw (UW) will participate in 19 projects financed by the Knowledge and Innovation Community in the area of EIT Food. EIT Food is part of the European Institute of Innovation and Technology - an institution of the European Union that supports innovation and entrepreneurship in Europe. EIT Food is a Knowledge and Innovation Community dealing with the modernization of the food sector. It is composed of 50 partners from 13 countries. These include universities, research units and enterprises, among others: University of Warsaw, University of Cambridge, Hohenheim University, Technical University of Munich, Bosch, Nestlé, PepsiCo, Siemens, Sodexo and Polish Maspex. The projects of the scientists from the University of Technology will be implemented in 2019 and concern education, innovation and communication.

Scientists from Białystok discovered the unusual properties of *Heterobasidion annosum*

2018-12-28

Researchers from the Medical University of Białystok (UMB) and the Białystok University of Technology filed a patent application on the use of *Heterobasidion annosum* pine to treat colorectal cancer. This is the result of research on the use of fungi found in the Białowieża Forest in the treatment of cancer. At the beginning of 2018, scientists reported the creation of a bank of extracts of over 150 fungi occurring in the Białowieża Forest, which is located at the Science and Research Center of the Faculty of Forestry at the Białystok University of Technology in Hajnówka. The properties of the *Heterobasidion annosum* were first tested on physiological cells and colon cancer cells grown in the laboratory, and then on laboratory mice. The patent application concerns a new application of this fungus that stops the development of colon cancer cells - informed Prof. Halina Car, head of the UMB experimental pharmacology department.

MBA studies for the IT industry at the Polish-Japanese Academy of Information Technology

2018-12-31

The MBA program for the IT industry is a new initiative of the Polish-Japanese Academy of Information Technology (PJATK) in Warsaw and company Microsoft. Applications will be accepted until March 1, 2019. MBA studies for the IT industry of the Polish-Japanese Academy of Information Technology in cooperation with Microsoft, aim to broaden, supplement and systematize knowledge about the IT market in Poland and in the world. The studies are to provide students with modern knowledge in management, company development strategy, analysis and methodology of solving business problems based on the specifics of the IT industry. The MBA program for the IT industry is addressed to the middle and top management. The condition of participa-

tion is completed studies and several years of professional experience. More: <https://mba.pja.edu.pl/>

Graduate of the Gdańsk University of Technology receives Award of the Polish Association of Plastics Converters

2018-12-31

MSc. Agnieszka Sulowska from the Department of Polymer Technology at the Faculty of Chemistry of the Gdańsk University of Technology took the first place in the competition of the Polish Association of Plastics Processing Processors for the best diploma thesis in the field of plastics. The awarded work concerned the use of polyetherresils in tissue engineering - combining engineering with medicine in the field of science, which aims to repair damaged tissues. It uses a combination of biomaterials, cells and bioactive components that create a functional structure to support tissue regeneration. Tissue engineering uses special scaffolds of porous tissue developed from natural polymers, synthetic polymers and inorganic biomaterials. They can be used in the processes of bone regeneration, cartilage, liver, wound healing, treatment of cardiac anemia and as a drug release system.

New solution in tomographic and microtomographic tests

2018-12-31

Researchers from the University of Silesia are co-authors of the solution used in tomographic and microtomographic studies to obtain a more precise picture of the structure of a given object. The method has been already patented. «Method for the preparation of an object constructed of a material with low X-ray absorption coefficient for X-ray examinations» was developed by Dr Andrzej Woźnica, Dr Jagna Karcz and Jerzy Karczewski, in cooperation with Dr Marcin Binkowski. The inspiration to the invention was the study of the structure of freshwater sponges *Spongilla lacustris* - primitive aquatic animals living in colonies and characterized by various asymmetric shapes. To get to know them more ac-

curately, a team of biologists from the University of Silesia decided to recreate the internal structure of sponges in the form of a three-dimensional image using computed tomography and microtomography. More: <https://www.us.edu.pl/obraz-z-badania-tomograficznym-bedzie-jeszcze-dokladniejszy-patent-dla-us>

Researchers at the University of Warsaw developing digital attachments for operational microscopes

2019-01-02

Researchers from the Faculty of Physics of the University of Warsaw (UW) are developing digital attachments for operational microscopes, thanks to which the microscope image can be displayed on the monitor. Until now, operations under the microscope are usually done so that the surgeon sits for many hours leaning over the microscope and observes the operating field through a pair of glasses. - Our solution allows surgeons to look at a very large, three-dimensional screen displaying what the microscope sees, instead of looking into microscope glasses, - said Dr Piotr Wasylczyk, assistant professor at the Faculty of Physics, University of Warsaw. He emphasizes, that such an attachment to existing microscopes is the first step for them to re-develop completely a digital stereoscopic microscope.

PW-Sat2 satellite's deorbiting sail is unfolded!

2019-01-03

On December 29, 2018, the key point of the student satellite mission of the Warsaw University of Technology (PW) was completed. Within experiment schedule the deorbiting sail received sent signal and was unfolded. The unfolding of the sail took place earlier than planned. This reason was a warning from the US office regarding the tracking of space debris with a facility threatening the PW-Sat2 satellite. On December 27, 2018, the object marked SCC # 39841 passed PW-Sat2 at a speed of about 3.6 km / s, at a distance of only 79 meters. A deorbit sail increases the aerodynamic resistance of the satellite, and thus it will reduce its velocity in orbit. Later, the satellite will fall lower, until it finally burns in the atmosphere of the Earth. According to Warsaw students, this should happen within 12 months. A satellite without a deorbiting sail would have been in orbit for up to 20 years.

„Partnership for Innovation“ conference to be held at the Krakow University of Technology

2019-01-03

The Technology Transfer Center of the Krakow University of Technology together with the American Chamber of Commerce in Poland invites participants to the conference „Partnership for Innovation“ on January 15. The conference is to summarize the «Incubator of Innovation +» project, under which 16 pre-implementation works were selected at the Krakow University of Technology in spring 2017 within the TRL + competition. The Investment Committee of representatives of science and business chose projects with the highest implementation potential. The event will also be an opportunity for scientists from Krakow to establish direct contacts with representatives of American and Polish companies interested in the commercialization of their solutions.

Program developed at the Warsaw School of Economics helps to make decisions

2019-01-03

The SilverDecisions program developed in the Decision Support and Analysis Department of the Warsaw School of Economics (SGH) was included into the Innovation Radar program by the European Commission. The SilverDecisions program is used to support decision making using the decision tree method and is a graphical presentation of the relationship between successive actions and the possible consequences of these actions, and enables the analysis of uncertainty accompanying the decision-making process. Today the program is used by law firms in the US to translate the potential results of various activities to clients and doctors to illustrate possible treatment scenarios for patients. The software is also used at universities for scientific and didactic purposes. The user community has exceeded 60,000 in over 150 countries. Currently, it is the only fully free and open software of this type in the world with such advanced functionality. More: <https://www.innoradar.eu/innovation/29875>

IP box tax solution enters into force

2019-01-04

From January 1, 2019, IP box enters into force. This solution is addressed to entrepreneurs conducting research and development (R & D) activities, directly related to the creation, development or improvement of intellectual property rights. The Ministry of Entrepreneurship and Technology explains, that the solution comes into effect if the entrepreneur spent money on research and development, developed or bought a new technology, obtained a qualified intellectual property right for it and commercializes. In that case he can pay only 5 percent of CIT or PIT tax. IP box operates in many countries that have focused on innovation as the driver of the economy. Israel, the Netherlands, the United Kingdom, Ireland and Luxembourg have similar solutions.

Warsaw University of Technology begins the construction of the PW-Sat3 satellite

2019-01-07

- We are currently commencing the construction of the PW-Sat3 satellite at the Faculty of Power and Aeronautical Engineering of the Warsaw University of Technology. It will be developed by the next generation of students - announces the deputy coordinator of the PW-Sat2 project, Dominik Roszkowski. Within 4 weeks the PW-Sat2 satellite carried out all the planned tasks. The success of the mission proves that the technology of the deorbitation sail developed by students from Warsaw can help solve the problem of space debris that may damage probes, ships, as well as the International Space Station. The unfolding of a deorbiting sail made of a mylar film 10 times thinner than the human hair was the main task of the satellite. During the mission, it was also possible to take the first Polish satellite image of the Earth. The photograph shows southern Sweden, clouds over Norway, a fragment of the North Sea and the Baltic Sea. See photos from the PW-Sat2 satellite: <https://radio.pw-sat.pl/gallery>

Student of Gdansk University of Technology wins the Young Innovation competition for PGNiG

2019-01-07

Eng. Jędrzej Wrzaskowski, a student of Power Engineering of the Gdańsk University of Technology, took the second place in the fourth competition for the research and development project Young Innovation for PGNiG (Polish Oil and Gas Mining). The subject of his work is „Demonstration system for obtaining hydrogen from DME as an element of electromobility”. The awarded work contains a proposal to solve the problem of hydrogen storage. It assumes the use of synthetic fuel DME (dimethyl ether) as a carrier, and then the recovery of hydrogen in the process of steam reforming. The small size of the installation allows it to be mounted in an electric vehicle powered by a fuel cell, enabling the use of hydrogen in a safe and ecological way. The Innovative Young Competition for PGNiG aims to find innovative ideas from the areas of activity of the PGNiG Group, which may initiate the implementation of research and development projects.

Researchers from the Maria Curie-Skłodowska University win the main prize in the „Geology 2018” competition

2019-01-08

Employees of the Institute of Physics of the Maria Curie-Skłodowska University in Lublin (UMCS): Dr Andrzej Pelc, Prof. of UMCS, Dr Tomasz Pieńkos, Dr Andrzej Trembaczowski and Dr Artur Wójtowicz received the main prize of the Minister of the Environment in the „Geology 2018” competition. The aim of the competition is to promote innovative services and solutions, to promote activities aimed at sustainable management of environmental resources and to support scientific development and popularization of geological knowledge. The jury of the competition awarded projects for the development and promotion of Polish geology, scientific and technical solutions and fundamental discoveries in this field. The award was given to UMCS scientists in the «In-

dustry, Innovation» category for the work aimed at improving the mass spectrometric techniques of studying the isotopic composition of elements in the natural environment and geological formations. More: <https://www.gov.pl/web/srodowisko/>

Law on the Łukasiewicz Research Network delivered to the Sejm

2019-01-08

A new draft Law on the Łukasiewicz Research Network has been delivered to the parliament. The first version of the proposal was delivered to the Sejm a year ago. At that time, however, it did not pass the legislative procedures. The new project assumes that a network of research institutions will be created in Poland, which will be subject to one central organization. As emphasized the Ministry of Science and Higher Education, the Łukasiewicz Center will be the coordinator of scientific and educational efforts. It will also develop a «procedure for providing specialist tools to external entities», including enterprises, which will allow to build a bridge between science and business. The point is to change discoveries and scientific work into economic success. The Łukasiewicz Research Network will cost PLN 25 million in the first year of operation and PLN 17.5 million per year in the next 10 years.

Jan Kochanowski University to participate in the international project of x-ray method analysis of elements

2019-01-09

Jan Kochanowski University (UJK) in Kielce represents Poland in the international project „European Network FOR Chemical Elemental analysis by Total reflection X-Ray Fluorescence”. The project will concern the X-ray method of elemental analysis and it is part of the European Cooperation in the field of Scientific and Technical Research (COST). 49 scientists from 23 countries will participate in it. The project management committee is composed of Dr Dariusz Banaś, Prof. UJK and Dr Aldona Kubala-Kukuś. Both of them are employees of the UJK Institute of Phys-

ics. The value of the project is 60 million euros. It will be implemented in 2019-2022 years.

New way of obtaining special membranes of graphene oxide and cellulose

2019-01-09

Researchers associated with the University of Silesia in Katowice have developed a method for the production of special membranes of graphene oxide (or its derivatives) and cellulose, which will allow removal of traces of heavy metals from aqueous solution, and marking heavy metal ions in water or soil. Due to this method, the membrane owns a high content of graphene oxide in relation to cellulose, which contributes to the increase of the adsorptive capacity of the material. Therefore, it can be used to remove larger amounts of heavy metal ions, such as cadmium, lead or cobalt from a water solution. The authors of the already patented invention are the head of the Analytical Laboratory of Spectroscopic Methods, Prof. Rafał Sitko and PhD student of the Institute of Chemistry at the University of Silesia, MA Marcin Musielak.

Institute of High Pressure Physics of the Polish Academy of Sciences takes over the technology of producing crystals from gallium nitride

2019-01-11

The Industrial Development Agency has donated PLN 15 million to the Institute of High Pressure Physics of the Polish Academy of Sciences. The donation will be used by the Institute for the purchase of company Ammono, and thus the acquisition of technology for the production of crystals from gallium nitride. - This example shows that science and industry, science and entrepreneurship can cooperate well with each other - said Deputy Minister of Science Piotr Dardziński. It is important to us that globally recognized brands are created in Poland. We have all the resources for this, and above all, we have talented scientists. Gallium nitride is indicated as a breakthrough innovation in the field of optoelectronics and electronics - said Jadwiga Emilewicz, Minister of Entrepreneurship and Technology. The plates cut from gallium nitride crystals can be used as substrates in the technology of Blu-ray or high-power LEDs for car lamps or current converters in hybrid and electric cars.

Scientists to develop a system to detect the disease using the patient's voice analysis method

2019-01-11

Researchers and physicians from the Medical University of Białystok, together with experts from the Krakow company Techmo, will develop a VAMP diagnostic system (Voice Analysis for Medical Professionals), which is to help diagnose patients by voice analysis. Nearly PLN 10 million has been allocated for this purpose by the National Center for Research and Development. The project will be implemented for 4 years. Thanks to this method, medical diagnostics can be initiated during a telephone conversation with a patient. According to the marketplacezdrowia.pl, more than 500 people will take

part in the research, including patients with such problems as: neurodegenerative changes, dementia, stroke and changes in the central nervous system, coronary artery disease and peripheral atherosclerosis, heart failure, obesity, metabolic syndrome, diabetes, hypothyroidism, respiratory diseases, depressive-anxiety disorders and schizophrenia.

Researchers from Katowice and Wrocław developed a new method of temperature measurement

2019-01-14

Researchers from the University of Silesia and the Institute of Low Temperatures and Structural Research of the Polish Academy of Sciences (PAS) in Wrocław have developed a new method of temperature measurement that can be used to construct optical temperature sensors. The patented solution allows to determine the temperature of objects based on radiation measurement, which is emitted by the object, but the measurement takes place without contact with the object. Optical sensors can be used in biomedical diagnostics and in measurements in toxic conditions e.g. in refineries, power plants and mines. The authors of the invention are scientists from the Institute of Chemistry of the University of Silesia: Prof. Wojciech Pisarski and Dr Eng. Joanna Pisarska, as well as Prof. Witold Ryba-Romanowski and Dr Radosław Lisiecki from the Institute of Low Temperature and Structural Research PAN.

Project of the Wrocław Academy of Fine Arts and the Labvonn company

2019-01-15

After six months of intensive cooperation, the Wrocław Academy of Fine Arts (ASP) and the Świebodzice company Labvonn completed the project under the program „Dolnośląskie Bonus for Innovation”. The result of the project is the preparation of a comprehensive design documentation and prototype of a bag for a dog or cat, a bed and a piece of furniture for a cat. The Labvonn company offers the furniture and accessories for animals. It announces

the implementation of designs for mass production developed by students of the Wrocław university. The program «Dolnośląski Bonus for Innovation» is to support the cooperation between business and scientific environments offered by the Lower Silesian Regional Development Agency. The budget of the project, implemented from June to December 2018 by the Department of Design of the Academy, amounts to 71 thousand PLN.

Researcher of the Adam Mickiewicz University creates glowing paper and ink

2019-01-15

Dr Agata Szczeszak from the Faculty of Chemistry at the Adam Mickiewicz University in Poznań, conducts research on paper and ink emitting visible light of the desired color. The project is financed from the National Center for Research and Development under the LIDER IX program. It assumes the production of ecological cellulose fibers as well as paper and ink with synthesized structure and synthesized luminescent modifiers. The modifiers, i.e. inorganic micro- or nanomaterials contain rare earth elements, that allows fibers, paper and ink to emit visible light with the desired color. The light emission will be activated in two-band - ultraviolet and / or infrared radiation. The produced fibers will be used in industry for the production of so-called security and light paper personalization of identification cards, and unique paper and ink to obtain original packaging and advertising materials.

Poznan scientist wins the scientific prize of the Polish Society of Microbiologists

2019-01-15

Dr Eng. Wojciech Smulek from the Department of Organic Chemistry of the Poznan University of Technology, as the leading author, received the scientific II degree prize of the Polish Society of Microbiologists, for the article „Sapindus saponins, impact on hydrocarbon, biodegradation by bacteria strains after short- and long-term contact with pollutant”. Publication, co-authored by: Agata Zdarta; Piotr Krawczyk; Teofil Jesionowski and Ewa Kaczorek, presents interdisciplinary research including microbiology, physicochemistry and environmental engineering. The collected results allow for more effective designing of bioremediation processes of areas contaminated with petroleum derivatives. In addition, the effects of previous studies point to the high potential of plant extracts containing saponins as natural surfactants.

SOLARIS to develop Polish Laser on Free Electrons

2019-01-17

The National Synchrotron Radiation Center SOLARIS will take part in the construction of the Polish Laser on Free Electrons. The SOLARIS Center is a department of the Jagiellonian University specialized in research of synchrotron radiation. It is one of the partners of the PoFEL project, whose leader is the National Center for Nuclear Research in Świerk near Warsaw. Free electron lasers and synchrotrons are the most technologically advanced research devices used in modern science. PoFEL will allow the development of basic and technological research in physics, chemistry, biology, material engineering and other fields.

Researchers from Olsztyn patented a device for absorbing CO2

2019-01-17

Researchers from the Department of Environmental Engineering at the Faculty of Environmental Sciences of the University of Warmia and Mazury in Olsztyn: Prof. Mirosław Krzemieniewski, Prof. Marcin Zieliński and Prof. Marcin Dębowski patented a device for CO2 absorption in the Polish and European Patent Office. Their invention is based on the principle of capturing CO2 by algae. Researchers from Olsztyn created algae concentrate. Then they developed a method of transform it into capsules made of organic gel. The CO2, light and heat needed for the algae are supplied by the special installation. Algae would produce pure oxygen instead of CO2. Olsztyn scientists are raising money to launch a pilot installation. They hope that their solution will be interesting for coal-fired power plants and heat plants.

Institute of Aviation together with the Gyro-Tech company developed innovative helicopter rotors

2019-01-17

The Institute of Aviation completed a research project carried out jointly with the Gyro-Tech Innovation in Aviation company. The innovative helicopter rotors have been developed as a result of the project based on ground and air tests. They have demonstrated global quality and the highest competitiveness in relation to the helicopters currently used in the world. As part of joint work on the project «Innovative composite rotors for ultralight helicopters», the Institute of Aviation developed two types of rotors, including one developed at the Institute of Aviation and dedicated specifically to the light helicopters. The manager of the project was Tomasz Szczepanik from the Center for Transport and Energy Conversion of the Institute of Aviation, and the entire undertaking was co-financed from the Intelligent Development Operational Program. See the video of the trials and tests: <https://youtu.be/xjYpNoeEn8>

International successes of scientists at the Nicolaus Copernicus University in Toruń

2019-01-17

Researchers from the University of Nicolaus Copernicus in Torun have won 6 medals at the Paris International Fair of Invention, the Grand Prix Eiffel and the exhibition Kaohsiung International Invention & Design EXPO in Taiwan. The gold medal in Paris and the silver medal in Kaohsiung were received for the following projects: «Endovascular stent with properties that accelerate the healing of the implant site and reduce the occurrence of thrombosis» and «Method for obtaining a biological preparation of fungal origin accelerating the degradation of polymer materials and biological preparation». The gold medal in Paris and the bronze medal in Kaohsiung was received by the «Preparation with adaptogenic effect based on the extract of *Eleutherococcus senticosus* and the method of producing the preparation with adaptogenic effect based on the extract of *Eleutherococcus senticosus*». The fairs in Paris gathered 150 inventions from 14 countries, in Kaohsiung there were representatives of 21 countries and they presented over 380 inventions.

P

oznan University of Medical Sciences to hold a conference on innovations in occupational therapy

2019-01-18

Poznan University of Medical Sciences invites participants on March 5- 6th to the 2nd International Scientific and Training Conference „Innovations in Occupational Therapy. The international perspective - science, education, practice”. - We believe that it is worth looking at current, early Polish experiences in occupational therapy in the international perspective and try to answer the following questions: Does and to what extent the Polish innovation reflect international trends in the field of research, education and practice? To what extent is the current national specificity maintained? Occupational therapy has been present in academic offer in Poland since 2012. This innovative challenge was undertaken by six universities (in Kraków, Wrocław, Poznań, Warsaw, Gdańsk and Bydgoszcz). The conference organizer is Occupational Therapy Laboratory at the Department of Geriatrics and Gerontology at the Faculty of Health Sciences at the Poznań University.

Application „reading human thoughts” awarded at the Garage Inventory Review

2019-01-21

Scientists of the Medical University of Silesia in Katowice Tadeusz Sułkowski, Adam Siedlaczek and Tomasz Pucek became laureates of the Review of the Garage Inventories OFF SCIENCE „organized as part of the Silesian Science Festival in Katowice. The application « reading human thoughts» won the «Dziennik Zachodni» competition for the most inspiring technical concept. The purpose of the application is to activate elderly people to be physically active and to leave homes and apartments and go into the public space. The application is to provide the opportunity to spend time together, such as going out for a coffee or Scandinavian walking. The target version of the application will be prepared at the European Startup Days, which will be held in Katowice on May 14 and 15.

University of Poznan to hold forum about supporting people with disabilities

2019-01-21

The Office for Students with Disabilities at the Adam Mickiewicz University in Poznań and the Association of Disabled Students „Ad Astra” invite participants to the Fourth Forum of University Plenipotentiaries for Persons with Disabilities „Innovative solutions in supporting people with disabilities in higher education”. The event will be held on 27 and 28 February. The aim of the Forum is to promote innovative solutions in the field of supporting people with disabilities, disseminate knowledge and raise awareness about the functioning of such people in higher education. The organizers are planning discussion of new realities in financing the support of people with disabilities at universities, workshop sessions with experts specializing in various aspects of organizing support, as well as meeting with representatives of the National Center for Research and Development dedicated to the «Accessible University» competition.

Strategic partnership between the Wrocław University of Science and Technology and the Lower Silesia Voivodship

2019-01-21

Wrocław University of Science and Technology has signed a strategic agreement on cooperation with the local government of the province Lower Silesia. The document was signed by Prof. Cezary Madryas, rector of the Wrocław University of Science and Technology and Cezary Przybylski, marshal of the province Lower Silesia. The contract assumes cooperation in the area of self-government-science-innovation-business, joint activities for the sustainable development of the voivodship and universities, supporting the development of local government by transferring knowledge, improving the skills of local government officers and local and regional leaders, and initiating joint meetings and conferences for the development of Lower Silesia. - We are a voivodship

with the wealth second rank in the country, just behind the Mazovian voivodship. We would not be able to achieve such success without the cooperation with universities, including the Wrocław University of Science and Technology - says the Marshal of the province. Lower Silesia. More: <http://pwr.edu.pl/uczelnia/aktualnosci/wspieramy-nauke-i-biznes-na-dolnym-slasku-11080.html>

Białystok high schools to run the Innovation + Incubator project

2019-01-22

Białystok University of Technology, Medical University of Białystok and the University of Białystok have conducted joint achievements in supporting the transfer of research and the results of scientific work to industry. The three largest universities in the Podlasie region have been implementing the Innovation + project for the past two years. The project allowed to finance 26 pre-implementation works, 4 new companies and 14 patent applications. The Institute of Innovation and Technology at the Białystok University of Technology (IliT PB) was the leader of the project Incubator of Innovation+. Tomasz Stypułkowski, the president of the board of the Incubator of Innovation + as a tool, emphasized that it is indispensable in the commercializing of scientific projects. - We have proven, above all to ourselves, but also to the business and scientific society that it makes sense - he said.

New equipment for the Laboratory of Organization and Traffic Management of the State Higher Vocational School in Kalisz

2019-01-22

The Laboratory of Organization and Traffic Management of the faculty of social sciences and humanities of the State Higher Vocational School in Kalisz has been enriched with a good-class speed camera with professional software. The Laboratory of Organization and Traffic Management at the University of Kalisz also has a simulator for the work of drivers and a drone to control the traffic. There are also 11 computers at the disposal of students and lecturers, equipped with specialized software for analyzing road accidents. - It is very important to use that, because it is the same program as the court experts use in their work. Internal safety students have the opportunity to acquire practical skills, which is difficult to overestimate - says Dr. Paweł Kamiński, associate dean of the Faculty of Social Sciences and Humanities.

Wrocław University of Science and Technology explores new sources of light in the infrared range

2019-01-22

Wrocław University of Science and Technology conducts the study of new light sources of the mid-infrared range. This is a very advanced technology, which is being tested by very few scientific centers in the world. The project allowed to develop infrared light sources operating in the wave range from 2000 to 6000 nanometers. These are ranges invisible to the human eye. Their main advantages are low price of light sources, simple construction, high reliability and low temperature work. Medium infrared is widely used in medicine. It can increase the availability of diagnostic methods for patients - including the recognition and classification of cancer cells. It is also a simple and effective method of gas detection, e.g. in mines. The research is directed by

Dr Eng. Sławomir Sujecki, Prof. Wrocław University of Science and Technology, who has been for many years also working at the University of Nottingham. The project is implemented as part of the Polonez grant from the National Science Center, co-financed by the European Commission. More: <http://pwr.edu.pl/uczelnia/aktualnosci/badania-nad-nowymi-zrodami-swiatla-11082.html>

Scientists of the University of Silesia together with the company IBI Verde developed a new pluviometer

2019-01-23

Scientists of the University of Silesia together with employees of the IBI Verde Ltd developed a new pluviometer - a device for measuring daily sums of atmospheric precipitation. Their invention is already patented. The device records the change in the weight of rainfall, snow, hail, dew, and even fog using the so-called a strain gauge bridge that transmits a measurement signal to the data acquisition and processing module. Therefore, the actual duration of atmospheric precipitation and changes in the weight of the collector system is recorded. The patented pluviometer allows to obtain an accurate weight measurement in a wide range of rainfall intensity and wind speed and it is characterized by an aerodynamic shape and an economical measuring system. It has a shape compatible with the recommendations of the World Meteorological Organization, so the wind field around the collector bowl is not significantly distorted. Laboratory of Refrigeration and Air Conditioning established at the Maritime University of Szczecin

2019-01-23

The Laboratory of Refrigeration and Air Conditioning was established in the Department of Marine Machinery and Equipment, mechanical department of the Maritime University of Szczecin. The studio

was created on the basis of the employees' projects and was financed by the university. In the laboratory, researchers will focus on developing energy-saving and safe solutions for the environment. Cooling devices have a huge impact on the natural environment, and the task of scientists is to find new solutions that make this impact as small as possible. The new laboratory of the Szczecin university is equipped with a station for testing refrigeration automation, a test stand for ventilation unit with heat recovery, a didactic stand for filling and recovery of the refrigerant, as well as a refrigerator to run the courses both for students and officers' cadres.

Biologists from the University of Warsaw discover new herbicides

2019-01-24

Biologists from the University of Warsaw (UW) have discovered chemical compounds that are innovative in terms of chemical structure and have very high effectiveness in eliminating weeds. The main authors of the invention are Dr Rafał Archacki and Dr Paweł Siedlecki from the Institute of Experimental Biology and Biotechnology of Plants at the Faculty of Biology of the University of Warsaw. New substances were found by chance when regulators of proteins stimulating the growth and development of plants were sought in other conducted research project. Several dozens of selected chemical compounds have been tested. Among them, the biologists managed to find several promising molecules. However, some of the tested substances, contrary to the expectations of researchers, inhibited it or even destroyed plants, instead of stimulating growth. Discovered herbicides were subjected to efficacy tests that provided very promising results. Now researchers will conduct further research and carry out tests and field trials.

Students from Toruń to create robots to perform administrative work

2019-01-24

Students of the faculty of economics and management at the Nicolaus Copernicus University in Toruń (UMK) won the main prize in the Make Progress with Citi competition. A prize of 10,000 PLN was granted to the project „Robotic Automotion - what the robot is for?” The aim of the project is to show the benefits of using robots, for example computer programs in business processes. In connection with its implementation, works will be created to perform the tasks of administrative back office staff. The lack of employees concerns both the operational sphere and the back office. The solution can be automation and robotization, which are becoming more and more common in the operational sphere, while in the case of the back office they are only gaining their place. The awarded project is innovative because it draws attention to the need for automation and robotization of back office processes and the need to educate students of economics universities in the field of robotics.

Innovative application that can save lives

2019-01-25

Scientists are implementing the Reanimator application, which is to help people who have had a cardiac arrest. The application is to be made available in the second half of 2019. Young developers from the Polish branch of the Danish company KMD and students of the Warsaw University of Technology have created a solution that not only guides the users step by step through the first aid process, but also allows them to find the nearest available defibrillator. At the moment the application includes modules: first aid support, defibrillator search and first aid tutorial. KMD Poland for Reanimator won the ABSL Diamonds 2018 award. The prize was awarded in the category «Socially Responsible Activities».

Polish startups to cooperate with corporations

2019-01-28

According to the study of the Startup Poland Foundation over 80 percent Polish startups want to cooperate with corporations, and almost every third startup has already run such cooperation. Cooperation with startups allows corporations to obtain innovations necessary to achieve business goals or find solutions to technological problems. Poland has been launched government acceleration programs: ScaleUp, corporate accelerators, hub:raum T-Mobile, Orange Fab, which greatly influenced the development of this cooperation - says Katarzyna Wszola from the Campus of New Technology, vice-secretary of Global Shapers in Poland. The report of the Startup Poland Foundation says that as much as 24 percent startups gained financing from Polish startup accelerators. This is twice as much as in 2017. Warsaw University of Technology participates in a tripartite agreement for an energy-efficient economy

2019-01-28

Warsaw University of Technology has concluded a tripartite agreement with the city of Piastów and the Teraz Energia company for the development and commercialization of technological solutions supporting the building of an energy-efficient and environmentally friendly economy. The parties will jointly implement projects in the areas of energy efficiency, dispersed generation of RES (renewable energy sources) and electromobility. The intellectual, technological and capital potential of the signatories of the agreement will be used for achieving the goals of the initiative. The university will involve scientists and students to co-create innovative technologies ready for commercialization. Company Teraz Energia which is a part of the Innovation Incubator of the Warsaw University of Technology, develops technologies in the field of Intelligent Energy Networks, the Internet of Things and Virtual Power Plants.

Awards for young scientists of the West Pomeranian University of Technology

2019-01-28

Three young scientists from the West Pomeranian University of Technology received the Prize of the Mayor of the City of Szczecin in a competition for master's theses and diploma theses aimed at development of modern technologies and innovations. The award for the best master's thesis on modern technologies and innovations was granted to Paweł Grochocki for the work «Electric machine with magnetic barriers moved by hybrid engine». In the category of the best PhD dissertations focused on modern technologies Dr Eng. Kamila Stępný was awarded for «CNC manual programming system with the use of virtual reality technology», and Dr. Eng. Dariusz Pulikowski for «Experimental and numerical tests of winding superconductor coils made of Rutherford type Nb₃Sn multi-conductor cable». The competitions have been held since 2008 and are addressed to young researchers and graduates of Szczecin's universities.

Koszalin University of Technology to participate in the international project „EngiMath - Mathematics on-line model in education”

2019-01-29

Koszalin University of Technology with other six higher education institutions will develop and implement modern methods of teaching mathematics at technical universities. The „EngiMath - Mathematics on-line model in education” project is financed by the European Union under the Erasmus + program. In addition to the Koszalin university, the following universities are involved in the project: Tallinna Tehnikakõrgkool (Estonia) as a coordinating university and Letterkenny Institute of Technology (Ireland), Instituto Politecnico do Porto (Portugal), Universidad Del Pais Vasco / Euskal Herriko Unibersitatea (Spain) and Universitatea Tehnică Cluj-Napoca (Romania). The aim of the activities is to develop and implement an innovative methods by using a variety of information technologies, means of communication and mathematics teaching model for students of engineering studies. The universities implementing the project will design and develop a course of mathematics for first-year students.

AGH University of Science and Technology in Krakow opens new building for the Telecommunications Department

2019-01-30

Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin, Minister of Entrepreneurship and Technology Jadwiga Emilewicz, the Małopolska voivode Piotr Ćwik and the authorities of the AGH University of Science and Technology in Krakow participated in the opening of the new building of the Faculty of Computer Science, Electronics and Telecommunications of the Kraków University. In the era of intense technological progress, specialized education in the field of ICT, telecommunications or cybersecurity is one of the are-

as to put a decisive emphasis – said Deputy Prime Minister Gowin during the ceremony. In such places the future of the Polish economy is coined. The new building has been constructed for the students of the Department of Telecommunications. The laboratories ultra-fast computer networks, LTE 4G / 5G cellular systems and wireless ICT networks will be launched in it.

Lazarski University in Warsaw looking for trainees to the Blockchain Technology Center

2019-01-30

Blockchain is a modern technology of distributed databases that cannot be counterfeited. It is resistant to cyber attacks, because its security is ensured by cryptography. The consortia of the largest companies in the world develop common blockchain standards for business purposes, that are formed at a rapid pace. Cryptocurrencies are one of the possible applications of this technology. They are becoming more and more popular, despite significant fluctuations in capitalization. There are also new legal challenges in the regulation of this developing field, also at international level. All interested universities can contact at: blockchain@lazarski.edu.pl

Torun's project of a visually controlled communicator awarded in the competition of the Sektor 3.0 Foundation

2019-01-31

A team of scientists from the Nicolaus Copernicus University in Toruń and therapists from the „Light” Foundation won the first prize in the Sektor 3.0 Foundation competition co-organized by Google and Orange. The competition concerns the #TechForGood sphere, i.e. the use of the latest technology achievements in the service of society. The jury distinguished Dr. Bibianna Bałaj from the Faculty of Humanities and Dr hab. Jacek Matulewski from the Faculty of Physics, Astronomy and Applied Computer Science, and Anna Betlejewska and Monika Kwilińska from the «Light» foundation under the direction of Anna Grajpel-Dybowska - working on

a visually controlled communicator. The solution will allow patients after accidents, strokes or advanced stage of neurodegenerative diseases, who can control only eye movements, communicate with families and friends via text messages or short e-mails. More: <https://www.umk.pl/wiadomosci/?id=25907>

Patent for the use of waste CRT glass plates

2019-01-31

Employees of the Ceramics and Concrete Department of the Institute of Ceramics and Building Materials in Warsaw obtained patent for the invention: „The method of production of glass cladding or façade claddings from waste CRT glass and glass plate with CRT”. The production of plates according to the patented invention enables to obtain glass plates from the wasted CRT glass and a small amount of generally available inorganic materials. The invention has been submitted to the European Patent Office for protection in other European countries, and its worth is also evidenced by the interest of ceramic tile manufacturers intending to use it for the production of glass tiles on an industrial scale.

Medical University of Silesia to build a digital medical platform eCareMed - Telemedicine

2019-02-01

The Silesian Medical University in Katowice will carry out the project „Silesian Digital Medical Platform eCareMed - Telemedicine and exploration of medical data”. The project was created in response to the needs of patients in the field of early diagnostics in oncology, cardiology and neurology. The platform is to use information and communication technologies in the area of e-health. Services will be directed at improving safety and comfort in treating patients. The eCare Med will enable comprehensive diagnostics and individually selected therapy, taking into account the specificity of the disease - using teleconsultation between medical entities. The partners of the project are Silesian Center for Heart Diseases in Zabrze, Oncology Center – Institute of Maria Skłodowska-Curie in Gliwice, Beskid Center of Oncology - Municipal Hospital in Bielsko-Biala and the University Clinical Center and Upper Silesian Medical Center of the Medical University in Katowice. More:<https://sum.edu.pl/uczelnia/wiadomosci-z-zycia-uczelnia/9339-sum-podpisal-umowe-na-realizacje-projektu-slaska-cyfra-wa-platforma-medyczna-ecaremed-telemedycyna-i-eksploracja-danych-medycznych>

Silesian University of Technology to launch an interdisciplinary course - nanotechnology

2019-02-01

Silesian University of Technology is launching the second degree studies on the interdisciplinary field of nanotechnology implemented by seven faculties of the university. Classes will be conducted in the summer semester, in the design mode with individual academic care. Students of the new field will acquire interdisciplinary knowledge in the field of physics, chemistry, material engineering, designing the structure and properties of engineering materials, as well as their production technologies com-

bined with the ability to use modern IT tools used for numerical simulations of phenomena and processes in nanotechnology. Graduates will become the appropriate staff for technologically advanced industrial enterprises in the sectors of modern technologies related to electronics, optoelectronics, optics, photonics, medicine and pharmacy, environmental protection, automotive, aerospace, machine, textile and clothing, cosmetics, agricultural and food industries.

Opole University of Technology receives a new electron microscope

2019-02-01

A specialized material engineering laboratory of the Opole University of Technology has been equipped with the Scanning Electron Microscope JSM-840A with the Energy Dispersive Spectroscopy (EDS) system enabling work at magnifications up to 300,000 times. The new microscope, in combination with EDS X-ray microanalysis, is a powerful tool allowing to determine the elemental composition of samples with a size of several micrometres or create a map of the distribution of elements in a larger area of the sample with micrometric spatial resolution. Scanning electron microscopy with the EDS system is a useful and increasingly common technique for characterizing surfaces and structure of materials - mainly morphology and elemental composition. It allows the observation of both organic and mineral samples at very high magnifications, and its use is very wide.

Medical Simulation Center of the Medical University in Lublin to receive the most modern abdominal simulators

2019-02-04

In the Medical Simulation Center of the Medical University of Lublin, medical students will practice on the most modern abdominal simulators. Devices can simulate physiological and pathological changes as well as appendicitis or cancer. The center will receive the most technologically advanced abdominal simu-

lators, which will allow to learn the accurate assessment of what is happening in the abdominal cavity. The equipment will allow training for doctors during the next months during specialization. In the future, doctors from foreign centers will also be able to use them. Preliminary declarations of cooperation were sent from Harvard University, the IRCAD center in Strasbourg or the American College of Surgeons.

Meeting of the International Research Consortium of the Scalings project in Wrocław

2019-02-04

The participants of the International Research Consortium of the Scalings project realized within the framework of the European research program Horizon2020 met at the University of Economics in Wrocław. The Wrocław University is one of the project's partners. The meeting was attended by about 30 scholars from the universities involved in the project from Austria, Denmark, France, Spain, Germany, Switzerland, Great Britain and Italy. The Scalings project concerns innovation in the field of introducing renewable energy in cities (the subject of research are campuses of European universities that undertake energy transformation). It is implemented as part of a competition whose guiding principle is to involve society in co-creating science and innovation - including the recently popular development of responsible research and innovation - RRI.

Prototype of a patrol and intervention vehicle tested by Poznan policemen

2019-02-06

„The Praetorian” - is a patrol and intervention vehicle for the police, which was created with the participation of the Special Purpose Vehicle of the University of Economics in Poznan, started a month-long test in the conditions of daily work of officers. The vehicle's prototype was created as part of a research and development project by a consortium of three partners: the Polish Platform for Homeland Security (coordinator); Target Company UEP (scientific partner) and Automotive House GERMAZ (industrial partner). The project aims to create a vehicle best suited to the needs and expectations of police officers. During the work on the Praetorian prototype, 20 proprietary solutions have been created that ensure the multifunctionality of the vehicle and the possibility of its complete configuration. The car will work both in everyday patrol, as well as in the situation of securing a mass event such as a match or concert.

Poland joined the European Commission cluster of space robotics

2019-02-07

Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education visited the Kielce University of Technology in Kielce, where he was informed about Poland's accession to the European Space Industry Cluster - PERASPER. - Poland in the robotics is getting stronger and stronger. We also have an increasing demand for personnel in the space industry, as the result of growing potential of Polish companies and institutions and their participation in an increasing number of missions and space projects - said Deputy Prime Minister Jarosław Gowin. The task of the PERASPERA cluster is to develop a road map for the development of robotic technologies in Europe and to support the European Commission in the organization of tenders for solutions in the field of robotics under the Horizon 2020 program and its next edition, Horizon Europe.

Kraków SOLARIS to support the construction of a tomographic line at the synchrotron in Jordan

2019-02-07

As part of the Horizon 2020 program, the BEATS project was launched. It involves the construction of a line using „hard X-ray radiation for computed tomography” at the SESAME synchrotron in Jordan. Nine centers are involved in the project, including the National SOLARIS Synchrotron Radiation Center in Kraków. These centers are to support the needs of Jordanian synchrotron in the field of research development and applied technology, mainly through scientific development and exchange of experience in the construction of a tomographic line and through activities strengthening the scientific environment. The SESAME Synchrotron is an independent, intergovernmental organization whose members are institutions from Cyprus, Egypt, Iran, Israel, Jordan, Pakistan and Turkey. The mission of the center is to provide world-class research infrastructure in the region and to develop international scientific cooperation.

Patent for a new method of obtaining compounds used in organic synthesis

2019-02-07

The Patent Office of the Republic of Poland granted a patent for an invention developed by scientists from the University of Silesia, the University of Adam Mickiewicz in Poznań and the Institute of Non-Ferrous Metals in Gliwice. Researchers from Silesia and Wielkopolska have developed a new synthesis of (E) -1,4-disubstituted symmetrical 1,3-enynes - unsaturated organic compounds that can be used in the synthesis of compounds with biological activity, including antibacterial activity. They can also be used as building blocks in the synthesis of organic light-emitting diodes mounted in graphic displays of the WOLED type. The authors of the invention are Dr Patrycja Żak, Małgorzata Bołt, Jan Lorkowski, Prof. Cezary Pietraszuk from the University of Adam Mickiewicz, Dr Eng. Grzegorz Benke and Dr Eng.

Katarzyna Leszczyńska-Sejda from the Institute of Non-Ferrous Metals in Gliwice, as well as Dawid Zych, PhD student of the University of Silesia.

Students receive awards in the National Student-Inventor Competition

2019-02-08

The laureates of the ninth National Student-Inventor Competition organized by the Kielce University of Technology are awarded with the opportunity to present and promote their innovative solutions during the 47th International Exhibition of Inventions in Geneva. In the ninth competition, 5 main prizes were awarded to Piotr Terebun and Michał Kwiatkowski from the Lublin University of Technology for the device for the plasma activation of liquid materials; Mateusz Wrzochal from the Kielce University of Technology for the device for testing the thrust moments of tapered roller bearings; Julia Radwan-Pragłowska and Łukasz Janus from the Krakow University of Technology for biodegradable chitosan nanocomposites / poly (sodium aspartate) / Fe3O4 with ferrimagnetic properties; Michał Pielka from the University of Silesia in Katowice for the system to monitor the locomotor functions of the body and respiratory functions and Ewa Kozłowska Dymarska, Monika Urbaniak, Monika Grzeszczuk, Jakub Sycz, Jordan Kownacki, Patryk Franczak and Iga Matera Agata from the University of Life Sciences in Wrocław for a series of 26 inventions regarding obtaining steroid compounds with high therapeutic potential as a result of biotransformation.

Physicists from the University of Białystok discovered new possibilities for photomagnetic 3D recording

2019-02-08

Physicists from the University of Białystok (UwB) have discovered new possibilities of photomagnetic 3D recording, and the results of their research have just been published by the journal Nature Communications. The results of research conducted by an international team of physicists, under the supervision of Dr Andrzej Stupakiewicz from the Department of Physics of Magnetics, Faculty of Physics, was published in the prestigious journal Nature Communications. The scientists presented a new concept of selective ultrafast record of magnetic cells in a layer of pomegranate with an admixture of cobalt ions. The recording takes place using only ultra-short laser pulses with a combination of optical parameters such as polarization, wavelength and intensity of light. As Dr Andrzej Stupakiewicz emphasizes, this unique opportunity opens the way to «photomagnetic 3D recording», which would allow even more efficient use of light to record information in digital memories. More: <https://www.nature.com/articles/541467-019-08458-w>

Researcher of the Adam Mickiewicz University in Poznań receives the L'Oréal-UNESCO scholarship

2019-02-08

Dr Joanna Gościańska from the University of Adam Mickiewicz in Poznań won the scholarship L'Oréal-UNESCO for Women in Science. A scientist from the Faculty of Chemistry is researching technologies that use coal in a new way. Dr Gościańska analyzes multifunctional mesoporous carbon materials in the processes of adsorption of active pharmaceutical substances. The research is to find an answer to the question how to use mesoporous coals as drug carriers. This is an innovative and almost unexplored subject. Dr Gościańska's project includes painkillers and antibiotics. The results of research will allow limit the number of doses

of the drug - the drug will be released in the body gradually throughout the day and exactly where it should. The Polish National Committee for UNESCO, the Ministry of Science and Higher Education and the Polish Academy of Sciences are partners of the L'Oréal Poland For Women and Science Program.

Samsung opens an incubator for startups at the Lublin University of Technology

2019-02-11

The official opening of the Samsung Incubator Laboratory took place at the Faculty of Electrical Engineering and Computer Science of the Lublin University of Technology on February 6, 2019. The ceremony was attended by Jadwiga Emilewicz, Minister of Entrepreneurship and Technology. The Lublin-based Samsung Incubator will specialize in cybersecurity and the Internet of Things projects. Individuals or teams who already have a business concept of their product or start-up can apply to the Incubator. They will be provided with work space, electronic equipment, substantive and technical assistance, financial support, training and workshops. The Samsung Incubator is located on the campus of the Lublin University of Technology. The entrepreneurs qualified for the program may use the laboratories equipped by Samsung.

Pomeranian Science and Technology Park to develop the atmosphere monitoring system

2019-02-11

Company Pelixar Ltd from the Pomeranian Science and Technology Park, Gdynia is developing a comprehensive solution that allows to provide accurate monitoring of the atmosphere in terms of pollution. Pomeranian constructors have already developed an anti-smog drone for air measurements that allows to provide precise location of the source of pollution. Thanks to measurements, it will be possible to create visualizations and maps of pollution distribution for selected locations. The measurement methodology is created in cooperation with the

Gdańsk University of Technology, an application is also created that allows the visualization of the distribution of pollutants in the form of a smog cloud. This will enable better understanding of the formation, movement and concentration of smog clouds, as well as predicting their occurrence. The whole system is to operate under the name of the Aviation Atmosphere Monitoring (LMA).

Surgeons of the Jagiellonian University Collegium Medicum to participate in the project Innovations in Surgery

2019-02-12

1st Department of General Surgery of the Jagiellonian University Collegium Medicum in Krakow - as the only Polish clinic - has been included in the prestigious world group of surgical clinics cooperating within the international project Innovations in Surgery. The program is run by the American clinic Cleveland Clinic. The project provides regular exchange of knowledge and experience, through monthly videoconferences. In addition to the Cleveland Clinic, the project also involves other American surgical clinics: Mayo Clinic, Harvard University, John Hopkins, Columbia University and Mount Sinai New York clinics.

Polish software in the European Space Agency

2019-02-12

The European Space Agency (ESA) has implemented Polish software in its research center. ESA's engineers have just approved the final version of the system developed by Astri Polska, which will be used to test GNSS satellite navigation receivers. The task of the Polish company was to design a universal software that will enable the integration of test devices, creating a comprehensive environment for testing GNSS receivers for space applications. Such types of receivers will be installed on satellites and launching missiles. The software was developed as part of the FLIGHT (FLexible environment for GNSS Testing) project commissioned to the Warsaw company by the European Space Agency in 2017.

PhD student of the University of Technology and Life Sciences in Bydgoszcz to receive Rector's Award of the Kielce University of Technology

2019-02-12

Sandra Śmigiel, PhD student at the Faculty of Mechanical Engineering at the University of Technology and Life Sciences in Bydgoszcz, received a special award of the Rector of the Kielce University of Technology in the Student-Inventor competition for the „Mobile ECR recorder based on the LoR”. The invention of a young researcher is a system for monitoring the electrical activity of the heart based on the technology of wireless data transmission LoR together with a device for receiving data and processing them. The co-founder of the invention is Dr Eng. Damian Ledziński and Dr Eng. Tomasz Andrysiak. The National Student-Inventor Competition has been organized since 2010 by the Kielce University of Technology. Its aim is to develop a culture of innovation in the academic environment. This year brought 139 solutions from 20 universities from all over Poland which is the record in the history of the competition with 361 inventors, including 157 students.

PhD student of the University of Silesia becomes the winner of the „Student-Inventor” competition

2019-02-12

Michał Pielka, PhD student at the Faculty of Computer Science and Materials Science at the University of Silesia, was the winner of the „Student-Inventor” competition organized by the Kielce University of Technology. 139 proposals from 20 universities from all over Poland were submitted to this year's competition. The awarded invention is a system for monitoring locomotor functions of the organism, respiratory activities and pulse together with related solutions of 2 patented inventions and 2 industrial designs. One of the solutions is a developed meth-

od of data transmission that allows to send more information and simplify the procedure for their receipt. The winners will present their solutions in Switzerland during the 47th International Exhibition of Inventions of Geneva, they will also take part in accompanying seminars organized by the World Intellectual Property Organization and the European Organization for Nuclear Research.

PhD student of Warsaw University of Technology develops a revolutionary bone implant

2019-02-13

Monika Budnicka, PhD student at the Faculty of Chemistry of the Warsaw University of Technology, has created a revolutionary bone implant. The solution is a synthetic substitute for spongy bone, the very inner part of the skeleton fragment. It is a kind of scaffolding that is supposed to help in the regeneration of bones after serious damage, for example after cancer. - The material we have developed is biodegradable and resilient. It can also be cut directly in the operating room. It is also very light - explains Monika Budnicka. Dr Agnieszka Gadomska-Gajadur, leader of the project explains that before in this type of surgery, a bone taken from another deceased person was used. At the moment, no one produces such an implant.

Scientists to research the use of insect protein in animal nutrition

2019-02-13

A consortium composed of the Ministry of Agriculture and Rural Development, University of Warmia and Mazury (UWM) in Olsztyn and the State Veterinary Institute - National Research Institute in Puławy implements a research project „Developing strategies for using alternative sources of insect protein in animal nutrition enabling the development of its production at territory of the Republic of Poland. „ The research is financed by the National Center for Research and Development. The consumption of insects can be helpful in fighting hunger in the world.

At least 2 billion people eat insects in various forms. Contrary to popular belief, insects are food not only for food shortage times - says Dr Tadeusz Bakula from the Department of Veterinary Prevention and Feeding Hygiene at the Faculty of Veterinary Medicine at the UWM. Insects can provide a sustainable and environmentally friendly production of both human food and animal feed. Research carried out at UWM are to help to develop strategies for the use of insect protein in animal nutrition in Poland.

Innovative gripper from the Wrocław University of Technology to fly into space soon

2019-02-13

Students of the Wrocław University of Technology have completed work on an innovative gripper. They want to check its qualities in the microgravity and vacuum conditions. In March, the device will be launched at a height of 80 km. Students' project: Testing Robotic Application For Cathing in Zero-G is to check whether it is possible to use a jamming gripper in microgravity and vacuum. Such devices consist of a diaphragm filled with a granulate operating on the principle of pressure difference manipulation. The inflatable gripper adapts its shape to the object to be lifted, and after the air is sucked out, the granulate hardens, the membrane tightens on the object, and can be moved. The experiment is carried out within the framework of the Swedish-German Rexus / Bexus program under a bilateral agreement between Germany (DLR - Deutsches Zentrum für Luft- und Raumfahrt) and the Swedish space agency (SNSB - Swedish National Space Board). Medals for the presentation of inventions for the Technology Transfer Center of the Pomeranian Medical University

2019-02-14

Technology Transfer Center of the Pomeranian Medical University (CTT PUM) in Szczecin received gold medals for the presentation of five inventions during the International Exhibition of Intellectual Property, Inventions and Innovation IPITEX 2019 in Bangkok. The exhibition on the occasion of the Thai Inventors' Day presents 434 solutions from 25 countries. Szczecin Center received gold medals for the presentation of inventions: Method for detecting the first episode of psychosis; Umbilical cord collection kit; A kit for the treatment of HIV and HCV through the use of virtual algorithms and QR codes; The prototype of the impression tray for unilateral missing teeth in the jaw and the Mobile application for sexual health. The inventions awarded in Bangkok were created as part of the «Incubator of Innovation +» program, implemented by the medical and maritime MareMed consortium, which includes CTT PUM and the Innovation Center of the Maritime University of Szczecin.

Archaeologists from the Jagiellonian University developed a digital guide for southern Jordan

2019-02-14

Archaeologists from the Jagiellonian University in Krakow have developed a professional digital guide for southern Jordan. In addition to information about the nature and landscapes of Jordan, users can also read about Polish research in this part of the world. The <http://southernjordanguide.com/> guide is available in Polish, English and Arabic. It was created thanks to the financial support of the Ministry of Science and Higher Education. Last year Kraków archaeologists discovered a settlement from the Neolithic era located in an inaccessible mountain area, where no one conducted research

before (Munqat's position). In southern Jordan they also excavated stone walls surrounding a large farmstead with commercial and residential rooms (the Faysaliyya in the desert).

„Polish Product of the Future” selected

2019-02-15

Chitosan hydrogel - ChitoVelum from KAEM Maria Krystyna Krupska company and the Gdańsk University of Technology and the bone replacement graft FlexiOss from Medical Inventi S.A., won the competition „Polish Product of the Future” organized by the Polish Agency for Enterprise Development and the National Center for Research and Development. Initiatives such as the Polish Product of the Future competition show how much potential lies in the close cooperation of Polish entrepreneurs and scientific units - said Piotr Dardziński, deputy minister of science and higher education during the gala ceremony. He emphasized, that the creative cooperation between these two realities is the best recipe for breakthrough solutions for the Polish economy and social life. The winners will receive a grant of up to PLN 100,000 for the further development, promotion or internationalization of the product.

Researcher of the Pomeranian Academy in Słupsk nominated for the Polish Intelligent Development Award

2019-02-15

Magdalena Pawlik from the Institute of Physics at the Pomeranian Academy in Słupsk has been nominated for the Polish Intelligent Development Award 2019 in the category „Scientist of the Future” for the project „Optical characteristics of pine pollen grains and their impact on the quality of remote measurements in the Baltic Sea”. Comprehensive measurements of the optical properties of pine pollen and pollen grains found in seawater, as well as its mixture with different amount of optically significant water components will contribute to the knowledge of natural water optics. The results of the research will help to reduce errors in

the creation and interpretation of satellite maps. The Polish Intellectual Development Award is being fought by projects implemented by Polish scientific institutions, institutions and companies dealing with research and development activities that, through their innovative investments and solutions, support the sustainable development of Poland.

Invention from the Gdańsk University of Technology to enable the production of ecological disposable products

2019-02-18

The scientists of the Department of Polymer Technology of the Faculty of Chemistry of the Gdańsk University of Technology discovered an innovative polymer composition for the production of disposable eco-friendly cutlery. The innovative composition includes thermoplastic starch obtained from potato flour and natural-derived additives and biopolymer of polylactide. The disposable products obtained from it are durable in use and at the same time retain environmentally friendly properties. They can be composted along with food scraps and are completely biodegradable. - For the production of our biopolymer materials, easily available raw materials of natural origin or raw materials obtained from renewable sources are used, which is a significant advantage over the commonly used oil derivatives - explains the head of the research team - Prof. Helena Janik. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/wynalazek-z-pg-pozwoli-wytworzyc-ekologiczne-produkty-jednoraz-uzytku

Environmental Aerodynamics Laboratory to be created at the Krakow University of Technology

2019-02-19

The Environmental Laboratory of Environmental Aerodynamics, unique in the scale of Europe, will be built at the Krakow University of Technology (PK). It will be a modern solution to fight for clean air in the region and in Poland. The University has obtained nearly PLN 18 million for this purpose from the Regional Operational Program of the Małopolska Region for 2014-2020. The laboratory is planned to be built on the campus in Czyżyny. It will be the only research center of environmental aerodynamics in Poland - emphasizes the Krakow university. It will run model studies and computer simulations regarding the dynamic impact on smog and airing of cities. The Environmental Aerodynamics Laboratory is to be created by 2021. The total value of the project is over PLN 24.6 million.

Patent for a chemical inducer of plant resistance

2019-02-19

A team of Dr Marcin Śmiglak obtained a patent for the plant inducer. The research partner is the Poznań Science and Technology Park of the University of A. Mickiewicz. For years, Dr Śmiglak has been conducting research to find the stimulator of plant development that increases immunity against infections caused by fungi, viruses and bacteria attacking particular species. This technology can be cutting-edge solution in the plant protection industry, and obtaining patent protection will allow the commercialization of the invention. Research has shown that the obtained chemical molecules are the most effective of the known systemic resistance inducers in plants, effectively stimulating immunity against viruses, bacteria and fungi simultaneously. The technology based on the discovered inducers allows the use of the preparation in doses up to 250 times lower than in the case of conventional plant protection agents.

Campus of the Białystok University of Technology implemented in virtual space

2019-02-20

Białystok University of Technology (PB) is the first university in Poland to implement an innovative solution that is friendly to students, employees and guests. The university campus has been moved into a virtual space. The Zonifero application, developed by specialists from the Białystok firm SoftwareHut easily helps find a laboratory or lecture hall by mobile phone. As explained by Dorota Sawiocka, a PB spokeswoman, all important places can be located with the help of a virtual map: the dean's office, career office, lecturer's room, doctors office, photocopying point or buffet. You can also find out where to apply with specific documents, collect your ID or index, how to find yourself in the PB library. The application is free and available for devices with Android and iOS.

Silesian University of Technology cooperates with the Air Force Institute of Technology

2019-02-20

Silesian University of Technology is intensively developing scientific-research and didactic cooperation with aviation institutions. The latest partner of the university becomes the Technical Institute of Air Forces from Warsaw. The contract has been signed by the Vice-Rector for General Prof. Bogusław Łazarz and the director of the Institute, Prof. Mirosław Kowalski. The signatories of the agreement expressed their satisfaction with the strengthening of contacts between institutions whose business profiles allow for synergistic scientific and research cooperation in innovative fields of knowledge. The signed document will be the first step towards intensification of activities in the dynamically developing civil and military aviation industry. The contract provides joint conducting research and development, innovative and implementation activities, as well as implementation of projects financed from domestic or foreign funds. The partners will also organize training for employees and undertake many other initiatives.

Gdańsk University of Technology scientists co-created the first Polish telescopic loader

2019-02-21

Scientists from the Gdańsk University of Technology worked on the creation of the first Polish telehandler AGroLeo. It is narrower and more manoeuvrable than other loaders with the same capacity. It will be used in agriculture and construction. AGroLeo is one of the most versatile handlers on the market, distinguished by relatively small dimensions in relation to the lifting capacity. It can move in any area, including narrow squares and even in buildings. Central adjustment of the telescope boom ensures good stability of the vehicle despite its small width. The team of Hydraulics and Pneumatics of the Faculty of Mechanical Engineering of the Gdańsk University of Technology, commissioned by Adam Gordziejczyk Hydro-Metal company, made a hydraulic drive project, construction documentation and strength calculations for the frame and loader boom. The Hydro-Metal company obtained funding from the Polish Agency for Industry Development for the project as part of the «Bonus for Innovations» program.

Students of the architecture faculty of the Silesian University of Technology awarded in the international competition

2019-02-21

Students of the 3rd year of the Faculty of Architecture at the Silesian University of Technology - Karolina Słomiany, Natalia Tadla and Kamil Wróbel - were awarded in the international competition „La Ville Vertical” Vertical City Design Competition. They located their project of a unique building in the center of Katowice. - We have designed more than a hundred-meter building on a plot in the center of Katowice, next to the railway station. Katowice is located in one of the most polluted regions in Poland. The idea was to design a building that would not only be harmless to the environment, but also help clean the air. The students wanted to create a place in the city center, where people could live like in the suburbs and enjoy the benefits of green areas. The building is adapted for the disabled, has a green roof available for everyone. It also has an underground parking for bicycles - thus supporting ecological communication.

Polskie Gornictwo Naftowe i Gazownictwo invites participants to cooperate with startups from around the world

2019-02-22

Polskie Gornictwo Naftowe i Gazownictwo (PGNiG) has launched a program with the Startup Hub Poland Foundation, which has invited startups from around the world. The company offers financial help to innovators, and in return expects innovative solutions that will help it improve its operations. The event was attended by the Minister of Entrepreneurship and Technology Jadwiga Emilewicz. - We offer startups access to qualified personnel. It will be an innovative cooperation platform. PGNiG is a global company and needs innovative solutions, which is why we invite startups from abroad. We offer a

50,000 euro award for the best startups. We also expect that solutions will bring us profits. We want to implement innovations primarily in the mining sector - said PGNiG president Piotr Woźniak.

Researchers from Krakow and Toruń co-authored the new sky map

2019-02-22

An international team of over 200 astronomers from 18 countries, including astronomers from the Jagiellonian University in Krakow and the Nicolaus Copernicus University in Toruń, published data from the first phase of a new radio sky survey of unprecedented sensitivity, carried out using the LO-FAR interferometer. Published maps of the radio sky show hundreds of thousands of previously unknown galaxies and shed new light on many problems of modern astrophysics, such as the physics of black holes or the evolution of galaxy clusters. The participation of Polish scientists in the project was possible thanks to the financial support of the Ministry of Science and Higher Education and the National Science Center. The team of Krakow scientists consisted of six people whose task was to «identify and classify morphological thousands of radio sources in the review.» See: <https://youtu.be/GJ1YK5sKdTw>

Project led by Prof. Marian Paluch co-financed within the Maestro call

2019-02-22

The project „Simulation and experimental studies of liquids forming glass based on the new strategy of effective molecular modeling” led by Prof. Marian Paluch, director of the Silesian Inter-University Center for Education and Interdisciplinary Research, was co-financed within the Maestro 10 call of the National Science Center. The team of Prof. Paluch will check how the architecture of molecules, the spatial distribution of their charge and their stiffness affect the structural, dynamic and thermodynamic properties of entire systems. Based on the results, the researchers want to determine which intramolecular properties are most important for

the processes characteristic of subcooled liquids: crystallization, dynamic growth of heterogeneity during system cooling and density scaling. As a result, it will be possible to standardize the results obtained for simple and real materials. More: <https://www.us.edu.pl/projekt-kierowany-przez-prof-mariana-palucha-dofinansowany-w-konkursie-maestro-10>

Artificial bone of Lublin researchers to be commercialized

2019-02-25

Artificial bone patented by Prof. Grażyna Ginalska and Dr Anna Belcarz from the Medical University of Lublin has a chance to reach foreign markets. The Medical Inventi company shared by the authors of the invention plans to get the CE mark this year. Obtaining this mark will allow to sell the composite materials around the world. Researchers from the Lublin Medical University cooperate with the Lublin University of Technology in the field of launching a technological line that will enable the production of composite on a larger scale. Five patients have already learned about the advantages of artificial bone. Dr Adam Nogalski, head of the Clinic of Traumatology and Emergency Medicine at the Independent Public Clinical Hospital No. 1 in Lublin treated them successfully when other centers failed. Thanks to the composite, the patients turned fit again with no side effects.

Information Refining Center to monitor technological trends

2019-02-25

The Information Refining Center, commissioned by the National Center for Research and Development (NCBR), will develop a solution for acquiring and analyzing large amounts of data from sources concerning global and Polish trends in research, development and innovation. Effective programming of support for R & D and innovation activities should be based on reliable and, above all, up-to-date data that allow identifying and forecasting technological trends - says Dr Aleksander Żołnierski from NCRD. That is why NCBR decided to implement mechanisms to monitor technological trends. Ultimately, accurate identification of the current situation in the area of research and development and innovation will allow to improve the NCBR offer. The NCBR entrusted the implementation of this project to the Information Refining Center, the first human-social spin-off company established at the University of Warsaw.

Krzysztof Wegner from the Poznan University of Technology becomes the laureate of the Polish Intelligent Development Award

2019-02-25

Krzysztof Wegner from the electronics and telecommunications department at the Poznań University of Technology received the Polish Intelligent Development Award 2019 in the category: „Scientist of the Future” for the project „MUCHA - Spatial Image Registration and Processing System”. The aim of the project is to develop an innovative system of recording and processing of spatial images with very high resolution, a large number of registered beams and a wide angle of acquisition. The result of the works will be the technology of construction of a new generation of spatial image cameras. The Polish Intellectual Development Award is a nationwide distinction

appreciating the most innovative projects implemented under EU and national programs by Polish scientific institutions, institutions and companies involved in research and development, which through their innovative investments and solutions, are committed to the sustainable development of Poland. More: <https://www.put.poznan.pl/en/aktualnosc/polska-nagroda-inteligentnego-rozwoju-2019>

Students of the AGH University of Science and Technology in Krakow developing an electronic skateboard

2019-02-26

Students from the Scientific Circle of Mechanics of the AGH University of Science and Technology in Krakow, operating at the Faculty of Mechanical Engineering and Robotics, have been developing a hoverboard, an electronic skateboard. This year the students are planning to make a model of a classic hovercraft with dimensions: 80 cm long, 40 cm wide and 5 kg of weight, and next year, based on measurements made earlier, they will start to develop a full skateboard designed for a human. At the moment, the machine is almost completed, the last corrections and the necessary measurements are made. At the same time, the AGH Hoverboard Team design team is starting to complete the components of the device necessary for the construction of the solution.

University of Humanities and Natural Sciences in Częstochowa to cooperate with Symkom

2019-02-26

University of Humanities and Natural Sciences in Częstochowa concluded a cooperation agreement with a company Symkom - ANSYS Channel Partner in Poland, dealing implementation of comprehensive solutions in the field of numerical analysis in industry. The agreement was signed by the rector of the university, Prof. Anna Wypych- Gawrońska and

the president of Symkom, Dr Eng Leszek Rudniak. The agreement is a result of numerous joint initiatives. The most important activities are related to the dual studies, which will be launched from the academic year 2019/2020 in the field of Innovative Technologies and Modern Materials. The studies will be implemented in unique specialties: Virtual Prototyping, Design and Industrial Design. The direction is co-created by representatives of companies and institutions, in which graduates will be able to find employment.

Researcher of the University of Life Sciences in Wrocław joins the ILRS Governing Board

2019-02-26

Professor Krzysztof Sośnica from the University of Life Sciences in Wrocław became a member of the Governing Board of the International Laser Ranging Service (ILRS). The Wrocław scientist is the first Pole in the IRLS management group - an institution associating laser observatories located all over the world and centers for processing laser distance measurements to artificial satellites and the Moon. ILRS provides fundamental observations and products used in various areas of satellite geodesy, physics, astronomy, geophysics, Earth sciences and the environment. SLR laser technology (Satellite Laser Ranging) is used to implement global geodetic reference systems providing the most accurate information on the location of the center of gravity of the Earth's mass, the so-called geocentrum, where the beginning of global reference systems is usually assumed. More: http://www.glos.upwr.edu.pl/aktualnosci/49030/pierwszy_polak_w_radzie_zarzadzajacej_ilrs.html

Seminar on space mining to be held in the Warsaw Kozminski University

2019-02-27

The Center for Space Studies of Kozminski University (ALK) in Warsaw organizes on February 28, 2019 the seminar „Cosmic mining - the perspective of the Polish and international space industry”. The event's partners will be experts from the Space Research Center of the Polish Academy of Sciences and The Hague International Space Resource Governance Working Group, who will share knowledge in the field of technological and legal aspects of space mining. Seminar participants including invited engineers, economists and lawyers will try to answer questions about key technological aspects related to the extraction of raw materials in space conditions and learn to try to regulate the issue of cosmic mining in Polish law.

Rzeszów University of Technology receives nearly 12 million PLN for the for the development of aviation technologies

2019-02-27

Rzeszów University of Technology received almost PLN 12 million for the implementation of the project „Regional Center of Excellence in Automation and Robotics, Information Technology, Electrical Engineering, Electronics and Telecommunications of Rzeszów University of Technology”. The project will be implemented from the „Regional Initiative of Excellence” program, which was announced by the Ministry of Science and Higher Education. The aim of the project is to strengthen the research potential of the Rzeszów University of Technology and increase the level of scientific research. The project will be implemented in 2019-2023. Its detailed tasks include technology development and the use of Artificial Intelligence (AI), Internet of Things (IoE), machine learning (ML) and analysis of large sets of quickly collected data (Big Data) for the needs of the aviation industry.

Patent for compounds used in organic synthesis

2019-02-27

Researchers from the University of Silesia and the Institute of Non-Ferrous Metals in Gliwice have developed a method of obtaining compounds that will be used in chemistry, organic synthesis, biochemistry as well as chemical technology, in particular in polymer technology. The developed method for the production of 1-propenyl compounds of the type $QCH = CHCH_3$ 1-propenyl will be used for the production of photocurable resins used in the industry of protective coatings, printing inks, in micro- and optoelectronics, lithography and dentistry. The patent-protected invention will also find application in the production of: polymers with high refractive index used in the production of optical fibers, compounds useful in anti-cancer prevention, stabilizers and antioxidant additives to gum, as well as mixtures that are flavors or aromas with onion aromas.

Three years of government activity in the field of innovation summarized

2019-02-28

The effect of the efforts of the Council for Innovation activities are: the Constitution for Science, opening universities and research units for the needs of society and economy, a program of implementing PhD theses and a tax system friendly for innovators - said Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin during a press conference opening the Council meeting Innovation. The Ministry of Enterprise and Technology has summarized three years of government activity in the field of innovation. Deputy Prime Minister Gowin mentioned the Constitution for Science, the program of implementation PhD theses and the Łukasiewicz Research Network as the successes of the Council. He pointed out that this new solutions will strengthen the international position of applied research and development works of Polish institutes. The Innovation Council is the most important inter-ministerial coordinator of the innovation policy implemented by the government, included in the public administration system.

System of interactive teaching of histology and cytology at the Medical University of Gdańsk

2019-02-28

The first in Poland system enabling interactive teaching of histology and cytology during practical classes is available at the Department and Histology of the Medical University of Gdańsk. Thanks to equipping microscopes with a digital camera and a tablet, the student has the possibility to save images of histological preparations in the form of a graphic file, marking the characteristic structures in the picture. Then the files can be archived and sent to the student's email address. The system is an interactive consulting and didactic platform. Images from microscopic cameras are sent in real time to the assistant's tablet. Thanks to the appropriate software on the computers of academic teachers, it is possible to display the image from a given student microscope on the big screen, discuss it for all students.

Scientist of the West Pomeranian University of Technology receives Marie Skłodowska-Curie Actions scholarship

2019-02-28

Dr Eng. Paweł Sikora, a scholar of the Didactic Team of Economics, Organization and Management in the Construction of the West Pomeranian University of Technology in Szczecin, has received individual scholarship of the Marie Skłodowska-Curie Actions (MSCA) as part of the EU Horizon 2020 Framework Program. Project of Dr Sikora entitled «Ultra-Light-weight Concrete for 3D printing technologies» scored 94.4 / 100 points. The scholarship will be carried out at the Technical University of Berlin in cooperation with the industrial partner SIKA AG for 24 months. It will allow Dr Sikora to continue his research as part of the started Bekker's internship. The MSCA program supports researchers at various stages of their careers, funding research and training in Europe and non-European countries. At the same time, it enables institutions to employ researchers and involve their employees in international research and training projects.

Researchers from the Technical University of Lodz created a device processing PET bottles into a filament for 3D printers

2019-03-01

Aleksandra Gzowska and Filip Mikołajczyk from the Technical University of Lodz have developed a device for processing PET bottles into a filament for 3D printers. Their idea was awarded at the Polish ClimateLaunchpad competition. The device of Lodz researchers does not only solve the problem of excessive amount of garbage, but also gives a real product, turning empty bottles into a 3D printer filament. The 3D printer market is developing extremely dynamically. One of the biggest factors that stopped this market segment for many years was the high cost of equipment and consumables

- says Filip Mikołajczyk, a student in Chemical and Process Engineering at the Technical University of Lodz. However, it took several years and the technology was significantly improved and printer prices dropped from several thousand to several hundred PLN. Students Gzowska and Mikołajczyk founded the P3T Studio startup and are looking for investors who would help develop their device.

Students from the Warsaw University of Technology developing a device to store energy in compressed air

2019-03-01

Students from the Student Energy Storage Circle at the Warsaw University of Technology (PW) are working on a project to develop an energy storage in compressed air. The project of the Student Energy Storage Circle PW has been completed: Compressed Energy Energy Storage (CAES) project. The team had been working on it for over a dozen months. The students have completed most of the construction works including «preparing the valve part for flow regulation, preparing the pipes, connecting them with air reservoirs, sealing all connections and constructing a heat exchanger». The model is developed in adiabatic technology, which means that the heat from the compression process is used to heat the air before the turbine. It is an innovative technology thanks to which the «need to bring energy from outside the system» is avoided. The final stage of works will be the construction of a Tesla turbine that will drive a small generator of electricity.

#TweetupMNiSW held at the Ministry of Science on Innovation and the „Fast Path” competition

2019-03-01

On Wednesday, February 27, 2019, the Ministry of Science and Higher Education (MNiSW) held #TweetupMNiSW, which was devoted to innovations and this year's „Fast Path” competition. Innovation is an important issue for the Ministry of Science, which created new laws on innovation and

their implementations. They are an opportunity for cooperation between science and business - said Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education. Prof. Aleksander Nawrat, deputy director of the National Center for Research and Development (NCBR), emphasized that «one must have the courage to create innovations». But thanks to such competitions as the «Fast Path» it is much easier now. «Fast Path» is the flagship program of the National Center for Research and Development, which supports the edge-cutting projects of entrepreneurs and is implemented in the form of grant competitions.

New nanocatalyst developed by scientists from the University of Silesia

2019-03-01

Scientists of the University of Silesia have developed a nanocatalyst that can be used to conduct synthesis reactions of compounds with potential anti-cancer, antifungal and antibacterial effects, used in the pharmaceutical industry. The nanocatalyst is a powder and is obtained by the transfer method as a result of the application of the nanopalladium to electrolytic copper of appropriate grain size. It is characterized by high results of coupling reactions and a relatively low production cost due to the availability of materials used and low palladium content. The invention by Prof. Eng. Jarosław Polański, Dr Piotr Bartczak and Dr Eng. Mateusz Korc and Dr Maciej Kapkowski was designed to conduct the Sonogashira coupling reaction, combining two compounds in a basic environment: terminal alkynes with aryl or vinyl halides. More: <https://www.us.edu.pl/nowe-rozwiazania-dla-branzy-farmaceutycznej>

New method of diagnosing kidney damage caused by diabetes

2019-03-04

Researchers from the Jagiellonian University (UJ) in Krakow have developed a method that will help in diagnosing kidney damage caused by diabetes. The method will also recognize the risk of renal failure. Researchers at the Jagiellonian University found that microvesicles in the urine can become a new biomarker of diabetic kidney disease. A team from the Jagiellonian University under the supervision of Dr Ewa Stępień, working with scientists from the Institute of Nuclear Physics of the Polish Academy of Sciences, worked on the solution since 2014. The invention has already been submitted to the Patent Office.

Toruń's success in the competition „Innovation is a woman”

2019-03-04

Dr Grażyna Dąbrowska from the Department of Genetics of the Faculty of Biology and Environmental Protection of the Nicolaus Copernicus University in Toruń (UMK) won in the 10th „Innovation is a woman” competition organized by the Women Science Foundation. The winner was appreciated for the innovative solution «Method of obtaining a biological preparation of fungal origin accelerating the degradation of polymer materials and a biological preparation», created jointly with Zuzanna Znajewska from the Faculty of Biology and Environmental Protection and Dr Ewa Olewnik-Kruszkowska and Dr Grażyna Szczepańska from the Faculty of Chemistry of the Nicolaus Copernicus University. The winning project is a preparation from fungi and other microorganisms occurring in Poland, which by about 20 percent accelerates the decomposition of plastics, even those biologically non-degradable. Importantly, the preparation is easy to reproduce and cheap to prepare.

Deputy Minister Dardziński: We need innovators at universities and in companies

2019-03-05

The creation of the Łukasiewicz Research Network means that the entrepreneur will easily find a partner and have substantive and financial support from the scientific organizations, but above all it means the support of competent scientists to develop new technologies - said Piotr Dardziński, deputy minister of science and higher education. Support for research institutes, incentives for universities to conduct research with greater commercialization potential and to make education easier are the three main elements to develop the innovation of Polish companies and they could be realized through the Łukasiewicz Research Network. - We need people at universities who understand innovation, we need people in companies who understand innovation, and we need innovative investors. The project of implementing PhD theses is the answer to those needs. We have already been teaching almost a thousand PhD students who write their PhD theses, working in companies - added Dardziński.

Toruń researchers to participate in an international team creating new sky maps

2019-03-05

Dr Magdalena Kunert-Bajraszewska and Carole Roskowiński from the Center of Astronomy of the Nicolaus Copernicus University in Toruń will participate in an international team of astronomers who has just published new sky maps showing hundreds of thousands of previously unknown galaxies. Data from the first phase of the new, great sky radio survey of unprecedented sensitivity, realized with the LOFAR interferometer (The LOw Frequency ARray), have just been published by a team of over 200 astronomers from 18 countries. The research of the Toruń team is financed by the National Science Center. The resulting radio sky maps show hundreds of thousands of previously unknown galaxies, shedding new light on many of the problems of modern astrophysics, such as black hole physics and the

evolution of galaxy clusters. More: <https://www.umk.pl/wiadomosci/?id=25953>

Industrial Development Agency to implement the business incubation center of the European Space Agency

2019-03-06

The Industrial Development Agency (ARP) has signed a contract for the implementation of the European Space Agency Business Incubation Centers (ESA BIC). ARP acts as a project leader that joins three regional consortia. ESA BIC is a network of business incubation centers coordinated and co-financed by the European Space Agency. The purpose of creating incubators is to support startups that are at an early stage of development, whose operation is related to the use of space technologies. The consortium, led by ARP, also includes three institutions: Blue Dot Solutions Sp. z o.o. - leader of the Regional Consortium Gdańsk - Krakow, Fundacja Przedsiębiorczości Technologicznej - leader of the Regional Consortium Warsaw - Łódź - Wrocław and the Podkarpackie Voivodeship - leader of the Regional Consortium Rzeszów.

Invention of scientists from the University of Economics in Poznan obtained the European patent

2019-03-06

The invention of scientists from the University of Economics in Poznan, a nanocomposite oxygen absorber, has obtained a European patent. The authors of the invention are lecturers and graduates of the UEP commodity science department: Prof. Zenon Foltynowicz, Dr Eng. Wojciech Kozak, Karol Muc, Eng. Joanna Stoińska and Marta Urbańska. An oxygen scavenger based on zero-grade iron is used to protect packed food from the effects of oxygen. It contributes to the extension of the shelf life and positively affects the sensory characteristics of the product. It prevents food spoilage and reduces food waste. The revolutionary nature of the invention lies in the fact that the absorber is a part of the package and is not added directly to the food - like antioxidants. In addition, the invention of Poznan scientists also works under anhydrous conditions and can be used to protect dry food products.

Researchers from the Gdańsk University of Technology to participate in an international project for a cleaner Baltic Sea

2019-03-07

The Gdańsk University of Technology joins academic and research institutions from six countries of the Baltic Sea Region that deal with developing better anti-flood solutions tools for urban planners. The aim of the project is to create a concept of comprehensive planning and implementation of intelligent drainage systems for everyday practices of cities and water supply and sewage services. It is to contribute to reducing the inflow of pollution from urban areas to the Baltic Sea by as much as half of the floods. The NOAH project «Protection of the Baltic Sea against pollution due to floods caused by intense precipitation in urban areas» is financed by the European Territorial Community in the Interreg

Region of the Baltic Sea program. The project is carried out by two departments of the University of Technology: the civil engineering and the environment departments in cooperation with the «Water supply - Słupsk» company. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/naukowcy-z-pg-w-miedzynarodowego-projekcie-na-rzecz-czystszego-baltyku

Lublin University of Technology creates an innovative simulator for pilots

2019-03-08

The scientists of the Lublin University of Technology have developed the VR Syntia simulator to train pilots on all types of aircraft and helicopters as well as training drone operators. The simulator was presented in the laboratory of the Center for Innovation and Advanced Technologies PL. Pilot education supplemented by a simulator is a must in any aviation training. Currently, such training is carried out on physical simulators, which are expensive, complicated and large in size. In addition, there is no possibility of training flights in battle groups or to simulate air combats - says Dr Eng. Jarosław Zubrzycki from the Institute of Technological Information Systems at the Lublin University of Technology. The effectiveness of VR simulators have been confirmed by the tests. The simulator due to the possibility of programming a large number of functions, advanced graphics, and above all the simulation of load factor that exists on military and aerobatic aircraft, will increase the safety and comfort of flights.

Week of Brain 2019

2019-03-08

From March 11 to 16, 2019, Week of Brain 2019 will take place in many Polish cities. The event is organized by the Institute of Experimental Biology of the Polish Academy of Sciences in Warsaw and the Neuroscience Center of the SWPS University. From March 11 to March 15, the organizers are planning meetings with scientists. All-day workshops will take place on Saturday, March 16, when scientists will invite to «Journey inside the brain», i.e. EEG and BCI imagery show. In addition, researchers from

the University of Social Sciences and Humanities have prepared many attractions, such as interactive demonstrations of augmented reality and capacity trainings that will help understand the structure of brain and its functions. Krakow event will be held under the slogan «Neurobiology in the service of man». During lectures the scientists will talk about how the brain of the deaf or people with spinal cord injury works.

Day with Horizon 2020

2019-03-08

The National Contact Point (NCP) of European Union Research Programs invites participants to the Day with Horizon 2020, which will take place on 4 April 2019 in the Innovation Management and Technology Transfer Center of the Warsaw University of Technology. The co-organizer of the event is the Ministry of Science and Higher Education. The meeting will be an opportunity to get acquainted with selected examples of Polish projects implemented under the Horizon 2020 program and the possibilities of applying in contests in the years 2019-2020. Later in the event there will be several short parallel thematic sessions conducted by KPK experts on selected activities in the Horizon 2020 program and detailed rules for applying in open competitions. More: http://www.kpk.gov.pl/wp-content/uploads/2019/02/ID_program_szkic_V5.pdf

Deputy Prime Minister Gowin: The Łukasiewicz research network to boost innovation

2019-03-08

The Łukasiewicz research network will allow the research institutes to cooperate instead of competing with each other, – said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. Gowin emphasized that such a network of research institutes will give a real scientific basis for the development of the Polish economy and ensures a more innovative character. In his opinion, Poland is successful in terms of traditional industries, but it does worse in terms of innovative, cutting edge products. There are 111 research institutes in Poland. The Łukasiewicz's network include 37 of them. - We did not merge all the institutes. In fact, they are subjected to sixteen different ministries, and most ministries believed that they should be under the control of those institutes that perform industry functions. We respect these decisions - stated the head of the Ministry of Science.

Eco Fresh II air purification device awarded at the fairs in Bangkok and Malaysia

2019-03-08

The inventors of the modern Eco Fresh II air purifier have won a total of 7 awards at the International Invention Fair in Bangkok (Thailand) and the Malaysia Technology Expo 2019. The Eco Fresh II is a modern device for effective removal of health-hazardous volatile organic compounds, fat vapours, NOx, SO2, H2S and harmful microorganisms from the air. The device is the result of cooperation between the team of Prof. Adriana Zaleska-Medynska from the Department of Environmental Technology, Faculty of Chemistry, University of Gdańsk and the PHU Dytrych company from Lodz with the Institute of Biopolymers and Chemical Fibers. The device is supposed to improve the quality of air in gastronomic premises. Its main function is to prevent from the unpleasant odours, fat vapours and harmful compounds caused by burning, frying and grilling in the kitchen (especially the so-called open kitchens).

Startup Games conference to be held in Warsaw

2019-03-12

Until March 12, in Warsaw, the Startup Games conference is organized in the Google Campus Warsaw by the Polish Agency for Enterprise Development, the Ministry of Entrepreneurship and Technology and the Embassy of Great Britain in Warsaw. The main goal of the event is to develop the skills of the creators of start-ups in the field of presentation techniques. One of the elements of the conference is developing a game that simulates real market conditions. The 70 start-up creators and 25 investors are invited to take part in the conference. A special virtual game application should convince investors to invest as much as possible money in the presented idea. The start-up with the highest value at the end of the game wins the main prize, which is a weekly participation in London Tech Week.

Silesian scientists developed an organic bacteriostatic material

2019-03-12

The scientists of University of Silesia and the Silesian Medical University in Katowice have developed a new organic material to prevent the growth and reproduction of bacteria. It will be able to cover medical products and everyday objects. Toothbrushes, interiors of shower cubicles, in-ear headphones, keyboards, and even cell phones are the objects on which surfaces bacteria grow in case of use. They can be covered with impurities of sebum, food leftovers or dust, becoming an excellent breeding ground for microorganisms. The authors of the invention are scientists from the Faculty of Computer Science and Materials Science of the University of Silesia: Dr Andrzej Swinarew; Tomasz Flak; Marta Łęźniak, Jadwiga Gabor, Dr Hubert Okła and Klaudia Kubik, and also Beata Rozwadowska, from the Silesian Medical University in Katowice. The result of their research has been patented.

Gdynia MUSE unmanned boat project awarded in Sweden

2019-03-13

The Searis Technologies company from Gdynia received the Stena Line Propeller Prize for the MUSE (Multipurpose Unmanned Surface Explorer) project transferring instruments for hydrographic and hydrological research. Stena Line Propeller Prize is an award for entrepreneurs granted annually to young innovative companies of the Baltic Sea region in the field of ICT and marine technologies. The awards were given at the Innovation Day conference in Karlskrona in Sweden. In the last season, the MUSE carried out research tasks at Polish Polar Station on Spitsbergen. The boat piloted by scientists from the Department of Oceanography and Geography of the University of Gdańsk collected samples and examined water at the glacier located in the Hornsund fjord. Despite the arctic conditions, the MUSE has fully implemented the research program by providing dozens of samples and measurements from various depths.

Students of the University of Life Sciences in Wrocław created an application for the Romanian Timisoara

2019-03-13

The Students' Scientific Planning Association Puzzle at the University of Environmental and Life Sciences in Wrocław has prepared a mobile application for tourists who want to visit Timisoara - a city in Romania, which in 2021 will be the European Capital of Culture. Wrocław students, using a mobile application based on the GPS system, carried out an inventory of the Timisoara center and chose the most attractive and familiar places presenting the cultural life in the city. The obtained data served to create an interactive map, the so-called Story Map under the name LightUP Timisoara! The area of study included mainly the city center, with its monuments, parks and stories related to those places. The application offers the user information about the place's history in three different languages: English, Romanian and Polish. More: http://www.glos.upwr.edu.pl/aktualnosci/49083/skn_puzzle_z_aplikacja_dla_timisoary.html

Number of Polish patent applications to the European Patent Office increases

2019-03-14

The number of Polish patent applications filed to the European Patent Office (EPO) increased in 2018 by 19.7 percent. The growth rate of the number of Polish applications was one of the largest in Europe. Last year, applicants from Poland filed 534 patent applications to the EPO (in 2017 there were 446 applications). The first place in the ranking of Polish applicants was taken by the Jagiellonian University in Kraków with 12 patent applications, followed by: Polpharma S.A. Pharmaceutical Works. (6 applications), AGH University of Science and Technology in Kraków (5 applications) and Gdańsk University of Technology and the Fakro Group (4 applications). In 2018, over 174,000 European patent applications were submitted to the EPO. This is an increase of 4.6 percent in comparison to 2017. More: <https://www.epo.org/about-us/annual-reports-statistics/annual-report/2018.html>

Institute of Non-Ferrous Metals in Gliwice joins the project of high-performance 3D printing technology

2019-03-15

The Institute of Non-Ferrous Metals in Gliwice is the leader of the „3DMPWIRE - High-Efficiency 3D Printing Technology using the wire in the form of a Cu-based wire”. As part of the project, the production technology will be developed from copper-based alloys, using 3DMP (3D Wire Printing Arc Additive Manufacturing) of components resistant to aggressive corrosive marine environments. The technology developed in the project will be used to produce blades for marine turbines, propellers and other elements for applications in the maritime industry. The Upscaling project financed under the European Institute of Innovation and Technology Raw Materials is carried out in a consortium composed of: Institute of Non-Ferrous Metals (Poland); Gefertec GmbH (Germany); Tecnalía (Spain); ENEA (Italy) and Ghent University (Belgium).

„Communication” application of the student of the University of Technology and Life Sciences in Bydgoszcz

2019-03-15

Bartek Mróz, student of the first year of applied computer science at the University of Technology and Life Sciences in Bydgoszcz, created the KomByd application, which makes the use of public transport easier for its users. The application, which can be downloaded for free from the GooglePlay online store, allows to search for stops by name and it shows the actual departure time of the bus. It also allows them to track bus departure times from other stops on the route and search for stops on the map. Through the application, users can also manage their season tickets, and the application will remind them to extend the validity of the ticket. The application is available in three language versions - Polish, English and Ukrainian.

Polish scientists printed 3D the world's first bionic pancreas

2019-03-18

Researchers from the Foundation for Research and Development of Science (FbIRN) in Warsaw printed 3D the world's first bionic pancreas with blood vessels. In October 2015, on the initiative of FbIRN, the BIONIC consortium was formed. It includes the Foundation for Research and Development of Science together with the team of DM Michał Wszola, Institute of Experimental Biology Polish Academy of Sciences together with a team of Prof. Agnieszka Dobrzyń, Faculty of Materials Science at the Warsaw University of Technology under the supervision of Prof. W. Świążkowski, Center for Biostructure of the Warsaw Medical University under the direction of Prof. Artur Kaminski, the Infant Jesus Clinical Hospital in Warsaw and the MediSpace company. The consortium received funding from the National Center for Research and Development as part of the STRATEGMED III program and thanks to this support, in 2017 intensive work on the bionic pancreas started, which was successful. More: [\[jabirn.pl/projekty/projekt-biodrukowanie-3d-bionicznej-trzustki/\]\(http://jabirn.pl/projekty/projekt-biodrukowanie-3d-bionicznej-trzustki/\)](https://fundac-</p>

Researcher of the University of Białystok working on a system of artificial intelligence to support the lawyers

2019-03-18

Kamil Stępnik, PhD student at the Department of Constitutional Law, Faculty of Law, University of Białystok (UWB), developed theoretical assumptions of the world's first artificial intelligence system actively supporting the work of lawyers. «System of Artificial Legal Intelligence (Salin)» is a software that will be able to replace a lawyer in much of his intellectual work. For example, the system will independently reconstruct the legal status, analyze the client's office situation and propose a solution to a given legal problem. By creating the assumptions of the system, Kamil Stępnik took into account the possibilities of IT tools available on the market. The next stage of work will be the creation of specific algorithms and programs. The PhD student hopes that he will be able to obtain funds for his idea.

Polish Science Fund to be launch

2019-03-19

The Sejm has passed a law on supporting Polish science from the Polish Science Fund. The bill was prepared by the Ministry of Science and Higher Education (MNiSW). The fund will be created by Bank Gospodarstwa Krajowego (BGK) and will be co-financed with PLN 500 million. The Fund is to finance the Virtual Research Institute (WIB), which will be an innovative structure for conducting scientific research. The way of its functioning will differ from the typical method of financing research in Poland. Financial resources will be allocated to the creation and development of research teams. The act, which will now be directed to the Senate, will allow the creation of a new mechanism for financing research works and their commercialization in Poland.

Students of the Opole University of Technology develop a cyber-hand

2019-03-19

Students of the Opole University of Technology (OP) have developed a cyber-hand prototype as part of their diploma thesis. Thanks to their idea, the market has a chance to find a cheap and functional prosthesis printed in 3D technology and controlled by a special glove. The prototype is the result of the work of students of automation and robotics: «Control of robotic hand control with the help of own hand» (author Pavlo Sutyskyi) and «Physical model of human hand prosthesis using pneumatic muscles» (author - Yaroslav Antonchuk). - The project was created for people who lost their hand. Most prostheses on the market are very expensive and only some people can afford to buy a bionic prosthesis. Our goal was to create a cheap solution, the cost of which would be around PLN 1000. Currently, our prosthesis model will be subject to further development - says the promoter and reviewer of the Opole students works, Dr Eng. Mirosław Szmajda.

Polska Grupa Energetyczna and the Research Center of the Polish Academy of Sciences to search innovative technologies

2019-03-21

PGE Polska Grupa Energetyczna signed a contract with the Research Center for Energy Conversion and Renewable Sources (KEZO) belonging to the Institute of Fluid Flow Machinery of the Polish Academy of Sciences (PAN). The objective of the signed agreement is cooperation for the development of innovative, non-emission technologies that will support the transformation of the Polish energy sector. KEZO Research Center is a laboratory of the Institute of Fluid-Flow Machinery PAS, whose aim is to conduct research on clean energy technologies. - We extend cooperation in the field of research and development with the KEZO Research Center, which is a part of the Polish Academy of Sciences. The synergy of the largest company in the energy sec-

tor and the most modern European research center will contribute to the development of low-emission technologies - said Henryk Baranowski, President of the Management Board of PGE Polska Grupa Energetyczna.

President of Poland Andrzej Duda signed the bill on the Łukasiewicz Research Network

2019-03-22

The act is to ensure more effective cooperation of research institutes that will be part of the network. This will happen through the unification of financial management mechanisms, people, real estate and intellectual property rights. There are 111 research institutes operating in Poland, which are supervised by 16 ministers. This affects the dissipation of their potential. Almost one third of these scientific units achieve higher rental income than sales of services related to research and development. The network will be joined by 37 institutes (now mostly subordinated to the Ministry of Enterprise and Technology), as well as the Polish Center for Technology Development. The Łukasiewicz Center will be responsible for the coordination of their activities.

„Jamming gripper” developed by Wrocław students flew into space

2019-03-22

An innovative jamming gripper, designed by students of Wrocław University of Technology, was sent on board the REXUS rocket, which was launched from the Esrange Space Center spaceport in Swedish Kiruna. The rocket has reached the height of 82 km. The experiment was carried out as part of the Swedish-German Rexus / Bexus program implemented under a bilateral agreement between space agencies German Deutsches Zentrum für Luft-und Raumfahrt and the Swedish National Space Board. The project involved checking the possibility of using a jamming gripper in the microgravity and vacuum. Such devices consist of a diaphragm filled with a granulate operating on the basis of a pressure dif-

ference manipulation. The gripper adapts its shape to the object to be lifted, and after the air is sucked out, the granulate hardens, the membrane tightens on the object, thanks to which it can be moved. More: <https://pwr.edu.pl/uczelnia/aktualnosci/chwytak-naszycz-studentow-wystrzelony-w-kosmos-11138.html>

New interactive campus map of the university created at the Wrocław University of Technology

2019-03-25

Agata Kapusta, student of Wrocław University of Science and Technology, has created an interactive campus map of the university as part of her engineering work. There are information about individual buildings and places important for students, like photocopying points or ATMs, and plans for four university's buildings. The interactive campus map has been developing for several years by members of the GIS research and development circle in the geoengineering, mining and geology faculties. Its latest version is based on data from previous student projects - after being updated and transformed into the GeoJSON format. The map consists of 15 grouped thematic layers and two base maps, on which there are campus buildings, libraries, ATMs and photocopier points. In separate views, there are plans for four selected buildings that the user can access from the main map view. Information about objects is displayed in pop-up windows, opened after pointing to the selected object. Link to the map: <http://knbgis.pwr.edu.pl/kampus/kampus.html>

Students of the Wrocław University of Technology to build a solar boat

2019-03-26

Students from the „Flow” and „Płomień” research groups operating at the Faculty of Power Engineering and Energetics at the Wrocław University of Technology are developing a solar boat. The composite form of the fuselage is ready, the first buoyancy tests on the Oder will commence soon. A boat with a length of approx. 5.5 m will be equipped with photovoltaic panels with an area of 6 sq m. The structure will also have hydro-wings, i.e. special bearing flaps, which are mounted under the fuselage. When they acquire the right speed, they cause the hull to rise from the water, thanks to which the resistance decreases and the boat can flow much faster. The construction is to start in international competitions, which will be held in Monaco in July - the largest and most prestigious event of this type in the world. The event welcomes not only university teams, but also professional constructors. The teams compete in three competitions - acceleration, slalom and races. More: <https://pwr.edu.pl/uczelnia/aktualnosci/lodz-solarna-wkrotce-na-odrze-11139.html>

Polish Consortium awarded Intelligent Development Prize for composite material for bone reconstruction

2019-03-27

Scientific consortium of the Institute of Ceramics and Building Materials, University of Gdańsk, Wrocław University of Science and Technology, Institute of Biotechnology and Molecular Medicine and SensDx S.A. became the laureate of the Polish Intelligent Development Award 2019. The prize was awarded in the category «Innovative technologies of the future» for the implementation of the project «Multifunctional composite material with antimicrobial and pro-regenerative properties for the reconstruction of bone tissue». The project was co-financed in the strategic program of scientific research and development works of the National Center for Research and Development. The aim of the project is to develop and produce a mate-

rial with biological activity, acting as a material filling the bone defect and forming a matrix for cells, and at the same time supporting the regeneration of damaged tissue. The use of such a biomaterial will speed up the treatment process and eliminate a number of postoperative complications. More: https://ug.edu.pl/media/aktualnosci/86837/polska_nagroda_inteligentnego_rozwoju_2019

Scientists from the University of Gdańsk to detect urinary tract cancer faster

2019-03-28

Professor Adam Lesner and Dr Natalia Gruba from the Faculty of Chemistry of the University of Gdańsk have developed a quick and non-invasive diagnostic test to detect cancer of the urinary epithelium, commonly referred to as urinary tract cancer. The proposed method assumes only taking a urine sample. Previous studies on a group of 800 people have brought about 90 percent of effectiveness. The research is carried out with the financial support of the UG Technology Transfer Center as part of the Incubator of Innovation + project. The invention has been patented all over the world, and talks are underway on the implementation of the test. The diagnostic kit developed by the Gdańsk scientists consists of two components that under the influence of factors secreted by tumor cells present in the bladder, disintegrate and enable their detection. The test's advantages include ease of carrying it out, diagnostic effectiveness and waiting time for the result (less than 60 minutes). More: https://ug.edu.pl/media/aktualnosci/87002/szybkie_wykrywanie_nowotworu_ukladu_moczowego_dzieki_naukowcom_z_ug

Students of the Wrocław University of Technology to develop a new underwater robot

2019-03-29

Students from the „Robocik” Scientific Club operating of the Faculty of Mechanical Engineering of the Wrocław University of Technology are developing a new version of the autonomous underwater

robot to present it in international competitions in the USA. The new model will be larger, equipped with more engines and a completely new manipulator. Students already have a fully completed boat model and a frame made of polypropylene. The manipulator is also prepared and tests will begin soon at the pool of the Academy of Physical Education. The new boat will be bigger and will attract observers with their futuristic look. This is mainly due to practical reasons - the issue of water resistance and the changed way of placing electronics inside the hull. The design will be lighter and equipped with more engines; four to move horizontally and additional four to move vertically. More: <https://pwr.edu.pl/uczelnia/aktualnosci/z-nowym-robota-podwodnym-wystaruja-w-usa-11146.html>

Silesian University of Technology invites participants to the Innovator Day

2019-03-29

The Faculty of Organization and Management at the Silesian University of Technology in Zabrze invites participants on April 4 to the „Innovator's Day” conference. It is an opportunity to exchange knowledge and experiences between students, entrepreneurs and research workers in the field of creating, developing and commercializing innovative solutions and the possibility of supporting young innovators and inventors. The organizers are planning attractions in the form of scientific riddles rooms, interesting lectures, exhibitions and practical workshops on the use of creative thinking techniques for innovative solutions and design thinking. Conference participants will also learn how to facilitate the processes of prototyping and designing new solutions through visual thinking, how to use the Internet of Things to implement a robot controlled via wifi, how to run an IT project “Creating the first mobile application”.

New microscope purchased for the Department of Histology of the Medical University of Gdańsk

2019-04-01

The fluorescence microscope together with the software was purchased for the Department of Histology of the Medical University of Gdańsk. The device is equipped with an incubation chamber with a two-channel gas mixer and temperature control, which allows long-term observation of changes occurring in living cells. The light source for observation in the fluorescence technique is a set of 16 LED elements. The microscope is also equipped with an eight-position, automated carousel for fluorescent filters, which allows observation of many markers in the same preparation. This is of particular importance in the study of the location, co-localization, translocation and morphological changes taking place in the cells. The ultra-fast camera is responsible for image processing, which minimizes the exposure time of living cells to fluorescent light and greatly speeds up scanning of whole preparations. The purchase cost 450,000.PLN. More: <https://gumed.edu.pl/54715.html>

Students-chemists to compete in Toruń for the titles of Polish champions

2019-04-01

The Students' Scientific Circle of Chemists at the Nicolaus Copernicus University in Toruń invites participants on 6 April to the Artus Court, where scientific clubs from all over Poland will compete in the third Chemical Shows Festival. The festival has been organized since 2017 by the Students' Scientific Circle of Chemists operating at the Faculty of Chemistry of the University of Toruń. The event takes the form of a competition for members of student chemical groups operating in Poland. During the final game, the best Polish scientific chemists clubs will present the most spectacular chemical experiments to the audience and compete to be champions. This year, students from Wrocław, Warsaw, Gdańsk, Rzeszów, Poznań and Kraków will take part in the contest. The

finalists will present a few-minute demonstration in front of the audience.

Science for football

2019-04-02

The capital football club Legia Warsaw strengthens cooperation with innovators. It has already launched the research and development centre "LegiaLab". The Warsaw club is launching the Legia Training Center in Grodzisk Mazowiecki, where it will also include start-ups. They will get access to the sports infrastructure, analytical facilities and tactical club, which will allow to quickly verify their visions. -We want to involve the startups in the sports industry, in particular football, in which they can find recipients of their innovative solutions. The value of this market, both professional and amateur football, is growing at a very fast pace in the world and in Poland. Naturally, more and more money and investments will be also spent on new technologies in this industry - said Tomasz Zahorski, plenipotentiary of the Legia Warsaw board.

Poznań branch of the Institute of Non-Ferrous Metals in Gliwice to modernize its laboratory

2019-04-02

The Poznań branch of the Institute of Non-Ferrous Metals in Gliwice will modernize its laboratory. The project „Modernization of the Laboratory to increase research capabilities for the development of the automotive market and electromobility” is co-financed from the European Regional Development Fund. The aim of the project is to create a modern research base in the field of electromobility that allows conducting research in accordance with the safety requirements for energy storage systems (RESS) and battery testing for electric vehicles. The leader of the consortium established to implement the project is the Poznań branch of the Institute of Non-Ferrous Metals, the other members are: EXIDE Technologies SA, Poznań; Przemysłowy Instytut Motoryzacji PIMOT, Warsaw and the Institute for Automotive Research and Development BOSMAL Sp. z o.o., Bielsko-Biała.

Scientists of the University of Warmia and Mazury in Olsztyn to develop a drug for breast cancer

2019-04-03

The Faculty of Veterinary Medicine of the University of Warmia and Mazury in Olsztyn (UWM) is launching a new research project to develop a medicine for breast cancer. Dr Małgorzata Chmielewska-Krzesińska from the Chair of Pathophysiology, Veterinary Medicine and Administration of the Faculty of Veterinary Medicine UWM begins research on the role of thymoquinone in the fight against cancer. As a model she chose a zebrafish, a small freshwater fish from the carp family, popular in aquarium cultures. Scientists have been using zebrafish for over a dozen years, and the Laboratory of Genomics and Transcripts at the Faculty of Veterinary Medicine as the first in Poland began research work with this fish. Dr Chmielewska-Krzesińska wants to check how thymoquinone will effect on cancer cells. Scientists know that a substance can cause cancer cells to die, but have not yet discovered how this happens.

Poznań scientists to build an observation complex of five modern telescopes

2019-04-03

Scientists at the Adam Mickiewicz University in Poznań will search the sky through five modern telescopes. The Sierakowski Landscape Park is an ideal place for such researches. The university received a grant - PLN 3 million for this purchase. Currently, the university strives to obtain permission to build an observation complex. The whole set of four smaller telescopes and one larger device will be installed in the Sierakowski Landscape Park, 70 km from Poznań. - This is the Dark Sky Park, where the lights from Poznan do not reach - says Dr Kaminski - However, this is not the final destination, because in time we will want to move. Where? We do not know that yet - says project coordinator, Dr Krzysztof Kamiński. Dr Kaminski has just returned from Arizona (US), where he visited the observatory where the Polish telescope from the Poznan University is located.

Researchers from the Jagiellonian University working on the construction of artificial neural networks

2019-04-05

The construction of innovative artificial neural networks is the goal of a research project led by Prof. Jacek Tabor from the Jagiellonian University in Krakow. - Neural networks are software structures and systems whose operation is similar to processes occurring in the human brain. Currently, we have more and more insight into how our brain functions, and thus we can translate this knowledge and improve artificial intelligence systems - says prof. Jacek Tabor. Comprehensive work on the construction of Polish neural networks, under the guidance of Prof. Jacek Tabora, will be run by six research groups from the Jagiellonian University: the Faculty of Mathematics and Computer Science, the Faculty of Physics, Astronomy and Applied Computer Science, and the Faculty of Management and Social Communication. The team will include IT specialists, programmers, statisticians, biostatisticians and neurocognitive scientists. They will receive over PLN 19 million from the Foundation for Polish Science as part of the TEAM-NET program.

Institute of Non-Ferrous Metals awarded at the Moscow salon „Archimedes 2019”

2019-04-05

The Institute of Non-Ferrous Metals received the gold medal of the 22nd Moscow International Salon of Inventions and Innovative Technologies „Archimedes 2019”. The awarded solution is „A method of processing WEEE waste through low temperature pyrolysis”. The authors of the technology are Dr Eng Jerzy Kozłowski, Eng. Wojciech Miklasz and Dariusz Lewandowski. The «Archimedes» exhibition is one of the largest and most famous world events of this type. Over the years, the organizers have gained a great reputation and brand. It is visited by specialists from various industries from around the world. This year's exhibition gathered over 500 inventions from 22 countries around the world from Russia, Germany, Portugal, Italy, Cyprus, Macedonia, Slovenia, Austria, Serbia, Romania, the Czech Republic, Poland, Indonesia, South Korea, Thailand, Taiwan, India, China, Macau, Saudi Arabia and Iraq.

Scientists of the Jagiellonian University developed a method for detecting DNA damage

2019-04-10

Researchers from the Jagiellonian University (UJ) in Krakow have developed a method that not only allows to indicate a damage in the DNA chain, but also precisely determine the place where the genetic code cracks occurred. The creators of the invented method named SensiTive Recognition of Individual DNA Ends (STRIDE) are Prof. Jerzy Dobrucki, Dr Magdalena Kordon, Dr Mirosław Zarębski and Dr Kamil Solarczyk from the Faculty of Biochemistry, Biophysics and Biotechnology of the Jagiellonian University. The development of the method and its commercialization will be carried out by a company intoDNA organized by the scientists. The invention is to be patented soon. Researchers are currently conducting pilot studies related to with adaptation of the STRIDE method to different types of biologi-

cal material. They discover new applications of this method and have initially selected areas where the method has the best chance of commercial use.

Researchers of the Wrocław University of Science and Technology to develop a technology for measuring the adhesion of body surfaces

2019-04-10

The project of scientists of the microsystems and photonics department at the Wrocław University of Science and Technology received funding from the Tango 3 program. The team led by Prof. Teodor Gotszalk will develop practical research of a previously developed new technology for measuring the surface adhesion of bodies. Their research is a part of the base project of the National Center for Science Opus, concerned the metrology of molecular interaction forces using electromagnetically moved microsystem systems - MetMolMEMS. The researchers have developed a new concept for measuring adhesion, which in essence is the sum of the chemical interactions of molecules found on two contact surfaces. The developed measurement technology - after some modifications - will be able to find application in the production of surfactants, e.g. in the cosmetics industry. This will allow to determine the degree of adhesion, that determines whether the product has stronger or weaker performance. More: <https://pwr.edu.pl/uczelnia/aktualnosci/rozwijanie-nowej-technologie-pomiaru-adhezji-na-w12-11159.html>

Lublin scientists working on optimizing the propulsion system of the speedway motor

2019-04-11

The Lublin University of Technology has started cooperation with Speed Car Motor Lublin club. Its goal is to optimize the propulsion system of the speedway motor and obtain its maximum race performance. The university will develop a system for

active registration, transmission and data analysis dedicated to speedway sports. Such a system will allow to upgrade speedway games to a higher technological level. Researchers from the technical university and mechanics from Motor Lublin will work on improving driving techniques. - Our goal is to provide technological support to the Motor Lublin team, which advanced to the PGE Ekstraliga 2019 games - says Prof. Mirosław Wendeker, head of the Department of Thermodynamics, Fluid Mechanics and Air Drives. The research will be financed from the Regional Initiative Excellence project from the funds of the Ministry of Science and Higher Education.

Scientists from the Gdańsk University of Technology create diamond origami

2019-04-11

The team of Prof. Robert Bogdanowicz from the faculty of electronics, telecommunications and computer science at the Gdańsk University of Technology participates in the QUNNA project (QUANTUM-effect-based nanosensing and imaging: Novelglass-diamond photonic approach for the next generation of biodiagnostic applications). Scientists create „diamond origami” - nanoparticles with predefined electrical and optical properties. The QUNNA project involves the use of nanodevices - microscopic diamond crystals even smaller than viruses - to develop innovative sensors for use in optical and magnetic studies, electronics and medical diagnostics. The developed technologies will be implemented in the economy, allowing, among others, faster and more precise diagnosis of cancer and neurodegenerative diseases. The project has gained over PLN 18 million in funding in the first edition of the Foundation for Polish Science TEAM-NET competition. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/diamen-towe-origami-naukowcow-z-pg-powstanie-w-rachmach-projektu-nagrodzonego-w-konkursie-fnp

Gdańsk universities receive over PLN 1 million for implementations under the Innovation Incubator 2.0 program

2019-04-12

Consortium composed of Gdańsk University of Technology (PG), University of Gdańsk, Medical University of Gdańsk and special purpose company PG Excen-to obtained PLN 1.1 million within the competition under the Innovation Incubator 2.0 program. The consortium will conduct pre-implementation projects, promote scientific achievements of Pomeranian scientists and strengthen cooperation between the scientific environment and the business environment. Three Pomeranian universities have planned meetings with business representatives in order to present the technological offer, results of scientific research or research services, and participate in science and business exhibitions and exhibitions. The consortium is one of the 24 applicants for this year's competition and it received the highest ratings of the recommending team. More: https://ug.edu.pl/media/aktualnosci/87382/ponad_milion_na_wdrozenia_w_programie_inkubator_innowacyjnosc_20

First startups in the Samsung Incubator in Lublin

2019-04-15

The Samsung Incubator in Lublin has finished the application period. The Incubator for young entrepreneurs from Eastern Poland was launched in February 2019 and it is aimed at supporting innovative startups operating in digital security. The partners of the Lublin investment are NASK, Lublin University of Technology and the City of Lublin. In the Lublin Incubator, four startups will develop their ideas in the closest future. All new concepts refer to the subject of cybersecurity and provide solutions that have a real impact on improving the functioning of society in digital reality. Startup RAW will work on a secure smartphone constructed on the basis of the Samsung KNOX platform along with a dedicated communicator. Billy Plus is a startup operating in the field of safe education. The founders have creat-

ed an application for learning foreign languages by children and parents. Another startup is CyberStudio. The company offers a service created for companies that do not have IT security management specialists. To provide more security cybersecurity for kids, Real Buddy will prepare a new generation application that monitors communication in search of sensitive content.

New research center of the Wrocław University of Science and Technology to launch new laboratories

2019-04-16

Twelve specialized laboratories with modern equipment will be located in the newly opened GEO-3EM research center of the Wrocław University of Technology. The value of the investment is PLN 102.6 million. The Center was established in the vicinity of the „Polinka” cableway station and the Geocentrum educational and research complex. The three-story building has over 100 different rooms - laboratories, a conference room and warehouse and administration facilities. This infrastructure will be used by scientists from civil and water, chemical, electronics, geoengineering, mining, geology and mechanical faculties. The facility is adapted to the needs of the disabled students. 12 laboratories have been located in the building including Laboratory of Hydrometallurgy Processes, Laboratory of Polymer Plastics Processing, Laboratory of Earth Sciences and Mineral Engineering and Accredited Tape Laboratory and Accredited Laboratory of Work Safety. More: <https://pwr.edu.pl/uczelnia/aktualnosci/centrum-geo-3em-otwarte-nowoczesne-laboratoria-dla-dolnego-slaska-11166.html>

Scientists from the Lublin University of Technology receive gold and silver medal at the exhibition of inventions in Geneva

2019-04-18

The adjusting mechanism of a single-screw extruder adjustable barrel and a mobile plasma device won medals at the 46th International Geneva Invention Exhibition, which took place in Switzerland on April 10-14, 2019. The adjusting mechanism of a single-screw extruder adjustable barrel was awarded a gold medal. This is the solution of scientists from the Lublin University of Technology and Portugal, developed as part of the Newex project. Prof. Joanna Pawłat and young scientists Eng. Michał Kwiatkowski and Eng. Piotr Terebun from the Department of Plasma Technologies and Renewable Energy at the Faculty of Electrical Engineering and Computer Science of the Lublin University of Technology constructed a mobile device for plasmating for the needs of agriculture and the food industry. The invention won the silver medal.

PhD student from the University of Life Sciences in Wrocław receives a bronze medal in Geneva

2019-04-18

Ewa Kozłowska, PhD student at the University of Life Sciences in Wrocław, won a bronze medal and a special prize of the University of King Abdulaziz from Saudi Arabia during the 47th International Exhibition of Inventions in Geneva. The laureate uses entomopathogenic filamentous fungi to biotransformation of steroid hormones to attack insects. The spore falls on the insect, germinating through the chitin armor, begins to grow and gradually kills the insect - says Kozłowska. The same fungi carry out complicated, cascade transformations of hormones: DHEA -prehormone, which is transformed in the human body into male and female sex hormones and has a big impact on the vitality, physical and mental condition of man and progesterone and estrone. As a result of biotransformation, the PhD student obtained the compounds that can be used in the treatment of autoimmune, cancer, allergic disease or organ transplantation. More: http://www.glos.upwr.edu.pl/aktualnosci/49294/ewa_kozlowska_z_brazowym_medalem_w_genewie.html

Polish scientists working on a new method of leukemia diagnostics

2019-04-19

Polish scientists have proposed an innovative method for the diagnosis of leukemia, thanks to which it will be possible to prevent the recurrence of the disease. For the development of their specialized diagnostic equipment, they have just received a grant of PLN 26 million under the TEAM-NET program of the Foundation for Polish Science. The research work will be carried out by a consortium of five scientific units whose leader is the University of Warsaw. As a result of the project, a diagnostic device will be created for rapid, unmarked imaging, identification and sorting of leukemic cell subtypes. Six multidisciplinary teams including oncologists, chemists and physicists from the Faculty of Physics at the Univer-

sity of Warsaw, the Institute of Physical Chemistry of the Polish Academy of Sciences in Warsaw, the Institute of Hematology and Transfusiology in Warsaw, Medical University in Lodz and the Faculty of Chemistry of the Jagiellonian University will be working on the new diagnostic method.

Project of the University of Silesia receives the highest mark of the ranking list of the TANGO3 call

2019-04-19

The scientific project, headed by Andrzej Dzień, a PhD student of the Faculty of Mathematics, Physics and Chemistry at the University of Silesia has been ranked on the highest position in the list of applications for research funding under the TANGO 3 call. The co-financing will allow him to develop a unique pressure free-radical method of polymerization of N-vinyl pyrrolidione to obtain polymers with controlled properties. These compounds will find use in the pharmaceutical industry. The developed method will reduce the use of catalysts and organic solvents and will maintain high process efficiency and control over the properties of the obtained macromolecules. This makes the whole pressure polymerization process much more effective and more ecological compared to the methods currently used in this industry.

Project of the Nicolaus Copernicus University in Toruń awarded in the competition „2019 Innovations That Inspire”

2019-04-23

The project „IMPULS 50+. Strategies for vocational activation of older people for Public Employment Services” conducted by the Faculty of Economic Sciences and Management at the Nicolaus Copernicus University in Toruń, won the award in the „2019 Innovations That Inspire” competition. The project aims to improve the effectiveness of public employment services in increasing the employability

of the unemployed 50+ by adapting to Polish conditions and developing local cooperation and developing new, effective measures to support the labor market. The «Innovations That Inspire» competition is organized by AACSB International - the world's largest network of business education schools. In the fourth competition, 85 business school projects- examples of future-oriented solutions for education, research, community involvement or information and leadership activities were presented. More: <https://www.umk.pl/wiadomosci/?id=26070>

Wrocław University of Technology develops a system for analyzing ashes from domestic furnaces

2019-04-23

Wrocław University of Science and Technology summarized the „Feniks” project, in which university scientists together with the City Guard examined what fuel is used by the inhabitants of Wrocław in their furnaces. The result is the development of sampling procedures and analysis system of ash from home furnaces. One of the main tasks of the project was to develop a control system - from the moment of sampling, to the final report. The University of Science and Technology researchers have prepared an appropriate diagram and a sample collection set consisting of a dozen elements, currently used by guards. However, before scientists could start research, it was necessary to develop a database, which included information on how individual fuels (coal, coke, wood, etc.) and the most common waste (panels, textiles, plastics or newspapers) are burned. In total, researchers developed 21 markers, providing the guards with the set of samples. More: <https://pwr.edu.pl/uczelnia/aktualnosci/feniks-sprawdza--czego-palimy-w-piecach-na-dolnym-slasku-11169.html>

Researchers from the University of Silesia appreciated in Geneva

2019-04-24

The invention of scientists from the department of computer science and materials science at the University of Silesia in Katowice was appreciated during the 47th International Exhibition of Invention, Modern Technology and Products „Geneva Inventions”. Dr Paweł Janik, Eng. Michał Pielka and Dr Małgorzata Janik won a bronze medal awarded by an international jury, as well as a special award from the National Council for Scientific Research of Thailand for developing a broadcasting method for Bluetooth Low Energy transmitters. The invention was applied in the breath monitor - a multifunctional device allowing to control various parameters related to the respiratory system and locomotor activity, such as strength or frequency of the breath, as well as the pulse and the change of the child's body position, for which the whole system was created. «Geneva Inventions» is one of the biggest European events, during which inventors from around the world meet with representatives of industry and business.

Gowin: We have to spend much more on learning to make profits

2019-04-25

- Several conditions must be met to gain from scientific research and to translate it into modern technologies. First of all, it is necessary to have high expenditure on learning. Secondly, there must be a demand on innovation from the economy - said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. Deputy Prime Minister Gowin emphasized, that the government introduced all solutions that favor an innovative economy. He mentioned about two innovation laws, prepared by the Ministry of Science in close cooperation with the Ministry of Entrepreneurship and Finance, and the Act on implementation doctrines, which opened a new economy way focused on close cooperation with business. Jarosław Gowin

also reminded that huge funds were mobilized for co-financing startups, at the very beginning of the term by the then deputy prime minister Morawiecki. He added to this the creation of the Łukasiewicz research network, which is focused on the commercialization of the research results of several dozens of scientific institutes. More: <https://opinie.wp.pl/jaroslaw-gowin-panstwo-ktore-nie-inwestuje-w-swoje-elity-intelektualne-bedzie-panstwem-teoretycznym-wywiad-6373161635583617a>

Scientist of the Wrocław University of Science and Technology developed a biochip for tissue culture

2019-04-25

Dr Robert Szafran from the Wrocław University of Science and Technology has developed a biochip for breeding vascularized tissues. The invention may revolutionize the procedure of admitting new medicines to the market, speeding it up and lowering its cost. The heart of the chip is a breeding chamber whose structure has been cut in a hair thin layer of polymer. It is here that non-living matter connects in a programmed way with cells in artificial tissue. Thanks to the technology, it is now possible to obtain a flow structure which allows to grow whole tissue models on the plate. It allows to «check» the medicine outside the patient's body, but on his own biological material. - Tissue models on the chip are new. They can be widely used e.g. at various stages of preclinical testing of drugs or in personalized medicine, especially in immunological therapies of cancer - says Dr Szafran. More: <https://pwr.edu.pl/uczelnia/aktualnosci/bioniczne-modele-tkanek-pomoga-nie-tylko-w-ce-z-nowotworami-11171.html>

Polish training technology awarded at the exhibition of inventiveness in Geneva

2019-04-25

The training technology developed in the consortium of the Land Forces Academy in Wrocław and the Lublin University of Technology won the silver medal at the 47th International Exhibition of Innovation

and Invention in Geneva. Polish engineers presented in Geneva technology for operators of unmanned aerial vehicles, possible for wide application in training in virtual space. The solution has been submitted for protection in the Patent Office. The invention allows a significant reduction in training costs for operators of unmanned aircraft. It is a development solution - in the future, it will allow operators of any equipment and utilities to be equipped with land forces before the operator will be able to handle the actual equipment.

Researcher of the Nicolaus Copernicus University in Toruń becomes the laureate of the Polish Intelligent Development Award

2019-04-25

Professor Artur Terzyk from the Faculty of Chemistry at the Nicolaus Copernicus University in Toruń became a laureate of the Polish Intellectual Development Award in the category „Scientist of the Future”. The Toruń scientist was awarded for his project «Are nanohedges thirsty? New carbon allotrope and carbon nanomaterials as components of novel superhydro- and superomnify surfaces.» Professor Terzyk is the author of over 230 scientific publications, editor of one book and co-author of the other work. He received a scholarship from the Polish Science Foundation and a Prime Minister award for his post PhD dissertation. The Polish Intellectual Development Award has been awarded since 2016, its winners are organizations and people who demonstrate pro future orientation in their activities. Projects, investments and ventures implemented by the winners are characterized by innovativeness and are examples of sustainable and intelligent development.

Warsaw University of Technology becomes the leader of the Baltic Large-Scale Computing consortium

2019-04-26

Researchers, business representatives and technology parks from eight countries of the Baltic Sea Region are implementing the BalticLSC (Baltic Large-Scale Computing) project, which aims to improve the efficiency of using large computing powers. - Our goal is to support innovative activities, mainly of small and medium enterprises, but also of large companies to use the computing surpluses - says Dr Eng. Michał Śmiałek from the Faculty of Electrical Engineering, coordinator of the BalticLSC consortium. According to the PRACE (Partnership for Advanced Computing in Europe) association report, the European Union loses 2-3% of GDP annually due to delays in the application of modern computational methods. In the Baltic States, these indicators are even worse. Thanks to BalticLSC, the situation is to improve.

International success of Polish young inventors

2019-04-26

Winners of the ninth National Student-Inventive Competition organized by the Kielce University of Technology received five medals, including three silvers, and two distinctions from the 47th International Exhibition of Inventions in Geneva. Mateusz Wrzochal from the Kielce University of Technology was awarded a silver medal for his device for testing the thrust moments of tapered roller bearings. The second silver medal was received by Julia Radwan-Pragłowska from the Krakow University of Technology for a solution called «Biodegradable chitosan nanocomposites / poly (sodium aspartate) / Fe3O4 with ferrimagnetic properties». The third, silver medal was received by Michał Kwiatkowski from the Lublin University of Technology, who together with his team developed a low-temperature plasma for the needs of agriculture and the food industry. The International Exhibition of Inventions in Geneva is the largest and most prestigious exhibition of

inventions in Europe visited by over 30,000 people from all 5 continents.

University of Silesia joins new Innovation Incubator program

2019-04-26

The University of Silesia in Katowice has received funding for the implementation of its project within the program of the Ministry of Science and Higher Education Innovation Incubator 2.0. The program is to contribute to the promotion of scientific achievements, development of innovation, as well as to strengthen cooperation between science and the economy. The consortium composed of University of Silesia, SPIN-US SPE and Jan Kochanowski University in Kielce will conduct activities to initiate and intensify cooperation of the scientific community with the business environment by seeking entities interested in implementing research and development results, promotion of technology and participation in science and business exhibitions and fairs. Activities will also concern the implementation of pre-implementation work - adapting inventions to the needs of interested buyers. The program also provides for the management of the technology portfolio and the establishment of innovation brokers.

Invention of an Opole entrepreneur can stop the epidemic of African Swine Fever

2019-04-29

Entrepreneur Jarosław Romanowski and his team invented, patented and started the production of „Janobio” - a measure that can stop the African Swine Fever epidemic disease. „Janobio” is a biocide - chlorine hydride, electrically charged to a drop of water, with the addition of a special stabilizer. A spray of water dropping on a virus or bacteria acts like a bomb. An «explosion» occurs and destroys the cell membrane or lipid cover of viruses. The bacterial or virus tissue is opened and the remaining hypochlorite with the stabilizer breaks down or eliminates the virus. As the manufacturer convinces

the agent is completely safe for people. It does not cause poisoning or skin irritation either burns. It is very easy to use for animal breeders, veterinary services or even hunters. It was examined and positively assessed by the State Veterinary Institute in Puławy. More: <https://nto.pl/opolanin-stworzyl-bron-dowalki-z-afrykanskim-pomorze-swin-sukces-prob-z-nowym-srodkiem-biobojczych/ar/c8-14070163>

First Polish portal dedicated to artificial intelligence

2019-04-30

Warsaw Information Processing Center - National Research Institute (OPI PIB) with the support of the Ministry of Science and Higher Education launched the first Polish website devoted entirely to artificial intelligence, automation and robotics. The site sztucznainteligencja.org.pl will present technological innovations related to artificial intelligence, materials on the subject of scientific research in the area of AI conducted in Poland and abroad, and AI development strategies. The new medium combines information and educational functions. The news section presents the latest information on research and practical applications of the broadly understood AI. The portal also presents ideas related to digital technologies and AI, the profiles of their authors and information on the most important AI events in the country and around the world.

Network of air assessment sensors operating for three months at the Wrocław University of Science and Technology

2019-04-30

The only university network of sensors for air quality assessment in Poland has been operating for over three months on the Wrocław University of Science and Technology campus. The information provided by the network has already been read by several thousand employees, students and residents of Wrocław. The system consists of twenty devices, located on the university campuses, in Geocentrum at ul. Na Grobli and in the dormitories. The equipment used in the project consists of innovative measuring devices using a method in which the measurement consists in detecting light reflected from dust particles in the air. On the basis of the number of counts and the intensity of the scattered light, the instantaneous dust concentration is calculated. The aim of the project is to measure concentrations and analyze pollutants responsible for the so-called smog. During the tests, the influence of buildings, meteorological conditions and urban plants focused on a small, closed area on the spread of pollutants is also checked. More: <https://pwr.edu.pl/uczelnia/aktualnosci/modelowe-badania-jakosci-powietrza-na-kampusie-11174.html>

Graduate of the University of Technology and Life Sciences in Bydgoszcz created the longest wind blade

2019-05-02

LM Wind Power in its plant in Cherbourg, France, has produced a windblade with the length exceeding 100 meters for the first time in the history of wind energy. The director of the team supervising the work is Łukasz Cejrowski, a graduate of the University of Technology and Life Sciences in Bydgoszcz. The windblade produced in Cherbourg is 107 meters long and will be tested to get the necessary certificates for commercialization and to demon-

strate the ability to work without problems for over 20 years. The new blades will be used in the largest offshore wind turbines in the world - General Electric Heliade-X with a unit power of 12 MW.

Wrocław University of Science and Technology to hold VIII Meet-up Top500 Innovators

2019-05-06

The Association Top 500 Innovators and the Wrocław University of Science and Technology are inviting participants to the VIII Meet-up Top500 Innovators & Polish-American Innovation Bridge (PAMI) - a three-day conference for people interested in the latest technologies. The program includes discussion panels with the participation of the CEOs of startups dealing with advanced technologies in the Space, Med Tech, Bio Tech, Industry 4.0 areas. The participants will listen to the presidents and representatives of VIGO Systems, Bioceltix, Pure Biologics, ToopLoox, NestMedic, SDS Optic, Space is More, NeuroSys, AlphaMoon, SAT Revolution, Kell ideas, Bioavlee, Captor Therapeutics, Nysa, InferMedica, eMedica or Microscope IT. From 8 to 10 May the participants will discuss the issue of development of research and development areas in the light of new legal regulations. There will also be workshops on the methodology of solving complex problems, TEDex public speeches, industrial design and legal aspects of the development of technology companies. More: <http://top500meetup.pl/>

Consortium to develop implants for bone tissue regeneration

2019-05-07

Wrocław University of Technology is the leader of the project „Multifunctional biologically active composites for applications in bone regenerative medicine” has received almost PLN 14 million within the TEAM-NET competition of the Foundation for Polish Science. The consortium includes the Wrocław University of Science and Technology, the Institute of Ceramics and Building Materials, the Ceramics and Concrete Department in Warsaw; Krakow Universi-

ty of Technology and University of Lodz. The aim of the project is to develop new polymer-ceramic composite biomaterials designed for regenerative medicine applications - in controlled regeneration of the skeletal system. As part of cooperation of research teams, porous implants for regeneration of bone tissues and bone stabilizing implants covered with innovative coating materials, which release bioactive growth factors and anti-inflammatory components, will be developed.

Medical University of Silesia gained over PLN 10 million from the National Center for Research and Development

2019-05-07

The project of the Medical University of Silesia „Integrated School Programs SUM 2” received more than PLN 10.1 million funding from the National Center for Research and Development as part of the competition for „Integrated University Programs - Path I”. The project assumes increasing the competences of teaching staff in the scope of educating students according to the direction of Health Risk Management with knowledge and skills allowing health risk assessment and programming of preventive care and participation of teaching staff in courses of statistical programs, databases, specialized software and specialist English. Thanks to co-financing, the Faculty of Public Health will be provided with a computer lab with equipment and software for analyzing environmental and health data. The money will also allow to launch the University Repository of Medical Cases and the system of handling scientific conclusions and the office document circulation.

European Space Agency to send a Polish device in the lunar mission

2019-05-08

The engineers of the Space Research Center of the Polish Academy of Sciences, are working on the construction of a small excavator, which will be launched with a lander developed by the European Space Agency (ESA) to the Moon. The excavator will dig the oxygen-rich regolith. The Polish device is to transfer regolith to a thermochemical reactor to produce water. The European Space Agency (ESA) intends to send a lander to the Moon by 2025. It will be used to carry out further research, which will show the possibility of obtaining oxygen or water from the local mineral resources. This will be the first ever mission focused on using the Moon's resources.

Students of the University of Zielona Góra developed a prosthesis for a dog

2019-05-08

Students from the BiomedUZ scientific club, operating under the Biomedical Engineering Department of the University of Zielona Góra, developed a prosthesis for Reksio - a dog that lost a part of the paw after being hit by a train. Students of the Zielona Góra university designed a prosthesis, which consists of rigid element, which is covered with a gel pad and is joined with the 3D printed stump made of elastic fiberglass and epoxy resin to simulate work of joint, provide cushioning and prevent overloading of other joints in the limb. The elastic element was also 3D printed. More: <http://www.infoserwis.uz.zgora.pl/index.php?studenci-z-koa-naukowe-go-biomeduz-stwrzyli-protezy-dla-psa-ze-schroniska-w-nowej-soli>

Project of Wrocław students awarded in the competition eVolo 2019 Skyscraper Competition

2019-05-09

The project of a skyscraper cleansing the ocean of rubbish designed by students of the architecture faculty of the Wrocław University of Science and Technology was awarded as one of the 30 best works in the competition eVolo 2019 Skyscraper Competition. The project of Wrocław students would have a huge, floating piston, pressing waste directly in the water. It would take away only the most contaminated water without using pumps or underpressure. The only force pressing the garbage would be gravity. Then a press with a diameter of more than 4.5 meters would crush the garbage, thus forming discs whose height would depend on the density and type of waste. Then the garbage would go to a special buffer to be picked up by the ship and destined for utilization. 478 works were submitted to this year's competition. The jury selected three finalists and awarded 27 prizes. The Wrocław prized students are Szymon Ciupiński, Karol Łącki and Dominik Pierzchlewicz. More: <https://pwr.edu.pl/uczelnia/aktualnosci/studenci-z-w1-wyroznieni-w-miedzynarodowego-konkursie-evolo-11183.html>

Important discovery of scientists from the Jagiellonian University

2019-05-10

Researchers from the Małopolska Center of Biotechnology of the Jagiellonian University (JJ) in Krakow informed in the journal Nature about the discovery of a 24-walled protein cage, made of gold ions, whose geometry is contrary to the rules of mathematics. Krakow researchers belong to an international team led by the British Prof. Jonathan Hedderley. The discovery is a step towards the wider use of artificial protein cages with original properties. This could ultimately revolutionize protein therapies or treatments using DNA or RNA, potentially allowing for greater efficacy, e.g. in the fight against cancer. The long-term research was financed by the Nation-

al Science Center, and the partners in the project included scientists from the University of Oxford, Durham University in Great Britain, and from Japan, Canada and Slovenia.

„Thin-layer photoreactor” project to receive 200,000 PLN funding

2019-05-14

Project „Thin-film photoreactor” of Prof. Adriana Zaleska-Medynska from the University of Gdańsk received funding within the Tango 3 competition of the National Center for Research and Development. The budget of the project is 200,000 PLN. The main goal is to design, develop and test an innovative thin film photoreactor with a photocatalytic layer in the form of nanotubes developed as a mixture of TiO₂ with Ag₂O and / or Cu₂O. The researchers' plans include elaborating a concept for the economic use of a photoreactor for the disinfection and water phase treatment processes, carrying out a market analysis that diagnoses the production needs and the use of a photoreactor, receiving a patent and acquiring a partner interested in the production or use of such equipment. The aim of the Tango competition is to support scientific units that undertake activities related to the practical use of the obtained results of basic research.

Researchers from the Warsaw University of Technology working on a device to help identify skin cancers

2019-05-16

Team under the direction of Dr Eng. Agnieszka Siemion from the Faculty of Physics, Warsaw University of Technology (PW), is working on the creation of optical systems for the device that will real-time imaging human skin, allowing identification of cancerous changes. The T-SKIN project received funding in the ninth LIDER program organized by the National Center for Research and Development. The device will be based on optical modules containing diffraction structures. These structures use the phenomenon of diffraction, which consists in the fact that the wave, when encountering an obstacle, changes the direction. The scientists' plans include creating an illumination and imaging system for the skin that focuses the radiation on the high power density spot and the system redirecting radiation reflected at different angles to the detector or matrix, which will also allow deeper layers of the skin to be examined.

Rehabilitation oscillation vest for clearing the airways

2019-05-16

Scientists of the University of Silesia created a rehabilitation vest for oscillating the airways. The solution was created primarily for the physiotherapy of people struggling with diseases with secretion accumulated in the airways, for example cystic fibrosis or bronchial asthma. The vest is a technologically advanced product that requires the integration of control techniques with mechanical elements hidden in a specially designed textile material. - The eight built-in vibration motors cause the vibrations of the vest so strong that the patients reflexively expectorate the secretion from their lungs. In addition, there is a special cotter that immediately switches off the device. It may happen that during the vibration the patient feels worse, then he can immediately disconnect all systems.

Scientists from the University of Silesia develop rehabilitation game

2019-05-17

Researchers from the University of Silesia created a special rehabilitation game using virtual reality. The game is addressed to patients requiring constant or temporary rehabilitation of the musculoskeletal system, having post-traumatic problems, as well as rheumatological and orthopedic diseases. The rehabilitated persons, thanks to the system of sensors, can play a virtual character in the games «Teddyrun» or «Teddyflight», and then, trying to avoid numerous obstacles they collect honeycombs or additional bonuses while running in the spaceship. The scenario can be freely changed for patients of all ages. - The patient must perform certain movements with his hands or torso to achieve the goal of the game to collect as many as possible honeycombs, apples or get to a certain number of rooms.

Polish scientists to create two new elements in laboratories

2019-05-20

Researchers from the Faculty of Physics of the University of Warsaw (UW) and the National Center for Nuclear Research (NCBJ) are declaring the possibility of producing two new super-heavy elements and a few new isotopes from already discovered elements. They used theoretical, created in Warsaw model to calculate chemical processes previously not taken into account. - In Warsaw, we have a simple but reliable model that allows us to estimate the probability of new elements formation in new installations»- explained Prof. Krystyna Siwek-Wilczyńska from the Faculty of Physics, University of Warsaw. Free spaces in the 7th row of the periodic table were recently filled, and new elements obtained their new names. The heaviest (with the number of protons $Z = 118$) was called oganesson in honor of the scholar and discoverer Yuri Oganessian. Scientists, however, are still wondering whether it will be possible to create artificially even heavier elements.

Young scientists to present Innovative ideas at the conference Science -Startup -Industry

2019-05-20

On 22-23 May 2019 years at the Academy of Mining and Metallurgy in Krakow will host the fifth conference „Innovative ideas of young researchers: -Startup - Science- Industry „ organized by the Institute „Highway of Technology and Innovation“. The event will take place as part of the Impact'19 congress. The conference is addressed to young researchers, graduate students, students and representatives of startups. Participants will be able to present papers on innovative product, process, social, organizational, and institutional marketing. The aim of the conference is to promote innovative solutions, which are created largely by young scientists and students. Organizers hope that the presentation of innovative solutions and promoting them among the partners of the Institute of Highway Technology and Innovation and industry will allow their faster implementation.

Startup of graduates of the Silesian University of Technology awarded at the European Startup Days

2019-05-21

Startup WAAM created by graduates of the Silesian University of Technology, was considered one of the three best startups in the Environment category at European Startup Days organised as part of the 11th European Economic Congress in Katowice. The WAAM is the first Polish Reverse Vending Machine to accept returnable packaging. The device is characterized by innovative mechanical solutions that allow to enhance collection of waste. In addition, the unconventional combination of a dedicated application of games with the machine creates the first such game console, which collects waste for a virtual currency. For the received currency young people will be able to fulfil their dreams in the virtual world. The system of generating profits for the investor is also revolutionary. They can score selected products or machine locations, increasing sales of products.

Polish science and innovation to receive over PLN 21 billion from European

2019-05-24

The Ministry of Science and Higher Education and its executive agencies: National Center for Research and Development, National Academic Exchange Agency, Information Processing Center - National Research Institute and National Contact Point for European Union Research Programs in the current perspective (2014-2020) will allocate in total over PLN 21 billion from European funds to support the transfer of knowledge from science to the economy. - While creating a strategy for Polish science, we accepted as the basic assumption that innovations are for people. Inventions are created to improve not only GDP level, but above all the everyday life of Poles, especially in such areas as health, safety or education. In order to achieve such goals, we must invest in brave people and their visionary projects - said Jarosław Gowin, deputy prime minister, minister of science and higher education.

Scientists from Bydgoszcz receive Medals for inventions

2019-05-24

Scientists from the University of Casimir the Great in Bydgoszcz (UKW) won gold medals at the Global Invention Forum 2019 in Limassol in Cyprus for their inventions worked out by inter-university research teams. The inventions include a shredder for plastics developed by Dr Eng. Marek Macko, Prof. Eng. Józef Flizikowski, Michał Bogdański, Eng. Mariusz Lenc (University of Technology and Life Sciences in Bydgoszcz) and wheelchair inner pad for patients with periarticular cirrhosis developed by Dr Eng. Dariusz Mikołajewski (UKW), Dr Emilia Mikołajewska (Nicolaus Copernicus University in Toruń). The success was possible due to their well-thought-out development strategy and promotion of innovations of the UKW on the regional, national and international market. Participation in the fair and the awards can contribute to the long-term promotion of the UKW achievements during its 50th anniversary and will contribute to the increase of commercialization opportunities.

Deputy Prime Minister Gowin encourages Poles to take part in Mission Boards Horizon Europe

2019-05-27

Until 11 June 2019, Poles can apply for the Mission Boards of the Horizon Europe program. Deputy Prime Minister Jarosław Gowin invites Poles to be part of this venture. Horizon Europe is the largest research and innovation funding program in the history of Europe. It can be participated by all European citizens, not just scientists and entrepreneurs. Currently, people EU citizens can apply for the Mission Boards. Each mission will be a group of 15 people who will control the achievement of goals. According to the Ministry of Science, 5 European missions for future generations were selected in a long consultative and analytical process: Climate change, Oncology, Healthy land, Clean oceans and seas, Smart cities. -We want Poles to be part of this ambitious undertaking. We want the most courageous, open and innovative people from Poland to participate in the missions and help Europe make a giant step for humanity - said Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education. More: http://ec.europa.eu/transparency/regexpert/index.cfm?do=calls.calls_for_app

Student Construction Competition KoKoS 2019

2019-05-28

Michał Zwierz, a student of the AGH University of Science and Technology in Kraków, designed a wheelchair with increased mobility, which won the LifeScience category in the Student Construction Competition KoKoS 2019. He studies Automation and Robotics at the Faculty of Mechanical Engineering and Robotics. Over 36 projects have been submitted to this year's KoKoS Student Construction Competition. The winners in the remaining categories are: Railway - a locomotive (scale model 1: 5,5) implemented as part of the Railway Challenge by Poznan University of Technology, Joker - locator for recreational divers Wavy by Lodz University of Technology. Smart Robots - a mobile research platform

Scorpio X by Wrocław University of Science and Technology, Vehicle - car Maria of the Motorsport team from Poznan University of Technology, Ecology - motorcycle LEM Thunder by team LEM Wrocław University of Science and Technology).

Three Wrocław universities to create a platform for electronic services

2019-06-03

Three Wrocław universities - University of Life Sciences, Medical University and Academy of Physical Education will carry out the project „Platform of electronic services UPWr, UMW and AWF Wrocław - friendly e-universities”. The project assumes the creation of a multiportal IT system for e-services, which will be made available to students and the academic community, as well as to institutions and entrepreneurs cooperating with Career Offices and scientific units. The system will include e-services addressed to students, university staff as well as entities dealing with the human resources. Money for the task, PLN 5.5 million is allocated from EU funds to the Marshal's Office of the Lower Silesian Voivodship.

Krakov scientists produced protective „cages“ for enzymes

2019-06-06

In the laboratories of the Małopolska Center of Biotechnology of the Jagiellonian University, the Krakow scientists successfully completed the procedure of placing enzymes inside protective „cages“ of proteins, from which crystals were subsequently created. As a result, enzymes can still perform their functions, being protected from adverse environmental factors. The research was conducted by a team of scientists from the Jagiellonian University and Aalto University in Helsinki. Enzymes play a key role in the cells of the human body, and are also used in industry (e.g. as stain removers in biological washing powders). Enzymes are often very sensitive to external factors and some of them are broken up when they are outside the cellular environment. Thanks to the solution of scientists from the Jagiellonian University, this process can be stopped. The work was financed mostly by the Homing and TEAM programs of the Foundation for Polish Science.

Researchers of the University of Wrocław developed a missing people location system

2019-06-06

Scientists from the Department of Geoinformatics and Cartography of the University of Wrocław has developed a system for locating missing persons in open areas. According to their plans, in two years it will be implemented in saving human life during exploratory campaigns. Thanks to the innovative combination of geographical knowledge, information skills and drone capabilities, the scientists created an algorithm to search targets from the bird's eye view. It can detect people in aerial photographs, on which man is only a group of pixels, similar to animals and bushes. The team decided to set up a technology company and commercialize the solution. A capital company SARUAV was established, which is supported by the University of Wrocław and has the university license agreement. The company will co-

operate with investment fund Epic Alfa, whose main investor is a company from the PGE Capital Group. More: <https://uni.wroc.pl/naukowcy-z-uwr-pomoga-ratowac-zycie/>

Poznan University of Technology to hold the conference of Polish Scientific Networks

2019-06-07

Until June 14, students can register for the 4th Polish Scientific Networks (PSN) conference. The conference will be held at the Lecture Center of the Poznan University of Technology from September 19 to 21. Participants of the event will discuss the relationship between science and technology as well as modern technologies and innovations in various areas of science - from social to exact sciences. The latest achievements in this area will be presented by scientists from Poland and abroad, in six thematic areas: energy, new materials, information technologies, health care, social media and a large research infrastructure. In addition to scientific sessions, the organizers will provide debates and discussion panels to allow participants to exchange ideas and experience. The conference is organized by the Academy of Young Scientists of the Polish Academy of Sciences, the Scholarship Club of the Foundation for Polish Science and the Ministry of Science and Higher Education.

Researchers from Lublin developed and patented an innovative bio-fertilizer

2019-06-10

A team of scientists from the Faculty of Biology and Biotechnology of the Maria Curie-Skłodowska University (UMCS) in Lublin under the supervision of Dr Jerzy Wielbo, prof. UMCS, received the statuette of the Minister of Agriculture and Rural Development and a silver medal for the development and patenting the innovative bio-fertilizer. The award was granted during the INTARG International Fair of Inventions and Innovations. The purpose of the invention is to stimulate germination, growth and

yielding of legume plants. The authors of the patent «Biofertilizer for legumes planted on the basis of metabolites of the strain of bacteria *Rhizobium leguminosarum* bv. *Viciae* GR09 and the method of producing this bio-fertilizer « are: Dr Jerzy Wielbo, Prof. of UMCS, Dr Dominika Maj, Prof. Anna Skorupska and Dr Monika Marek-Kozaczuk.

Application expanding knowledge about the Arctic

2019-06-11

The EDU-ARCTIC consortium, coordinated by the Institute of Geophysics of the Polish Academy of Sciences (PAN), launched the Arctic Explorer Game application, which allows users to broaden their knowledge of the Arctic area in the form of quizzes. The author of the application idea is 13-year-old Yngva from the Faroe Islands, who proposed the idea of creating a virtual journey through the Arctic, which allows you to expand knowledge about the region. His idea was highlighted in the competition, organized by the EDU-ARCTIC consortium. The journey through the Arctic begins in Svalbard, where Poland under the Spitsbergen Treaty conducts scientific research in the Polish Polar Station in Hornsund. Users can choose from biology, geography, geology and natural sciences questions on 3 levels of difficulty. Answering correctly, the players collect «coins» that allow them to «travel» in other parts of the Arctic: Iceland, Greenland, Faroe Islands, Scandinavia or North American polar regions. More: <https://play.google.com/store/apps/details?id=pl.americansystems.arcticexplorer>

23rd competition for the Alexander von Humboldt Polish Honorary Scientific Scholarship

2019-06-11

Foundation for Polish Science has launched the 23rd competition for the Alexander von Humboldt Polish Honorary Scientific Scholarship, under which eminent German scholars, invited by researchers from Poland, can come to our country for several months of studies. From June 6 to September 30, 2019, scholarship candidate applications may be submitted by Polish scientists. The scholarship may be awarded to a German scholar for a period of 3 to 6 months to stay in a research center in Poland and may be used within 3 years after its granting. The amount of the scholarship is equivalent to EUR 4,000 per month. The competition is addressed to representatives of all fields of science. More: <https://www.fnp.org.pl/oferta/humboldt/>

Researchers from Krakow joins a consortium to develop a European supercomputer

2019-06-11

Researchers from the AGH University of Science and Technology in Krakow will develop a supercomputer together with European partners. It will be 10 times faster than the currently fastest computer in Europe. The works will be carried out as part of the European Joint Undertaking in the field of the Great EuroMill (EuroHPC Joint Undertaking). Declaration on Poland's accession to EuroHPC was signed in 2018 by Deputy Prime Minister Jarosław Gowin. The Ministry of Science will allocate 5 million euros to develop the computer. The consortium that is to develop, install and test the supercomputer includes Poland, Finland, Belgium, the Czech Republic, Denmark, Norway, Sweden and Switzerland. The installation is planned for 2020 and will take place in the Finnish data center in Kajaani. Poland is represented by the Academic Computer Center Cyfronet of the AGH University of Science and Technology in Kraków.

Researcher of the University of Wroclaw becomes a laureate of the Polish Intellectual Development Award

2019-06-11

Dr Joanna Błaszczak, head of the Experimental Studies Laboratory of the University of Wrocław, became the laureate of the Polish Intelligent Development Award 2019 in the category - Future Scientist. The initiator and organizer of the prize is the Intelligent Development Center. The media partners are journal «Rzecz o Innowacji i Inwestycjach» and the «goPL» program. The main partner is the Silesian Center for Business Ethics and Sustainable Development at the Silesian University of Technology. The honorary patron is the President of the Patent Office of the Republic of Poland, Dr Alicja Adamczak. From 2016, the winners are organizations and people who are oriented towards the future in their activities. All projects and investments implemented by the winners that are characterized by innovation and are the best examples of sustainable and intelligent development.

Successes of the Silesian University of Technology at the XII International Fair of Inventions and Innovations of INTARG

2019-06-11

Four solutions submitted by the Center for Innovation and Technology Transfer of the Silesian University of Technology were awarded in the INTARG competition, which was organized as part of the International Fair of Inventions and Innovations of INTARG in Katowice's Spodek hall. The method of processing waste and laminated foils separated in the refining process from multi-material containers for liquid food of the TetraPak type has won the gold medal, the President's Cup of the Jury and the Cup of the President of the Polish Chamber of Ecology. The uFluidix microfluidic device and the way of conducting 3D cell cultures in conditions reflecting the

in vivo environment won the gold medal and the special prize of the Croatian Association of Inventors. The nano-structured fibrous composite material with a polymer matrix with a reinforcing phase and the method of its production has won the gold medal, and the synthetic intra-thorax esophagus prosthesis and the way it is made won platinum medal of the INTARG competition.

Lublin university to hold a conference „Innovations in the world of marketing and human resources management”

2019-06-12

The Scientific and Management Sciences Club of the Maria Curie-Skłodowska University (UMCS) in Lublin is organizing on June 14, 2019 the conference „Innovation in the world of marketing and human resources management”, which will be held at the Faculty of Economics of UMCS. This is the first nationwide conference, dedicated to people interested in changes, news, current and future trends in marketing and human resource management. The organizers address it mainly to students and PhD students. The aim of the conference is to exchange experiences, views and insights on development in the fields of marketing and human resource management.

Researchers of the AGH University of Science and Technology in Kraków receive a grant under the ATTRACT program

2019-06-14

The international consortium including researchers of AGH University of Science and Technology in Krakow will develop the Random Bit Generator, generating keys and other data and aimed at providing a safe, cost-effective, strong and small tool for the Internet of Things and the car market. AGH as the only Polish university participating in the ATTRACT program. It is an initiative bringing together European scientific and research communities and industry, which construct and exploit telescopes, particle accelerators and other capital-intensive scientific instruments. The consortium includes European Southern Observatory (ESO), European Organization for Nuclear Research (CERN), European Molecular Biology Laboratory (EMBL). The main task of ATTRACT is to create a completely new, European model of open innovation that can become a driving force for creating jobs and the welfare of society.

Groundbreaking research of physicists from Poland, Denmark and Germany to accelerate the development of new technologies

2019-06-17

The research of scientists from the Center for Theoretical Physics of the Polish Academy of Sciences in Warsaw has expanded knowledge of the quantum properties of matter. In the near future, their application will allow for the acceleration of the development of new technologies, such as quantum computers or super-accurate gravitational wave detectors. Polish physicists, under the guidance of Prof. Kazimierz Rzążewski, participated in a pioneering experiment measuring the fluctuation of the number of particles in the Bose-Einstein condensate. The team of Prof. Rzążewski was responsible for the theoretical basis of the project, while the experiment

was entirely carried out in Denmark. - Together with the scientists from Denmark and Germany, we made a precursory measurement. We have opened the gate to a better understanding of statistical properties in cold atoms - said Prof. Rzążewski.

Białystok Science and Technology Park to launch „Hub of Talents 2”

2019-06-18

Białystok Science and Technology Park is launching a special platform for start ups „Hub of Talents 2”. The platform is a program to support people with innovative business ideas. It offers specialized services, comprehensive mentoring and accounting, tax and legal services for a new company. The startup will be incubated in accordance with an individually tailored development path by a dedicated incubation manager. After the positive completion of the incubation process and obtaining the recommendation, start ups can apply for 800 thousand PLN of co-financing for business development as part of the Start-up Development in Eastern Poland competition. The project's partner is the Białystok University of Technology.

Experiment involving Polish scientists on the Chinese space station

2019-06-18

The list of experimental solutions, which are the results of the cooperation between China and the United Nations and will be placed on the Chinese space station announced in Vienna includes the POLAR-2 experimental solution: Gamma-Ray Burst Polarimetry on the China Space Station. The project was prepared by a consortium with the participation of the National Center for Nuclear Research (NCBJ). - The first POLAR mission, co-organized by us, carried out in 2016 on board the Chinese space laboratory Tiangong-2, observed 55 flashes, of which five were able to measure polarization - explains Prof. Agnieszka Pollo, head of the NCBJ Astrophysics Department. We count on the fact that POLAR-2 will provide more detailed information. The

POLAR-2 consortium includes: NCBJ, the University of Geneva, the Max Planck Institute for Extraterrestrial Physics and the Institute of High-Energy Physics of the Chinese Academy of Sciences.

Researchers from the University of Silesia developed a way to clean metal tapes and sheets

2019-06-24

Researchers from the University of Silesia, Dr Andrzej Swinarew, Jadwiga Gabor together with a patent attorney Mariusz Grzesiczak developed a method for degreasing and anti-corrosive protection for tapes and sheets made of metals or their alloys. The solution has been patented. During the production of steel strips, their surface is covered with highly oiling substances, among others due to the necessity of repeated bending of the material. The new degreasing and anti-corrosion protection method consists of four modules. First, dry technical steam is blown onto the surface of the product at an appropriate angle, then compressed air under high pressure removes possible remaining moisture and solid particles. Dirt is collected by a special scraper collar, and the last stage involves the application of protective substances against corrosion. More: <https://www.us.edu.pl/naukowcy-z-us-opracowali-sposob-czyszczenia-metalowych-tasm-andarket>

Researchers of the Wrocław University of Science and Technology developed a technology for joining difficult-to-weld materials

2019-06-25

Researchers of the Department of Materials Science and Welding at the Faculty of Mechanical Engineering of the Wrocław University of Science and Technology have developed an innovative technology of welding a combination of materials with different physical and chemical properties. Wrocław researchers dealt with so called advanced materials. They include graphite with a composite structure, titanium and magnesium and their alloys. Their properties: lightness, high strength and good corrosion resistance make them very desirable solutions in many industries. However, these materials are not ideal; the problem is to join them, especially in unlike combinations. The team of Prof. Zbigniew Mirski confirmed that the use of intermediate layers on combined dissimilar materials enables their solderability. The results of the team's research brought 13 inventions and patents, and the victory in the competition of the Association of Engineers and Technicians of Polish Mechanics. More: <https://pwr.edu.pl/uczelnia/aktualnosci/naukowcy-z-w-10-opracowali-technologie-lutowania-trudno-spajalnych-materialow-11246.html>

Institute of Non-Ferrous Metals implements a strategic project as part of the TECHMATSTRATEG competition

2019-06-25

The Institute of Non-Ferrous Metals has started the implementation of a strategic project within the TECHMATSTRATEG competition „Modern technologies for the production of functional magnetic materials for electro-mobile and medical applications”. The strategic goal of the project is to develop and market new technologies for the production of low-loss magnetic 3D components for electro-mo-

bile and medical applications. The project is implemented by a consortium: Łukasiewicz Research Network, Institute of Non-Ferrous Metals, Faculty of Materials Science, Warsaw University of Technology, Institute of Metallurgy and Materials Science of the Polish Academy of Sciences and three companies: Trafeco - Polish producer of transformers, chokes and filters for power electronics, railways and medicine; Megatech - designer and manufacturer of high-speed DC and 3D Lab motors – company specialized in the production of powder materials and their use in incremental technology.

Poznan University of Technology develops cooperation with Huawei

2019-06-25

Poznan University of Technology and Huawei signed a contract under which the company will provide the university with the latest, high-class ICT devices. The partners also initiated the first Huawei ITC Competition in Poland. Cooperation between partners has been developed since 2015. New equipment in the laboratory of the electronics and telecommunications department will give students and university staff the chance to acquire knowledge and skills necessary to design, configure and run modern computer networks. The variety of devices will also allow them to explore security issues and wireless networks based on a operation of central controller. The Huawei ITC Competition last year attracted 40 thousand participants from over 800 universities and colleges. Its goal is not only to discover the talents of the ICT industry and prepare them for professional work, but also to equalize the level of knowledge and skills in line with global standards. More: <https://www.put.poznan.pl/en/aktualnosc/pp-rozwija-wspolprace-z-huawei>

Researchers of the University of Gdańsk and the Forest Research Institute to the rescue of the oak alley

2019-06-26

The patented biological liquid created by the scientists of the University of Gdańsk and the Forestry Research Institute can save the oak alley at the provincial road near Pelplin attacked by nun moths. All attempts to save the avenue have been ineffective, and the use of chemicals in close proximity to farms and other vegetation - undesirable. Hence, in cooperation with the Voivodship Roads Authority, with the support of the Marshal's Office of Pomerania the alley was sprayed with biological liquid. The applied preparation contains a suspension of the biological pathogenic factor, which often causes massive extermination of caterpillars, which leads to the collapse of the pest gradation. Due to the lack of induction of resistance and high selectivity, as well as complete safety for animals and humans, spraying a biological preparation is an opportunity to save a two-kilometer long alley. More: https://ug.edu.pl/media/aktualnosci/89271/szansa_na_ochrone_alei_debowej_dzieki_wynalazkowi_naukowcow_z_uniwersytemu_gdanskiego

Scientists of the Medical University of Poznan to receive Tanner Award

2019-06-26

Dr Piotr Rzymiski head of the Department of Environmental Medicine at the Poznan University of Medical Sciences, and his team received the Tanner's Award from the American Institute of Food Technologists. The award-winning work «Potential of cultivated *Ganoderma lucidum* mushrooms for the production of supplements enriched with essential elements» describes the method of cultivating yellow lacustrine on modified substrates leading to the production of food enriched with selenium, zinc and copper. The Institute of Food Technologists (IFT) grants the prizes to the authors of the best-quoted research papers published in the Journal of Food Science. The award was presented during the nineteenth international IFT convention, which took place in June in New Orleans.

Students of Gdańsk University of Technology develop an autonomous sailing boat

2019-06-28

Students of the SimLE Technical Club of Gdańsk University of Technology are working on the creation of a sailing boat, which is to operate fully autonomously. In autumn, the first fully autonomous cruise of their yacht on the Puck Bay is planned. One of the potential goals of the «Seafarer» project is to take part in the Microtransat Challenge, where an independent boat should cross the Atlantic Ocean. No one in the world has succeeded so far. The task is difficult to implement, because the boat can have a maximum of 2.4 m in length, it must be fully independent, there is no possibility of remote control, and must be moved only by the wind. Until now, the students managed to create a test boat hull (about 1.5 m long) for testing electronics and control algorithms. The boat already has a sail, rigging and also the electronics needed for control. The design has successfully passed the first tests on the water.

World's first lyophilizer for food developed in Gliwice

2019-07-01

Start-up FrostX - a company from the Gliwice Technological Accelerator, operating at Technopark Gliwice co-created by scientists from the Silesian University of Technology developed the world's first lyophilizer. The lyophilizer developed by FrostX will be used primarily by small producers and food processors - gardeners, fruit farmers, restaurateurs, hoteliers, etc. Next year, work on a smaller version of the device intended for home use will be completed. Lyophilisation is a purely physical process in which no chemical additives are used. Thanks to it, people can naturally process food with the preservation of all nutrients and vitamins. Products, created in this way have unchanged structure and color (they are not wrinkled as traditionally dried) and maintain their usefulness for consumption for even 25 years.

Invention of scientists associated with the University of Silesia to facilitate the preparation of elastomers

2019-07-01

Researchers of the University of Silesia in Katowice have developed a new method of obtaining triblock macrodiols - an intermediate used primarily for the synthesis of polyurethane elastomers. The solution developed has obtained the patent. The scientists who developed the solution are Dr Eng. Zbigniew Grobelny, Dr Andrzej Swinarew, Dr Justyna Jurk-Suliga, Eng. Kinga Skrzeczyna, Jadwiga Gabor and Marta Łęźniak. Elastomers resemble rubber in terms of properties, but are characterized by better technical parameters. They are made of elements used in machines or devices that are exposed to scratches or friction. They work well as protective coatings for various parts made of metal and plastics. They are ecological, have no negative impact on the natural environment, are successfully used in the automotive, machinery and chemical industries also in the medical and even food industry.

Researchers from Poland participated in the European Science, Research and Innovation Forum in Dresden

2019-07-02

Winners of European Research Council (ERC) grants from Poland, the Czech Republic and Germany participated in the European Forum for Science, Research and Innovation in Dresden. Poland was represented by Prof. Magdalena Król from the Faculty of Veterinary Medicine at the Warsaw University of Life Sciences. ERC offers the most prestigious European grants. In Poland, only a few scholars have been awarded in the last 10 years in the category of life sciences. These are high-risk research. There is a high probability that they will not succeed, but if they do, they will be a breakthrough for the world - explained Magdalena Król. - I'm working on solid cell therapy for solid tumors. So not leukaemia, only tumors that grow. We use immune cells to deliver drugs to the tumor area. We use the physiological mechanisms that normally occur in our body, to smuggle some medicine and kill this cancer from the inside - explained the professor from the Warsaw University of Life Sciences.

Ultrafast computer connection between Poland and Germany

2019-07-03

European XFEL and the National Center for Nuclear Research (NCBJ) in Otwock-Świerk near Warsaw intend to establish the first ultrafast computer connection between Germany and Poland. The aim of the project is to use the Świerk Computer Center (CIS) in NCBJ for processing and analyzing data generated in the European XFEL. A dedicated computer connection between Hamburg and NCBJ will ensure a transfer rate of 100 gigabits per second (Gbit / s). The connection will be about 100 times faster than the current European XFEL internet connection with other research institutes. The project of installing a new fast connection for data transfer will include: European XFEL, NCBJ, German National Research and Education Network (DFN), Supercomputing and Networking Center of the Institute of Bioorganic Chemistry in Poznan (PSNC), Scientific and Academic Computer Network (NASK) and Deutsches Elektronen-Synchrotron (DESY).

Electronic tags to help orientate on the Wrocław University of Science and Technology campus

2019-07-04

Wrocław University of Science and Technology has launched a pilot system of electronic markers that facilitate the movement of people with disabilities on its campus. The devices have been installed in thirty places including in the main building, Bibliothek and at Polinka stations. Tags have been installed both in the buildings and on their elevations. They have an autonomous source of energy, which allows them to work no shorter than three years. If users want to use them, they simply download the free Totupoint app on their smartphones or tablets and so they can orientate on the campus. When users approach the tag, they can hear information about our current location, e.g. entering the canteen in the Student Culture Zone or the Polinka station from the speaker. In addition, the mobile application displays extensive text descriptions with information

about moving around the facility, information and architectural accessibility. More: <https://pwr.edu.pl/uczelnia/aktualnosci/znaczniki-ulatwia-poruszanie-sie-po-kampusie-11269.html>

National Center for Research and Development to co-finance the construction of a new Trading Platform for the Warsaw Stock Exchange

2019-07-05

The National Center for Research and Development (NCBR) and the Warsaw Stock Exchange (GPW) have signed a contract for co-financing EU research and development to support the construction of the new WSE Trading Platform. - Poland is one of the leaders of changes in the development of innovation in the financial and capital markets. We also have funds that allow financing innovative projects - said Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin during signing the agreement between the NCBR and the WSE. The estimated cost of the project will amount to about PLN 90 million. The grant from the NCRR's «Fast Track» competition reaches PLN 30.27 million. The creation of the proprietary trading system will meet the needs of the market and the implemented Capital Market Development Strategy. The new platform means the possibility of reducing transaction costs and introducing new functionalities for exchange members, issuers and investors - said Marek Dietl, President of the WSE Management Board.

Minister of Investment and Development awarded scholars for work in the geoinformation

2019-07-05

The Minister of Investment and Development, Jerzy Kwieciński has awarded scholars for diploma theses, PhD and postPhD dissertations, publications and innovative solutions in the field of geoinformation. In total, 19 diploma theses, 3 habilitation and PhD dissertations, 2 national publications and 4 innovative

solutions in the field of geoinformation were submitted for the competition. In the category of engineering works, the awards were given to: Klaudia Hatzska and Paulina Syrokosz from the Faculty of Geodesy and Cartography of the Warsaw University of Technology and Dominik Niekurzak from the Department of Geodesy, Spatial Engineering and Construction of the University of Warmia and Mazury in Olsztyn. In the master's thesis category, the prizes were received by: Andrzej Szeszko, Anita Dylak, Magdalena Grudzień, Weronika Tulkowska and Monika Władyka from the Faculty of Geodesy and Cartography of the Warsaw University of Technology and Paweł Borek from the Mining and Environmental Engineering Department of the AGH University of Science and Technology in Krakow.

Scientists from the Koszalin University of Technology and the Maritime Fisheries Institute receive medal

2019-07-05

The research team from the Koszalin University of Technology and the Maritime Fisheries Institute - National Research Institute received the Mercurius Gedanensis medal at the 15th International Fair of Fish Processing and Products POLFISH 2019 in Gdańsk. Researchers were awarded in the technology category for designing a vacuum sweeper for whole or headless carps and other fishes. The design and prototype of the device were created as part of the research project «A comprehensive carp processing system for modern food and feed production». The project also brought other devices, including carp beheader and fishbones cutter for carp fillets. The devices are provided by the laboratory of the Department of Processes and Equipment of the Food Industry of the Koszalin university. They are used to educate students in the field of Food Technology and Human Nutrition and are made available for tests.

Company from Gdynia uses artificial intelligence to fight cyberbullying

2019-07-05

Samurai Labs - located in the Pomeranian Science and Technology Park Gdynia is the first in Poland laboratory of artificial intelligence fighting cyberbullying. It received a grant from the European program Horizon 2020. The problem of violence in the network is extremely important because it can affect everyone. In particular, children and adolescents are exposed to it. The concept proposed by Samurai Labs is unique worldwide- the prototype is subjected to very rigorous tests using real data from online forums and social media. - In this way, we learn how the target solution should look. Our goal is a fundamental change in the approach to protection - stopping violence instead of reacting after the fact. We create the world's first online Samurai, which will ensure the safety of children - explains Michał Wroczyński, CEO of Samurai Labs. More: <https://ppnt.pl/europejskie-pieniadze-na-polska-sztuczna-inteligencje/>

PLN 20 million for new courses on the Polish educational platform MOOC

2019-07-08

The National Center for Research and Development (NCBR) will allocate nearly PLN 20 million under the call for the preparation of free online courses for the platform Navoica.pl. Navoica is a Polish MOOC (Massive Open Online Course) educational platform that provides available courses for all persons interested in learning, acquiring new competences and skills. The platform provides education throughout the life, is free and available all the time. Navoica was launched last year by the Ministry of Science and Higher Education and the Young Science Foundation. The call «MOOC Course» will allow to broaden the educational offer of the platform, where language training, programming workshops, entrepreneurship courses, modern marketing, and even sign language classes will be available. NCBR's financial support comes from the Knowledge, Edu-

cation and Development Operational Program and include 52 courses. The total amount of support for best projects is almost PLN 20 million.

Gowin: Space sector inspires Polish innovation

2019-07-09

The Ministry of Science and Higher Education and the European Space Agency organized a workshop on the E3P program on 5 July 2019. The partner of the event is the Polish Space Agency. E3P (European Exploration Envelope Program) is a program of the European Space Agency, covering the preparation of human flights for low orbit and flights to the outer space, as well as the development of space robotics enabling the exploration of Mars and the Moon. The program has both a scientific value and influences the development of technological innovations. -We can see that the E3P program is an opportunity to join the ambitious space exploration venture. The space sector is even predestined to inspire Polish innovation- said Deputy Prime Minister Jarosław Gowin, opening the workshop. Poland wants to cooperate within the framework of the European Space Agency. It is very important to identify the chances of Polish stakeholders in the space sector to make the joint efforts within its framework - emphasized Gowin.

Academy of Land Forces in Wrocław receives the medal of the International Festival of Inventions

2019-07-09

The Academy of Land Forces (AWL) received the gold medal of the Silicon Valley International Inventions Festival (SVIIF). The Wrocław University presented in the USA the innovative technology of the virtual training platform 3DOF/nD and the innovative process of educating students. The innovative process of educating students, combined with previously developed technological solutions, creates a coherent and innovative model ready to be used for educating students. This type of synergy is a new quality highly appreciated by visitors and the jury

of the competition, which distinguished innovation with a gold medal. AWL participated in the Festival for the second time. This year's event was organized by PALEXPO - Geneva's Exhibition and Congress Center and International Federation of Inventors Associations in Silicon Valley. Approximately 200 inventions, innovative projects and technologies from several dozen countries were presented there.

Scholars of the Gdańsk University of Technology win the national Master of Technology competition

2019-07-10

The scholars of the Gdańsk University of Technology have won the nationwide Master of Technology competition in the field of environmental engineering. The Federation Commission of Scientific and Technical Associations NOT awarded the technical solution „Improving the energy consumption of wastewater treatment plants as a result of changing the control system of the aeration process”. Researchers have developed a universal aeration control system for municipal wastewater treatment plants. Its implementation has allowed to reduce energy consumption of technological systems while obtaining the ecological effect and high efficiency of wastewater treatment. The project implemented in the years 2016-2018 was financed from the funds of the Voivodship Fund for Environmental Protection and Water Management in Gdańsk. The authors of the awarded solution are: Dr Eng. Sylwia Fudala-Książek, Dr Eng. Anna Remiszewska-Skwarek, Dr Eng. Aneta Łuczkiwicz, Eng. Rafał Węglarek, Dr Eng. Ewa Zaborowska and Dr Eng. Marek Chodnicki.

Poznan scientists want to print meniscus from fat of patients

2019-07-10

Bioprinter 3D, which is located in the Wielkopolska Center of Advanced Technologies in Poznan Morasku, will be used to produce meniscal implants from fat collected from patients. A team of Poznan scientists is working on this solution. Treatment of meniscal injury consists mainly in the fact that if it is broken, it is cut out, which over time causes degeneration of the knee joint. Other methods used in the world are transplants from a deceased donor or implantation of menisci made of collagen or polyurethane. The availability of these solutions and their cost make them difficult, whereas the implant of the scientists from Poznań is an autologous transplant - the meniscus, which is really taken from the patient's body. The cost of producing such a meniscus would also be lower than the previous solutions. More: <https://uniwersyteckie.pl/nauka/lakotka-prosto-z-drukarki-juz-za-chwile>

Mobile application for students and foreigners of the Maria Curie-Skłodowska University in Lublin

2019-07-11

The Maria Curie-Skłodowska University (UMCS) in Lublin has developed the UMCS GUIDE mobile application, intended for foreign students, staff of the Maria Curie-Skłodowska University and foreigners staying in Lublin. The main purpose of the application is to facilitate everyday functioning and moving around the city and on the campus. The UMCS GUIDE contains basic data about the University and Lublin. Users will find information on safety, health and psychological information, timetables and a list of popular restaurants. Thanks to the application, they will be able to know about the most interesting city attractions, places of culture, entertainment and recreation. The application can be downloaded from stores: App Store: <https://apps.apple.com/us/app/umcs-guide/id1460001587> Google Play: <https://play.google.com/store/apps/details?id=en.umcs.guide>

Warsaw startup created application dedicated to the Apollo 11 mission

2019-07-19

The Warsaw Immersion startup, in cooperation with NASA and the Smithsonian Institute, created the application of AR (augmented reality) „Apollo's Moon Shot” on mission Apollo 11, during which, on July 21, 1969, Neil Armstrong set foot on the Silver globe. - NASA gave us access to historical materials, such as photos or recordings of the moon landing, which became part of our application. What's more, we decided to use some of them in particular sequences, for example during a rocket launch simulation, in the background users can hear real recordings of conversations - says Piotr Baczyński, CEO of Immersion. Immersion has already worked on educational projects with American institutions. The company created a series of projects for Newseum - the Washington Museum of Media. Also, recently in collaboration with the Museum of Natural History in New York, it revived T-Rex through its application. The Warsaw startup realizes 80 percent of its orders on the American market. More: <https://immersion.pl/nasa/>

Spin-off company of the University of Warsaw to clean up Polish hop plantations from harmful substances

2019-07-22

The Polski Eko Chmiel company signed a contract with the spin-off company of the University of Warsaw - BACTrem, which has developed an innovative technology for cleaning the soil from harmful substances. The technology is to allow to remove carcinogenic creosote from Polish plantations of hop and to provide the production of healthy, clean hop cones for the needs of breweries. The BACTrem company has decided to cooperate in the field of cleaning hop plantations from toxic substances using a special biopreparation for soil remediation. It is about the biodegradation of harmful creosote oil. - We are pleased that our biopreparation will contribute to the release of Polish hoppers from con-

tamination of creosote oil - said Dr Magdalena Popowska, president of BACTrem. Our biopreparations are fast acting, they are safe for the environment, they do not contain toxic substances or genetic modifications.

Scientists of Gdańsk University of Technology to create an innovative system of selective waste collection

2019-07-22

Researchers from the Gdańsk University of Technology together with the Kępsce commune are creating an innovative system of collection and segregation of municipal waste. As part of the intelligent Municipal Waste Management System (SMOK) the commune will provide underground garbage tanks equipped with an electronic user identification system. This solution is part of a new organization of selective waste collection points as multifunctional elements of small architecture. Its aim is also to raise the awareness and involvement of residents in the selective collection of municipal waste. The project „Kępsce rubbish in the Econet - an innovative waste management system” took the third place in the competition of the Ministry of Development „Human Smart Cities. Smart cities co-created by the inhabitants. „ As part of the project worth PLN 1.6 million, SMOK will be created and tested on the multi-family unit housing estate in Kępsce. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/naukowcy-pg-z-gmina-kepice-tworza-innowacyjny-system-selektywnej-zbiorki-odpadow

Students of the Gdańsk University of Technology developed an innovative monitoring system for the bee hive

2019-07-23

Students of the Faculty of Electrical Engineering and Automation of the Gdańsk University of Technology, Filip Łojczyk, Adam Litwin and Igor Marciniak, have developed a design and pilot station for monitoring the parameters of a bee hive. Students created a system for performing remote temperature and humidity measurements inside the hive in connection with continuous monitoring of its weight. Measurement data allow for the development of precise methods for remote assessment of the condition of bee colonies, and as a result of their better protection and counteracting the worrying decline in their numbers, which has been observed all over the world for over a dozen years. Data is collected and archived on the central server, and the dedicated application allows quick access and detailed analysis of the conditions prevailing in the bee colony. Ultimately, the developed system will also enable long-term statistics of data.

Lost and found - an application to help find a lost item implemented at the Wrocław University of Science and Technology

2019-07-26

Patryk Chojnacki and Tymoteusz Wojnarowski, students of the IT and management faculty of the Wrocław University of Science and Technology, have developed a mobile lost-and-found office - an application that will help university students find lost items. Lost and found office is an application that everybody can download on any Android device. It is very easy to use and is designed to help people who lose something or find something at the university. For now, it works only in English, soon there will be more language versions. - The program's operation is simple and intuitive - first a user has to log in and

then click on the „found” or „lost” module. Next, he fills in the form of the detailed information about the lost or found object. The app also gives a place to find / get lost. In the form, there have been listed all the buildings on the campuses of the University. More: <https://pwr.edu.pl/uczelnia/aktualnosci/lost-and-found--aplikacja--ktora-pomoze-znalezc-zgube-11292.html>

Lodz University of Technology to present Textile loader

2019-07-29

The Faculty of Materials Technology and Textile Design of the Lodz University of Technology will present a technology that allows to load mobile electronic devices with a textile charger. The invention may replace the heavy, often large-sized powerbanks available on the market, which often contain toxic substances. Prof. Katarzyna Grabowska, the author of the innovative solution, implements her idea based on research on the structure and properties of decorative and hybrid threads. The invention has received financial support from the Ministry of Science and Higher Education as part of the Innovation 2.0 Incubator project, which aims to support the process of managing research results by promoting the technological offer and participation in selected exhibitions and fairs.

Radio telescope of the Astronomy Center of the Nicolaus Copernicus University obtains greater capabilities

2019-07-30

The radio telescope of the Astronomy Center of the Nicolaus Copernicus University was developed with a system for receiving radio waves of frequencies in the range from 8 to 16 GHz, so-called X band. The first successful test observations have already been made. Scientific research using the new system will be based on observations of the 12.2 GHz methane maser methane line. Its emission takes place in the birth areas of massive stars. Due to the nature of their evolution, newly created stars are not visible

through optical telescopes for the initial several million years, hence research conducted on radio and infrared waves is currently the best source of information about them. The 32-meter radio telescope of the university Astronomy Center in Piwnice will celebrate the 25th anniversary of its inauguration in October. Over the past quarter-century, this unusual instrument has made many discoveries. Currently, it has obtained new possibilities of learning the secrets of the cosmos. More: <https://www.umk.pl/wiadomosci/?id=26254>

Contest „Innovator of Mazovia”

2019-07-31

Until August 19, 2019, the innovators from region of Mazovia can submit applications for participation in the program „Innovator of Mazovia”. The aim of this competition organized by the Mazowieckie Voivodeship is to select young talents developing and implementing innovative solutions. The topics of the competition include technical (product and process) innovations, organizational innovations, marketing and others with potential economic value that can be implemented or applied in everyday business practice. The competition is conducted in two categories: Innovative Company and Innovative Scientist. In November 2019, the jury officially will select and award the winning development and implementation of innovations presented by scientists and companies from the sector of micro, small and medium enterprises. The total prize amount is 113 thousand PLN. More: <https://www.dropbox.com/s/ywkc39oabvh1h3v/REGULAMIN%20XI%20EDYCJI%20KONKURSU.pdf?dl=0>

Scientists of the Lublin University of Technology receive medals at the International Inventions Festival in the USA

2019-08-01

Innovative solutions created by scientists from the Lublin University of Technology have been recognized by the jury of the International Festival of Inventions in Santa Clara in the Silicon Valley in the USA. Their inventions received gold, two silver and two bronze medals. The gold medal with distinction was received by the creators of the numerically controlled oblique rolling mill: Prof. Zbigniew Pater, Prof. Janusz Tomczak and Dr Tomasz Bulzak. The silver medals were obtained by the creators of the device for assessing the comfort of a passenger lift: Prof. Rafał Longwic, Eng. Kamil Szydło, Piotr Choniawka and authors of Personal Swim Trainer: Prof. Mirosław Wendeker, Eng. Mateusz Paszko, Eng. Krystian Łygas. Bronze medals for the CLBLDC brushless motor were received by Dr Eng. Przemysław Filipek; and by Prof. Zbigniew Pater for the technology of forging oblique rolling of rods from the heads of scrapped railway rails. In addition, the numerical mill developed in the team of Prof. Patera was recognized by the Hong Kong Inventors Association that awarded it with a special statuette.

Graduates of the Wrocław University of Science and Technology developing a non-invasive glucometer

2019-08-01

The GlucoActive startup, founded by the graduates of the Wrocław University of Science and Technology, has developed a device for non-invasive testing of the blood glucose level. It is supposed to help first of all diabetics, but it will also be available to people who are on a diet and athletes. The aim of the startup operating in Wrocław is to develop a solution that will allow to test the level of glucose in the blood without the need to puncture the skin. The designed device in the shape of a watch is comfortable and

easy to use. The measurement will be carried out using optical and spectrophotometric methods. The developed method assumes switching the skin several times with light of a specific wavelength, and then analyzing the obtained results. Even before the end of this year, the founders of the startup want to conduct official medical experiments to confirm the results of their research. The device is expected to hit the market as a sports gadget in mid-2020. More: <https://pwr.edu.pl/uczelnia/aktualnosci/zamiast-klucza--badanie-swiatlem-11297.html>

„Lower Silesia. Green Valley of Food and Health” included in the list of government strategic projects

2019-08-01

Project of the University of Life Sciences in Wrocław (UP) „Lower Silesia. Green Valley of Food and Health” was included in the list of government strategic projects. The decision was made by the Monitoring Board of Strategic Projects Portfolio of the Ministry of Investment and Development. The project assumes the creation of the Green Valley, a region in which the BIO-economy is developed in a sustainable manner, using innovative knowledge and socially responsible, positively affecting the quality of people's lives. - Production and processing of food should base on regional resources, but our knowledge and huge native scientific potential are a chance not only to meet our own needs, but also to build competitive advantage in global markets - said the rector of the UP Prof. Tadeusz Trziszka, the author of the Green Valley. More: http://www.glos.upwr.edu.pl/aktualnosci/49743/zielona_dolina_na_liscie_rzadowych_projektow.html

PhD student of Gdańsk University of Technology receives Siemens award for a gripper with the functions of a human hand

2019-08-02

Jacek Szkopek, PhD student of the Faculty of Electrical Engineering and Automation at the Gdańsk University of Technology created an anthropomorphic gripper driven by pneumatic muscles. His work won the third award in the 9th Competition for the Siemens Award for Graduates in Automation and Robotics. The design of the gripper, made in 3D printing technology, reflects the anatomical structure of the human hand, and, above all, its skeletal system. The system of tendons, which has been guided inside the phalanges, allows bending and straightening of individual joints. Also, artificial muscles with appropriate tendons constitute a drive system. - Biomimic solutions are gaining more and more popularity. My design allows you to manipulate objects of various shapes and artistic properties, and at the same time it is fully adapted to research on technical solutions, from mechanics to control algorithms. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/nagroda-siemensa-za-chwytek-o-funkcje-ludzkiej-dloni

Researchers from Silesian universities developed a device to help in the detection of cancer

2019-08-02

Scientists of the University of Silesia, the University of Physical Education and the Medical University of Silesia have developed a special device for the diagnosis of upper airway squamous cell tumor and pulmonary hypertension based on a breath test. There are even several hundred volatile compounds in the human breath sample. Based on their analysis, doctors can identify tumor markers signaling whether cancer cells are developing in the human body. The device developed by Silesian scientists consists of a short tube in which porous carbon is placed, on which markers are absorbed. Then, the coal itself is placed in the analyzer, where further tests are performed to differentiate the compounds. The device has been patented as an industrial design in the European Union. More: <https://www.us.edu.pl/diagnostyka-na-podstawie-oddechu-wzor-przemyslowy-dla-walazalazku>

Polish-Chinese snail robot

2019-08-07

Researchers from the Faculty of Physics of the University of Warsaw (UW) in cooperation with the Mathematics Department of the University of Suzhou in China, using photosensitive elastomer technology, have built a microrobot that mimics the movement of the snail. A 10-millimeter-long robot, driven and controlled by a modulated laser beam, can move on a flat surface, climb a vertical wall and crawl on a glass ceiling. Research on soft micro-robots and polymeric implementation mechanisms are financed by the National Science Center as part of the project „Executive mechanisms in micro-scale based on photo-responsive polymers” and by the Ministry of Science and Higher Education under the „Diamond Grant” awarded to Mikołaj Rogóż from the UW.

Autonomous transport is the future

2019-08-08

Will new technologies reduce the number of accidents on Polish roads? Will drivers lose their job and be replaced by computers? These questions will be tackled by the consortium of the Ministry of Infrastructure, the Motor Transport Institute (ITS) and the Faculty of Transport of the Warsaw University of Technology under the AV-PL-ROAD project. The project acronym means Autonomous Vehicles (AV) and vehicles communicating with other vehicles and infrastructure (Connected Autonomous Driving - CAD). The AV-PL-ROAD project implemented since December 2018 aims to prepare Poland for new challenges related to the safe implementation of automated and, in the future, autonomous vehicles into road traffic. One of its important aspects is the idea to create a CAD Competence Center. Thus ITS develops competences as well as invests in research equipment in the field of testing autonomous technologies.

Innovative dried honey produced by scientists from the Warsaw University of Life Sciences

2019-08-09

Scientists from the Warsaw University of Life Sciences (SGGW) produced dried honey, which contains as much as 80 percent natural honey. The honey available on the market contains only 50 percent, the rest is maltodextrin - a supplement with a high glycemic index. In the improved product maltodextrin was replaced with nutriose - a carrier with prebiotic properties, supporting the human digestive system. Dried honey is included in many food products and dietary supplements. It can also be used as a sweetener in dietetic products despite the content of maltodextrin. SGGW is convinced that it will soon be replaced by dried honey produced at the University of Warsaw by a team of scientists from the Department of Food Engineering and Production Organization of the Faculty of Food Sciences including Dr Katarzyna Samborska, Dr Eng. Aleksandra Jedlińska, Dr Eng. Artur Wiktor and Prof. Dorota Witrowa-Rajchert.

Idea of the Polish startup to be implemented in the United Arab Emirates

2019-08-09

From September, students from the United Arab Emirates will benefit from the programming learning platform created by the Wrocław-Rzeszów startup ChallengeRocket. For now, the project will be piloted in several schools. Polish scientists managed to beat nearly 600 competitors from around the world and enter into cooperation with the Dubai Future Foundation founded by sheikhs and the governmental agency KHDA, which is responsible for the development of private education in Dubai. The creators of the platform are pointing out that private schools today in the United Arab Emirates constitute over 50 percent of the market, and according to estimates by the Boston Consulting Group in 2023 it will be soon over 60 percent. Acceleration director at Dubai Future Foundation Saeed Al Falasi believes that the proposal of the Polish startup is a proof of the great possibilities of using modern technologies in the teaching process. - The joint initiative of the Dubai Future Foundation, KHDA and ChallengeRocket proves how much importance we attach to accelerating the development of our education system.

Polish-German ecological solution for industrial laundries

2019-08-12

The Polish-German consortium is developing a solution that will bring savings and reduce environmental pollution in industrial laundries. The REWARD project involves scientists from the Faculty of Chemical and Process Engineering of the Warsaw University of Technology (PW). In industrial laundries, for 1 kg of dry textiles, up to 10 liters of water and 6 g of detergents are used for washing - says Dr Eng. Maciej Szwast, head of the team from PW. The Polish-German team wants to recover most of the water and also some of the detergent. The recovered water could go back to the washing process (at the prewash stage), and the detergents - reduce the amount of new washing agents added to subsequent washing cycles. The aim of the REWARD project is to develop the technology and its economic assessment.

Success of the Warsaw School of Economics students in the European Innovation Academy

2019-08-13

The students of the Warsaw School of Economics (SGH), Paulina Godlewska and Maciej Czyż, took first place in the startup competition organized in the European Innovation Academy. SGH students were part of the international team of five students who created the BotAid application. The winning solution uses artificial intelligence, answers questions related to student life, including questions about classes or exams. Also, BotAid can learn. More: <https://www.inacademy.eu/blog/top-startups-european-innovation-academy-hong-kong-2019/>

Naval Academy in Gdynia hosts NATO DEEP workshops

2019-08-13

The Naval Academy in Gdynia is implementing the CALT (Computer Adaptive Language Testing) project

to implement an innovative program (algorithm) for conducting computer-based language adaptation tests. The Gdynia university hosted NATO DEEP workshops, the entity supporting the project was the Institute of Journalism and Social Communication at the University of Warmia and Mazury in Olsztyn. Eight remote education experts from the University of National Defense of Ukraine from Kiev, the National Defense Academy of Sofia, the Naval Academy of Gdynia and NATO DEEP ADL Portal participated in the workshops. The topics of the workshop concerned the use of the LMS ILIAS platform and the NATO DEEP ADL portal to conduct these tests, in accordance with the NATO 6001 standard. The participants made substantive arrangements and determined directions for future actions, including the conclusion that the next CALT will take place in February 2020.

Polish scientists building a platform for automatic brand image testing on the Internet

2019-08-14

The SentiOne company and the Institute of Slavic Studies of the Polish Academy of Sciences (PAN), AGH University of Science and Technology in Kraków and the Wrocław University of Science and Technology are jointly conducting the Senti Cognitive Services project, whose goal is to build a platform for automatically testing the brand image on the Internet. The innovative platform consists of automatic image reports; automatic crisis notifications; automatic answers to questions frequently asked by customers. This is a new generation of services based on artificial intelligence, and this way algorithms «learn» to analyze colloquial texts in Polish.

Researchers of the Gdańsk University of Technology to create technologies for storing energy from renewable sources

2019-08-14

Scientists from the Gdańsk University of Technology and three other European research centers are developing modern technologies for storing and processing energy derived from hydrogen, the fuel of the future. Researchers are implementing the Fun-KeyCat (Functional Grading by Key doping in Catalytic electrodes for Proton Ceramic Cells) project. It will allow to develop ceramic materials for the construction of electrodes used in fuel cells, thanks to which electricity can be generated from hydrogen fuel. The project is co-financed under the M-ERA.NET 2 call run by the National Science Center. The participants include Gdańsk University of Technology, the University of Oslo, the SINTEF institute from Norway and the Institute of Chemical Technology of the Spanish National Scientific Council.

Universality- Polish startup for students, lecturers and entrepreneurs

2019-08-16

The Universality platform was created for both students and lecturers. It is intended for people interested in technical and IT fields. It was created thanks to the support of the National Center for Research and Development under the e-Pionier program. Lecturers can post tasks for students on the platform, and thus THE STUDENTS can expand their knowledge. The portal is also intended for companies that are looking for students to work in the technology industry. The originator of the creation of the university startup is Jerzy Czepiel, an academic employee of the Jagiellonian University in Krakow. The portal is a response to the needs of young people who want to develop and expand their knowledge in technical fields.

National Center for Research and Development to launch two calls for innovative companies

2019-08-16

The National Center for Research and Development has announced two 'fast track' call. The call „Path for Mazovia” with a budget of PLN 600 million is intended for companies from Mazovia, and the other call with a budget of PLN 1.1 billion is for companies from other provinces. The Path for Mazovia Competition is addressed to enterprises, consortia of enterprises and consortia of enterprises and scientific units conducting industrial research and development works. The competition has no thematic restriction. The second is addressed to entities from all over Poland (except Mazovia Region) planning to implement research and development projects. The goal of the projects is to develop an innovative solution that can be implemented in business.

Universities from Warmia and Mazury join the European Network of Regions Cooperation in Research and Innovation

2019-08-19

The State Higher Vocational School (PWSZ) in Elbląg together with the University of Warmia and Mazury (UWM) in Olsztyn joined the European Network of Regions Cooperation in Research and Innovation (ERRIN). The agreement on this matter was signed by Prof. Zbigniew Walczyk - rector of the PWSZ, Prof. Ryszard Górecki - rector of UWM and Dr Gustaw Marek Brzezin - marshal of the Warmian-Masurian Voivodeship. The European Network of Regions Cooperation in Research and Innovation was founded in 2011. It is a non-profit association which operates under Belgian law. It currently brings together over 130 different organizations from 22 European countries. The network supports regional cooperation in research and innovation. It provides members with the opportunity to share project ideas, best practices, and personal contacts. The result is

a rapid exchange of knowledge for the benefit of all partners. The network is involved in projects financed by the European Union.

Wrocław University of Science and Technology students win in the „Grab Big Data” competition

2019-08-19

Students of the Wrocław University of Science and Technology have developed a system for classifying customers and generating promotions, which was rated highest in the „Grab Big Data” competition organized by the Żabka Polska. As a reward, they will go to Silicon Valley. The competition task was to use Big Data, i.e. large, variable and various data sets in practice. Three-person teams took part in the competition, which at the very beginning could choose one of eight research problems - including the analysis of customers of the Żabka application. The last issue interested students from the IT and management faculties - Paweł Kunicki, Adam Dłubak and Bartłomiej Lisek. According to the jury, their project «A system for customer segmentation and generating personalized promotions based on: current transactions, existing supply and external conditions» proved to be the most innovative, profitable and functional. More: <https://pwr.edu.pl/uczelnia/aktualnosci/wygrali-konkurs-big-data--w-nagrode-zobacza-doline-krzemowa-11309.html>

Scientists of the Nicolaus Copernicus University in Toruń join the project Share Your Soils (SYSstem)

2019-08-21

The innovative project Share Your Soils (SYSstem), co-created by scientists from the Faculty of Earth Sciences of the Nicolaus Copernicus University in Toruń, received over 352,000. euro under the „Erasmus + Action 2. Strategic Partnerships” competition. The project is a response to the challenges posed by higher education to the «Z» generation today, so called «digital natives» who expect that education will use a wide range of mobile technologies and gamification. Its purpose is to create edutainment social media dedicated to the description and classification of soils according to the international classification of WRB. The main tool created as part of the project implemented in a consortium of universities from the Czech Republic, Estonia, Hungary, Italy, Latvia, Poland, Slovenia and Spain is a mobile application for sending soil profile photos with a description and geolocation and classification proposal. Users will have the opportunity to interact and share their knowledge.

Research center for renewable energy sources to be created in Piła

2019-08-22

A Research and Development Center for Renewable Energy Sources is being created in Piła. The laboratory will help Piła become a zero-emission and energy self-sufficient city. It will start working this year. The center will be built in the municipal sewage treatment plant. The project is implemented by the Piła company GWDA together with the State Higher Vocational School in Piła and the Chamber of Commerce of Northern Wielkopolska Region. The laboratory will examine the possibility of using renewable energy sources in the urban economy. The whole project is co-financed from the Wielkopolska Regional Operational Program. The subsidy amounts to 551 thousand PLN, and the entire investment is almost PLN 1 million. In addition, sci-

entists and experts will develop new, cheaper and more economical solutions in the field of solar and wind energy. Currently, solar panels and an office container have already been launched to carry out researches on new technologies related to renewable energy sources. More: <https://globenergia.pl/pila-townem-samowystarczalny-energetycznie-powstaje-centrum-badczych-oze/>

Lublin University of Technology developing Innovative charger for electric cars

2019-08-23

Lublin University of Technology (PL) and PGE Dystrybucja are constructing the two-way charging stations for electric vehicles operating at lighting poles. This is a unique solution on a national and European scale. The device is integrated with a lighting pole. This saves space and the charging stations do not disturb the landscape. Installation of the charging station can be carried out during e.g. replacement of lighting columns in a given place - says Prof. Wojciech Jarzyna, head of the Department of Electrical Drives and Machines. At the end of September, the Lublin electric car charger will be tested. At the end of this year, the first two stations will start operating at the Lublin University of Technology and PGE Dystrybucja.

Warsaw startup receives the prestigious EIC Accelerator grant

2019-08-23

The Warsaw company Scope Fluidics, co-created by one of the winners of the Foundation for Polish Science (FNP), Prof. Piotr Garstecki, received an EIC Accelerator grant of EUR 1.9 million for further research on the innovative BacterOMIC system that will allow faster and cheaper diagnostics of bacterial infections. BacterOMIC was also included in the group of seven most groundbreaking diagnostic products in the American Association for Clinical Chemistry (AACC) competition. The prestigious EIC Accelerator grant, awarded by the European Com-

mission, serves to support small and medium-sized enterprises, with high innovation potential to develop and market new products, services and business models that can fuel economic growth. AACC is the largest organization in the world gathering specialists in medical diagnostics and publisher of Clinical Chemistry - the most important scientific periodical in this field. Solutions of the Polish startup Scope Fluidics, whose co-founder and president is Prof. Piotr Garstecki, were awarded in the competition of Disruptive Technology Awards 2019 and presented in the Innovation Zone during the August AACC fair in California.

XI competition „Innovation is a Woman”

2019-08-26

Until September 6, 2019, the Foundation of Women of Science is waiting for applications for the 11th „Innovation is a Woman” competition. The prize is an opportunity to present the winning invention at the International IENA 2019 in Nuremberg. The aim of the competition is to select an innovative technological solution or concept for implementing the developed solution. The winners will be selected by a competition committee, which includes members of the Foundation's board. They will make decisions based on ranking lists proposed by the experts of the foundation. More: <https://kobietynauki.org/index.php/2019/08/letnia-edycja-konkursu-innowacja-jest-kobieta-xi-edycja/>

Lublin University of Technology to develop a new generation aircraft

2019-08-29

Scientists from the Lublin University of Technology (PL) are working on a new generation aircraft that combines the features of gyroplanes and multi-rotor aircraft. Combining the advantages of a gyroplane i.e. a light, simple and cheap machine, with a multi-rotor assembly enabling vertical take-off and landing, will allow to design a flying ship with completely new properties - says project manager Dr Eng. Zbigniew Czyż from the Department of Thermodynamics, Fluid Mechanics and Aviation Drives PL. SafeGyro, a hybrid unmanned aerial vehicle of vertical take-off and landing with the possibility of autorotation flight, will be economical to use and safe, and capable of performing tasks previously assigned to conventional air machines. Its advantage is also a relatively low price compared to an unmanned helicopter with similar take-off mass - adds Dr Eng. Czyż. The work on the project will last 3 years. Its costs nearly PLN 1.5 million. The funds were granted by the National Center for Research and Development under the Leader X program.

Scholars of the Polish Academy of Sciences work on „plastic” to decompose over several years

2019-08-29

Researchers from the Institute of Physical Chemistry of the Polish Academy of Sciences (IPC PAS) are working on an ecological and cheap method of obtaining a material that is resistant and light as plastic, produced from garbage and decomposed in just a few years. - We want to replace PETs with something that would decompose in several months, at most a few years - explains Prof. Juan Carlos Colmenares from the IPC PAS. His team is working on a fully biodegradable material. Researchers managed to develop a new method of producing so-called DFF (2,5-diformyl furfural). The research results were published in the journal Applied Catalysis B: Environmental. DFF is a chemical compound that is

already used in the production of medicines, cosmetics, perfumes, fuels and environmentally friendly materials. Professor Colmenares reminds that there have already been tests of polymers made on the basis of DFF. They can be decomposed to sugar-like monomers. And such sugars are a tasty treat for many microorganisms. Even if a bottle of such plastic is thrown into the forest, it will decompose much faster than conventional polymers after a few years.

Kielce University of Technology to help business implement digital technologies

2019-08-30

Kielce University of Technology has joined the partnership of the Kielce Technology Park (KPT) to help entrepreneurs to increase competitiveness by using modern digital technologies in their companies. The university will organize specialized training using its laboratories. The agreement in this matter was signed in Kielce by the rector of the University of Technology, Prof. Wiesław Trąmpczyński and director of KPT Justyna Lichosik. The goal of the project implemented by the Kielce Technology Park «KPT StartUp Digital Innovation Hub» is to increase the dynamics of digital transformation of the Świętokrzyskie region. Digital Innovation Hub (DIH) are partnerships that will help enterprises to increase market competitiveness through the use of innovative solutions in the field of broadly understood digital technologies.

Students to apply for the ME310 Sugar program

2019-09-02

Application process for the ME310 Sugar program will take place until September 9, 2019. Within this program students from around the world are working in international teams on creating groundbreaking innovation. ME310 Sugar is a project developed and coordinated by the Sugar Network based on a concept originally derived from Stanford University. As part of ME310, international teams of students are working on challenges reported

and sponsored by business partners. Topics often relate to the vision of future products, services or solutions with a breakthrough potential in a given field. Each project team will consist of students from two different universities from the Sugar Network, which currently includes about 30 leading universities from the Americas, Asia, Australia and Europe, also Warsaw University of Technology. Project Regulations: https://www.nerw.pw.edu.pl/Media/Files/REGULAMIN-ME310_2019

Polish scientists want to use algae to create medicinal dressings

2019-09-03

Researchers from six research centers in Poland as part of the BIOG-NET consortium are considering microscopic algae - diatoms and their phenomenal ability to synthesize silica with a three-dimensional, openwork nanostructure to create innovative biocomposites for applications based on these observations, including in medicine and cosmetology. The Foundation for Polish Science (FNP) donated PLN 21 million for research under the TEAM-NET program. The consortium consists of researchers from the Faculty of Chemistry of the Nicolaus Copernicus University in Toruń, the Faculty of Earth Sciences of the University of Szczecin, the Faculty of Mechanical Engineering of the Białystok University of Technology, the Faculty of Chemistry of the University of Adam Mickiewicz in Poznań, the Faculty of Materials Science and Engineering of the Warsaw University of Technology and the Faculty of Biology and Biotechnology of the University of Warmia and Mazury in Olsztyn. The consortium's goal is to create innovative nanosilica composites. Scientists hope for rapid commercialization of their research.

Polish company InPhoTech wins a grant from the European Commission

2019-09-06

InPhoTech is another Polish company, after Scope Fluidics, supported by the Foundation for Polish Science (FNP), whose potential has been noticed and awarded in the European Commission competition. The company will receive a grant of EUR 2.153 million. InPhoTech deals mainly with optical fibers. The biggest challenge is to construct an optical fiber that also works precisely in extreme conditions, i.e. resistant to radiation or high temperatures. - Our project, NODUS, involves the development of an optical fiber that could also work in the presence of radioactive materials or very high temperatures. We want to achieve this effect by changing the internal fiber structure. Our unique optical fiber will be constructed of tiny capillaries and glass rods, i.e. specific air-glass micro and nanostructures - says Dr Eng. Tomasz Nasiłowski, who manages a team of scientists in the project. The European Commission grant will be allocated to the further development of our technology and the commercialization of our innovative multi-core optical fiber, which will be the key solution for the widespread introduction of the 5G network.

Warsaw University of Technology developing a new generation of nanocrystalline steel

2019-09-06

Scientists from the Faculty of Materials Science of the Warsaw University of Technology (PW) under the supervision of Eng. Krzysztof Wasiak are working on the development of a new generation of nanocrystalline steel. The development of such steel has a good chance of being implemented primarily for the production of tools, but also for important parts of machines and products exposed to operational wear. Conventional steels currently used for tool making (so-called tool steels) are hard and durable, but at the same time fragile. The industry is therefore looking for alternative materials. They

could be nanobainitic steels. They provide the right combination of high strength and flexibility and can be used for the production of many steel elements. For the implementation of the project «Development of a new generation of steel with nanocrystalline structure with carbides» Krzysztof Wasiak received funding from the National Center for Research and Development under the LIDER IX program.

Invention of the scientists of the Nicolaus Copernicus University in Toruń awarded in London

2019-09-06

The invention of „Smart materials” - intelligent separation materials on an activated polymer substrate with a defined surface nanoarchitecture „, developed by scientists from the chemistry department of the Nicolaus Copernicus University in Toruń, was awarded at the International Invention & Trade Expo 2019 in London. The solution presented in London won the gold medal, the Diamond Special Award and the special prize of the World Association of Intellectual Property and Invention (WIIPA Special Award). The invention is the result of cooperation of scientists from Poland and Jordan. Its use will enable the production of highly specialized separation materials with defined surface properties, characterized by controlled separation properties. The solution is patented and has great commercialization potential. More: <https://www.umk.pl/consciousoci/?id=26294>

Scientists from the Lodz University of Technology join an international research project

2019-09-10

Scientists from the Lodz University of Technology will conduct innovative research as part of the international project HIPERION (Hybrid Photovoltaics for Efficiency Record using Integrated Optical technology). The European Union has allocated EUR 10.6 million for its implementation. The coordinator of the project Dr Eng. Jacques Levrat from Center

Suisse d'Electronique et de Microtechnique SA - Recherche et Developpement (CSEM) from Switzerland emphasizes that the implementation of the project will enable the construction of a pilot installation for the implementation of breakthrough photovoltaic technology. - Our role in the project is to determine the environmental effects associated with construction, operation, maintenance, as well as waste management after the end of the system's life cycle. The specific task concerns the determination of the „environmental payback period”, after which clean energy produced by the panels will compensate for the environmental expenditure incurred for the construction and operation of the system - explains Prof. Ireneusz Zbiciński, project coordinator.

Researchers from Poland and the US have found a mechanism to help create a cure for legionellosis

2019-09-12

Researchers from the Warsaw University of Life Sciences (SGGW) in Warsaw, together with scientists from the University of Texas Southwestern Medical Center in Dallas, USA, have discovered the biochemical mechanism of one of the effector proteins of the bacterium „Legionella pneumophila”, which may contribute to the creation of a drug for legionellosis. The results of the work were described in the journal Science in the article «Bacterial pseudokinase catalyzes protein polyglutamylation to inhibit the SidE-family ubiquitin ligases». The main author of the publication is Dr Vincent Tagliabracci from the University of Texas Southwestern Medical Center from Dallas in the USA and his PhD student Miles Black. The Polish co-authors are Dr Krzysztof Pawłowski from the Department of Experimentation and Bioinformatics of the Faculty of Agriculture and Biology at the Warsaw University of Life Sciences and a PhD student Marcin Gradowski. The discovered mechanism of action of the SidJ effector protein, which regulates (blocks) other effector protein of SidE bacteria, gives hope for the invention of the drug for incurable legionellosis disease.

Institute of Non-Ferrous Metals of the Łukasiewicz research network presented at the International Defense Industry Exhibition

2019-09-16

Researchers from the Institute of Non-Ferrous Metals of the Łukasiewicz research network presented their projects at the 27th International Defense Industry Exhibition in Kielce. Researchers presented products developed and manufactured by the Institute: a new generation battery to power unmanned platforms, programmable thermal rocket ammunition batteries, dual-use hybrid energy storage and buffer system, and additional modular armor for wheeled armored personnel carriers and «ModPanc» tracked platforms. Representatives of the Institute from Skawina and Poznań answered questions, talked about the extensive activities of the Institute in the field of defense and security of the country, and provided information on ongoing research projects related to military innovation. More: http://www.imn.gliwice.pl/articles/1003/relacja_z_miedzawodowego_salonu_przemyslu_obronnego

Gdańsk scientists' projects co-financed under the Innovation Incubator 2.0

2019-09-16

Four projects of scientists of the Medical University of Gdańsk received funding under the Innovation Incubator 2.0 program implemented in consortium with the Gdańsk University of Technology, the University of Gdańsk and the special purpose company of the Gdańsk University of Technology Excento Sp. z o.o. The co-financed projects include «Innovative device for applying intelligent markers in medicine, including surgical treatment of cancer», «Research on substances with potential anti-Parkinson activity», «Development of a toothpaste recipe for children containing probiotic bacteria that reduces the risk of developing caries» and «New antibacterial peptidomimetics as potential drugs to help heal infected wounds.» The Innovation Incubator 2.0 is a program of the Minister of Science and

Higher Education, financed from European funds. Its implementation supports the development of entrepreneurship and strengthening of technology transfer from public scientific centers to the economy. More: <https://gumed.edu.pl/57808.html>

Poland to receive EUR 100 million for „Enterprise Development and Innovation” under Norwegian and EEA funds

2019-09-17

During the conference inaugurating the third program of Norwegian and EEA funds, the Minister of Investment and Development Jerzy Kwieciński announced that PLN 3.5 billion from these funds for Poland will be allocated to projects related to culture, health, innovation and entrepreneurship development. The first three programs were launched under Norwegian and EEA Funds: «Education», «Research» and «Local Development». Soon four more programs will be implemented, such as: «Culture», «Home Affairs», «Health», «Entrepreneurship Development and Innovation». The largest amount of funds under the third program (EUR 100 million) was allocated to the «Enterprise Development and Innovation» program, which will be managed by the Polish Agency for Enterprise Development. Micro, small and medium enterprises can apply for this support in the successively announced calls.

Bydgoszcz invention awarded at the International Invention & Trade Expo in London

2019-09-17

The invention developed by three Bydgoszcz scientists - crusher for plastics - won three International Invention & Trade Expo (ITE) 2019 awards in London. Crusher for plastics was noticed by the international jury of the London fair and won three awards: gold medal, platinum special award and special award World Invention Intellectual Property Associations (WIIPA). The authors of the solution are Dr Eng. Marek Macko – from the Kazimierz Wielki University, Prof. Eng. Józef Flizikowski, MA Michał

Bogdański and MA Mariusz Lenc from the University of Technology and Life Sciences in Bydgoszcz. During the International Invention & Trade Expo 2019, 287 inventions were presented in 10 thematic categories. The exhibition was a platform for the presentation and exchange of information on the latest and most innovative solutions for inventors, producers and traders from several dozen countries.

Creators of specialized drones receive the title of the best startup of Pomerania

2019-09-20

Gdynia Pelixar S.A. from Pomeranian Science and Technology Park Gdynia was chosen the best startup of Pomerania in the Top 100 competition. The Top 100 Pomeranian report has been published every year for 20 years and presents the achievements of the leading and best known companies of the region. The designers from Pelixar were the first in the world to create a drone for Air Atmospheric Monitoring, whose main goal is to fight smog. Another innovative product on a global scale designed by the Pelixar S.A. is a drone to rescue a drowning person. Currently, it is used by rescuers of the Water Volunteer Ambulance Service. - The title Best Startup of the Pomerania is not only joy, but also an honor. Thank you for this distinction and for the appreciating our activity. We are not going to rest on our laurels and are already involved in further projects.

Lodz University of Technology working on a bio-printer to help heal urethral defects

2019-09-24

Researchers from the Lodz University of Technology, together with Wolf 3D Solutions, are working on a printer 3D that using bioprint will allow the production of appropriate components for patients. That will enable the treatment of urethral defects in children and adults. Scientists from the Institute of Materials Engineering at the Faculty of Mechanical Engineering of the Lodz University of Technology under the supervision of Dr Eng. Dorota Bociąg are working on solving the problem of treating urethral defects. - We can help patients by developing biomaterials to produce a coil for the treatment of hypospadias in children and a stent for the treatment of stenoses using direct and indirect bioprint - explains Dr Eng. Dorota Bociąga. The project will be implemented by a specially established consortium with the Korczak Hospital in Łódź, the Religa Foundation for the Development of Cardiac Surgery, Warsaw University of Technology, University in Toruń and Wolf 3D Solutions.

Krakow University of Technology works out a pioneering method of city ventilation

2019-09-25

„Dynamic ventilation and smog reduction in urbanized areas by the case of Krakow” is the title of the conference organized by the Institute of Structural Mechanics of the Faculty of Civil Engineering of the Krakow University of Technology (PK) and the Wind Engineering Laboratory of the PK, which will take place on September 26, 2019. During the event, the Krakow scientists will present and discussed the method of ventilation of the towers and chimneys. The pioneering solution was developed by a team of scientists from the University of Technology. The method of city ventilation proposed by PK scientists is to be implemented «in horizontal ventilation channels through series of parallel systems of special ventilation towers cooperating with vertical

ventilation of chimneys». Research shows that the method we propose is an effective method to improve the ventilation of cities, which significantly reduces air pollution - says Prof. Eng. Andrzej Flaga, head of the PK laboratory. According to scientists from PK, research has confirmed that the innovative idea to fight smog is also economically justified. The method will be patented.

Wrocław University of Science and Technology to launch a new generation of rods and anchors for special tasks

2019-09-30

Researchers from the Wrocław University of Science and Technology and the University of Porto and the University of Coimbra from Portugal are starting work on a new technology for the production of composite reinforcing bars and anchors, which will be competitive with commonly used steel reinforcing bars. Work on a new generation of composite rods for concrete and soil reinforcement is possible thanks to a grant from the National Center for Research and Development. The scientists are striving to develop elements that will be more competitive and cheaper than existing composite rods and anchors. The developed products will have a new, multi-layered structure guaranteeing a progressive method of destruction during critical loading and providing the structure security. The new interdisciplinary team of chemists, materials engineers, mechanics and construction engineers will be working out the new technology. More: <https://pwr.edu.pl/uczelnia/aktualnosci/na-pwr-powstaje-nowanigeneracja-pretow-i-kotew-do-zadan-specjalnych-11334.html>

Silesian University of Technology implementing the European MineHeritage project

2019-09-30

The MineHeritage project has started at the Department of Mining Exploitation of the Faculty of Mining, Safety Engineering and Industrial Automation of the Silesian University of Technology, which aims

to show how important mineral resources have and still have in the development of civilization. Through the history of mining, MineHeritage will show the importance of mineral resources in the development of Europe, European culture and society. The creators of the project want to encourage schoolchildren and young people to learn about the history of mineral mining in Europe through a multi-level internet game and application for mobile devices for exploration as part of cultural tourism. The project is financed by the European Institute of Innovation and Technology (EIT), which is a body of the European Union, as part of the HORIZON 2020 Framework Program for Research and Innovation of the EU and the funds of the Ministry of Science and Higher Education. 13 scientific units from 11 European countries participate in the program. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListaWiadomosci&Page=1&WebPartTitle2=Wiadomosc&Filter1Field2=Identifier&Filter1Value2=2838>

Gaming industry in Poland to receive nearly PLN 105 million

2019-10-02

The National Center for Research and Development (NCBR) announced the results of the 3rd competition for the largest support program for the gaming industry (GameINN) in Poland. Companies creating innovative solutions will receive nearly PLN 105 million in funding. The National Center for Research and Development will support the projects: Development of a platform for creating field games based on an AR game engine that creates a map of the real world together with an application that allows users to send data; Test and training platform for verification of practical skills in the workplace and professional development using VR and AI technologies; Construction of an engine for the wheeled motor vehicles and generating charts based on artificial intelligence algorithms; Innovative game simulating the management of real production processes using an innovative gameplay model based on the interaction of the virtual world with the real world using the concept of industry 4.0. The goal of the GameINN sector program is to increase the competitiveness of the Polish video game producers sector on the global market by 2023.

Spin-out company of Gdansk University of Technology receives money for the development of chitosan hydrogel technology

2019-10-03

Spin-out company of the Gdańsk University of Technology "Chitone" obtained approx. PLN 5.5 million under the „Fast Track” National Research and Development Center competition for the development of ChitoVelum® Pro technology - a patented method of dissolving chitosan using carbonic acid. The method developed at the Faculty of Chemistry of the Gdańsk University of Technology is applicable in the agri-food industry. The company is working out an edible coating to extend the freshness of food products such as fruit, fish and vegetables. Thanks to its unique composition, the envelope will be 100% natural, and its use is intended to slow down the rate of water loss, as well as protect products from bacterial and fungal infection during transport and storage. The company has also finalized talks with a private investor who will finance a long-term investment program under a contract worth over PLN 21 million. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGNcmoQv7K0/content/spolka-chitone-pozyskala-ponad-25-mln-zl-finansowania-na-rozwoj-technologiei-hydrozeli-chitozanu

Polish scientists grown chicken meat on a skeleton of a spinach leaf

2019-10-08

- The consistency resembles seaweed, has a slightly salty aftertaste with no slight taste of spinach in it, but it doesn't taste like chicken either. So it is a completely new taste - describes the product Stanisław Łoboziak the head of the experiment from the Copernicus Science Center (CNK) in Warsaw. To create the product presented at the Copernicus Science Center, Warsaw scientists placed chicken cells in a cellulose spinach leaf skeleton. Stanisław Łoboziak emphasizes, that breeding one leaf with chicken meat lasts about three weeks, which is faster than «traditional» chicken intended for slaughter. Meat

grown in the laboratory is obtained from cells taken from live animals; a sample the size of a pinhead is enough. This means that in the future it will be possible to obtain meat without animal suffering.

Pomeranian Science and Technology Park Gdynia joins the Digital Hansa project

2019-10-08

The Pomeranian Science and Technology Park Gdynia and the City of Gdynia joined the international Digital Hansa initiative, implemented in cooperation with the Swedish Karlskrona and Lithuanian Klaipeda. The venture is financed by the Swedish Institute. The project's aim is to build partnerships between municipalities and science and technology parks operating in them, universities and ICT clusters to strengthen the innovation and competitiveness of local ICT companies in the entire Baltic Sea region. As part of three workshop sessions, project partners will try to define development problems of ICT companies and also identify tools that can increase the dynamics of development of this industry in the Baltic Sea Region. The ultimate goal of the partnership is to develop an implementation project and prepare an application for EU funding.

Spin-off company of the University of Warsaw receives Economic Award of the President of Poland

2019-10-10

The spin-off company Warsaw Genomics of the University of Warsaw (UW) received the Economic Award of the President of Poland in the Startup_PL category. The company offers innovative diagnostic tests of genetic diseases. Warsaw Genomics was founded in 2015 and employs specialists of laboratory diagnostics, bioinformatics, geneticists, biologists and doctors. It performs genetic tests that allow scientists to diagnose the gene responsible for the disease or determine the risk of developing hereditary ailments as cancer, but also those affecting e.g. the nervous, digestive or immune systems. Research carried out by Warsaw Genomics also

helps choose better therapies for cancer patients. The company was nominated for the award by the Polish Promotional Label „Teraz Polska” Foundation. The companies that have been on the market for no more than 5 years and have created a product or technological innovation can be nominated for the Startup_PL category.

Student of the AGH University of Science and Technology designs an electric surfboard

2019-10-11

Igor Łukasiewicz, a student of Mechanics and Machine Design Faculty at the AGH University of Science and Technology in Kraków designed an electric surfboard. This environmentally friendly and innovative project was created as part of his master's thesis. The device is a type of emission-free water equipment that allows surfing in various waters, using an electric motor powered by lithium-ion batteries. Hydro-wings are an interesting element of the vehicle. They are devices generating power that lifts the board above the water surface. Thanks to this, the user has the impression of floating in the air. The board is 1.5 m long, while its pylon, on which the wings are mounted, is 0.85 m. The board weighs 9 kg, and the whole device together with electronics and batteries weighs 17 kg. Vehicles of this type can reach speeds of up to 40 km / h, and the battery capacity is sufficient for an hour of entertainment on the water.

Modern biogas plant built at the Przybroda Agricultural and Orchard Farm

2019-10-11

A modern biogas plant developed with use of entirely Polish technical and technological solutions was opened at the Przybroda Agricultural and Orchard Farm of Agricultural Experimental Station of the Poznań University of Life Sciences. The biogas plant is characterized by very high fermentation efficiency obtained due to the separation of the first part of fermentation in a hydrolyzer working with unique bacterial cultures and an extremely effective mixing system. The installation can be powered by a very wide range of substrates - from typically agricultural materials such as animal droppings, decoctions and straw, to various types of waste from agri-food processing. Thanks to the modular construction, using mainly bolted steel elements as a construction material, it is possible to deliver the installation to the construction site in containers and quick assembly. This technology has huge export potential. More: <https://puls.edu.pl/ogloszenia/otwarcie-innowacyjna-biogazowni-w-przybrodzie>

Researcher at the Gdańsk University of Technology receives Diamond Grant for phosphine research

2019-10-14

Krzysztof Pyrchla, PhD student at the Gdańsk University of Technology Doctoral School has won the Diamond Grant competition and will receive 220,000 PLN for the implementation of the first independent research project „Research on the impact of deformation on optoelectronic parameters of phosphorus nanostructures using quantum mechanics methods”. The aim of the research is to design sensory structures that will be used to develop research and measuring devices using phenomena occurring at the nanoscale and enabling measurements of gravitational acceleration or mass of nanoobjects. Research will be conducted with use of quantum mechanics methods. Due to the chemical instability of phosphorus and the high costs of its synthesis,

the effects of the project will be implemented experimentally in the final stages of implementation, in cooperation with experimental groups in the USA and China. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGNcmoQv7K0/content/diamen-towy-grant-na-badania-nad-fosforenem

Scientist of the Warsaw University of Technology working on a technology that protects against surface icing

2019-10-14

Dr Eng. Rafał Kozera from the Faculty of Materials Engineering of the Warsaw University of Technology (PW) and his team implements the IceSurfer project. Researchers are developing technology to produce ice-phobic (i.e. ice-inhibiting) surfaces for use in polymer composite components. The project is implemented as part of the LIDER IX program organized by the National Center for Research and Development. The composites for decorative and protective reasons are covered with a layer called the gel coat - explains Dr Eng. Kozera. -We want to modify this layer in such a way that ice does not stick to it or that the nucleation of ice crystals is delayed as much as possible. And if the ice settles, however, it should have less adhesive strength and be easier to remove - adds a scientist from PW.

Scientist of the Adam Mickiewicz University in Poznań constructs a detector more sensitive than a dog's nose

2019-10-15

Professor Jerzy J. Langer from the Adam Mickiewicz University in Poznań invented and constructed a nanobiodetector - a miniature sensor that detects microorganisms. The small design is more sensitive than a dog's nose. It detects milligram of drug in the pocket, designer drugs and lung cancer. Just a small number of microorganisms is enough for a computer-assisted system to provide their name and quantity in a few tens of seconds. The device

can be used to check the quality and compliance of goods, discover counterfeit food and tobacco, detect explosives, drugs and even diagnose certain diseases. The nanobiodetector was created thanks to two projects of detecting biological contamination. The first was financed by the American agency DARPA - Defense Advanced Research Projects Agency; the second one was supported by the National Center for Research and Development. More: <https://amu.edu.pl/consciousosci/aktualnosci/studenci/wyjatkowe-urzadzenie-skonstruowane-przez-profesora-uam>

Physicists from the University of Warsaw received the first in Poland ultra-cold cesium and potassium atoms

2019-10-15

Doctoral students from the Faculty of Physics of the University of Warsaw, supervised by Dr Mariusz Semczuk, winner of the HOMING program of the Foundation for Polish Science (FNP), received the first in Poland ultracold cesium and potassium atoms. This is a necessary step, enabling the use of ultra-cold atoms for experiments in which the base for describing phenomena becomes quantum, not classical mechanics. Completing this type of system is a sensation, because Dr Semczuk's team did it as the first in Poland and as one of three centers in the world (the University of Innsbruck in Austria and the University of Durham, in Great Britain). Having worked out this unique experimental system, the team opened the door to further experiments using cold atoms, such as the development of new laser cooling methods, thanks to which it will be possible to miniaturize similar systems for applications using cold atoms in quantum technologies.

Maria Curie Skłodowska University working on a system to support cancer detection

2019-10-16

The Maria Curie Skłodowska University (UMCS) in Lublin and company Billennium- an IT company operating in several Polish cities are developing a diagnostic system that can help detect cancer. The system will use modern brain imaging techniques and «deep learning» methods that are used to create artificial intelligence. This solution is to serve for faster and more accurate location of brain tumors in the first stages of the development of the disease. In addition to academic staff, also students will work on the system. They will be able to use the effects of their work in their diploma theses.

Scientists from the Poznan University of Technology become co-creators of unique graphite material

2019-10-17

Scientists from the chemical technology department of the Poznań University of Technology, in cooperation with the international research team TU Bergakademie Freiberg from Germany, developed graphite material with unique structural properties, using the protein skeletons of sea sponges as a raw material. For two years, a 28-member team studied prefabricated three-dimensional biopolymer sponge skeletons to develop biomimetic model systems that would serve as an alternative to analogous plastic structures in advanced material chemistry. This discovery opens new opportunities for materials science, especially in extreme biomimetic. This new field is very popular due to the development of three-dimensional composites with a hierarchical structure. To this end, scientists propose the use of renewable, naturally occurring and non-toxic protein skeletons with dimensions from centimeter to meter. <https://www.put.poznan.pl/pl/aktualnosc/unikatowy-material-grafitowy>

Polish scientists constructing bionanosatellite

2019-10-18

Polish researchers from the Institute of Immunology and Experimental Therapy of the Polish Academy of Sciences (PAN) are building a bionanosatellite, which will help in the development of new oncological therapies and medicines. The bionanosatellite will enable to conduct biological and biomedical experiments on microorganisms and cells in low gravity, while the responses of cells in space to administered substances may be several dozen times stronger than on Earth. The CubeSat bionanosatellite's size is approximately 10 by 10 by 30 centimeters. It is equipped with small chip laboratories. After 18 months of the scientific phase the project will be sent into space. In the future, the developed technology will be able to be used by other companies or institutions, e.g. pharmacological companies.

Scientists from the Space Research Center of the Polish Academy of Sciences to develop Prototype map of Europe

2019-10-21

Scientists from the Space Research Center of the Polish Academy of Sciences (CBK PAN) have developed a method for automatically and quickly creating detailed maps globally. The prototype of the map, covering only Europe, was commissioned by the European Space Agency. The map is presenting the relief of Europe in 2017 with 13 most important classes, including agricultural areas, forests (separately deciduous and coniferous), built areas, marshes, peat bogs. As many as 15,000 images from Sentinel-2 satellites were used to develop the map. The smallest distinguishable details are 10 meters of size in reality, which means that the data is up to 2.5 thousand times more detailed than the most commonly used map of this type (CORINE). Thanks to the use of fully automatic algorithms, the production of the new map took only 6 weeks. The terrain classification method was developed by scientists from the Earth Observation Department of

the Space Research Center of the Polish Academy of Sciences. In their work, they used an approach called «machine learning». Researchers tested their method in China, Columbia, Namibia, Germany and Italy, and used it to generate a new terrain map in Europe. Project website: <http://s2glc.cbk.waw.pl/>

Medals for inventors from the Kazimierz Wielki University in Bydgoszcz

2019-10-22

Inventions of scientists of the University of Kazimierz Wielki in Bydgoszcz won three medals and a distinction at the International Warsaw Invention Show (IWIS 2019). The silver medal was won by the group: Katarzyna Kazimierska-Drobny, Mariusz Kaczmarek, Tomasz Fąs, Joanna Nowak, Karol Pawełkowski from the mechatronics department for Theranostatic system supporting people with limb edema. The bronze medal and distinction for the best invention for Developing of technology for creating polyurethane breast prosthesesbased on 3D scanning was won by Zbigniew Szczepański, Marek Macko, Joanna Nowak from the mechatronics department and Dariusz Mikołajewski from the computer science institute. The bronze medal for Hand exoskeleton was received by the team: Izabela Rojek, Dariusz Mikołajewski from the Institute of Computer Science, Jakub Kopowski from the psychology department and Marek Macko from the mechatronics department At IWIS, inventors from 25 countries presented their innovations that became a review of new technical achievements.

Bank Gospodarstwa Krajowego to offer millions for innovations within Call for applications for the technological bonus

2019-10-22

Bank Gospodarstwa Krajowego has launched the sixth technological bonus competition under the EU Intelligent Development program. Micro, small and medium-sized enterprises can apply for funding for innovation, and a single grant may be up to PLN 6 million. To apply for support, the entrepreneurs must present the technology that they developed alone or in cooperation with an external entity. Entrepreneurs who want to buy a license for a specific technology may also apply for funding. The most important thing is that as a result of its application must bring a new or significantly improved product or service. Companies from all industries can take advantage of the technology innovation loan. Most often, applications for funding are submitted by entrepreneurs from the food, furniture, printing, automotive and construction industries, but the aerospace and even space industries are also represented in the program.

Scientists of Jan Długosz University in Częstochowa receive Awards at the at the exhibition in Jakarta

2019-10-24

Inventions of scientists of the Jan Długosz University in Częstochowa (UJD) were awarded at the international World Invention and Technology Expo exhibition in Jakarta, organized by the Indonesian Invention and Innovation Promotion Association. The invention of Innovative Construction of The Ski Simulator by Dr Leon Rak from the Faculty of Health Sciences received a gold medal and a special distinction «WINTeX Best Commercialization», awarded for the greatest commercialization potential of the submitted solution. Technology for the production of innovative nutraceuticals and cosmetics using the waste generated in winemaking by Dr Wojciech

Ciesielski and his team in cooperation with scientists from the University of Agriculture in Krakow and the Krakow College of Health Promotion received the silver medal.

Polish nanosatellite to study Mars

2019-10-25

Preparation of the Martian nanosatellite mission is the main goal of the consortium, which was created by Polish universities and the companies SatRevolution and Virgin Orbit. The scientific director of the project is prof. Jan Dziuban from the Wrocław University of Science and Technology. The consortium also includes AGH University of Science and Technology in Krakow, Warsaw University of Technology, Gdańsk, Poznań and Łódź University of Technology, as well as the Catholic University of Lublin and the University of Life Sciences in Wrocław. Researchers at these universities will be responsible for developing scientific solutions, connectivity, software and development of on-board instruments that will be on board nanosatellites. SatRevolution's task will be to design and build a nanosatellite between 6 and 12 U (1 U is 1 cubic decimeter) depending on the use of engines. Company Virgin Orbit is responsible for mission planning, taking the load into space and cooperating in mission control and signal transmission. University of Warsaw to launch a new spin-off company

2019-10-28

University of Warsaw (UW) has launched a new spin-off company Inelco, which specializes in the production of innovative protective coatings made of metal alloys produced in an environmentally safe way. Inelco spin-off company was founded by Dr Paweł Bącał from the Faculty of Chemistry, University of Warsaw. The university company creates environmentally safe and cheaper to produce protective coatings using electrochemical methods. Scientists have new materials and alloys that have decorative, anti-corrosive or structural qualities. The

company's main product are currently nickel, copper and tungsten alloys. Research of Dr Bącał led to the discovery of a previously unknown alloy of this metal and opened new perspectives for creating such materials. Thanks to this, Inelco managed to develop a technology to replace harmful chromium. Dr Bącał also conducted advanced research on alloys that have the potential to be used in fuel cells.

Invention of scientists of the Nicolaus Copernicus University in Toruń receives Award of the Macau

2019-10-29

The invention of the team of scientists of the Nicolaus Copernicus University in Toruń „Smart materials” - intelligent separation materials on an activated polymer substrate with a defined nanoarchitecture of the surface was awarded at the Macau Innovative Invention Expo 2019 (MIEX). The invention is the effect of cooperation between scientists from Poland and Jordan. It was awarded the Gold Medal of the Fair and a «Silk Road- Best Belt and Road Initiative» Award- a special prize for the invention, which supports the initiative. The planned commercialization of the solution will enable the production of highly specialized separation materials with defined surface properties, characterized by controlled separation properties. Surface modification of separation materials also opens the possibility of their further modification and various applications, including the production of dedicated sensors or membranes for effective water and air purification. More: <https://www.umk.pl/wiadomosci/?id=26382>

Invention of the Institute of Non-Ferrous Metals receives the medal of the Eureka 2019 competition in Valencia

2019-10-31

Researchers from the Department of Functional Materials of the Łukasiewicz Research Network - the Institute of Non-Ferrous Metals won the gold medal in the 68th International Competition Eureka2019 in Spanish Valencia. The awarded technology is used to produce nanocrystalline multi-gap cores for filter chokes to improve the quality of electricity and reduce the negative impact on the environment. It aims to improve the life of energy machinery and equipment and reduce noise, with the possibility of storing energy, improving its quality and reducing the negative impact of energy on the environment. Low-loss chokes are designed for use in many applications in the field of energy, in which the operating parameters of the core eliminate the use of classic transformer steel, while it is impossible to use ferrite materials. The benefits of their use are a reduction of the choke weight by 40 percent. and a reduction of total power loss in the choke by 42%

Student of the Wrocław University of Science and Technology to develop app for virtual rehabilitation for people after a stroke

2019-11-04

Małgorzata Marzec, a student of the IT and management department of the Wrocław University of Science and Technology, will implement the project „Rehabilitation after a stroke using virtual reality and location algorithm”. The grant will be received from the program „The best of the best! 4.0” of the Ministry of Science and Higher Education. The Wrocław student's idea is a game in which the participant's task is to catch and move colored balls into appropriate containers. The level of difficulty in individual stages increases systematically, and extra points are awarded for correctly performed actions, which are an additional motivational factor. To cre-

ate the application, the student used Oculus Rift goggles, i.e. the virtual reality system, Leap Motion technology, which allows users to track all their fingers and have control in a virtual environment and the Blender program, which is specialized 3D software for creating computer graphics. More: <https://pwr.edu.pl/uczelnia/aktualnosci/wirtualna-rehabilitacja-dla-osob-po-udarze-11363.html>

Wrocław University of Science and Technology becomes one of the leaders of Digital Innovation Hubs

2019-11-05

Wrocław University of Science and Technology has become one of the leaders of Digital Innovation Hubs appointed by the Ministry of Entrepreneurship and Technology. The main task of new research units is to support entrepreneurs in digital transformation. Technological solutions that will be the main areas of hub activity are connectivity in 5G technology, learning algorithms (Artificial Intelligence), including autonomous systems, Internet of Things, Building Information Modeling, cloud computing, augmented and virtual reality, automation and robotics, computer integrated production, cybersecurity and additive technologies of 3D printing. Over the next two years, the hubs will carry out information and demonstration, training and consulting activities, which will allow to develop high standards of service provision by such centers. In this process, hubs will also build in-depth cooperation with the Future Industry Platform. More: <https://pwr.edu.pl/uczelnia/aktualnosci/powstana-huby-innowacji-cyfrowych-pwr-jednym-z-liderow-11379.html>

High School of the Lodz University of Technology launches first „Newton Room” in Poland

2019-11-05

The Public High School of Lodz University of Technology is launching an innovative „Pop-up Newton Room” created by the Norwegian non-profit foundation - FIRST Scandinavia. The «Newton Room»

concept was developed by a Norwegian foundation in cooperation with teachers, academic institutions and company representatives. Tomasz Kozera, director of the high school of the Lodz University of Technology emphasizes, that this is a modern, well- equipped classroom adapted to the aviation classes with airplane flight simulators, established in cooperation with Boeing. For three weeks, from November 5 to 24, studio classes are planned for pupils of primary and secondary schools in Łódź, conducted by a specially trained teacher in Polish. The students' task will be to carry out an air rescue mission. They will work in groups, make calculations and measurements to plan a practical reconnaissance flight using stationary flight simulators.

Researchers of the Gdańsk University of Technology working on a remote apiary surveillance tool

2019-11-05

Scientists from the Gdańsk University of Technology are working on a tool for beekeeping supervision. The researchers obtained funding from the project „e-Pionier II - Support for investors from the ICT industry as a chance to develop the potential of talented programmers” and support from the investor - Sescom S.A. Researchers will develop a network of energy-saving beekeeping monitoring devices that collect temperature, humidity and sound data, as well as information on attempts to steal hives or vandalism. These data will be sent to a remote server, their summary will be sent to the beekeeper through an internet application. - There is a strong need today to build a system that will not only monitor the hive and show temperature or humidity values, but also provide alarm mechanisms. The beekeepers needs as soon as possible information on the occurrence of situations harmful to their bees - says the leader of the project team, Dr Eng. Andrzej Sobiecki. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/naukowcy-z-pg-pracuja-nad-zdalnych-i-nieinwazyjnym-narzedziem-do-nadzoru-pasieki-pszczelarska

Invention of Wrocław scientists awarded at the invention fair in Valencia

2019-11-06

Professor Piotr Dudziński and Dr Eng. Andrzej Kosira from the Department of Engineering of Working Machines and Industrial Vehicles of the Faculty of Mechanical Engineering of the Wrocław University of Technology won the gold medal and distinction at the international invention fair in Spanish Valencia. They received the award for an innovative system for monitoring the subversive stability of mobile working machines on a tracked chassis. It allows detecting threats of loss of stability of machines equipped with a manipulator - it can warn the vehicle operator, correct drive settings or completely block the possibility of the machine making dangerous movements. It is the only system in the world that is able to detect threats of loss of stability as a result of sliding the slope on which the machine stands. Due to its modular design, it can also be easily integrated with other systems supporting the operator during work. As a result, it significantly improves the level of machine safety and productivity. More: <https://pwr.edu.pl/uczelnia/aktualnosci/wynalazek-z-mechanicznych-ze-zlotem-na-targach-w-walencji-11376.html>

Invention of Wrocław scientists awarded at the invention fair in Valencia

2019-11-07

Professor Piotr Dudziński and Dr Eng. Andrzej Kosira from the Department of Engineering of Working Machines and Industrial Vehicles of the Faculty of Mechanical Engineering of the Wrocław University of Technology won the gold medal and distinction at the international invention fair in Spanish Valencia. They received the award for an innovative system for monitoring the subversive stability of mobile working machines on a tracked chassis. It allows detecting threats of loss of stability of machines equipped with a manipulator. This way it can warn the vehicle operator to correct drive settings or completely block the possibility of the machine making

dangerous movements. It is the only system in the world that is able to detect threats of loss of stability as a result of sliding the slope. Due to its modular design, it can also be easily integrated with other systems supporting the operator during work. As a result, it significantly improves the level of machine safety and productivity. Poznan University of Technology receives the Polish Innovation Award 2019

2019-11-13

Poznan University of Technology received the Polish Innovation Award 2019. The award was granted during the 7th Polish Congress of Entrepreneurship, at the Conference and Training Center of the University of Warmia and Mazury in Olsztyn. The Polish Innovation Award is an image program run by the Polish Entrepreneurship Agency and the editors of the «Entrepreneurship Forum». Its goal is to reward institutions and companies operating on the Polish market whose activity is characterized by innovation and care for the research and development sphere. Participation in the program is also a great opportunity to promote innovative solutions created using EU funds. The goal of the Polish Entrepreneurship Agency is also to appreciate those who are thriving, investing, developing and showing innovative activity both through products and the management.

University of Silesia to start cooperation with the Silesian Association of Beekeepers in Katowice

2019-11-13

The University of Silesia will cooperate with the Silesian Association of Beekeepers in Katowice. The cooperation will primarily concern conducting joint scientific and didactic projects - in particular the organization of the Scientific Beekeeping Conference as well as scientific and didactic activities on beekeeping topics. The agreement was signed by the president of the Silesian Association of Beekeepers

Zbigniew Binko, a member of the board Dr Eng. Wiesław Londzin and Vice-Rector for international and national cooperation Dr Tomasz Pietrzykowski, Prof. University of Silesia. The Silesian Association of Beekeepers in Katowice is an independent beekeeping organization, gathering 2,570 beekeepers in 67 local clubs. Since 2010, he has been a member of Apimondia - the International Organization of Beekeeping Unions, associating 81 national beekeeping associations of the world, based in Rome. Beekeepers of the Silesian Association have 42 563 bee families.

Prof. Hanna Obarska-Pempkowiak from the Gdańsk University of Technology receives Green Laurel 2018

2019-11-18

Professor Hanna Obarska-Pempkowiak from the Faculty of Civil and Environmental Engineering of the Gdańsk University of Technology was awarded the Green Laurel 2018. The award is granted by the Polish Chamber of Commerce „Sustainable Development”. Professor Obarska-Pempkowiak was awarded for the development and implementation of innovative hydrophyte technology in municipal management. The technology is based on biological processes involving aquatic and water-loving plants (hydrophytes) and microorganisms. The professor has developed several variants of the method, adapted to the treatment of sewage, sewage sludge and rainwater or leachate. All variants of the hydrophyte method are in line with the principles of circular economy. The Polish Chamber of Commerce «Eco-development» awards the Green Laurel Award for achievements in the field of eco-development, for promoting or supporting environmental protection and for developing technologies in the field of environmental engineering, especially valuable for sustainable development. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGNcmoQv7K0/content/zielony-laur-2018-dla-prof-hanny-obarska-pempkowiak

Graduate of the Wrocław University of Science and Technology becomes a laureate of the competition of the Association of Polish Engineers and Technicians

2019-11-19

The thesis of Tomasz Targosz, a graduate of the mechanical faculty of the Wrocław University of Science and Technology, won the Wrocław competition of the Association of Polish Engineers and Technicians. The laureate worked in the testing department of Sitech and there he developed from scratch a measuring stand for the analysis of the functional properties of a manual car backrest tilt regulator. His work enabled to carry out a comprehensive analysis of the functional properties of the regulator (dependencies between physical properties such as torque, angular speed, angle of rotation in the backrest regulator, as well as the angular speed and angle of the backrest itself). The new stand is also more automated. The worker fixes the backrest of the chair and connects the whole system with the motor and sensor to it, and during the measurement does not even need to touch the device. The previous apparatus required manual data processing. More: <https://pwr.edu.pl/uczelnia/aktualnosci/student-w10-zbudowal- stanowisko-pomiarowe-dla-foteli-samochodowych-11394.html>

New laboratories of the Institute of Agricultural Engineering of the University of Life Sciences in Wrocław

2019-11-20

The University of Life Sciences in Wrocław has gained eleven didactic and scientific laboratories. A new building of the Institute of Agricultural Engineering was opened on the Biskupin campus. The new labs include a prototype workshop, a drying laboratory, biomass and waste, soil center agrophysics, plant technology and protection, and traction tests labs. The new premises also houses the Training Center of Plant Protection Techniques. The facility belongs

to the Institute of Agricultural Engineering, but the nature of the work carried out in the laboratories is part of interdisciplinary research not only of agriculture and horticulture, but also food and nutrition technology or the field of engineering and technical sciences. The reconstruction of the former garage building for teaching purposes cost over PLN 6 million. More: http://www.glos.upwr.edu.pl/aktualnosci/50254/nowe_laboratoria_instytutu_inzynierii_rolniczej.html

Scientists from Lublin created an innovative disconnecter

2019-11-22

Scientists from the Lublin University of Technology in cooperation with the company EKTO from Białystok have created a prototype of an innovative overhead vacuum switch disconnecter in a closed housing. The EKTOS disconnecter is a device for use in intelligent medium-voltage power networks, used for disconnecting and switching on current. The item is a ecological solution, it has better electrical parameters, longer durability and higher reliability compared to currently existing solutions. It is also adapted to work in extreme weather conditions, e.g. in heavy snowfall or icy conditions. The president of EKTO Sławomir Laskowski emphasized, that the invention will be implemented in production next year. Its use will improve the quality of electricity distribution, while reducing its costs and technical losses as well as reducing carbon dioxide emissions.

Ministry of Digitization creating a Polish model for training AI specialists

2019-11-25

The Ministry of Digitization has signed letters of intent with ten universities to create a model of system education of the highest class specialists in artificial intelligence, machine learning and cyber security. The value of the project for 2020–2023 is PLN 81 million. Letters of intent with representatives of 10 universities included in the consortium established to create the Academy of Innovative Applications of Digital Technologies (AI Tech) was signed on November 20 by Minister of Digitization Marek Zagór-

ski. The project will involve on the development of guidelines for the programs of full studies, preceded by a diagnosis of needs and trends on the labor market in the field of artificial intelligence, machine learning, and cyber security. Based on these guidelines, full studies will be launched at universities belonging to the consortium. The consortium includes: University of Warsaw (Faculty of Mathematics, Computer Science and Mechanics), Jagiellonian University in Krakow (Faculty of Physics, Astronomy and Applied Computer Science, Faculty of Mathematics and Computer Science), University of Wrocław (Faculty of Mathematics and Computer Science), AGH University of Science and Technology Stanisława Staszica w Krakowie (Faculty of Computer Science, Electronics and Telecommunications, Faculty of Electrical Engineering, Automatics, Computer Science and Biomedical Engineering, Faculty of Physics and Applied Computer Science) Adam Mickiewicz (Faculty of Mathematics and Computer Science, Adam Mickiewicz University) Warsaw University of Technology (Faculty of Electronics and Information Technology, Faculty of Mathematics and Information Sciences), Wrocław University of Science and Technology (Faculty of Computer Science and Management, Faculty of Electronics), Gdańsk University of Technology (Faculty of Electronics, Telecommunications and Computer Science, Poznan University of Technology (Faculty of Computer Science), Military University of Technology (Faculty of Cybernetics).

Lodz University of Technology joins the hubs of digital innovation

2019-11-25

The Ministry of Entrepreneurship and Technology has selected five Digital Innovation Hubs whose task is to support transformation into industry 4.0. Lodz University of Technology becomes one of them. The Hub of Digital Innovation consortium established this month consists of four partners: the Institute of Communications - National Research Institute, as a leader and Łódź University of Technology, Ericsson Sp. z o.o. and Fundingbox Accelerator Sp. z o.o. -The established consortium creating the Hub of Digital Innovation significantly brings us closer to the implementation of the ambitious project to build a pilot 5G network on the campus of the Lodz University of Technology - says Prof. Sławomir Wiak, rector of the Lodz University of Technology. It must be clearly stated that regardless of the funding obtained from the Ministry of Entrepreneurship and Technology, the Lodz University of Technology is already implementing a project related to the establishment of the 5G Competence Center and the 5G Knowledge Portal co-financed by the Marshals Office in the university - specifies the rector.

„Innovator of Mazovia” competition completed

2019-11-26

The 11th „Innovator of Mazovia” competition for the most innovative scientists and companies from the Masovian Voivodeship was completed. The Innovator of Mazovia has been organized by the Local Government of the Masovian Voivodeship since 2008. It is divided into two categories: «Innovative Company» and «Innovative Scientist». This year, 43 entries were submitted to the competition: 23 in the category for scientists and 20 for companies. In the «Innovative Company» category, the first prize and 30,000 PLN was received by KF Niccolum sp.z o.o. for the development of a technology of preparation of chelating substances of chromium and cobalt ions, based on the synthesis of active biopolymers, used in the cream for people with contact allergy to metals such as nickel, chromium and cobalt. In

the «Innovative Scientist» category, the jury awarded the first prize and 20,000 PLN to Dr Urszula Piotrowska from the Medical University of Warsaw for the work «High molecular weight antimicrobial peptide carriers - synthesis, structural, physicochemical and biological research».

Scientists from the University of Silesia awarded at the „Inova Croatia 2019’ fair

2019-11-27

The invention of scientists from the Faculty of exact and technical sciences of the University of Silesia was awarded during the 44th International Invention Fair „Inova Croatia 2019”. The winning solution is a method of broadcast transmission for Bluetooth Low Energy transmitters. It has been used in a breathing monitor developed by Silesian scientists. It is a multifunctional device that allows people to control various parameters related to the respiratory system and locomotor activity of a person - such as strength or frequency of breathing, as well as pulse and body position change. The invention consists of several patent applications and industrial designs of national and European scope. During the fair, the international jury awarded the Silesian invention with a gold medal, while the World Invention Intellectual Property Associations in Taiwan (WIIPA) awarded the work of scientists by granting them a special prize.

Łukasiewicz - Institute of Aviation to become a leader in innovation on the unmanned aerial vehicle market

2019-11-28

Unmanned aerial vehicles will deliver parcels, control energy networks, industrial installations and protect borders. Polish industry and engineers from Łukasiewicz Network want to have a considerable share in it. The Łukasiewicz Research Network and its Warsaw Institute of Aviation want to be leaders in supporting business in implementing innovations for the unmanned aerial vehicle market. -Our part-

ner is even the Nevada Institute for Autonomus Systems (NIAS). Together with the American institute, we are creating the Joint Competence Center in the field of autonomous unmanned systems. As part of this project, we are organizing BSL tests with the participation of leading American scientific and industrial organizations, including NASA. The Łukasiewicz Institute of Aviation is the only Polish institution participating in this unique BSL testing program in the urban area - emphasizes Sylwester Wyka, deputy director of Łukasiewicz - Institute of Aviation and adds that this project is one of the largest and most dynamically developing projects in the area R&D between Poland and the USA.

Scholars of Lublin University of Technology developing a solution decreasing heating costs

2019-11-28

How to provide buildings of a large number of rooms with the right temperature and at the same time reduce energy bills? The team under the direction of Dr Eng. Tomasz Cholewa from the Faculty of Environmental Engineering of the Lublin University of Technology (PL) is working on an innovative heat supply control system for large buildings. -For now, we are conducting tests on a laboratory scale. We focus on optimizing the types of external IT system architecture and forecast module installed in the facilities. The next stage is verification of our solution in existing residential and public buildings located in the Lubelskie Voivodeship - says Dr Eng. Tomasz Cholewa. The innovation of the solution is based on the fact that their controller will react in advance to the expected weather conditions and individual behavior of users, which will allow optimization of heat supply to the facility.

Researchers of the University of Gdańsk to build a thin-film photoreactor

2019-11-28

Researchers at the University of Gdańsk will create a thin-film photoreactor thanks to funding from the Tango National Science Center competition. The device will be developed as part of the project of Prof. Adriana Zaleska-Medynska from the chemistry department of the Gdańsk university. The main goal of the project is to design, create and test an innovative thin-film photoreactor equipped with a photocatalytic layer in the form of nanotubes made of a mixture of TiO₂ with Ag₂O and / or Cu₂O. Researchers at the University of Gdańsk are also announcing the concept for the economic use of a photoreactor in such areas of the economy as disinfection and / or treatment of the water phase, conducting market analyzes diagnosing the demand for the production and / or use of a photoreactor. They also want to develop a patent application and acquire a partner interested in the manufacture / production and / or use of such devices.

Chemists of the University of Silesia to purify water from heavy metal ions

2019-11-28

Chemists from the University of Silesia are members of teams whose goal is to develop, effective methods of purifying water contaminated with heavy metal ions. Modified graphene oxide is one of the solutions in this area. It allows the use of a relatively simple and effective method of sorption of heavy metal ions from solutions with a wide range of pH. Purification involves the introduction of a contaminated solution and modified graphene oxide into the reactor. The solution, after sufficiently stirring, is filtered using special filter paper filters. The technology that has recently obtained patent protection has been developed in cooperation with scientists from the University of Technology and Life Sciences of in Bydgoszcz. Earlier, the patent obtained for a special polyester fabric that captures toxic lead, cadmium, chromium, cobalt, nickel and zinc ions.

Student of the University of Life Sciences in Poznań wins the competition in Germany

2019-11-29

Sebastian Stempniak, agricultural engineering student at the Faculty of Agriculture and Bioengineering of the University of Life Sciences in Poznań took first place in the competition „Helmut Claas Scholarship 2019” in Harsewinkel (Germany). The Helmut Claas Foundation has awarded agricultural science students from various European countries for the twentieth time awards for outstanding engineering work, which are projects of modern agricultural machinery design solutions or bringing innovative solutions to applied agricultural production technologies. The award-winning work of a Poznań student is «Design of a device for applying protective liquid during potato tuber harvesting». The laureate received 2,000 euro for his invention.

Polish scientist receives the LRI Innovative Science Award

2019-12-02

Dr Karolina Nowak, a graduate of environmental protection at the Faculty of Environmental Management and Agriculture of the University of Warmia and Mazury (UWM) in Olsztyn, currently postdoc at the Faculty of Geobiotechnology at the Berlin University of Technology received the LRI Innovative Science award of EUR 100,000. This is one of the largest research grants in Europe for aspiring researchers. The award ceremony took place in Brussels during the 21st annual Cefic Long-Range Research Initiative (LRI) workshop. Dr Nowak's research aims to develop a fast and cost-effective screening method for testing the durability of chemicals in complex environments. Over the past two decades, the LRI program has funded over 250 research projects through grants and the Innovative Science Award.

Researchers of the University of Silesia developed new compounds in the form of p-vinylbenzyls

2019-12-04

Chemists from the University of Silesia in cooperation with scientists from Synthos S.A. developed new compounds of p-vinylbenzyls along with the method of their preparation. The solution is patented and the only entities authorized to use the solution are the University of Silesia and Synthos S.A. Scientists are primarily interested in the properties of these unusual compounds. It is already known that some of them show strong adsorption on the tooth enamel surface, thanks to which they can constitute a new type of filling material or act as a binder in tooth reconstruction. Previously known methods for the synthesis of p-vinylbenzyls were time-consuming and expensive due to their multi-stage nature. Scientists have therefore developed a one-step, simple and efficient way to obtain these compounds, which will allow their production on an industrial scale.

Wrocław University of Science and Technology to develop a fast tool to simulate phenomena in macro- and micro-scale

2019-12-04

Open source software for simulation of macro- and micro-scale phenomena is being developed at the Wrocław University of Science and Technology. It allows to create devastating effects in computer games, but also for example a virtual operating conditions. The program is called Microflow 3D. This is software written in C ++, used to simulate the phenomena of fluid flow, the so-called Lattice-Boltzmann (LBM) method solver. The program has a very universal application, enabling the simulation of phenomena in macro- and micro-scale. University of Technology researchers managed to automate the entire complex calculation process. This opens completely new areas of application: from virtual reality to device and process control. The classic applications of the program are computer games and special effects in movies - for example, the realistic movement of leaves and grasses in the wind, waterfalls, rain and fog, as well as fire and smoke, explosions and destructive elements. Students of the University of Life Sciences in Wrocław receive a medal for air purification

2019-12-05

Students of the University of Life Sciences in Wrocław returned from the USA where they received the bronze medal International Genetically Engineered Machine (iGEM) in Boston for yeast microbial filters that cleans the air of heavy metals. Wrocław students flew to a competition with biological filters based on modified yeast *Yarrowia lipolytica*. These yeasts absorb heavy metals and signal their excessive concentration by turning red and giving off a peach odor. Students have already created a prototype heavy

metal sensor. Now the project is entering the phase of creating a filter that will catch out of the air and neutralize harmful substances. It could be installed in ventilation, for example. iGEM is one of the most prestigious events for students of biological and engineering sciences. The idea of the competition is to present innovative projects that use the tools of modern synthetic biology. Students of the University of Zielona Góra created application increasing the productivity of enterprises

2019-12-05

Students and graduates of the University of Zielona Góra have created the Teamstack application that increases the productivity of enterprises by motivating employees to help each other. The project was created as part of internships and work in the headquarters of the group of IT companies in Zielona Góra. The application was created by IT students Michał Przygocki and Mateusz Szarata and an electronic business graduate Julian Markiewicz. Teamstack once a week asks each employee who has recently been most helpful to him. Based on this, the app creates the ranking and the winners are publicly announced every Monday. Teamstack is based on the Slack communication platform, which is used by over 85,000 enterprises - including McAfee, an American giant that produces anti-virus software. McAfee has been using Teamstack for over 3 months in one of its key departments in the United States. Poznań University of Technology to launch innovative locomotive

2019-12-06

Poznan University of Technology students from the Scientific Club of Public Transport Engineers operating at the Faculty of Transport Engineering con-

structed a locomotive. A half-ton machine of a scale of 1: 5.5 was presented at the Lecture Center of the University of Technology. The young constructors project was realized in the international Railway Challenge 2019 competition organized by the Institution of Mechanical Engineers in Stapleford in Great Britain. The Poznań locomotive received many distinctions in various categories. The PUTrain team won a special award for the materials used and the innovations introduced in the project. As a debut team in 2019, they won the 7th place in the overall classification of 14 teams. In addition, the team won: 2nd place in the Innovation competition, 2nd place in the Technical Poster competition, 3rd place in the Comfort of Travel competition, 4th place in the Business Presentation competition and 5th place in the Ease of Maintenance competition.

Prime Minister's awards for inventiveness

2019-12-11

The Foundation for Polish Science (FNP) received the award of the Prime Minister for inventiveness. The foundation has been recognized „for its special contribution to the development of Polish innovation“. The award is granted to institutions, organizations and associations distinguished by achievements for the development and popularization of inventiveness, science and technology, creating pro-innovative attitudes, promoting development and creative activities, as well as supporting initiatives aimed at spreading knowledge in the field of industrial property protection. This year, the awards were given to FNP, Prof. Eng. Jerzy Woźnicki (Polish Rectors Foundation - Institute of Knowledge Society), Prof. Eng. Stanisław Adamczak (Institute of Materials Engineering, Lodz University of Technology), Prof. Eng. Tomasz Ciach (Faculty of Chemical and Process Engineering, Warsaw University of Technology), Prof. Henryk Skarżyński (Institute of Physiology and Pathology of Hearing) and Military University of Technology.

Researchers of the University of Silesia to use new compounds in organic electronics

2019-12-11

Researchers of the Faculty of exact and technical sciences of the University of Silesia are the authors of the method of obtaining polycyclic aromatic hydrocarbons and anthracene derivatives, which will be used in modern organic synthesis and technology of materials developed with organic electronics in mind. The first group of compounds exhibits unique electronic and photophysical properties, the second is currently being tested for use as an active layer in organic light-emitting diodes (OLEDs). Both inventions are patented. Scientists are primarily looking for ways to remove problems caused by known methods of obtaining these compounds. New solutions, however, do not result directly from previously used methods. They are the result of a number of studies that have enabled the selection of appropriate molar proportions of reagents, solvent, temperature and reaction time. More: <https://us.edu.pl/nowe-zwiazki-wyyszne-w-organalnej-elektronice/>

Koszalin University of Technology becomes the leader of the Central Pomeranian development project

2019-12-11

Koszalin University of Technology will implement the project „Smart development of Central Pomerania - an innovative approach to creating a competitive advantage of the region”. The partners in the activities are the Koszalin Chamber of Commerce and Industry, the Northern Chamber of Commerce and the Science for the Environment Foundation. The project implementation will allow to prepare a diagnosis and analysis of the region's innovation potential in the context of building competitive advantage. It regards identification and assessment of economic potential in the context of innovation and compet-

itiveness networks, identification and assessment of the impact of logistic infrastructure elements on socio-economic development, as well as assessment of the level and quality of social and human capital. The most important result of the project will be the selection of smart specializations for the areas forming the region of Central Pomerania and the identification of potential sources of innovation. The project is accepted for financing by the Minister of Science and Higher Education under the «Dialogue» program.

Poznan University of Technology scientist co-authored an innovative research method

2019-12-13

Dr Eng. Łukasz Piątkowski from the Faculty of Technical Physics of the Poznan University of Technology together with a group of scientists from the Institute of Photonic Sciences in Barcelona developed an innovative research method involving the use of the phenomenon of stimulated emission for imaging and testing of physicochemical processes occurring in individual nano-objects. Using stimulated emission, scientists were able to visualize individual quantum dots having a size of ~ 30 nm and investigate how the charge carriers (electrons and holes), while being excited in the quantum dot, can evolve over time, what happens to them, how they lose energy and how they interact with the environment. The obtained results were published in the prestigious SCIENCE magazine. They are of fundamental importance for research in the field of photonics and photovoltaics because they show that scientists can very accurately track what is happening with excited electric charges at the nanoscale.

Researcher of the Poznań University of Life Sciences becomes an expert in the Research Executive Agency

2019-12-17

Dr Eng. Janetta Niemann from the University of Life Sciences in Poznań has been appointed an

expert of the Research Executive Agency (REA) acting within the powers delegated by the European Commission. Dr Eng. Janetta Niemann works at the Department of Genetics and Plant Breeding of the Faculty of Agriculture and Bioengineering at the Poznań University. She will advise on issues related to the Horizon 2020 program. She will take part in the process of assessing projects submitted to the Executive Agency for Sustainable Food Security under Horizon 2020 - Work Program 2018-2020. Horizon 2020 is a framework program for research and innovation, which was adopted by the European Parliament and the Council of the European Union in December 2013. This is the largest EU project to date in research and innovation. The program's budget is EUR 80 billion, of which EUR 2.8 billion will be allocated to research and innovation.

Researchers of the Gdańsk University of Technology implementing the Ella4Life project supporting seniors

2019-12-18

Researchers of the Gdańsk University of Technology are implementing the Ella4Life (Ella4Life your Virtual Personal Assistant for home and on the road) project. Integrated virtual assistant with home automation systems and e-health is to provide support in independent management in the care and treatment of seniors, as well as improve their safety and health control. As part of the project, scientists are developing sensor systems that monitor the work of the heart, placed in everyday equipment: in a chair and in a bathtub. The virtual assistant is also intended to provide support to elderly carers, e.g. family members, and help professionals perform their daily work with seniors even better and more efficiently. The project is funded by the research and development program Active and Assisted Living Program, which supports projects using information and communication technologies to improve the quality of life of older people. Its value is over PLN 1 million. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWgncmoQv7K0/content/ella4life-%E2%80%93-twoj-wiralny-osobisty-asystent-w-domu-i-w-podrozy

University of Humanities and Natural Sciences in Częstochowa supports overweight children

2019-12-18

University of Humanities and Natural Sciences in Częstochowa is a leader of the project supporting the treatment of children who are overweight, suffer from obesity and its metabolic complications. This is the largest research project implemented at the university in Częstochowa with a budget of almost 7.5 million PLN. The project is implemented as part of a consortium: University of Humanities and Sciences in Częstochowa, Tymbark MWS Sp. z o.o. Sp. K., Institute «Monument-Children» Health Center», Faculty of Biotechnology and Food Sciences of the Lodz University of Technology and the Oncology Center-Institute of Maria Skłodowska-Curie. The project involves the use of a soluble preparation of potato starch with prebiotic properties, the use of which will introduce innovative vegetable and fruit preparations with health properties for children with obesity to the market. The result will be global innovation in the form of new technology that will be implemented on the market. More: <http://www.ujd.edu.pl/news?category=2>

AGH University of Science and Technology to launch the fastest academic computing system in Poland

2019-12-24

The fastest academic computing system in Poland dedicated to the needs of artificial intelligence with a capacity of over 4 Pflops (petaflops) was launched at the Cyfronet Academic Computer Center of the AGH University of Science and Technology (AGH) in Krakow. The new infrastructure has been added to Prometheus, the largest Polish supercomputer, which will enrich traditional simulations with methods based on machine learning conducted in the same computing environment and on shared data sets. The new infrastructure will enable research using artificial intelligence methods that can also be used to enrich research work based on HPC (high

performance computing) simulations. Cyfronet AGH is currently implementing a number of projects using artificial intelligence methods in various fields.

Graphene chemists from Toruń appreciated in Taiwan

2019-12-24

The invention of chemists from the Nicolaus Copernicus University in Toruń won the silver medal at the Kaohsiung International Invention & Design Expo (Taiwan) fair, organized by the World Association for Intellectual Property and Invention. The awarded invention is «The method of obtaining three-dimensional graphene roses». Its subject is an oil-free and lusterless method of obtaining graphene roses using aqueous suspensions of commonly available graphite. The proposed material may allow improving the process of generating electricity in supercapacitors, fuel cells or photovoltaic cells. The high conductivity of graphene, both thermal and electrical, may replace silicon in electronics in the future, which will allow further miniaturization of electronic equipment. Representatives of 27 countries were present in Kaohsiung, presenting about 400 inventions to potential investors. More: <https://www.umk.pl/consciousosci/?id=26497>

Silesian University of Technology launches Silesian IoT Cluster SINOTAIC Silesian Cluster of Internet of Things

2019-12-24

The Silesian University of Technology is one of founders of the Silesian IoT Cluster SINOTAIC Cluster. The initiators are the Silesian Voivodeship and Smart Secure Networks. This is the first such entity in Poland. One of the main tasks of the Cluster is to develop lasting cooperation between companies and scientific institutions as well as public administration and business support organizations of the Silesian Voivodeship. The main purpose of his establishment is to create products and solutions for the Internet of Things, with particular emphasis on cybersecurity. Within the Cluster, joint research and implementation projects will be implemented as well

as effective transfer and commercialization of their results as part of business operations. The cluster will also be responsible for creating an implementation center in Silesia in the field of the Internet of Things by integrating native solutions. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListaWiadomosci&Page=1&WebPartTitle2=Wiadomosc&Filter1Field2=Identifier&Filter1Value2=2991>

Scientists of the University of Technology and Industry in Bydgoszcz awarded in India

2019-12-27

Inventions by scientists from the University of Technology and Industry in Bydgoszcz won medals during the third competition of the International Innovation Fair at the Hyderabad International Exhibition Center in India. The gold medal was won by the team: Andrzej Tomporowski, Józef Flizikowski, Adam Mroziński and Weronika Kruszelnicka for the Roller Mill with an Inter-Roller Plate, the silver medal by Bogdan Ligaj for the invention: Simulator of selected percutaneous procedures on the heart. The team of Adam Flizikowski, Łukasz Zabłudowski and Tomasz Olejniczak also won the silver medal for the invention of Fleezer - a method and hardware and software platform for video streaming for 3G, 4G and 5G wireless networks, using multi-path protocols especially for unmanned platforms (multi - mobile data transmission for vehicles (UAV, UGV, USV)). Student of the Silesian Medical University becomes the most entrepreneurial young Pole

2019-12-30

Mikołaj Basza, the third year student of the medical faculty of the Medical University of Zabrze of the Silesian Medical University will participate in the finals of Forbes and McKinsey & Company competition "25 for 25". He became the most entrepreneurial Pole among about 500 candidates. Mikołaj Basza is the originator and founder of the IRBA mobile application allowing for an analysis of medically significant data from wearable bands using artificial intelligence. The Polish Development Fund considered this solution to be one of the most innovative ideas of 2018. Mikołaj Basza is co-founder of firm Sculo and deals with printing detailed anatomical models and the use of 3D printing in medicine. He is an advisor to a joint-stock company on new medical technologies and cooperation with startups, an organizer of a charity campaign using virtual reality to support child therapy. Mikołaj Basza designs and implements technologies successfully used in science and business.

Białystok University of Technology to hold the conference on the internationalization of innovation

2019-12-31

Białystok University of Technology (PB) will host the international event called „More Entrepreneurial Universities, International Staff Training Week”, which will take place on January 15-17, 2020. The conference, organized by the PB Information Technology Department and the PB International Cooperation Office, is addressed to all representatives of the academic and business community who are interested in developing an innovation ecosystem based on internationalization. Participants will exchange experiences and best practices regarding the tools for developing international academic entrepreneurship and discuss strategies for building a network of innovation ecosystem internationalization of innovation. 2018-2019

Third Congress of Health Challenges in March

2018-02-07

- Will the progress in science replace once oncology doctors with technologies? This is a somewhat provocative question, but we should talk about it - says Prof. Krzysztof Skłodowski, director of the Oncology Center in the Maria Skłodowska-Curie Institute in Gliwice, who takes part in the Scientific Council preparing the 3rd Congress of Health Challenges. The 3rd Health Challenges Congress (HCC 2018) will be held in Katowice on March 8-10. It will be devoted to the emergence and practical implementation of new medical technologies. During the Congress session, speakers and guests will talk about start-ups in medicine, about innovative glaucoma surgery or models of cooperation between science, the state and industry. More about the Congress: <http://www.hccongress.pl/pl/>

Selvita invests in innovative oncology projects

2018-02-08

Biotechnological company Selvita will conduct a public offer of their shares to raise capital for the development of innovative oncology projects. In the next four years, it will allocate PLN 290 million, of which PLN 140 million is to be obtained from investors. Selvita wants to allocate their funds to the development of SEL120, which is to fight acute myelogenous leukemia and for four innovative platforms: targeted therapies, cancer cell metabolism with immuno-metabolism, immunological and immuno-oncological as well as a biological molecules tooling platform. Selvita successfully commercializes innovative projects. Its leukemia drug SEL24 is the first Polish drug approved for clinical trials in the US. More about the SEL120 drug development project: www.selvita.com/pl/projekty-innowacyjne/sel120

What determines healthy old age?

2018-02-08

Aging processes only in 25 percent depend on genes. Lifestyle plays the major role – stated participants of the third National Dietary Congress in Warsaw. Experts from the Institute of Food and Nutrition presented the Pyramid of Healthy Nutrition and Physical Activity modified for seniors, and prepared in this scientific and research institution. At an advanced age, health can be maintained thanks to proper nutrition and physical activity as well as quick detection of threats resulting from diseases or limited efficiency of the organism. There are 6 million people in Poland over the age of 65 in Poland now and in 20 years there will be 9 million. Poles live longer due to changing eating habits - they eat much more vegetable fats, fruit and vegetables. (Kp) http://www.rynekseniora.pl/zdrowie/116/eksperci_starzenie_tylko_w_25_pro...

Innovative endoscope from the Lodz University of Technology

2018-02-09

The endoscope with extended range, allowing doctors to diagnose the entire digestive system has been developed at the Faculty of Mechanical Engineering of the Lodz University of Technology. This innovative solution makes possible to examine the patient within one visit. Today, if during a traditional colonoscopy or gastroscopic examination, the doctor does not detect the cause of the disease, patients are directed to further examinations, e.g. ultrasound or computer tomography. Such a situation significantly delays the correct diagnosis of the disease and its treatment. - We are developing individual elements of the device, and next year we plan to build a ready-made prototype - says Dr. Eng. Łukasz Frącczak from the Lodz University of Technology. However, patients will have to wait for a new endoscope for several years, because of medical procedures and the need to conduct clinical trials. More: <https://www.p.lodz.pl/pl/nauka-movie-endoskopie-wydłużonym-zasięgu-dr-in...>

It's easier to get to the doctor online

2018-02-09

The ZnanyLekarz.pl website is a part of the DocPlanner group that has launched a promotional campaign encouraging Poles to make medical appointments via the Internet. The campaign will last till May, 2018. There are adverts in the Internet, in the largest television stations and in video rental spots (VoD) nationwide, showing the advantage of online doctor's appointments via the ZnanyLekarz.pl platform. The website is visited by 20 million people a month and more than 500,000 visits were made so far. This platform has collected 2 million patient reviews and information on over 6 million doctors from 24 countries. DocPlanner was founded in Poland in 2012. It has offices in Warsaw, Barcelona, Istanbul, Rome, Curitiba and Mexico. (Kp) <http://biuroprasowe.znanylekarz.pl/25340-znanylekarz-rusza-z-telewizyjna-kampania-reklamowa>

The Swedish Ministry of Health ordered a Polish application

2018-02-12

MovereX - a mobile application, designed to read the user's heart rate, was developed by a Polish Cybercom company commissioned by the Swedish Ministry of Health. In Sweden, pro-health programs were implemented many years ago. One of them is «a recipe for physical activity». When a patient receives such a prescription, he simultaneously gets the MovereX application and a band that measures his heart rate. Thanks to this, the doctor can follow the physical activity of the patient and control whether he is carrying out the planned physical activity plan and checking his progress. Devices that monitor our physical activity and health not only increase the quality of life and facilitate treatment, but also are able to reduce the cost of health care. The MovereX application was created for people struggling with heart disease, diabetes, cardiovascular diseases and those whose physical activity is low. It should motivate to play sports and support in the treatment process. More about MovereX: <https://www.cybercom.com/pl/Poland/projekty/moverex/>

New forms of medical care for former miners and steel workers

2018-02-12

New Silesian Clinical and Scientific Center for Prevention and Treatment of Environmental, Civilization and Old Age Diseases will be created in Zabrze.

In the cities of Silesia, where heavy, mining and chemical industries have been located, hundreds of thousands of old people suffer from complex diseases related to old age and work in harmful conditions. Treating them requires highly specialized medical care

- In Silesian post-industrial cities - said Prof. Marian Zembala, initiator of establishing the center, director of the Silesian Center for Heart Diseases - people live 4-6 years shorter than on average in Poland, heart diseases are more often connected with the so-called co-morbidities.

The first patients may come to the center in Zabrze at the end of 2021. (kp)

A heart in three dimensions - an innovative application at the University of Opole

2018-02-13

Medical students at the University of Opole as the first in Poland will learn the secrets of the human heart in a three-dimensional virtual reality. They received Virtual Heart, a newest didactic application. A realistic picture of the heart is viewed using goggles. It can be rotated, enlarged; simulate different body conditions: its healthy, uninterrupted work or changes in different situations, as a result of damage, disease progression or the action of stimuli or chemicals. This is useful for precise planning of operations. Opole Virtual Heart will enable better education of future doctors in clinical subjects, anatomy and physiology. It was created as a result of cooperation with the Foundation for the Development of Cardiac Surgery (Kp) <http://www.uni.opole.pl/page/2100/wirtualne-serce-na-uo-mowi-o-nim-cala-polska>

Medical Simulation Center opens in Koszalin

2018-02-14

A new Center for Medical Simulation for the needs of nurses' education will be opened in Koszalin. The project will be implemented by the State Higher Vocational School in Koszalin in cooperation with the Specialist Team of Tuberculosis and Lung Diseases from Koszalin. The center will be created thanks to the EU program implemented by the Ministry of Health and subsidies from the Zachodniopomorskie Region and the Koszalin local government. It is the only such center in northern Poland and one of the 30 currently being created in Poland. The State Higher Vocational School in Koszalin will educate nurses at the highest European level, in a facility equipped with technologically advanced patient simulators. Simulation rooms will be equipped with the necessary audio-video systems for recording simulation sessions, which will allow students to gain practical skills.

Training conference on innovations in oncology

2018-02-14

The 3rd National Student Training Conference „Innovations in Oncology” organized by the Student Science Club Onkoma from the Medical University of Warsaw will be held on April 14. The venue for the conference will be Warsaw for the third time, however, thanks to the use of modern ICT tools, the event will be broadcast live to 14 academic centers in Poland. The conference will begin with the inaugural lecture of Katarzyna Głowala - Undersecretary of State in the Ministry of Health. Later researchers will inform participants about innovations in the detection and treatment of colorectal, ovarian and thyroid cancers. Registration for the conference below: <https://docs.google.com/forms/d/e/1FAIpQLSed6dOZ0L3Z2y1TLJWUjaj3iJpgSNXv...>

The most influential people of Polish medicine

2018-02-16

Prof. Wiesław W. Jędrzejczak - head of the Chair and Clinic of Hematology, Oncology and Internal Diseases of the Medical University of Warsaw is on the top of the list of the hundred most influential people in Polish medicine The competition is organized by the journal „Puls Medycyny”. The second is Prof. Cezary Szczylik, specialist in internal medicine, clinical oncologist, Rector's representative at the Warsaw Medical University for the organization of the Clinical Research Center in Oncology. The third is Prof. Henryk Skarżyński, otolaryngologist, audiologist and phoniatriest, national consultant in the field of otorhinolaryngology, director of the World Hearing Center in Kajetany near Warsaw, head of the Department of Audiology and Phoniatics at the Academy of Music in Warsaw, chairman of the Committee of Clinical Sciences of the Polish Academy of Sciences. (Kp) See a list of the hundred most influential people in Polish medicine: <http://listastu.pulsmedycyny.pl/4686591,78304,lista-stu-2017-medycyna>

Innovative tools to fight cancer

2018-02-19

Can magnetic resonance work without gadolinium? This element is harmful to the body, especially for the brain. Team of Dr. Michał Godlewski from the Faculty of Veterinary Medicine of the Warsaw University of Life Sciences in cooperation with the Institute of Physics of the Polish Academy of Sciences and the Veterinary Research Center has developed its own type of nanoparticles and conducts research on their use in the diagnosis and treatment of cancer.

- Our nanoparticles are able to detect any cancer
- says Dr. Godlewski – e.g. lung cancer with 100 percent confidence.

They are not toxic, they can be administered orally, so they are excellent carriers of drugs. They are suitable for use in magnetic and fluorescence resonance. They will bring relief to patients during oncology procedures and biopsies. Precise imaging cancer changes will minimize the removal of healthy tissue. (Kp)

More on this topic: <http://www.media.sggw.pl/pr/383015/nanocastka-w-raka>

Polish innovation in the treatment of arrhythmias

2018-02-19

One electrode inserted into the patient's heart instead of two used so far. This is how the ablation procedure will change with the innovative MiniMax electrode developed in the Polish company Medinice by Prof. Sebastian Stec. Due to the built-in 3D mapping system, the electrode is adapted to perform heart ablation procedures without using X-rays. Ablation, or the method of treatment of cardiac arrhythmias involving the insertion of an electrode through the artery or femoral vein to the patient's heart, was first carried out in Poland in April 1992 by Prof. Franciszek Walczak. Since then, the technology of the tools used in the procedure has been constantly improved. New technology can improve the safety of the procedure and shorten its duration. The first patients will use this method at the end of the year as part of a clinical tests. More:

MEDmeetsTECH Teledmcyyna conference

2018-02-19

MEDmeetsTECH will start on April 18, 2018 in Warsaw, and for the fifth time it will connect entrepreneurs, startups, doctors and scientists. This time the conference will concern telemedicine. The MEDmeetsTECH program will consist of following sessions: trends, medicine, knowledge transfer, legal regulations, financing and startup presentations. During the event, examples of the implementation of telemedicine systems, various forms of financing such services by a public or private partners and trends in global markets will be presented. The most interesting startups in the field of telemedicine as well as the legal challenges of developing a startup will be also the topics of the conference. MEDmeetsTECH aims to create space for experts in medicine, science, technology and business to establish dialogue and exchange experiences. As part of the conference, the MEDmeetsTECH Innovation Showcase, an innovation fair, will also take place on 19 April. Registration for the conference: <http://medmeets-tech.com/rejestracja>

Laboratory of vibrotherapy at the Krakow University of Physical Education

2018-02-20

The first Oscillating and Cyclical vibrotherapy laboratory was launched at the Academy of Physical Education. There are nine stands for scientific experiments, a bookshelf with exercise modules and relaxation music in the background of the 33 square meter room. The studio was made by Vitberg company from Nowy Sącz. The scope of research are contemporary trends of symbiosis of science and industry. Vibrotherapy improves blood circulation and helps in the rehabilitation of the body and also it improves the results of trainings. It is also experimentally used as a support in the cancer treatment and in the awakening patients from pharmacological coma.

Pioneering operation at the Mother and Child Institute in Warsaw

2018-02-21

For the first time in the world such a complicated operation was performed on such a small child. In the Children Oncology Surgery of Institute of Mother and Child in Warsaw, an 8-month-old girl was implanted with a humeral endoprosthesis. The innovative operation was performed by surgeons: Andrzej Szafranski, Bartosz Pachuta and Magdalena Rychłowska-Pruszyńska. After the removal of the disease outbreak (the Ewing sarcoma) the doctors used a special mechanical endoprosthesis, adapted for such a small patient; the length of her humerus is 10 cm. Without the implant, removing the lesions would require amputation of the whole bone. The applied endoprosthesis will be extended as the girl's arm grows and then will be replaced by a larger one. After some time it will be possible to use an electromagnetically prolonged implant (kp) More: <http://www.imid.med.pl/pl/top-menu/biuro-prasowe> <http://www.rynekzdrowia.pl/uslugi-medyczne/warszawa-pionierska-operacja-...>

Scholars from Krakow build a new generation magnetic resonance

2018-02-21

Research of Dr Szymon Pustelny and his team from the Department of Photonics, Institute of Physics of the Jagiellonian University paves the way to create new nuclear magnetic resonance devices without the disadvantages of currently used equipment. Heavy and expensive magnets will not be necessary. - We propose a new approach - explains Dr. Pustelny - use of none or very weak magnetic field and optical magnetometers. Researchers from the Jagiellonian University check the possibility of changing the preparation of samples or objects intended for resonance studies. They use a physical basis for signal analysis other than currently used. Due to that, they achieve information about the structure of molecules, the strength of chemical bonds, without using expensive, superconducting

magnets. - In the perspective, it will allow to recognize chemical substances - stressed Dr. Pustelny - and to detect liquid explosives. (Kp) http://www.nauka.uj.edu.pl/aktualnosci/-/journal_content/56_INSTANCE_Sz8leL0jYQen/74541952/138953535

IT system will check if the prosthesis is safe for the patient

2018-02-22

A team of young scientists from the Lodz University of Technology and the Medical University of Lodz is working on the apparatus and algorithm for analyzing the effects of the use of various types of endoprosthetic prostheses (stent grafts) on patients. - The doctors - even before the procedure - will check what type of prosthesis in which configuration will be most useful for the patient due to its condition and the risk of complications - explained Dr. Eng. Andrzej Polańczyk from the Faculty of Process Engineering and Environmental Protection at the Lodz University of Technology The evaluation of the suitability of prostheses is carried out in several stages. First, on the basis of radiological examinations, the patient's aorta models are produced in 3D printers. Different types of dentures are introduced to them; by simulating blood flow, the functioning is monitored, the safety level and the potential risks are assessed. The system is currently undergoing a patent procedure. In addition to Dr. Eng. Andrzej Polańczyk, MSc. Michał Krempski-Smejda, MD Michał Podgórski, Dr. Eng. Maciej Polańczyk work on the prosthesis. The project is financed by the National Center for Research and Development. (Kp)

Innovative application supports therapy of aphasia

2018-02-23

The first, completely free, application supporting speech therapy for people with aphasia is now available in the Internet. The Afast application was created thanks to cooperation between Technopark in Gliwice, Collegium Medicum of the Jagiellonian University and the Salus Publica Foundation as part of the Social Innovation program co-financed by the National Center for Research and Develop-

ment. The Afast application, operating from March 2017 at <http://www.afast.pl>, is a multimedia rehabilitation tool. The solution provides patients, their caregivers and logopedics specialists with the free access to therapy. It also allows to conduct classes in cooperation with a caretaker or speech therapist. The program contains over 30 exercises designed for rehabilitation for three types of aphasia - loss of speech, understanding and the ability to read and write. It is intended for people affected by aphasia in a light or medium degree. It can also be used in the treatment of other neurological diseases, such as Alzheimer's or Parkinson's disorders.

New laboratory of the Silesian University of Technology established in cooperation with the industry

2018-02-26

Research on the impact of post-accidental spine injuries and creating robots helping medical staff to care for the sick will be possible thanks to the Leonardo Lab, established at the Faculty of Biomedical Engineering at the Silesian University of Technology. The solutions created in the Leonardo Lab are interdisciplinary and practical applications, providing better care for health and the support for medical personnel in the fight against diseases. Leonardo Lab is an example of cooperation between Polish universities and industry. It was established due to the cooperation of the Faculty of Biomedical Engineering at the Gliwice university with the APA Group, which is one of the leaders on the intelligent industrial automation market.

Electronic nurse helps to save patients in Przemyśl

2018-02-27

The „electronic nurse“ conducts the first, basic examination of patients in the emergency department of the Regional Hospital in Przemyśl. It examines blood pressure, heart rate, temperature, saturation, as well as chest pains and capillaries filling time. The results are processed by a special algorithm, which allows for an objective assessment of the patients' condition and determines the order of further procedures provided by real doctors. The full diagnosis lasts from 60 to 90 seconds. The «electronic nurse» deals with patients of all ages, including newborns. It improves work, usually crowded hospital emergency departments. Quick diagnosis increases patient safety, facilitates the management of medical personnel and speeds up decisions on the further course of treatment. Pioneering operation at the Warsaw Medical University

2018-02-27

There were only two such surgeries in the USA. In Poland and in Europe it was performed for the first time. Operated patient stays at home, in a very good condition.

Team of the Endoscopic Laboratory of the General, Transplant and Liver Surgery Clinic of the Medical University of Warsaw, headed by Prof. Krzysztof Zieniewicz performed endoscopic reconstruction of the continuity of the gastrointestinal tract. A specialized stent was used to connect the final sections of the large intestine (sigmoid colon and rectum). The treatment was conducted together with Prof. Anna Wiechowska-Kozłowska from the Hospital of the Ministry of Interior and Administration in Szczecin and PhD Sławomir Kozieł from the Department of General, Transplant and Liver Surgery, Endosonography and Endoscopy. The operation was prepared with the participation of PhD Jan Pertkiewicz, the leader of the Polish endoscopy.

Polish scientist studied the DNA of dogs

2018-02-28

Mongrels are not hybrids, they are an independent, separate breed of dogs. They are even better, healthier and stronger than dogs raised by humans. Such a conclusion is made by Prof. Wiesław Bogdanowicz from the Museum and Institute of Zoology of the Polish Academy of Sciences in Warsaw, who together with his team conducted dog DNA research. - Genetically mongrels are the closest to their ancestor - said the professor - newly discovered facts highlight that mongrels are the canine aristocracy. Purebred dogs, fully dependent on humans, have not developed features to survive and adapt to environmental conditions. The mongrels tower over them; they are stronger, healthier, their immune and reproductive systems work better, they have more sensitive senses, especially smell. Around a billion dogs live around the world, of which up to three-quarters are mongrels (kp) More: <http://shareinfo.pl/kundel-to-brzmi-dumnie-najnowsze-odkrycia-sugeruja-ze-to-psia-superrasa/>

Photoreactors will purify the water and provide substances for pharmacy

2018-02-28

Smartphone-size devices, capable of treating water for one person with the help of sunlight and desk-top modules producing valuable pharmaceutical substances from chemical waste are the innovative devices produced thanks to the ultrasonic technology of applying titanium dioxide layers to the inner walls of pipes with micrometric diameters - informs the Institute of Physical Chemistry of the Polish Academy of Sciences in the press release. Scientists from the Institute of Physical Chemistry of the Polish Academy of Sciences were the first to research and describe the technique of depositing TiO₂ nanoparticles on the inner walls of tubes with micrometer diameters in an article in the journal Ultrasonics – Sonochemistry. The research was financed from the SONATA BIS grant from the National Science Center. More: http://ichf.edu.pl/press/2018/02/ICH-F180222a_PL.pdf

Conference at the Jagiellonian University on cell therapy in the treatment of diseases of the cardiovascular system

2018-02-28

The Jagiellonian University - Collegium Medicum in September 2018 organizes the International Scientific Conference devoted to the use of cellular therapies in the treatment of cardiovascular diseases. The conference is addressed to scientific and business communities dealing with cellular issues and with the use of the latest technological solutions in medicine. The conference is organized by the Jagiellonian University - Collegium Medicum in partnership with: Krakow Specialist Hospital, Polish Bank of Stem Cells S.A., Jagiellonian Center of Innovation, AGH University of Science and Technology in Krakow, Medical University of Silesia in Katowice and it will be held on September 14-15, 2018 in Auditorium Maximum UJ at Krupnicza 33 in Krakow. More: <http://www.circulate.cm-uj.krakow.pl/>

New research and implementation center for industrial CentriX radiation techniques

2018-03-01

The total value of the CentriX project, launched at the National Center for Nuclear Research in Świerk, will amount to nearly PLN 28 million. Over 17.6 million comes from the Regional Operational Program of the Mazowieckie Region 2014-2020, financed by the European Union. The Fast-X Laboratory project includes the use of the modular accelerator speeding electrons to the energy of 30 MeV. The laboratory, apart from screening with high-energy x-rays and neutrons, also offers electric capacitance tomography and allows scientists to work on the newest x-ray technologies. The CentriX project also includes the Laboratory of the Acceleration Structures Test Stands, where new radiography structures will be developed and investigated. PhD student won the competition „Innovation is a woman”

2018-03-01

Agnieszka Podwin, a PhD student at the Wrocław University of Technology was the winner of the „Innovation is a woman” The winner of the competition submitted the concept of a low-cost biological laboratory lab-on-chip, consisting of three components, each of which contains a proprietary invention. The awarded solution will be presented in June 2018 during the international exhibition «Invent Arena» in Trinec, Czech Republic. «Innovation is a Woman» is a competition addressed to female researchers who can boast of developing an original innovative solution. The competition is one of the forms of promoting women's achievements in the science and research sector by the Foundation «Women of Science - Polish Women's Science Network».

Professor Borysiewicz with the honorary doctorate of the University of Białystok

2018-03-01

Professor Leszek Borysiewicz became an honorary doctor of the University of Białystok. He is the fifteenth person dignified by the Senate of the Białystok with the doctorate. During the laudation, the dean of the Faculty of Law at the University of Białystok, Professor Emil Pływaczewski reminded pioneer research on vaccines (especially the vaccine against human papillomavirus), for which Professor Borysiewicz received the title of nobility in 2001 from the Queen of Great Britain Elizabeth II. Professor Borysiewicz's parents come from the Podlasie region. He himself was born on April 13, 1951 in Cardiff, in Great Britain. His scientific career is related to British universities and scientific institutions. In the years 2010 - 2017 he was the rector of the University of Cambridge in the United Kingdom.

Polish-Taiwanese competition within research cooperation settled

2018-03-01

The National Center for Research and Development informed about the outcome of the fifth competition within the framework of the Polish-Taiwanese Research Cooperation. The competition was run jointly with the Ministry of Science and Technology in Taipei. According to the arrangements with the Taiwanese party, the applications recommended for co-financing were divided into the thematic areas described in the competition notice. Ranking lists have been arranged by the scores in the given thematic area and according to the recommendation of the Taiwanese side. The Center recommended applications «Quantitative (3D / 4D) imaging of the phase in neuroscience at the cellular level» of Warsaw University of Technology, «The role of LVV-hemorphine 7 in alcohol dependence and in analgesia» of AGH University of Science and Technology in Krakow and « Emitting with narrow bands phosphors to light diodes for lighting and illumination” of the University of Gdansk. Students of Gdańsk University of Technology developed a mobile application for paramedics

2018-03-02

Students of the Faculty of Electronics, Telecommunications and Informatics of the Gdańsk University of Technology have developed a mobile application that replaces paper intervention reports completed by paramedics. The work was commissioned by the Pomorski Regional Branch of the Polish Red Cross in Gdańsk under the supervision of Dr Sławomir Ambroziak. The system developed by students is also supposed to solve problems related to storing medical intervention cards. Students of the Faculty of Electronics, Telecommunications and Informatics

of the Gdańsk University of Technology have been preparing projects that meet the needs of the market or are commissioned by companies for over a dozen years. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/student-ci-pg-stworzyli-aplikacje-dla-ratownikow-pck?p_p_auth=xm2SZbut&redirect=https%3A%2F%2Fpg.edu.pl%20Faktualnosci%203Fp_p_auth%20%3Dxm2SZbut%2026p_p_id%203D101_INSTANCE_hWGncmoQv7K0%2026p_p_lifecycle%203D0%2026p_p_state%203Dnormal%20%2026p_p_mode%203DView%2026p_p_col_id%203Dcolumn%201%2026p_p_col_count%203D1

Running wheelchair for disabled children

2018-03-02

Students of the Wrocław University of Technology will design as part of their classes prams for disabled children. The initiator of the action is Dr. Tomasz Zatoński from the Medical University of Wrocław. The running wheelchair for children with disabilities should meet several requirements. It must be safe and comfortable, it should protect the spine and provide stability when cornering or moving on uneven terrain. Students of the interdisciplinary field of Mechatronics face this task until the end of the semester. The projects will be evaluated by a jury of scientists from the Wrocław University of Technology and the Wrocław Medical University. The most interesting solution will be awarded and recommended for implementation. More: <http://pwr.edu.pl/uczelnia/aktualnosci/politechniczno-medyczny-wozek-biegowy-10782.html>

Researchers from Poznań work on innovative technology to combat cancer

2018-03-08

Poznań researchers developed a method for obtaining from hemp drugs supporting the treatment of patients with cancer. The project was conducted for four years by the University of Life Sciences in Poznań, in cooperation with the Institute of Natural Fibers and Medicinal Plants of the University of Medicine in Poznań and the Institute of Human Genetics of the Polish Academy of Sciences in Poznań. They developed an innovative technology for obtaining from hemp agents that support the treatment of cancer patients with a low content of psychoactive substances. Results show that the chemical compounds contained in this plant (cannabinoids) can inhibit or even destroy cancer cells. However, before the drug hits the market, many years of analysis, clinical and observational studies are necessary.

New obstetrics and gynecology laboratory at the State Higher Vocational School in Płock

2018-03-08

Mayor of Płock Andrzej Nowakowski and Prof. Maciej Słodki, rector of the State Higher Vocational School in Płock, opened a new obstetrics and gynecology lab. It will be part of the Medical Simulation Center, which is being created at the Płock University as part of a project financed by the European Union. The studio also received support from the city in the amount of PLN 200,000 to equip the laboratory. The center is to provide the education for nursing and midwifery students using the latest global technologies. The Płock contribution was targeted to adapt and extend the simulation center. This allowed to purchase the training simulators of body organs and areas, phantoms and simulators of artificial patients with functioning systems and organs. The equipment will enable students to master technical qualifications and will support learning how to communicate with the patient correctly.

Krakow University launched first postgraduate program of practical coloproctology in Europe

2018-03-09

The Medical Center for Postgraduate Education of the Jagiellonian University together with the Faculty of Medicine of Collegium Medicum of the Jagiellonian University inaugurated a two-semester post-graduate program „Practical Coloproctology”. This is the only university postgraduate program in the European market that takes into account the problems of coloproctology in theory and practice. The studies were created in cooperation with the Polish Club of Coloproctology, which deals with the problems of colon diseases. The most distinguished specialists from all over Poland were invited to conduct the classes. 30 surgeons participate in the first edition of the course.

Innovative medical devices at the Congress of Health Challenges

2018-03-13

- I would like innovative telemedicine solutions to be increasingly included in the scope of guaranteed services. We will work on this - said Minister of Health Łukasz Szumowski during the panel discussion about innovations in medical devices, organized by the Polish Chamber of Commerce of Medical Devices POLMED. The discussion on the state of medical innovation and development barriers in the commercialization of projects took place as part of the Congress of Health Challenges in Katowice, which lasted from 9 to 11 March 2018. - We have Polish cardiological products that are sold in the world, but not in Poland, because they are not among the products refunded by the state. It is difficult to talk about commercialization until there is a fast path from commercialization to reimbursement - said Minister Szumowski. At the end of the panel, the Polish Chamber of Commerce of Medical Devices POLMED announced the commencement of work on the report on the market of medical devices in Poland.

Upper Silesian School of Economics to launch virtual hospital

2018-03-14

Upper Silesian School of Economics in Katowice has signed a partnership agreement with the Center for Diagnostics and Treatment of Women's Diseases-Tommed. It is related to the project «Implementation of the development program in Nursing» as part of the Operational Program of Knowledge Education for Development (POWER). The school will create a Monoprofil Center for Medical Simulation of Nursing skills at the Faculty of Medicine. The virtual hospital, established in the Katowice University, will improve the quality of education of the future medical staff. Upper Silesian School of Economics is one of 35 high schools educating nurses and midwives in Poland, which will benefit from European funds as part of the POWER program.

Ministry starts Virtual Research

2018-03-15

In the fourth quarter of 2018, recruitment for the teams of the Virtual Research Institute will begin - said Piotr Dardziński, Deputy Minister of Science and Higher Education at the Third Health Challenges Congress (HCC) in Katowice. The project of Virtual Research Institutes is the implementation of the concept presented in 2017 by Prime Minister Mateusz Morawiecki and by Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin. According to their announcements, the new institution is to invest half a billion zlotys in biotechnology and biomedicine research in Poland.

University of Zielona Góra in the World Catalog of Medical Schools

2018-03-15

The Faculty of Medicine and Health Sciences of the University in Zielona Góra was registered in the World Directory of Medical Schools. -This is very important information for our students, because in the future it will enable them to recognize a doctor's diploma outside the European Union, especially in the USA and Canada - highlights Professor Agnieszka Zembron-Łacny, dean of the Faculty of Medicine and Health Sciences of the University in Zielona Góra. World Directory of Medical Schools combines information previously contained in the WHO World Catalog, the International Medical Directory Catalog (IMED) and the Avicenna Catalogs. It contains information on 2,900 universities from all over the world (including 19 Polish medical schools and departments running a medical faculty), recruitment conditions and duration of medical studies.

Medical University of Silesia develops an innovative technology of craniofacial reconstruction

2018-03-15

Department of Laryngology, Faculty of Medicine of the Silesian Medical University in Katowice begins the implementation of the project „Introduction to the surgical practice of new technologies for the reconstruction and regeneration of damaged tissues in the facial area”. The undertaking will be co-financed by the National Center for Research and Development with almost PLN 7 million. The project will be implemented by a consortium including Medical University of Silesia in Katowice, Institute of Non-Ferrous Metals in Gliwice, the company «Solveere» Ltd and Kardio-Med-Silesia in Zabrze. The main task of the consortium will be to develop technology for receiving personalized tissue scaffolds that will be used in facial reconstruction.

Professor Okamoto visits Wroclaw University of Technology

2018-03-19

Prof. Masami Okamoto from the Toyota Technological Institute in Nagoya will come to the Wrocław University of Technology. The world-famous Japanese chemist is named among the Nobel Prize candidates. He will visit a Wrocław University as part of the Visiting Professors program. Professor Okamoto will give series of specialist lectures on «Nanocomposites for Application in Tissue Engineering» (March 19-23) and will be a guest of the open Interdisciplinary Scientific Seminar (March 20). The Japanese guest's scientific interests include: obtaining biocomposites and polymer nanocomposites, bone tissue engineering, regenerative medicine, cancer cell metastases and cancer stem cells.

Deputy Prime Minister Gowin at the International Conference of Students of Medical Universities in Szczecin

2018-03-19

In new scientific system the titles will not matter, but real scientific achievements will - said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education, while opening the 3rd International Conference of Students of Medical Universities in Szczecin. It was his reference to the reform of education. The conference was addressed to students and young doctors and was organized by the Student Scientific Society of the Pomeranian Medical University in Szczecin. The participants got acquainted with the research results and the latest trends in medicine. They also had the opportunity to meet other young scientists, exchange experiences, ideas or inspiration. During the conference, there were also health, dental and PhD sessions.

„Protein of immortality” to help in the treatment of glaucoma

2018-03-22

Scientists of the Department of Physiology of the Faculty of Medicine of the Medical University of Silesia in Katowice received over PLN 1 million for research of innovative therapies including the use of protein of immortality in the treatment of glaucoma. The therapy bases on delivering an additional gene responsible for the production of HuR protein into the eye to increase its content in retinal ganglion cells. HuR is called the immortality protein, because the cells with high concentration of it are more resistant to damaging factors. Glaucoma is a chronic, neurodegenerative disease that causes damage to retinal ganglion cells and to higher levels of the visual pathway. If untreated, it can lead to total and irreversible blindness. Studies on animals have shown that the methods developed in Katowice allow to slow down significantly the progression of the disease.

PLN 35 million for the development of colon cancer drug

2018-03-28

The company Pure Biologics, using the laboratories of the Wrocław Technology Park, received funding from the National Center for Research and Development for the development of an innovative drug for anti-cancer immunotherapy. The total value of the project is over PLN 35 million. The aim of the project is to develop a recombinant antibody - Multibody, which can be an immunotherapeutic drug for patients suffering from colorectal cancer - the third most common cancer diagnosed in women and the second most common in men. The project, which is scheduled to start in the first half of 2018, will be based on a technological platform- PureSelect to search for antibody fragments with therapeutic and diagnostic potential. The solution proposed by Pure Biologics will allow the development of an innovative drug with a unique therapeutic potential. The company is ready to start the second phase of clinical tests.

University of Physical Education in Wrocław to test the players of Śląsk Wrocław

2018-03-28

The Wrocław Academy of Physical Education and the Śląsk Wrocław football club have signed a cooperation agreement that includes the regular conduct of motor, physiological, biomechanical and psychological tests of the players of Silesia. The agreement also regulates the rules of the use APE's facilities by Śląsk Wrocław and its Football Academy. At the press conference, the signatories highly appreciated the importance of the signed document, which - in the opinion of the APE's Rector Andrzej Rokita - is the beginning of long-term cooperation. The President of Śląska Wrocław, Marcin Przychodny, stressed the strategic nature of the partnership and expressed his willingness to use the enormous scientific and research potential of the university. «This is an important element of achieving success, and I greatly look forward to this cooperation,» he announced.

First in Poland transplant of corneal epithelial stem cells in a child

2018-03-29

Professor Edward Wylęgała and Dr. Dariusz Dobrowolski, from the Silesian Medical University in Katowice, conducted the first in Poland and the third in the world transplant of corneal epithelial stem cells in a child. The patient was a 10-year-old Kuba, who four years ago suffered from scalding the left eye with lime. A month after the operation, the boy regains his sight in the damaged eye, he can already see the letters. The District Railway Hospital in Katowice with its University clinical department of ophthalmology is the only place in Eastern Europe where ophthalmic patients have been provided with the latest stem cells therapy. The main stages of therapy are meticulous qualification processes, taking material from a healthy eye; carrying out the breeding at the reference center in Modena, Italy and then transplanting to replace the damaged tissue.

Conference on neuroscience at the Jagiellonian University

2018-03-30

The Jagiellonian University in Krakow organizes on 20-22 April 2018 an international conference NEURONUS 2018 IBRO Neuroscience Forum. Neuronus IBRO Neuroscience Forum is an important scientific conference in Central and Eastern Europe, devoted to dynamically developing neuroscience. Last year's conference gathered 500 participants, representing 61 research institutes and universities from 18 countries. This year's scientific program was divided into four thematic blocks: Drugs that heal, cognitive session, biological session and medical session. The program will be complemented by the lectures of the renowned scientists: Amir Amedi from the Hebrew University in Jerusalem, Ole Jensen from the University of Birmingham, Markus Ullsperger from the University of Otton von Guericke in Magdeburg, Emma Robinson from the University of Bristol, Yves de Koninck from Laval University and Tomas Kuner from the University of Heidelberg. More: <http://neuronusforum.pl/>

Newest medical simulators to operate at the University of Opole

2018-03-30

The Center of Gynecology, Obstetrics and Neonatology in Opole presented the latest generation of medical simulators obtained by the University of Opole. «Our university is finalizing the agreement with the Ministry of Health, which allocates the significant part of funding for these medical simulation centers» - assured Prof. Zenon Halaba. In Opole, the latest generation of a newborn simulator, an adult Hal simulator, a simulator to learn how to intubate a patient, and simulators for learning and improving laparoscopic surgery are available. «Being a doctor requires constant striving for perfection to eliminate the possibility of mistakes. This is the possibility provided by educational simulators, when, for example, a patient simulator can be intubated up to fifty times in order to do it flawlessly at the fifty first time» - explained Prof. Halaba.

Center for Medical Simulations at the University of Bydgoszcz

2018-04-05

The Collegium Medicum of the University in Bydgoszcz officially opened the new Medical Simulation Center. This completely renovated and equipped facility cost PLN 17 million. Almost 11 million is an EU subsidy, whereas the Ministry of Health offered PLN 6 million. The Center has well-equipped simulation rooms of high-fidelity with advanced simulators - an intensive care unit, a hospital emergency department, a delivery room, an operating room, an ambulance room and a nursing room. Low-fidelity simulation rooms use different simulators and models. There are special rooms for teaching technical and surgical skills, for laboratory teaching of clinical skills. There is also a room with a simulated patient to form interpersonal skills between the patient and the medical team, and a computer-teaching spot with virtual patients.

Scientists from Białystok patented „Substitute of natural saliva”

2018-04-06

Białystok University of Technology, Medical University of Białystok and company Nantes Nanotechnology received the patent for the invention „Substitute of natural saliva”. This invention was designed by the scientists Prof. Jan Dąbrowski and Dr Eng Joanna Mystkowska from the Białystok University of Technology and Prof. Halina Car and Dr Katarzyna Niemirowicz from the Medical University of Białystok. The essence of the invention is a substitute for oral saliva with favorable physicochemical and tribological properties (related to friction). The preparation of artificial saliva, composed of mucin, xanthan gum and colloidal nanogold solution, was prepared on the basis of physiological saline treated with low-temperature and low-pressure plasma - informs Białystok University of Technology. The role of the preparation is to moisten the mouth and reduce friction in the dental system. This is especially important for people with salivary disorders, e.g. people who have undergone cancer therapy or use drugs that inhibit the secretion of saliva, such as depression medications.

Ambulance and car simulators at the Center for Medical Simulation in Poznań

2018-04-06

Researchers of the Medical Simulation Center of the Medical University in Poznań created the ambulance and car simulators. It will provide the full mapping of the work environment for future doctors and paramedics. The ambulance simulator is a faithful copy of real ambulances adapted to working conditions at the Simulation Center. The driver's cabin is cut, the medical compartment with the Venetian mirror to let the lecturer watch the work of the rescue team. In addition to the ambulance, there will be a real passenger car, in which special emergency mannequins of the weight of an adult person will be placed, enabling to practice the medical procedures in traffic accidents. Simulation equipment is

implemented with the help of European funds under the Operational Program Knowledge Education Development. The co-financing value exceeds PLN 16 million.

Pharmaceutical Department of the Jagiellonian University Collegium Medicum to launch new field of study

2018-04-10

Drug Discovery & Development (DD & D) is the only such study course in Poland and in Central Europe. From the next academic year, it will be included in the educational offer of the Pharmaceutical Faculty of Collegium Medicum in Krakow. The new course is a proposal for the graduates in the field of chemical, biological, pharmaceutical and medical sciences to continue their education, focusing on aspects of identification and development of new medicines - informed the Krakow University. The aim of the studies will be to prepare high-class specialists combining advanced theoretical knowledge in the field of drugs with practical skills. The study program was developed in cooperation with pharmaceutical companies. Classes will be taught in English. Studies are free for citizens of the European Union. Detailed information is available at www.ddd.farmacja.cm.uj.edu.pl

Polish innovative company Neuro Device to receive 1 million \$ in global competition

2018-04-10

Neuro Device, a startup from Warsaw, has developed a method of stimulating damaged areas of the brain after a stroke. Its innovative solution was qualified for the final of the world competition Chivas Venture and it will compete for the main prize of \$ 1 million. Every year, the authors of the competition invest in projects that change the world for better and permanently affect the quality of human life. As explained by the president of Neuro Device Paweł Soluch, the competition solution is based on neuromodulation, that is stimulation of relevant ar-

reas of the brain with electrical impulses, thanks to which proper processes are consolidated in it and alternative centers and connections in the brain are created. The key stage of the startup has been completed, as it won the Polish eliminations and thus it was qualified for the world final, which this year takes place in Amsterdam. However, in order to get the main prize in the global Chivas Venture competition, the Warsaw company needs Internet users' votes from April 25 through the website: www.chivasventure.com

Project of the Medical University of Gdańsk receives subsidies from the Polish League Against Cancer

2018-04-17

The research project „Analysis of the possibility of introducing a statutory ban on the use of tobacco and tobacco products in passenger cars transporting children” by the researchers of the Medical University of Gdańsk obtained funding in the Onkogranty competition. The aim of the project is to analyze available studies on the exposure of children to tobacco smoke in private vehicles, to examine legislative trends in selected countries and to analyze the legitimacy and feasibility of introducing such provisions in Poland. After the research and tests, a report containing a proposal for legislation will be presented. It will be prepared in consultation with the Ministry of Health and will be disseminated nationwide. In addition, the resulting conclusions will be the basis for scientific publications. Onkogranty are awarded annually by the Foundation «Polish League Against Cancer», which seek for new and so far not financed by other institutions projects referring to the program «Strategy against Cancer in Poland 2015-2024».

Researchers of Wrocław universities to research drugs from 400 years ago

2018-04-17

Researchers from the Medical University and the University of Wrocław will jointly analyze the medicinal preparations described in the texts from 400 years ago. The project, scheduled for 4 years, will start this year. The group of scientists from both universities is led by Dr Jakub Węglorz from the Department of Polish and General History of the XVI-XVIIth cent. Historians from the University of Wrocław will collaborate with researchers from the Department of Pharmacognosy of the Medical University in Wrocław. The sources of knowledge of scientists are primarily the records of personal experiences and memories of authors from four centuries ago - diaries, notes, letters. Such notes - in the opinion of the researchers - show the actual picture of medical practices, which could significantly differ from the patterns known from the medical literature of that time. The project «Reconstruction and analysis of medicinal preparations identified on the basis of ego- documents from old Polish period (XVI-XVIII century)» is financed under the Sonata Bis 7 competition.

PhD student at the University of Life Sciences in Wrocław wins a gold medal at the Geneva exhibition

2018-04-20

Joanna Kozłowska from the University of Life Sciences in Wrocław won a gold medal in the medical category and a special prize of the Malaysian Association for Scientific Research at the 46th International Exhibition of Inventions in Geneva. PhD student of the chemistry department at the Wrocław university presented a series of 46 inventions regarding the preparation of new derivatives of flavonoids - organic compounds naturally occurring in plants. In the competition she competed in the M class - related to medicine, surgery, hygiene, orthopedics and materials for the disabled. The research conducted jointly with the Wrocław Medical University checks

the activity of the compounds obtained by the PhD student on cancer cell lines. „In our research we focus on colon cancer, in the future we plan research on other cell lines, including breast cancer. The first results are very promising, „says the winner.

Bionanopark and the Medical University of Lodz to study myeloma

2018-04-24

Lodz Bionanopark and the Medical University of Lodz have established research cooperation. Based on personalized genetic tests they intend to establish, why some patients with multiple myeloma do not respond to pharmacological treatment. Prof. Tadeusz Robak, project manager from the Medical University of Lodz informed at a press conference that physicians from the Provincial Center of Oncology and Traumatology in Lodz will take part in the research. The medical team will take the bone marrow for testing and then, the selected genetic material will be analyzed by the Laboratory of Personalized Medicine and the Biotechnology Laboratory in Bionanopark. The results of cooperation in research on one of the most dangerous blood cancers will be important for matching therapy to a specific patient. Bionanopark is a modern implementation center for business. It has top-notch research equipment, biotechnology and nanotechnology laboratories.

PLN 200 million for joint innovations of scientists and entrepreneurs

2018-04-24

The National Center for Research and Development announced the fourth „Application projects” competition, the aim of which is to support research and development works - carried out by consortia composed of scientific entities and enterprises. The activities of the Ministry of Science and Higher Education and the National Center for Research and Development precisely match the Responsible Development Strategy of Prime Minister Morawiecki. The aim is to enable Polish economy to develop as much as possible basing on research conducted

by Polish scientists - said Jarosław Gowin Deputy Prime Minister, Minister of Science and Higher Education during the announcement of the competition. Only consortia consisting of a maximum of 5 entities including at least one scientific unit and one enterprise, may apply for co-financing research and development works. The applications can be submitted from May 16 until July 16 - informs the National Center for Research and Development. More: <http://www.ncbr.gov.pl/fundusze-europejskie/poir/konkursy/projekty-aplikacyjne2018/>

International conference at the Silesian Medical University

2018-04-24

The International Medical Congress of Silesia is an international conference organized by the Student Scientific Society and the PhD Students Association of the Medical University of Silesia. It will be held in Katowice from 25 to 26 April. The event is interdisciplinary. Plenary sessions for students and PhD students are planned. Students will present the results of their research carried out as part of the activity in 170 Student Scientific Clubs. PhD students will present the results of their work as part of the clinical and experimental medicine, and the newly created PhD student «General Medicine» sessions. The International Medical Congress of Silesia is a regular event of the academic year. Every year, the Medical University of Silesia is visited over 1,700 participants - students and young doctors. More information on the website of the Student Scientific Society: www.stn.sum.edu.pl

Professor Wojciech Golusiński to be President of the European Head and Neck Society

2018-04-24

Professor Wojciech Golusiński - head of the Clinic of Head, Neck and Laryngological Surgery at the Poznan University of Medical Sciences has been elected President of the European Head and Neck Society (EHNS) - informs the university on its website. EHNS brings together doctors who in everyday practice deal with head and neck cancer - laryngologists, head and neck surgeons, maxillofacial surgeons, oncological surgeons, plastic surgeons, radiotherapists, clinical oncologists, radiologists and pathologists. The organization also includes speech therapists, physiotherapists, oncology nurses, psychologists, dietitians and social workers as well as patient organizations supporting patients with head and neck cancer at every stage of treatment. The main goals of EHNS are to popularize knowledge about head and neck cancer and to support the highest standards of scientific research, education, prevention, treatment and care of patients. More information: <http://www.ump.edu.pl/aktualnosci/profesor-wojciech-golusinski-prezyden-teme-european-head-and-neck-society>

Jagiellonian University Professor to become Secretary of the European Society of Pediatric Urology

2018-04-26

Prof. Rafał Chrzan of the Jagiellonian University became a member of the board and Secretary of the European Society of Pediatric Urology (EBPU), organization subjected to the European Union of Medical Specialists (UEMS) - informs the Krakow university. The main goal of the European Society of Pediatric Urology is to promote this field of medicine, as well as to take care of its development, including the exchange of experiences between doctors dealing with the treatment of genitourinary disorders in children. Dr Rafał Chrzan has been the head of the Children's Urology Clinic of the University Children's Hospital in Krakow-Prokocim since September 1, 2016.

First in Poland subcutaneous arrhythmia recorder communicating with a smartphone

2018-04-26

The Cardiology of the Children's and General Pediatrics Clinic of the Independent Public Children's Clinical Hospital of the Medical University in Warsaw performed the first in Poland implantation of a subcutaneous arrhythmia recorder, which communicates with a smartphone. It was the first implantation of the arrhythmia recorder in a child in Poland and one of the first in Europe. According to the Information and Promotion Office of the Medical University of Warsaw, this historic treatment was performed by: Dr Piotr Wieniawski from the Department of Cardiology of the Childhood and General Pediatrics, Dr Marcin Grabowski from the Clinic of Cardiology, Dr Beata Cała from the Department of Anaesthesiology and Intensive Pediatric Therapy, Katarzyna Gadowska, Dr Piotr Przygodzki from the Abbott company and a team of nurses, and technicians from the Center of the Invasive Cardiovascular System of the Children's and General Pediatrics of the Warsaw Department Medical University.

Prof. Daniel Gianola to hold a lecture at the Wrocław University of Environmental and Life Sciences

2018-04-27

Until Monday 30th of April students can apply for the lecture of Prof. Daniela Gianola at the University of Environmental and Life Sciences in Wrocław. This outstanding specialist in the field of mathematical statistics used in natural sciences will be a guest of the university on 13-14 of April. Modern genetics cannot exist without mathematical statistics, because it is a tool in the analysis of so-called attributes with a complex model of inheritance - says Prof. Joanna Szyda from the Department of Genetics at the Faculty of Biology and Animal Breeding. In her opinion, the application of mathematical statistics and computer science in biology is the basis of modern data analysis. The competence of Prof.

Gianola is the application of mathematical statistics methods in genomics, with particular emphasis on applications to livestock and to the analysis of features with a complex model of inheritance. Professor Gianola began as a World Bank expert and later worked at the Universities of Illinois and Wisconsin-Madison. More information: http://www.glos.upwr.edu.pl/aktualnosci/47738/statystyka_matematyczna_z_prof_gianola.html

Gowin: We want to develop cooperation with the US in creating cancer drugs

2018-04-30

Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin announced that Poland will cooperate with oncologists from the United States in creating modern cancer drugs. The cooperation will include research of the cancer detection and prevention. During his visit to the USA Deputy Prime Minister Jarosław Gowin together with representatives of the Ministry of Health, visited the oncological hospital MD Anderson Cancer Center in Texas, where he stressed: - We are very interested in developing cooperation with MD Anderson. We want to focus our efforts on research and development, including the biotechnology sector. It would be valuable for us to use the experience of MD Anderson to research modern cancer drugs.

Medical University of Gdańsk to study nanocellulose bioimplants

2018-04-30

The research team from the Clinic of Cardiac Surgery and Vascular Surgery at the Medical University of Gdańsk has made an experimental implantation of an original heart valve prosthesis made of bacterial nanocellulose in three sheep - informs the university on its website. The operations were carried out in the experimental medicine laboratory of the Catholic University of Leuven in Belgium - a world-renowned center specializing in preclinical studies of various bioimplants in cardiac surgery. The operations were successful, now the half-year period of observation began with the aim to check the functioning of the implanted heart valve and examine any degenerative changes within the applied bioimplant. Cooperation between the Gdańsk University and the University of Leuven began in 2016 with joint research on the possibility of using Polish bionanocellulose in regenerative medicine in the aspect of bioimplants in cardiac surgery and vascular surgery.

Warsaw University Center of Dentistry to construct new facility

2018-05-09

The Medical University of Warsaw will be provided with a new facility in 2019. The construction of the University Center of Dentistry is underway. The celebration of signing and laying the foundation act is scheduled for May 14 at the investment site at the Banach Campus at ul. Żwirki i Wigury 81 in Warsaw. The new facility will have five floors. Its total area will amount to almost 19,000 square meters. The authors are architects of the Archibis Architectural and Executive Office, while its construction will be carried out by Warbud. In close proximity to the emerging Dentistry Center there is already the Center for Pre-Clinical Research and Technology, a complex of the Pediatric Hospital of the Medical University of Warsaw and the Library and Information Center of the Warsaw Medical University.

First patellar grafting in Europe at the hospital of the Medical University of Wrocław

2018-05-10

Doctors from the Clinic of Orthopedics and Traumatology of the University Clinical Hospital in Wrocław conducted the first in Europe and the second in the world transplantation of extensor apparatus in a patient with patella cancer. Doctors could not use the standard treatment method, which is a tumor excision. It was necessary to reconstruct the whole extensor apparatus to allow the patient to straighten the knee joint, so we decided to transplant it - explains the head of the clinic, Prof. Szymon Dragan. The grafting material came from a deceased donor. Doctors decided not to give the patient immunosuppressive drugs to not to weaken the body's immune system. There were also fears that the dead bone grafted into a living knee joint will function properly. One year after the operation it is known that it was successful - the patient was able to return to work and is now fully fit.

Students from Gdańsk receive Health Protection Leaders Award

2018-05-14

Students of the inter-university faculty of biotechnology of the University of Gdańsk and the Medical University of Gdańsk, founders of the Biolumo company, received one of three awards in the category „Innovative Idea” during the 23rd International Congress of the Open System of Health Protection in Katowice. Olga Grudniak and Marcin Pitek were awarded the title of Health Protection Leaders. At the congress, they presented the design of the device for immediate determining which antibiotic will work for a particular patient. The jury appreciated their idea emphasizing the importance of the imprecise antibiotic therapy as one of the key challenges of modern medicine. Earlier, the Biolumo project was awarded in the final of the InfoShare 2017 competition, it was also appreciated by the Startupbootcamp Digital Health accelerator in Berlin and by the magazine «The Journal of mHealth» placing the company on the 100 Global Digital Health list.

Medical University of Wrocław cooperates with the Västmanland Hospital Västerås

2018-05-14

The University of Medical Sciences in Wrocław intensifies its cooperation with Västmanland Hospital Västerås in Sweden. The main assumptions of the agreement signed by both parties are developing studies and exchange of experience. Polish and Swedish delegations discussed new fields of cooperation in psychiatry, oncology, vascular surgery or anesthesiology. Visitors from Sweden were interested in the scientific activity of the Clinic of Psychiatry dealing in non-pharmacological way with autism, depression, Alzheimer's disease, Asperger syndrome and seeking new forms of treatment of disorders. After signing the agreement Vice-Rector for Science of the University Prof. Piotr Ponikowski emphasized the necessity of working out its practical aspects and selecting leaders interested in joint research, projects or exchange of experience.

MedTrends - European Forum for Modern Health Protection

2018-05-15

On 23 and 24 May in Zabrze the participants of the 4th international MedTrends- European Modern Healthcare Forum conference will discuss the current trends, problems and challenges in modern health care in Poland and Europe. The first day of the conference will focus on issues related to the implementation and development of digital health in Poland. The discussants will discuss the use of artificial intelligence and machine learning in education, diagnosis and treatment of civilization diseases also in the context of new challenges and expectations in the Polish healthcare system. The second day program is dedicated to startups in health care. There are planned lectures to be given by experts and practitioners as well as workshops and case studies. The conference will also host the MedTrends TOP TRENDS competition to select the best startup in health care. Applications for participation in the conference / workshop: www.rejestracja.medtrends.pl

Students of the Wrocław University of Life Sciences run the National Biotechnology Days

2018-05-16

Students of the two research groups of the biotechnology and food science faculties of the Wrocław University of Environmental and Life Sciences presented an interesting scientific issues during the National Biotechnology Days organized by students of the University of Wrocław, Wrocław University of Technology and the University of Life Sciences. Wrocław biotechnologists prepared attractions for children and adults. Adults were able to see colored preparations and insects under the microscope, find out how plants grow in vitro and how blood is detected at the crime spot. Children participated in numerous experiments such as money laundering, games with non-Newtonian liquids and volcanic lava. The novelty of the event was hare and hound game organized by three universities. The prizes were university gadgets, fragranced soaps produced by students and AgarArty - cultures of wine bacteria, enclosed in dishes.

Medical University of Wrocław launches Medical Simulation Center

2018-05-16

The Wrocław Medical University launched officially Medical Simulation Center. The investment cost is almost PLN 23 million. Full-time classes will start in October. There are 6 high-fidelity rooms (operating theater, intensive care unit for newborns, children and adults, hospital emergency department, delivery room, ambulance simulator and nursing room) in the Center. The Center is provided with the real hospital equipment and the patient simulators (phantoms). During the classes students will participate in the simulation scenarios and will work directly with the phantom. The Medical Simulation Center also has a virtual reality room where students will learn to perform ultrasound tests on simulators of the highest class and perform simulated operations in the field of laparoscopy, endoscopy and procedures on blood vessels.

Clinical departments of the Jagiellonian University regarded best in Poland

2018-05-17

The Clinical Department of Urology and Oncological Urology and the Clinical Department of Gynecology and Oncology together with the Breast Unit of the University Hospital in Krakow took first place in the national ranking „Hospitals 2018” carried out by the Wprost weekly newsmagazine. The Clinical Department of Urology and Oncological Urology specializes in uro- oncology. Experts appreciated the work of Prof. Piotr Chłosta and his team in the area of operating patients with advanced renal cancer. The department was also the winner in rankings of urological operations. - Our experience provide that operations are characterized by a low mortality rate and favorable long-term results, i.e. good results without relapse - says Prof. Piotr Chłosta, head of the Clinical Department of Urology and Oncological Urology of the University Hospital. These results are comparable to the best centers in the world - informs Collegium Medicum of the Jagiellonian University. More: <http://rankingi.wprost.pl/szpitala>

Olsztyn University to use first two-sided angiograph in Poland

2018-05-18

The University Clinical Hospital of the University of Warmia and Mazury uses the most modern in Europe and the only two-dimensional angiograph in Poland. It is a device that shows 3D blood vessels in real-time. Two-plane angiograph is used in neurosurgery, neurology and cancer surgery. - With its help, we can close the flow of blood to the cancer cells, which will cause them to die, or to clear the arteries in the brain in conditions after ischemia - explains Prof. Wojciech Maksymowicz, vice-rector of Collegium Medicum at the University of Warmia and Mazury in Olsztyn. Angiograph is the most important item of equipment purchased for Surgery of Radiology Interventions and Endovascular Neurosurgery at University Clinical Hospital, which was open on May 15.

Discovery of scientists from the University of Warsaw to develop a drug for spinal muscular atrophy

2018-05-22

The team working under the direction of Prof. Jacek Jemielity from the Center of New Technologies of the University of Warsaw and Dr Joanna Kowalska from the Faculty of Physics of the University of Warsaw, both the laureates of the Foundation for Polish Science programs developed a new modification of the structure of the end of the 5' mRNA molecule, so-called "cap" - informs the Warsaw university. According to the researchers, this discovery may be used in the development of a drug for spinal muscular atrophy (SMA) or other genetic disorders. The new modifications developed by the researchers show surprising biological properties, attractive for potential clinical applications in the pharmaceutical industry. The team of Prof. Jacek Jemielity was nominated for this year's European Inventor Prize, awarded by the European Patent Office. Currently, the selection process in the Popular Prize category is underway. Its winners are selected in an online poll in which everybody can take part. <https://www.epo.org/learning-events/european-inventor/finalists/2018/jemielity.html>

Pharmacy - a new study at the Pomeranian Medical University in Szczecin

2018-05-22

The Pomeranian Medical University in Szczecin has started this year's recruitment. There are 14 studies to choose at four faculties, and pharmacy will be a novelty in the 2018/2019 academic year. The Pomeranian Medical University prepared 610 places for full-time and part-time studies, 670 places for full-time and part-time studies, and 601 for full-time MA and part-time studies. In total, nearly two thousand places are waiting for secondary school graduates. Foreign students have also a choice of programs in English: Faculty of Medicine, Faculty of Medicine and Dentistry and program Asklepios, for over 100 students. Last year, the most popular

courses were: medical faculty (more than 11 people for one place), medical-dental faculty (8.5), cosmetology (3.1), medical analysis (2.6), physiotherapy (2.5) and dietetics (2). Over 1,100 people started full-time studies.

Professor Michał Grabowski from the University of Lodz to join the international research network Barcode of Life

2018-05-23

Professor Michał Grabowski from the Department of Zoology of Invertebrates and Hydrobiology at the Faculty of Biology and Environmental Protection of the University of Lodz was invited to join the international research network Barcode of Life (iBOL), which deals with the modern identification and serialization of species using a genetic code, or DNA nucleotide sequence. The ordering of species using DNA nucleotide sequences was developed in 2003 by scientists from the University of Guelph in Canada. This is a new method that allows to assess the diversity of living beings. It reminds the system of bar codes being labeled to goods in a hypermarket. Researchers use a specific piece of DNA to identify a species that can not be confused with another species. Currently, 28 countries from five continents have worked together in the iBOL research network. Poland will be the 7th European country that will join the organization.

Szczecin scientists win grants from the program „Incubator of Innovation +”

2018-05-23

Five research teams of the Pomeranian Medical University and the Maritime University of Szczecin received nearly PLN 2.5 million from the „Incubator of Innovation +” program for their projects. The grants were awarded for «The prototype of the impression tray for unilateral missing teeth in the mandible» - under the supervision of Dr. Małgorzata Tomasik, «An innovative kit for umbilical cord blood collection in premature babies» - under the supervision of Prof. Bogusław Machaliński, «Development of dry

bath technologies in a mixture of CO₂ and O₃ gases» - under the supervision of Dr Anna Lubkowska, «Innovative composite materials with a halloysite filler for the production of reinforced dental prostheses» under the supervision of Dr Ewa Sobolewska and «Total Free Station- Autonomous Measurement System” under the supervision of Dr Eng Grzegorz Stepien. The awarded teams can count on 2-year support, in particular in the area of commercialization of research results.

Professor Dariusz Dudek from the Jagiellonian University to head European interventional cardiologists

2018-05-24

Professor Dariusz Dudek from the Collegium Medicum of the Jagiellonian University was elected the chairman of the European Association of Cardiovascular Interventions in the European Cardiac Society (EAPCI ESC). This is the first time, when the Pole became the chairman of this organization. His term of office will start in 2020. On a daily basis, Professor Dariusz Dudek is the head of the 2nd Department of Clinical Cardiology and the Intervention of Heart-Vascular University Hospital. The cardiologist has been implementing modern methods of treatment of myocardial infarction and hybrid heart valve procedures for many years, giving patients a chance for innovative therapies.

Summer School of Personalized Medicine in Warsaw

2018-05-25

On 19 - 22 June 2018, the 3rd Summer School of New Horizons in Personalized Medicine will take place in Warsaw. The organizers of the event are the Polish Coalition of Personalized Medicine, Center of Oncology, Maria Skłodowska-Curie Institute in Warsaw and the European Alliance for Personalized Medicine. The main goal of the Summer School of Personalized Medicine is to provide knowledge about the latest reports and discoveries in the field of personalized medicine, which in the future will allow for a better understanding of patients and the selection of optimal therapies. For 4 days, the participants of the School will take part in lectures and workshops conducted by top-class specialists from Poland and Europe in the field of radiology, oncology, hematooncology, molecular biology and molecular diagnostics. More: <http://teach2018.com/>

Lublin Students best in the Nationwide Medical Simulation Competition

2018-05-29

Students of the Medical University of Lublin won the Nationwide Medical Simulation Competition, which took place at the Medical Simulation Center of the Medical University of Gdańsk. The home team took the fourth place. Teams from the 10 medical schools had to solve tasks consisting of clinical situations: pre-hospital intervention in acute heart attack, processing with myocardial infarction and cardiac arrest and respiratory cardiopulmonary resuscitation, management of pulmonary edema and asthma, acceptance of labor and surgical treatment of wounds. Teams were evaluated by referees having experience in international competitions. The first place was taken by the team from the Medical University of Lublin, the second by Jagiellonian University - Collegium Medicum in Krakow, and the third by Medical University in Poznań. A total of eighty-nine participants took part in the competition.

Professor Alina Wieliczko to become honorary doctor of University of Veterinary Medicine and Biotechnology in Lvov

2018-05-30

Professor Alina Wieliczko from the Wrocław University of Life Sciences became the honorary doctor of the University of Veterinary Medicine and Biotechnology in Lvov. She is the first woman in the history of this university, granted with this dignity. Professor Wieliczko works in the Department of Epizootiology with the clinic of birds and exotic animals at the Faculty of Veterinary Medicine at the University of Life Sciences in Wrocław. She is an outstanding specialist in veterinary science, the creator of rich scientific and popularizing achievements in the field of bird pathology. In an interview for «Głos Uczelni», the professor compares the award of the honorary doctor to the professorial nomination - This is something more. Of course, this dignity can be obtained without being a professor, because it is obtained for special achievements, but it is a great honor, distinction and appreciation in many areas, not only scientific ones - emphasizes Prof. Wieliczko. More: http://www.glos.upwr.edu.pl/aktualnosci/47907/prof_alina_wieliczko_doktorem_honoris_causa_lwowskiej_uczelni.html

Popular science conference on protective vaccinations

2018-06-04

On June 7, 2018, the College of Artes Liberales of the University of Warsaw, is holding a popular science conference titled „220 years of preventive vaccinations- on the anniversary of Edward Jenner's publication on the vaccination of smallpox”. Speakers include experts from the Polish Academy of Sciences. Professor Andrzej Karpiński from the Institute of History will deliver a lecture entitled „Fear - epidemics in early modern Europe” and Prof. Anna Nasiłowska-Rek from the Institute of Literary Research will bring closer the issues from the point of view of literature in the lecture „From the plague of Defoe to the plague of Camus: epidemics and

literature”. Also, scientists from the Medical Center of Postgraduate Education will present the medical arguments for the necessity of vaccinations. Professor Teresa Jackowska will give a lecture on „Protective vaccinations - facts and myths”, and Dr Janusz Ostrowski will hold lecture: „Hilary Koprowski and polio vaccination”.

IV Silesian Medical and Legal Conference in Katowice

2018-06-04

The Silesian Medical University and the University of Silesia in Katowice together with the Silesian Medical Chamber, the District Legal Council in Katowice and the self-government of PhD students of the Silesian Medical University organize the IV Silesian Medical and Legal Conference. This year's conference is addressed primarily to lawyers, PhD students and medical and law students and it was divided into two parts. The first part will explain the role of experts and their importance in criminal and civil procedures. Speakers will discuss the adopted rules for the appointment of experts, both in teams of institutional and „ad hoc” experts. The conference is intended to confront the positions of the practitioners and theoreticians of law and medicine, as well as to define the needs and expectations of the judicial authorities. The second part of the conference will present the issues related to the medical errors. More information on the website: <http://lekarzprawniczy.sum.edu.pl/>

Prof. Köhler to hold lecture on telemedicine at the Medical University in Wrocław

2018-06-05

Medical University of Wrocław and Fund Scientiae Wratislavenses invite participants to the lecture of Prof. Friedrich Köhler, head of the Cardiovascular Telemedicine Center, Charité University of Medical Sciences in Berlin. The event will take place on June 8, 2018 as part of the international Cardiology Innovations Day conference - informs the Wrocław University. The lecture entitled „The concept and implementation of the program for telemanagement of patients with heart failure” will be presented in English with simultaneous translation. Professor Friedrich Köhler is the author of many publications in prestigious scientific journals and a laureate of prizes in the field of propagation and implementation of telemedicine solutions. He is also a member of the European Cardiac Society.

„Conscious Consumer” - conference at the Medical University of Gdańsk

2018-06-05

The Medical University of Gdańsk together with the Pomeranian State Sanitary Inspectorate organizes on June 7, 2018 the conference „Conscious Consumer - dietary supplements, food, cosmetics, environment. Warnings, labels, information. „ During the event, the lecture „About dietary supplements” will be held by Regina Szymańska, head of the Department of Food Hygiene, Nutrition and Objects of the Regional Sanitary and Epidemiological Station in Gdańsk, Dr Małgorzata Grembecka from the Department of Bromatology at the Gdansk university will hold a lecture „Dietary supplements - when and for whom?” and Paulina Metelska from the Gdansk University Clinical Center will deliver a lecture „How to understand food information, etiquette and composition”.

PLN 230 million for the increase of competitiveness and innovativeness of Polish pharmacy

2018-06-06

The National Center for Research and Development announced the InnoNeuroPharm call, which aims to increase the competitiveness and innovation of the Polish pharmaceutical sector, including neuromedicine, in the perspective of 2026. PLN 230 million has been allocated to the program. The InnoNeuroPharm sector program was created on the initiative of the Polish Association of Employers of the Pharmaceutical Industry and the Polish Innovation Platform of Neuromedicine. The research areas of the InnoNeuroPharm sector program include innovative medicinal products, innovative technologies for the production of medicinal products, innovative diagnostic methods and new biomarkers with practical diagnostic-predictive applications in the field of neuromedicine, innovative methods of rehabilitation of neuromedicine patients, development of tools supporting research on medicinal products. More: <http://www.ncbr.gov.pl/fundusze-europejskie/poir/konkursy/innoneuropharm-2018/>

Polish Science Towards EMBL conference at the Polish Academy of Sciences

2018-06-11

The Institute of Experimental Biology of the Polish Academy of Sciences organizes on 19 - 20 June 2018 the Polish Science Towards EMBL conference to commemorate the Polish membership in the European Molecular Biology Laboratory (EMBL) and to bring together Polish and world experts and scientists involved in biomedical research. The scientific symposium will allow to consolidate the community dealing with molecular biology. During the event, biology students, PhD students and researchers will be able to obtain comprehensive information on the possibilities of cooperation with EMBL. More: <http://embl.nencki.gov.pl/>

Pomeranian Medical University wins a grant for the Center for Medical Simulation

2018-06-13

The Minister of Health awarded the Pomeranian Medical University in Szczecin with a financial subsidy of almost PLN 1.4 million. The money is allocated to the emerging Medical Simulation Center - informs the University on the website. The center is located at ul. Żołnierska in Szczecin near the university faculty of health sciences. Students will find high fidelity simulation rooms in the Center - an operating theater and an intensive care unit, a hospital emergency department, an ambulance simulator, a delivery room and nursing care, and low fidelity simulation rooms, technical skills laboratories, laboratories for teaching clinical skills and surgical skills, ultrasound lab and endoscopy, „virtual patient” and examination rooms in the form of doctors’ offices. There will also be seminar hall and computer rooms.

Scientist from Poznań wins the „Supertalents in Medicine 2018” competition

2018-06-15

Dr Alicja Kalinowska-Łyszczarz, assistant professor in the neurochemistry and neuropathology of the department of the Poznań University of Medical Sciences, has won the competition „Supertalent in Medicine 2018”. This year’s competition was attended by dozens of doctors and graduates of medical related faculties from academic centers and clinical hospitals. The winner deals with the diagnosis and treatment of patients with multiple sclerosis, and also conducts educational activities promoting knowledge about MS among doctors and patients. In her scientific and research work she deals with the issues of neuroimmunology and neuropathology of multiple sclerosis and related diseases. Supertalents in Medicine is a contest organized by „Puls Medycyny” since 2012. Its aim is to select and reward young doctors and graduates who will influence changes in the health care sector in Poland in the coming years.

PhD student at the University of Gdańsk awarded in the FameLab competition

2018-06-18

Paulina Jędrak, PhD student at the Faculty of Biology at the University of Gdańsk, received a prize from the Kosciuszko Foundation in the finals of the FameLab competition for a lecture „The secret of the elixir of youth” about the role of telomeres in the aging of the organism. PhD student during the finals told the participants about the aging of the body and the role of chromosomal ends - telomeres in this process. Some cells, e.g. cancerous, produce an enzyme called telomerase, which rebuilds lost telomere fragments after each division. - In my speech, I was wondering if we could use telomerase to design new anticancer therapies or extend human life - explained the PhD student. FameLab is an international competition, during which the scientists face the jury and the audience to present their research work in three minutes speech. In Poland, FameLab is organized by the Copernicus Science Center.

Student from Poznań Medical University developed new App

2018-06-18

Piotr Danielewski - a student at the Medical University of Poznań - developed a mobile phone application that allows students to learn the basics of auscultation. The „Hear yourself” mobile app contains both physiological and pathological sounds from the lungs and heart. Thanks to it, students can broaden their skills of correct auscultation and obtain information about the origin and characteristics of a given sound. The application also gives them the opportunity to test the knowledge; it includes two types of questions about sound recognition and information about its etiology and characteristics. The questions are divided into two sections - cardiology and pulmonology question sets. The application was welcomed by specialists from the Poznan university. Positive opinions were expressed by Dr Szczepan Cofta (pulmonology) and Dr Przemysław Mitkowski (cardiology).

Students of Wrocław University of Technology design running trolleys for disabled children

2018-06-18

Students of the Wrocław University of Technology prepared about 30 designs of running wheelchairs for disabled children as part of an action organized with the Medical University of Wrocław. - We thought it would be a fantastic thing to create a special stroller for disabled children. We were not able to do it ourselves, so I started working with scientists from the Wrocław University of Technology and I found the volunteers easy to help - says Dr Tomasz Zatoński from the Medical University, one of the initiators of the competition. The stroller for children with disabilities must be safe and comfortable, protect the spine and provide stability during turns and on uneven terrain. The structure should also be resistant and light, protected against wind and rain, easy to assemble, and be equipped with a mechatronic diagnostic system – covering overloads and vibration, which a disabled athlete is subjected to while running.

Jagiellonian University wins a prize for the best public health educational program in Europe

2018-06-19

The Europubhealth + program, realized by the Institute of Public Health of Collegium Medicum the Jagiellonian University, received the first ASPHER Deans & Directors Award for the best educational program in the field of public health in the European region - informs the Krakow university. ASPHER (Association of Schools of Public Health in the European Region) is an independent European organization that strengthens the role of public health by improving the education of specialists in this field. The Europubhealth + program has been implemented for 12 years by the Institute of Public Health together with a consortium of 5 European universities: EHESP School of Public Health in Rennes (France), University of Sheffield's School of Health and Relat-

ed Research (Great Britain), University of Granada - Andalusian School of Public Health (Spain), University of Rennes 1 (France) and Maastricht University (Netherlands). The program includes 2-year Master's degree programs within the Erasmus Mundus program educating in the field of public health.

Researcher from the Medical University of Wrocław wins the COPERNICUS 2018 Prize

2018-06-21

Professor Piotr Ponikowski from the Wrocław Medical University and Prof. Stefan Anker from the Charité clinical hospital - Universitätsmedizin in Berlin won the Polish-German COPERNICUS Scientific Award 2018 for outstanding achievements in the field of cardiology. Researchers were honored for research on heart failure that contributed to a better understanding of the pathophysiology of this disease and to the development of new treatment strategies. Candidates for the Award are reported by the scientific community. 29 applications were evaluated in this year's edition. The COPERNICUS Prize is awarded every two years by the Foundation for Polish Science and the Deutsche Forschungsgemeinschaft. Its aim is to promote Polish-German scientific cooperation. The award-winning scholars are expected to have special merits for German-Polish cooperation, combining different experiences, knowledge and resources to jointly solve research problems.

Medical University of Poznan scholar receives prestigious award

2018-07-02

Doctor of MS Piotr Eder from the Poznan University of Medical Sciences has been awarded the international Dr Bares Award for one of the best original papers in the field of gastroenterology and hepatology, published in 2015-2017. The award-winning work: «Magnetic resonance enteronic predictors of one-year outcome in Ileal and ileocolonic Crohn's disease treated with anti-tumor necrosis factor antibodies», was published in Scientific Reports in 2015. It was written in collaboration with the Department and Department of Radiology and concerned the usefulness of magnetic resonance enterography in predicting long-term results of anti-TNF-alpha therapy for Leśniowski-Crohn disease. The Dr Bares Award competition from 1994 promotes researchers dealing with gastroenterology and hepatology mainly from Central and Eastern Europe. Piotr Eder is the fourth Polish winner.

Researcher from the University of Wrocław wins Polpharma Scientific Foundation competition

2018-07-03

Dr Aleksander Czogalla from the biotechnology department of the University of Wrocław has been awarded within the Polpharma Scientific Foundation competition. A Wrocław scientist obtained a grant of 510,000 PLN for the implementation of the research project «Designing, manufacturing and checking the effectiveness of new TP53 gene carriers for use in anticancer therapies». The theme of this year's competition was the development and optimization of processes in medical biotechnology. The participants were scientists with at least a PhD degree who proposed: optimization of existing drug manufacturing methods - or potential biotechnology drugs, creation of new, better expression systems, mathematical models of biotechnological processes enabling their optimization and control, devices or technical solutions that improve biotechnology processes.

Passive exoskeleton wins a prize at the Inventions and Innovation Fair in Katowice

2018-07-04

A passive exoskeleton made in 3D printing technology to support the strength of weakened upper limbs in children - authored by researchers from Bydgoszcz, won three prizes at the 11th International Fair of Inventions and Innovation INTARG 2018 in Katowice. The joint project of the employees of the Collegium Medicum of the Nicolaus Copernicus University in Toruń and the Kazimierz Wielki University in Bydgoszcz won the Grand Prix in Katowice, the Platinum Award (together with the diploma of the Minister of Investment and Development) and the Special Award granted by the Croatian delegation. Exoskeleton is supposed to support muscle activity in children with the possibility of extending its application to adults. Thanks to the use of 3D printing, each exoskeleton is made individually, according to the dimensions of the future user based on 3D scans of its torso and upper limbs as part of a personalized therapy (patient-tailored therapy). More: <https://www.umk.pl/wiadomosci/?id=25533>

Innovative intravascular stent created by scientists from the Nicolaus Copernicus University

2018-07-05

The invention of scientists from the Faculty of Medicine at the Collegium Medicum of the Nicolaus Copernicus University „Intravascular stent with properties that accelerate the healing of the implant site and reduce the occurrence of thrombosis” won the gold medal at the International Fair of Inventions and Innovations INTARG 2018. The award-winning invention is a revolution in intravascular cardiology. The endovascular stent allows to support the implantation at the site of narrowing of the blood vessel to maintain its proper light. In addition to the gold medal, the invention of Dr Maciej Gagat, Dr Dariusz Grzanka and Prof. Alina Grzanka was honored with the Award of WIIPA World Invention Intellectual Property Associations and the special

prize Politehnica of Bucharest. The invention will increase the efficacy of vasodilation procedures, especially coronary arteries, by balloon angioplasty with stent implantation and reduce postoperative complications. More: <https://www.umk.pl/wiadomosci/?id=25538>

Over EUR 27 million from the European Investment Bank for the Poznan University of Medical Sciences

2018-07-05

The European Investment Bank provided the Medical University of Poznan with a 27.3 million euro loan from the Juncker plan. The money will be used to build and equip the Medical Simulation Center. As part of the investment, a new facility of Collegium Pharmaceuticum will be built as well as the Center for Innovative Pharmaceutical Technologies. The funds will also allow the construction of the ophthalmology department and the Hospital Rescue Department. The vice-president of the EIB, Vazil Hudák, European Commissioner for health and food safety, Vytenis Andriukaitis and Minister of Investment and Development Jerzy Kwieciński, took part in the official signing of the agreement. Medical University of Poznan was represented by the rector of the university - Prof. Andrzej Tykarski. The transaction is guaranteed by the European Fund for Strategic Investments.

University Clinical Hospital in Opole has a hybrid operating room

2018-07-05

A new hybrid operating room was opened in the University Clinical Hospital in Opole. The investment, which combines the elements of the operating room and the cabinet for treatments with low invasion processes will significantly improve patient safety. The hybrid operating room is a place where surgeons, cardiologists, cardiac surgeons and anesthesiologists can work simultaneously. The room allows to perform treatments combining classic open surgery with minimally invasive surgery. It is possible thanks to the special equipment. This allows for minimally invasive procedures and speeds up diagnostics, reducing the time of surgery. The room significantly increases the patient's safety - in the case when during the procedure it turns out that it is necessary to perform the traditional surgery, it can be done immediately, without having to transport the patient to another location.

Bydgoszcz scientists win gold medals at INTARG 2018

2018-07-06

Teams from the University of Casimir the Great in Bydgoszcz received two gold medals at the INTARG 2018 fair in Katowice. Prof. Marek Macko University of Bydgoszcz and MA Zbigniew Szczepański were awarded for the development of light-cured dental implants. Prof. of Bydgoszcz University Joanna Paciorek-Sadowska, Eng. Marcin Borowicz, Prof. Eng. Bogusław Czupryński, Dr Eng Joanna Liszkowska, Eng. Ewa Tomaszewska received a gold medal for the development of pro-ecological industrial technology for waste management of polylactic acid as an alternative polyol raw material for the production of polyurethanes for the construction industry. The INTARG fair has an interdisciplinary character - it presents a wide range of novelties in the area of ecology, medicine or IT, as well as new solutions for various industries and everyday objects.

International conference on the use of polymeric materials in medicine in Krakow

2018-07-10

The Polish Society of Biomaterials in cooperation with the International Society for Biomedical Polymers and Polymeric Biomaterials and the Faculty of Materials Science and Ceramics at the AGH University of Science and Technology in Krakow organizes on 15-18 July 2018 an international conference dedicated to biomedical polymers and polymeric biomaterials. The event will cover issues related to polymeric materials for medical purposes - methods of obtaining innovative polymer implant materials, their characteristics, research of cell and tissue reactions, analysis of experimental and clinical results to examples of applications. It will be a multidisciplinary conference, on material engineering, chemistry, biotechnology, biology and medicine. More: <https://isbpb2018.org/>

Applying for international PhD studies at the Medical University of Bialystok is in progress

2018-07-10

Medical University of Bialystok is offering free international PhD studies in the field of medical and pharmaceutical sciences at the Faculty of Pharmacy in the Division of Laboratory Medicine. «The studies will enable the education of a high-class specialist in the field of medical and pharmaceutical sciences, prepared to work in an international environment, with innovative issues and using the most advanced technologies in modern science». The free PhD programs are full-time studies and last 4 years. More: https://www.umb.edu.pl/interdyscyplinarne_miedzynarodowe_studia_doktoranckie

Gdańsk students succeed in the National Competition of Physiological Knowledge

2018-07-10

Małgorzata Styczewska, student at the Medical University of Gdańsk, won the individual competition of the National Great Synapsis Knowledge Contest in Poznań. The competition organized under the patronage of the Polish Physiological Society was attended by 57 students from the 9th medical schools. In the first part of the competition, participants solved the test of choice. After the selection of 12 finalists, the second test part was held, with the increased difficulty of questions. Representatives of the Gdańsk university, Małgorzata Styczewska, Mikołaj Młyński, and Izabela Kotlewska, took the third place in the competition of teams. The competition involved 9 student teams. The participants had to solve clinical problems during simulation scenarios with the use of practical skills and physiological knowledge. After a fierce battle, the students from Poznań won against the team from Katowice.

Wrocław students to study the behavior of cancer cells in the stratosphere

2018-07-10

The project of students of the Wrocław University of Technology and the University of Wrocław - ARES (Astrobiology and Radiation Experiments in Stratosphere) was awarded by the 3M company and received 10,000. PLN for further development of research on the behavior of cancer cells in the stratosphere. Students want to send a stratospheric balloon at a height of about 30 km above the surface of the Earth, sensitive to the radiation of human skin cells - normal keratinocytes and melanoma. At this height, environmental conditions are the same as on Mars. This will enable checking the effect of all high doses of radiation on the functioning of human cells. As part of the research, an attempt will be made to develop a biological radiation sensor based on skin cells and to check the influence of selected substances of natural origin in their use in pharmacological protection against changes caused by the action of electromagnetic radiation.

Polish scientists create a bionic pancreas printed in 3D

2018-07-13

Polish scientists are developing a revolutionary solution. They want to create a bionic pancreas, printed in 3D, that would function like a real organ, producing insulin and glucagon. Bionic pancreas would be built in a similar way as bone elements are printed. Currently, printing of vessels and the creation of the entire vascular system are underway. Creating a bionic pancreas is a chance for a normal life for people with type 1 diabetes, when the pancreas stops producing insulin. The project «Bioprinting 3D of the bionic pancreas» is financed by the National Center for Research and Development. It is to end in December 2019 and its value is estimated at PLN 24.7 million. Research is carried out by the Bionic Consortium, whose leader is the Foundation for Research and Development of Science. The consortium also includes Warsaw University of Technology, Warsaw Medical University, Nencki Experimental Biology, Polish Academy of Sciences, Infant Jesus Clinical Hospital and MediSpace company. More: <https://fundacjabirn.pl/projekty/projekt-biodrukowan-ie-3d-bionicznej-trzustki/>

Bone marrow transplantation without blood transfusion at the University Clinical Hospital in Wrocław

2018-07-13

The team of the Department of Hematology, Blood Tumors and Bone Marrow Transplant of the University Clinical Hospital in Wrocław performed a bone marrow transplantation in a patient who refused transfusions on religious grounds. The patient - a young man who recently became a father, refused a transfusion on religious grounds. He was suffering from Hodgkin's lymphoma. Blood transfusions are used in such operations to support the organism, in which the «new» marrow is not yet functioning, after the devastating chemotherapy and implantation of stem cells taken from the patient before. The transplantation, probably the first in Poland, took place in December 2017. The treatment took place

without complications, the patient was in good shape, we gave him drugs increasing production of red blood cells, we took care of the hemoglobin level - says Prof. Tomasz Wróbel from the Medical University in Wrocław. More: <https://www.umed.wroc.pl/content/przeszczep-szpiku-bez-transfuzji>

PhD student at the University of Life Sciences in Wrocław to rejuvenate cells

2018-07-16

Katarzyna Kornicka, PhD student at the Faculty of Biology and Animal Production at the University of Life Sciences in Wrocław, is implementing the project „Mitochondrial transfer as an innovative method of restoring stem cells to stem cells isolated from adipose tissue suffering from metabolic syndrome (EMS)”. The research of a Wrocław PhD student is a consequence of an earlier project, in which the researchers tried to rejuvenate stem cells of horses using resveratrol and 5-azacytidine. - In my project I want to rejuvenate the same cells, only by another method, through artificial transfer of mitochondria, which I isolate from «healthy cells» - explains Katarzyna Kornicka. She adds that in the future there is a chance to use this method in human medicine, especially in transplantology. For her project, the scientist obtained a grant - almost 140,000 PLN. The money is received from the Prelude 14 program of the National Science Center.

Agreement of universities in biomedical engineering

2018-07-16

Collegium Medicum of the Nicolaus Copernicus University and the University of Technology and Life Sciences in Bydgoszcz signed an agreement to strengthen cooperation in the field of biomedical engineering. The main aim of education is comprehensive education of students as a specialist staff for health care units, production and construction plants and repairing medical equipment, research and development units in the areas of modern medical technology. The scope of education includes all important elements of medical, technical and IT knowledge. Students who undertake studies in

the Biomedical Engineering will implement a study program focused on practical skills, contact with the patient, cooperation in the medical environment of health care institutions and scientific research institutes producing medical equipment. The program will be enriched with entrepreneurship classes.

Polish-American cooperation agreement in biomedical sciences

2018-07-18

Health Minister Prof. Łukasz Szumowski and Alex Azar, secretary of health and social care USA, signed a cooperation agreement in the field of biomedical sciences between both countries. Minister Łukasz Szumowski stressed that thanks to the agreement, Polish biomedical sciences and Polish scientists will gain a great opportunity for development and access to the resources of knowledge, experience and scientific research available to American institutions. The director of the National Academic Exchange Agency, Łukasz Wojdyga, who participated in the visit to the US, announced the launch of this year's new program of scholarships and financing the PhD studies, research programs for about one hundred Polish young scientists in medicine and biomedical sciences. The American side is interested in cooperating and using Polish experiences in infectious diseases, especially tuberculosis.

Researchers from the Jagiellonian University awarded by the American Association of Clinical Anatomists

2018-07-19

Dr Przemysław Pękala and Dr Brandon Michael Henry from the Department of Anatomy of the Jagiellonian University Collegium Medicum received awards from the American Association of Clinical Anatomists - AACA. It is the largest and most prestigious association of scientists in the field of anatomy around the world. Dr. Przemysław Pękala received the award for the best science poster (Biomechanics behind the age-related changes in the Anatomy of the Achilles Tendon), and Dr. Brandon Michael Henry for the best anatomical publication (Consensus guidelines for the flat reporting of study ethics in anatomical research within the framework of the anatomical quality assurance (AQUA) checklist). The winning works were created in the Department of Anatomy of the Jagiellonian University Collegium Medicum under the supervision of Prof. Jerzy Walocha and Dr Krzysztof Tomaszewski.

Double prize for a scientist at the Medical University of Gdańsk

2018-07-19

Professor Michał J. Markuszewski, head of the Department of Biopharmacy and Pharmacodynamics of the Medical University of Gdańsk, was awarded with the Medal of Professor Andrzej Waksmundzki and the Medal of Merit in favor of Polish Analytical Chemistry by the Committee of Analytical Chemistry of the Polish Academy of Sciences. Medal of prof. Waksmundzki is an honorary award for significant scientific achievements in the field of chromatography and related techniques. Professor Waksmundzki (1910-1998) was an outstanding specialist in chromatographic research. He was also a recognized teacher and author of textbooks and scripts on chromatography. Medal of Merit in favor of Polish Analytical Chemistry is an expression of recognition for the contribution to the popularization of

analytical chemistry, including the organization of «24th International Symposium on Electro and Liquid Phase Separation Techniques» and the XI Polish Chromatographic Conference in Sopot in 2017.

Ministry of Health to launch Medical Research Agency

2018-07-20

In September this year, a draft bill establishing the Medical Research Agency (ABM) will be ready - said health minister Łukasz Szumowski. At the beginning, the Agency's budget, modeled on the British Medical Research Council, would amount to PLN 100 million. The Medical Research Agency will be divided into three divisions. The first division will deal with providing scientific grants for the implementation of research projects. The second division will conduct scientific research commissioned by the administration, and the third department will carry out the Agency's own research. - The agency will not be a bank to provide money - announced Minister Szumowski and added that conducting research will be easier because the Agency will use the database of medical institutes that are subject to the Minister of Health.

Scientist of the Nicolaus Copernicus University in Toruń wins the competition in the TEAM program

2018-07-20

Dr Ireneusz Grulkowski from the Institute of Physics of the Nicolaus Copernicus University in Toruń will receive almost PLN 3.5 million to create a research team. The money comes from the competition of the Foundation for Polish Science in the TEAM program. The grant will allow the employee of the Department of Biophysics and Medical Physics at the University of Toruń to carry out the project «Lenticular and vitreal light scattering and refraction for tomorrow's eye diagnostics». Dr Grulkowski heads a team in Bio-Optics and Optical Engineering in Toruń. He uses advanced techniques of optical engineering in the development of new imaging methods dedicated to biology and medicine. His team cooperates with many centers in the country and abroad. His research on the new generation of optical tomographs has been awarded by the American Optical Society of America.

eration of optical tomographs has been awarded by the American Optical Society of America.

Lazarski University in Warsaw to offer Neurologopedics as post-graduate studies

2018-07-25

The Lazarski University in Warsaw launches a new course of post-graduate studies: Neurologopedics and early support of child development. Recruitment will last until September 30. The launch of a new studies on neurologopedics and early development support is dictated by the growing needs of the labor market. The aim of the studies is to provide students with practical skills, knowledge and instruments in the field of neurologopedics, necessary for independent diagnosis and neurologopedic therapy. The studies will last three semesters and will include lectures, seminars, exercises and internships. Their program is addressed to post graduated students with a specialty in speech therapy. More: <https://www.lazarski.pl/pl/oferta/studia-podyplomowe/akademia-skutecznej-komunikacji/neurologopedia-i-wczesne-wspomaganie-rozwoju-dziecka/>

Multimodal heart phantom created at the Krakow AGH University of Science and Technology

2018-07-26

At the AGH University of Science and Technology in Krakow, a multimodal heart phantom was created. The model created by Dr Eng Katarzyna Matusiak from the Faculty of Physics and Applied Computer Science is used to calibrate diagnostic devices used in hospitals. This is the first phantom that allows reading and correct application of medical images, with particular emphasis on cardiac images acquired on devices of various types. In addition, it allows to determine which patient's position during the test is the most advantageous, to obtain the best result. In the model developed by Dr Eng Matusiak the most important element is the heart made of organic glass. The artificial organ is of the same size as the human heart and is made of transparent material with a density similar to human tissues.

Researcher of the Medical University of Gdańsk awarded in Slovakia

2018-07-26

Dr Eng Magdalena Buszewska-Forajta, scientist of the Department of Biopharmacy and Pharmacodynamics of the Medical University of Gdańsk, was awarded for the best oral presentation delivered during the 24th Intensive Symposium on Separation Sciences and 21st International Conference Analytical Methods and Human Health. The symposium and conference took place in Jasna, Slovakia. The winning work «Formalin-Fixed, Paraffin-Embedded (FFPE) or fresh tissue? Which matrix is more suitable for metabolomics?» is implemented as part of cooperation with the Department of Pathology and Neuropathology, under the direction of Prof. Ewa Iżycka-Świeszewska. The presentation is part of the project implemented thanks to the grant obtained from the National Science Center as part of the Sonata competition.

Warsaw Medical University in an international project to improve the quality of nursing students' education

2018-07-27

Department of Didactics and Learning Effects of the Faculty of Health Sciences received a grant for the implementation of an international project under the Erasmus + program „Cooperation for innovation and good practices. Strategic partnerships for higher education „- informs the Warsaw Medical University. The «Providing a Teaching and Learning Open and Innovative Toolkit for Evidence-based Practice to Nursing European Curriculum» project will be implemented with five partner universities from Europe: Universidad de Murcia (Spain), Università degli Studi di Modena and Reggio Emilia (Italy), Technological Educational Institute of Crete (Greece), Ostravska Univerzita (Czech Republic) and Angela Boskin Faculty of Health Care (Slovenia). The main objective of the project is to improve the quality of education of nursing students in the area of the use of scientific evidence in clinical practice. The project will start in September 2018 and will last three years.

Two new research centers to be created in Warsaw

2018-07-30

BRAIN CITY Center of Excellence in Neuroplasticity and Brain Diseases and the CENTERA Center for Research and Application of Terahertz Technologies will be two new research centers in Warsaw. The Foundation for Polish Science will allocate 73 million PLN for their creation. The first center will be created at the Institute of Experimental Biology and the second at the Institute of High Pressure Physics of the Polish Academy of Sciences. New scientific institutions will be financed thanks to funds granted in the recently announced call in the program International Research Agendas of the Foundation for Polish Science. BRAIN CITY will investigate the complex mechanisms of plasticity of the human brain, while CENTERA will investigate terahertz radiation, which can have a range of applications in communication, industry, agriculture and trade. The project foreign partners are Goethe University in Frankfurt and CNRS- Institute of Electronics, Microelectronics and Nanotechnology in Lille,

Veterinary and biocosmetology are the most popular majors of the University of Life Sciences in Lublin

2018-08-01

Six thousand candidates registered for studies at the University of Life Sciences in Lublin in this year's recruitment. The university has prepared 1810 places at full-time studies. The most popular field of study in this year's recruitment is veterinary medicine, for which there are 9 candidates for one place. Biocosmetology was also very popular, which is a new trend offered by the University of Life Sciences. The number of volunteers exceeded the number of places for 7 times. Dietology and Animal behavior were also popular with 4 candidates per one place. More: <http://www.up.lublin.pl/glowna/?form=default&rid=15515>

Regenerative Medicine Center of the Warsaw University of Life Sciences to receive over PLN 66 million

2018-08-01

The Warsaw University of Life Sciences (SGGW) will create a Regenerative Medicine Center and an integrated set of laboratories equipped with innovative equipment for animal testing. The investment will be possible thanks to EU support. As part of the Regional Operational Program for Mazowieckie Voivodeship 2014-2020, SGGW will receive PLN 66.6 million for this purpose. The Regenerative Medicine Center will implement projects on medicine and veterinary medicine, in the field of physiology and pathophysiology of diseases, research into diseases that threaten public health in a broad sense, and innovative research in the field of highly specialized regenerative medicine.

Innovative equipment for blood analysis for the University of Life Sciences in Wrocław

2018-08-01

The Faculty of Veterinary Medicine at the University of Life Sciences in Wrocław has gained new, innovative equipment for rapid blood testing of cats, dogs and horses. Vets will use it on the operating and field conditions. The EPOC blood gas analyzer is a small device that fits in the hand, but it significantly improves the work of veterinarians, replaces traditional laboratory machines and gives a chance for quick diagnostics - thus increasing the chances of animals to survive. Just 100 microliters of blood is enough to carry out precise measurements and analysis of gases, electrolytes and biochemical parameters. - This device is necessary to monitor vital functions during operations under general anesthesia in small and large animals. The small amount of blood needed to perform the tests will greatly facilitate the work with really small animals, in which every collected milliliter counts - says Prof. Zdzisław Kielbowicz, head of the Chair and Clinic of Surgery. http://www.glos.upwr.edu.pl/aktualnosci/48129/innovacyjny_sprzet_do_analzy_krwi_dla_upwr.html

Warsaw Medical University to participate in the international project of the European Cardiac Society

2018-08-03

The first Department and Cardiology Clinic of the Medical University of Warsaw will take part in the project of the European Cardiac Society named STEER-AF. The aim of the STEER-AF project (Randomised trial in patients with Atrial Fibrillation) is to examine in a randomized way the impact of doctor education on therapeutic decisions taken in patients with atrial fibrillation. The project will be attended by scientific units from six countries: Poland, Germany, Great Britain, Italy, France and Spain.

Researchers from the University of Silesia design a mouthpiece to help in detecting lungs cancer

2018-08-07

Researchers from the University of Silesia Special designed a mouthpiece that will be used in the diagnosis of upper and lower respiratory tract diseases, for lung and laryngeal tumors and bronchial diseases. The use of analytical chemistry allows to identify and determine the relationship between certain types of proteins in exhaled air and the occurrence of lung or laryngeal cancer. The patient's health status is determined based on the analysis of tumor markers, which are collected using the so-called Tedlar's sacks. The examined person blows up the air with the marked proteins into them. The mouthpiece allows to filter the air inhaled by the patient and direct it to the porous material, which will help reduce the contamination of the collected material and place a larger number of tumor markers in a single study. More: <http://www.us.edu.pl/naukowcy-z-us-zaprojektowały-ustnik-ktory-pomoz-wykryc-min-raka-pluc>

Warsaw Medical University to test innovative telemedicine equipment

2018-08-10

The Warsaw Medical University will receive new, innovative technological facilities. The university signed a letter of intent on cooperation with the Krakow-based company MedApp, which assumes the development of the existing cooperation in the field of invasive cardiology and electrophysiology. According to the magazine «Rynek Zdrowia», researchers and students of the Warsaw Medical University will receive innovative telemedicine equipment and will independently test it. Based on their comments and recommendations, MedApp will develop the functionality of its products, finally presenting a product ready for implementation to full clinical practice. The Medical University of Warsaw is another scientific unit among MedApp's partners. Until now, the Kraków-based company cooperated with the Collegium Medicum of the Jagiellonian University.

European patent for solution to treat baldness

2018-08-13

The invention of scientists from the Medical University of Gdansk „Solid lipid nanoparticles of roxithromycin for hair loss or acne” has been protected by the European Patent Office. The innovative pharmaceutical composition containing roxithromycin developed by Gdańsk scientists can be used to treat androgenic and / or acne-induced alopecia. For the production of the proposed preparation, lipid micro-nanoparticles were used as carriers of roxithromycin in hair follicles. The inventors are Dr Krzysztof Cal, professor at the Medical University of Gdańsk and Dr Hanna Wosicka - a former PhD student at the Faculty of Applied Pharmacy at the Gdańsk University.

Gdańsk scientists published in the journal Scientific Reports

2018-08-16

The article of the scientists from the Medical University of Gdańsk „Immunophenotyping and transcriptional profiling of in vitro cultured human adipose tissue derived stem cells” was published in the journal „Scientific Reports”. The work was conducted under the direction of Dr Michał Pikuła from the Laboratory of Tissue Engineering and Regenerative Medicine of the Department of Embryology and Dr. Arkadiusz Piotrowski, Prof. Medical University of Gdańsk from the Department of Biology and Pharmaceutical Botany. It presents an extensive evaluation of the phenotype and molecular profile of in vitro grown fat adipose stem cells. Stem cells are an extremely promising material for tissue engineering and regenerative medicine. They have the ability to transform into other cell types, immunoregulatory abilities and are an important model for the study of new drugs. More: <https://gumed.edu.pl/48895.html>

Scientists from the Warsaw University of Life Sciences researching cancer

2018-08-20

The Faculty of Veterinary Medicine of the Warsaw University of Life Sciences (SGGW) launched the Król Lab, in which scientists will conduct cancer research for 5 years. This has been made possible by the grant of the European Research Council in the amount of EUR 1.4 million, which in 2016 was awarded to Dr Magdalena Król, Prof. Warsaw Agricultural University. The research conducted in the Król Lab laboratory is aimed at explaining the biological phenomenon discovered by Prof. Magdalena Król. Thanks to many years of scientific work related to cancer research, she discovered that certain cells of the immune system give cancer cells a specific group of proteins. This mechanism may probably be used in oncological practice for the precise delivery of cancer-destroying drugs directly to the tumor.

Gdańsk scientist participating at the Asian Hyperbaric and Diving Medicine Association conference

2018-08-20

Dr Jacek Kot, head of the National Center for Hyperbaric Medicine, GUMed participated as an invited lecturer at the annual scientific conference „Asian Hyperbaric and Diving Medicine Association (AHD-MA)” in Bangkok. During the conference, Dr. Kot presented three plenary lectures: «Intensive care and HBOT»; «Pre-conditioning of divers and accelerated decompression» and «Extreme recreational diving». The Gdańsk scientist presented physiological and medical aspects of diving in hard-to-reach places (in the mountains, in caves), to extreme depths (exceeding 300 meters), using different types of diving equipment (open circuit, closed circuit). The conference gathered representatives of most Asian countries with the exception of China and Japan, which have their own national scientific societies and do not participate in joint international conferences.

Polish portable laboratory to examine the patient at home

2018-08-21

Thanks to the innovative solution of the Polish company Genomtec S.A., genetic tests that allow to detect dangerous infections can be performed with a portable device during a home visit or in an ambulance - informs Miron Tokarski, co-founder of the company. The portable diagnostic system has been named Genomtec ID. It allows to identify a pathogen in a biological material using molecular biology techniques. The whole analysis is performed on a small chip, which in just 20 minutes detects the presence of DNA or RNA in any biological material. The system can detect different types of infections: upper respiratory tract-, sexually transmitted- and generalized infections, such as MRSA or meningitis.

Researcher from the Jagiellonian University developing a new technology in the diagnosis of diabetic complications

2018-08-22

Agnieszka Kamińska from the Faculty of Physics, Astronomy and Applied Computer Science of the Jagiellonian University is working on a new technology that will help in the diagnosis of diabetes complications. A PhD student from the Krakow university is one of the winners of the 9th program “Leader” of the National Center for Research and Development. Her project envisages the construction of a device for the capture of extracellular microvesicles and the assessment of their molecular composition for the diagnosis of diabetic complications. The device will be created in cooperation with the company MeasLine, which is interested in the commercialization of research. The innovative product will be used in the diagnosis of nephropathy in patients with diabetes.

Lubuski Marshal's Office supports future doctors

2018-08-27

The Marshal Office of Lubuskie Voivodeship awarded future doctors with scholarships. The condition for receiving the support was a declaration of employment in one of the Lubuskie hospitals for a period equal to the time of the scholarship. In September, the Office will start another call for this program. Scholarships of 2 thousand PLN monthly were awarded 61 doctors. 16 applications were submitted by students from the University of Zielona Góra, the others came from Poznań (15), Bydgoszcz (5), Szczecin (7), Katowice (2), Lublin (4), Olsztyn (1), Wrocław (5), Łódź (5) and from Rzeszów (1). To support future doctors, the Marshal's Office has allocated 900,000 PLN this year. In the next two years, it will amount to one million PLN. The next call for financial aid applications will start on September 1 and will last until October 31. The rules for applying for next support program are the same as for the first call.

Polish-German scientific consortium to design a mobile application for patients and doctors

2018-08-29

A scientific consortium of the Warsaw Medical University has received 600,000 euro co-financing for the implementation of the project „Mobile application for patients and doctors of many specialties - a tool for education and support in the decision-making process before the operational treatment”. Co-financing was granted by the National Center for Research and Development in the third call for research and development projects within the framework of Polish-German cooperation. The consortium is composed of the Warsaw Medical University, KardioMedSilesia Sp z o.o., the University of Freiburg- Medical Center and business entities: HID Human Interface Design GmbH, Heart Team Sp o.o. The goal is to create the first comprehensive telemedicine solution on the market - a mobile application «with intelligent decision support algorithms and an education module for patients treated with oral anticoagulants». The application will help to improve health and quality of life.

University of Warsaw researchers' internet system to shorten research in projects using bacterial DNA

2018-08-29

Three PhD students from the Department of Bacterial Genetics of the Faculty of Biology of the University of Warsaw are finalizing works on the Internet system, which will shorten the stage of identifying and describing the function of bacterial genes from several dozen days to several hours. The solution of scientists from the Faculty of Biology will significantly shorten the initial stage of research in scientific projects using bacterial DNA analysis. The authors plan to launch the website, which will be available to any scientist using genetic analyzes of bacteria in his research. The system will provide high-quality feedback in a few hours, which is many times faster compared to manually analyzing genomic sequences of bacteria for up to several days. More: <https://oferta.uw.edu.pl/System-informacyjny-przyspieszy-poprawne-opisowanie-sekwencja-genetycznych-bakterii>

First lung transplant in Pomerania performed at the University Clinical Center

2018-08-29

Doctors from the University Clinical Center of the Medical University of Gdańsk conducted the first lung transplant in Pomerania. The lungs were transplanted to a 64-year-old man with an extreme form of emphysema. The patient was subjected to home oxygen therapy, but his condition worsened, which led to more frequent visits to the hospital. The Gdańsk doctors performed a transplant of both lungs without using extra-coronary circulation, which is a minimally invasive technique. On both sides, the chest was opened just for the pleural cavities to enter the transplanted organ. - This is an advanced transplant technique, possibly the least burden on the patient. Rehabilitation of such patients is the easiest. It is not always possible to use such a technique, but it will certainly be the preferred method in Gdańsk

Center - says Dr. Jacek Wojarski from the Department of Cardiac Surgery and Surgery who operated on the patient.

Article of scientists of the Medical University of Gdańsk published in „Scientific Reports”

2018-08-31

The work „Cancer stem cells as targets for DC-based immunotherapy of colorectal cancer”, written by scientists from the Gdańsk Medical University has been published in „Scientific Reports” - a renowned journal belonging to the Nature Publishing Group. The project described in the publication concerned the analysis of the potential usefulness of dendritic cells (DC) for the immunotherapy of patients with colorectal cancer. The research is innovative due to the fact that they focused on therapy targeting cancer stem cells (NKM), which are responsible for the pathogenesis of cancer and the development of metastases and remission. The project was entirely planned and developed by Dr Magdalena Szaryńska and Agata Olejniczak from the Department of Histology in cooperation with surgeons from the General, Endocrinological and Transplant Surgery Clinic of the Medical University of Gdańsk. More: <https://gumed.edu.pl/49003.html>

Nicolaus Copernicus University in Toruń looking for new tools to fight cancer

2018-08-31

The research group from the Faculty of Chemistry at the Nicolaus Copernicus University will take part in the international project „Airborne Biomarkers for Colorectal Cancer” (ABC-Cancer), which aims to find a minimally-invasive tool for the diagnosis of colon cancer. The consortium that will implement the project is: University of Maastricht (the Netherlands), which acts as a leader; IVV Laboratory of Process Engineering at the Fraunhofer Institute in Freising and Medical Clinics together with Polyclinic III of the University of Munich (Germany) and Nicolaus Copernicus University in Toruń. The main goal

is to develop new methodologies and standard operational protocols - including the unification of the methodology for the preparation and analysis of biological samples and the analysis of volatile organic compounds in the feces and intestinal gases and air exhaled by coupled chromatographic techniques and ion mobility spectrometry. More: <https://www.umk.pl/wiadomosci/?id=25601>

Researchers from the University of Wroclaw receive grants in the SONATINA competition

2018-09-04

Two researchers from the Faculty of Biotechnology of the University of Wroclaw are awarded in the second part of the National Science Center competition – SONATINA. Dr Joanna Hołówkas project «The role of mIHf protein in the organization of Mycobacterium chromosome and its impact on gene expression» was subsidized with PLN 819,795, and Dr. Agnieszka Strzałka received PLN 926,100 for the project «The role of interaction between HupA and HupS proteins during growth and response to stress Streptomyces bacteria». The SONATINA competition can be attended by people who obtained a PhD degree not earlier than three years ago. In the current competition, 154 applications were received, of which 45 were accepted, and their authors will receive more than PLN 30 million for their projects. The grant enables employing a researcher in a research unit, project implementation and internship at a foreign university lasting from 3 to 6 months. More: <https://uni.wroc.pl/nagrodzone-badaczki-z-uw-r-w-konkursie-sonatina/>

Aesthetic medicine of face to become new study at the Pomeranian Medical University in Szczecin

2018-09-05

In the new academic year, the Pomeranian Medical University in Szczecin is launching postgraduate Aesthetic Medicine of Face. The course is intended for doctors or dentists with a permanent right to practice. Studies will acquire professional knowledge and practical skills in the field of anatomical and histological structure of the area of aesthetic medicine treatments in the face and neck, diagnosing aesthetic problems of the face and neck, preventive treatment in the biological aging of the face and neck, correction of smile aesthetics with the use of dental treatment, corrective treatment of selected facial skin problems, selected aspects of medical law, bioethics, clinical psychology and dietetics. Graduates will be granted the right to conduct basic consultations in the field of facial aesthetic medicine and to perform aesthetic medicine treatments.

Krakow scientists working on a new carrier of oncology drugs

2018-09-06

Researchers from the Krakow University of Technology are working on intelligent carriers of oncological drugs. Special molecules based on zinc and titanium oxides will allow the drug to attack cancer cells more accurately without damaging healthy organs and tissues. Researchers from the University of Technology are supported by scientists from two other Krakow universities: the Jagiellonian University and the University of Agriculture. - Our goal is to create innovative carriers of therapeutic substances based on nanostructured metallic oxides, whose properties would allow their safe use in living organisms - said Dr. Eng. Jolanta Pulit-Prociak from the Krakow University of Technology, who manages the work of the research team. The project is financed from the «Leader» program. The researchers received a grant from the National Center for Research and Development amounting to nearly PLN 1.2 million.

Medical University of Silesia invites volunteers to participate in the Standardized / Simulated Patient Program

2018-09-06

The Medical University of Silesia in Katowice is beginning implementation of an innovative „Standardized / Simulated Patient Program“. The main objective of the project is to support the student education process by including specially trained people for simulation activities, exercises and practical examinations. The Simulated Patient is a person who can realistically reproduce the history of the disease by imitating physical symptoms and emotional reactions of a real patient. The Standardized Patient plays a role in a repeatable way, giving the students possibility to practice a certain skill in identical or similar conditions. Playing clinical situations will allow future medics to acquire the skills, develop a good relationship with the patient, develop emotional intelligence, provide difficult talk and conduct the diagnostics. The university invites people aged 18 and plus who have completed at least secondary education and have passion for acting. More: <http://www.cdism.sum.edu.pl/podstrony-projektu-power/standaryzowany-pacjent/>

Gdańsk Medical University and Radio Gdańsk continuing the health education project

2018-09-07

Medical University of Gdańsk, University Clinical Center in Gdańsk and Radio Gdańsk will jointly educate citizens of the province Pomerania. The partners signed an agreement on the continuation of the „Be Healthy - No Queue“ project. Next year, the three institutions will work together to spread information about health, disease prevention and treatment methods available especially in Pomerania - implementing the original idea of the Gdańsk Medical University and Radio Gdańsk started in 2017. Previously, orthopedic specialists, physiotherapists, cardiologists, dentists, endocrinologists, immunologists, diabetologists, gastroenterologists,

rheumatologists, dermatologists and specialists from the pharmaceutical department of the Medical University of Gdańsk shared their expert knowledge and advice.

Researchers from the University of Life Sciences in Wroclaw examined the health of middle school students

2018-09-07

The research project carried out by the employees of the Department of Human Nutrition at the University of Life Sciences and the Department of Health and Social Affairs and the Department of Education of the City of Wroclaw has been completed. For three years, the researchers studied the health of Wroclaw teenagers. The project involved 1160 students from 11 junior high schools in Wroclaw. The collected data show that the BMI (Body Mass Index) is too high for 21% girls and for 24 percent boys. Too big waist circumference - over 76 cm - was measured in 13.4% female students, and above 80 cm in 19 % students. - We know that 20 % teenagers do not eat breakfast before going to school, 6 % drink coca-cola more than once per day. Approx. 22 percent pupils watch television for 5 to 6 hours a day, and this percentage increases twice during the weekend. Approx. 23 percent teenagers apply a diet to lose weight - says Prof. Joanna Wyka from the Department of Human Nutrition. 3rd Congress of Bio-science of Polish BIO2018 at the University of Gdańsk

2018-09-11

The University of Gdańsk invites participants from September 18 to 21 at the III Congress of Bio-science of the Polish BIO2018. It will be attended by world-renown scientists dealing in natural sciences and related fields. Congress is also the 51st Congress of the Polish Biochemical Society. Interdisciplinary topics of papers, meetings and discussions include new solutions in medicine - especially in the treatment of cancer and genetic diseases. The program includes 30 scientific sessions and nearly 500 guests, 150 presentations and speeches, almost 200 poster presentations and a satellite session «Women in Science». Scientists in their speeches will take up contemporary civilization challenges, like the research into the immune system in the fight against cancers, new methods of diagnosing cancer and genetic diseases, research and application of stem cells, research on the possibilities of modifying plant metabolism and research on so-called «Historical» DNA.

Students of the Medical University of Wroclaw receive co-financing for the cosmic project

2018-09-12

The Student Scientific Circle of Biology of Cancer Cell at the Medical University in Wroclaw won almost 320,000. PLN of funding for a research project on the protection of biological material for the needs of space missions. The assumption of the awarded project is to send radiation-sensitive human cells (healthy and cancerous) to a height of about 30 km above the Earth's surface. This will enable checking the influence of sub -osmic conditions on the functioning of human cells including high doses of radiation. Students will also attempt to develop a biological radiation sensor based on human cells and to check the influence of selected natural substances in terms of their use in pharmacological protection against changes caused by

electromagnetic radiation. The money will help in the implementation of laboratory tests and enable participation in courses and conferences. Young scientists want to cooperate with the European Space Agency. More: <https://www.umed.wroc.pl/content/nasi-studenci-w%C5%83%B3d-najlepszych-z-najwy>

Mateusz Sokolski from the Medical University of Wroclaw wins the grant from the European Society of Cardiology

2018-09-12

Dr. Mateusz Sokolski, assistant at the Clinic of Heart Diseases at the Medical University in Wroclaw received a prestigious training grant European Society of Cardiology (ESC), which will allow him to develop knowledge and skills in the field of cardiology in a reputable clinic in Switzerland. Dr Mateusz Sokolski is one of 11 this year laureates of the ESC grant, and one of the two awarded Poles, who can raise their qualifications in the field of cardiology through training in the better developed country. Dr Sokolski will be training at the Zurich clinic for 12 months. The condition of qualification, apart from the young age of the participant, was an impressive scientific achievement, which Dr. Sokolski performed under the supervision of Prof. Piotr Ponikowski - the promoter of his PhD dissertation.

Researcher of the Warsaw Medical University becomes a member of the European Health Parliament

2018-09-13

Paweł Koczkodaj, PhD student of the Faculty of Health Sciences at the Medical University of Warsaw and a graduate of this university was appointed to the European Health Parliament (EHP) in Brussels. As emphasizes Warsaw Medical University, he was selected as one of 55 specialists who will work on solutions improving health in Europe. The Polish scientist will focus on the issues of anti-cancer pre-

vention. The aim of the European Health Parliament is to exchange ideas with European Union officials, members of the European Parliament, non-governmental organizations, the media and interested citizens, and then develop and present political recommendations in the area of health protection. The developed solutions will be presented at the plenary session of the EHP and send to decision-makers and people related to health care throughout the European Union.

Łódź Days of Gerontology

2018-09-14

On September 20 and 21, the Department of Demography and Gerontology of Social University of Lodz organizes „Łódź Days of Gerontology”, which will be devoted to the causes, processes and consequences for aging population. The intention of the organizers is to focus on the following issues: the demographic aging process of the population, with particular emphasis on territorial diversity; aging population and demographic, economic and social security; health, living conditions and quality of life for seniors; tasks of social policy implemented at various levels for elderly people; situation of older people in the labor market. The organizers intend to issue the reports, evaluated by external reviewers in the journal «Acta Universitatis Lodzensis. Folia Oeconomica».

Medical graduates of the University of Warmia and Mazury can perform their job in India

2018-09-14

The Supreme Medical Chamber of India added the Faculty of Medicine at the University of Warmia and Mazury (UWM) in Olsztyn into the list of medical universities recognized by India. This opens up the opportunity for UWM students to work in India. - We are very happy about this decision. India is one of the most populous countries in the world. It counts more than 1.3 billion people, and in addition, many Indians live outside its borders. This accreditation opens the way for inviting students from India to our Faculty of Medicine - said prof. Andrzej Rynkiewicz, dean of the Faculty of Medicine. Polish universities in Białystok, Gdańsk, Katowice, Lublin, Łódź, Poznań, Toruń and Wrocław as well as the Warsaw Medical University and Collegium Medicum of the Jagiellonian University have already been accepted by Indian Medical Chamber.

Polish-Australian discovery to slow down neurodegenerative diseases

2018-09-17

Dr Sebastian Glatt from the Jagiellonian University in Krakow in collaboration with researchers from Australia discovered the molecular basis of the progressive degeneration of nerve cells. This discovery gives hope for the future development of ways to slow down the neurodegenerative diseases, such as Alzheimer's or Parkinson's diseases. Dr Glatt is the laureate of the FIRST TEAM program of the Foundation for Polish Science. The results of Polish-Australian research have been described in Nature Communications. As the Foundation emphasizes, the discovery of scientists from Poland and Australia deepens the knowledge about the mechanisms of neurodegenerative disease formation and may be the basis for developing in the future ways to slow down the process of nerve cell death occurring in these diseases. See the publication in Nature Communications: <https://www.nature.com/articles/s41467-018-05765-6>

Krakow's scientists conduct innovative research in the field of regenerative medicine

2018-09-17

Scientists at the Collegium Medicum of the Jagiellonian University and the Krakow John Paul II Specialist Hospital are looking for a way to use a new type of stem cells to treat patients with cardiovascular disease. The problem concerns hundreds of thousands of Polish patients for whom there is basically no good method of therapy. Heart failure is associated with a death risk of 50 percent in 5 years and, despite the continuous implementation of new drugs, there is only insignificant improvement of these indicators and the quality of life. Regenerative medicine is a chance for the patients after myocardial infarction to regain lost tissue and to protect those with chronic lower limb ischemia from amputation – said Prof. med. Piotr Musiałek from the Clinical Department of Heart and Vessel Diseases at the Krakow Specialist Hospital, who provides clinical trials assessing the effectiveness of the new therapy.

Success of doctors of the University Clinical Center in Opole

2018-09-17

Dr Med. Jacek Hobot and Dr Med. Tomasz Porażko - doctors of the University Clinical Center in Opole performed the procedure of removing the damaged dialysis catheter with the innovative method - informs Małgorzata Lis-Skupińska, Centrum's spokesperson. Dialysis using vascular catheters causes complications that require replacement of the catheter, which is usually performed under local anesthesia, painlessly and comfortably for the patient. Sometimes, however, the venous vessel gets attached to the tissue, and the patient requires a major surgical procedure. It was avoided in Opole. Doctors first tried to remove the damaged catheter by inserting a special balloon into it, filling and emptying it. This method turned out to be ineffective. Then they used an intravascular loop to separate the adnexed catheter. The treatment went without complications.

World-renowned Canadian scientists to give lectures at the Gdańsk Medical University

2018-09-17

Professor Philip F. Halloran, international expert in the field of transplantology and nephrology from the Nephrology Clinic of the University of Alberta in Edmonton, head of the Alberta Transplant Applied Genomics Center and Dr. Konrad Famulski, cooperating with him, will deliver lectures at the Medical University of Gdańsk on September 19. Professor Halloran will give a lecture «Molecular analysis of transplant biopsies: insights into mechanisms of disease» and Dr. Famulski «The remarkable versatility of the molecular signature of acute kidney transplant injury.». Both researchers will deliver their lectures in the conference room of the Nephrology, Transplantology and Internal Diseases Clinic. Professor Phillip F. Halloran is the author of numerous publications in the field of transplantology and immunology. Currently, he deals with new methods of molecular diagnostics of transplanted kidney pathology. In 2016, he was recognized as «the most influential personality in the field of transplantology in the last 25 years».

Medical University of Silesia invites participants to the Wound Treatment Forum

2018-09-20

Evereth Publishing and the Chair and Department of Descriptive and Topographical Anatomy of the Medical University of Silesia invite participants to the second interdisciplinary conference on the Treatment of Wounds. The conference „Trends and challenges in modern therapy“ will take place from 11 to 13 October in Zakopane. The topics of the Forum are Problems of wound healing in various etiologies in the light of current guidelines, General and local treatment of chronic wound, Antiseptics and dressings, Microbiological aspect of chronic wound healing, Vacuum treatment - NPWT therapy, Compression therapy and Other techniques and methods supporting wound healing. The organizers invite doctors of various specialties, nurses and all those who in their daily practice meet the problems of wound treatment of various etiologies, both in hospital or at home.

Students of the Silesian University of Technology to take part in the UAV Challenge Medical Express competition in Australia

2018-09-20

Students of the Silesian University of Technology associated in the „High Flyers“ scientific circle will take part in the UAV Challenge Medical Express competition in Australia. The purpose of the competition is to demonstrate the usefulness of unmanned aircraft in civil applications, in particular where they can save human life. The competition organized by the University of Queensland and the Australian Institute for Research and Development provides the design and construction of an unmanned aircraft that should perform an exploration and rescue mission in the Australian outback. An autonomous drone must find a sick man cut off from the world, land without a runway, take a blood sample, take off and deliver a sample to the laboratory for further medical analysis. The construction of the students

of the University is a plane of vertical take off and landing HF-10 VTOL (Vertical Take-Off and Landing) - a hybrid unmanned platform combining the advantages of a classic quadcopter and a plane.

Jagiellonian University launches the synergy between Chinese and Western medicine

2018-09-21

On September 18-19, 2018, the Jagiellonian University in Krakow will hold the conference „Integrative Health. A New Paradigm for Health Care“ on possible synergies between Chinese and Western medicine. The organizers of the event emphasize, that Chinese medicine has gained wide recognition in the Western world. Chinese medicine centers are now at many western universities, including the United States, Sweden, Germany and Israel. The conference promoting this approach at the Jagiellonian University was a pioneering event in Poland. Among the speakers were Prof. Ka-Kit Hui, founder and director of the Center for East-West Medicine at the University of California in Los Angeles, Prof. Jing Zhao from the Chinese Academy of Medical Sciences in Beijing and Dr Magdalena Kocot-Kępska, secretary of the Polish Society for the Study of Pain.

Scientists from the Medical University of Białystok patent a pharmaceutical kit

2018-09-24

Researchers from the Medical University of Białystok have patented a pharmaceutical kit that can be used in the treatment of colorectal cancer and other cancers. According to the Puls Medycyna portal, the invention «Erythropoietin and the Bruton's kinase inhibitor in the form of 2-cyano-N-(2,5-dibromophenyl)-3-hydroxy-2-butenamide» as a medicine and its use in the cancer treatment drug «has been developed by Białystok scientists: Prof. Dariusz Pawlak - head of the Department of Pharmacodynamics, Prof. Krystyna Pawlak - head of the Monitoring Pharmacotherapy Unit, Dr Anna Tankiewicz-Kwedło, Dr Justyna Hermanowicz, Tomasz Kamiński and Dariusz Rożkiewicz. This is not the

first patent of scientists from Białystok. Previously, they obtained patent for a complementary feed for bees and verification of anticancer properties of pine root extract.

BBC Arabic report about research conducted at the Jagiellonian University

2018-09-25

BBC Arabic, an Arabic-language BBC television channel, broadcast a documentary about research of a technique for detecting early-stage renal failure in diabetic patients conducted at the Jagiellonian University in Krakow. This technique involves the identification of new biological biomarkers of kidney function. The research is carried out by the Department of Physical Physics, Faculty of Physics, Astronomy and Applied Computer Science, and High Resolution Laboratory of Mass Spectrometry of the Faculty of Chemistry. The project is managed by Dr Ewa Stępień. The material was broadcast as part of the 4Tech program - a series of reportages by BBC Arabic about the latest scientific discoveries and technical inventions. View material BBC Arabic: <https://youtu.be/OImOk9x2YI8>

Talks on digital transformation at the e-Health Forum in Sopot

2018-09-25

Almost 400 participants - patients, service providers, scientists, medical professionals, and representatives of the Ministry of Health and the Center of Information Systems for Health Care participated in the e-Health Forum in Sopot. The Forum co-organized by the Medical University of Gdansk and the Polish Society for Health Programs became a platform where the stakeholders of the digital transformation process made many important declarations. - We are building a foundation on which we will be able to base new services for patients, tools for doctors, algorithms for analysts - said Deputy Minister of Health Janusz Cieszyński. Deputy President of the National Health Fund Adam Niedzielski declared a new way of thinking of the Fund, more open to new technologies. He emphasized the importance of pilot programs in the field of telemedicine, which in practice demonstrate whether the adopted solutions are effective and can be applied on a wider scale. More: <https://gumed.edu.pl/49631.html>

Over PLN 7 million for Kraków students of Nursing

2018-09-26

Over PLN 7 million will be allocated for the support of students of Nursing and their professional development at the Jagiellonian University Collegium Medicum and the Frycz Modrzewski Krakow Academy. According to the portal Rynek Zdrowia, the best students who undertake nursing studies are to be paid the scholarships in the amount of PLN 800 per month since the second year of study. Graduates who will start working in the profession in health care institutions financed from public money will be able to receive two-year scholarships in the amount of PLN 1000 gross per month for their professional training. Funds for this purpose have been obtained from the EU program «Knowledge - Education - Development».

Scientists from the Poznan University of Medical Sciences create innovative application

2018-09-26

Researchers at the Poznań University of Medical Sciences have developed the „iWound” application - a tool that through analysis and efficient data management, can help the patient in caring for the wound and improve the treatment process. Developed by a team of physicians, IT specialists and patients from the Department of General, Endocrine and Gastroenterological Surgery at the Poznan University of Medical Sciences, the application is part of a comprehensive patient monitoring system under and after hospitalization. It also allows effective prevention and reduction of the risk of surgical site infection, which is one of the biggest problems of surgical wards. The team under the direction of Prof. Tomasz Banasiewicz managed to create a unique and innovative tool that can not only significantly help the patient in the care of the wound, but also helps the medical staff, facilitates the contact with a specialist and facilitates the treatment process. More: <http://www.ump.edu.pl/aktualnosci/nowa-torska-aplikacja-iwound>

Medical University of Silesia to train doctors using medical simulation techniques

2018-09-28

The Medical University of Silesia will receive almost PLN 10 million for postgraduate education of doctors using medical simulation techniques. As part of the project, in 2019-2022 1622 people will be trained. The aim of the project is to develop professional skills and qualifications of doctors and resident doctors by organizing trainings that include maps of health needs. The courses will include virtual simulation of laparoscopic techniques in pediatric surgery, enhancing practical skills in minimally invasive surgical techniques; course of virtual simulation of thoracoscopic techniques in thoracic surgery containing the science of manipulation, transfer, capture and preparation of tissues and a course of functional diagnosis of the bone-joint and muscular

system with the use of modern technical solutions - with particular emphasis on the age of specialist doctors in medical rehabilitation. More: <https://sum.edu.pl/uczelnia/wiadomosci-z-zycia-uczelnia/8791-dofinansowanie-na-ksztalcenie-podyplomowe-lekarzy-metoda-simulation-medycznej>

European nomination for an Opole cardiologist

2018-10-02

Professor Marek Gierlotka, head of the Cardiology Clinic of the University Clinical Hospital (USK) in Opole, was elected a member of the Board of the Acute Cardiovascular Care Association (ACCA) of the European Cardiac Society. According to USK spokeswoman Małgorzata Lis-Skupińska, this is an honor and a great success for Polish cardiology. Working on the ACCA Board opens the possibility of implementing international projects and including medical and scientific staff at the University of Opole. Professor Gierlotka is also the chairman of the Intensive Cardiac Therapy and Resuscitation Section of the Polish Cardiac Society - the Polish equivalent of ACCA. As the co-chairman of the ACCA Scientific Section, Prof. Gierlotka will be responsible for coordinating activities related to science.

Rector of the Cardinal Stefan Wyszyński University: We want to educate mission doctors

2018-10-03
