- We want to educate mission doctors. We start with the assumption - which is obvious, but in practice this obviousness has been lost somewhere - that a doctor is not an ordinary profession. This vocation is connected with serving the other person - said Prof. Stanisław Dziekoński, rector of the Cardinal Stefan Wyszyński University (UKSW) in Warsaw in an interview for the weekly journal „Do Rzeczy”. The rector of the CSWU also mentioned the Collegium Medicum, a new faculty that was established at this Warsaw university. As emphasized Professor Dziekoński «a patient can not be treated as a disease entity, but as a human being who needs help». - In the next two, three years, we want to develop a medical department at CSWU, which will be part of the new quality of medicine. We also want to develop an IT school. This year, we established the Center for Digital Science and Technology with a separate module of digital medicine - added the Rector of UKSW.

NMedycyna2018 + conference held at the Lazarski University in Warsaw

2018-10-04

The Institute of Neuroscience and Cybernetic Medicine of the Medical Faculty of the Lazarski University in Warsaw organizes the conference nMedycyna2018 +. The event will take place on October 26, 2018 and will have the character of a nationwide forum devoted to new technologies in medicine. - NMedicine (new medicine) will soon be the medicine of the past. Such rapid and dynamic changes in technology are a specific challenge and a new responsibility for the doctors and medical institutions. This is an ethical obligation to use everything that is useful - and especially what's new to improve the patient's health and quality of life - says Dr. Piotr Zwoliński, chairman of the Organizing Committee of conference nMedycyna2018 +, head of the Institute of Neuroscience and Cybernetics at the Faculty of

Medicine at the University Lazarski. More: <http://www.nmedycyna.pl/>

Medical University of Gdańsk organizing a scientific and training conference Nefrooncology 2018

2018-10-04

The Department of Nephrology, Transplantology and Internal Diseases of the Medical University of Gdańsk invites participants on 5-6 October to the 1st Scientific and Training Conference Nefrooncology 2018. The plan includes lectures of eminent experts and presentations of clinical cases. The organizers intend to address the following issues: acute kidney injury / chronic kidney disease in oncological patients in the context of drug side effects and oncological therapies; active oncological treatment in renal replacement therapy patients, including renal transplant patients and renal paraneoplastic syndromes. One of the sessions will also be devoted to tuberous sclerosis. Nephrologists and oncologists combine the needs of patients and the rapid development of both fields of medicine. The Nephrologist often needs the knowledge and support of an oncologist and vice versa. As daily practice shows, there are many areas where decisions should be made jointly.

Polish-Japanese talks on cooperation at the Silesian Medical University

2018-10-05

Representatives of Toho University, during their visit to Katowice, talked with the authorities of the Medical University of Silesia on the possibilities of cooperation. The process of establishing cooperation between representatives of the Polish and Japanese scientific and medical communities are continued from this year's Forum of „Polish Medicine of the 21st Century” in Tokyo. Visitors from Japan visited the Center for Didactics and Medical Simulation in Katowice-Ligota, where they reviewed modern simulation equipment in the operating room and intensive care unit, as well as an ambulance and a virtual

anatomical table. During a few-hour visit, the hosts and guests exchanged experiences in conducting research and teaching in Poland and Japan and discussed the possibilities of cooperation between universities, the exchange of students, employees and implementation of research and development projects.

Gdańsk Medical University to receive Grant for Polish-Canadian research

2018-10-10

Dr Marcin Gruszecki from the Department of Radiological Informatics and Statistics of the Gdańsk Medical University received a grant as part of the MINIATURE 2 competition announced by the National Science Center. His research: «The influence of hypoxia on selected parameters of the brain and cardiovascular physiology» will be implemented jointly with Prof. Patrick Neara from the University of Regina in Canada. The aim of the search for scientists will be to obtain 30-minute records of blood pressure, ECG and oxygen saturation in hemoglobin chamber conditions. Hypoxia causes a number of changes in the brain, including increased perfusion, blood volume, blood-brain barrier permeability, up to a slight cerebral oedema. Better understanding of the interactions between blood pressure, heart and oxygen saturation level will contribute to a deeper understanding of the pathophysiology of high-altitude disease or sleep apnoea syndrome.

Cardiology novelties at the AS KIER Conference of the Medical University of Lodz

2018-10-11

The Clinic of Interventional Cardiology and Heart Rhythm Disorders University Hospital and Medical University of Lodz are organizing on October 25th a scientific conference AS KIER, which will be devoted to cardiac arrhythmias and interventional cardiology. During the scientific sessions, the participants will deal with the following issues: How to recognize myocardial infarction in 2018? How to treat patients after myocardial infarction? News in anti-

platelet treatment. Physical activity in patients after myocardial infarction. Speakers will also present new products in cardiology and will try to answer the questions: Can the vest save life? How to treat a patient with heart failure in 2018? Can atrial fibrillation cause myocardial infarction? More: <http://www.askier.kardiologz.pl/pl>

The Treatment Center for Drug resistant Epilepsy established in Szczecin

2018-10-11

The Department of Developmental Neurology at the University Clinical Center in Gdańsk and the Clinical Department of Pediatric Neurosurgery with the Department of Neurosurgery of the Adults of the „Zdroje” Hospital in Szczecin established the first supraregional Center for the Treatment of Drug Resistant Epilepsy. Two entities renowned and recognizable in Poland have created a centre that gives patients in Poland the chance to diagnose and treat surgical treatment-resistant epilepsy under the supervision of experienced specialists in conditions that meet the highest standards of care. Epilepsy is treated mainly pharmacologically, using drugs that in most cases bring the expected results. However, there is a group of patients who are resistant to pharmacological agents, which is particularly dangerous in children. Then it is advisable to quickly implement the surgical treatment, minimizing the effects of epileptic seizures that are destructive to the young body.

University of Technology and Humanities in Bielsko-Biała receives PLN 10 million for improving the quality of education

2018-10-12

The University of Technology and Humanities in Bielsko-Biała received PLN 10 million for the implementation of the project „Ordering competences - Nursing from education to employment”. The agreement in this matter was signed by the rector of the university - Prof. Jarosław Janicki and Under-

secretary of State in the Ministry of Health - Maciej Miłkowski. The aim of the project is to improve the quality of higher education in the field of nursing, which is expected to cause more interest of an additional number of graduates. The implementation of the project will allow to develop professional competences and qualifications of medical personnel corresponding to the epidemiological and demographic needs of the country. The goal will be achieved by organizing a series of medical vocational training for graduates.

Projects of the Warsaw Medical University win in the Golden Scalpel competition

2018-10-15

In the 10th Golden Scalpel competition, the jury distinguished two projects implemented in the clinics of the Medical University of Warsaw (WUM). The Gold Scalpel is a competition awarding prizes for outstanding innovations in Polish healthcare. The project «Implementation of an innovative and ultra-modern method of intrauterine fetal surgery with spina bifida in a carbon dioxide environment» took the second place. It was carried out in the 1st Department and Clinic of Obstetrics and Gynecology of the Medical University of Warsaw. The project: «Innovative and unique endoscopic techniques for the treatment of patients with benign and cancerous diseases of the gastrointestinal tract» took the fourth place and was carried out in the Endoscopy Laboratory of the Chair and Clinic of General, Transplant and Liver Surgery of the Medical University of Warsaw. The jury awarded the first prize to the project: «The first implantation of artificial heart in Poland» by scientists from the Silesian Center for Heart Diseases.

Medical University of Wrocław received over PLN 5 million

2018-10-15

The Medical University of Wrocław has received over PLN 5 million for the implementation of a project developing the practical postgraduate education of PhD students at the Medical Simulation Center. By June 2022, nearly 500 physicians from all over

Poland will benefit from the project. High-specialist post-graduate courses, beyond the specialization program, will be prepared for the project participants. Their thematic scope concerns medical issues based on Evidence Based Medicine related to the development of medical skills in the field of general and pediatric surgery, chest surgery, vascular surgery, neurosurgery, orthopedics and traumatology of the musculoskeletal system, urology and pediatric urology. The project assumes the implementation of two courses: «European Trauma Course» and “Intensive Practical Course of Endoscopic Surgery in Children”. Six simulation laboratories equipped with the necessary instruments will be launched within the project.

Hybrid room opened at the University Clinical Hospital in Wrocław

2018-10-16

At the Department of Cardiac Surgery, University Clinical Hospital in Wrocław, a hybrid room was officially put into operation. The investment for over PLN 7 million will enable the work of interdisciplinary teams and give new treatment options. The room is equipped in quantum technology. It is the most modern device for extracorporeal circulation in the world, which after safe stopping of the heart, allows for accurate and continuous analysis of vital signs and blood tests during surgery. The team of cardiac surgeons thanks to the use of quantum can perform the most complex heart operations. The room can be used by cardiac surgeons and cardiologists. Its functionality is based on the fact that they can perform two different treatments at the same time. The hybrid room also carries the possibility of minimally invasive surgery, thanks to which the patients' treatment time and hospital stay are shortened.

Medical University of Silesia to hold Conference „Prevention in medicine”

2018-10-19

The Silesian Medical University in Katowice invites participants to the conference „Prevention in Medicine” on October 26th. The 15th event is devoted to the prevention of diseases, early diagnostics of diseases and reducing the risk of their complications. The program of the conference provides for the presentation of the latest guidelines to improve the effectiveness of preventive and curative activities, the latest results of multicentre clinical trials and the presentations of students and PhD students of the Students' Society Scientific Society. The topics of the conference will include: prevention of cardiovascular disease, neurology, pulmonology, nephrology, geriatrics, diabetology, dermatology and infectious diseases and psychiatry. More: <http://www.profilaktykawmedycynie-2018.sum.edu.pl/>

Pomeranian Medical University in Szczecin to expand the didactic and clinical-research center

2018-10-19

The Pomeranian Medical University in Szczecin signed a letter of intent with the City of Szczecin regarding investments in the area of streets Unia Lubelska and Zimowski. The university wants to build there a modern didactic and clinical-research center for 15 academic units. The creation of modern research laboratories will enable large-scale research projects and the search for effective methods of cancer therapy. It will be possible to expand the educational offer with modern virtual reality technologies, medical e-learning platforms or expanding cooperation with medical simulation centers. - We know that the investment is serious, we believe that the rector will obtain the necessary funds. I believe that the government will send funds to Szczecin to improve the center, which can further develop and affect not only Poland but also our western neighbors - said Piotr Krzystek, mayor of Szczecin, during the ceremony of signing the document.

Scientists of the University of Life Sciences in Poznań to examine the effects of betaine

2018-10-22

Researchers from the Institute of Human Nutrition and Dietetics at the University of Life Sciences in Poznan will carry out studies aimed at assessing the effects of betaine supplementation on body composition, physical fitness and betaine metabolism in the group of men training CrossFit. The project is financed by the National Science Center. Betaine is a compound that was first isolated from beets. It is also produced in the human body with choline. In the sport aspect, it has been shown to increase muscle mass while reducing the amount of abdominal fat. This suggests the potential benefits of using it by athletes. Betaine also prevents cell dehydration, which is why it seems that it can affect the ability to exercise. Poznan scientists want to examine the exact mechanism of action of betaine and determine its most effective dose.

Medical University of Wroclaw prepared the Practical First Aid Guide

2018-10-23

The scholars of the Medical University of Wroclaw have developed a Practical First Aid Guide with instructions on how to deal with the most common health and life risks. In the guide, there are presented ways to deal with the 20 most common emergency situations, including children emergency cases with explanation how to effectively help in the event of cardiac arrest, how to recognize the symptoms of stroke and how to use the automated AED defibrillator. Each instruction includes photos and short descriptions linked by arrows indicating the order of the proceedings. The back cover has been divided into flashcards with help instructions in nine situations. After cutting, each of them easily fits in the wallet. The paper guide will be distributed at the university and among institutions and offices related to health care. It can also be downloaded in electronic version:

https://www.umed.wroc.pl/sites/default/files/files/aktualnosci/2018/10/folder_pierwsza_pomoc_www.pdf

University of Technology and Humanities in Radom to educate medical personnel for the army

2018-10-24

Minister of National Defense Mariusz Błaszczak and Prof. Eng. Zbigniew Łukasik, Rector of the University of Technology and Humanities in Radom signed a letter of intent regarding the program of education of medical personnel for the needs of military health services, which will be implemented at the Faculty of Health Sciences and Physical Culture of the University of Radom. - I am glad that the University of Technology and Humanities will teach not only doctors, but also nurses and paramedics who will then take care of the health and life of the Polish army, and civilians. I am convinced that the University is the right place where we can carry out the defense capabilities of our Homeland - said Minister Błaszczak during the ceremony. Professor Eng. Zbigniew Łukasik mentioned that the Radom university is already cooperating with the Ministry of National Defense in the industry, but now it will start cooperation in the medical field.

Faculty of Biotechnology of the University of Wrocław to hold lectures on vaccination

2018-10-24

The Faculty of Biotechnology of the University of Wrocław invites participants to a series of lectures on vaccination. During the lectures will be discussed the mechanism of immunization and the formation of immunological memory, the risks of giving up vaccination, the most important facts will be given and the myths about vaccination will be explained. The lectures are open, they will be held on Saturdays at 9:30 and last 45 minutes. The first meeting - «Introduction to immunology» - is scheduled for October 27. During the lecture, Dr. Zdzisław Wróblewski will acquaint students with the basics of immunological knowledge, which are based on vaccination. The organizers announce the presentation of the concepts of antigen and antibodies, cells of the human immune system, as well as the methods of natural acquisition of immunity. The lecturer will also talk about immunological memory and individual immunity as well as population resistance and its importance for the health of the society.

Prehabilitation at the University Clinical Center of the Medical University of Gdańsk

2018-10-24

The University Clinical Center at the hospital of the Medical University of Gdańsk is launching a project to support patients in the pre-operation period. „Prehabilitation at UCK” will start with educational activities. The first lecture „Get up before the operation” will be held on October 27. After that, breathing and regeneration exercises are planned. The projects creators want to show patients what actions accelerating the process of recovery after surgery can be taken before it. The moment when the patient learns about the need for surgery is often stressful, but it can also become a moment of awakening. The period of waiting for surgery is worth learning ways of active care for one's health. Scientific research and clinical observations have

shown that increasing the psychophysical capacity of the patient in the pre-operative period can shorten the time of hospital stay and speed up recovery. More: <https://gumed.edu.pl/50865.html>

Innovative laboratory tripod developed by scientists from the University of Silesia

2018-10-25

Researchers associated with the University of Silesia are the authors of an innovative tripod project for test tubes or other laboratory containers. The designed system can consist one or several shelves with holes for test tubes and vials. A unique solution in the project that has already been covered by patent protection is the use of a locking mechanism that holds the vessels. It prevents them from falling out when the tripod falls or turns around. The patented solution not only allows to empty simultaneously all containers, but also it enables faster washing and drying. The tripod can be used in analytical laboratories in research and industrial units as well as in school chemical and biological laboratories. The authors of the invention are Dr Robert Musioł from the Institute of Chemistry, University of Silesia and Eng. Paulina Musioł.

Poznan scientists study the properties of celandine herb as a potential cancer drug

2018-10-25

A team of scientists headed by Prof. Anna Goździcka-Józefiak from the Faculty of Biology, Adam Mickiewicz University in Poznań, researches the properties of a common plant - celandine, which may be an effective drug for some cancers caused by HPV (human papilloma virus). Celandine (*Chelidonium majus*), which is common in Poland, has been used in folk medicine for removing warts since antiquity. The plant is a well-known remedy for skin lesions, it also has cholagogic, antimicrobial, calming and analgesic properties. As a result of research, some properties of celandine have been scientifically confirmed. New applications have also been discovered. It turned out, among others, that extracts from

Chelidonium reduce the risk of new endometriosis foci. This is important because so far no effective method for treating this disease leading to infertility has been developed. More: <http://zycie.amu.edu.pl/nauka/uam-cudowne-zielenienietylko-na-raka>

II Rzeszow Forum Technology in Medicine „From an idea to an industry”

2018-10-26

The Management Board of the „Technology in Medicine” Cluster, which includes Rzeszów University of Technology, University of Rzeszów and representatives of regional hospitals, medical companies and Rymanów Zdrój health resort, invites participants to the 2nd Rzeszów Forum of Technology in Medicine „From an idea to an Industry”. The conference will take place on October 30, 2018 at the University of Rzeszów. Its aim is to familiarize students of medical engineering, PhD students, young businessmen and people who plan to create their own company related to medical industry with medicine opportunities and development ways, and to create a forum for exchanging experiences, seeking contacts and funds to conduct innovation activities and their implementation. More: <http://www.technomed.prz.edu.pl/>

Center for Medical Simulation officially opened at the Silesian Medical University

2018-10-29

The Medical Simulation Center was officially opened at the Silesian Medical University (SUM). Students can use 7 simulation rooms equipped with the most modern models - including real dental equipment for future dentists. - The launch of the next Medical Simulation Center is a response to the challenges faced by universities in the era of continuous technological development. I am convinced that this place will meet the expectations of our current students, brought up in the digital world, and also future graduates will be encouraged to study at our University - says the rector of the Medical University of Silesia Prof. Przemysław Jałowicki. The SUM, as the first university in Poland, has launched a workshop in the Center to learn comprehensive IT service of the hospital system. This will enable students to acquire skills in the use of IT tools that they will encounter in hospitals and clinics.

Student of the University of Rzeszów received a scholarship from the King of Saudi Arabia

2018-10-30

Maciej Noga, the 3rd year student of engineering at Biotechnology at the University of Rzeszów, received a research grant funded by the King of Saudi Arabia for the implementation of the scientific project „Why it is so difficult to find potent drugs against cancer? - decoding the druggability of molecular target”. The project will be carried out under the direction of an outstanding scientist in the field of protein biochemistry of Dr. Łukasz Jaremko at the University of Science and Technology King Abdullah (King Abdullah University of Science and Technology) in Saudi Arabia. King Abdullah University of Science and Technology (KAUST) is a private interdisciplinary Saudi university founded in 2009 by the King of Saudi Arabia - Abdullah bin Abdulaziz Al Sauda. The student of the Rzeszów University will receive a monthly scholarship of USD 1000, accommodation in a dormitory, travel expenses and insurance.

Silesian Medical University to launch Museum of Medicine and Pharmacy

2018-10-30

In December, the Silesian Medical University in Katowice will open the Museum of Medicine and Pharmacy of in Sosnowiec. The subsidy 100,000 PLN for the museum was given by the Mayor of Sosnowiec. The museum is to serve primarily as a teaching aid for students of medical faculties, and also it will be a perfect complement to knowledge in the history of medicine and pharmacy for the inhabitants of Sosnowiec and pupils of secondary schools. The establishment of the museum will contribute to the popularization of the rich achievements of Silesian medicine and the pioneering achievements of doctors working here. For several years, the University has been collecting unique exhibits with the intention of showing them at the university museum. In the facility located at ul. Ostrogórska 30 in Sosnowiec, there will be an exhibition of tools and equipment used in the past, a gallery presenting the work of staff in operating rooms and a former pharmacy, where you will be able to see the vessels and tools for making medicines.

Researchers from the Krakow University of Technology working on a new bandage for patients with psoriasis

2018-10-31

A team of chemists from the Faculty of Chemical Engineering and Technology of the Krakow University of Technology is working on a new type of materials for the preparation of dressings for patients with psoriasis. Works at the Krakow university are run under the supervision of Dr Eng Katarzyna Bialik-Wąs. Researchers want to create a biohybrid material hydrogel, which can provide an innovative approach to the treatment of psoriasis using the nanocarrier-drug system. - Thanks to this combination, we will create a new type of dressing with an innovative application system for medicinal preparations used in the treatment of psoriasis. Such a material will provide protection against mechanical damage and

a suitable environment for the skin covered by psoriasis, and the dual drug release system will allow gradual delivery of the active substance to the affected skin - explains Dr. Eng. Katarzyna Bialik-Wąs.

University of Natural Sciences and Humanities in Siedlce to educate doctors

2018-11-07

The University of Natural Sciences and Humanities in Siedlce is checking whether it can start educating doctors in the near future. For now, the university is analyzing the possibilities of developing a didactic base and acquiring qualified staff. The authorities of the University of Natural Sciences and Humanities set up a commission that checks if the university will be able to provide facilities necessary for the planned project. The application for permission to start medical education would be submitted at the end of April 2019. The medical course could be launched in two years. 30 students would be accepted in the first course,. It would be the third medical course, after emergency care and nursing, at the Siedlce university.

Ministry of Science and Higher Education to finance National Center of Electronic Cryomicroscopy

2018-11-07

The Ministry of Science and Higher Education decided to finance the purchase of the latest generation of the Cryo-EM electron microscope (Cryo-EM) and to create the National Center of Electronic Cryomicroscopy at the National Center for Radiation Synchrotron Solaris in Krakow. The creation of the National Center for Electronic Cryomicroscopy will allow Polish scientists to keep pace with other international research centers and will enable joining the group of world leaders in structural biology. Research using structural biology techniques has contributed to a huge advance in the treatment of many diseases, such as cancer, Alzheimer's disease and obesity. Research results obtained with the use of this technology are essential for understanding the functioning of the human body, the formation of diseases or aging processes and the development of effective therapies.

Researchers from the Warsaw Medical University receive Award of the American Physiological Society

2018-11-09

The American Physiological Society awarded the article „Chronic, low-dose TMAO treatment reduces diastolic dysfunction and heart fibrosis in hypertensive rats”, describing research conducted under the supervision of Dr Marcin Ufnal from the Department of Experimental Physiology and Pathophysiology at the Medical University of Warsaw (WUM) with the APSselect. The publication concerns the influence of TMAO - a compound found in fish and produced by intestinal bacteria, on the cardiovascular system in the hypertension model. Research on TMAO is financed from the resources of the National Science Center. The American Society of Physiology founded in 1887 is one of the most prestigious American scientific societies in the field of biomedical sciences. It counts over 10,000 members and publishes 15 prestigious scientific journals.

DIAGMOL 2018 to hold conference „Molecular biology in diagnostics of infectious diseases and biotechnology”

2018-11-12

The Warsaw University of Life Sciences (SGGW) together with the Section of Physiology and Pathology of the Polish Horse of the Society of Veterinary Sciences organize on November 17, 2018 the conference „Molecular biology in diagnostics of infectious diseases and biotechnology” DIAGMOL 2018. The aim of the conference is to promote the achievements of molecular biology and biotechnology in the diagnosis of infectious diseases. The event is also aimed at spreading the latest knowledge on infectious agents, pathogenesis of infectious diseases and the participation of non-specific and specific immune mechanisms. Particularly important part of the conference is the «Young Scientists» session, during which the employees of science in various research centers in Poland will present their works related to the subject of the conference.

Researchers from the Collegium Medicum of the Jagiellonian University to investigate the influence of the electromagnetic fields

2018-11-13

Researchers from the Department of Biophysics Collegium Medicum of the Jagiellonian University (CM UJ) in Krakow have started a multidirectional research project „The influence of electromagnetic fields on the human body”. - Electromagnetic fields are ubiquitous and cannot be avoided. Field sources are present in our natural environment, but their intensity is millions of times smaller than the intensity of electromagnetic fields originating from artificial sources, created by our civilization - said Prof. Eugeniusz Rokita from the Department of Biophysics, Department of Physiology, Faculty of Medicine, CM UJ. Krakow scientists want to investigate whether the fields of electromagnetic frequencies used in

wireless communication have an impact on our health. The research is to focus both on checking the subjective assessment of the influence of electromagnetic fields on the body based on questionnaire studies and on conducting a series of clinical tests.

Silesian Medical University to build the Silesian Medical Platform eCareMed

2018-11-13

Almost PLN 67 million will be awarded to the Medical University of Silesia in Katowice (SUM) for the Silesian Medical Platform eCareMed. The project was created in response to the needs of patients in early diagnostics of oncology, cardiology and neurology diseases. Implementation of the project «Silesian Digital Medical Platform eCareMed - Telemedicine and exploration of medical data» will allow minimizing waiting time for diagnostics, treatment and rehabilitation. It will also increase the access of doctors to the results of patient tests. The platform will allow the use of information and communication technologies in the area of e-health. The project led by the SUM, will be implemented by partners: the Silesian Center for Heart Diseases in Zabrze; Beskidzkie Centrum Onkologii, Municipal Hospital of John Paul II in Bielsko-Biała; Center of Oncology - Maria Skłodowska-Curie Institute in Gliwice, University Clinical Center and Upper Silesian Medical Center SUM. More: <https://sum.edu.pl/uczelnia/wiadomosci-z-zycia-uczelni/9024-niemal-67-mln-zl-dla-slaskiego-universytetu-medycznego-w-katowicach-na-slaska-platforme-Medical-ecaremed>

Prof. Herta Flor to hold a lecture at the University of Wrocław

2018-11-13

The University of Wrocław and Academia Europaea Wrocław Knowledge Hub invite participants to the lecture of Prof. Herta Flor „From acute to chronic pain: the role of learning and cerebral plasticity”. Professor Flor, a world-renown specialist in the field of neuropsychological research on chronic pain, will talk about short-term and chronic pain, its impact on the body and quality of life, and how neuropsychology can help in coping with suffering. Herta Flor is a professor of neuropsychology at the University of Heidelberg and the director of the Cognitive and Clinical Neuroscience at the Central Institute of Mental Health in Mannheim. She also deals with the process of learning and memorizing in the context of neurology, treatment of psychological disorders such as depression, anxiety or substance abuse and neuropsychological rehabilitation.

Pomeranian Medical University in Szczecin gains PLN 12 million to study civilization diseases

2018-11-15

The Pomeranian Medical University in Szczecin received about PLN 12 million for the project „The impact of biological and environmental factors on the development of selected diseases, with particular emphasis on civilization diseases, and methods of their prevention and treatment”. The aim of the project is to conduct interdisciplinary research combining the issues of medical sciences and health sciences. The subject of the proposed research concerns issues related to civilization diseases of various origins - from biologically or environmentally conditioned diseases to social and psychological disorders. Money for research is allocated from a pilot competition under the «Regional Initiative of Excellence» program of the Ministry of Science and Higher Education and will be paid for four years. <https://www.pum.edu.pl/aktualnosci/12-mln-zl-dla-pum>

Ceremonial opening of the Medical Simulation Center at the Medical University in Poznań

2018-11-16

Medical Simulation Center was officially opened at the Medical University of Poznan. This modern, multi-profile center will operate in a new university building –Adam Wrzosek Collegium. The project has received over PLN 16.5 million from European funds. The Center consists of eight high fidelity halls together with control rooms, the operating department, two intensive care rooms, the hospital room of the emergency department; a carriage simulator, delivery room and two nursing rooms. In addition, there are also six rooms of low fidelity and ten didactic rooms - including a room for practicing with standardized patients. Exercises with the participation of standardized patients - actors professionally prepared to play the history of the course of a given disease will be a novelty at the Poznan university. <http://www.ump.edu.pl/universytet/unia-europejska/centrum-symulacji-medycznej>

Prof. John-Dylan Haynes to deliver lecture as part of the project ‚Great Questions in Krakow’

2018-11-20

Professor John-Dylan Haynes, director of the Berlin Center for Advanced Neuroimaging, will deliver an open lecture on free brain imaging on November 22. The event is part of a joint project of the Center for Copernicus of Interdisciplinary Studies, the Jagiellonian University and the city of Krakow entitled „Great Questions in Krakow”. This time the listeners will learn the answers to the questions: What effect do our cognitive processes have on free will? How does the brain code our experiences and thoughts? Can neuro-scans illustrate brain activities such as decision making, remembering or imagining? Does modern science allow us to predict what decisions we will make? The lecture will be delivered on November 22, 2018 at 18.30 at the Faculty of Law and Administration of the Jagiellonian University, ul. Krupnicza 33a in Krakow.

Researchers of the Medical University of Wrocław receive Grants of the National Science Center

2018-11-21

Three scientists from the Medical University of Wrocław received grants from the National Science Center within Opus and Preludium calls. The winner of the Opus call was Wojciech Kosmala from the Department and Clinic of Cardiology. He received over 400,000 PLN for the implementation of the project: «A hypertensive response to moderate exercise load and an increased risk of developing cardiovascular complications and reduced exercise tolerance». The PRELUDIUM grant was granted to Artur Andrzej Nahorecki from the Department of Angiology at the Faculty of Health Sciences for the implementation of the project: «Sleep apnea syndrome in patients with carotid stenosis - affecting the stability of atherosclerotic plaque” and Aneta Popiel from the Department of Histology and Embryology at the Faculty of Medicine for the implementation of the project: „The role of testine expression in pre-invasive and invasive cervical cancer”.

Consortium of Gdańsk universities to carry out the BIONANOVA project

2018-11-22

The consortium of Medical University of Gdańsk, University of Gdańsk (leader), Gdańsk University of Technology and INNOVABION Ltd will implement the project „New generation systems for the delivery of bioactive molecules in chemically synthesized and genetically engineered nanobiomaterials (BIONANOVA)”. The results of the BIONANOVA project will be used to develop new unique methods of drug delivery and to create innovative nanobiomaterials for the treatment of diseases of various etiology. The research will be carried out using advanced cell culture techniques, immunology, molecular biology and genetics. The proposed budget for the project is over PLN 25 million. The money for the project's implementation is allocated by the TECHMATSTRATEG program of the National Center for Research and Development. The goal of the Program is to stimulate the growth of innovation and competitiveness of the Polish economy.

Call for international research projects devoted to antibiotic resistance is launched

2018-11-26

On 5 December 2018, the international call JPI AMR (Joint Programming Initiative on Antimicrobial Resistance) will be launched. It is dedicated to antibiotic resistance. The call is to bring international research projects focused on the development of tools, technologies and methods of diagnostics that allow detection of antimicrobial resistance. Financial support will be provided to research projects that may impact areas, where the risk of antibiotic resistance is most serious, such as low- and middle-income countries in Africa and Asia. The budget for the competition is EUR 20 million, including EUR 500 thousand allocated by the Council of the National Science Center to fund the participation of Polish researchers. More: <https://www.jpiamr.eu/>

University Clinical Center in Gdańsk wins the „Innovation Code” competition

2018-11-26

The University Clinical Center of the Medical University of Gdańsk was awarded in the competition „Code of Innovation” for the use of bar codes for the identification of medical devices, which can provide the elimination of medical errors. Implementation works of the medical barcode identification system started in Gdańsk in 2015. The goal was the efficient assignment in the IT system of a medical device used in the treatment process for a particular patient - based on a global standard for tracking and tracing products (so-called traceability). The competition is organized by the GS1 Polska Foundation - the only institution authorized to accept companies from Poland and the EU to the GS1 System and to grant them the right to use GS1 codes. The global GS1 organization operates in 150 countries around the world. From 2018, it awards prizes to companies and organizations that use GS1 standards to improve their efficiency.

Opole University and the State Medical University of Applied Sciences in Opole to merge

2018-11-28

From the beginning of next academic year, the University of Opole (UO) and the State Medical School of Higher Education in Opole (PMWSZ) will merge in one university. This will result in establishing the Collegium Medicum, an organizational unit that brings together didactics and science in medical sciences, health sciences and physical education. All fields of studies, previously conducted at the University of Silesia and the PMWSZ will be administered and organizationally assigned to Collegium Medicum. At the extraordinary session of the Senate, the rector of the PMWSZ Dr Tomasz Halski emphasized - I promise hard work and I assure that the PMWSZ team is prepared for the merger. We have considerable scientific potential, scholars with great scientific achievements. I am glad that we will con-

tribute a lot into the university's structure, including discipline of health science. More: <http://www.uni.opole.pl/page/2561/senat-uo-za-wlaczeniem-pmwsz-w-strukture-universytetu>

20 years of the Technology Transfer Center of the University of Warsaw

2018-11-30

The spin-off company of the Warsaw University Warsaw Genomics, which specializes in conducting genetic tests as well as a research team that discovered a method of obtaining sustained mRNA for develop innovative anticancer vaccines, were awarded at the 20th anniversary of the Technology Transfer Center of the University of Warsaw. During the ceremony, Prof. Marcin Pałys, rector of the University of Warsaw explained that the best universities do not only conduct edge-cutting research and ensure the quality of education. They also have a strong impact on the environment, including the commercialization of the results of research and the support of entrepreneurship of employees, PhD students and students. The Central European Startup Awards distinguished the spin-off company Warsaw Genomics in 2017 as the best biotechnology start-up in Poland.

Center for Genetic Engineering established at the University of Environmental and Life Sciences in Wrocław

2018-12-04

The Center for Genetic Engineering equipped with modern and unique research infrastructure was opened at the Faculty of Veterinary Medicine at the University of Life Sciences in Wrocław. The creation of the center cost nearly PLN 5.5 million. The Center's equipment allows students to breed and conduct biomedical basic and preclinical research in vivo on small animal models, in an environment free of specific pathogens and in the conditions of good laboratory practices (GLP). The Center will also be a place for training students and PhD students. Scientists of the University of Life Sciences in Wrocław have many years of experience in the application of genetic engineering techniques to create genetically modified cells and animal research models. Currently in cooperation with the Wrocław Medical University it conducts research on the molecular mechanisms of resistance to chemotherapy of breast cancer cells. More: http://www.glos.upwr.edu.pl/aktualnosci/48665/centrum_inzynierii_genetycznej_upwr.html

University of Zielona Góra to hold EXPO Conference Medical Simulation - Challenges of the Future

2018-12-05

The Faculty of Medicine and Health Sciences of the University of Zielona Góra invites participants to the EXPO Conference Medical Simulation - Challenges of the Future. As part of the two-day meeting on December 6 and 7, the organizers are planning lectures, discussion panels and workshops. Medical simulation is becoming a standard of education in medical majors. It has opened a range of hardware options for undergraduate and postgraduate education. The Zielona Góra conference is to be a place for discussion and exchange of experiences related to the implementation of the didactic program in order to learn about the latest technologies and

available solutions in teaching the methodology of medical simulation,. The organizers are planning to talk about design, organization and management of the Medical Simulation Center. More: <http://www.exposymulacjamedyczna.pl/>

Researcher of the Medical University of Silesia to examine the impact of obesity and gestational diabetes on the course and resolution of pregnancy

2018-12-07

Linda Litwin from the Faculty of Medicine of the Medical University of Silesia will carry out the project „Intergenerational influence of maternal obesity and gestational diabetes on the cardiovascular system and the cardiovascular risk profile in offspring in early childhood”. Her research, co-financed under the Preludium competition, is to help check whether maternal obesity and gestational diabetes directly interfere with fetal development of the cardiovascular system, increasing the risk of cardiovascular disease at a later age. The impact of maternal obesity and gestational diabetes and resolution of pregnancy is a particularly important issue for public health, due to the possible long-term health consequences for the offspring. The relationship between obesity and gestational diabetes has been proven to be associated with an increased risk of excessive weight gain in childhood. Gestational diabetes disturbs fetal development, leading to macrosomia, hypertrophy of the heart muscle and dysfunction of the heart.

International team of scientists fights the antibiotic resistance of bacteria

2018-12-07

The crystallographers of the Adam Mickiewicz University in Poznań, together with experts from the University of Virginia and the National Cancer Institute in the USA, are dealing with one of the most current problems in medicine, related to the anti-

biotic resistance of pathogenic bacteria. The widespread use of antibiotics in humans and animals has led to acquiring by dangerous bacteria the ability to break down any antibiotics, including antibiotics from the last batch of β -lactams, chemically similar to penicillin. The degradation of these drugs is due to enzymes called metallo- β -lactamases. The current world situation associated with antibiotic resistance is very bad. Fewer and fewer antibiotics can act and many infections can become fatal. To solve this problem, researchers from UAM are looking for a molecule, a chemical agent that could block metallo- β -lactamase and restore the power of antibiotics.

Poznań Science and Technology Park runs a genomic laboratory

2018-12-07

The Poznań Science and Technology Park of the Adam Mickiewicz University Foundation opens a genomic laboratory. A modern equipped lab will conduct research in the field of molecular biology. The laboratory's tasks will include processes aimed at preparation of sequencing material, mainly DNA / RNA isolation from the supplied material and its purification, e.g. isolation of genetic material from contaminated culture or from a fragment of tissue. The laboratory will conduct research, development and commercial research. In the case of genetic crosses and transgenic plants, DNA sequencing and reading of the genetic code can be used to select individuals with a characteristic that can be transferred to the next generation. It speeds up the research process of introducing new varieties of useful plants, recognizing bacterial species, and exploring the mechanisms of genetic diseases.

Researcher of the Medical University of Gdańsk received the Bekker scholarship

2018-12-10

Dr Marlena Zyśk, assistant professor of the Department of Molecular Medicine at the Department of Clinical Biochemistry at the Medical University of Gdańsk, received the Bekker scholarship from the National Academic Exchange Agency. The scholarship will allow the scientist from the Gdańsk university to spend 12 months at the University of Uppsala (Sweden) to implement the project «The role of immune-reactive astrocytes in the progression of Alzheimer's disease». Dr Zyśk will conduct research together with a team of Prof. Anna Erlandsson (Molecular Geriatrics / Rudbeck Laboratory). The research project is a continuation of scientific cooperation between Dr Zyśk and Prof. Erlandsson launched in 2016 during her first research scholarship at the Molecular Geriatrics. Part of the study was published as «The A β protofibril selective antibody mAb 158 prevent accumulation of A β in astrocytes and rescues neurons from A β -induced cell death» (Sollvander et al, 2018).

Poznan scientists investigating how cells deal with DNA damage

2018-12-10

Dr. Paweł Zawadzki from the Department of Molecular Biophysics, Faculty of Physics, Adam Mickiewicz University in Poznań, studies how cells deal with DNA damage. The knowledge gained in this way can be used to improve the quality of treatment for people with cancer. Dr. Zawadzki investigates one of the types of DNA repair consisting in nucleotide excision (NER - nucleotide excision repair), the basic component of the code – Physically, it provides an excision, one of the enzymes acts like scissors, cuts DNA on both sides of the damage, ejects the parts, and then synthesizes new ones that is not damaged - explains the scientist. - If this system works well in humans, there are no mutations in the genes. However, if this repair works poorly, for example in a smoker, the system will not be able

to cut out the damaged piece and many mutations can accumulate in the body and their consequence is cancer - adds Dr. Zawadzki. More: <https://amu.edu.pl/wiadomosci/aktualnosci/z-zycia-uam/wygramy-z-rakiem-dzieki-bakteriom>

Chemical department of the Wrocław University of Technology equipped with mass cytometer

2018-12-11

The Laboratory of Imaging is launched at the Faculty of Chemistry of the Wrocław University of Technology. The facility has been already equipped with the mass cytometer, the most modern device for the analysis and diagnosis of cellular samples and advanced proteomics. This is only one device of this type in Poland. Mass Cytometry is an analytical technique that has recently revolutionized modern medical diagnostics in academic laboratories and the pharmaceutical industry. It uses mass spectrometry, sample testing by means of mass spectra analysis of metal atoms, which are used as markers. With the mass cytometer, scientists can test, for example, cancer cells or leukemia cells, blood cells, and even cells from parasites and bacteria. At the Wrocław University of Technology, the device will be used primarily for the study of proteolytic enzymes (proteases) - specialized proteins that break down peptide bonds. More: <http://pwr.edu.pl/uczelnia/aktualnosci/cytometr-masowy--ultranowoczesny-aparat-pomozew-diagnostyce-11042.html>

Researcher at the Warsaw Medical University wins a prize from the European Orthodontic Society

2018-12-13

Dr MSc Ewa Czochrowska from the Department of Orthodontics of the Warsaw Medical University (WAM) received the Distinguished Teacher Award. The prize is awarded annually a distinguished European lecturer in the field of orthodontics by the European Orthodontic Society. Dr Ewa Czochrowska is the first Polish orthodontist who was honored with

this award. The European Orthodontic Society is the oldest and largest orthodontic company in Europe. It was founded in 1907. The seat of the company is London. The Society publishes the European Journal of Orthodontics and organizes annual orthodontic congresses in various European countries.

Medical University of Gdansk examines Polish seniors

2018-12-13

The Medical University of Gdańsk is carrying out research on the health condition of Poles aged over 60 and its social background. The PolSenior 2 project involves 6,000 respondents aged 60 -100 years drawn on the basis of the PESEL number by the Ministry of Digitization. The study will allow not only to assess the health of older Poles, but also, through the comparison with the results of the PolSenior survey carried out 10 years ago, will indicate beneficial and unfavorable health trends in one of the fastest-growing European societies. The main research tools are questionnaire surveys, laboratory tests, geriatric tests as well as anthropometric and blood pressure measurements. The conclusions of the research results will allow to define the needs of the population of present and future seniors, as well as adjusting the system activities of public institutions to social changes awaiting us over the next dozen or so years.

Reportage at BBC Arabic on the research of scientists from the Jagiellonian University

2018-12-14

Reportage on research conducted at the Małopolska Biotechnology Center of the Jagiellonian University in Kraków by the Białystok Protein Crystallography Research Group under the supervision of Dr Grzegorz Dubin, appeared on BBC Arabic. Research conducted by Dr Dubin is to enable a better understanding of the structure of proteins and their functioning in the human body, which can be used in the creation of new drugs. The BBC's Arabic-language television channel presented material as part of the 4Tech program - a series of BBC Arabic reportages devoted to the latest scientific discoveries and technical inventions that are watched by millions of viewers, mainly from the Middle East and North Africa. See the BBC Arabic report: <https://youtu.be/3IGgqVtsWzM>

Students of the University of Zielona Góra Polish become champions in surgical sewing

2018-12-14

Students of the medical faculty of the University of Zielona Góra won the Polish Surgical Sewing Championship. Zielona Góra University organized competition for 80 medical students from 20 teams from all over Poland. The competition included 4-person teams from medical universities, clubs and student associations from all over the country. The two-day competition was divided into two parts. In the first, theoretical part, the lectures were held to prepare participants in terms of content. The second practical part consisted in checking the skills acquired on the first day. Students from Zielona Góra defended the title from last year. The second place was taken by the team from Wrocław, and the third by the students from Lublin. The main goal of the championship is to raise the knowledge and skills of medical students in the field of surgical stitching techniques, knowing modern suturing materials and the integration of medical universities from Poland.

Biologists from the University of Warsaw identified a new enzyme

2018-12-17

Researchers from the Faculty of Biology of the University of Warsaw (University of Warsaw) together with researchers from Belgium and Germany have identified a new enzyme that plays an important role in the proper functioning of the human and animal body. The results of the research have been published in the „eLife” magazine. Dr Jakub Drożak with his colleagues from the Faculty of Biology of the University of Warsaw Sebastian Kwiatkowski, Agnieszka Seliga, Dr Takao Ishikawa, Dr Iwona Grabowska and Dr Adam Jagielski, in collaboration with scientists from the Institut de Duve in Belgium and the Deutsches Krebsforschungszentrum (DKFZ) from Germany, identified the gene coding for one of the most mysterious orphan enzymes found in mammals - actin methyltransferase. The examined methyltransferase realises important, though not fully understood functions in the muscular and nervous system as well as in the development of some cancers. See the article in «eLife»: <https://elifesciences.org/articles/37921>

Medical University of Silesia to launch the Museum of Medicine and Pharmacy

2018-12-17

The Museum of Medicine and Pharmacy was officially opened at the Faculty of Pharmacy with the Division of Laboratory Medicine at the Medical University of Silesia. For the needs of the exhibition, the ground floor of Student Dormitory nr 2 in Sosnowiec was adapted. In the museum visitors can watch several thousand of exhibits - including the apparatus of a lung machine made by Prof. Tadeusz Paliwoda, cardiac surgeon of the Silesian Medical Academy, operating table of Prof. Wiktor Bross and the first Polish hip joint endoprosthesis designed by the team of Dr Janusz Daab from Piekary Śląskie. The museum will serve as a didactic aid for students, and will contribute to popularizing knowledge about the achievements of Silesian and Zagłębie medicine and

the pioneering achievements of doctors and pharmacists working in Silesia. The university has spent over PLN 2.6 million from its own resources for the renovation and equipment of the museum. 100,000 PLN was allocated by the City Hall of Sosnowiec.

Modern animal laboratory opened in Poznań

2018-12-17

In the Wielkopolska Center of Advanced Technologies in Poznań Animal Laboratory was launched. It is one of the most modern facilities in Poland that creates opportunities for in vivo and in vitro research in biomedical sciences, with particular emphasis on pharmacology, toxicology, oncology and pathophysiology. The facility is housed in a building adapted to SPF (Specified Pathogen Free) animals and transgenic animals. It is equipped with a continuous and emergency ventilation system with three types of filters, pass-through autoclaves, automatic washers and locks with air shower for staff, as well as imaging equipment in vivo, computer tomographs, analytical and histological laboratories. The Animal Laboratory enables the molecular and physiological examination of pathomechanisms of human diseases (infectious, cancerous, genetically determined) with the use of appropriate animal models.

Scientist of the Medical University in Wrocław creates an innovative wound treatment workshop

2018-12-17

The scientist of the Medical University of Wrocław is creating an innovative wound treatment workshop to use ESW - Extracorporeal Shock Wave. The project will be implemented as part of the Mozart program 2018/2019. The leader of the project «Decumed: Organization of an innovative workshop for treating chronic wounds with shock waves» is Dr Robert Dymarek from the Department of Nervous System Diseases. The aim of the project is to shorten the duration of therapy, reduce pain and exudate from the wound, as well as reduce the stress associated with impaired healing, minimize the occurrence of complications, and improve the quality of life. The Mozart - Municipal Program of Supporting Partnership for Higher Education and Science and the Economic Activity Sector is a program adopted in 2012 by the City Council of Wrocław. Its aim is to support the Wrocław labor market by enabling companies to access the intellectual potential of scientists. More: <https://wca.wroc.pl/dr-robert-dymarek-decumed-organizacji-innowacyjna-pracowni-leczenia-ran-przewleklych-skory-z-aposowania-fali-uderzeniowej>

In January scientists from the University of Warmia and Mazury to start microbiological research in Antarctica

2018-12-19

Professor Aleksander Świętecki and Dr Dorota Górniak from the Department of Microbiology and Mycology at the University of Warmia and Mazury in Olsztyn set out in January 2019 for Antarctica, where they will conduct microbiological research in the Polish Antarctic Station for 4 months. - We will investigate the bacteria in Antarctic lichens. This is an interesting topic, so far we know little about these microorganisms - says Dr Dorota Górniak. Sci-

entists hope that some Arctic microorganisms have biochemical potential and can be used in medicine - for the production of antibiotics or in the production of biopolymers.

Cardinal Stefan Wyszyński University received the right to education in nursing

2018-12-19

The Polish Accreditation Committee has positively examined the application of the Cardinal Stefan Wyszyński University (UKSW) in Warsaw for granting the Faculty of Medicine Collegium Medicum the right to conduct education in nursing. The consent applies to first level studies with a practical profile. The course will start in February 2019. The uniqueness of the educational offer of the Warsaw university is Polish or English language of the course. This is the only study of this type in Warsaw. Nursing in English at CSWU can be studied both by foreigners and Poles. Importantly, 3-year full-time studies are free of charge for every student. This is a huge benefit for students as foreign language studies at most Polish universities are paid.

Researcher from the Jagiellonian University wins the Award of the Biotechnology Committee of the Polish Academy of Sciences

2018-12-20

Dr Katarzyna Magiera-Mularz from the Faculty of Chemistry at the Jagiellonian University in Krakow received the Prof. Waclaw Szybalski Award of the Biotechnology Committee of the Polish Academy of Sciences for the best original work of a young Polish researcher in the field of biotechnology published last year in an international journal. Dr Katarzyna Magiera-Mularz was awarded for the publication «Bioactive Macrocyclic Inhibitors of the PD-1 / PD-L1 Immune Checkpoint», which appeared in the journal «Angewandte Chemie International Edition». In the award-winning publication, Dr. Magi-

era-Mularz presented the results of her work, which is «a significant contribution to the development of PD-L1 inhibitors with potential use in immunotherapy - the most promising among recently developed anti-cancer strategies».

Researcher from the Warsaw Medical University awarded the Prize of Presidents of the Polish Cardiac Society

2018-12-21

Dr Medical Sciences Marcin Grabowski from the 1st Department of Cardiology Clinic of the Medical University of Warsaw (WUM) has been awarded this year's prize of the Presidents of the Polish Cardiac Society (PTK). The award committee appreciated the series of seven papers on the use of clinical and biochemical markers in the diagnosis and prognosis of patients with acute cardiological conditions. The awarded works enrich the knowledge about the results of distant treatment of acute coronary syndromes, independent deathly risk factors after leaving the hospital - informs Bayer Ltd, the founder of the prize. The PTK Presidents Award is an individual prize, awarded for an original, defined scientific achievement or an innovative solution in the field of clinical or experimental cardiology, documented by works published in peer-reviewed scientific journals.

Wrocław students to carry out the project in cooperation with the European Space Agency

2018-12-24

Students of the Medical University of Wrocław will be the first Polish academic team in history that will conduct research in the field of medicine and astrobiology in cooperation with the European Space Agency. The ARES team project has been accepted for implementation under Spin Your thesis! 2019. The project is an experiment on the functioning of cancer cells in changed gravity. In the device Large Diameter Centrifuge will be carried out experiments on samples that will be exposed to acceleration from 1 g to 20 g. Participation in the competition is part of the project «Research on the protection of biological material for the needs of space missions» financed by the Ministry of Science and Higher Education as part of the competition «The best of the best! 3.0.» It is attended by students of the Medical University of Wrocław, the University of Wrocław and the Wrocław University of Technology.

Gdańsk scientist wins the prestigious EMBO grant

2018-12-27

Dr Michał R. Szymański from the inter-university faculty of biotechnology of the University of Gdańsk and the Medical University of Gdańsk becomes a laureate of the prestigious grant of the European Molecular Biology Organization - EMBO Installation Grants. Dr. Szymański deals with the research of mitochondrial DNA repair mechanisms in humans. These studies may contribute to more effective diagnosis and treatment of cancer or neurodegenerative diseases. EMBO is an organization consisting of over 1,800 prominent scientists in the field of natural sciences in Europe and abroad. It grants awards to young outstanding scientists with foreign experience for setting up an innovative research laboratory. The winners receive 50,000 Euros per year from 3 to a maximum of 5 years to support the creation of a research group and conduct innovative research.

Scientists from Białystok discovered the unusual properties of *Heterobasidion annosum*

2018-12-28

Researchers from the Medical University of Białystok (UMB) and the Białystok University of Technology filed a patent application on the use of *Heterobasidion annosum* pine to treat colorectal cancer. This is the result of research on the use of fungi found in the Białowieża Forest in the treatment of cancer. At the beginning of 2018, scientists reported the creation of a bank of extracts of over 150 fungi occurring in the Białowieża Forest, which is located at the Science and Research Center of the Faculty of Forestry at the Białystok University of Technology in Hajnówka. The properties of the *Heterobasidion annosum* were first tested on physiological cells and colon cancer cells grown in the laboratory, and then on laboratory mice. The patent application concerns a new application of this fungus that stops the development of colon cancer cells - informed Prof. Halina Car, head of the UMB experimental pharmacology department.

Researcher at the University of Wrocław to examine the role of invasive species in the epidemiology of tick-borne diseases

2018-12-28

Dr Joanna Hildebrand from the Institute of Genetics and Microbiology of the University of Wrocław received a grant from the Miniatura program of the National Science Center for the project „Invasive species as hosts of pathogens transmitted by ticks and <dilution effect>”. Thanks to the subsidy, Dr Hildebrand will examine the role of invasive species - the raccoon and Asian raccoon in the epidemiology of tick-borne diseases. Pathogens transmitted to the

human body and animals through tick bites cause Lyme disease, babesiosis, anaplasmosis and rickettsiosis. One of the results of research on factors influencing the spread of pathogens is the hypothesis called the «dilution effect» - the incidence of pathogens in the biotope decreases with the increase in the number of animal species that are hosts of ticks and also the reservoir of microorganisms. In this light, a question arises about the assessment of the role of invasive species in the pathogen-vector-host system.

Graduate of the Gdańsk University of Technology receives Award of the Polish Association of Plastics Converters

2018-12-31

MSc. Agnieszka Sulowska from the Department of Polymer Technology at the Faculty of Chemistry of the Gdańsk University of Technology took the first place in the competition of the Polish Association of Plastics Processing Processors for the best diploma thesis in the field of plastics. The awarded work concerned the use of polyetherresils in tissue engineering - combining engineering with medicine in the field of science, which aims to repair damaged tissues. It uses a combination of biomaterials, cells and bioactive components that create a functional structure to support tissue regeneration. Tissue engineering uses special scaffolds of porous tissue developed from natural polymers, synthetic polymers and inorganic biomaterials. They can be used in the processes of bone regeneration, cartilage, liver, wound healing, treatment of cardiac anemia and as a drug release system.

New solution in tomographic and microtomographic tests

2018-12-31

Researchers from the University of Silesia are co-authors of the solution used in tomographic and microtomographic studies to obtain a more precise picture of the structure of a given object. The method has been already patented. «Method for the preparation of an object constructed of a material with low X-ray absorption coefficient for X-ray examinations» was developed by Dr Andrzej Woźnica, Dr Jagna Karcz and Jerzy Karczewski, in cooperation with Dr Marcin Binkowski. The inspiration to the invention was the study of the structure of freshwater sponges *Spongilla lacustris* - primitive aquatic animals living in colonies and characterized by various asymmetric shapes. To get to know them more accurately, a team of biologists from the University of Silesia decided to recreate the internal structure of sponges in the form of a three-dimensional image using computed tomography and microtomography. More: <https://www.us.edu.pl/obraz-z-badania-tomograficznym-będzie-jeszcze-dokładniejszy-patent-dla-us>

University of Medical Sciences in Katowice looking for methods of warming patients in hypothermia

2018-12-31

The University of Medical Sciences in Katowice will implement the project „Assessment of warming efficiency using continuous renal replacement therapy - seeking an effective method of extracorporeal warming of the victims in deep hypothermia”. The research will be financed by the National Science Center as part of the call Miniatura 2. Effective warming of patients in hypothermia is a basic condition for their survival. In Poland, every year, 300-600 people lose their lives due to hypothermia, often in local hospitals and without access to advanced in vitro warming methods. A large part of these facilities, however, have intensive care units and the possibility of continuous renal replacement therapy (CRRT - Continuous Renal Replacement

Therapy). The effect of the research is to determine the maximum possibilities of heating patients in severe hypothermia using CRRT devices, determining the optimal heating scheme, as well as reducing the mortality of patients in hypothermia.

Researchers at the University of Warsaw developing digital attachments for operational microscopes

2019-01-02

Researchers from the Faculty of Physics of the University of Warsaw (UW) are developing digital attachments for operational microscopes, thanks to which the microscope image can be displayed on the monitor. Until now, operations under the microscope are usually done so that the surgeon sits for many hours leaning over the microscope and observes the operating field through a pair of glasses. - Our solution allows surgeons to look at a very large, three-dimensional screen displaying what the microscope sees, instead of looking into microscope glasses, - said Dr Piotr Wasylczyk, assistant professor at the Faculty of Physics, University of Warsaw. He emphasizes, that such an attachment to existing microscopes is the first step for them to re-develop completely a digital stereoscopic microscope.

Researchers from Wrocław, Gdansk and Krakow investigating the O'nyong-nyong virus

2019-01-02

Scientists led by Dr Eng. Marcin Sieńczyk from the Wrocław University of Technology will investigate a dangerous virus. National Science Center has allocated over PLN 2 million for the project „O'nyong-nyong virus CP protease: substrate profiling, design and synthesis of inhibitors and molecular probes with their biochemical analysis”. - This virus is practically unexplored. We derive current knowledge by analogy to other viruses belonging to the same family. We deal with this topic because there is a real epidemic threat, perhaps also in Europe, and at the moment we do not have any medicine or vaccine.

The aim of the project is designing compounds that inhibit the virus's ability to multiply and reduce its infectious potential. The research team also includes: biochemist - Prof. Adam Lesner from the University of Gdańsk and a virologist - Prof. Krzysztof Pyrc from the Jagiellonian University. More: <http://pwr.edu.pl/uczelnia/aktualnosci/nasi-naukowcy-beda-badac-grozny-wirus-z-ugandy-11050.html>

Researcher of the University of Wrocław awarded for her research on smell

2019-01-08

Dr Anna Oleszkiewicz from the Institute of Psychology at the University of Wrocław received the award for scientific achievements in 2018, funded by the Research section on the Smell and Taste of the German Otorhinolaryngological Society. The award was granted during a conference in Bern, where Dr. Oleszkiewicz presented new age standards of the most popular test of smell «Sniffin 'Sticks», developed on a sample of over 9100 people. She published an article on this subject in the journal European Archives of Oto-rhino-laryngology. According to the test results, new standards of sex and age were necessary because the previous normative values were based on smaller sample sizes - especially in the group of older individuals. After developing the results of the new tests, a significant effect of sex and age on the olfactory efficiency was observed. The most pronounced was the increase in the olfactory test results between 5 and 20 years of age and a dramatic decline between the ages of 60 and 71.

Scientists to develop a system to detect the disease using the patient's voice analysis method

2019-01-11

Researchers and physicians from the Medical University of Białystok, together with experts from the Krakow company Techmo, will develop a VAMP diagnostic system (Voice Analysis for Medical Professionals), which is to help diagnose patients by voice analysis. Nearly PLN 10 million has been allocated for this purpose by the National Center for Research and Development. The project will be implemented for 4 years. Thanks to this method, medical diagnostics can be initiated during a telephone conversation with a patient. According to the marketplacezdrowia.pl, more than 500 people will take part in the research, including patients with such problems as: neurodegenerative changes, dementia, stroke and changes in the central nervous system, coronary artery disease and peripheral atherosclerosis, heart failure, obesity, metabolic syndrome, diabetes, hypothyroidism, respiratory diseases, depressive-anxiety disorders and schizophrenia.

Researcher of the Medical University of Gdańsk becomes a laureate of the Science Populariser competition

2019-01-11

Paulina Łopatniuk from the Department of Physiology of the Gdańsk Medical University has become one of the winners of the Science Populariser competition organized by the Polish Press Agency and the Ministry of Science and Higher Education. The Gdańsk researcher runs a scientific blog «Patologists». She discusses various medical issues, especially in the field of pathology, oncology, reproductive biology, infectious and parasitic diseases, and preventive vaccinations, in accessible way. The 14th „Science Promoter” competition ended on January 7 at the Copernicus Science Center in Warsaw. The ceremony was attended by Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin and Vice President of the Polish Press Agen-

cy Łukasz Świerzewski. The competition has been organized since 2005. Awarded blog: <https://patolodzyna.klatce.wordpress.com/>

University of Rzeszów to launch Interdisciplinary Center for Preclinical and Clinical Research

2019-01-14

Within two years, the University of Rzeszów will launch a new facility to carry out experiments on animals, including pigs, mice, rats and rabbits. The research will be conducted by the biotechnology department. The University of Rzeszów signed an agreement on co-financing the project under the name «Interdisciplinary Center for Pre-clinical and Clinical Research» with the Podkarpackie Voivodship Board. The project will be co-financed from the European Regional Development Fund and will be implemented within a scientific consortium with the University of Warmia and Mazury in Olsztyn from March 2019 to April 2020 under the Regional Operational Program of the Podkarpackie Voivodeship for 2014-2020. - Basic, applied, preclinical and clinical research will be carried out at the facility. Research will be carried out on pigs, mice, rats and rabbits - adds Dr. Maciej Ulita, spokesman press of the Rzeszów university.

Cardinal Stefan Wyszyński University becomes the leader of the project „Closer to the patient”

2019-01-14

One thousand pharmacies will take part in the pilot project “Closer to the Patient”. The project leader is the Medical Department of Collegium Medicum of the Cardinal Stefan Wyszyński University (UKSW) in Warsaw. The aim of the project is «validation of the pharmaceutical service». The project «Closer to the patient» is a program of three-step intervention of a pharmacist in a pharmacy to reduce the mortality of patients from non-adherence causes of drugs in atrial fibrillation. The project is carried out by scientists of the Cardinal Stefan Wyszyński University to-

gether with scientists from the Medical University of Gdańsk and the Collegium Medicum of the Nicolaus Copernicus University in Toruń. The research methodology was prepared by Dr Regis Vaillancourt from a hospital in Ottawa along with a team of the best clinical pharmacists in Canada.

Graduate of the Medical University of Wrocław honored for her master's thesis

2019-01-14

Justyna Paleczny, graduate of medical analysis of the Medical University of Wrocław, was awarded in the National Competition for her Master's Thesis in the field of medicine in 2018. In the paper «Evaluation of the usefulness of the Solid-Phase Micro Extraction technique for differentiation between methicillin-resistant and methicillin-resistant staphylococci», she checked whether on the basis of differences in volatile metabolite profiles, staphylococcus aureus is sensitive to methicillin and can be distinguished from strains resistant to this antibiotic. In her research she used the fast and cheap Solid Phase MicroExtraction (SPME) method. In today's methods used for the diagnosis of sepsis, the waiting time for the result is up to 72 hours. The SPME method can shorten this time up to 2 hours after collection. Such a faster diagnosis reduces the patient's death risk and limits the use of antibiotics with a broad spectrum of activity.

Poznan University of Medical Sciences to hold a conference on innovations in occupational therapy

2019-01-18

Poznan University of Medical Sciences invites participants on March 5- 6th to the 2nd International Scientific and Training Conference „Innovations in Occupational Therapy. The international perspective - science, education, practice „. - We believe that it is worth looking at current, early Polish experiences in occupational therapy in the international perspective and try to answer the following questions: Does and to what extent the Polish innovation reflect international trends in the field of research, education and practice? To what extent is the current national specificity maintained? Occupational therapy has been present in academic offer in Poland since 2012. This innovative challenge was undertaken by six universities (in Kraków, Wrocław, Poznań, Warsaw, Gdańsk and Bydgoszcz). The conference organizer is Occupational Therapy Laboratory at Department of Geriatrics and Gerontology at the Faculty of Health Sciences at the Poznań University.

Application „reading human thoughts“ awarded at the Garage Inventory Review

2019-01-21

Scientists of the Medical University of Silesia in Katowice Tadeusz Sułkowski, Adam Siedlaczek and Tomasz Pucek became laureates of the Review of the Garage Inventories OFF SCIENCE „organized as part of the Silesian Science Festival in Katowice. The application « reading human thoughts» won the «Dziennik Zachodni» competition for the most inspiring technical concept. The purpose of the application is to activate elderly people to be physically active and to leave homes and apartments and go into the public space. The application is to provide the opportunity to spend time together, such as going out for a coffee or Scandinavian walking. The target version of the application will be prepared at the European Startup Days, which will be held in Katowice on May 14 and 15.

Medical University of Gdansk and the University Clinical Center become Medical Leaders

2019-01-21

The Medical University of Gdańsk and the University Clinical Center (UCK) in Gdańsk have been awarded in the competition Success of the Year 2018 in Health Care and became Medical Leaders. The university was awarded for its rich educational and training activities, while UCK was considered the most innovative hospital in Poland. The jury of the competition appreciated the great involvement of the academic community and initiatives taken by the university. The Medical University of Gdańsk has popularized knowledge about health, disease prevention and treatment methods, both among children and adults for many years. Gdańsk students actively participated in a charitable educational and educational program to support the development of children raised in orphanages, foster families and in families with low material status. As part of the Heart of Kenya project, they taught Kenyans how to correctly perform ECG testing and interpret its results. More: <https://gumed.edu.pl/52795.html>

Wroclaw University of Science and Technology explores new sources of light in the infrared range

2019-01-22

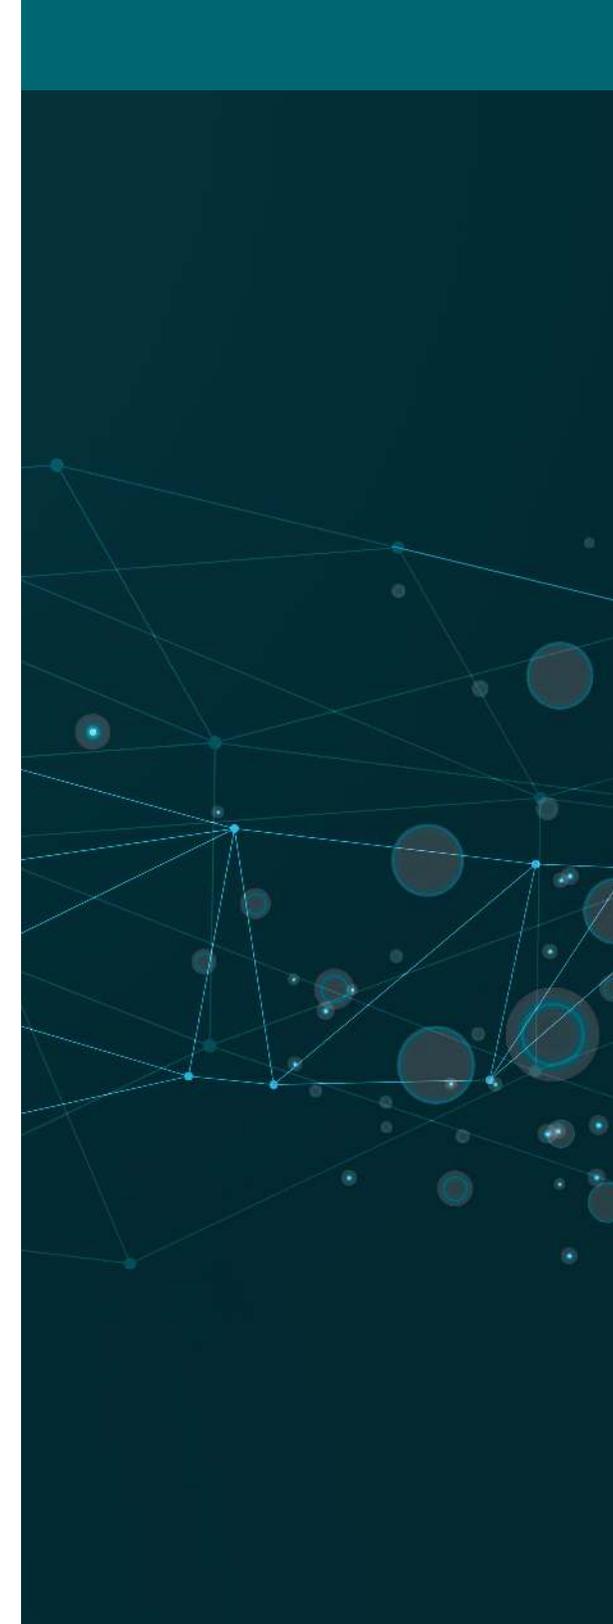

Wrocław University of Science and Technology conducts the study of new light sources of the mid-infrared range. This is a very advanced technology, which is being tested by very few scientific centers in the world. The project allowed to develop infrared light sources operating in the wave range from 2000 to 6000 nanometers. These are ranges invisible to the human eye. Their main advantages are low price of light sources, simple construction, high reliability and low temperature work. Medium infrared is widely used in medicine. It can increase the availability of diagnostic methods for patients - including the recognition and classification of cancer cells. It is also a simple and effective method of gas

detection, e.g. in mines. The research is directed by Dr Eng. Sławomir Sujecki, Prof. Wrocław University of Science and Technology, who has been for many years also working at the University of Nottingham. The project is implemented as part of the Polonez grant from the National Science Center, co-financed by the European Commission. More: [http://pwr.edu.pl/uczelnia/aktualnosci/badania-nad-nowymi-zrodłami-swiatła-11082.html](http://pwr.edu.pl/uczelnia/aktualnosci/badania-nad-nowymi-zrodлами-swiatła-11082.html)

Researchers of the Medical University of Gdańsk become co-authors of the Pharmaceutical Profession Act

2019-01-24

Researchers at the Medical University of Gdańsk (GUMed) co-created a draft act on the pharmacist profession. The Act is expected by the entire pharmaceutical community and is part of the implementation of the governmental strategic project «Drug Policy of the State for 2018-2022» prepared by members of the Ministerial Team of Experts. The work was chaired by Deputy Minister Dr Marcin Czech, his deputy Dr Agnieszka Zimmermann, head of the Medical and Pharmaceutical Law Department at GUMed. The project includes many modern solutions including providing a pharmacist the possibility of performing health care services within pharmaceutical care. It also assures the right to issue prescriptions for continuing therapy. The pharmacists' community has appealed for this solution for long time, pointing to similar competences awarded to nurses. More: <https://gumed.edu.pl/53481.html>

Innovative application that can save lives

2019-01-25

Scientists are implementing the Reanimator application, which is to help people who have had a cardiac arrest. The application is to be made available in the second half of 2019. Young developers from the Polish branch of the Danish company KMD and students of the Warsaw University of Technology have created a solution that not only guides the users step by step through the first aid process, but also allows them to find the nearest available defibrillator. At the moment the application includes modules: first aid support, defibrillator search and first aid tutorial. KMD Poland for Reanimator won the ABSL Diamonds 2018 award. The prize was awarded in the category «Socially Responsible Activities».

Center for Research on Diseases of Civilizations to be created at the Pomeranian University in Słupsk

2019-01-29

An interdisciplinary Center for Research on Civilization Diseases will be created at the Pomeranian University in Słupsk. The Ministry of the Interior and Administration has allocated PLN 1.7 million for this purpose. The Center was designed as an interdisciplinary center, allowing the implementation of topics from both basic and theoretical as well as clinical, epidemiological research, and also in the field of psychology and sociology of civilization diseases. The Center will establish laboratories for clinical, epidemiological and statistical analysis; research on metabolic processes as well as basic and experimental research of civilization diseases.

Researcher of the University of Zielona Góra appointed as an external examiner in biology

2019-01-29

Professor Leszek Jerzak from the Faculty of Biological Sciences of the University of Zielona Góra was

appointed by the National University of Ireland as an external examiner in biology at medical universities: Royal College of Surgeons in Ireland in Dublin, RCSI in Bahrain and RUMC in Penang, Malaysia. The external examiner plays an important role in exams in the countries of the British education system - where it is required that at least one member of the examination commission should come from a different university. It is one of the oldest quality control systems in higher education - in the case of differences in the assessment of the examination by internal examiners, the deciding vote belongs to the external examiner. The work involves the analysis and quality control of biology exams in medical fields. The analysis is subject to compliance of the test content with the knowledge passed on during classes and control or tests are understandable for students.

Results of the research of an international team with the participation of Polish scientists published in the „Science Advances”

2019-01-30

In the journal Science Advances, an international team of scientists with the participation of Polish researchers published the results of research, which shows that the bacterium Porphyromonas gingivalis may be responsible for developing Alzheimer's disease. So far, it has been known that this bacterium causes primarily gum disease, is associated with atherosclerosis and rheumatoid arthritis. The research described in the publication was financed by the National Science Center under the OPUS 12 grant. The Polish team worked under the guidance of Prof. Jan Potempa from the Faculty of Biochemistry, Biophysics and Biotechnology of the Jagiellonian University. He was one of the three main authors of the publication. The other authors are Dr Piotr Mydel, Dr Małgorzata Benedyk, Agata Marczyk, Karina Adamowicz and Annelie Hellvard. See the article in «Science Advances»: <http://advances.sciencemag.org/content/5/1/eaau3333>

International Center for Ophthalmology Research to be created in Warsaw

2019-01-30

The Foundation for Polish Science has announced the results of the next nationwide competition in the International Research Agendas program. This year almost PLN 35 million has been awarded to the project of Prof. Maciej Wojtkowski from the Department of Physical Chemistry of Biological Systems at the Institute of Physical Chemistry PAS and Prof. Krzysztof Palczewski from the School of Medicine at the University of California in Irvine in the USA. The researchers will create a new scientific center in Warsaw, which will investigate the dynamics and plasticity of the human eye, which in the long run will bring the development of new therapies and diagnostic tools helpful in the case of various visual dysfunctions. The International Center for Translational Eye Research (ICTER) will be established as a sub-unit of the Institute of Physical Chemistry of the Polish Academy of Sciences.

Monoprofiled Center for Medical Simulation for Nursing at the University of Zielona Góra

2019-01-30

The University of Zielona Góra opened the Monoprofiled Center for Medical Simulation for Nursing. The investment was implemented under the Operational Program Knowledge Education Development 2014-2020. The project was co-financed from the European Union funds. The Center consists of a high-fidelity nursing room, two OSCE examination rooms, two technical skills workshops, a simulation hall in the field of basic and advanced resuscitation procedures (ALS and BLS), a room for nursing skills and rooms for staff. Classes in the Zielona Góra Center will start in the summer semester this academic year.

Torun's project of a visually controlled communicator awarded in the competition of the Sektor 3.0 Foundation

2019-01-31

A team of scientists from the Nicolaus Copernicus University in Toruń and therapists from the „Light” Foundation won the first prize in the Sektor 3.0 Foundation competition co-organized by Google and Orange. The competition concerns the #Tech-ForGood sphere, i.e. the use of the latest technology achievements in the service of society. The jury distinguished Dr. Bibianna Bałaj from the Faculty of Humanities and Dr hab. Jacek Matulewski from the Faculty of Physics, Astronomy and Applied Computer Science, and Anna Betlejewska and Monika Kwilińska from the «Light» foundation under the direction of Anna Grajpel-Dybowska - working on a visually controlled communicator. The solution will allow patients after accidents, strokes or advanced stage of neurodegenerative diseases, who can control only eye movements, communicate with families and friends via text messages or short e-mails. More: <https://www.umk.pl/wiadomosci/?id=25907>

Medical University of Silesia to build a digital medical platform eCareMed - Telemedicine

2019-02-01

The Silesian Medical University in Katowice will carry out the project „Silesian Digital Medical Platform eCareMed - Telemedicine and exploration of medical data”. The project was created in response to the needs of patients in the field of early diagnostics in oncology, cardiology and neurology. The platform is to use information and communication technologies in the area of e-health. Services will be directed at improving safety and comfort in treating patients. The eCare Med will enable comprehensive diagnostics and individually selected therapy, taking into account the specificity of the disease - using teleconsultation between medical entities. The partners of the project are Silesian Center for Heart Diseases in Zabrze, Oncology Center – Institute of

Maria Skłodowska-Curie in Gliwice, Beskid Center of Oncology - Municipal Hospital in Bielsko-Biała and the University Clinical Center and Upper Silesian Medical Center of the Medical University in Katowice. More:<https://sum.edu.pl/uczelnia/wiadomosci-z-zycia-uczelnia/9339-sum-podpisal-umowe-na-realizacje-projektu-slaska-cyfrowa-platforma-medyczna-ecaremed-telemedycyna-i-eksploracja-danych-medycznych>

Łódź University of Technology to start cooperation with a biotechnology company Bio-Gen

2019-02-04

One of the leading biotechnology companies in Poland Bio-Gen has signed a cooperation agreement with the Lodz University of Technology. - The ability to use the knowledge and experience of Bio-Gen specialists is of great importance to us, both for scientific and educational projects - said the dean of the Faculty of Biotechnology and Food Sciences Prof. Maria Koziolkiewicz. The prospect of cooperation in organizing internships for students, educational meetings and conducting joint research and development of new technologies are also important factors. The Bio-Gen plans to employ several hundred new, young employees in Łódź. Its cooperation with the Lodz University of Technology is a chance for the company to select the best candidates.

Medical Simulation Center of the Medical University in Lublin to receive the most modern abdominal simulators

2019-02-04

In the Medical Simulation Center of the Medical University of Lublin, medical students will practice on the most modern abdominal simulators. Devices can simulate physiological and pathological changes as well as appendicitis or cancer. The center will receive the most technologically advanced abdominal simulators, which will allow to learn the accurate assessment of what is happening in the abdominal cavity. The equipment will allow training for doctors during

the next months during specialization. In the future, doctors from foreign centers will also be able to use them. Preliminary declarations of cooperation were sent from Harvard University, the IRCAD center in Strasbourg or the American College of Surgeons.

Multiprofiled Center of Medical Simulation to be created at the University of Zielona Góra

2019-02-04

The University of Zielona Góra began the construction of the Multiprofiled Center of Medical Simulation at the Medical Faculty (WCSM). The task is implemented since January and will be completed in the middle of 2023. The rooms of the Center ensure the preservation of the communication route and the continuation of the scenario from pre-hospital care to the hospital rooms. Within WCSM simulation, students of the medical faculty will find high-fidelity rooms including an ambulance simulator, a Hospital Emergency Department, an intensive care unit, an operation room, a delivery room, simulation rooms for basic and advanced resuscitation procedures (ALS and BLS), and a surgical room. Also, the „Standardized patient” program will be implemented within the project. The value of the project is approximately PLN 16.5 million, of which the construction costs 5.5 million PLN. The remaining 11 million PLN will be spent to provide simulators and medical equipment. The WCSM surface will be 1 135 sq m.

Rzeszów scientists to study how the aerosol can help in the treatment of autumn and winter depressions

2019-02-05

The scientists of the University of Rzeszów are planning to conduct research that will help to treat autumn and winter depressions with an ordinary aerosol. The research would be carried out in cooperation with the American Yale University. The aim of the research of scientists from the University of Rzeszów is to create a measure that could effectively counteract autumn and winter depressions. Such a measure would deceive our mind, causing the sensations of the body that it is summer when we feel much better than in the winter. The research will take place at the Center for Pre-clinical and Clinical Research, which is to be created by April 2020. Thus, the aerosol tests are to be carried out on animals. Together with the American university, the Rzeszów University will try to obtain a scientific grant for this research.

Researcher of the Adam Mickiewicz University in Poznań receives the L'Oréal-UNESCO scholarship

2019-02-08

Dr Joanna Gościańska from the University of Adam Mickiewicz in Poznań won the scholarship L'Oréal-UNESCO for Women in Science. A scientist from the Faculty of Chemistry is researching technologies that use coal in a new way. Dr Gościańska analyzes multifunctional mesoporous carbon materials in the processes of adsorption of active pharmaceutical substances. The research is to find an answer to the question how to use mesoporous coals as drug carriers. This is an innovative and almost unexplored subject. Dr Gościańska's project includes painkillers and antibiotics. The results of research will allow limit the number of doses of the drug - the drug will be released in the body gradually throughout the day and exactly where it should. The Polish National Committee for UNESCO, the Ministry of Science and Higher Education and

the Polish Academy of Sciences are partners of the L'Oréal Poland For Women and Science Program.

Medical University of Gdansk to launch the first Polish study on the quality of life of patients with cutaneous T-cell lymphoma (CTCL)

2019-02-08

The Medical University of Gdansk will conduct the first in Poland study of the quality of life of patients with cutaneous T-cell lymphoma (CTCL). The research ambassador is Prof. Małgorzata Sokołowska-Wojdyło from the Chair and Clinic of Dermatology, Venereology and Allergology. Information activities will begin with the survey of the patients with CTCL «Unknown Lymphomas. Unseen problem» that will be carried out in selected Polish clinics. The authors of the study will in the first place conduct a series of in-depth conversations with both key substantive experts specializing in the treatment of patients with CTCL and patients. The questionnaire for patients will be based on the interviews and the adopted methodology. The result of the work will be a report containing the most important conclusions, gathering not only a statistical description of the patients' situation, but also indicating the unmet needs of patients in various spheres of their lives. More: <https://gumed.edu.pl/53836.html>

Lodz University of Technology receives certificates for biotechnology

2019-02-11

In recognition of the high quality of education the biotechnology course at the Lodz University of Technology by the Faculty of Biotechnology and Food Sciences received the certificate of the Accreditation Committee of Technical Universities (KAUT) and the European quality mark - EUR-ACE Label. The Faculty of Biotechnology and Food Sciences was visited by KAUT experts and European experts associated in the ENAEE (European Network for Accreditation of Engineering Education). One of the tasks of ENAEE is to provide European education programs with a

certificate that confirms a high level of education. Biotechnology course received the KAUT accreditation for five years from the academic year 2018/2019.

Professor Maciej Żylicz to hold a lecture on „Micro-evolution of cancer cells” at the University of Wrocław

2019-02-11

University of Wrocław invites participants on February 21 for a lecture of an eminent biochemist Prof. Maciej Żylicz, entitled: „Micro-evolution of cancer cells”. The lecture at the Congress Center of the university will take place as part of the Interdisciplinary Scientific Seminar of the Wrocław University of Technology. Professor Maciej Żylicz deals with the molecular biology of thermal shock proteins, the interaction of caring proteins, cancer transformation, p53, MDM2. For many years he worked at the International Institute of Molecular and Cell Biology in Warsaw. Since 2005 he has been the president of the board of the Foundation for Polish Science. He participates in works of many national and foreign academies of sciences, he is a laureate of numerous scientific awards. Professor Żylicz received honorary doctorates from Wrocław, Gdańsk and Jagiellonian Universities. Interdisciplinary Scientific Seminar is a program addressed to students, PhD students, researchers and anyone interested in deepening science knowledge.

Surgeons of the Jagiellonian University Collegium Medicum to participate in the project Innovations in Surgery

2019-02-12

1st Department of General Surgery of the Jagiellonian University Collegium Medicum in Krakow - as the only Polish clinic - has been included in the prestigious world group of surgical clinics cooperating within the international project Innovations in Surgery. The program is run by the American clinic Cleveland Clinic. The project provides regular exchange of knowledge and experience, through monthly videoconferences. In addition to the Cleveland Clinic, the project also involves other American surgical clinics: Mayo Clinic, Harvard University, John Hopkins, Columbia University and Mount Sinai New York clinics.

PhD student of the University of Silesia becomes the winner of the „Student-Inventor” competition

2019-02-12

Michał Pielka, PhD student at the Faculty of Computer Science and Materials Science at the University of Silesia, was the winner of the „Student-Inventor” competition organized by the Kielce University of Technology. 139 proposals from 20 universities from all over Poland were submitted to this year's competition. The awarded invention is a system for monitoring locomotor functions of the organism, respiratory activities and pulse together with related solutions of 2 patented inventions and 2 industrial designs. One of the solutions is a developed method of data transmission that allows to send more information and simplify the procedure for their receipt. The winners will present their solutions in Switzerland during the 47th International Exhibition of Inventions of Geneva, they will also take part in accompanying seminars organized by the World Intellectual Property Organization and the European Organization for Nuclear Research.

University of Gdańsk to participate in the project of prevention of postnatal depression

2019-02-12

„MAMA stop” is a project to prevent postnatal depression. It will be co-financed from the European Social Fund. The educational component of the project will be prepared by the Institute of Psychology of the University of Gdańsk. The leader of the project is Copernicus Podmiot Leczniczy Ltd Gdańsk. It will provide prevention of postnatal depression, screening and treatment options, which in the long-term is to reduce the negative effects of untreated depression on the labor market. The University of Gdańsk is planning preparation of a training plan, participation in the creation of a pilot project on the prevention of postnatal depression and didactic materials for project participants, as well as website and online forum maintenance and providing statistical analysis of program implementation indicators.

PhD student of Warsaw University of Technology develops a revolutionary bone implant

2019-02-13

Monika Budnicka, PhD student at the Faculty of Chemistry of the Warsaw University of Technology, has created a revolutionary bone implant. The solution is a synthetic substitute for spongy bone, the very inner part of the skeleton fragment. It is a kind of scaffolding that is supposed to help in the regeneration of bones after serious damage, for example after cancer. - The material we have developed is biodegradable and resilient. It can also be cut directly in the operating room. It is also very light - explains Monika Budnicka. Dr Agnieszka Gadomska-Gajadur, leader of the project explains that before in this type of surgery, a bone taken from another deceased person was used. At the moment, no one produces such an implant.

Researcher from the Jagiellonian University included in the Forbes list „30 under 30 Europe”

2019-02-14

Dr Mateusz Hołda from the Jagiellonian University in Krakow was included 'magazine „Forbes” in the category „Science & Healthcare”. The „30 under 30” lists include the young entrepreneurs, founders of innovative businesses, scientists, social activists, artists, politicians and sportsmen selected by the „Forbes” magazine. Dr Mateusz Hołda is a co-founder and head of the HEART - Heart Embryology and Anatomy Research Team operating at the Department of Anatomy of the Jagiellonian University Collegium Medicum. The work of his team focuses on the study of cardiovascular morphology, results in the models of heart produced in the 3D print and visualization laboratory developed for medical and scientific purposes.

4th Psychiatric Prevention University

2019-02-21

The Medical University of Białystok (UMB) is launching the 4th University of Psychiatric Prevention. The Faculty of Health Sciences UMB invites by June 2019 44 senior students. They are graduates of another educational program of the Białystok Medical University – the University of Healthy Senior. Classes are unique in the country, because no other medical school organizes a series of lectures devoted only to psychogeriatrics, mental disorders in the elderly people, although almost all universities have universities of healthy senior citizens. The subject matter of the course will concern mental disorders in the elderly generation, anxiety disorders, sexual disorders or addiction to drugs and alcohol.

Scientist from the University of Białystok to investigate the drug resistance of *Pseudomonas aeruginosa*

2019-02-22

Dr Krzysztof Brzeziński from the Institute of Chemistry, University of Białystok (UwB) has won the SONATA BIS call organized by the National Science Center. He will receive over PLN 3 million for research on drug resistance of *Pseudomonas aeruginosa* - the number two bacterium on the current list of global microbiological threats published by the World Health Organization. In the case of the *Pseudomonas aeruginosa*, the number of mechanisms conditioning its virulence and resistance is amazing - says Dr Krzysztof Brzeziński. The bacterium provides a number of protective barriers. Even if the substance harmful to the bacteria overcomes these barriers, systems of so-called pumps are activated, removing e.g. antibiotic molecules outside the cell. Research will be interdisciplinary. During the project, Dr Krzysztof Brzeziński will apply a number of methods from the microbiology, cell biology, biophysics, NMR spectroscopy, molecular biology, biochemistry, crystallography and structural chemistry.

Artificial bone of Lublin researchers to be commercialized

2019-02-25

Artificial bone patented by Prof. Grażyna Ginalska and Dr Anna Belcarz from the Medical University of Lublin has a chance to reach foreign markets. The Medical Inveni company shared by the authors of the invention plans to get the CE mark this year. Obtaining this mark will allow to sell the composite materials around the world. Researchers from the Lublin Medical University cooperate with the Lublin University of Technology in the field of launching a technological line that will enable the production of composite on a larger scale. Five patients have already learned about the advantages of artificial bone. Dr Adam Nogalski, head of the Clinic of Traumatology and Emergency Medicine at the Independent Public Clinical Hospital No. 1 in Lublin treated

them successfully when other centers failed. Thanks to the composite, the patients turned fit again with no side effects.

Medical School in Białystok to launch the Monoprofiled Center of Medical Simulation

2019-02-26

The modern Monoprofile Center of Medical Simulation has been opened at the University of Medical Sciences (WSM) in Białystok. Prof. Lech Chyczewski, Rector of WSM, emphasizes that the Center will enrich the science of the nurse profession and help in the final evaluation of teaching results. The center consists of several rooms with different types of simulation models. It simulates not only newborns, children and adults, but also the parts of body like a hand, so that future nurses can learn to make injections or sew the seams. The Center has also models of the breasts affected by cancer. Dr Bianka Misiak, head of the Nursing Department at WSM, reminds that the Białystok school educates future nurses since 2005. In her opinion, the creation of the Center marks a milestone in improving the quality of education.

Gdansk researcher receives grant in the Polish-Chinese call

2019-02-27

Dr Anna Żaczek from the Department of Medical Biotechnology of the Interuniversity Faculty of Biotechnology of the University of Gdańsk and the Medical University of Gdańsk received a grant in the Polish-Chinese call of the National Center for Research and Development and the Ministry of Science and Technology of the People's Republic of China. The grant of PLN 2 million was awarded for the project «Circulating cancer cells in personalized medicine - an effective method of isolation, analysis at the level of individual cells and use in predicting response to treatment». The effect is to be a package of solutions that allows for more precise treatment assignments, including a CTC detection kit and a quick response test based on biomarkers

identified within the project. The project involves the cooperation of leading centers in their regions in the field of biotechnology and engineering of nanomaterials: Inter-University Biotechnology Department and Institute of Functional Nano & Soft Materials from Soochow University. More: <https://gumed.edu.pl/54155.html>

Wrocław Technology Park launched a portal promoting the cooperation of Polish companies and scientists

2019-02-27

Wrocław Technology Park has launched the big-science.pl portal, which will promote the cooperation of Polish companies and scientists. "Big Science Institutions" is a definition of international organizations or research centers connected with projects concerning the Great Science. They are responsible for conducting large-scale experiments and research as well as expanding the infrastructure to the necessary one. The result of their activities are innovations that change the face of science and industry, and thus our everyday lives and the future of humanity. Big Science combines the potential of many institutions, industries and fields of science. Thanks to the partner cooperation of the business and science environment, the development of the industry is driven by projects with budgets allocated for the development of an innovative, high-tech economy.

System of interactive teaching of histology and cytology at the Medical University of Gdańsk

2019-02-28

The first in Poland system enabling interactive teaching of histology and cytology during practical classes is available at the Department and Histology of the Medical University of Gdańsk. Thanks to equipping microscopes with a digital camera and a tablet, the student has the possibility to save images of histological preparations in the form of a graphic file, marking the characteristic structures in the picture. Then the files can be archived and sent to the student's email address. The system is an interactive consulting and didactic platform. Images from microscopic cameras are sent in real time to the assistant's tablet. Thanks to the appropriate software on the computers of academic teachers, it is possible to display the image from a given student microscope on the big screen, discuss it for all students.

Silesian Medical University to support the IV Congress of Health Challenges

2019-03-01

Directions of development of the health care system, treatment financing, innovations in the medical sector are the most important topics of the IV Congress of Health Challenges scheduled for 7 and 8 March at the International Congress Center in Katowice. The organizers are planning around 60 sessions in five main blocks: health policy, finance and management, therapies, new technologies in medicine and education. The main idea of the Congress are the therapeutic challenges, facing specialists in particular fields of medicine, as well as organizational and financial problems, which the decision-makers shaping the health care systems must meet. Participations in the event were confirmed by outstanding specialists from several medical disciplines, as well as representatives of the world of science, economy, business, finance, insurance market, non-governmental organizations, politics, state and local government administration

and the media. More: <https://sum.edu.pl/uczelnia/wiadomosci-z-zycia-uczelnia/9465-iv-kongres-wyzwan-zdrowotnych-health-challenges-congress-hcc-w-katowicach-7-8-marca-2019-r>

New nanocatalyst developed by scientists from the University of Silesia

2019-03-01

Scientists of the University of Silesia have developed a nanocatalyst that can be used to conduct synthesis reactions of compounds with potential anti-cancer, antifungal and antibacterial effects, used in the pharmaceutical industry. The nanocatalyst is a powder and is obtained by the transfer method as a result of the application of the nanopalladium to electrolytic copper of appropriate grain size. It is characterized by high results of coupling reactions and a relatively low production cost due to the availability of materials used and low palladium content. The invention by Prof. Eng. Jarosław Polański, Dr Piotr Bartczak and Dr Eng. Mateusz Korc and Dr Maciej Kapkowski was designed to conduct the Sonogashira coupling reaction, combining two compounds in a basic environment: terminal alkynes with aryl or vinyl halides. More: <https://www.us.edu.pl/nowe-rozwiazania-dla-branzy-farmaceutycznej>

New method of diagnosing kidney damage caused by diabetes

2019-03-04

Researchers from the Jagiellonian University (UJ) in Krakow have developed a method that will help in diagnosing kidney damage caused by diabetes. The method will also recognize the risk of renal failure. Researchers at the Jagiellonian University found that microvesicles in the urine can become a new biomarker of diabetic kidney disease. A team from the Jagiellonian University under the supervision of Dr Ewa Stępień, working with scientists from the Institute of Nuclear Physics of the Polish Academy of Sciences, worked on the solution since 2014. The invention has already been submitted to the Patent Office.

University of Zielona Góra invites participants to the Space Medicine EXPO 2019 conference

2019-03-04

The Scientific Society of Space Medicine and Health Sciences of the University of Zielona Góra invites participants to the Space Medicine EXPO 2019 conference on March 16. It is the largest conference in Poland devoted to space medicine, cooperation between the private and public sectors as well as the scientific and innovative economy. Representatives of the parliament, scientists, clinicians, entrepreneurs, local government officials and students will take part in the event organized for the third time. Space Medicine EXPO also provides training for medical students and young scholars as well as a chance to gain invaluable knowledge for those interested in astronomy, law, economics, management and political sciences. During the conference, listeners will be able to take part in debates, lectures and trainings, as well as get acquainted with the anatomical and histological structure of human beings, and establish valuable contacts that can support projects implemented by EXPO guests in the future. Researchers from Krakow looking for effective treatment of neuropathic pain

2019-03-06

One in five Europeans suffers from neuropathic pain. A research team from the Institute of Pharmacology of the Polish Academy of Sciences (PAS) in Krakow is working on the development of effective therapies. Anna Piotrowska-Murzyn from the PAN research team focuses on research on the neuro-immunological basis of pain. She is also looking for substances that will enhance their effectiveness when administered with conventional painkillers. This PhD student from the Polish Academy of Sciences has already identified the searched substance. This may be Maraviroc, an anti-retroviral drug used in HIV-infected patients. The compound may affect the effectiveness of conventionally used analgesics. Thus, it seems that Maraviroc may turn out to be an interesting approach to the combination therapy with opioids in patients suffering from neuropathic pain - said Anna Piotrowska-Murzyn.

Professors of the Pomeranian Medical University awarded as the most influential scholars in Polish medicine

2019-03-06

Three professors of the Pomeranian Medical University in Szczecin (PUM) became the most influential scholars in Polish medicine. „List of a hundred” has been publishing by the Pulse of Medicine for 16 years. Prof. Mieczysław Walczak MD, head of the Department of Paediatrics, Endocrinology, Diabetology, Metabolic Diseases and Age Cardiology took the 42 place. Prof. Jan Lubiński MD, head of the Department of Genetics and Pathomorphology of the PUM Department of Oncology, head of the International Center for Neutral Cancer in PUM was 65th in the list. Prof. Bogusław Machaliński MD, rector of PUM, head of the Department of Physiology and General Pathology, and head of the Department of Marrow Transplantation, Department of Hematology and Transplantology was 92nd. Candidates were evaluated in three categories: achievements and

accomplishments in 2018; professional reputation and influence in the environment and the power of public influence.

Krakow researchers discovering the secrets of neurodegenerative diseases

2019-03-11

The international team of scientists from the Małopolska Center of Biotechnology of the Jagiellonian University in Krakow, deciphered the atomic structure of one of the key cellular „bodyguards” - the Elp3 protein. This molecule is responsible for the correct production of all other cellular proteins, thus counteracting neurodegenerative diseases. The scientists wrote an article about the results of the research in „Nature Communications”. Their work is devoted to researching three-dimensional structures of the Elp3 protein found in various organisms. The authors explain that its shape and role remains identical even in the case of very distantly related organisms, and shed light on the mechanisms responsible for their function. Understanding the structure of the Elp3 protein will allow scientists to answer the question of how exactly it works, how they affect the mutation and whether its activity can be blocked. More: <https://www.nature.com/articles/s41467-019-08579-2.epdf>

Silesian scientists developed an organic bacteriostatic material

2019-03-12

The scientists of University of Silesia and the Silesian Medical University in Katowice have developed a new organic material to prevent the growth and reproduction of bacteria. It will be able to cover medical products and everyday objects. Toothbrushes, interiors of shower cubicles, in-ear headphones, keyboards, and even cell phones are the objects on which surfaces bacteria grow in case of use. They can be covered with impurities of sebum, food leftovers or dust, becoming an excellent breeding ground for microorganisms. The authors of the invention are scientists from the Faculty of Computer Science and Materials Science of the University of Silesia: Dr Andrzej Swinarew; Tomasz Flak; Marta Łężniak, Jadwiga Gabor, Dr Hubert Okła and Klaudia Kubik, and also Beata Rozwadowska, from the Silesian Medical University in Katowice. The result of their research has been patented.

Polish scientists printed 3D the world's first bionic pancreas

2019-03-18

Researchers from the Foundation for Research and Development of Science (FBiRN) in Warsaw printed 3D the world's first bionic pancreas with blood vessels. In October 2015, on the initiative of FBiRN, the BIONIC consortium was formed. It includes the Foundation for Research and Development of Science together with the team of DM Michał Wszola, Institute of Experimental Biology Polish Academy of Sciences together with a team of Prof. Agnieszka Dobrzyń, Faculty of Materials Science at the Warsaw University of Technology under the supervision of Prof. W. Świąszkowski, Center for Biostructure of the Warsaw Medical University under the direction of Prof. Artur Kaminski, the Infant Jesus Clinical Hospital in Warsaw and the MediSpace company. The consortium received funding from the National Center for Research and Development as part of the STRATEGMED III program and thanks to this sup-

port, in 2017 intensive work on the bionic pancreas started, which was successful. More: <https://fundacja-biorn.pl/projekty/projekt-biodrukowanie-3d-bionicznej-trzustki/>

Student of the University of Gdańsk becomes a laureate of the Businesswoman of the Year competition

2019-03-18

Olga Grudniak, a student at the University of Gdańsk and the president of the Gdynia-based company Biolumo, producing the diagnostic equipment for doctors, becomes one of the jubilee laureates of the 10th Businesswoman of the Year competition. - I am involved in combining the world of science and business. In business, I am running the Biolumo, a company dealing with the creation of a diagnostic device for the rapid selection of targeted antibiotic therapy for primary care physicians. At the same time I am a biotechnologist, and I have been working in the laboratory on researches aimed at solving the problem of drug resistance of bacteria for 5 years – says Olga Grudniak. The Biolumo company creates a point-of-care medical device for general medical practitioners to help them prescribe a working antibiotic. This solution is adapted to GP surgeries to diagnose quick (6h), in an automated and inexpensive way.

Students of the Opole University of Technology develop a cyber-hand

2019-03-19

Students of the Opole University of Technology (OP) have developed a cyber-hand prototype as part of their diploma thesis. Thanks to their idea, the market has a chance to find a cheap and functional prosthesis printed in 3D technology and controlled by a special glove. The prototype is the result of the work of students of automation and robotics: «Control of robotic hand control with the help of own hand» (author Pavlo Sutysskyi) and «Physical model of human hand prosthesis using pneumatic muscles» (author - Yaroslav Antonchuk). - The project was created for people who lost their hand. Most prostheses on the market are very expensive and only some people can afford to buy a bionic prosthesis. Our goal was to create a cheap solution, the cost of which would be around PLN 1000. Currently, our prosthesis model will be subject to further development - says the promoter and reviewer of the Opole students works, Dr Eng. Mirosław Szmajda.

Medical University of Bialystok to cooperate with the Belarusian psychiatric clinic

2019-03-21

The Medical University of Bialystok has concluded an agreement on scientific cooperation with the Belarusian Pediatric Psychiatry Clinic in Minsk. The contract concluded for 5 years assumes the exchange of personnel, scientists, doctors and administrative employees, development and implementation of joint research and training programs, exchange of information, materials and scientific publications, joint publication of instructions and monographs on medicine and the organization of joint scientific conferences and symposia. This initiative can help in completing the staff for the Center for Psychiatry created in Bialystok for children, youth and adults. The university authorities expect that Belarusian child psychiatrists will take up work in Bialystok, when the Center will start operating.

Comprehensive training program in interventional children cardiology

2019-03-21

The Institute „Children’s Memorial- Health Center” together with medical universities in Katowice and Poznań and the Provincial Specialist Hospital in Wrocław invite participants to join the „Program of comprehensive training in interventional cardiology in children - PO WER-KID”. The aim of the project, financed by the European Union, is to increase the number of physicians trained in pediatric interventional cardiology at the basic and advanced level through the development of their professional competences and qualifications. The participants will take courses in the morphology of the cardiovascular system and congenital heart defects, the basis of pediatric interventional cardiology and the psychological aspects of pediatric interventional cardiology. The main part of the training will be practical classes in the laboratories of interventional cardiology conducted with the use of modern medical simulation techniques. More: <https://sum.edu.pl/aktualnosci-i-komunikaty-swp/nauka-wiadomosci/9581-program-wszecznostnego-szkolenia-w-kardiologii-intewencyjnej-u-dzieci-po-wer-kid>

Game Antyszczepionkowcy.biz to expose the hypocrisy of anti-vaccine movements

2019-03-22

Aleksandra Stefaniak, PhD student at the Medical University of Wrocław (UM) is a co-author of the card game Antyszczepionkowcy.biz, which exposes the hypocrisy of anti-vaccine movements and educates about the value of preventive vaccinations and provide entertainment. The game shows the consequences and realities of the self-serving businessmen who are winning fortunes in the anti-vaccine and altmede industries. The game players try to gain influence at all costs by selling useless goods in their online stores or by collecting signatures and enforcing harmful laws. Their actions affect the population resistance index, and over time, cases of various diseases are more and more dangerous.

Aleksandra and Jakub Stefaniak, the authors of the game, collected money for its release through a crowdfunding. Obtaining the minimum amount - 10,000 PLN took only 14 minutes. The Medical University of Wrocław is one of the supporter of the game. More: <https://www.umed.wroc.pl/content/grantyszczepionkowcybiz-ufundowana-w-rekordowym-tempie>

New scientific program for Polish doctors is underway

2019-03-25

Professor Franciszek Walczak, called the godfather of Polish electrophysiology, became the patron of the new National Program of the Academic Exchange Agency and the Ministry of Health addressed to scientists in the field of cardiology, oncology, allergology and infectious diseases. - It is really a unique program, implemented interdepartmentally. 100 Polish doctors will take internships at the best institutes in the USA. Thanks to close cooperation with American scientists, patients in our country will gain access to the latest knowledge and clinical practices - said Piotr Dardziński, deputy minister of science and higher education, during the conference inaugurating the program. The program involves trips lasting 3 to 6 months to the best medical centers of the USA. More: <https://nawa.gov.pl/naukowcy/program-im-walczaka/ogloszenie>

Silesian Medical University receives certificates „Studies with future” and „Laurel of Innovation”

2019-03-25

Silesian Medical University in Katowice was awarded in the 4th Competition and Accreditation Program „Studies with future” certificate. The study «Health Risk Management» provided in the public health department in Bytom again obtained the accreditation certificate «»Studies with future». Also the «Neurobiology» faculty, second-degree studies, at the medical department in Katowice received this award. The «»Studies with future» accreditation certificate is awarded by the Foundation for the Development of Education and Scholarship. It is given to studies and specializations that meet the needs of the labor market and meet the expectations of the socio-economic environment. In addition, the courses of „Health Risk Management” and „Neurobiology”, second-degree studies obtained the „Laurel of Innovation” - a special distinction for the studies implementing the most innovative and unique solutions in the field of material base and technology supporting the educational process.

Wroclaw University of Economics joins the international project HeartBIT 4.0

2019-03-25

The employees of the Institute of Business Information Technology at the University of Economics in Wroclaw gained funding for the HeartBIT 4.0 project. The project will be implemented as part of the prestigious Horizon 2020 program (Twinning Program). The aim of the HeartBIT 4.0 project (Application of innovative Medical Data Science for heart diseases) is to conduct a series of trainings, workshops, consultations and to develop materials for the employees of the Faculty and Clinic of Heart Diseases at the Medical University of Wroclaw, including in the field of application of modern Big Data technologies, Data Science techniques and machine learning in medicine and the security of medical

data. The project will be implemented by a university consortium consisting of: Medical University and Wroclaw University of Economics, German Technische Universität Dresden and Universität Leipzig as well as the Czech Vysoká Škola Ekonomická v Praze. The total project budget is approximately 788 thousand euro.

Pomeranian Medical University in Szczecin cooperates with the University of Vilnius

2019-03-26

The Pomeranian Medical University in Szczecin (PUM) signed a cooperation agreement with the Lithuanian University of Vilnius. The agreement concerns, joint research, exchange of scientific and didactic staff and students. Last year, the PUM delegation visited Vilnius University, which has long been involved in joint research in the field of hereditary cancers. Now, thanks to the agreement, their cooperation will be extended to new areas, including congenital metabolic diseases and medical history. The Vilnius University was founded in 1579 by King Stefan Batory. Today it is on the list of the 500 best universities in the world and is the largest high school in Lithuania. It has 12 departments, 10 research centers, 3 hospitals, an astronomical observatory and over 25,000 students.

Polish Consortium awarded Intelligent Development Prize for composite material for bone reconstruction

2019-03-27

Scientific consortium of the Institute of Ceramics and Building Materials, University of Gdańsk, Wroclaw University of Science and Technology, Institute of Biotechnology and Molecular Medicine and SensDx S.A. became the laureate of the Polish Intelligent Development Award 2019. The prize was awarded in the category «Innovative technologies of the future» for the implementation of the project «Multifunctional composite material with antimicrobial and pro-regenerative properties for the reconstruc-

tion of bone tissue». The project was co-financed in the strategic program of scientific research and development works of the National Center for Research and Development. The aim of the project is to develop and produce a material with biological activity, acting as a material filling the bone defect and forming a matrix for cells, and at the same time supporting the regeneration of damaged tissue. The use of such a biomaterial will speed up the treatment process and eliminate a number of postoperative complications. Scientists from the University of Gdańsk to detect urinary tract cancer faster

2019-03-28

Professor Adam Lesner and Dr Natalia Gruba from the Faculty of Chemistry of the University of Gdańsk have developed a quick and non-invasive diagnostic test to detect cancer of the urinary epithelium, commonly referred to as urinary tract cancer. The proposed method assumes only taking a urine sample. Previous studies on a group of 800 people have brought about 90 percent of effectiveness. The research is carried out with the financial support of the UG Technology Transfer Center as part of the Incubator of Innovation + project. The invention has been patented all over the world, and talks are underway on the implementation of the test. The diagnostic kit developed by the Gdańsk scientists consists of two components that under the influence of factors secreted by tumor cells present in the bladder, disintegrate and enable their detection. The test's advantages include ease of carrying it out, diagnostic effectiveness and waiting time for the result (less than 60 minutes). More: https://ug.edu.pl/media/aktualnosci/87002/szybkie_wykrywanie_nowotworu_ukladu_moczowego_dzieki_naukowcom_z_ug

Researcher at the Medical University of Gdańsk joins the team of the World Health Organization

2019-04-02

Dr Łukasz Balwicki from the Department of Public Health and Social Medicine of the Medical University of Gdańsk was appointed to the scientific team of the World Health Organization dealing with the illegal trade of tobacco products. The team's task is to conduct an investigation of the illegal tobacco market in countries on the eastern border of the European Union. The result of these activities is to be a series of scientific publications describing this phenomenon. The team's activities are related to the implementation of the Protocol on the elimination of illegal trade in tobacco products to the WHO Framework Convention on Tobacco Control (FCTC) and the European Tracking and Tracing system to track tobacco trading, which will enter into force in May 2019. The implementation of the Protocol and the Tracking and Tracing system will help reduce the illegal tobacco trade and more effectively monitor the fight against the smoking addiction.

Scientists of the University of Warmia and Mazury in Olsztyn to develop a drug for breast cancer

2019-04-03

The Faculty of Veterinary Medicine of the University of Warmia and Mazury in Olsztyn (UWM) is launching a new research project to develop a medicine for breast cancer. Dr Małgorzata Chmielewska-Krzysińska from the Chair of Pathophysiology, Veterinary Medicine and Administration of the Faculty of Veterinary Medicine UWM begins research on the role of thymoquinone in the fight against cancer. As a model she chose a zebrafish, a small freshwater fish from the carp family, popular in aquarium cultures. Scientists have been using zebrafish for over a dozen years, and the Laboratory of Genomics and Transcriptomics at the Faculty of Veterinary Medicine as the first in Poland began research work with this fish. Dr Chmielewska-Krzysińska wants to

check how thymoquinone will effect on cancer cells. Scientists know that a substance can cause cancer cells to die, but have not yet discovered how this happens.

Jan Kochanowski University in Kielce to award PhD titles in medical fields

2019-04-04

The Jan Kochanowski University (UJK) in Kielce received the right to award PhD titles in medical faculties. - The Commission appreciated our efforts. The receipt of rights reflects the scientific activity of our Faculty of Medicine and Health Sciences - emphasizes Prof. Stanisław Głuszek, Vice-Rector of the UJK. Kielce University will soon develop regulations for awarding PhD titles. The offer is mainly prepared for doctors, although other graduates of medical studies will also be able to use it. The university authorities expect that the PhD will primarily be awarded to the doctors working in the largest hospitals in the region, namely in Kielce, Czarnów and in the Świętokrzyskie Oncology Center.

Researchers from the Jagiellonian University working on the construction of artificial neural networks

2019-04-05

The construction of innovative artificial neural networks is the goal of a research project led by Prof. Jacek Tabor from the Jagiellonian University in Krakow. - Neural networks are software structures and systems whose operation is similar to processes occurring in the human brain. Currently, we have more and more insight into how our brain functions, and thus we can translate this knowledge and improve artificial intelligence systems - says prof. Jacek Tabor. Comprehensive work on the construction of Polish neural networks, under the guidance of Prof. Jacek Tabora, will be run by six research groups from the Jagiellonian University: the Faculty of Mathematics and Computer Science, the Faculty of Physics, Astronomy and Applied Computer Science, and the Faculty of Management and Social Communication.

The team will include IT specialists, programmers, statisticians, biostatisticians and neurocognitive scientists. They will receive over PLN 19 million from the Foundation for Polish Science as part of the TEAM-NET program.

Researcher of the Medical University of Poznan receives Scholarship of the Kosciuszko Foundation

2019-04-08

Professor Med. Marzena Gajęcka, head of the Department of Pharmacy and Pharmaceutical Genetics and Pharmacy of the Poznan University of Medical Sciences, received a scholarship from the Kościuszko Foundation for the academic year 2019/2020 to complete a scientific internship at Baylor College of Medicine and Texas Children's Hospital, Houston in the United States. During his three-month stay in Houston, Prof. Gajęcka will work on the application of integration analyzes in multi-level studies on host-microbiota interaction in multifactorial diseases. The Kosciuszko Foundation promotes Polish-American cooperation through international exchange in education, science and culture. The Foundation grants annual residency and grant grants to Poles for studies, research and/or didactics at universities or other institutions providing higher education in the United States.

Poznań universities and Enea Operator to launch a project of Virtual reality in the energy sector

2019-04-08

Enea Operator, together with the University of Economics in Poznań and the Poznań University of Technology, launched a research and development project using virtual reality technology. They are aiming to develop a system to increase the competence of employees of Enea Operator technical services using virtual goggles. The implementation of the project assumes the implementation of interactive training scenarios for fifteen selected Main Supply Points and ten medium voltage stations. Within them, the electrician will move inside a three-dimensional digital model. The project of implementing the «Flexible system for increasing the competence of employees of technical services using virtual reality techniques» is co-financed from EU funds under the «Fast track for large enterprises and consortia» Research Program implemented by the National Center for Research and Development.

Center for Medical Simulation of the University of Zielona Góra receives the SESAM recommendation

2019-04-09

The Monoprofiled Center for Medical Simulation at the Faculty of Medicine and Health Sciences of the University of Zielona Góra is the first monoprofiled center of medical nursing simulation in Poland, which received the recommendation of Society in Europe for Simulation Applied to Medicine (SESAM). MCSM has one high quality hall with three patient simulators (adult, child and infant patient), technical skills workshop, basic nursing skills workshop, debriefing room, BLS (basic medical help) and ALS (advanced medical help) and two rooms for designed for the OSCE (Objective Structured Clinical Examination) exam. Monoprofiled Center for Medical Simulation is a unit of the Faculty of Medicine and Health Sciences of the University of Zielona Góra. The creation of the Center began in 2017,

and it was officially launched in January 2018. More: <http://www.infoserwis.uz.zgora.pl/index.php?mcsm-uz-oficjalnie-zostal-wpisane-na-liste-referred-women-monoprofilowych-centrow-symulacja-medycznej-w-Europe>

Polish scientists working on a cellular therapy to cure inborn immunodeficiency

2019-04-10

Scientists from three academic centers: the Medical University of Lodz, the Jagiellonian University in Krakow and the Wrocław University of Science and Technology under the guidance of Prof. Wojciech Młynarski from the Medical University of Lodz want to develop innovative cell therapy that will allow the treatment of congenital immunodeficiency. They obtained funding for this research from the Foundation for Polish Science, as part of the TEAM-NET program implemented with EU funds from the Intelligent Development Operational Program. - Our goal is to develop an effective, simple and cheap diagnostic test that differentiates neutropenia for genetic reasons from non-genetic ones. We also want to find new, yet undiscovered genes responsible for innate neutropenia - explains Prof. Wojciech Młynarski. Researchers will take the bone marrow from patients with congenital neutropenia to isolate the blood stem cells. Then, in the laboratory, they will fix genetic errors in stem cells and from repaired stem cells will grow healthy neutrophils. After checking whether the neutrophils are functional, they will introduce them to patients.

Scientists of the Jagiellonian University developed a method for detecting DNA damage

2019-04-10

Researchers from the Jagiellonian University (UJ) in Krakow have developed a method that not only allows to indicate a damage in the DNA chain, but also precisely determine the place where the genetic code cracks occurred. The creators of the invented method named SensiTive Recognition of Individu-

al DNA Ends (STRIDE) are Prof. Jerzy Dobrucki, Dr Magdalena Kordon, Dr Mirosław Zarebski and Dr Kamil Solarczyk from the Faculty of Biochemistry, Biophysics and Biotechnology of the Jagiellonian University. The development of the method and its commercialization will be carried out by a company intoDNA organized by the scientists. The invention is to be patented soon. Researchers are currently conducting pilot studies related to adaptation of the STRIDE method to different types of biological material. They discover new applications of this method and have initially selected areas where the method has the best chance of commercial use.

VIII Interuniversity Conference Brain Day in Szczecin

2019-04-12

Department of Clinical Psychology and Psychoprophylaxis of the Institute of Psychology at the University of Szczecin, Department of Psychiatry of the Pomeranian Medical University, District Medical Chamber in Szczecin, Polish Neurological Society and Polish Psychiatric Association Branch in Szczecin and the Cogito Association invite participants to the VIII Inter-University Conference Day of the Brain. The Brain Day is a lecture on topics related to the functioning of this organ in an interdisciplinary perspective - from a medical, neurological and psychiatric point of view, and taking into account humanistic aspects. This year's performances will include: Imagination of music, Irrationality of our communication, Does art suffer?, or Who is art therapy for? and Diseases of the brain in the film. The conference is organized under the slogan «BRAIN - ART - CONTROVERSIA» and will take place on Saturday, 13 April, in the hall of the Faculty of Humanities of the University of Szczecin.

Polish universities join the international research project on dyspnoea

2019-04-15

The Medical University of Gdańsk together with the Nicolaus Copernicus University in Toruń and foreign partners of the BETTER-B project (Better Treatments for Breathlessness) started a research in early 2019 to change the treatment of severe dyspnoea in people suffering from respiratory diseases, especially chronic obstructive pulmonary disease and interstitial lung disease. BETTER-B is financed from the EU program for research and innovation «Horizon 2020» and is carried out in a consortium consisting of universities from Poland, Germany, Ireland, Italy, Great Britain and Australia and the European Respiratory Society. The project includes studies on the influence of dyspnoea on the quality of life, on various types of dyspnoea and on the improvement of treatment. Its ultimate goal will be to alleviate suffering and improve the quality of life of patients, their friends, family and carers. More: <https://gumed.edu.pl/55025.html>

Researcher of the Medical University of Wrocław developed the European Requirements for Training in Neuroradiology

2019-04-17

Prof. Marek Szaśiadek, the scientist of the Medical University of Wrocław prepared European Intervention Neuroradiology Training Requirements which have been unanimously adopted as a standard of training in the European Union and countries cooperating with EU. The document was adopted unanimously (as the only one out of the 8 training programs presented), both by the Advisory Committee of UEMS (European Union of Specialist Physicians), consisting of presidents of European sections representing all medical specialties, as by the UEMS Council (UEMS Council) - delegates of Supreme Medical Chambers from all over Europe. Professor Szaśiadek, president of the Neuroradiology Division, UEMS presented a document drawn up under his

guidance at the meeting of the UEMS Council in Brussels. Now it will become a standard in the field of interventional neuroradiology training in European Union and in the countries associated with the European Union.

Pomeranian Medical University in Szczecin launches the Center for Medical Simulation

2019-04-17

A Medical Simulation Center was opened at the Pomeranian Medical University in Szczecin. It is one of the most modern facilities for training students of medical faculties. Classes in the Center have already started. - We have the latest teaching and medical center in Poland. We have overtaken other such universities in terms of equipment and quality. It will be used by students of all our faculties. Each student, before starting their practice, will undergo classes in this center on clinical and preclinical subjects - says the rector of the Pomeranian Medical University, Prof. Bogusław Machaliński. The facility consists of 35 classrooms including an operating theater, an intensive care unit, a hospital emergency department, an ambulance simulator, a delivery room and a nursing room. There are also rooms of technical, clinical and surgical skills, ultrasound and endoscopy labs, an ambulance and 12 programmable phantoms.

Polish scientists working on a new method of leukemia diagnostics

2019-04-19

Polish scientists have proposed an innovative method for the diagnosis of leukemia, thanks to which it will be possible to prevent the recurrence of the disease. For the development of their specialized diagnostic equipment, they have just received a grant of PLN 26 million under the TEAM-NET program of the Foundation for Polish Science. The research work will be carried out by a consortium of five scientific units whose leader is the University of Warsaw. As a result of the project, a diagnostic device will be created for rapid, unmarked imaging, identification

and sorting of leukemic cell subtypes. Six multidisciplinary teams including oncologists, chemists and physicists from the Faculty of Physics at the University of Warsaw, the Institute of Physical Chemistry of the Polish Academy of Sciences in Warsaw, the Institute of Hematology and Transfusiology in Warsaw, Medical University in Lodz and the Faculty of Chemistry of the Jagiellonian University will be working on the new diagnostic method.

„Level of masculinization as a signal of male antioxidant potential” - a study by the University of Wrocław

2019-04-19

Researchers from the Department of Human Biology at the University of Wrocław are starting new research in the framework of the project „The level of masculinization as a signal of men’s antioxidant potential”, financed by the National Science Center. The main goal of the study is to test whether facial and body characteristics in men, depending on the testosterone level, are related to the health and general condition of the body. Researchers are looking for healthy men, aged 30-40, willing to participate in the study. Both active men and those who do not engage in physical activity can take part in the project. Participating in the study is a great opportunity to get to know their bodies, check-up, perform a number of free tests and measurements, and help Wrocław scholars carry out interesting and innovative research in the field of evolutionary biology. More: <https://uni.wroc.pl/poszukiwany-mezczyzna-wiek-30-40-lat>

Biobank of the Medical University of Wrocław receives the certificate ISO 9001: 2015

2019-04-23

Biobank of the Medical University of Wrocław, as the first in Poland, obtained the ISO 9001: 2015 certificate in the scope of „biobanking of biological material for scientific, research and development as well as didactic purposes”. The certificate was awarded by the oldest and the most experienced BSI standardization organization in the world with the validity period until April 2, 2022. Biobank operates in the Laboratory for Biological Activity Screening and Biological Material Collection. The implementation of the guidelines enables management of Biobank processes according to the highest standards, guaranteeing the high quality biological material and data related to it. This translates directly into the possibilities of obtaining new scientific and research projects and cooperation in creating innovative research and development solutions.

Criminologists from Cambridge to participate in European Legal and Pharmaceutical Congress in Białystok

2019-04-24

On June 7, 2019 in Białystok, Medical University of Białystok, Medical University of Silesia in Katowice and Institute of Criminology at the University of Cambridge are organizing the European Legal and Pharmaceutical Congress dedicated to the problem of falsification of medicinal products. The event will be attended by representatives of the United Nations, law enforcement and justice, the National Medicines Institute, the Euroregional Center of Pharmacy, as well as foreign and Polish universities. The issue of the conference is extremely current, especially in the situation of increasing crime related to falsification of medicines and dietary supplements. Every second drug purchased on the Internet

is a fake. Forging medicines is a source of income for organized criminal groups and a serious threat to the life and health of consumers.

Scientist of the Wrocław University of Science and Technology developed a biochip for tissue culture

2019-04-25

Dr Robert Szafran from the Wrocław University of Science and Technology has developed a biochip for breeding vascularized tissues. The invention may revolutionize the procedure of admitting new medicines to the market, speeding it up and lowering its cost. The heart of the chip is a breeding chamber whose structure has been cut in a hair thin layer of polymer. It is here that non-living matter connects in a programmed way with cells in artificial tissue. Thanks to the technology, it is now possible to obtain a flow structure which allows to grow whole tissue models on the plate. It allows to «check» the medicine outside the patient's body, but on his own biological material. - Tissue models on the chip are new. They can be widely used e.g. at various stages of preclinical testing of drugs or in personalized medicine, especially in immunological therapies of cancer - says Dr Szafran. More: <https://pwr.edu.pl/uczelnia/aktualnosci/bioniczne-modele-tkanek-pomoga-nie-tylko-w-ce-z-nowotworami-11171.html>

Medical University of Lodz creates Center for Molecular Studies of Civilization Diseases

2019-04-29

The Medical University of Lodz has signed a contract for the Center for Molecular Studies of Civilization Diseases, as part of the MOlecoLAB project, which involves the construction of top-class scientific and research laboratories for chemical and biological research and analysis. - MOlecoLAB is a unique project not only because of the research that will be carried out there. In addition, the investment is consistent with the university's sustainable development policy - EcoUMED. We invest in «green»

infrastructure and energy-saving solutions - says Dr Jacek Grabowski, Chancellor of the Medical University of Lodz. Laboratories of the Center for Molecular Studies of Civilization Diseases will enable to conduct research and development works, design innovative products and diagnostic and therapeutic services, as well as to implement cooperation with the industry in Poland and worldwide.

University of Rzeszów to launch the Multi-profile Center for Medical Simulation

2019-04-29

The University of Rzeszów (UR) has signed a contract to co-finance the purchase of several medical simulators for the medical needs of the Faculty of Medicine. Dr Józef Cebulski, Vice-Rector for Infrastructure and Cooperation with Economy, signed in the Ministry of Health the project «Multi-profile Medical Simulation Center for medical education with the use of the Medical Simulation Center. Development program of the Medical Faculty of the University of Rzeszów» implemented under the Operational Program Knowledge Education Development 2014-2020. The aim of the project is to improve the quality of practical education by implementing a development program and creating a multi-profile medical simulation center for the Medical Faculty of the University of Rzeszów. Co-financing PLN 13.5 million covers the whole project costs. PLN 10 million will be allocated for the purchase of equipment. The training of the staff will be covered by the remaining part of the amount.

University of Zielona Góra receives PLN 10 million for the Multi-profile Medical Simulation Center

2019-04-29

The University of Zielona Góra received over PLN 10 million to create a Multi-profile Center for Medical Simulation. Ministry of Health has allocated money from the Knowledge Education Development Program to purchase equipment, hold training and courses for teaching staff conducting classes by simulation. The multi-profile Medical Simulation Center will be built in the premises at ul. Energetyków, where three floors (ground floor, 1st and 2nd floor) will include modern training rooms for medical students. Future doctors will practice in fully equipped, operating, intensive care and childbirth rooms. There will also be a hospital emergency unit and a S-type ambulance simulator (an ambulance used for more difficult cases with a lifeguard on board and at least one doctor). Rooms for medical procedures will be fully equipped with simulators, audio-video systems, phantoms, equipment and furniture.

Invention of an Opole entrepreneur can stop the epidemic of African Swine Fever

2019-04-29

Entrepreneur Jarosław Romanowski and his team invented, patented and started the production of „Janobio” - a measure that can stop the African Swine Fever epidemic disease. „Janobio” is a biocide - chlorine hydride, electrically charged to a drop of water, with the addition of a special stabilizer. A spray of water dropping on a virus or bacteria acts like a bomb. An «explosion» occurs and destroys the cell membrane or lipid cover of viruses. The bacterial or virus tissue is opened and the remaining hypochlorite with the stabilizer breaks down or eliminates the virus. As the manufacturer convinces the agent is completely safe for people. It does not cause poisoning or skin irritation either burns. It is very easy to use for animal breeders, veterinary services or even hunters. It was examined and positively

assessed by the State Veterinary Institute in Puławy. More: <https://nto.pl/opolanin-stworzyl-bron-dowalki-z-afrykanskim-pomorze-swin-sukces-prob-z-nowym-srodkiem-biobojczych/ar/c8-14070163>

University of Opole to receive almost PLN 14 million for the Multi-profile Medical Simulation Center of the Opole University

2019-04-30

The University of Opole received almost PLN 14 million for the Multi-profile Medical Simulation Center. The money comes from EU funds under the Knowledge Education Development Program. More than half of the amount will be spent on the purchase of the Center's equipment, and the rest will be devoted to the training of teaching staff and students, employment of medical simulation technicians and preparation of scenarios of simulation techniques. In the near future, the center will provide a workshop of technical, surgical and nursing skills, an intensive therapy room, a clinical and nursing skills room, a delivery room, an operating theater, a hospital emergency department and an ambulance simulator. It will be used primarily by students of the medical faculty as well as teachers and technical staff of the Opole university.

III Congress of the Polish Society of Cryotherapy to be held in Wrocław

2019-05-06

The Polish Cryotherapy Society, the University of Physical Education in Wrocław and the Medical University of Silesia in Katowice are inviting participants to Wrocław on May 16 to the Third Congress of the Polish Society of Cryotherapy. The Congress will take place on the 30th anniversary of the creation of the first cryogenic chamber in Poland in 1989 at the Institute of Low Temperatures and Structural Research of the National Academy of Sciences in Wrocław. The event program includes the topic of cryotherapy applications in modern medicine and physiotherapy, as well as the possibilities that in modern cryothera-

py can develop bioengineering and physics achievements. The lecturers are outstanding figures of cryogenics and cryotherapy, who agreed to share their knowledge and experience with the participants of the meeting.

Pomeranian Medical University in Szczecin receives almost PLN 7.6 million

2019-05-06

The Pomeranian Medical University in Szczecin is on the ranking list of projects of the National Center for Research and Development recommended for receiving funding as part of the competition for the implementation of Integrated University Programs. The value of the project is almost PLN 7.6 million. The project «Integration-Integrated Development of the Pomeranian Medical University in Szczecin» includes: implementation of information management tools of the university, including electronic management of university records (EZD) along with a series of training for the staff enabling efficient implementation of EZD. The project also includes the implementation of additional classes: ultrasound diagnostics, endoscopy, radiochemistry, internal dosimetry, microsurgery, biophysics, near-infrared spectroscopy and 3D printing and the implementation of domestic and foreign teaching internships for university staff, specialist courses for students and study visits in leading foreign national centers.

Consortium to develop implants for bone tissue regeneration

2019-05-07

Wrocław University of Technology is the leader of the project „Multifunctional biologically active composites for applications in bone regenerative medicine” has received almost PLN 14 million within the TEAM-NET competition of the Foundation for Polish Science. The consortium includes the Wrocław University of Science and Technology, the Institute of Ceramics and Building Materials, the Ceramics and Concrete Department in Warsaw; Krakow University of Technology and University of Lodz. The aim of the project is to develop new polymer-ceramic composite biomaterials designed for regenerative medicine applications - in controlled regeneration of the skeletal system. As part of cooperation of research teams, porous implants for regeneration of bone tissues and bone stabilizing implants covered with innovative coating materials, which release bioactive growth factors and anti-inflammatory components, will be developed.

Students of the University of Zielona Góra developed a prosthesis for a dog

2019-05-08

Students from the BiomedUZ scientific club, operating under the Biomedical Engineering Department of the University of Zielona Góra, developed a prosthesis for Reksio - a dog that lost a part of the paw after being hit by a train. Students of the Zielona Góra university designed a prosthesis, which consists of rigid element, which is covered with a gel pad and is joined with the 3D printed stump made of elastic fiberglass and epoxy resin to simulate work of joint, provide cushioning and prevent overloading of other joints in the limb. The elastic element was also 3D printed. More: <http://www.infoserwis.uz.zgora.pl/index.php?studenci-z-koa-naukowe-go-biomeduz-stwrzyli-protez-dla-psa-ze-schroniska-w-nowej-soli>

Cardinal Stefan Wyszyński University receives the right of medicine studies

2019-05-09

The Minister of Science and Higher Education issued a positive decision regarding the application of the Cardinal Stefan Wyszyński University (UKSW) in Warsaw to grant the Medical Faculty of Collegium Medicum the right to conduct education at the medical school. The consent concerns education at the regular master's studies with a general academic profile. The first course will start in October 2019. Students can apply for 100 places available from June 7. The qualification exams will cover three subjects: biology, chemistry and mathematics. The clinical basis for the UKSW medical studies are scientific and research institutes, including: Military Medical Institute, Cardinal Stefan Wyszyński Institute of Cardiology, Institute of Mother and Child and public hospitals and institutions that provide commercial activities in the field of medical services.

Important discovery of scientists from the Jagiellonian University

2019-05-10

Researchers from the Małopolska Center of Biotechnology of the Jagiellonian University (UJ) in Krakow informed in the journal Nature about the discovery of a 24-walled protein cage, made of gold ions, whose geometry is contrary to the rules of mathematics. Krakow researchers belong to an international team led by the British Prof. Jonathan Heddle. The discovery is a step towards the wider use of artificial protein cages with original properties. This could ultimately revolutionize protein therapies or treatments using DNA or RNA, potentially allowing for greater efficacy, e.g. in the fight against cancer. The long-term research was financed by the National Science Center, and the partners in the project included scientists from the University of Oxford, Durham University in Great Britain, and from Japan, Canada and Slovenia.

Medical University of Silesia receives PLN 5.5 million for an integrated university program within regional development

2019-05-10

The project of the Medical University of Silesia „Integrated Programs of Universities for Regional Development” has received more than 5.5 million PLN of funding from the National Center for Research and Development. The project assumes the simulation of activities carried out at the site of the disaster with the use of the Emergency Medical Service helicopter, as well as the use of tools to simulate activities in the chemical laboratory and providing tools to familiarize students with the anatomical structures of the human body. Thanks to the co-financing, the competence of nursing students in the dealing with vascular access will be increased, as well as the implementation of tools for objective and real-time evaluation of the quality of lectures and staff work.

State Higher Vocational School in Tarnów to launch Monoprofiled Center of Medical Simulations

2019-05-14

The State Higher Vocational School (PWSZ) in Tarnów has opened a modern Monoprofiled Center for Medical Simulations (MCSM). Its several studios have been comprehensively prepared and equipped with technologically advanced equipment, including simulators, allowing for very realistic reproduction of clinical scenarios. MCSM was created thanks to the PLN 2.5 million allocated by the EU funds. - Education using the simulation method gives completely new possibilities to both didactics and students. I am very happy that our University has joined the group of higher education institutions with such advanced equipment. I want to thank everyone who contributed to the creation of the Center - said Prof. Eng. Jadwiga Laska, Rector of the PWSZ in Tarnów.

Institute of Medical Sciences of the State Higher to be launched at Vocational School in Chełm

2019-05-15

The State Higher Vocational School (PWSZ) in Chełm received PLN 28.5 million to create the Institute of Medical Sciences. On May 13, 2019, the PWSZ in Chełm received a symbolic check for PLN 28.5 million and the decision of the vice-Prime Minister, Minister of Science and Higher Education Jarosław Gowin to erect the didactic building of the Institute of Medical Sciences of the State Higher Vocational School in Chełm. The Institute of Medical Sciences is to be established in Chełm until 2022. The rector of the PWSZ in Chełm Dr Eng. Arkadiusz Tofil emphasized that there is a constant increase in the demand for such employees both from hospitals and other medical institutions. - The University is trying to obtain the opportunity to educate students also within the regular Nursing course. My dream is to launch our own clinic hospital- said the Rector of the State Higher Vocational School in Chełm.

Researchers from the Warsaw University of Technology working on a device to help identify skin cancers

2019-05-16

Team under the direction of Dr Eng. Agnieszka Siemion from the Faculty of Physics, Warsaw University of Technology (PW), is working on the creation of optical systems for the device that will real-time imaging human skin, allowing identification of cancerous changes. The T-SKIN project received funding in the ninth LIDER program organized by the National Center for Research and Development. The device will be based on optical modules containing diffraction structures. These structures use the phenomenon of diffraction, which consists in the fact that the wave, when encountering an obstacle, changes the direction. The scientists' plans include creating an illumination and imaging system for the skin that focuses the radiation on the high power density spot and the system re-

directing radiation reflected at different angles to the detector or matrix, which will also allow deeper layers of the skin to be examined.

Medical University of Gdańsk to launch Center for Translational Medicine

2019-05-16

The Medical University of Gdańsk opened the Center for Translational Medicine (CMT). Translational medicine is a way to quickly transfer the knowledge gained in the experiment to everyday clinical practice. This is a new but extremely important scientific discipline. The seat is the University Clinical Center in the immediate vicinity of the Invasive and Non-Invasive Medicine Centers. The modern imaging center of the cardiovascular system with facilities was launched, which enables joint work of various scientific specialists and the employees of the Technology Transfer Center. The CMT is provided with a new infrastructure including a treatment space for conducting clinical research, imaging laboratories using the most modern magnetic resonance methods, laboratory and office spaces for conducting research and also commercial space. More: <https://gumed.edu.pl/55758.html>

Rehabilitation oscillation vest for clearing the airways

2019-05-16

Scientists of the University of Silesia created a rehabilitation vest for oscillating the airways. The solution was created primarily for the physiotherapy of people struggling with diseases with secretion accumulated in the airways, for example cystic fibrosis or bronchial asthma. The vest is a technologically advanced product that requires the integration of control techniques with mechanical elements hidden in a specially designed textile material. - The eight built-in vibration motors cause the vibrations of the vest so strong that the patients reflexively expectorate the secretion from their lungs. In addition, there is a special cotter that immediately switches off the device. It may happen that during the vibration the patient feels worse, then he can immediately disconnect all systems.

College of Public Administration in Ostrołęka to educate nurses

2019-05-17

The representatives of the nursing self-government and local self-government announce that the School of Public Administration in Ostrołęka will launch a nursing department. Such a proposal was made during the ceremony on the occasion of the International Day of Nurse and Midwife, which took place on 9 May 2019 in Ostrołęka. The initiator of the project was the vice-president of the Supreme Council of Nurses and Midwives Mariola Łodzińska, who noticed that there is a lack of the department educating nurses and midwives in Ostrołęka. She proposed then that local authorities, taking into account staff shortages, would take care of this staff locally for the needs of the region. The initiative was accepted by Elżbieta Lanc, a member of the Mazovia Province Board. She announced that together with the mayor of Ostrołęka, Łukasz Kulik, they decided that the local government would take the initiative to launch the department for nurses in Ostrołęka.

Scientists from the University of Silesia develop rehabilitation game

2019-05-17

Researchers from the University of Silesia created a special rehabilitation game using virtual reality. The game is addressed to patients requiring constant or temporary rehabilitation of the musculoskeletal system, having post-traumatic problems, as well as rheumatological and orthopedic diseases. The rehabilitated persons, thanks to the system of sensors, can play a virtual character in the games «Teddyrun» or «Teddyflight», and then, trying to avoid numerous obstacles they collect honeycombs or additional bonuses while running in the spaceship. The scenario can be freely changed for patients of all ages. - The patient must perform certain movements with his hands or torso to achieve the goal of the game to collect as many as possible honeycombs, apples or get to a certain number of rooms.

University of Science and Technology to launch a computational medicine center in Krakow

2019-05-22

The SANO AGH project at the AGH University of Science and Technology in Krakow has won a grant of 15 million euro in the prestigious Teaming for Excellence competition under the EU's Horizon 2020 program. Thanks to financing, researchers will be able to conduct advanced computer simulations used in medical diagnostics. The Center for Individualized Computational Medicine SANO will be created from the grant funds. It will deal with the creation of innovative methods of medical diagnosis and individualized therapy, which will be supported by advanced computer simulations. The SANO Center will be created as a result of international cooperation. The consortium includes the Academic Computer Center CYFRONET AGH, LifeScience Cluster in Kraków, the German Society of Fraunhofer Supporting Applied Research and Forschungszentrum Jülich GmbH and the British University of Sheffield.

Scientists of the Medical University of Wrocław to receive nearly PLN 5 million

2019-05-22

Nearly PLN 5 million will be granted to the researchers of the Medical University of Wrocław for their research from the National Science Center as part of the Opus program. Almost PLN 2 million will be allocated to the project «Determination of epigenetic mechanisms of modulation of selected genes from the SOX family and their transcripts as potential diagnostic and predictive markers in NSCLC non-small cell lung cancer», and nearly 900 thousand PLN will be allocated to the «Investigations of GABAergic transmission plasticity mechanisms in interneurons and pyramidal cells of mouse hippocampus». One million PLN will allow to determine the «importance of microflora and permeability of the colon barrier in the pathophysiology of schizophrenia - in search of conditions for sub-threshold inflammation and

metabolic dysregulation». This project is carried out by a consortium of the Pomeranian Medical University in Szczecin and the Institute of Immunology and Experimental Therapy of the Polish Academy of Sciences.

Polish-Portuguese cooperation in the „battlefield medicine”

2019-05-24

The Medical Simulation Center of the Medical University of Wrocław strengthens the cooperation with the Portuguese Centro de Saúde Militar de Coimbra. Thanks to this agreement, students and PhD holders of the Wrocław university will have the opportunity to participate in new courses in the battlefield medicine. The agreement with Módulo de Formação e Simulação Biomédica de Centro de Saúde Militar de Coimbra in Portugal is an extension of the existing cooperation between the two institutions. It offers the opportunity to organize martial arts courses and medical activities in mass events in the future. - I think that we have to prepare our students to such challenges of today and changes in the world – emphasized Dr Piotr Kolęda, who heads the Medical Simulation Center at the Medical University.

Elbląg University to teach doctors

2019-05-28

The University of Humanities and Economics in Elbląg (EUH-E) waits for the decision of the Ministry of Science and Higher Education on granting the Faculty of Health Sciences EUH-E the right to conduct regular medicine studies. - Demand is huge, doctors, especially specialists are pensioners to a large extent, and the supply of new cadres is insufficient - says Sylwia Sobkowiak, the head of the rectorate of the Elbląg University of Humanities and Economics. Two years ago, the opinion of the Ministry of Science and the Polish Accreditation Committee was negative due to the lack of a functioning education and simulation center for students of the medical faculty. However, such a center has already been built and equipped. It will start operating from October 1, 2019. The rectors of the Elbląg university

expect that after fulfilling all the requirements, they will receive a positive decision from the Ministry of Science.

Medical rescuers in Wrocław trained in the virtual reality

2019-05-28

Students in the field of Emergency Medicine at the University of Medical Sciences in Wrocław as the second in Poland launched a modern educational tool providing training opportunities in virtual reality. The possibilities of training paramedics virtually are now unlimited. Students begin training on a standard simulator and later start simulation wearing VR goggles. They must not only make the right decisions, but also perform the necessary activities recorded by the controllers. Each simulation is based on a predetermined scenario, created and supervised by the teacher, who later discusses the results with the students. The University of Medical Sciences in Wrocław is the second university in Poland and one of the first in Europe using virtual reality technology to train students of emergency medical services - informs the university. Experts of the Medical University of Gdańsk co-authored an important analysis about diabetes in Poland

2019-05-30

Researchers of the Medical University of Gdańsk are co-authors of the work „Prevalence of diabetes in Poland: a combined analysis of national databases”. The analysis concerns diabetes, which is one of the main health problems in Poland and in the world. The analysis of Gdańsk scientists was published in the journal «Diabetic Medicine». It shows that there are 2.68 million diabetic patients in Poland (including almost 0.5 million patients who are unaware of the disease). This is the first comprehensive and precise assessment of the number of diabetic patients in Poland. Its publication was preceded by the work of a special working group appointed by the Public Health Committee of the Polish Academy of Sciences. The working group carried out extensive analyzes using data from the National Health Fund and the National Institute of Public Health - the National Institute of Hygiene, commercial organizations and the results of scientific research. More: https://gumed.edu.pl/attachment/attachment/63410/Topor_Madry_et_al_2019_Diabetic_Medicine.pdf

Medical University of Gdańsk joins consortium of the PRECODE project

2019-05-31

Researchers at the Medical University of Gdańsk received a Marie Skłodowska-Curie Actions Innovative Training Networks grant for the implementation of the PRECODE project: PancREatic Cancer Organoids REsearch. The project assumes the implementation of innovative doctoral thesis in an international team and the promotion of a new generation of scientists in model systems and methods for the development of effective therapies for pancreatic cancer. It will be implemented in a consortium of 15 European universities: Università degli Studi di Verona from Italy, the Spanish University of Navarra, the Scottish

University of Glasgow, the Dutch Universiteit Leiden and the Karolinska Institutet and Umea Universitet from Sweden. The coordinator of the work is the German University in Erlangen. Gdańsk scientists will develop a model of interaction between pancreatic cancer organoids and platelets in the context of the metastasis process and assess its suitability for studying the antineoplastic activity of drugs and screening of newly synthesized compounds.

Center for Diagnosis and Treatment of Lung Cancer established in Białystok

2019-06-04

Medical University of Białystok and the University Clinical Hospital set up the Center for Diagnosis and Treatment of Lung Cancer. The goal of the established Lung Cancer Unit is to provide better and coordinated patient care. This is the first such center in Poland. The doctors of the Center will cooperate with radiotherapy specialists from the Białystok Center of Oncology. The center will offer adequate facilities for diagnosis and treatment of lung cancer, where experienced specialists will deal with the treatment. The center is also to have access to all methods needed for diagnosis and therapy. UMB emphasizes that lung cancer is still the leading cause of cancer deaths in people around the world.

Scientist of the Medical University of Silesia becomes the chairman of the group at EAACI

2019-06-04

Dr Grzegorz Brożek from the Chair and Department of Epidemiology at the Medical Faculty of the Silesian Medical University in Katowice became the chairman of the epidemiological group European Academy of Allergy and Clinical Immunology (EAACI) with automatic membership in the management board of the Environmental and Occupational Allergies section. EAACI is one of the largest organizations in the world joining over 50 national allergological societies, about 10,000. scientists, researchers and doctors from 121 countries around the world. It acts

as a scientific reference organization for other scientific, health and political organizations dealing with allergology and clinical immunology. Additional areas of EAACI activity include: promotion of basic and clinical research, collection, evaluation and dissemination of scientific information, postgraduate education and promotion of good care of patients in allergology and clinical immunology.

Institute of Medical Sciences to be established in Chełm

2019-06-05

- The best what we have in Chełm is the State Higher Vocational School, which educates pilots of civil aviation. Precisely, this school is what develops the scientific potential of the city – said Mayor of Chełm Jakub Banaszek. Banaszek added, that the PWSZ will establish the Institute of Medical Sciences. The school has received PLN 30 million as subsidies from the Ministry of Science and Higher Education. - Establishment of the institute is the first step for the constructing a medical center. Mayor of Chełm wants to «profile the city for the medical services market». My goal is to double the number of students in the future. The current number is about 1000 - emphasizes Banaszek.

Playing with a whale helps kids support inhalation

2019-06-05

Scientists of the University of Silesia have developed a game that supports inhalation. Their invention allows to monitor whether the patient performs the inhalation correctly and makes the long procedure less burdensome for the child. The child, by regulating the breathing rate during inhalation, controls the figure of the whale visible on the screen, which devours the food, situated on various levels, making it bigger and bigger. In this way, the young patient learns to breathe and exhale very quickly, and at the same time concentrates on the floating hero, not on the loud device, which often arouses fear for children. Respiration monitoring is possible thanks to the sensor installed in the inhaler mask. The scientists can program the inhalation time and other parameters in the system to assure the best possible inhalation effects.

Larger admission limits for medical studies

2019-06-10

The Medical University of Lodz will accept more students to study medicine. The University of Lodz received a larger limit from the Ministry of Health in the call for the academic year 2019/2020. From October 2019, Łódź Medical University will accept 670 students for the first year of full-time medical studies. However, it should be mentioned that 150 places will be financed by the Ministry of National Defense. 520 places remain for future civilian doctors. Raising the limits of medical studies, paid in total by the state, applies not only to Łódź university. In the regulation from the previous year, the Ministry of Health allowed Polish universities to offer a total of 4,678 places, this year there will be 5122 places for medical students. The development of medical staff is very important from the point of view of the epidemiological situation of the country.

Oświęcim State Higher Vocational School to launch the Monoprofiled Center of Medical Simulation

2019-06-13

On 10 June 2019, Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin, Minister of Entrepreneurship and Technology Jadwiga Emilewicz and Deputy Minister of Health Józef Szczurek-Żelazko, launched the Monoprofiled Center of Medical Simulation at the State Higher Vocational School in Oświęcim. The center consists of seven rooms representing the full hospital environment. It is the first and the most modern Center in western Małopolska Region and will be a didactic base for students of nursing. - We can proudly say that nurses in Poland will be educated at the global level. Thanks to the Medical Simulation Center, we can guarantee that if disaster comes, the patients will be cared for by nurses educated at the highest possible level- said Deputy Prime Minister Jarosław Gowin.

Scientists of the University of Silesia fight Alzheimer's disease

2019-06-13

Chemists from the University of Silesia, have developed two new derivatives of carbamates, which can be used in medicines to alleviate the symptoms of Alzheimer's disease. The currently used drugs use enzymes responsible for the degradation of acetylcholine. As a result of the drugs action, this distribution is blocked, which increases the level of the neurotransmitter in the patient's brain, which in turn compensates for the decrease in its concentration resulting from the death of cholinergic neurons. The substances that can block this decomposition include organic chemicals - carbamates. Researchers from Poland, the Czech Republic and Slovakia received new derivatives of carbamates. These compounds will be tested as substances alleviating the symptoms of Alzheimer's disease by affecting the enzymes responsible for regulating the degradation of acetylcholine in both the early and advanced stages of the disease. More: <https://www.us.edu.pl/nowe-zwiazki-w-walce-z-choroba-alzheimer>

Minister of Health appoints a Scientific Council of the Medical Research Agency

2019-06-21

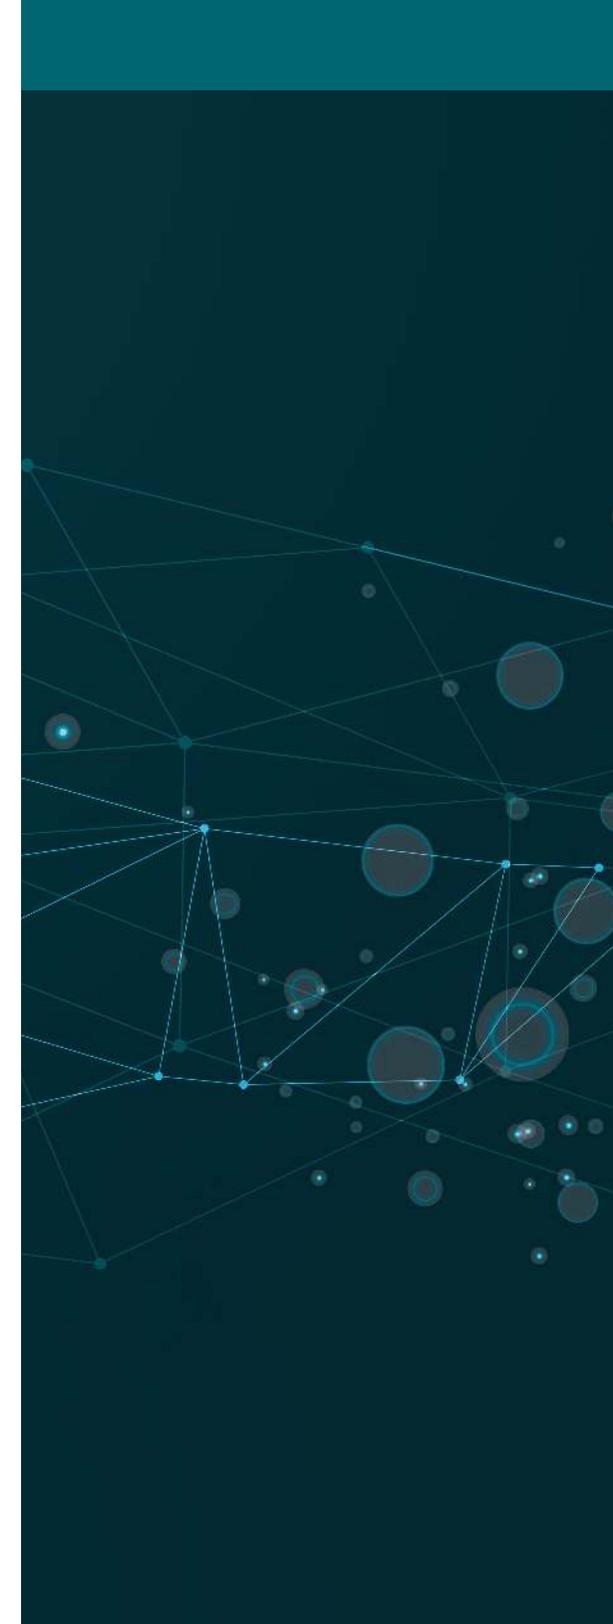

Minister of Health Rafał Szumowski appointed sixteen experts who will sit in the Scientific Council of the Medical Research Agency. Their task will be to give opinions on the research activities of the institution and the rules for the distribution of financial resources. The Scientific Council includes Prof. Marcin Moniuszko - head of the Department of Allergy and Internal Medicine at the Medical University of Białystok, Prof. Waldemar Priebe - Professor of Medicinal Chemistry; Department of Experimental Therapeutics; Division of Cancer Medicine; The University of Texas MD Anderson Cancer Center, Prof. George Wilding - Vice President and Deputy Chief Academic Officer; Clinical and Interdisciplinary Research; The University of Texas MD Anderson Cancer Center, Prof. Christopher JL Murray - Chair and Pro-

fessor of Global Health at the University of Washington; Director of the Institute for Health Metrics and Evaluation (IHME).

Professor Marek Niedozytko received a grant from the Polpharma Scientific Foundation

2019-06-26

Professor Marek Niedozytko, Head of the Clinic of Allergology at the Medical University of Gdańsk, received a grant from the Polpharma Scientific Foundation for the project „Investigating the importance of epigenetic processes in the pathogenesis of mastocytosis in the hope of finding new therapeutic possibilities”. The scientist explains whether there is a relationship between epigenetic changes and disease symptoms in mastocytosis patients and whether there are epigenetic markers. The research is also to determine whether there is a relationship between epigenetic changes and the response to the drugs, and whether it is possible to use drugs affecting epigenetic processes in the treatment of mastocytosis. Mastocytosis is a disease caused by mast cell proliferation. Symptoms are associated with persistent skin lesions, severe anaphylactic reactions and numerous symptoms associated with the release of mediators of these cells, osteoporosis and haematological symptoms associated with organ failure infiltrated by altered cells. More: <https://gumed.edu.pl/56853.html>

TELESTROKE project to receive funding under the POLKARD program of the Ministry of Health

2019-06-26

Professor Bartosz Karaszewski, head of the Department of Neurology at the Medical University of Gdańsk, is the initiator and the main author of the TELESTROKE project - a model of regional inter-hospital telemedical platforms. The telemedicine platforms described in the project are aimed at improving the effectiveness of treatment of acute phase of ischemic strokes by increasing the availability of invasive endovascular therapies and shortening the time for therapeutic interventions. The TELESTROKE project is coordinated by the University Hospital in Krakow, and one of the contractors is the hospital of the Medical University of Gdańsk - University Clinical Center. It received funding of over PLN 3.5 million as part of the POLKARD program of the Ministry of Health for 2017-2020.

Projects of the Pomeranian Medical University in Szczecin receive funding from the National Science Center

2019-06-27

Researchers from the Pomeranian Medical University in Szczecin won funding for three projects as part of the OPUS competition of the National Science Center. All projects will be implemented in a consortium with other universities. Thanks to the financing, the research «Comprehensive analysis of factors determining the course and clinical consequences of tick-borne encephalitis» will be carried out within a scientific consortium with the Medical University of Białystok; «Optimization and analysis of the biological effect of the electromagnetic field on production support and activity of bacteriophage preparations» will be developed by a scientific consortium with the West Pomeranian University of Technology in Szczecin; «The importance of microflora and permeability of the colon barrier in the pathophysiology of schizophrenia - in the search for conditions of subliminal inflammation and metabolic dysregula-

tion» - by a scientific consortium with the Medical University in Wrocław.

Researchers from Poland participated in the European Science, Research and Innovation Forum in Dresden

2019-07-02

Winners of European Research Council (ERC) grants from Poland, the Czech Republic and Germany participated in the European Forum for Science, Research and Innovation in Dresden. Poland was represented by Prof. Magdalena Król from the Faculty of Veterinary Medicine at the Warsaw University of Life Sciences. ERC offers the most prestigious European grants. In Poland, only a few scholars have been awarded in the last 10 years in the category of life sciences. These are high-risk research. There is a high probability that they will not succeed, but if they do, they will be a breakthrough for the world - explained Magdalena Król. - I'm working on solid cell therapy for solid tumors. So not leukaemia, only tumors that grow. We use immune cells to deliver drugs to the tumor area. We use the physiological mechanisms that normally occur in our body, to smuggle some medicine and kill this cancer from the inside - explained the professor from the Warsaw University of Life Sciences.

Prof. Piotr Chłosta from the Jagiellonian University Collegium Medicum receives Golden Pin European Board of Urology

2019-07-05

Professor Piotr Chłosta, head of the Clinic and Department of Urology of the Jagiellonian University Collegium Medicum in Krakow, received the Golden Pin European Board of Urology (EBU) for merits in the field of education and postgraduate education in urology in Europe. EBU is a non-profit organization that acts as part of the UEMS Urological Section (European Union of Medical Specialists). Its main purpose is to define the standards of urological

practice and education in urology, which translates into providing the highest level of medical care in the field of urology in Europe. Professor Piotr Chłosta since 2008 has been chairing the Endourology Section of the Polish Urological Association (PTU), in the years 2002-14 he was a delegate of PTU to EBU.

Researchers from the University of Warsaw to create the most effective painkiller in the world

2019-07-10

Researchers from the Faculty of Chemistry of the University of Warsaw (UW) have discovered a chemical compound that has analgesic properties 5,000 times more effective than the currently available strongest painkillers. If the successive stages of clinical tests are successful, a drug will hit the market. It will be able to relieve pain, for example of neuro-pathic origin or acute traumatic states. A chemical compound with strong analgesic properties belongs to the family of peptidomimetics. It has a bifunctional character. This means that one part of the molecule acts on the opioid receptors, which results in the suppression of pain reactions, while the second part acts on the fourth receptor- melanocortyl, which is responsible for sending the pain-initiating signal. Works on the drug are still in progress. The researchers submitted the application for patent in Poland and in selected countries of the world.

Poznan scientists want to print meniscus from fat of patients

2019-07-10

Bioprinter 3D, which is located in the Wielkopolska Center of Advanced Technologies in Poznan Morasku, will be used to produce meniscal implants from fat collected from patients. A team of Poznan scientists is working on this solution. Treatment of meniscal injury consists mainly in the fact that if it is broken, it is cut out, which over time causes degeneration of the knee joint. Other methods used in the world are transplants from a deceased donor or implantation of menisci made of collagen or polyurethane. The availability of these solutions and their cost make them difficult, whereas the implant of the scientists from Poznań is an autologous transplant - the meniscus, which is really taken from the patient's body. The cost of producing such a meniscus would also be lower than the previous solutions. More: <https://uniwersyteckie.pl/nauka/lakotka-prosto-z-drukarki-juz-za-chwile>

Warsaw Lazarski University to launch Center for Medical Simulation

2019-07-15

In October 2019, the Medical Simulation Center (CSM) of the Lazarski University in Warsaw will be open to students of the medical faculty. The Polish Accreditation Committee awarded a distinguishing diploma to the medical department in the category of caring for students and support in the process of learning and achieving educational outcomes. The Lazarski University began to train future doctors in 2017. Students, who undertook medical science then, now are the students of the third year. That is the reason why since October Lazarski University will be launching the CSM. The CSM will consist of high-fidelity simulation laboratories, including rooms simulating the conditions of the hospital emergency department, operating theater, intensive care unit, and ambulance simulator. There will also be laboratories: advanced resuscitation procedures, basic resuscitation procedures, technical, surgical and clinical skills.

Researcher at the Silesian Medical University receives European grant

2019-07-16

Professor Krzysztof Solarz from the Medical University of Silesia won a grant in the SYNTHESYS competition as part of the European Commission Grants Program HORIZON 2020. The scientist will carry out the project „Domestic mites (Astigmatina: Pyroglyphidae, Acaroidea, Glycyphagoidea) and other Astigmatina as forensic indicators“. The grant concerns the use of allergenic mites - dust, storage, food pests) and forensic mites from the Astigmatina cohort in forensic medicine (issues related to product quality, food quality, exposure to allergy mites in the workplace and forensic analysis). SYNTHESYS is a framework program of the European Union and the European Commission, including the largest and most prestigious European natural history museums, botanical gardens and scientific units related to taxonomic research. Activities and projects The SYNTHESYS consortium are coordinated by the Museum of Natural History in London.

Spin-off company of the University of Warsaw to clean up Polish hop plantations from harmful substances

2019-07-22

The Polski Eko Chmiel company signed a contract with the spin-off company of the University of Warsaw - BACTrem, which has developed an innovative technology for cleaning the soil from harmful substances. The technology is to allow to remove carcinogenic creosote from Polish plantations of hop and to provide the production of healthy, clean hop cones for the needs of breweries. The BACTrem company has decided to cooperate in the field of cleaning hop plantations from toxic substances using a special biopreparation for soil remediation. It is about the biodegradation of harmful creosote oil. - We are pleased that our biopreparation will contribute to the release of Polish hoppers from contamination of creosote oil - said Dr Magdalena Popowska, president of BACTrem. Our biopreparations are fast acting, they are safe for

the environment, they do not contain toxic substances or genetic modifications.

Jan Kochanowski University of Kielce to launch Center for Medical Simulation

2019-08-01

The Medical Simulation Center is created at the Faculty of Medicine and Health Sciences of the Jan Kochanowski University (UJK) in Kielce as part of the SIMED project. Prof. Stanisław Głuszec, vice-rector for medical affairs of UJK emphasized that thanks to modern equipment students of nursing and obstetrics studies will be able to practice important treatments in the center from the new academic year. The Medical Simulation Center is almost equipped. There are also studios for the students of Dietician faculty. The value of the SIMED project is approximately PLN 4.2 million.

Graduates of the Wrocław University of Science and Technology developing a non-invasive glucometer

2019-08-01

The GlucoActive startup, founded by the graduates of the Wrocław University of Science and Technology, has developed a device for non-invasive testing of the blood glucose level. It is supposed to help first of all diabetics, but it will also be available to people who are on a diet and athletes. The aim of the startup operating in Wrocław is to develop a solution that will allow to test the level of glucose in the blood without the need to puncture the skin. The designed device in the shape of a watch is comfortable and easy to use. The measurement will be carried out using optical and spectrophotometric methods. The developed method assumes switching the skin several times with light of a specific wavelength, and then analyzing the obtained results. Even before the end of this year, the founders of the startup want to conduct official medical experiments to confirm the results of their research. The device is expected to hit the market as a sports gadget in mid-2020. More: <https://pwr.edu.pl/uczelnia/aktualnosci/zamiast-klucia--badanie-swiatlem-11297.html>

Researchers from Silesian universities developed a device to help in the detection of cancer

2019-08-02

Scientists of the University of Silesia, the University of Physical Education and the Medical University of Silesia have developed a special device for the diagnosis of upper airway squamous cell tumor and pulmonary hypertension based on a breath test. There are even several hundred volatile compounds in the human breath sample. Based on their analysis, doctors can identify tumor markers signaling whether cancer cells are developing in the human body. The device developed by Silesian scientists consists of a short tube in which porous carbon is placed, on which markers are absorbed. Then, the coal itself is placed in the analyzer, where further tests are performed to differentiate the compounds. The device has been patented as an industrial design in the European Union. More: <https://www.us.edu.pl/diagnostyka-na-podstawie-oddechu-wzor-przemyslowy-dla-walazalazku>

Help for former miners and steelworkers

2019-08-05

In Zabrze, Prof. Zbigniew Religa Silesian Clinical and Scientific Center for Prevention and Treatment of Environmental Diseases, Civilizational and of Aged People will be launched. The first patients will be received at the end of 2012. It will be a modern facility in which specialist clinical care will be combined with scientific research. It will treat cases of particularly complex diseases, e.g. heart and lungs, which are the result of many years of work in difficult conditions of heavy industry, among others in mines and smelters. 95 percent geriatric patients suffer from cardiovascular disease.

Researchers of the Medical University of Wroclaw to receive doctoral scholarships

2019-08-05

The National Science Center awarded doctoral scholarships to two scientists from the Medical University of Wroclaw under the Etiuda 7 competition. Łukasz Zadka received funding for the project «Importance of exocytosis and IL10RA receptor against the induction of suppression of immune response in colon cancer through the mechanism of extracellular extracellular transport» in the amount of over 125 thousand. PLN. PhD student performs research at the Faculty of Histology and Embryology. Katarzyna Malec received a scholarship in the amount of over 124 thousand PLN for the project «Drug-surfactant interactions in micellar carriers of pharmaceutically active substances», carried out at the Faculty of Pharmacy with a branch of medical analytics. Katarzyna Malec is a PhD student at the Department of Medicine.

Researcher of the University of Silesia joins the international project of sustainable plant production

2019-08-08

Dr Agata Daszkowska-Golec from the Faculty of Biology and Environmental Protection of the University of Silesia is participating in the international project „Advanced tools for intensified and sustainable cultivation of barley in the face of climate change / BARISTA”. The project of scientists from Italy, Finland, Spain, Germany, Denmark, Great Britain, Estonia and Poland received almost 835,000. PLN co-financing under the first ERA-NET Co-Fund SusCrop Program competition. SusCrop is an action under Horizon 2020, which aims to strengthen the European Research Area in the field of sustainable plant production through closer cooperation and coordination of national and regional research programs. SusCrop brings together owners and managers of national and regional research and development and innovation programs in Member States and associated countries of the EU and third

countries with extensive experience in financing and coordinating research.

Warsaw startup receives the prestigious EIC Accelerator grant

2019-08-23

The Warsaw company Scope Fluidics, co-created by one of the winners of the Foundation for Polish Science (FNP), Prof. Piotr Garstecki, received an EIC Accelerator grant of EUR 1.9 million for further research on the innovative BacterOMIC system that will allow faster and cheaper diagnostics of bacterial infections. BacterOMIC was also included in the group of seven most groundbreaking diagnostic products in the American Association for Clinical Chemistry (AACC) competition. The prestigious EIC Accelerator grant, awarded by the European Commission, serves to support small and medium-sized enterprises, with high innovation potential to develop and market new products, services and business models that can fuel economic growth. AACC is the largest organization in the world gathering specialists in medical diagnostics and publisher of Clinical Chemistry - the most important scientific periodical in this field. Solutions of the Polish startup Scope Fluidics, whose co-founder and president is Prof. Piotr Garstecki, were awarded in the competition of Disruptive Technology Awards 2019 and presented in the Innovation Zone during the August AACC fair in California.

Discovery of scientists from the Gorzów Wielkopolski Academy

2019-08-28

Scientists from the Gorzów Wielkopolski Academy embedded the first spatial graphene structures. Gorzów scientists have obtained them from rape-seed oil. The process is created in an oil precursor. Graphite electrodes submerged under the surface of the oil are brought to the distance of ignition of the electric hatch. Then the electrodes slide apart and spatial structures are obtained. Until now, studies on the deposition of the first spatial graphene structures have been carried out with expensive and

time-consuming methods. This time they were obtained from rapeseed oil, which can be of great importance for the development of pharmaceuticals. The discovered type of graphene can be a carrier for anti-cancer drugs without harmful side effects, it can be used to build very efficient electric cells and to construct a filter for sea water. More: <http://www.ajp.edu.pl/wydarzenia/4365-konferencja-prasowa-fa-nowosci-naukowych-w-ajp.html>

Experts from the Medical University of Gdańsk to talk about health

2019-08-29

The Medical University of Gdańsk, the University Clinical Center and Radio Gdańsk will continue to educate the region's residents about health. The contract for the implementation of the „Be healthy – with no queue” program is unlimited. Programs from the series «Be healthy – with no queue» is an initiative of the Medical University of Gdańsk and the University Clinical Center, which aims to improve health knowledge among the inhabitants of Pomerania Region. The experts and listeners talk not only about diseases, but also about preventive medicine and new products in medicine. The program is broadcast like a year ago - once a month scientists of various specialties will meet with students at the University Clinical Center. In the next program on September 9 at 14.00 experts from the Clinic of Cardiac Surgery and Vascular Surgery at the Gdańsk University will be present. More: <https://gumed.edu.pl/57693.html>

Conference „We're running kids” to be held at the Scientific Medical Information Center in Wrocław on September 5

2019-08-29

The Medical University and the University of Physical Education in Wrocław, together with the Wrocław City Hall are inviting experts, doctors, teachers and parents to the conference „We're running kids”, on September 5 at the Scientific Medical Information Center. - Scientists, doctors, experts will share the research,

which will interest the scientific community and they will do it in such an accessible way that the parents in the room will also take useful information from the meeting - says the main organizer of the meeting, Prof. Tomasz Zatoński from the Medical University of Wrocław. The program contains many interesting issues, from analyzing the nutritional status and growth of children, to reflecting on whether sugar is actually an enemy and how bacteria can affect obesity. Much attention will be devoted to physical activity - especially in the context of how sport interests can translate into actual physical education lessons.

Poland to sign an agreement with the European Infrastructure Network for Clinical Research

2019-08-30

As part of the XXIX Economic Forum in Krynica, on September 4, 2019, Poland will sign an agreement with the European Clinical Research Infrastructure Network (ECRIN). The agreement will be signed through the Medical Research Agency (ABM). This will allow Poland to obtain observer status and then to become a member of the ECRIN network, which is an international agency supporting the clinical research network in Europe. ECRIN focuses mainly on supporting non-commercial (academic) clinical research projects, providing all the tools necessary to prepare and conduct the study (e.g. advice on financing along with applying for it, whether designing the study from the moment the center is selected for logistics activities or insurance), checking protocol (in the scientific and practical context) and research management (obtaining official permits and bioethical opinions, reporting, monitoring, data management, statistics and project management).

18th Congress of European Mycologists to be held in Warsaw and Białowieża

2019-08-30

The Polish Mycological Association together with the European Mycological Association are organizing the 18th Congress of European Mycologists,

which will take place in Warsaw and Białowieża on September 16-21, 2019. It will be a scientific event comprehensively covering the role of fungal biodiversity in various environments. The aim of the congress is to present the latest achievements of mycology and to promote applied mycology, biotechnology and the latest methods of studying mushrooms. One of the events accompanying the congress will be the lecture «Mycology: the latest weapon in the crime arsenal», which professor Patricia E.J. Wiltshire, lecturer and researcher at the University of London, specializing in palynology, mycology and microbiology will give at the Copernicus Science Center in Warsaw on September 17.

Researcher from the University of Gdańsk nominated for the Intelligent Development Award 2019

2019-09-02

Professor Hanna Mazur-Marzec from the University of Gdańsk received a nomination for the Polish Intelligent Development Award 2019 in the 'Scientist of the Future' category. The nomination was granted for the implementation of the project „Peptides produced by Baltic cyanobacteria - from identification to the choice of a leading compound (from hits to leads H2L)”. The project is implemented under the program of the National Science Center - OPUS 11, and its budget is almost PLN 1.5 million. The interdisciplinary research in the blue biotechnology in the future may contribute to obtaining a product useful in the development of a new anti-cancer drug from the sea natural resources. The winners of the Intelligent Development Award are eminent scientists and institutions, which in their activities and scientific research demonstrate a continuous focus on the future ensuring sustainable economic development. More: https://ug.edu.pl/media/aktualnosci/90256/nominacja_dla_prof_hanny_mazur-marzec_do_nrody_inteligentnego_rozyszne_2019_w_kategorii_naukowiec_przyszlosci

Polish scientists want to use algae to create medicinal dressings

2019-09-03

Researchers from six research centers in Poland as part of the BIOG-NET consortium are considering microscopic algae - diatoms and their phenomenal ability to synthesize silica with a three-dimensional, openwork nanostructure to create innovative bio-composites for applications based on these observations, including in medicine and cosmetology. The Foundation for Polish Science (FNP) donated PLN 21 million for research under the TEAM-NET program. The consortium consists of researchers from the Faculty of Chemistry of the Nicolaus Copernicus University in Toruń, the Faculty of Earth Sciences of the University of Szczecin, the Faculty of Mechanical Engineering of the Białystok University of Technology, the Faculty of Chemistry of the University of Adam Mickiewicz in Poznań, the Faculty of Materials Science and Engineering of the Warsaw University of Technology and the Faculty of Biology and Biotechnology of the University of Warmia and Mazury in Olsztyn. The consortium's goal is to create innovative nanosilica composites. Scientists hope for rapid commercialization of their research.

Medical Research Agency with pharmaceutical companies in Poland focuses on the innovation of medicine

2019-09-10

During the XXIX Economic Forum in Krynica, the Medical Research Agency (ABM) signed a letter of intent declaring cooperation with representatives of key pharmaceutical companies in Poland in the development of innovation in Polish medicine. The agreement concluded between ABM and pharmaceutical companies concerns supporting enterprises in conducting and developing innovative activities in the field of medical sciences, health sciences and interdisciplinary projects in health care, with particular emphasis on artificial intelligence, and also includes joint actions focused on the development of new technologies and scientific research. in health care.

As part of cooperation, the parties envisage joint organization of workshops, conferences, seminars and trainings, as well as the creation of initiatives at the expert level in the form of think tanks. The letter of intent with the Medical Research Agency was signed by 12 pharmaceutical companies, members of the Pharmaceutical Committee of the American Chamber of Commerce, including Amgen, AstraZeneca, BMS, Janssen, Medtronic, MSD, Mylan, Novartis, Pfizer, Roche and Takeda.

University of Technology and Humanities in Bielsko-Biała to receive almost 500,000 PLN for research infrastructure

2019-09-10

The Minister of Science and Higher Education awarded 494 thousand PLN for the purchase of highly specialized research equipment for the Department of Biochemistry and Molecular Biology of the Faculty of Health Sciences of the University of Technology and Humanities in Bielsko-Biała. The new research apparatus is a set of technologically advanced devices that allows conducting various types of experiments on the model of an insulated organ in the conditions of a Schuler bath. One of the main areas of the use of this equipment is to study the response of blood vessels, mainly arteries, to various endogenous and exogenous substances with the potential of vasoconstricting or vasodilating. Technological advancement of new devices will allow for extremely precise and repeatable measurement of key parameters from the point of view of physiology and pathophysiology of the circulatory system. More: <https://www.ath.bielsko.pl/grant-na-zakup-infrastruktury-badawcza/>

Researchers from Poland and the US have found a mechanism to help create a cure for legionellosis

2019-09-12

Researchers from the Warsaw University of Life Sciences (SGGW) in Warsaw, together with scientists from the University of Texas Southwestern

Medical Center in Dallas, USA, have discovered the biochemical mechanism of one of the effector proteins of the bacterium „Legionella pneumophila”, which may contribute to the creation of a drug for legionellosis. The results of the work were described in the journal Science in the article «Bacterial pseudokinase catalyzes protein polyglutamylation to inhibit the SidE-family ubiquitin ligases». The main author of the publication is Dr Vincent Tagliabracci from the University of Texas Southwestern Medical Center from Dallas in the USA and his PhD student Miles Black. The Polish co-authors are Dr Krzysztof Pawłowski from the Department of Experimentation and Bioinformatics of the Faculty of Agriculture and Biology at the Warsaw University of Life Sciences and a PhD student Marcin Gradowski. The discovered mechanism of action of the SidJ effector protein, which regulates (blocks) other effector protein of SidE bacteria, gives hope for the invention of the drug for incurable legionellosis disease.

Scientists from the Wrocław University of Science and Technology developing a bioimplant to help in bone regeneration

2019-09-17

Researchers at the Wrocław University of Science and Technology are working on a technology for producing multi-functional composite material for bone tissue reconstruction. The project is financed by the National Center for Research and Development as part of the Techmatstrateg 2 competition. The idea of the project is to create a bone implant that will be biologically active. It is to help patients with bone defects caused by e.g. osteoporosis, cancer or injury. The material is to be biodegradable and bioresorbable - it will decompose in the human or animal body in such a way that no toxic compounds are formed. It will not cause inflammation and will be absorbed by the body. The researchers from the Wrocław University of Science and Technology participate in an interdisciplinary project supervised by the Institute of Ceramics and Building Materials from Warsaw. The consortium also includes the University of Gdańsk, the Institute of Biotechnology and Molecular Medicine and their business partner - SensDx. More: <https://pwr.edu.pl/uczelnia/aktualnosci/bioimplant--ktory-pomoze-w-regeneracji-kosci-11326.html>

International Biomaterial Research Center established in Łódź

2019-09-18

The Lodz University of Technology (PŁ) is launching the International Center for Innovative Biomaterials Research (ICRI-BioM) - International Research Agenda (MAB) in cooperation with the German Max Planck Institute for Polymer Research in Mainz. It is the only MAB in Łódź and one of 14 in Poland. At the beginning of September this year, the Lodz University of Technology signed a contract with the Foundation for Polish Science for PLN 1.5 million allocated for the first period of ICRI-BioM, while PLN 31 million has been allocated to the en-

tire project. In the near future, the scientific activity of the Center will focus on research of materials for encapsulation of drugs. In this regard, the Center is planning the cooperation with the Polish pharmaceutical company ADAMED Pharma S.A. The first director of the International Center for Research on Innovative Biomaterials (ICRI-BioM) - International Research Agenda (MAB) will be selected through an international competition.

First Discouri Centers launched

2019-09-19

Aleksandra Pekowska and Grzegorz Sumara studied biology in Poland, for many years they conducted research in the best institutes abroad, and in 2018 they won an international competition in a new program initiated by the Max Planck Society. Now they will create their own research teams at the Institute of Experimental Biology of the Polish Academy of Sciences in Warsaw. Jarosław Gowin, Minister of Science and Higher Education, Anja Karliczek, German Minister of Education and Research, Martin Stratmann, president of the Max Planck Society and Zbigniew Blocki, director of the National Science Center took part in the opening ceremony. Aleksandra Pekowska and Grzegorz Sumara are engaged as two world-class scientists in the field of molecular biology in Poland. This is an important element of our efforts to internationalize the Polish scientific landscape - said Jarosław Gowin, Minister of Science and Higher Education. The financing of the Dioscuri Centers is supported by scientific partners from Germany and equally by the Polish Ministry of Science and Higher Education and the German Federal Ministry of Education and Research. Dioscuri is a program developed by the Max Planck Society to support the development of Centers of Scientific Excellence in Central and Eastern Europe.

Lodz University of Technology working on a bio-printer to help heal urethral defects

2019-09-24

Researchers from the Lodz University of Technology, together with Wolf 3D Solutions, are working

on a printer 3D that using bioprint will allow the production of appropriate components for patients. That will enable the treatment of urethral defects in children and adults. Scientists from the Institute of Materials Engineering at the Faculty of Mechanical Engineering of the Lodz University of Technology under the supervision of Dr Eng. Dorota Bociąg are working on solving the problem of treating urethral defects. - We can help patients by developing biomaterials to produce a coil for the treatment of hypospadias in children and a stent for the treatment of stenoses using direct and indirect bioprint - explains Dr Eng. Dorota Bociąga. The project will be implemented by a specially established consortium with the Korczak Hospital in Łódź, the Religa Foundation for the Development of Cardiac Surgery, Warsaw University of Technology, University in Toruń and Wolf 3D Solutions.

Scientists of the Jagiellonian University investigating the role of melatonin in the process of cell pigmentation

2019-09-26

Dr Michał Sarna and Krystian Mokrzyński from the Department of Biophysics of the Faculty of Biochemistry, Biophysics and Biotechnology of the Jagiellonian University (UJ) in Krakow are co-authors of an article in the Journal of Pineal Research, in which they indicate the participation of melatonin in the process of cell pigmentation. The article «Melatonin exerts oncostatic capacity and decreases melanogenesis in human MNT-1 melanoma cells» on the regulation of pigmentation in pigment cells is the result of collaboration between scientists from the University of Munster, the Jagiellonian University, the University of Texas and the University of Alabama. Factors regulating the phenomenon of melanin synthesis in cells have been researched for years. In their work, the authors showed that melatonin, which is produced by the pineal gland and is involved in the regulation of the biological clock, can also affect the synthesis of melanin in cells. More: <https://onlinelibrary.wiley.com/doi/abs/10.1111/jpi.12610>

Gorzów Academy to cooperate with the Provincial Hospital

2019-09-27

Academy in Gorzów Wielkopolski signed an agreement with the local Multi-Specialist Provincial Hospital. This cooperation expresses the intention of the Academy to establish first degree nursing studies with a practical profile. Pursuant to the document, students of the new faculty will have professional internships in the Gorzów clinics and they will profit from the cooperation in the areas of infrastructure, staff, didactic process, apprenticeships and research. The agreement between the academy and the hospital is to be a remedy for the lack of nurses. The hospital has committed to admit students to take internships. The document expresses also a commitment of the parties to undertake joint ventures to popularize the issues of public health - including organizing conferences and practical seminars, publishing joint articles and scientific monographs on this subject.

Medical University of Warsaw to strengthen cooperation with the District Medical Chamber in Warsaw

2019-09-30

The Medical University of Warsaw (WUM) has signed a letter of intent with the District Medical Chamber in Warsaw, which aims to improve the existing partner cooperation in the field of teaching and development as well as scientific, research and implementation of joint projects in the field of the activities of the medical self-government and dental policy. Cooperation between science and the activity of the medical self-government assures the certainty of an effective combination of knowledge and practice of its application and implementation of socially valuable projects. The signatories of the letter expressed their will to expand the participation in joint scientific, research and development projects, including joint organization of scientific conferences devoted to dental issues and concerning the tasks and activities of the medical self-government; sci-

entific advice and consultations; promoting jointly developed dental policy projects.

University of Gdańsk researcher awarded during EUROBIOTECH in Krakow

2019-10-01

Karolina Pierzynowska from the University of Gdańsk won the „Best Poster Award” competition during the 7th Central European Congress of Life Sciences EUROBIOTECH in Krakow. Congress's scientific program focused on two areas of biotechnology - «Red Biotechnology» and «Green Biotechnology», i.e. personalized medicine and agrobiotechnology. The subject of the young researcher's work concerned personalized medicine and was associated with patent applications «Medical use of 5,7-dihydroxy-3- (4-hydroxyphenyl) -4H-1-benzopyran-4-one in the treatment of Huntington's disease and a pharmaceutically acceptable form of the drug». The prize was awarded by Katarzyna Pierzynowska for the innovation of the presented research results and its potential for a broad impact on society, as research conducted by the UG scientific team may revolutionize the treatment of Huntington's disease, which belongs to genetic neurodegenerative diseases for which no effective medicine has yet been invented.

Graduates of the Jagiellonian University achieve the best results of the Final Medical Exam in Poland

2019-10-03

The Medical Exam Center has published the results of the autumn Medical Final Exam (LEK). Medical graduates of the Jagiellonian University Collegium Medicum have again obtained the best result among all medical universities in Poland - in two basic, most numerous categories: for the students taking exams for the first time and the students of last two years (in total about they cover 95% of all students taking exam). Students who have graduated in the last two years have obtained an average of 140.18 points, and students taking exams for

the first time - 139.77 points, which is 8.74 and 9.47 points, respectively, than the national average. In the last category, 97 percent UJ CM graduates passed. A total of 640 graduates took the exam, and 594 (93.0%) obtained a positive result.

Nowy Sącz Higher Vocational School launches Medical Simulation Center

2019-10-04

The State Higher Vocational School (PWSZ) in Nowy Sącz has launched the Medical Simulation Center to improve the quality of education in the field of nursing and emergency medicine. The Medical Simulation Center in Nowy Sącz includes a real ambulance, fully equipped medical rooms, a hospital emergency room and patients' rooms with modern phantoms. This academic year students will be educated in 16 fields of basic studies, 6 fields of full studies and 2 MA programs. For the first time, students will study internal security at the Institute of Physical Culture and pre-school and early school education at the Pedagogical Institute.

Scientist of the Wrocław Medical University becomes the finalist of the Polityka Science Awards

2019-10-04

Dr Piotr Donizy, a scientist of the Department of Pathomorphology and Oncological Cytology of the Medical University of Wrocław became one of the finalists of the 19th Scientific Awards of the weekly journal Polityka. The Awards are given to „the most talented specialists” in individual fields of science. Dr Piotr Donizy conducts research on the mechanisms of progression of a rare malignant Merkel's cancer and an extremely rare variety of mucosal melanoma. He is also a member of an international team of doctors, including from Japan, Spain, Taiwan and the USA, whose project concerns new prognostic markers and molecular disorders responsible for the development of mucosal melanoma. Research of the Wrocław scientist will help learn new mechanisms of the formation of extremely rare malignant tumors and may result in the discovery of new gripping points for molecularly targeted therapies, which in the future could significantly improve the results of treatment. More: <https://www.umed.wroc.pl/content/dr-hab-piotr-donizy-w-finale-nagr%C3%B3d-naukowych-polityki>

Polish scientists to investigate how smog affects children's brains

2019-10-07

Polish scientists associated in the NeuroSmog consortium want to examine several hundred children to determine how smog affects the developing brain. They received over PLN 15 million from the Foundation for Polish Science (FnP) as part of the TEAM-NET program for research. The work will be conducted by the Institutes of Psychology and Applied Psychology of the Jagiellonian University in Krakow and the Institute of Environmental Protection in Warsaw, creating the maps of air pollution. Researchers want to confirm the hypothesis of the negative impact of smog on the developing brain, which until now has been raised only in individu-

al scientific studies. - We believe that as a result of the project we will obtain solid and reliable data on the influence of smog on brains of children in the concentrations that we encounter every day in Poland. If the effects of smog are indeed as sinister as we suppose, then we hope that our discoveries will cause the action of the government and administrations responsible for air quality in Poland and in Europe - says project manager Dr Marcin Szwed from the Institute of Psychology of the Jagiellonian University.

University Clinical Hospital in Olsztyn receives PLN 19 million for the „Onkoinnowacje” project

2019-10-07

University Clinical Hospital of the University of Warmia and Mazury (UWM) in Olsztyn received PLN 19 million from the Ministry of Health for the „Onkoinnowacje” project. The facility will spend the acquired funds on the purchase of specialized medical equipment. This will improve efficiency in cancer diagnosis and treatment. The Ministry of Health has been implementing the «Onkoinnowacje» project from 2014 to 2020. It is financed by the European Union. University UWM Clinical Hospital joined it at the end of September 2019. - We will be able to detect tumors faster and heal patients faster and the cure rate will be significantly better. We are the only regional hospital in the Warmian-Masurian Voivodeship and we are becoming a leader in oncological diagnostics and early detection of cancer. This should significantly reduce mortality in our region and accelerate the therapy - says Łukasz Grabarczyk, MD, medical director of USK.

Spin-off company of the University of Warsaw receives Economic Award of the President of Poland

2019-10-10

The spin-off company Warsaw Genomics of the University of Warsaw (UW) received the Economic Award of the President of Poland in the Startup_PL

category. The company offers innovative diagnostic tests of genetic diseases. Warsaw Genomics was founded in 2015 and employs specialists of laboratory diagnostics, bioinformatics, geneticists, biologists and doctors. It performs genetic tests that allow scientists to diagnose the gene responsible for the disease or determine the risk of developing hereditary ailments as cancer, but also those affecting e.g. the nervous, digestive or immune systems. Research carried out by Warsaw Genomics also helps choose better therapies for cancer patients. The company was nominated for the award by the Polish Promotional Label «Teraz Polska» Foundation. The companies that have been on the market for no more than 5 years and have created a product or technological innovation can be nominated for the Startup_PL category.

Researcher from the Jagiellonian University receives Polish Intelligent Development Award 2019

2019-10-11

Dr Aleksandra Wrońska from the Faculty of Physics, Astronomy and Applied Computer Science of the Jagiellonian University in Krakow became a laureate of the Polish Intelligent Development Award 2019. She received this prize for the implementation of her project aimed at developing a method of real-time monitoring of proton cancer therapy. The research is financed under a grant from the National Science Center. The Polish Intelligent Development Award was established in 2016. It is awarded by organizations and individuals who demonstrate future-oriented activities. The initiator and organizer of the award is the Intelligent Development Center. The content partner is the Silesian Center for Business Ethics and Sustainable Development at the Silesian University of Technology in Gliwice. The laureate works at the Institute of Hadron Physics of the Jagiellonian University. Until recently, her work mainly involved basic research in hadron physics. After launching the Bronowice Cyclotron Center (CCB), the first Polish proton therapy center, she shifted her interests to the use of nuclear physics for medical purposes.

Medical University of Warsaw launches the University Dentistry Center

2019-10-11

On Wednesday, October 9, the opening ceremony of the University Dentistry Center of the Medical University of Warsaw (WUM) took place at the university's campus in Warsaw. This is the largest and most modern dental center in Poland. - We are officially starting a new era in dentistry at the Medical University of Warsaw. The University Center of Dentistry starts working, since the beginning of October we have been educating students here, we will treat patients. And the Medical University of Warsaw will continue to develop dentistry for another two centuries, because this magnificent building the Faculty of Medicine and Dentistry has excellent operating conditions - emphasized the rector of the Medical University of Warsaw Prof. Mirosław Wielgoś. The University Center of Dentistry is to educate medical staff, develop scientific research and treat patients. It is a seven-storey building with a usable area of nearly 8 thousand m². The center provides high quality teaching and creates completely new conditions for conducting scientific research at the highest level.

University of Opole receives specialist ambulance simulator

2019-10-14

The simulator of a specialist ambulance with full medical equipment was purchased by the Faculty of Medicine of the University of Opole. It is part of the equipment of the university's Multi-Profile Medical Simulation Center. Medical simulation has become the standard of teaching at medical universities. Teaching with this method is a modern educational process using medical educational equipment, ranging from simple trainers for learning individual medical procedures to advanced phantoms and patient simulators, faithfully reflecting man and their parameters. In addition to the ambulance, the Center currently provides a room ALS (Advanced Life Support) and BLS (Basic Life Support), a Laboratory of Science

of Technical, Surgical and Nursing Skills - serving as low fidelity rooms and a Clinical and Nursing Room as a high fidelity room. More: <http://www.uni.opole.pl/page/3102/symulator-karetki-dla-wieloprofilowego-centrum-symulacji-medycznej>

Surgeon of the Medical University of Gdansk joins the Prof. Franciszek Walczak's Program

2019-10-16

Dr Jarosław Kobiela, assistant professor at the Department of General, Endocrinological and Transplant Surgery of the Medical University of Gdańsk became a laureate of the Prof. Franciszek Walczak's Program. The scientist will do an internship at the American Memorial Sloan Kettering Cancer Center. The Program is a joint initiative of the National Agency for Academic Exchange and the Ministry of Health. The program enables trips to the best medical centers in the United States of America. It is an opportunity for professional and scientific development as well as a chance to gain valuable experience in an international scientific environment, but also to contribute to the improvement of medical care in Poland. Professor Franciszek Walczak is considered a senior of Polish electrophysiology. He is the author and co-author of over 200 publications in Poland and abroad and co-author of many monographs. During his career he cooperated with scientific staff around the world.

Maria Curie Skłodowska University working on a system to support cancer detection

2019-10-16

The Maria Curie Skłodowska University (UMCS) in Lublin and company Billennium- an IT company operating in several Polish cities are developing a diagnostic system that can help detect cancer. The system will use modern brain imaging techniques and «deep learning» methods that are used to create artificial intelligence. This solution is to serve for faster and more accurate location of brain tumors in

the first stages of the development of the disease. In addition to academic staff, also students will work on the system. They will be able to use the effects of their work in their diploma theses.

University of Opole to cooperate with the Łukasiewicz Research Network

2019-10-16

The University of Opole will cooperate with the Łukasiewicz Research Network - the Polish Center for Technology Development (PORT). The agreement signed by the partners concerns the activity of the Research and Innovation Center for Civilization Diseases, which is being created at the University Clinical Hospital. The letter of intent was signed by the director general of USK Dariusz Madera and director Łukasiewicz - PORT Andrzej Dybczyński. - This cooperation is very important to us, it gives us a chance to cooperate, to create value for each other and both benefit. For our entity operating in the field of medical biotechnology, direct contact with the world of medicine and doctors is extremely important - says Dybczyński. The University Clinical Hospital is applying for funds for the Center for Research and Innovation in Civilization Diseases, which is to be created in the building of an old hospital laundry. After the reconstruction, there will be opened new laboratories, magnetic resonance imaging, tomography and teaching rooms. More: <http://www.uni.opole.pl/page/3104/bedzie-wspolpraca-unia-demicego-szpitala-klinicznych-z-siecia-badawcza-lukasiewicz-port>

Researcher of the Medical University of Gdańsk nominated for the Polish Intelligent Development Award

2019-10-17

Dr Krystyna Pieńkowska from the Department of Physical Chemistry of the Medical University of Gdańsk was nominated for the Polish Intelligent Development Award 2019 in the category „Scientist of the future”. The Intelligent Development Center nominated a Gdańsk researcher for the implementation of the project «Interaction studies between siloxanes (silicones) and the structure of human skin as well as an assessment of their effects», which received funding from the National Science Center in 2019 as part of the Opus 16 competition. The interdisciplinary project is implemented in the scientific cooperation of pharmacists and physicists from the Department of Physical Chemistry and the Department of Applied Pharmacy of the pharmaceutical faculty of the Medical University of Gdańsk, the Optronics Laboratory of the Institute of Mechanical Technology of the Faculty of Mechanical Engineering and Management at the Poznan University of Technology and the Department of Structural Research and Medical Physics of the Jan Długosz University in Częstochowa.

Polish scientists constructing bionanosatellite

2019-10-18

Polish researchers from the Institute of Immunology and Experimental Therapy of the Polish Academy of Sciences (PAN) are building a bionanosatellite, which will help in the development of new oncological therapies and medicines. The bionanosatellite will enable to conduct biological and biomedical experiments on microorganisms and cells in low gravity, while the responses of cells in space to administered substances may be several dozen times stronger than on Earth. The CubeSat bionanosatellite's size is approximately 10 by 10 by 30 centimeters. It is equipped with small chip laboratories. After 18 months of the scientific phase the project will be

sent into space. In the future, the developed technology will be able to be used by other companies or institutions, e.g. pharmacological companies.

International ReMedy Research Agenda to launch researches on splicing

2019-10-18

Professor Magda Konarska and Dr Marcin Magnus from the ReMedy International Research Agenda conducted research on gene expression in the RNA Biology Laboratory, which resulted in a publication in the journal *Molecular Cell*. - Splicing is an important part of gene expression. Errors that occur during splicing can have a negative impact on cell metabolism, apoptosis and the cell cycle, in some cases also causing cancer,- they explained. ReMedy is a joint unit of the University of Warsaw and the University Medical Center in Göttingen. Its creation and activity are possible thanks to the International Research Agendas program run by the Foundation for Polish Science. Since 2015, the program has allowed to create 14 research institutions in Poland - centers of excellence, where high-quality scientific research and development works are carried out at the highest global level under the guidance of outstanding scientists. The publication of Polish scientists is available at: [https://www.cell.com/molecular-cell/pdfExtended/S1097-2765\(19\)30390-9](https://www.cell.com/molecular-cell/pdfExtended/S1097-2765(19)30390-9)

University of Gdańsk researchers receive L'Oréal-UNESCO scholarships

2019-10-18

Researchers at the University of Gdańsk, Dr Ewelina Król and Karolina Pierzynowska - have won the „L'Oréal-UNESCO for Women and Science” program. Dr Ewelina Król from the intercollegiate faculty of biotechnology of the University of Gdańsk and the Medical University of Gdańsk received a postdoctoral scholarship for the project «Development of innovative strategies for combating viral infections in humans with particular emphasis on hepatitis C virus, tick-borne encephalitis virus and Zika virus through the use of chemically synthesized

therapeutic agents and new generation vaccines». Karolina Pierzynowska, MA from the biology department of the University of Gdańsk, received a scholarship for PhD students for the project «Induction of autophagy as a mechanism of genistein action in the experimental therapy of neurodegenerative diseases». This year, a record number of 144 candidates from 39 institutions applied for scholarships. The winners include 6 Polish researchers.

Scientist of Adam Mickiewicz University wins the Scientific Award of the weekly journal Polityka

2019-10-23

Dr Andrzej Zieleziński from the Institute of Molecular Biology and Biotechnology of the Faculty of Biology of the Adam Mickiewicz University in Poznań has won the Scientific Award of the weekly journal *Polityka* in the category of life sciences. Dr Zieleziński is a biologist specializing in molecular biology and bioinformatics. The main purpose of his research is to develop computational methods for determining the function of genes of various organisms (including humans), finding similarities between the sequences of these genes and determining the most likely mechanism of their formation. The winner has developed a set of computer programs to discover WG proteins in hundreds of viruses that infect plants and animals. He identified the viral WG protein sequences that could form the basis for the development of gene therapy aimed at switching off the expression of WG genes that the virus uses for infection. More: <https://amu.edu.pl/wiadomosci/aktualnosci/pracownicy/dr-andrzej-zielezinski-z-uam-laureatem-nagrody-naukowej-tygodnika-polityka>

Jan Kochanowski University in Kielce to launch Monoprofiled Center for Medical Simulation

2019-10-29

Faculty of Medicine and Health Sciences of the Jan Kochanowski University (UJK) in Kielce will be transformed into Collegium Medicum UJK from November 1 and will open the Monoprofiled Center for Medical Simulation for nurses and midwives. The center will be established as part of the SIMED project and cost PLN 4.2 million, of which 3.54 million is co-financed by the European Union. The laboratory, equipped with the latest phantoms will be used to train nurses and midwives. The university authorities emphasize, that since 2005 PLN 120 million has been invested in the medical department. The new laboratories are equipped with the high-tech and world-class solutions.

Scientists from the University of Life Sciences in Wrocław receive grants Opus 16

2019-10-29

Researchers of the Wrocław University of Environmental and Life Sciences will study the metabolic pathways of *Yarrowia lipolytica* yeast, the interaction of soil organic matter with pesticides, the birds' resistance to Shiga toxins and the properties of sterol glycerides. Research grants are provided under the Opus 16 competition by the National Science Center. Researchers of the Department of Biotechnology and Food Microbiology will study the metabolic pathways of *Yarrowia lipolytica*. The spectroscopic and chemical properties of the soil fraction of humines in relation to their mutual interactions with pesticides will be examined by a consortium in which the leader is the Institute of Soil Sciences and Environmental Protection of Wrocław university. Another consortium will study the physicochemical and biological properties of sterol glycerides and their products formed during thermal oxidation. Wrocław researchers will also look for the answer to the question why birds are resistant to Shiga toxin produced by *Escherichia coli*. More: http://www.glos.upwr.edu.pl/aktualnosci/50141/naukowcy_upwr_z_grantami_opus_16.html

Polish scientists to create a phantom for precise dose planning in radiotherapy

2019-10-31

Researchers from the AGH University of Science and Technology in Krakow and the Krakow University of Technology as well as doctors from the Oncology Center in Krakow have created a consortium Dose-3D, which aims to create a medical phantom for precise dose planning in radiotherapy. Teleradiotherapy is basically one of the most important methods of fighting with cancer- said Prof. Tomasz Szumlak from the Faculty of Physics and Applied Computer Science of the AGH University of Science and Technology in Krakow. The phantom is to enable adaptation to the needs of each patient both the dose and the angle of incidence of the radiation beam in such a way as not to damage healthy tissues. The project is expected to revolutionize techniques for measuring radiation dose distribution and personalization in radiation therapy, which is the most-used method for treating cancer patients.

Artificial intelligence in medicine

2019-10-31

Professor Grzegorz Mazur, head of the Department and Clinic of Internal and Occupational Diseases, Hypertension and Clinical Oncology of the Medical University of Wrocław will be conducting a research project for the development and implementation of telemedicine technology enabling the recommendation and interpretation of medical research results. Project will be implemented in cooperation with Labplus Sp. z o.o. and the Medical University of Silesia in Katowice. It received almost PLN 6 million in funding under the «Fast Track» competition of the National Center for Research and Development. As a result of the project, telemedicine technology will be developed and implemented. It is based on two methods of artificial intelligence, enabling the recommendation and interpretation of medical research results.

Student of the Wrocław University of Science and Technology to develop app for virtual rehabilitation for people after a stroke

2019-11-04

Małgorzata Marzec, a student of the IT and management department of the Wrocław University of Science and Technology, will implement the project „Rehabilitation after a stroke using virtual reality and location algorithm”. The grant will be received from the program „The best of the best! 4.0” of the Ministry of Science and Higher Education. The Wrocław student's idea is a game in which the participant's task is to catch and move colored balls into appropriate containers. The level of difficulty in individual stages increases systematically, and extra points are awarded for correctly performed actions, which are an additional motivational factor. To create the application, the student used Oculus Rift goggles, i.e. the virtual reality system, Leap Motion technology, which allows users to track all their fingers and have control in a virtual environment and the Blender program, which is specialized 3D software for creating computer graphics. More: <https://pwr.edu.pl/uczelnia/aktualnosci/wirtualna-rehabilitacja-dla-osob-po-udarze-11363.html>

Jagiellonian University launches new University Hospital

2019-11-05

- Our Jagiellonian University (UJ) has launched a hospital of the 21st century. This is a serious reason to be proud - said the rector of the Jagiellonian University Prof. Wojciech Nowak during the opening of the largest and most modern medical complex in Poland, as well as one of the most innovative in Europe. The new University Hospital in Prokocim will meet its first patients in a month. This is a great value for patients of Krakow, the Malopolska Region and generally Poland. The University Hospital is not only a therapeutic but also a teaching unit: it teaches students and doctors. This is a kind of laboratory for gaining experience, for learning new things in the field of all medical sciences - said the rector of the Jagiellonian University. The University Hospital complex consists of 13 buildings with a total usable area of 110,000. sq m. There are 24 operating rooms, a hospital emergency department, 25 clinical departments, 27 specialist clinics and an administrative premises.

Medical University in Wrocław to receive almost 900 thousand EUR for the design of the Clinic of Nephrology

2019-11-08

The Clinic of Nephrology and Transplant Medicine of the Medical University of Wrocław will implement the ProDial project in the field of personalized medicine thanks to funds from the ERA PerMed competition (ERA-NET network). The budget of the consortium co-created by the Universities of Halle and Wittenberg and the University of Leipzig is over 870 thousand euro. ProDial (Patient-Reported Outcome, Biodata and Process Data to Evaluate Dialysis Tolerability) aims to collect patient-relevant symptoms, assess quality of life, and continuously record biomedical data during and after dialysis sessions (e.g., dialysis fluctuations, heart rate variability). Biomedical data will be combined with hemodialysis parameters (e.g. vascular access, ultrafiltration volumes,

electrolyte levels) to optimize therapy for each patient individually. Patients will wear biomedical data recorders for a week (RR, HRV analysis, sleep, physical activity). More: <https://www.umed.wroc.pl/content/niemal-900-tys-euro-na-projekt-katedry-i-kliniki-nefrologii>

Professor Marcin Drąg of the Wrocław University of Technology becomes a laureate of the „Polish Nobel Prize“

2019-11-13

Professor Marcin Drąg from the Chemical Faculty of the Wrocław University of Technology became a laureate of the Foundation for Polish Science Award, the so-called Polish Nobel Prize. This is the most important scientific award granted in Poland. The laureate works at the Department of Bioorganic Chemistry and specializes in biological and medical chemistry. He was recognized for developing a new technology platform enabling the production of biologically active compounds, in particular inhibitors of proteolytic enzymes. This platform can be used to develop new therapies, medicines or diagnostic methods. The Foundation's awards are granted for special scientific achievements and discoveries that expand the cognition and open new cognitive perspectives, make an outstanding contribution to the civilization and cultural progress of our country and assure Poland as a significant scientific environment to solve the most ambitious challenges of the modern world. More: <https://pwr.edu.pl/uczelnia/aktualnosci/prof-marcin-drag-laureatem-polskiego-nobla-11385.html>

Researchers from Lublin made a discovery in research on Alzheimer's treatment

2019-11-15

Professor Krystyna Skalicka-Woźniak and Associate Professor Tomasz Mroczek from the Medical University of Lublin have completed research on a compound that significantly delays the symptoms of the disease. The drug had a positive effect to the

mice implanted with a gene found in people suffering from Alzheimer's. It is worth emphasizing that the test substance is of natural origin, because such compounds are the object of interest of Lublin scientists. It is a medicine obtained from plants - says Prof. Krystyna Skalicka-Woźniak. Researchers want existing achievements to be the basis for further research on the drug. In this respect, Lublin researchers cooperate with a research center in Turkey. The treatment is to be patented.

Scientists to investigate the relationship between intestinal microflora and schizophrenia

2019-11-18

Researchers from the Medical University of Wrocław, the Pomeranian Medical University and the Institute of Immunology and Experimental Therapy of the Polish Academy of Sciences in Wrocław will investigate the role of microflora and colon barrier permeability in the pathophysiology of schizophrenia. The research goal is to check whether the subgroup of patients, which has a very unfavorable course of the disease and a number of negative symptoms, additionally stands out in terms of the composition of the microflora. Scientists have obtained over PLN 1 million from the Opus 16 program for their work. Research can increase the data about psychobiotics - specially selected strains of bacteria that are being checked in the case of depression as supportive care. According to the first analyzes, psychobiotics can not only increase the effectiveness of treatment, but also alleviate some side effects of psychiatric drugs. More: <https://www.umed.wroc.pl/gu-w-poszukiwanie-zwiazkow-miedzy-mikroflora-jelit-schizofrenia>

Researchers of the Medical University of Wrocław to examine 2.5 thousand city residents

2019-11-19

Researchers at the Medical University of Wrocław are starting extensive research on the health status of the inhabitants of Wrocław. They are planning to examine 2,500 people. The research is co-financed by the City of Wrocław. The study will concern a child and one of the parents, its participants were chosen randomly. Data from the PESEL database were provided to researchers by the Ministry of Digitization. Each participant will be laboratory tested (i.e. blood test, glucose, glycosylated hemoglobin, creatinine level, lipidogram: total cholesterol, LDL cholesterol, HDL cholesterol, triglycerides, electrolyte level: sodium and potassium and thyrotropic hormone TSH). Additionally, ECG tests, spirometry, blood pressure measurement, anthropometric tests will be performed, including body mass composition analysis, ENT and audiometric tests. Self-research would cost the family about one thousand PLN. More: <https://www.umed.wroc.pl/content/picture-welcome-wroclawian-na-badania>

State Higher Vocational School created in Chełm to launch the headquarters of the Institute of Medical Sciences

2019-11-25

The State Higher Vocational School (PWSZ) in Chełm has already developed the initial feasibility study and the concept of the entire investment of the new premises of the Institute of Medical Sciences. -We want to boast that we have completed the first part of our new investment, the seat of the Institute of Medical Sciences - said Prof. Eng. Arkadiusz Tofil, rector of the PWSZ in Chełm. He said that work on this serious investments should soon transform into «the process of preparing technical documentation and starting construction works themselves». It is an investment that is to create conditions for the de-

velopment of medical science education in Chełm. The new institute will be the beginning of development of the spot, which was unused for a long time - added Prof. Tofil.

Researchers of the Medical University of Wrocław to receive grants under Opus 17 and Prelude 17

2019-11-28

Researchers at the Medical University of Wrocław have received grants from the National Science Center in the Opus 17 and Prelude 17 competitions. The total amount of funding for their projects is almost PLN 2.7 million. Preludium grants were awarded to: Agnieszka Olejnik from the Department of Clinical Chemistry and Laboratory Hematology for the project «Protective effect of Klotho protein on cardiomyocytes damaged as a result of acute ischemia and reperfusion» and Tomasz Urbaniak from the Department and Department of Physical Chemistry and Biophysics) for «Core-type microparticles coating as carriers of conjugated drug substance in therapies of macrophage dependent diseases». The Opus grant was received by Institute of Immunology and Experimental Therapy of the Polish Academy of Sciences is a partner of the Wrocław university, for the project «Immunological control points in non-small cell lung cancer - study of genetic and epigenetic mechanisms of regulation of mRNA and protein expression».

European Forum: Biomedical Engineering from Research to Commercialization to be held in Warsaw

2019-11-29

The European Forum: Biomedical Engineering from Research to Commercialization will take place from December 2-4 in Warsaw. The event will be hosted by the Institute of Biocybernetics and Biomedical Engineering of the Polish Academy of Sciences (IBIB PAN). The forum is addressed to scientists and entrepreneurs from the medical technologies sector. Participants will talk about the results of the latest

scientific research, especially those that can be commercialized or implemented in clinical practice. The topics also include cooperation between research centers and companies from the medical technology sector, and good practices in obtaining projects and grants. The meeting will be chaired by Dr Eng. Ratko Magjarević from the University of Zagreb, president elect International Federation for Medical and Biological Engineering (IFMBE) and Dr Eng. Piotr Ładyżyński, Prof. of IBIB PAN, director of the International Biocybernetics Center.

Researchers from the University of Silesia develop new solution for the pharmaceutical industry

2019-12-09

Scientists from the University of Silesia have developed a synthesis method that allows the production of chemically pure polycaprolactone. It is a polymer that degrades naturally over a period of about two years. It demonstrates tissue compliance and can be used in the pharmaceutical and medical industry. It can be used as a carrier in controlled drug release systems, tissue culture medium in tissue engineering or filling material. Due to the fact that it naturally breaks down in the human body, it can also be used to produce absorbable surgical sutures or shape memory implants, such as clamps for connecting bone fractures or special rods used to treat diseases of the spine. Due to its interesting properties, it can be also used in industry - as an additive to biodegradable packaging and films, and in combination with starch it can be used to make material from which disposable plates or cups are made. More: <https://www.us.edu.pl/nowe-rozwi-azanie-dla-branzy-farmaceutycznej>

University of Life Sciences in Poznań sold technologies for creating probiotic bacteria strains

2019-12-10

The University of Life Sciences in Poznań has signed sales contracts for the commercial use of five technologies developed by university scientists and the Institute of Natural Fibers and Herb Plants in Poznań. The buyer is company Sanprobi. The transaction concerned technologies developed as part of the Applied Research Program of a Poznań university. The formulations developed include 10 strains of probiotic bacteria, combined into several compositions that protect farm animals against the pathogenic *Escherichia coli* and *Clostridium perfringens*. Sanprobi is a company with exclusively Polish capital, which was founded in 2008 and quickly became an acknowledged expert in Poland in probiotic supplementation for humans. The company conducts numerous research involving researchers from Polish and foreign research centers. The idea of Sanprobi is to create new solutions supporting microbiota. More: <https://puls.edu.pl/ogloszenia/dmik/komercjalizacja-patent-w-na-priobiotyki-i-eubiotyki-unipitet-przyrodniczy-w>

RNA Biology Laboratory to be launched in Warsaw

2019-12-16

On January 9, 2020, the International Institute of Molecular and Cell Biology in Warsaw will make an official presentation of the RNA Biology Laboratory. The new research group will be led by Prof. Andrzej Dziembowski, and the RNA Biology Laboratory will deal with research on the regulation of gene expression on so-called post-transcript level. Professor Andrzej Dziembowski is a world-class molecular biologist, biochemist and geneticist, a corresponding member of the Polish Academy of Sciences. He is a laureate of the prestigious ERC Starting Grant (2012) and the Foundation for Polish Science Award (2018). The project is implemented under the European grant ERA Chairs Horizon 2020 «Molecular signaling pathways in health and disease - Interdisciplinary Center of Excellence» (MOSAIC).

Researcher of the Wrocław University of Environmental and Life Sciences joins the team for the Biobanks Act

2019-12-16

Professor Krzysztof Marycz, head of the Department of Experimental Biology at the University of Life Sciences in Wrocław, was appointed by the Prime Minister to a team of experts who will develop a draft law regulating the principles of biobanking of biological material. 14 scientists led by Prof. Piotr Fiedor is expected to prepare a bill on biobanks by March 2020 - including the principles of making bank materials available for further research. The specialists invited to cooperate are designed to develop proposals for legal solutions that will allow to create a system integrating databases containing scientific and medical data, in particular in the field of oncology, personalized medicine and rare diseases, and ensure the possibility of using this data for the purposes of scientific research and work development. More: http://www.glos.upwr.edu.pl/aktualnosci/50555/prof_marycz_w_rzadowym_ze-spole_ds_biobankow.html

Scientist of the Medical University of Wrocław awarded the Iuvenes Wratislaviae 2019 prize

2019-12-16

Dr Błażej Misiak from the Medical University of Wrocław received the Iuvenes Wratislaviae 2019 Award funded by the Wrocław Branch of the Polish Academy of Sciences for outstanding scientific achievements in the field of life, exact and technical sciences. The prize is awarded once a year and is intended for scientists under 37 years of age who hold a PhD title and work permanently in the Lower Silesia region. Dr Błażej Misiak received it for research on the clinical and genetic determinants of discrete metabolic disorders in the first episode of psychotic disorders in the circle of schizophrenia. The distinction is also awarded for achievements in the field of humanities, social sciences and arts. This year's laureate in this category was Dr Aleksandra

Kubas-Kruk from the vocal department of the Music Academy in Wrocław.

Researchers of the Gdańsk University of Technology implementing the Ella4Life project supporting seniors

2019-12-18

Researchers of the Gdańsk University of Technology are implementing the Ella4Life (Ella4Life your Virtual Personal Assistant for home and on the road) project. Integrated virtual assistant with home automation systems and e-health is to provide support in independent management in the care and treatment of seniors, as well as improve their safety and health control. As part of the project, scientists are developing sensor systems that monitor the work of the heart, placed in everyday equipment: in a chair and in a bathtub. The virtual assistant is also intended to provide support to elderly carers, e.g. family members, and help professionals perform their daily work with seniors even better and more efficiently. The project is funded by the research and development program Active and Assisted Living Program, which supports projects using information and communication technologies to improve the quality of life of older people. Its value is over PLN 1 million. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/ella4life-%E2%80%93-twoj-wiralny-osobisty-asystent-w-domu-i-w-podrozy

University of Humanities and Natural Sciences in Częstochowa supports overweight children

2019-12-18

University of Humanities and Natural Sciences in Częstochowa is a leader of the project supporting the treatment of children who are overweight, suffer from obesity and its metabolic complications. This is the largest research project implemented at the university in Częstochowa with a budget of almost 7.5 million PLN. The project is implemented as part of a consortium: University of Humanities

and Sciences in Częstochowa, Tymbark MWS Sp. z o.o. Sp. K., Institute «Monument-Children's Health Center», Faculty of Biotechnology and Food Sciences of the Lodz University of Technology and the Oncology Center-Institute of Maria Skłodowska-Curie. The project involves the use of a soluble preparation of potato starch with prebiotic properties, the use of which will introduce innovative vegetable and fruit preparations with health properties for children with obesity to the market. The result will be global innovation in the form of new technology that will be implemented on the market. More: <http://www.ujd.edu.pl/news?category=2>

Biotechnology Committee of the Polish Academy of Sciences grants AgroBioTop

2019-12-19

The prestigious AgroBioTop scientific prize was awarded by the Biotechnology Committee of the Polish Academy of Sciences (PAN) to Dr Marta Grech-Baran from the Institute of Biochemistry and Biophysics of the Polish Academy of Sciences in Warsaw. The AgroBioTop Award was granted for the third time with aims to honor young scientists whose recognized achievements in the field of biotechnology have contributed to the development of agricultural sciences. The award is an annual individual cash prize 5000 euro granted by an independent jury appointed by the Biotechnology Committee of the Polish Academy of Sciences. The prize is funded by Bayer. - Dr Marta Grech-Baran received the AgroBioTop 2019 award for identifying the potato resistance gene to Y virus infection - said Prof. Maciej Żylicz, chairman of the jury of the AgroBioTop Award - This is the first, very important step to receive plants resistant to Y viruses. These viruses (also called PVY) attack not only potato, but also tobacco and tomato crops, bringing huge losses in agriculture in the world, including Poland - added Żylicz.

Student of the Jagiellonian University wins the competition for innovations in cardiology

2019-12-19

Tomasz Pulanecki, a student of the Faculty of Medicine of the Jagiellonian University Collegium Medicum (UJ CM), won the Digital Health „Application of 3D printing, augmented reality / virtual reality in cardiology, interventional cardiology and cardiovascular imaging” competition organized as part of the New Fronteries in Interventional Cardiology conference. Young doctors and biomedical engineers interested in innovative solutions in medicine were invited to participate in the competition. They were required to prepare an English-language essay on one of two topics: „Application of artificial intelligence in cardiology and interventional cardiology” or „Application of 3D printing, augmented reality / virtual reality in cardiology and interventional cardiology”, in which they deal with the proposed implementation solutions of the above technology for wide use in the field of cardiology and interventional cardiology. The most important evaluation criteria included were: innovation, speed and ease of implementation of the proposed solution and the level of its comprehensiveness. The winner of the competition was Tomasz Pulanecki, who presented the work entitled „Tissue engineered 3D printing in patient-specific aortic aneurysm (AA) management”.

PhD student of the Medical University of Wrocław receives the Mayzl Medical Laurel

2019-12-19

Stanisław Supplitt, PhD student of the Medical University in Wrocław, received the Waclaw Mayzl Medical Laurel, awarded by the Polish Academy of Sciences for outstanding scientific work performed during studies. He is currently studying at the Department of Genetics and he has formally received the distinction as a sixth-year student of the Faculty of Medicine of the Wrocław University for the series of works „Photodynamic Therapy as an innovative

approach for the treatment of cancer and skin disorders”. The doctoral student of the Wrocław University is one of six winners of this competition. Stanisław Supplitt is also this year’s laureate of the Young Talents competition in the scientific category. He received the award together with Krzysztof Kotowski, a medical student of the Medical University of Wrocław, for research into skin cancer.

University of Warsaw project receives international funding from the JPco-fuND 2 program

2019-12-20

The „OligoFIT” project, managed by Dr Piotr Hańczyc from the Faculty of Physics of the University of Warsaw (UW), received funding under the international program JPco-fuND 2. The JPND network finances research in the field of precision medicine in neurodegenerative diseases. This time, it awarded 18 out of 180 applications. EU Joint Programme - Neurodegenerative Disease Research (JPND) is an international undertaking aimed at supporting research on neurodegenerative diseases. First of all, its initiators strive to improve work on analyzing the causes and discovering methods for early recognition of symptoms of Parkinson’s, Huntington’s or Alzheimer’s diseases. It is also important to develop appropriate forms of therapy for the affected patients. One of the activities undertaken by JPND is the organization of competitions for the implementation of international research projects prepared by teams of scientists from at least three countries-members of the network.

Student of the Krakow University of Technology designs an electronic hand prosthesis

2019-12-20

Agnieszka Tkaczyk, a student of biomedical engineering at the Faculty of Mechanical Engineering of the Krakow University of Technology (PK) designed an electronic hand prosthesis controlled by muscle impulses. The invention will help amputees return to normal functioning. The project was implemented as

part of the 7th ABB Science Club. The initiative of ABB, a company that is a global technology leader in the field of energy and automation, is addressed to students of technical universities and secondary technical schools. Participants of the Science Club, operating at the ABB Corporate Technology Center in Krakow, can benefit from the help of scientists and specialists, technological facilities as well as financial support. Agnieszka Tkaczyk has worked on her invention «Electronic hand prosthesis controlled by muscle impulses» for 9 months. She emphasizes that designing this type of device gives great satisfaction because it will help amputated people to return to normal life.

Dr Genoveffa Franchini receives an honorary doctorate of the Medical University of Białystok

2019-12-31

The Senate of the Medical University of Białystok (UMB) awarded Dr Genoveffa Franchini from the National Cancer Institute in the USA an honorary doctorate. Dr Genoveffa Franchini is a world-renowned authority in the field of virology and a pioneer in the study of oncogenes and human retroviruses. The aim of her research is to prevent and treat diseases caused by pathogenic human retroviruses. Since 1997, Dr Franchini has been managing the Animal Models and Retroviral Vaccines Section laboratory at the National Cancer Institute (NCI) belonging to the National Institutes of Health (NIH) in the US. Dr Franchini conducts constant scientific cooperation with many centers in the USA, Europe and South America, including cooperation with the Medical University of Białystok for over 20 years.

Scholarships offered for PhD students

2018-02-01

If you have your doctoral thesis reviewed and you carry out research in technology combined with medical sciences, you can receive the scholarship from Czesław M. Rodkiewicz Scholarship Foundation.

Polish citizens, permanently living and obtaining the engineer diploma from Polish universities can apply for the scholarship competition. During the qualification procedures the jury will take into consideration the subject of the doctoral thesis and its impact on the science, academic achievements and the opinions of their tutors with two independent researchers. Ultimately, two doctoral students will receive a scholarship of 4,000 Canadian dollars. The application and required documents should be sent to the following address: Janusz Wójcik, President 622 Wahstao Rd Edmonton, Alberta, T5T 2Y4 Canada, until April 30, 2018. You can find more information on the Foundation's website

Start of the program „Grants for grants - promotion of quality 2.0”

2018-02-01

The Ministry of Science and Higher Education has established a program called „Grants for grants - promotion of quality 2.0” starting February 1, 2018.

According to the Ministry, the aim of the program is to support Polish scientific organizations and universities that have applied for the implementation of projects under the European Union research programs. Scientific organizations and universities may apply for e.g. covering the costs related to the preparation of the project application, supplementations or improvements, if the project met the criteria described in the program. The call for proposals under the established program is planned from March 1, 2018 to October 31, 2018 and will be launched by the Minister's announcement.

Agreement on cooperation between NCBR and NCN

2018-02-02

The National Center for Research and Development and the National Science Center have signed a cooperation agreement that aims to release the potential of Polish science. The cooperation between NCBR and NCN offers better development opportunities for Polish scientists, also in terms of TANGO program, financed by NCRD with PLN 40 million.

The aim of the TANGO program is to join basic, applied and industrial research, which will create new opportunities to use the effects of researchers' work in practice. There are no thematic restrictions and that allows to implement projects from various fields. - We use all available means to ensure the best possible conditions for conducting, both basic and applied research. The agreement signed today by the NCRD and the NCN is another step in the improvement of support mechanisms that Polish science and the economy will benefit from - said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. More: <http://www.ncbr.gov.pl/aktualnosci/art,5912,ncbr-oraz-ncn-zaciesniaja-wspolprace.html>

Polish student app will help blind people

2018-02-02

Polish students developed an application that will help blind people to move in the university.

24 hours, 14 teams, over 20 thousand lines of code and the result is an application for people with visual disabilities. It can be controlled only by simple gestures and an intuitive interface, which allows to pass to various lecture halls. The innovative idea of students from Warsaw and Krakow was awarded by the hackathon jurors at the Campus App Challenge. Now, the winners are developing the software under the guidance of professionals, and they target more than 40 its implementations at Polish universities and schools abroad. See the report from the event: <https://www.facebook.com/indoorway/videos/819111474960307/>

Software programmers are the sign of the technological revolution in Poland

2018-02-05

250 thousand programmers working in Poland are one fourth of all IT developers employed in Central and Eastern Europe.

They are among the best professionals in the world - emphasize the authors of the latest Stack Overflow report «Central & Eastern Europe Developer Landscape 2017». Polish universities educate over one million students. There are 69 higher education institutions in Warsaw, 27 in Wrocław, and 21 in Poznań and Kraków. Reputable universities are also in Katowice, Łódź and Gdańsk and Gdynia. And it results in the largest number of technology companies and start-ups created there.

Rare earth elements are the topic of the victorious Diamond Grant

2018-02-05

Karolina Górnicka, a PhD candidate at the Faculty of Technical Physics and Applied Mathematics of the Gdańsk University of Technology, won the 6th „Diamond Grant” competition.

Her project titled „Superconductivity and magnetism in the new double compounds R-Rh and R-Ir (R-rare earth)” received funding in the amount of PLN 219 350. Every year bachelor graduates or students after the third year of their master's program may apply for the Diamond Grant to carry out their own research. The program is organized by the Ministry of Science and Higher Education.

RNA Composer supports the imagination of scientists

2018-02-06

We are the best in creating of automatic systems for predicting RNA structures and their three-dimensional presentation - said Dr Marta Szachniuk. She and a team of Prof. Ryszard Adamiak from the Institute of Bioorganic Chemistry PAS in Poznań have developed system of the RNA Composer. It is a free, publicly available, quick IT tool. It deals with both short and very long chains of RNA molecules with complex architecture.

During the 6 years of functioning of RNA Composer it has already performed 1 million tasks. This way many scientists got the first idea of how the molecule looks in three dimensions. The Polish results of RNA research are well-known worldwide. In this field, innovative experiments are conducted by a team of Prof. Janusz Bujnicki from the International Institute of Molecular and Cell Biology in Warsaw. Prof. Ryszard Kierzek from the Institute of Bioorganic Chemistry PAS in Poznań described the thermodynamic rules of RNA folding. (kp)

Scientific photos wanted

2018-02-06

Foundation for Polish Science is looking for interesting, intriguing photos and illustrations depicting the subject of research and showing the beauty of science.

The Foundation intends to use the best photos in promotional materials (along with information about the author of the study and his work). The person providing the photo must own proprietary copyrights to it. Pictures in printable resolution, grouped in files with extension * jpg, * tiff or * eps. can be sent to: elzbieta.marczuk@fnp.org.pl by 28 February this year.

People cannot talk to a hippopotamus

2018-02-06

... because we can only hear some of the sounds they communicate. Hippopotamuses have a special anatomical structure and they can receive sounds in the water ... with a jaw.

Using the system of specialist microphones, acoustics specialists from the Academy of Mining and Metallurgy in Krakow (AGH) stated that animals communicate in low and very low frequencies. - It is highly probable that they are infrasounds - said Marcin Zastawnik from AGH - whose human ear is unable to capture. Scientific certainty will be obtained after acoustic processing of recordings obtained during the research. Audible sounds issued by hippopotamuses are similar to a croak interrupted by hiccups. (Kp)

Torun scientists are looking for evidence of the dark matter

2018-02-07

Dr Piotr Wcisło from Torun University with his team is looking for evidence for the existence of dark matter. For now, they pointed places where dark matter is not present.

For the purposes of experiments, researchers from Toruń organized a network of optical atomic clocks. Clock from the National Laboratory FAMO cooperates with similar devices in the United States, Europe and Japan. Measurements are so precise that the special camera would measure the speed of approaching America to Europe. - If we can hear the same «click» in all our clocks we will know that it is not a coincidence. So we will recognize the change of one of the most fundamental physical constants. The experiment will show if there are so-called topological defects revealing forms of dark matter. (Kp) More: <https://www.nature.com/articles/s41550-016-0009.pdf?origin=ppub> <http://www.nauka.gov.pl/polska-nauka/torunski-zegar-atomowy-tyka-ciemnej...>

Szczecin Maritime Science Center is established

2018-02-07

It will be a multimedia science and education institution for children and young people interested in the sea, maritime science and technologies as well as in maritime economy and traditions of Szczecin and its region.

A ship's hull-shaped building will be constructed on the Oder river, in the city center, on the Łasztownia island. The Center will be built by 2021, at a cost of over PLN 80 million from the EU Regional Operational Program for the West Pomeranian Region with participation of regional budget (kp) More: <http://naukawpolsce.pap.pl/aktualnosci/news%2C28123%2Cszczecin-powstaje-...>

Polish chemical computer

2018-02-07

Scientists from the Institute of Physical Chemistry of the Polish Academy of Sciences in Warsaw proved that a chemical computer is not a dream of futurologists.

They built a pioneer device of this kind; currently one of the best in the world, where chemical signals replaced electronic ones. To process information in a similar way to traditional computing machines, the scientists used a system of contacting drops, in which repetitive chemical reactions take place. This allows - with high accuracy - to recognize, for example, three-dimensional shapes, and classify cancer cells. Polish scientists with their colleagues from the University of Jena, showed that the 5x5z droplet system classifies cancer cells from the Breast Cancer Wisconsin Dataset with an accuracy of 97%. (Kp).

Third Congress of Health Challenges in March

2018-02-07

- Will the progress in science replace once oncology doctors with technologies?

This is a somewhat provocative question, but we should talk about it - says Prof. Krzysztof Skłodowski, director of the Oncology Center in the Maria Skłodowska-Curie Institute in Gliwice, who takes part in the Scientific Council preparing the 3rd Congress of Health Challenges. The 3rd Health Challenges Congress (HCC 2018) will be held in Katowice on March 8-10. It will be devoted to the emergence and practical implementation of new medical technologies. During the Congress session, speakers and guests will talk about start-ups in medicine, about innovative glaucoma surgery or models of cooperation between science, the state and industry. More about the Congress: <http://www.hccongress.pl/pl/>

Do not dry the peatland

2018-02-07

Peat bogs, occupying about 2% of the lands on Earth, accumulate almost twice more coal than forests; they accumulate ¼ of coal in all ecosystems in the world.

The square meter of peatland receives annually about 1 kg of carbon dioxide - recalls the communication of the Warsaw University of Life Sciences (SGGW). Research conducted at this university has shown a comprehensive, beneficial effect of peatlands on the condition and balance of the natural environment. Peatlands are not worth drying them up. Profits from leaving them untouched are higher than profits from obtained arable land. - The governments of many countries have noticed that the use of peatlands does not require their degradation - emphasized Dr Mateusz Grygoruk from the Department of Hydrology and Water Resources of the Faculty Construction and Environmental Engineering SGGW – and they direct significant efforts to restore their original state. (Kp)

Institute of Electronic Materials Technology develops a white laser

2018-02-07

Laser sources of white light can revolutionize the screens of TVs and smartphones, car headlights and they can be even the successor to the standard of wi-fi communication.

Polish scientists work on new methods of producing sources of white light laser. One of the basic elements of the white light lasers is the ceramic luminophore Ce: YAG- currently developed at the Institute of Electronic Materials Technology in Warsaw. Luminophore is a chemical compound causing the effect of luminescence, that is to say, emitting light waves not under the influence of high temperature. White light can be used, among others in LEDs, in laser lights, in the car industry or in energy-saving street lamps. More: <https://innowacje.newseria.pl/news/bialy-laser-moze,p772965438>

Research centers for cancer and quantum technologies planned in Gdańsk and Warsaw

2018-02-07

The Foundation for Polish Science has transferred over PLN 109 million for research in three international science centers planned in Gdańsk and Warsaw.

The International Center for the Theory of Quantum Technologies will be established at the University of Gdańsk. Research will include the use of quantum technologies in computers. Its foreign partner is the Institute of Quantum Optics and Quantum Informatics (IQOQI) of the Austrian Academy of Sciences. Scientists from Prof. Konrad Banaszek's Center in Warsaw will develop quantum optical technologies. They cooperate with the Oxford University. The Cancer Research Center will be set up in Gdańsk and it will be run by Prof. Jan Dumański from the University of Uppsala (Sweden) and Dr Arkadiusz Piotrowski from the Medical University of Gdańsk. (Kp)

Secure quantum dots

2018-02-07

Researchers from the Institute of Physical Chemistry of the Polish Academy of Sciences in Warsaw and the Faculty of Chemistry of the Warsaw University of Technology have developed an innovative method of producing quantum dots of zinc oxide, one of the most commonly used nanomaterials.

New ZnO nanoparticles are safe. They can be introduced into biological and medical laboratories, e. g. for imaging processes or applied in materials exposed to humans, like paints. Such solutions are carried out, among others in the NANOXO start-up company. The research was financed by the Foundation for Polish Science and the National Science Center. The results were published in the well-known scientific journal «Chemistry - A European Journal» with participation of Krakow scientists from the Jagiellonian University. (kp) more: <https://informacje.pan.pl/index.php/informacje/2022-zenskie-ptasie-wycho...>

Selvita invests in innovative oncology projects

2018-02-08

Biotechnological company Selvita will conduct a public offer of their shares to raise capital for the development of innovative oncology projects. In the next four years, it will allocate PLN 290 million, of which PLN 140 million is to be obtained from investors.

Selvita wants to allocate their funds to the development of SEL120, which is to fight acute myelogenous leukemia and for four innovative platforms: targeted therapies, cancer cell metabolism with immuno-metabolism, immunological and immuno-oncological as well as a biological molecules tooling platform. Selvita successfully commercializes innovative projects. Its leukemia drug SEL24 is the first Polish drug approved for clinical trials in the US. More about the SEL120 drug development project: www.selvita.com/pl/projekty-innowacyjne/sel120

Individual grant from the European Commission for Gdańsk scientists

2018-02-08

The project „Dating fossils with use of molecular data - an innovative approach to determining the age of Baltic amber” (AMBER) has received an individual grant from the European Commission for scientists - MSCA Individual Fellowships.

Individual grants are awarded to researchers who have more than 4 years of experience in research or a PhD. The project was implemented by Dr Dagmara Żyła under the supervision of Dr Tracy Heath from the Iowa State University of Science and Technology and Dr Jacek Szwed, Prof. of University of Gdansk. The main assumption of the AMBER project is to develop a new method of accurate dating of fossil species preserved in Baltic amber. The project will run from September 1, 2018 to August 31, 2020 with its budget of EUR 147,000.

Sea drone with ultramodern propulsion sets off on the first cruise

2018-02-09

„Autonomous, bionic carrier of sensors” - this is how Michał Latacz calls the NOA Sentinel underwater submarine drone, constructed in his NOA company.

The device is used for research and searching for raw materials both on the bottom and under the sea bottom. It is efficient, safe, maneuverable and economical. It operates alone - even two months - without the assistance of the base ship. It reduces search costs by 40 percent. The NOA Sentinel is equipped with the modern NOA wave propulsion, designed and patented by Michał Latacz. He was inspired by the way the squids moved. The drone propulsion is set in motion with the special NOA DRIVE wings that move the vehicle. They operate in a quiet, safe for man and the environment way, providing high power and maneuverability. In the first mission NOA Sentinel will look for freshwater sources under the bottom of the Baltic Sea. In the coming years, the

market for autonomous submarine vehicles may grow by more than 22 percent annually. (Kp)

World Brain Days

2018-02-12

For several years, World Brain Days have been celebrated in March. Also this year, Polish universities, institutions and scientific societies are involved in this project.

Held in Gdańsk, Gdynia and Sopot, the event will be devoted to the expanding of knowledge about the brain. On March 16-17, the Faculty of Biology of the University of Gdańsk organizes a series of lectures, workshops and laboratory demonstrations to bring the knowledge about the structure and functioning of the brain, as well as to familiarize with the neurobiologists, neurosurgeons and psychologists. In turn, in Krakow, on March 12-18 the Auditorium Maximum of the Jagiellonian University provides a series of lectures on the functioning of the brain and its diseases. Later, at University of Rzeszów, on March 14, an open lecture will be held by Dr Paweł Balcerak from the Institute of Philosophy titled «Brain and Mind. Is a man more than a body? « More: <http://www.dana.org/baw/>

Polish article published in the journal Nature

2018-02-12

In the latest edition of the journal Nature Prof. Polasik from the Faculty of Chemistry of the Nicolaus Copernicus University in Toruń published an article describing the observation of the forced release of energy from the excited atomic nuclei. Co-author of the publication „Isomer depletion as experimental evidence of nuclear exclusion by electron capture” is Dr Jacek Rzadkiewicz from the National Center for Nuclear Research in Świerk. The authors report the first experimental observation of a new, theoretically foreseen physical phenomenon, i.e. the process of excitation of the nucleus through the electron capture to the atomic electron shell. The experiment was conducted in the United States with the linear ATLAS accelerator at the National Laboratory in Argonne. More: <https://www.nature.com/articles/nature25483>

New technologies in education

2018-02-14

Over 85 percent teachers appreciate importance of new technologies, almost all use digital devices as learning aids; many use special educational applications- report studies commissioned by the Polish educational platform. Similar opinions are expressed by the parents. 68 percent of them confirm that their children use digital devices as a learning aid, 73 per cent of parents believe that the Internet helps to acquire new knowledge. Ssula.pl is a modern educational platform adapted to many devices. It provides 60,000 interactive quizzes, educational tasks and videos adapted to the age and pace of the child's learning. This platform covers all school subjects in grades 1-6 and pre-school education. It complies with the core curriculum of the Ministry of National Education for the 2017/2018 school year. Quizzes and tasks for Ssula.pl are created by experienced subject teachers and pedagogues. One week of using the Ssula.pl educational platform costs PLN 15. One can use it on computer, tablet and smartphone. (Kp)

Competitions for new Polish humanities projects

2018-02-14

Until February 28, 2018 the National Program for the Development of Humanities offers an opportunity to participate in competitions to get financing for new humanities projects.

The program was established by the Minister of Science and Higher Education. The task of competitions is to translate the most important works of Polish humanities, its new and classic achievements in order to include them in the international academic society into congress languages (English, French, Spanish, German, Russian Italian). The National Program for the Development of Humanities launches also a project for translating the most important works of world culture into Polish with scientific editorial work: philology, bibliography, history and interpretation. Deadlines for entries in competitions expire on February 28, 2018. Details can be found on the websites of the Ministry of Science and Higher Education.

Tadeusz Kotarbiński's Award

2018-02-14

University of Lodz has announced the fourth Tadeusz Kotarbiński Award competition for the best scientific work in the humanities. Only outstanding works, defining the directions of humanities development in Poland may be distinguished with that award. Polish universities are major centers of humanities. The scientists who are focused on them are people for whom „humanities” is not only a term for the field of science, but an expression of an ethical attitude and an open approach to the world. The patron of the prize - the first dean of the University of Lodz - was a humanist, philosopher and an excellent academic teacher. So far, the prizes have been awarded to: Prof. Jan Strelau (SWPS University of Humanities and Social Sciences), Dr Ewa Kołodziejczyk (Polish Academy of Sciences), Dr Dorota Sajewska (Institute of Polish Culture, University of Warsaw) (kp) More info on page: www.nagrodakotarbinskiego.uni.lodz.pl

Naukobusy (science busses) reach the villages and towns

2018-02-15

Naukobusy - modern mobile laboratories with more than 20 exhibits that can be touched and tested have reached almost 100,000 children from all Poland. According to the program of the Ministry of Science and Higher Education, the kids have the opportunity to learn the secrets of the human body, carry out experiments in physics or to cheat their senses. All this is provided under the supervision of animators from the Copernicus Science Center in Warsaw. Naukobusy visit villages and smaller cities (up to 130,000 inhabitants). This initiative aims at equalizing educational opportunities and also aims to prevent exclusion. The science ministry allocated PLN 2.3 million this year to the activity of children's universities and to popularize science among the youngest. As part of Young Explorers' Universities, children and adolescents aged 6 to 16 had a chance to feel like real scientists. Thanks to the support of the Ministry of Science and Higher Education, Young Explorers' Universities appeared in all provinces.

University drone examines air quality in Wroclaw

2018-02-15

The Department of Climatology and Atmospheric Protection at the University of Wrocław is testing air quality with a modern drone. The device was purchased thanks to a subsidy from the Municipal Office in Wrocław. The idea for the purchase of a drone by the University of Wrocław appeared already in 2015, when the LIFE-APIS / PL project implemented by the Department of Climatology and Atmospheric Protection was awarded with the Polish Innovation Prize. It was a great opportunity to establish scientific cooperation with Optimum Tyimiński Company, which in 2017 created the first unmanned flying platform. In environmental monitoring, drones are very popular and have different applications. The University drone is used as a platform for measuring air quality and basic meteorological parameters. The range of measurements is several hundred meters. The drone is equipped with the so-called environmental warhead, measuring dust and ozone concentration; in addition, it measures the temperature and humidity of the air. More about the LIFE-APIS / PL project: <http://life-apis.meteo.uni.wroc.pl/>

Former director of NASA Ames Research Center visits Toruń

2018-02-15

Former director of NASA Ames Research Center in Silicon Valley, General Simon Peter Worden visited the Torun University. General Worden met the Vice-Rector for Research Prof. Jacek Kubica, director of the Astronomy Center Prof. Michał Hanasz and vice-dean of the Faculty of Physics, Astronomy and Applied Computer Science, Dr. Winicjusz Drozdowski, Prof. NCU. The meeting was also attended by Mateusz Józefowicz from the ABM Space company in Toruń. The topics included the development opportunities for the space industry in Toruń, plans to create a selection committee for candidates for the scientific award granted by Simon Worden's foundation and research projects regarding the search for planets carried out at the Astronomy Center of the Torun University.

Recruitment for Fulbright scholarships

2018-02-15

The Ministry of Science and Higher Education reports that recruitment has begun for scholarship programs of the Polish-American Fulbright Commission for Polish citizens. Recruitment refers to an opportunity to visit the US in the academic year 2019/2020. The Fulbright Graduate Student Award program is a scholarship for graduates of Polish universities who want to continue their studies in the USA. In turn, the Fulbright Junior Award is a scholarship for PhD students, which enables the implementation of a research project at an American university, research institute or non-governmental organization. The third Fulbright Senior Award program is a scholarship for scientists, researchers and teachers. It provides the opportunity for implementation of their own research projects at American universities, non-profit research institutes and some government institutions. More: <http://www.fulbright.edu.pl/>

City scholarship for PhD student at the University of Life Sciences in Lublin

2018-02-15

MSc. Agnieszka Wawryniuk received a scholarship of the mayor of Lublin granted within the „Municipal scholarship program for students and doctoral students”. The scholarship holder is a PhD student at the Department of Commodity Science and Animal Processing at the Faculty of Biology, Animal Sciences and Bioeconomy, where under the supervision of Dr. Jolanta Król she prepares her doctoral thesis «The influence of selected factors on the quality of milk and curd produced on the basis of this raw material, with particular emphasis on the content of lipophilic vitamins». University of Life Sciences in Lublin (formerly Agricultural University) is a public university of science. Since 1955, it exists as an independent didactic and scientific-research facility. It has a multi-profile character, integrates agricultural, biological, veterinary, technical and socio-economic sciences. (Kp)

Professor Giulianotti and Dr Armstrong visit the Warsaw Institute of Political Sciences

2018-02-16

Two prominent European sport sociologists will visit the Institute of Political Sciences of the University of Warsaw in March. Professor Richard Giulianotti and Dr. Gary Armstrong on 9-10 March 2018 will give a lecture and conduct a methodological seminar. March 9, 2018, at 3 PM, Prof. Giulianotti and Dr. Armstrong will give a lecture entitled «Key contemporary issues in the sociology and anthropology of football». The lecture will take place in the Collegium Politicum (Auditorium Building) as part of the course on the monographic subject «Football in Europe: Case Studies» led by Dr Seweryn Dmowski. The lecture will be open and will be conducted in English. On March 10, 2018, from 10:30 AM, scientists will conduct a methodological seminar for Polish PhD students and students. The seminar will take place in room 303 in the Collegium Politicum (Auditorium Building). The guests of the Institute of Political Sciences will cover the following topics: theory and methodology of contemporary social sciences (with particular emphasis on research on sport / football), experience in writing and publishing scientific articles in renowned journals and publications and international scientific networking. For further information, please contact Dr Seweryn Dmowski (seweryn.dmowski@uw.edu.pl).

Minister's awards for academic teachers

2018-02-16

Polish colleges may apply for the awards of the Minister of Science and Higher Education for academic teachers. They can be acquired by Polish scientists, including those working abroad and foreigners who, during their stay in Poland, obtained a unique achievement in scientific or didactic work. The Ministry awards scientific achievements that became the basis for the PhD degrees last year. Individual and team prizes for distinguishing results in didactic work can be obtained by the authors of outstanding academic textbooks, innovative research and modern teaching methods and didactic materials.

The deadline for submitting applications is March 31, 2018. The detailed rules and procedures are regulated by the Regulation of the Minister of Science and Higher Education of September 6, 2016. (Kp) See the regulation: <http://dziennikustaw.gov.pl/du/2016/1462> <http://prawo.sejm.gov.pl/isap.nsf/download.xsp/WDU20160001462/O/D20161462.pdf>

Next Thursdays with economics for children and youth launched

2018-02-16

In March, next series of „Thursdays with Economics”, known as the Economical Children's University and the Academy of the Young Economist, begin in seven Polish academic cities. In Szczecin, the Faculty of Management and Economics of Services at the University invites young students for scientific lectures. Classes will be held in two age groups. The younger (11-13 years) as part of the Economic Children's University and during the six lectures the kids will learn principles of creating products, basic rules for their advertising and the importance of ecology in economic processes. In turn, older students (14-16 years) may attend lectures on conflict management, trends in marketing, interpersonal communication the key to business success, index analysis of the enterprise, globalization of the economy, as part of the Academy of the Young Economist. The recruitment will be conducted until February 25, 2018 for classes at the Children's Economics University in Warsaw, Poznań, Wrocław, Białystok and Gdańsk. The duration of registration for meetings in Szczecin was extended until February 28, 2018, and for classes in Katowice until March 5, 2018. Application form for classes at the University of Economics Application form for classes of the Academy of the Young Economist: <http://www.gimiversity.pl/zapisy2/> Participation in the classes is free. <http://www.uniwersytet-dzieciacy.pl/zapisy2/> <http://www.gimiversity.pl/zapisy2/>

The latest monograph of the Nobel Prize winner Czesław Miłosz

2018-02-16

The Scientific Publisher of the Academy of Technology and Humanities in Bielsko-Biała published a scientific monograph entitled Miłosz. Meetings. Miłoszological studies and dissertations. In the review, Prof. Zofia Zarębianka from the Jagiellonian University wrote that the publication „is a cognitively valuable proposition, not deprived of innovative approaches and interpretations”. The author of the monograph is Prof. Marek Bernacki, involved in the works of Czesław Miłosz for many years. The first part of the monograph contains interpretations of known works of the Polish Nobel Prize winner (including the poem My Faithful Speech). The author discussed the poetical and philosophical considerations of the poet and his attitude towards the idea of Central Europe (Mitteleuropa). The second part is devoted to Miłosz's relations with other writers (including Zbigniew Herbert) and people who significantly influenced his life (Leopold Chomski, Jerzy Turowicz). <https://www.ath.bielsko.pl/monografia-naukowa-o-czeslawie-miloszu/>

Polish scientists working on the landing system on Phobos

2018-02-16

Researchers at the Krakow AGH University of Science and Technology are involved in the project of the European Space Agency, which aims to launch the lander on Phobos - one of the moons of Mars. Researchers from the Faculty of Mining and Geoengineering, together with the Space Research Center of the Polish Academy of Sciences, started the project «LOOP - Landing Once on Phobos». Research conducted at the AGH University of Science and Technology is a part of the European Space Agency (ESA) project. Designing construction works on the surface of Phobos is one of the tasks of the research team from the Faculty of Mining and Geoengineering. The experimental laboratory works include reconstructing the conditions prevailing on Phobos and examining the reaction of various types of ground to the lander's foot. Simulations of the lander's contact with the Phobos surface will be carried out on a mobile platform in one of the halls at the Faculty of Mining and Geoengineering. The team of the AGH University of Science and Technology together with the Space Research Center of the Polish Academy of Sciences has two years to carry out the project.

The most influential people of Polish medicine

2018-02-16

Prof. Wiesław W. Jędrzejczak - head of the Chair and Clinic of Hematology, Oncology and Internal Diseases of the Medical University of Warsaw is on the top of the list of the hundred most influential people in Polish medicine. The competition is organized by the journal „Puls Medycyny”. The second is Prof. Cezary Szczylik, specialist in internal medicine, clinical oncologist, Rector's representative at the Warsaw Medical University for the organization of the Clinical Research Center in Oncology. The third is Prof. Henryk Skarżyński, otolaryngologist, audiologist and phoniatriest, national consultant in the field of otorhinolaryngology, director of the World Hearing Center in Kajetany near Warsaw, head of the Department of Audiology and Phoniatics at the

Academy of Music in Warsaw, chairman of the Committee of Clinical Sciences of the Polish Academy of Sciences. (Kp) See a list of the hundred most influential people in Polish medicine: <http://listastu.pulsmedycyny.pl/4686591,78304,lista-stu-2017-medycyna>

Crane of the future

2018-02-20

40 academic scientists and students from the Faculty of Mechanical Engineering and Mechatronics of the West Pomeranian University of Technology in Szczecin are working on the project of the innovative crane. The «Crane of the Future» is a project implemented thanks to the financing of the National Center for Research and Development. The consortium implementing the project consists of Cargotec Polska and three universities: West Pomeranian University of Technology from Szczecin as the project leader, Koszalin University of Technology and Poznan University of Technology. Each organization has its own scope of work. Researchers from the Koszalin University of Technology work on the voice control systems for use of everyday speech. As they explain, the aim is to replace strictly specified commands to control the crane with speech. The crane may be controlled in both Polish and English languages. The operator will not have to learn a special language, but simply he will be able to „talk to the crane”. In the project assumptions cranes of this type will be also used in harvesters.

Opole Electrics Days

2018-02-21

The XXVIII Opole Electrics Days are an event addressed to enthusiasts, practitioners and theoreticians of electrical technology. The organizers invite to the second campus of the Opole University of Technology on March 6. There will be lectures and the Open Day of the Faculty of Electrical Engineering, Automatics and Computer Science. During the event, besides the presentation of the educational offer, a series of lectures on electrical engineering and electrotechnics is planned. Dr Eng. Stefan Wolny from the Opole University of Technology will talk about electricity generated from hydrogen. In turn, Eng. Andrzej Przytułski will familiarize future

students with the electric means of communication at the turn of the 19th and 20th century and Dr. Eng. Ryszard Beniak will conduct a lecture entitled «Three-phase AC systems as the driving force of our world» Opole Electricity Days will start on March 6 at 9.30 am in the premises of the Opole University of Technology (building 9A) ul. Prószkowska 76.

National Center for Research and Development will support the Polish railway in the implementation of innovative projects

2018-02-23

Polskie Koleje Państwowe Intercity (PKP Intercity) signed a letter of intent with the National Center for Research and Development. Both institutions will cooperate in the implementation of innovative projects for sake of passengers of Polish railways. A letter of intent signed under the joint implementation of the „Luxtorpeda 2.0” program assumes implementations of the innovative rail initiatives. Dr. Sebastian Skuza, deputy minister of science and higher education emphasized that « just undertaking the effort of innovative partnership in this field, is an innovation itself». In turn, Prof. Marek Chorowski, director of the National Center for Research and Development, said that together with the Polish State Railways, they will analyze current state of technology. Also the specific technological challenges and the market for innovation are being defined. According to the director of the National Center for Research and Development, „ creating a market and setting specific technological and economic requirements will guarantee that a valuable final product will be created”. In February 2016, Prime Minister Mateusz Morawiecki announced that the railway industry will be one of the Polish „smart specializations”. - The government wants to withdraw from the concept of developing a country based on supporting the metropolis for sustainable development. Development cannot be only in big cities. We need to create more perspectives for medium towns and small towns- highlighted- Prime Minister Morawiecki.

Researchers of the Technical University of Lodz invented sand with no permeability

2018-02-23

The technology of coating sand grains with a special layer that protects them against water penetration was developed at the Faculty of Civil Engineering, Architecture and Environmental Engineering of the Lodz University of Technology. Hydrophobized sand prevents from the penetration of water through sand and it does not mix with water. Dr. Eng. Patrycja Baryła from the Lodz University of Technology explains «the repulsive force between grains of sand and water is so large that the grains in the water form closed groups, so-called water cages ». The main application of hydrophobized sand is to create layers of several dozen centimeters thick for protecting underground parts of buildings in areas where periodic increase of groundwater level is expected. In this application, the hydrophobized sand plays a dual role - it protects against water and transfers weight from the structure of the building. It can also be used to seal water reservoirs, dams, and also as a sealed layer of waste landfills.

Tests of a new Polish drone for gas and oil exploration

2018-02-27

Soon the tests of an advanced drone for exploration of gas and crude oil begin. The drone was constructed by a Wrocław BZB UAS startup and commissioned by Polskie Górnictwo Naftowe i Gazownictwo. It will replace the older type of device, which has been used by the Geology and Exploitation Department searching for gas and oil resources for three years. The companies established cooperation within the MIT Enterprise Forum acceleration program. - Aerial photos of the terrain taken by the drone may be transformed into a three-dimensional map - said Kacper Budnik from BZB UAS - which will facilitate the planning of exploration, location of drilling and reduce the cost of seismic surveys. The device equipped with an optoelectronic head is autonomous, light and small. The components were made in 3D printing technology; the structure was reinforced with composite materials. Polish scientists develop solutions for Phobos and asteroids probe landers

2018-02-28

The researchers want to find answers to questions what forces affect the chassis of the lander while touching the ground of the Phobos and how the dynamics of this chassis will affect the active steering? The implementation of the projects commissioned by the Space Research Center of the Polish Academy of Sciences by the European Space Agency should provide the answers. The proposed solutions will also be used in vehicles settling on light, almost devoid of gravity asteroids, celestial objects on which there are deposits of valuable raw materials. In the first project Polish Industry Incentive Scheme Landing Once On Phobos - Space Research Center of the Polish Academy of Sciences cooperates with the Faculty of Mining and Geoenvironment of the AGH University of Science and Technology in Krakow. In the second project concerning the impact of active steering on the chassis dynamics, the partners are GMV Romania and AVS United Kingdom. (Kp) More: <https://informacje.pan.pl/index.php/informacje/14-nauki-scisle-i-nauki-o-ziemiu/2057-ladowanie-na-fobosie-z-udzialem-cbk-pan>

Polish cyber security experts in the CyberExchange program

2018-03-01

From October 2018, for two years, Polish experts of the Scientific and Academic Computer Network (NASK) for cybersecurity will participate in the European internship program. In addition to the Polish team of CERT (Computer Emergency Response Team), also specialists from Austria, Croatia, the Czech Republic, Greece, Lithuania, Luxembourg, Malta, Romania and Slovakia will take part in the program. Apart from the exchange of expert teams, the project also includes technical cooperation,

involving the exchange of IT tools and technical competences related to the analysis of threats in the network. Enhancing cooperation between cybersecurity teams in individual countries of the European Union is one of the main goals of building a Community network security system. The CyberExchange program will be financed from European Union funds as part of the European Commission's Connecting Europe Facility program.

Students of Gdańsk University of Technology developed a mobile application for paramedics

2018-03-02

Students of the Faculty of Electronics, Telecommunications and Informatics of the Gdańsk University of Technology have developed a mobile application that replaces paper intervention reports completed by paramedics. The work was commissioned by the Pomorski Regional Branch of the Polish Red Cross in Gdańsk under the supervision of Dr Sławomir Ambroziak. The system developed by students is also supposed to solve problems related to storing medical intervention cards. Students of the Faculty of Electronics, Telecommunications and Informatics of the Gdańsk University of Technology have been preparing projects that meet the needs of the market or are commissioned by companies for over a dozen years. XI Głogów Days of Science and Art

2018-03-05

On March 8-9, 2018, the State Higher Vocational School in Głogów organizes the 11th Głogów Days of Science and Arts. Fans of technical sciences will carry out chemical and physical experiments, look at the formation of 3D cubes and build their own tin army. Humanists will have the opportunity to meet with film, advertising, philosophy and history. Everyone can join the nursing skills workshop, where they will become familiar with the specifics of the nurse profession and check their knowledge and skills in the field of first aid. The scholars of the Institute of Economics of the Głogów university will provide a lecture on tax systems and together with participants will consider whether Bitcoin is a phenomenon of our time. The event will take place at the State Higher Vocational School in Głogów at ul. Piotra Skargi 5.

Another award for the students of the College of Information Technology and Management in Warsaw

2018-03-05

Last year, three students from the College of Information Technology and Management in Warsaw: Bartek Kmita, Kamil Kryński and Wojciech Szwed completed a six-minute science fiction film as part of their diploma thesis. The film «Paradigme» was completed in the first half of 2017 with the support of Film Busters and Platige Image. It won recognition at the London X4 Seasonal Short Film Festival as the Best Film of Sci-Fi / Fantasy and won the award for Best Montage at the 48th KRAF Short Film Festival in Rijeka, Croatia. He has now been awarded the Fantasy / Sci-Fi Feedback Film Festival in Los Angeles for the best pictures. See: <https://youtu.be/PkOYODsUJEXE>

Summer space school in Austria

2018-03-05

Students and young scientists from Poland will have the opportunity to design space missions under the supervision of specialists and engineers from the European Space Agency in July 2018. Until March 31, 2018, the second year students, as well as young scientists, may submit applications to the summer school in Alpbach, a city in western Austria. The workshop will last from 17 to 25 July 2018, and its participants will be involved in the creation of a mission with aim to provide a planetoid sample to Earth. In Poland, information on the program is provided by Dr Anna Łosiak from the Institute of Geological Sciences of the Polish Academy of Sciences at the following e-mail address: anna.losiak@twarda.pan.pl More about the summer school in Alpbach: <https://www.summerschoolalpbach.at/>

25th Engineering Job Fair

2018-03-07

On March 13-14, 2018, the 25th Engineering Job Fair will take place at the Warsaw University of Technology. The exhibition organizer - the BEST Warsaw association - emphasizes that it is an ideal opportunity to meet with representatives of companies, learn about potential employers and their requirements. It is also the chance to apply for dream practice, internship and regular work. Exhibitors will organize workshops during both days of the fair, e.g. MARS Polska holds lecture on «Production management, engineer challenge as a manager», Schneider company on «Drive technology and robotics in the era of Industry 4.0», and Polskie Koleje Państwowe Intercity on «Engineering of modern rail transport». More: <http://targipracy.org.pl/>

COST Association holds conference on quantum in the Copernicus Science Center

2018-03-07

On 8 March 2018, the COST Association will present COST CONNECT project at the Copernicus Science Center. The event is titled „Quantum: Where

will the next jump go?” Prof. Aleksander Bobko, secretary of state in the Ministry of Science and Higher Education and Dr Ronald de Bruin, director of the COST Association confirmed their participation in this conference. The cycle of events under the name COST CONNECT was initiated by COST (European Cooperation in Science and Technology) in June 2017. The aim of the project is to combine COST representatives and other scientists interested in the given scientific issue, who could contribute to the research initiated by COST. The European Program for Scientific and Technical Cooperation is jointly organized by 36 European countries and Israel as an institutional structure. Its most important task is to organize multilateral scientific and technical cooperation of member countries. More: http://www.cost.eu/events/cost_connect_quantum

Polskie Gornictwo Naftowe i Gazownictwo will use innovative drones

2018-03-08

PGNiG, the largest gas company in Poland, will use special drones to create precise maps and plans necessary for oil and gas exploration and for detection of gas leaks. The company has been running an InnVento startup incubator for several years. The part of this project, startup BZB Uas develops, among others, drones with special sensors. Such drones are of particular interest to Polska Spółka Gazownictwa - the operator of the gas distribution network as according to the regulations, gas pipelines must be inspected from the air at least once a year. Currently, helicopters are used for this purpose. Controlling by drones is believed to be faster and cheaper. More on BZB Uas drones: <http://bzbuas.com/pl/home/>

Vehicle for the disabled

2018-03-08

Students of the Warsaw University of Technology are constructing a vehicle, which can be driven by disabled people. Creation of such an innovative vehicle has been conducted since October 2017. Students are currently at the design stage. The construction of the machine is still ahead, but the car is promised to be ready in July 2018. The vehicle is to be driven with a joystick. Thanks to this solution, people with partial disability will be able to manage it. With the help of the stick, the driver will be able to control the steering system and the brakes. The car will be electrically powered, it needs about 8 minutes to charge the engine, and its range will be 30 km on one charge. To realize their goal, students of the Warsaw University of Technology conduct fundraising on the Internet. You can support them at: <https://polakpotrafi.pl/projekt/e-makspower>

National Center for Research and Development announces a competition for projects within the TECHMATSTRATEG program

2018-03-08

The director of the National Center for Research and Development has announced the second competition for projects under the strategic program of scientific research and development work within „modern material technologies” - TECHMATSTRATEG. The main objective of the Program is to develop knowledge that will transfer innovative solutions to the socio-economic environment and raise international position of Poland in scientific research and development works. The competition covers five strategic problem areas: technologies of construction materials, technologies of photonic and nanoelectronic materials, technologies of functional materials and materials with designed properties, non-waste material technologies, technologies of biodegradable engineering materials, materials technologies for energy storage and transmission. The budget allocated for selected projects in the competition is PLN 200 million, and applications can be submitted from

April 9 to June 8, 2018. More: <http://www.ncbr.gov.pl/programy-strategiczne/nowoczesne-technologie-materialowe---techmatstrateg/techmatstrateg-ii-konkurs/aktualnosci/art,6013,techmatstrateg-ii-konkurs.html>

Scientists from the AGH University of Science and Technology on podium of the Process Simulation Cup competition

2018-03-09

Eng. PhD student Ewelina Brodawka, from the Faculty of Energy and Fuels at the AGH University of Science and Technology in Krakow, won the international competition for the simulation of the technological process Simulation Cup (PSC2017). The third place was taken by Eng. Kamil Krzemień, who studies chemical technology at the same faculty. The competition, which lasted from March 2017 to February 2018, was attended by over 150 students and PhD students from 70 leading technical universities from around the world. In the year-round competition the participants had to demonstrate their skills in chemical process engineering, chemical simulations, knowledge about automation and in control of industrial processes.

Satellite designed by Warsaw University of Technology students ready to fly into space

2018-03-09

The PW-Sat2 space satellite designed by students of Warsaw University of Technology is ready for the final tests before transferring it to space flight. The conceptual work on the PW-Sat2 project began in 2013, and several months later the first prototypes of the deorbiting sail and the designs of several basic subsystems were created. The satellite was created by the Student Astronaut Circle, operating at the Faculty of Power and Aeronautical Engineering of the Warsaw University of Technology. In recent months, it underwent tests of electronic

components and integration of the whole in the CEZAMAT laboratories of the Warsaw University of Technology and the Space Research Center of the Polish Academy of Sciences. The main mission of the satellite will be to test the deorbiting sail. In May 2018 it will be delivered to the company, which put the device for the Falcon 9 rocket. The launch of the rocket is planned for the second half of 2018.

Institute of Aviation completed work under the European project for the construction of a hybrid rocket engine

2018-03-09

Department of Space Technology at the Institute of Aviation completed the tasks under the European project „Hybrid rocket engine for orbital transfer to LEO, MEO and GEO” (HYPROGEO), co-financed by the European Commission under the Horizon 2020 program. The goal of the project was to develop a satellite propulsion module based on a hybrid rocket engine that uses 98 percent hydrogen peroxide as the oxidant. The final result of the project is a demo-version of hybrid rocket engine. The consortium of the project was coordinated by Airbus D & S, and consisted of 12 partners from 7 European countries (Belgium, France, Germany, Italy, Norway, Poland and Great Britain). The project started in February 2015 and lasted 36 months. More about the HYPROGEO project: <https://www.hyprogeo.eu/>

National Center for Research and Development supports research and development in the shipbuilding industry

2018-03-09

The National Center for Research and Development announced the first competition as part of the pilot program of the INNOship sector program. The program is designed to support research and development in the shipbuilding industry. We have great shipbuilding traditions and well-educated engineers in Poland. If we add to this the increase in expenditure on research and development, we will achieve our goal: shipbuilding can again become a showcase of the Polish economy - said Deputy Prime Minister Jarosław Gowin, Minister of Science and Higher Education. The reconstruction of the shipbuilding industry is one of the priorities of the government's activities. The first stage of the INNOship program will last two years. Two competitions have been planned with a total budget of around PLN 240 million. The call for applications in the first competition will start on April 30 and will last until June 29, 2018.

Competition for the Siemens Award

2018-03-12

The entries for the XXIII Contest for the Siemens Award for 2017 will be accepted until March 31, 2018. The competition is organized by Warsaw University of Technology and Siemens AG. It promotes outstanding achievements in technology and scientific research conducted by employees of academic and non-academic institutions in Poland. The Siemens Award may be given to authors of works concerning areas of interests to Siemens AG such as: electrical engineering and energy, generation, transmission and use of electricity, electronics and information technology, automation and robotics, rail transport as well as traffic management and control. Works can be submitted at: Rector's office of the Warsaw University of Technology Pl. Politechniki 1, room 106, 00-661 Warsaw with the note «Competition for the Siemens Award»

International competition for innovations in electronics

2018-03-13

The call for innovation proposals is currently being held within an international competition organized as part of the ECSEL Joint Undertaking. The competition is intended for authors of innovative projects in electronics. The ECSEL Joint Undertaking is a public-private partnership in electronic components and systems. The institution manages a research and innovation program to build and develop a strong, globally competitive electronic components and systems industry in the European Union. PLN 1.5 million has been allocated for co-financing the participation of Polish entities in projects selected as part of the National Center for Research and Development competition. More: <http://www.ncbr.gov.pl/programy-miedzynarodowe/wspolpraca-wielostronna-/inne-inicjatywy-wielostronne/ecsel-ju/aktualnosci/art,6018,wspolne-przedswiezienie-ecsel-otwarciem-naboru-wnioskow-w-konkur-sie-2018.html>

Polish female scientist among the emerging talents of world science

2018-03-13

Dr Agnieszka Gajewicz from the University of Gdańsk, holder of the scholarship L'Oréal Poland Program „For Women and Science”, was awarded the International Rising Talents. The Polish woman was included in the group of 15 women from different countries who, thanks to their research, have a chance to change the world. Dr Gajewicz is the third Polish woman in the history of the competition, who was awarded this distinction. She was appreciated for research on chemical risk assessment of various types of substances. A researcher from the University of Gdańsk recently deals with the development of chemoinformatic methods in science. Chemoinformatics is a relatively new field of science at the intersection of computer science, mathematics, chemistry and theoretical physics and chemometrics. International Rising Talents is a competition for emerging world science talents organized by the

L'Oréal Foundation and UNESCO. The official award ceremony will take place during the final gala on March 21 in Paris. More: <https://en.unesco.org/women-in-science-rising-irt-2018>

Conference Man-Business-Technologies at the Lodz University of Technology

2018-03-15

The Faculty of Management and Production Engineering of the Lodz University of Technology organizes since March 15, 2018 a series of meetings „Man-Business-Technologies”, which will be devoted to the overall vision of society, economy and technology. The following meetings are planned: March 15 – Prof. Maciej Soin, Corporate Social Responsibility. Ethics or rhetoric? April 19 - Dr. Szymon Wierzbński, Personal Heroism or Collective Responsibility? Organization of the Byzantine army. 17 May - Dr Joanna Sośnicka, Ethics and technology - contemporary dilemmas. June 14 - Dr Inga Kuźma Cein, Social aspect of innovation. Seminars will be held at 18.00, in Łódź at ul. Wólczarska 215 (Building of Three Faculties) room 422.

World Pi Day at the Kraków University of Science and Technology

2018-03-15

The AGH University of Science and Technology in Krakow invites participants on March 16, 2018 for the Friday Science Evening, organized on the occasion of the World Pi Day. The event is addressed to children and adolescents aged 11-15. After the inaugural lecture, participants divided into smaller groups will take part in workshops, experiments and logic games. The event will be held under the patronage of the Rector of the Krakow Academy Professor Tadeusz Słomka. All attractions are prepared by employees and students of faculties of Applied Mathematics, Materials Science and Ceramics, Power Engineering and Fuels, Physics and Applied Computer Science. Events promoting mathematics and science are inextricably linked to the International Day of Pi Number (3,14), which is celebrated on March 14. The date is not a coincidence - in the American record (first month, then day) March 14 we read as 3.14, which corresponds to the Pi value. The Friday Evening of Exact Sciences will be held at the Faculty of Physics and Applied Computer Science of the AGH University of Science and Technology in Krakow at ul. Reymonta 19, building D-10 from 17.00 p.m.

Lodz University of Technology to cooperate with the State Higher Vocational School in Włocławek

2018-03-16

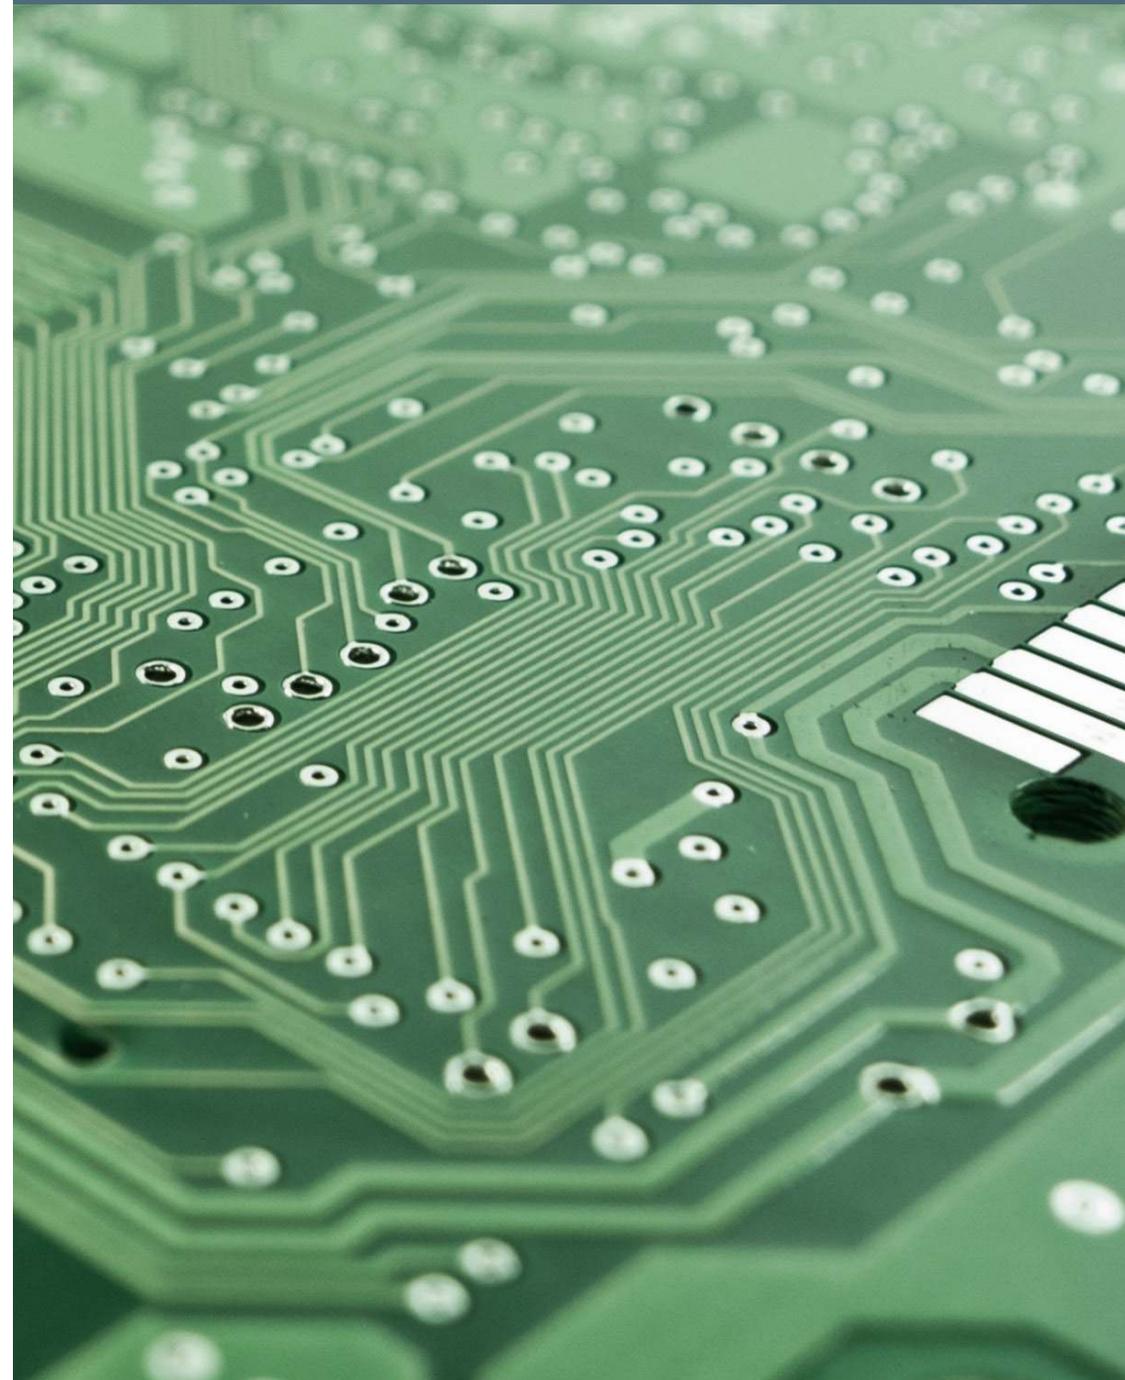

Positive experience of the cooperation between the State Higher Vocational School in Włocławek with the Faculty of Technical Physics, Informatics and Applied Mathematics of the Lodz University of Technology prompted the university authorities to develop their collaboration. University's Rector, Prof. Sławomir Wiak and the Rector of the High School, Dr Małgorzata Łagiedź-Gałuszka, have signed an agreement whose main objective is to support the Włocławek school in the implementation of practical education programs. The Lodz University of Technol-

ogy will thus become a more attractive destination to continue education for Włocławek students. Both high schools declare the cooperation in education, science, research and in the contacts with the social and economic environment.

School of Business in Dąbrowa Górnicza holds 14th Science Festival

2018-03-19

The School of Business in Dąbrowa Górnicza was the organizer of the 14th Science Festival, with the aim of updating the participants with the latest achievements and discoveries and presenting scientific research in the attractive manner. The inaugural lecture «Transition from the opportunistic to the relational market game - towards the economics of values» was given by Prof. Jerzy Hausner from the University of Economics in Krakow. Invited keynote speakers were Major General Dr Eng Roman Polko, who presented the process of forming modern special forces; journalist Kamil Durczok, who wondered how the information is developed in the era of digitization and priest Dr Andrzej Nowicki, a graduate of the Pontifical Academy of Theology in Krakow, who sought the answer to the question of how to be a happy person in today's world.

Polish scientists to focus on a system of intelligent road signs

2018-03-19

Researchers from the Academy of Mining and Metallurgy in Kraków and Gdańsk University of Technology are working on a system of intelligent road signs, adapting smartly to traffic and weather conditions. The system is designed to help drivers better adapt their speed to the conditions on the road. The main goal of the project is to improve the safety and increase the collision avoidance. AGH UST Communication announced that the system called INZNAK will be the first such solution in Poland and one of the few in the world. The project was appreciated and financed by the National Center for Research and Development and the General Directorate of National Roads and Motorways.

Hybrid bicycle from 3D printer wins „Soczewki Focusa” competition

2018-03-20

Students of the Silesian University of Technology won the competition „Soczewki Focusa 2017” presenting their spokeless hybrid-powered bike. The young engineers „printed” their invention on a 3D printer and won the main prize in the category of technical innovations. The innovative bike has a foot drive, if necessary supported by an electric motor. The battery has been placed in the frame of a two-wheeler. The prototype consisted of over 300 plastic parts printed on 3D printers. The target structure is to be made of aluminum or carbon fiber - bicycle designers are looking for a business partner to start its production. „Soczewki Focusa” is a competition aimed at selecting the best Polish innovations. The organizers choose the most interesting technologies created in Poland.

Wroclaw satellite in the competition of the European Space Agency

2018-03-20

Students from Wroclaw have constructed a micro-satellite, which will soon take part in the CanSat competition, organized by the European Space Agency ESA. Before the final part the young constructors asked for a professional opinion of scientists from the University of Wroclaw. The satellite is small, with size of a can (hence the name of the competition). This year the competition objective is to construct a sampler examining the atmosphere of a planet. Its task is to measure the temperature and air pressure and send the data to the receiving station. The space wanderer must also be able to survive a high-speed landing. Six students from the School No. 14 in Wroclaw have been working on the prototype since October last year. Before the national final, the constructors visited the University of Wroclaw. During an official meeting, they listened to the advice of scientists who enthusiastically accepted the proposal for cooperation on this and subsequent projects (the students are already planning to participate in the next CanSat).

Dragonfly and Red Bomber will fly to the USA

2018-03-20

Dragonfly and Red Bomber - unmanned airplanes constructed at the Academic Air Club of Wroclaw University of Technology - will take off in April in the SAE Aero Design West 2018 competition in California. 75 teams from around the world announced the participation in this competition. SAE Aero Design tournaments have been organized for 30 years. The task of the participants is to construct unmanned airplanes that meet stringent standards. Machines are designed to lift as much weight as possible while weighing as little as possible. Constructed by members of the AKL «Red Bomber» will start in the Micro class, in which the ratio of the raised weight to the weight of the aircraft itself is thoroughly calculated. The model weighs only 423 grams, but it can lift up to 1.3 kilograms weight. The second plane - «Dragonfly» - will start in the

Advanced class. It weighs 8 kilograms and it will be able to carry a load of 15 kilos, and then drop it onto the designated target. During the construction, students used laser cutting and 3D printing.

New way of determining landslide activity

2018-03-21

Researchers from the University of Silesia have developed a new way of determining landslide activity by examining annual tree increments. The discovery has an impact on land development plans - houses and roads should not be built in areas of active landslides. The trunks of trees growing on landslides are often inclined or bent due to landslides, which results in the creation of broader annual increments on one side of the trunk. Researchers from the University of Silesia have developed a method for analyzing such increments. The invention allows to study soil activity for construction planning purposes and to create accurate threat maps for local governments, indicating safe areas and those that are exposed to ground movements. This will allow to manage the space in a more rational way and limit damage resulting from landslides in the future.

Broadband Internet in the Baltic

2018-03-21

Researchers from the Faculty of Electronics, Telecommunications and Informatics at the Gdansk University of Technology have developed innovative solutions that ensure wireless, broadband communication in maritime areas. The results of their work will be available on Thursday, March 22 during the seminar, which will start at the Institute of Oceanology of the Polish Academy of Sciences in Sopot. The seminar will summarize three years of work under the project «netBaltic: Internet in the Baltic - Implementation of a multi-system, self-organizing broadband ICT network at sea to increase the safety of navigation through the development of e-navigation services». The project was carried out by a consortium consisting of research teams of the Faculty of Electronics, Telecommunications and Information Technology at the Gdańsk University of Technology, the Institute of Communications of the National Research Institute, the Institute of Oceanology of the Polish Academy of Sciences and the companies DGT LAB and NavSim Polska. The whole project was financed by the National Center for Research and Development as part of the Applied Research Program.

Students of the Warsaw University of Technology construct a motorcycle prototype for competitions in Spain

2018-03-22

Students of Mechanics and Mechanical Engineering at the Faculty of Automobiles and Working Machines of the Warsaw University of Technology are working on a prototype of the preMoto3 class motorcycle. They are preparing it for the MotoStudent competition, which will take place in October in Spain. According to the schedule, the construction of the motorcycle is expected to be completed at the end of July to allow the team to test their machine. The prototype of Warsaw students will be presented in two categories: static and dynamic ones. Static category includes presentations of the project and

its business assumptions – whether motorcycles can be introduced into series production. Dynamic category tests braking, acceleration, top speed as well as steering features. However, the greatest emotions will be aroused by a 40-kilometer race on the full stretch of the MotorLand Aragon track, where the registered motorcycles are tested by professionals. This year MotoStudent will be held for the fifth time. 74 teams from 17 countries will take part in it. This is the first start of the Warsaw University of technology in this event. More: <http://www.moto-student.com/>

Mechatronics - a new course at the State Higher Vocational School in Tarnów

2018-03-22

The Polish Accreditation Committee positively assessed the application of the State Higher Vocational School in Tarnów for the authorization to run the „Mechatronics” course at the first- level studies with a practical profile. It will be the 20th course of study at the Tarnów school. Mechatronics is one of the fastest growing fields of science and technology. It uses mechanics, construction and operation of machines, electronics, IT, automation and control, modeling, design and operation of products and production processes. The new course is complemented by a wide range of education opportunities at the Tarnów Technical Institute. Tarnów High School graduates can already study automation and robotics, electronics and telecommunications, electrical engineering, computer science and materials engineering.

Researchers from Koszalin to develop modern woodworking tools

2018-03-22

Researchers from the Faculty of Technology and Education and the Mechanical Faculty of the Koszalin University of Technology will participate in the implementation of the project, which will allow to modernize technological processes and production procedures in the company owned by

KPPD - Szczecinek S.A. in Kalisz Pomorski. The task of Koszalin researchers is to develop and implement production of tools for processing wood and wooden composites. The project „Improvement of process and material efficiency in sawmill industry” will be implemented as part of the strategic research program and development within „Environment, agriculture and forestry” - BIOSTRATEG. The aim of the program, which was prepared by the National Center for Research and Development, is to increase the innovation and competitiveness of Polish companies. The project leader is the University of Life Sciences in Poznań, and the consortium of the Koszalin University of Technology, KPPD-Szczecinek SA and the Warsaw University of Life Sciences.

Energy flower to be placed on the building of the Wrocław University of Environmental and Life Sciences

2018-03-23

Students of the BioEnergia Scientific Circle of the Wrocław University of Environmental and Life Sciences have designed and produced an „energy flower” by combining photovoltaic panels and wind turbine with a vertical axis of rotation. Now, everybody can charge the phone or tablet from the device. Environmentally friendly charging station will start operating this spring. Students emphasize that their idea fits into the idea of a «green university» - projects aimed at increasing the use of the renewable energy. The energy flower is also to show that it is possible to install renewable energy sources in urban space. Such solutions can be very useful and integrated well into the environment. Another idea of Wrocław's students is an energy bench with a roof made of photovoltaic panels. More: http://www.glos.upwr.edu.pl/aktualnosci/47587/energetyczny_kwiatek_na_upwr.html

Wrocław University of Technology at the World Summit of the Information Society

2018-03-23

Students and scientists at the Wrocław University of Technology presented their inventions at the World Summit of the Information Society (WSIS Forum) 2018 in Geneva, Switzerland. They showed six projects - including an unmanned and autonomous air system for blood transport. Wrocław University of Technology students also presented a 3D scanner controlled by a mobile application that enables quick and easy reproduction of three-dimensional elements (3D photocopying), a Martian rover Scorpio and a robotic chessboard - a device for playing chess games, both with a live partner and with artificial intelligence. Other Wrocław projects on the co-organized by UNESCO WSIS Forum 2018 were a robot with a manipulator that detects obstacles, working in conditions inaccessible to people and an innovative rental service through the application powerbank from any location in the city.

Six Polish teams in the final of the Martian rovers competition in University Rover Challenge 2018

2018-03-26

Teams: University of Warsaw Rover Team from the University of Warsaw; Impulse from the Kielce University of Technology; KNR Team from the Warsaw University of Technology; Raptors from the Lodz University of Technology; Legendary Rover Team from Rzeszów University of Technology; PCz Rover Team from the Czestochowa University of Technology have been qualified for participation in the Mars Rovers Challenge University Rover Challenge 2018. 95 design teams participated in the qualifying rounds for the competition this year. The jury qualified 36 most interesting solutions from the USA (11 teams) Canada and Poland (6 teams). In addition, teams from India, Bangladesh, Great Britain, Egypt, Mexico, Australia and Turkey will take part in the finals. The University Rover Challenge (URC) is the

most prestigious international competition for Mars rovers built by students and it takes place in the Utah desert. This year the competition will last from May 31 to June 2. See the film presentation of the University Rover Challenge 2018 and in it all final prototypes: <https://youtu.be/RfHNODonLeQ>

Scientific conference in Lublin on relations between robots and people

2018-03-26

The Institute for Market, Consumption and Business Cycles Research - National Research Institute and the Faculty of Philosophy and Sociology at the Maria Curie Skłodowska University in Lublin in cooperation with the Lublin Voivode invite participants to the conference „People or robots? Future competition”. The introductory lecture «What skills and knowledge do people need for interacting with robots?» will be given by Prof. Marek Hetmański from the Faculty of Philosophy and Sociology at the Lublin University. The program also includes a debate on what relationships with robots we need. The organizers also plan to find answers to the questions: Will robots deprive people of work? How to prepare for cooperation with artificial intelligence? What is the future education for the constructors of automated industrial solutions? The conference will take place on April 9, 2018 in Lubelski Provincial Office at Spokojna 4. Conference programme: <http://ibrkk.pl/index.php/pl/konferencje/150-9-iv-ludzie-czy-roboty-nowoczesne-kadry-dla-przemyslu-4-0>

Exhibition of students of the Silesian University of Technology at the Italian University

2018-03-26

At the University of Cassino (Italy) the exhibition of students of the Silesian University of Technology has been presented. Their works were created as part of the project „San Pietro Infine: il luogo e la memoria - place and memory”. The exhibition is the result of a competition organized by the Faculty of Architecture of the Silesian University of Technology

together with the Department of Civil Engineering and Mechanics of the University of Cassino and the city of San Pietro Infine - a city completely destroyed during the Second World War. From 1943, the town is abandoned and remains in ruins. This area is very valuable historically, architecturally and culturally and it has become the subject of research, conservation and design studies. The aim of the project is to research and evaluate the heritage, develop a strategy for its protection and promotion, carry out architectural and conservation projects, make the area accessible to visitors, and build awareness of its value, and significance also in the history of World War II.

Another gold medal for Poland at the INNOVA 2018 Fair

2018-03-28

During the International Exhibition of Innovation, Research and New Technologies INNOVA 2018 held in Valencia, the Institute of Aviation- Department of Remote Sensing (Space Technology Center) was awarded the Gold Medal of Invention, for the development of the tools for processing satellite images, data aggregation and creating easy-to-interpret maps of the physical phenomena. At the same fair, the gold medal was also won by scientists from the Nicolaus Copernicus University in Toruń for the location system supporting the fire service. The INNOVA fair is the oldest event in the field of inventiveness and scientific research in the world. For 65 years the fairs were held in Belgium, and last year they were transferred to Spain. The previous event took place in Barcelona while the current one took place in Valencia. Over 160 exhibitors from around the world participated in it. Parallel to the INNOVA Fair, the FORINVEST International Forum was also held. This was an exhibition of products and services in the fields of finance, investment, insurance and new technologies from various fields.

Conference on scientific management at Warsaw University of Technology

2018-03-28

As part of the celebrations of the 100th anniversary of regaining independence, the Faculty of Management at the Warsaw University of Technology and the Warsaw Branch of the Scientific Society of Organization and Management organize a scientific conference „Management 4.0 - scientific management in the vanguard of Polish development for 100 years”. The scholars plan to reflect on the current development trends of «Management Science», especially in the context of progressive digitization, based on modern technologies and causing dynamic economic and social changes. The event will consist of four thematic blocks related to management: strategy, processes, relationships and human resources. In addition, a discussion panel will be held with representatives of leading high-tech companies: Oracle, Dell, Intel and Microsoft. More: http://www.wz.pw.edu.pl/index.php/Media/Files/Zaproszenie_na_konferencje_Zarzadzanie_4.02

„Compostomat” from the Silesian University of Technology awards the Stena Circular Economy Award

2018-03-28

The compostomat developed at the Faculty of Environmental and Power Engineering of the Silesian University of Technology to increase the efficiency of bio-waste collection received the main prize of the Stena Circular Economy Award - the Leader of Closed Circuit Economy. Compostomat constructed by a student Karolina Ceglarz is an energy self-sufficient and easy-to-use device that enables increasing the efficiency of bio-waste collection from urban multi-storey blocks. The device is to be located near local rubbish containers. The residents bring kitchen waste in special chipped containers. In return, they receive points that they can exchange for a home composter, compost, a discount for waste disposal, gadgets that help reduce the amount of waste generated, and discounts to cooperating companies.

Students and graduates of the Silesian University of Technology are laureates of the Fiat competition

2018-03-29

Six works of students and graduates of the Silesian University of Technology were awarded the prize of the Fiat Chrysler Automobiles group for the best diploma and research works. The aim of the 19th competition is to support young scientists who are passionate about the automotive industry and its modern construction solutions. The awarded works are: «BATT2CARS electric vehicle - traction calculations»; «BATT2CARS electric vehicle - prototype construction»; „A new generation of energy-saving permanent magnet synchronous motors for automotive applications”; Test Thermo-Shock application on the cDAQ platform in the context of IIOT (Industrial Internet of Things); „The influence of boron on the structure and hardness of ductile iron” and „Optimization and numerical analysis of the strength properties of the connecting-rod of an internal combustion engine”. This last job also won the prestigious Giovanni Agnelli prize, awarded by the Fiat Research Center in Torino.

Campaign „Girls go to the technical universities!” to launch in Poland

2018-03-30

April „Girls go to the technical universities!” Campaign is the largest project promoting technical, engineering and exact majors among young women in Poland and in Central and Eastern Europe. The project started in 2006 and this year technical universities in Poland invite girls for an open day on 19th of April. The initiators of the action are the Conference of Rectors of Polish Technical Universities and the Perspektywy Educational Foundation. The most important goal is to overcome stereotypes and encourage upper secondary school female students to start technical and exact studies. The culminating point of the campaign is the National Open Day for Girls. Women working at universities, lecturers, but also female students and graduates meet with students

to tell them about their career path and professional fascinations. They invite girls to visit the laboratories and organize special workshops, lectures and demonstrations for them. More: <http://www.dziewczynynapolitechniki.pl/>

Autonomous vehicles from the Wrocław University of Technology considered as the best at competitions in the Czech Republic

2018-03-30

Students of the Wrocław University of Technology advanced to the finals of international competitions of autonomous vehicles NXP Cup. They took the first two places in the final elimination tournament in the Czech Republic. NXP CUP is an international series of competitions in which student teams compete on designated routes with autonomous vehicles. The machines are made up of parts provided by the organizers, and the young constructors must develop the engine control module and the vehicle control software themselves. Teams from the Scientific Circle of Mechatronics and Robotics prepared two models of autonomous vehicles. After a fierce battle, the Synergy team won. Their vehicle made the entire route in 17.2 seconds while the Synergia team with the score of 20.8 seconds took second place and also qualified for the final tournament in Germany.

Chinese students of landscape architecture in Dzierżoniów

2018-03-30

Polish-Chinese landscape architecture students at the University of Environmental and Life Sciences in Wrocław visited Piława Dolna to prepare an analysis of the village landscape and design concepts of two parks. Thanks to the agreement concluded with the commune of Dzierżoniów, students of Polish-Chinese specialty in landscape architecture prepare the concept of land development in one of the villages every year. In 2016, it was the development of Gnejsów, and in 2017 the pond area in Mościsko. This year, Chinese students dealt with the areas in Piława Dolna. In mid-March, they got acquainted with the landscape and the advantages of the village. After the visit - within the framework of the subject of Shaping of the rural areas in Europe - they made landscape analysis, and later presented the design concepts of two parks - at Spacerowa and Blotna.

High Flyers from the Silesian University of Technology to fly to the USA for the SAE AeroDesign competition

2018-04-03

Students of the Silesian University of Technology associated in the Inter-Faculty Scientific Society of Unmanned Aerial Vehicles „High Flyers” are flying to California for the SAE AeroDesign competition. They will compete with 74 teams from around the world. The competition consists in designing and building an unmanned aircraft with the highest possible lifting capacity, and then completing the competition flight. The following tasks are evaluated: technical documentation prepared by the team during preparations, technical presentation during the competition and competition flight - transporting cargo of the largest possible mass and precise discharge of its part for the purpose indicated. The High Flyers team will take part in the SAE AeroDesign competition for the first time. However, the university team has already started successfully in similar professions. In 2011, 2013, 2015, young engineers took part in the Air Cargo Challenge in Europe.

Student IT Festival in Krakow

2018-04-03

On 5-7 April 2018, the 14th Student Information Festival will take place at the Auditorium Maximum of the Jagiellonian University in Krakow. This is an annual event organized jointly by the scientific circles from the following universities: the AGH University of Science and Technology, the Jagiellonian University, the University of Economics and the Cracow University of Technology. The event is under the patronage of the rector of the Jagiellonian University, Prof. Wojciech Nowak. During three days, the festival participants will take part in many inspirational lectures and workshops. The speakers include Larry Wall - the creator of the Perl language, Joe Armstrong - author of Erlang, and Bram Moolenaar - creator of the popular text editor Vim. More: <https://www.facebook.com/sfikrakow/>

Warsaw students to examine UV radiation from the stratosphere

2018-04-03

Students of the Warsaw University of Technology with unprecedented accuracy will examine the distribution of ultraviolet radiation in different layers of the atmosphere. They implement their idea as part of the German-Swedish student program REXUS / BEXUS organized by the European Space Agency. The LUSTRO project consists in the creating a system of sensors and rotating mirrors. The completed system will be lifted using a stratospheric balloon to a height of approximately 25-33 km and will remain there for several hours. During this time, two periscopes will collect data on the intensity of UV radiation. The flight of the balloon with the LUSTRO experiment is planned for the autumn of 2018.

Success of Wrocław University of Technology students in California

2018-04-11

The students of the Wrocław University of Technology won six medals (five silver and one bronze) at the SAE Aero Design West 2018 flight construction

competition, which took place at the Van Nuys airport near Los Angeles. Over 70 teams from around the world took part in the competition. The Technology University of Wrocław presented two planes - «Red Bomber» in the Micro category and «Dragonfly» in the Advanced class. In the Micro class, the students won the second place in the technical presentation, the third place in the technical reporting, the second place for the heaviest raised load and the second place in the general classification. In the Advanced class they won the second place in the accuracy of the cargo discharge and the second place in the general classification. SAE Aero Design tournaments have been organized for 30 years. The task of the participants is to construct unmanned aircraft that comply with strict regulations. The machines are designed to lift as much weight as possible with minimum own weight.

Over PLN 5 million for the education of PhD students at the Silesian University of Technology

2018-04-12

Two projects from the Silesian University of Technology received funding from the National Center for Research and Development. The university has received over PLN 5 million for the implementation of programs increasing the quality and effectiveness of education at the PhD studies. Both projects will be implemented at the Faculty of Automation, Electronics and Computer Science. The first awarded project is «AIDA (Applied Integrative Data Analysis) - interdisciplinary PhD studies in the field of data processing and analysis». It assumes increasing the quality and efficiency of education at PhD studies by creating interdisciplinary studies responding to the growing demand for experts in the analysis of large data sets. The second project is a program of modern PhD studies in the field of cyber-physical systems. Its primary goal is to provide stable support for the development of young, highly qualified scientific staff and promote new leaders of research teams.

Three gold medals for the Poznan University of Technology at SAE Aero Design West 2018

2018-04-12

The team of the Academic Aviation Club of the Poznan University of Technology won three gold medals at the Professionals Competition of the Society of Automotive Engineers SAE Aero Design West 2018 in Los Angeles. Participants build unmanned aircraft in accordance with the restrictions and requirements of the contest. This year, the students' task was to design and build an aircraft that, with the lowest possible own mass, would transport the maximum weight. The rules of the competition defined the material of the plane and the type and power of the drive. Poznań students won in the Regular class, where other 37 teams competed, including USA, Canada, India, Mexico, Egypt and China. SAE Aero Design is an international academic competition organized for over 30 years by the American Society of Automotive Engineers (SAE) in cooperation with SolidWorks, Lockheed Martin or ANSYS.

Conference on new technologies in Gliwice public transport

2018-04-13

Representatives of science, local government organizations and energy companies as well as specialists of public transport will gather on Monday 16 April at the Silesian University of Technology to discuss the implementation of modern technologies in public transport. The conference - organized by the Polish Association of Municipalities and Counties, Silesian University of Technology and the city of Gliwice will be held at the Center of New Technologies at the University at ul. Konarskiego 22B. Its aim is to present and compare various solutions used in bus public transport and discuss the conditions for the implementation of new technologies. The matter of the conference is becoming more and more important due to legislative changes. One of the most important change is the adoption of the Act on elec-

tromobility and alternative fuels at the beginning of the year. The first consequences of this regulation will be noticed by local governments and energy companies in 2018. Application form: <https://www.silesia.org.pl/formularze/formularz-zgloszenia-udzialu-w-konferencji-pn-nowe,152>

Railway industry funds scholarships at the Cracow University of Technology

2018-04-13

1000 PLN of monthly scholarship, paid internships, apprenticeships and employment guarantees in the leading companies of the railway industry - such incentives are planned for students of the railway construction industry at the Faculty of Civil Engineering of the Cracow University of Technology - informs the university. In the coming years, huge rail investments will be implemented in Poland, and employers from railway companies urgently will need engineering staff with highly specialized qualifications. Such qualifications will be attained by graduates of the Cracow University of Technology studying programs developed jointly by the university and specialists from the railway sector. Declaration of cooperation with the Faculty of Civil Engineering at the Cracow University of Technology has already been submitted by seven companies: Polish State Railways - Polish Railway Lines, Przedsiębiorstwo Napraw i Utrzymywania Infrastruktury Kolejowej w Krakowie Sp. z o.o., Kolejowe Zakłady Nawierzchniowe «Bieżanów» Sp. z o.o., Grupa ZUE, Track Tec S.A., Budimex S.A. and STRABAG Sp. z o.o. They funded 26 scholarships for students of the second and third semester of regular studies on the railways specialty.

Wrocław University of Technology and AWF in the Common Architectural Initiative

2018-04-16

Architecture students of the Wrocław University of Technology with physiotherapists from the University of Physical Education and the Association for Support of the Development of Disabled People create

an innovative project to help people with disabilities to remove architectural, technical and communication barriers. The goal of the Joint Architectural Initiative is to help people with various disabilities and cognitive functions to adapt the apartment to their specific needs. This support can also be used to improve the accessibility of public buildings - centers and social welfare homes. In order to obtain support, eligible person reports to the Social Welfare Center to carry out architectural works and facilitate their daily functioning. Co-financing for such tasks comes from the State Fund for the Rehabilitation of the Disabled.

Cooperation between the Silesian University of Technology and the top supplier of li-ion batteries

2018-04-16

Silesian University of Technology has signed a cooperation agreement with Johnson Matthey Battery Systems - one of the largest suppliers of lithium-ion batteries in Europe. The agreement was signed by the Rector of the Silesian University of Technology, Prof. Arkadiusz Mężyk and HR manager Johnson Matthey Battery Systems Vladyslav Kryvenko. Students of the technical university will be able to take apprenticeships and internships at the company's headquarters and write diploma theses on topics related to the actual technological problems and the company's needs. The deal is also beneficial for graduates who will be able to work for Johnson Matthey Battery Systems. The university and the company will also jointly determine the topics of research and development, improve educational programs and exchange experience in the field of knowledge management, with particular emphasis on the development of competences. A team of specialists for strategic technical and organizational solutions will also be established.

AGH University of Science and Technology in Krakow has its own mobile telephony network

2018-04-17

It operates in the same ways as commercial networks. It is fully functional and has a licensed frequency provided by the Office of Electronic Communications. The first mobile student network in Poland was created by the students of the Telecommunications Department of the AGH University of Science and Technology in Krakow together with Nokia. The 4G / LTE network is a scientific-demonstrative model and consists of servers located outside and inside the base station buildings belonging to the Department of Telecommunications and the area adjacent to them. It has received recently a license for the radio frequency. Krzysztof Persona, director of Nokia's Research and Development Center in Krakow, emphasizes that researchers and students received « a complete solution that is as close as possible to the actual cellular network ». It allows to conduct experiments and scientific research on the latest solutions in mobile radio technologies (for example Mobile Edge Computing) as well as Internet of Things applications.

Letter of intent regarding the creation of Szczecin Automotive Hub

2018-04-17

The West Pomeranian University of Technology together with BrightONE, the IT leader based in Szczecin, the P3 group - a supplier of solutions for car manufacturers and the city of Szczecin, will build the competence center of Szczecin Automotive Hub. The parties have signed a letter of intent to make the academic offer and the labor market more attractive by launching exchange programs with the participation of students and staff of Szczecin's universities and business in Poland and Germany. The BrightONE specializes in providing software for the automotive industry - from cars and planes to advanced sports equipment. It is used by drivers, pilots of rescue helicopters and even trainers of the best

football clubs. The P3 Group is a provider of solutions for automotive information and entertainment systems, e-mobility, assistance systems for the driver and autonomous driving.

University of Silesia develops a new method of producing oxide layers on aluminum

2018-04-17

Researchers from the University of Silesia developed a method for the production of oxide layers enriched with nanolubricant on aluminum or alloys of this metal. The invention is applicable to the production of protective layers of machine parts, so that their operating costs can be reduced. Aluminum and alloys of this metal are relatively light materials. They are often used in the design of cylinders and compressors or engine pistons. However, they are characterized by limited hardness and easy deformation. To improve their properties, scientists are developing different layers for sliding associations - including oxide layers enriched with nanolubricants, thanks to which the hardness and corrosion resistance of materials can be increased. The authors of this already patented invention are Dr. Joanna Korzekwa and Dr Władysław Skoneczny from the Faculty of Computer Science and Materials Science, University of Silesia. More about the invention: <http://www.us.edu.pl/news-bozwiazanie-uozliwiajace-obnizenie-ksztow-eksploatacji-urzadzen>

Warsaw students to develop an electric racing car

2018-04-18

Team Proton Dynamic was established in October 2017. It consists of students of the Warsaw University of Technology and the Warsaw School of Economics. Since then they have been building an electric racing car for the Formula Student competition. This fully electric car is one of the first of its kind in Poland. A car weighing 230 kg will be powered by an electric motor generating 80kW. Acceleration to 100 km / h should be reached within less than 4 seconds. Formula Student is an international racing competition for university teams organized since 1979 by the Association of Automotive Engi-

neers (Society of Automotive Engineers). Students from world leading universities design and complete a car to race on the most famous racetracks in the world after the testing phase. Visitors can take a closer look at the car on 18 April in the Parachute Hall of the Warsaw School of Economics.

Polish design office constructs a turbojet engine for the HondaJet

2018-04-18

One of the most modern HondaJet HA-420 business aircraft was presented at the Warsaw Okęcie Airport. GE Honda HF120 turbojet engine for this modern unit was designed at the Engineering Design Center, a design office being a joint venture of General Electric Aviation and the Institute of Aviation in Warsaw. The HF 120 engine for HondaJet is not the only project run by the Engineering Design Center. The Polish engineers carry out comprehensive projects related to the most modern devices for various industries - including aviation and energy. Key achievements include the latest aircraft engines, efficient turbines and installations for extracting oil and gas from the seabed. Projects have been carried out in Warsaw starting from the concept phase and under the Polish engineers' lead.

Graduate of Gdańsk University of Technology holds the prize of the Association of Polish Architects

2018-04-18

Michalina Frątczak a graduate of Gdańsk University of Technology won the prize Zbyszek Zawistowski Dyplom Roku 2018 held by the Association of Polish Architects. The winning work was selected from 99 proposals sent from 19 Polish universities. Award-winning work is titled «On the edge. Expansion and adaptation of the sanctuary and the pilgrim's house into the place of tranquility. Cape Espichel, Portugal». This is a project of the expansion and revitalization of a decrepit sanctuary from the 15th century. «The author reveals the potential of the 15th-century sacral team embedded in the harsh Portuguese landscape as a place that has a chance to restore the lost balance to visitors. It proposes a discreet architecture that reveals the value of what is found and introduces simultaneously what is necessary to sustain the still-smoldering life here «- it was written in the justification. The prize Zbyszek Zawistowski admits the Association of Polish Architects. This year it was presented for the 54th time.

„E-technologies in Engineer Education” at the AGH University of Science and Technology in Krakow

2018-04-19

Integration of the academic environment involved in didactics supported by technologies, exchange of experience and good practices, as well as searching for inspiration for further activities - these are the goals of the conference „eTEE (e-Technologies in Engineers Education)”, which from 19 to 20 April 2018 takes place at the AGH Academy in Kraków. The topics of the conference are the impact of modern technologies on the training of engineers, theory of learning and e-learning models, good practices of e-learning in technical universities, teaching with the use of mobile devices (m-learning), and e-learning foreign languages for students

of science and engineering. During the event, Agnieszka Wykowska, Giorgio Metta (Italian Institute of Technology), Anna Turula (Pedagogical University in Krakow) and Christopher Sweeney and Andrzej Pierńkowski from the Katalyst Education Foundation will hold their lectures.

University of Toruń to receive PLN 1.7 million for the development of quantum technologies

2018-04-19

A team of scientists from the Faculty of Physics, Astronomy and Applied Informatics at the University of Nicolaus Copernicus in Torun will receive PLN 1.7 million for the project „The cryogenic system for the development of new optical quantum technologies”. Torun researchers from the team headed by Dr Piotr Wcisła received a grant for the purchase of a cryogenic installation for controlling the temperature of experimental systems, such as an ultra-stable optical cavity or a confocal microscope. The investment enables to start new research programs in the areas of atomic and molecular physics, simple molecules chemistry, quantum information, ultra-precise optical metrology, and the search for new physics going beyond the Standard Model- as informs the University on its website. Dr Piotr Wcisła is a graduate of the Inter-Faculty Individual Studies in Mathematics and Natural Sciences (specialization in atomic physics) at the Jagiellonian University. He has completed an internship at the Harvard-Smithsonian Center for Astrophysics in Cambridge.

Graduate of the Poznan University of Technology wins the TAURON company competition

2018-04-19

Jacek Kamiński, a graduate of the Poznań University of Technology won the competition for the best MA thesis of TAURON Dystrybucja - informs the university on its website. The main prize was awarded for the work „Optimal power distribution in a solar-wind power plant with energy storage”. Jacek

Kamiński developed the concept and made the software implementing the process of optimization of the hybrid structure of the solar-wind power plant with the energy storage. He also conducted optimal distribution of power in objects with a specific 24-hour load profile. The use of renewable energy sources in combined hybrid systems with storage can solve one of the biggest problems of modern energy - a continuous increase in demand for electricity with scarcity of conventional sources. Hybrid systems can accumulate surplus energy when demand is lower than the current level of production and return it when demand exceeds this level.

Maritime University of Szczecin is a COST member

2018-04-19

The international project „A pan-European Network for Marine Renewable Energy with a focus on Wave Energy” has been approved by the COST program. Among the networking organizations, connecting over 100 participants from 25 countries, is the Maritime University of Szczecin. The aim of the campaign is to create the basis for joint projects and to establish directions for research in the field of offshore renewable energy (in particular marine energy), financed by the European Commission. The activities assume creating working groups, organizing conferences and trainings, and disseminating knowledge. The European Program for Scientific and Technical Cooperation - European Cooperation in Science and Technology (COST) is an institutional structure that is held jointly by 36 European countries and Israel (as a supporting state). Its most important task is to organize scientific and technical cooperation of member countries. More information: <https://www.am.szczecin.pl/aktualnosci/4594-akademia-morska-w-szczecinie-czlonkiem-akcji-cost>

Yacht from recycled materials wins international competition

2018-04-20

The design of the yacht by Dr Wojciech Wesołek from the Academy of Fine Arts in Wrocław won the Millennium Yacht Design Award 2018 in the professional category. The awarded project was presented at the „Hybrid and electric propulsion” conference in the Italian Carrara. The project involves the use of recycled materials for the construction of the yacht protected from marine conditions. The outer shell is made of recycled cutters and ships, the teak floors come from decommissioned yachts, and the interiors are made of elements of beams from the demolition of houses. According to the author's plan, the construction of the yacht should be carried out near the demolition site of old ships. «It is also an opportunity for the scrapping community. It gives chances for better working conditions and much higher incomes in the industry commonly recognized as luxurious,» says the author of the project. The winning design on the author's website: <http://wwdesign.eu/html/rat120.html>

European Rover Challenge 2018

2018-04-23

65 teams from 20 countries will take part in international races of the European Rover Challenge 2018. The final part is planned from September 14 to 16 at the Museum of Nature and Technology in Starachowice. The event is under the patronage of the European Space Agency and the Ministry of Science and Higher Education. The competition will be attended by students from the best technical universities in the world. Teams from Poland include universities and high schools in Białystok, Bydgoszcz, Chełm, Kielce, Częstochowa, Gliwice, Kraków, Łódź, Opole, Rzeszów, Szczecin, Toruń, Warsaw and Wrocław. The teams from Germany, Great Britain, India, Italy, Canada, the United States, Norway, Mexico and Bangladesh will also compete. The organizers inform that the European Rover Challenge is one of the world's largest international robotics and space competitions, gathering not only spe-

cialists in the field of planetary robotics and rover constructors, but also representatives of the world of science, business and the new-tech sector. The organizer of the event is the European Space Foundation, and the co-organizers of the Special Economic Zone „Starachowice” S.A., Powiat Starachowicki, Museum of Nature and Technology in Starachowice and Mars Society Poland. More: <http://roverchallenge.eu/pl/home/>

Over PLN 100 million for innovative projects in the power industry

2018-04-23

The National Center for Research and Development offers over 100 million PLN for the implementation of innovative projects run by entrepreneurs from the power industry. This is the result of the second competition of the PBSE sector program. Its main objective is to increase the innovation of the national electricity sector in the perspective of 2023 - informs the National Center for Research and Development. - Projects implemented under sectoral programs of NCRD are to bring benefits not only to the given industry, but to the entire economy and citizens. Over PLN 100 million, which we offer to Polish entrepreneurs for the development of better, more effective and ecological solutions, is an investment that will pay back and serve next generations of Poles - says Piotr Dardziński, deputy minister of science and higher education. Thanks to the support of the National Center for Research and Development, 19 companies will be able to implement projects - among others: «The use of low-dimensional structures to broaden the absorption spectrum and increase the efficiency of silicon cells in the IBC or BIFACIAL architecture» by ML System SA, «Development and implementation of the technological process processing of waste from fluidized bed boilers using CO₂ for the production of cement substitute «proposed by the Tauron group or» Development of innovative biomass treatment technology to improve fuel parameters and increase the possibility of biomass utilization « by OZE 11.

Ranking of Engineering Studies in Poland- Perspektywy 2018

2018-04-23

The best faculties of Polish universities providing education in 21 technical faculties were honored during the gala of the Ranking of Engineering Studies Perspektywy 2018. 12 indicators were grouped into six criteria to provide the assessment: prestige, graduates in the labor market, academic potential, scientific effectiveness and didactic potential. The ranking principles were developed by the Chapter chaired by Professor Michał Kleiber. The Chapter included experts in the field of higher education as well as representatives of various branches of industry. Among others, in the Architecture category, the Chapter awarded the Architecture Department of the Warsaw University of Technology, in the Automation and Robotics - Faculty of Mechanical Engineering and Robotics of the AGH University of Science and Technology in Kraków, in the Biotechnology - Faculty of Chemistry at the Warsaw Polytechnic, in the Biomedical Engineering - Faculty category Electrical Engineering, Automatics, Computer Science and Biomedical Engineering of the AGH University of Science and Technology in Kraków and in the Computer Science - Electronics and Information Technology Faculty at the Warsaw University of Technology. <http://engineering.perspektywy.pl/2018/ranking>

Mobile Robot rolling from the Poznan University of Technology wins the Robot Show 2018

2018-04-23

Three students of automation and robotics at the Poznan University of Technology won the main prize of the Robot Show competition 2018 for a four-legged, crawling and jumping robot. The device will be able to replace people during the inspection of waterworks and underground channels in the future. The invention is to help the company having a problem with monitoring the condition of waterworks, because the previous robots did not meet this task satisfactorily. Jakub Bartoszek, Łukasz Antczak and Jakub Matyszczak worked on the prototype for almost a year. The victory in the competition brought PLN 10,000. - I can assure that we will use this award well and in a year our robot will perform even better - says Jakub Matyszczak in an interview quoted on the university website. The Robot Show took place as part of the 11th Investment Forum in Tarnów. More about the contest: <http://inwestforum.pl/zwyciezcy-startup-award-i-robot-show-nagrodzeni/>

Innovative diamond optical sensor developed at the Gdańsk University of Technology

2018-04-24

A team of scientists from the Gdańsk University of Technology has constructed a fiber optic sensor using thin diamond layers. The device allows measurements in less accessible places and in difficult working conditions, in particular in the presence of strong electromagnetic fields. The sensor was developed at the Faculty of Electronics, Telecommunications and Informatics. The device, due to the innovative covering the part of the mirror with a diamond layer becomes competitive in comparison to similar sensors available on the market. The invention also has other advantages: high sensitivity of measurements, wide range and good resolution. Mirrors in traditional sensors are made of silver and are sus-

ceptible to scratches. The use of diamond coating gives the device resistance not only to mechanical damage, but also electromagnetic interference and aggressive chemical environments. The solution has been submitted for legal protection in the Patent Office.

First applications for the Polish synchrotron SOLARIS

2018-04-25

Until May 20, scientific entities can submit applications for access to research stations at the SOLARIS National Synchrotron Radiation Center. The Academic Center of Materials and Nanotechnology of the AGH University of Science and Technology in Krakow invites participants to the seminar devoted to the use of synchrotron, which will take place on April 26. The seminar will include the presentation of measurement methods. The application procedure for measurement time will also be presented. During the seminar, Dr Eng Joanna Stępień from the Academic Center of Materials and Nanotechnology will give a lecture «SOLARIS - the first proposals in the Polish synchrotron program.» The entities can apply for time on three measurement stations: PEEM (photoemission electron microscopy), XAS (X-ray absorption spectroscopy) and UARPES (ultra angle-resolved photoemission spectroscopy), which are placed on two currently operating measurement lines.

Poznan University of Technology at Expo Estudiante in Bogota

2018-04-26

Poznan University of Technology presented its offer at the largest Latin America Expo Estudiante educational fair in Bogota. The educational mission to Colombia was organized by the National Agency for Academic Exchange. All interested students could get acquainted with the study offer at the University of Technology and get information about the scholarship program managed by the Agency for developing countries. The «Poland my best choice» exhibition was very popular among the fair visitors. Emilia Wojtczak from the Department of Continuing

Education and International Poznan University of Technology visited the Fundación Universitaria del Área Andina to prepare the agreement on academic exchange. There are 3 students from Colombia at Poznan University of Technology. One of them is a scholarship holder of the Ignacy Łukasiewicz program.

Gdańsk University of Technology scientists succeed at the 3D Printing Days in Kielce

2018-05-07

The team of the Polymer Technology Department of the Faculty of Chemistry of the Gdańsk University of Technology won the main prize for the best product in 3D Printing Days competition organized by Kielce Trade Fairs and the Polish Association of Technology Initiatives - informs the university on its website. The award was granted for compostable and biodegradable granulate for the production of supporting filaments obtained from renewable raw materials - BioGranAqua. The granulate is made from polymer compositions developed in the department of polymer technology basing on the invention protected by a European patent. At the Kielce trade fair, the scientists presented granulate itself and its characteristics as well as the prototype of filaments obtained from it. They are environmentally friendly - they disintegrate in water and are susceptible to organic recycling. They can be an alternative to supporting filaments obtained from petrochemical raw materials.

Success of Olsztyn landscape architecture students

2018-05-08

Students of the University of Warmia and Mazury in Olsztyn won the competition for the best landscape architecture diploma and master's thesis - informs the e-newspaper of the university in Olsztyn. The competition organized by the Association of Polish Landscape Architects in the category of engineering works was won by Eng Ewelina Pochodyła for her work «The concept of spatial development of a scenic path along a fragment of the shore line of the Morąskie Rozlewiska». In the master's thesis category, the first prize was awarded to Katarzyna Wójcik for her work: «Wind power stations and landscape. Analysis of the impact of the planned Mikołajki Pomorskie wind farm on the landscape». The promoter of both theses was Dr Mariusz Antolak, assistant professor in the landscape architecture department at the Faculty of Environmental and Agricultural Development at the University of Warmia and Mazury.

New workshops at the Center for Practical and Continuing Education in Zabrze

2018-05-08

The Center for Practical and Continuing Education in Zabrze launched a new car workshop equipped with a hybrid car. The workshop was opened during the conference „New quality of vocational education”. During the ceremony, the Vice-Rector for cooperation with the socio-economic environment of the University Prof. Janusz Kotowicz gave a lecture on innovative technologies. Later the participants and the Center specialists discussed the need of constant education. The car workshop with a new and fully functional Toyota hybrid car joins the other laboratories operating in the Center for Practical and Continuing Education in Zabrze. In the Hall of New Technologies there are already workshops of numerically controlled machines from American company HAAS, models of renewable energy sources from the Finnish company FORTUM, as well as the ROCA assembly and operation installations.

In Kielce students can study data engineering next academic year

2018-05-09

In the new academic year, Jan Kochanowski University in Kielce is launching the new faculty of the Analysis of Big data and Artificial Intelligence. Data Engineering is a new specialty, which in the world is considered the dominant profession of the 21st century - informs the Kielce University. These studies are currently one of the most popular in Poland. According to the data of the Ministry of Science and Higher Education, in the last recruitment for Engineering and Data Analysis there were over 54 applicants for one place. In this respect, this faculty overtook Engineering Management (19.4 candidate), Chemistry and Forensic Toxicology (18.9) or Medical faculty (16.7). Studies at the Jan Kochanowski University will last 7 semesters. Students can apply for one of two specialties: artificial intelligence methods and data analysis. Graduates will obtain the title of an engineer. There is a possibility to study in English.

Białystok University of Technology students successful at robot competitions in USA

2018-05-09

Student team of the Faculty of Mechanical Engineering of the Białystok University of Technology participated in the largest robotic competition in North America - Robogames 2018 in Pleasanton and won two gold and one bronze medals. The gold medal in the MiniSumo category was won by the Hellfire2 robot, while in the MegaSumo category, among other 24 robots, the Białystok's SumoMasters introduced two robots to the finals. The ACE won the competition, the Masakrator was the third, and Speedster finished as the fourth robot. The Polish team completely dominated the competition in Pleasanton, California. Financial support for the construction, its improvement and for participation in the competition was provided as part of the project of the Ministry of Science and Higher Education „The best of the best! 2.0.”

Students of the AGH University of Science and Technology built a solar lamp in Tajikistan

2018-05-09

Students from the AGH University of Science and Technology in Krakow within the framework of the Tajikistan Project educated their Tajik peers from Tajik Technical University in Dushanbe in the renewable energy. Firstly, they introduced them to the secrets of photovoltaics and then during a visit to Dushanbe, they built a solar lamp together - informs Anna Żmuda-Muszyńska, spokesman for the Krakow university. The solar lamp, together with the attached measuring system, will be a real example of the photovoltaic technology for Tajik students and an innovative tool during laboratory classes. The Tajikistan project is an initiative of four students from the Faculty of Energy and Fuels at the AGH University of Science and Technology: Joanna Maraszek, Anna Ścierańska, Joanna Dubielewska and Hubert Stinia, who decided to share their knowledge of renewable energy sources with their peers in Tajikistan and thus influence the energy shortage situation electricity in central Asia. In Tajikistan as much as 70 percent residents experience electricity cuts. More:<http://projecttajikistan.pl/>

Polish „folding skyscraper” wins the prestigious architectural competition

2018-05-10

Polish students won the international architectural competition eVolo. Piotr Pańczyk from the Wrocław University of Technology, Damian Granosik from the Lodz University of Technology and Jakub Kulisa from the Cracow University of Technology designed a folded tower for the victims of natural disasters. SkysHELTER.zip - a portable skyscraper built like a balloon is made of a nanomaterial based on EFTE foil (ethylene tetrafluoroethylene). It is a multifunctional center for various types of rescue operations. The whole structure, with a maximum length of 100 and a 10-by-10-meter base, folds like an accordion or origami. The rescuers can control the number of floors that will be spread out through the amount of gas pumped into the interior, eVolo Skyscraper Competition is one of the most prestigious architecture competitions. Awarded projects implement new technologies and materials, proposing new aesthetics and organization of space. More about the project: <http://pwr.edu.pl/uczelnia/aktualnosci/projekt-studenta-dzdzialu-architektury-nagrodzony-w-usa-10847.html>

Scientist from the Gdańsk University of Technology to create new energy storage technologies

2018-05-11

Dr Eng Monika Wilamowska-Zawłocka from the Department of Apparatus and Chemical Engineering at the Faculty of Chemistry of the Gdańsk University of Technology is developing innovative energy storage technologies. Her project won the competition of the Foundation for Polish Science. - The two main types of energy storage devices are batteries and supercapacitors. The first work for a long time, but they slowly release energy. The supercapacitors can accept and give away more energy, but for a short time. In my project, I try to combine different types of materials to create a device that could store more energy than a supercapacitor, while maintaining its

high power - explains Dr. Eng. Wilamowska-Zawłocka. The technology of a Gdańsk scientist can be particularly useful in storing energy from renewable sources. Using them often presumes the storage of large amounts of energy in a short time - when the wind is blowing or the sun is shining.

Krakov students to construct the unique parametric pavilion

2018-05-14

The parametric pavilion, designed and produced by students from the Imago Scientific Circle, operating at the Faculty of Architecture of the Krakow University of Technology, is a unique design in the world. The construction will be presented during the Science and Art Festival, which will take place from 16 to 19 May in Krakow. The parametric pavilion consists of 132 elements that are connected like a 3D puzzle model. The construction material used for the production of the pavilion is foamed parking polystyrene. The pavilion is 12 meters long and 7 meters wide. At the highest point it reaches 3 meters. It is one of the largest buildings of this type in the world and it is also the most original pavilion as each element was specially designed- informs the Krakow university.

AGH University of Science and Technology to held seminar on challenges for scientists and engineers in innovative industry

2018-05-15

The Academic Center of Materials and Nanotechnology of the AGH University of Science and Technology in Krakow is organizing on 17 May 2018 the seminar „Challenges for scientists and engineers in innovative industry”. The guest and lecturer of the seminar will be Luc Van De Putte from the Netherlands, currently employed as a Group Manager Modeling at ArcelorMittal Poland. In his lecture he will deal with the issues of innovation in the steel industry, which is sometimes perceived as an old industry, but in fact it implements many innovations

and investments. This provides new opportunities for scientists and engineers working in companies of this industry. During the seminar, Luc Van De Putte will present the challenges faced by the ArcelorMittal Modeling Group, where scientists (physicists, chemists and material engineers) work on process models, planning and logistics improvements, and data analysis.

Bialystok Physicists in the European consortium COST

2018-05-17

The Faculty of Physics of the Department of Physics and Magnetism at the University of Bialystok will implement a new project of the European Cooperation in Science & Technology (COST)- informs Katarzyna Dziedzic, spokesperson of the University of Bialystok. The „Ultrafast opto-magneto-electronics for non-dissipative information technology” project will be coordinated by Radboud University from the Netherlands within the international consortium. The head of the work carried out by Polish scientists will be Dr Andrzej Stupakiewicz from University of Bialystok. He emphasized that „this project will allow for greater integration of the international scientific and technical environment in one of the most innovative areas of science related to information technology.” More: <http://www.cost.eu/>

Warsaw Faculty of Architecture wins a competition for a model single-family house in Program Flat Plus

2018-05-17

The Faculty of Architecture of the Warsaw University of Technology dominated the BGK Real Estate competition for the development of a model single-family home. The competition was held as part of the government Flat Plus program. The best solutions will be implemented as prototype houses. The Ministry of Science and Higher Education was a partner of the competition. The technical universities and architecture offices could have applied for the competition. The first and second places among the universities belonged to the projects proposed by the Faculty of Architecture of the Warsaw University of Technology. In addition, the project by the next team of the Faculty of Architecture received a distinction. - The initiative taken by BGK Real Estate is another impulse to build a bridge between the world of science and business. An innovative state can be built only on the basis of close cooperation of these two environments and efficient transfer of knowledge in key areas of the economy - emphasized Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education.

Students of the Wrocław University of Technology win medals at RoboGames 2018

2018-05-17

One gold and four silver medals were won by students from the KoNaR Scientific Circle of the Wrocław University of Technology at the RoboGames 2018 robotics Olympiad in the USA. 828 robots from over 20 countries competed in the tournament. Wrocław students won gold in the Best of Show category for a robot chessboard project, in which the role of the opponent was played by the social robot EMYS built in the Wrocław University and developed as a commercial product by FLASH Robotics. Three silver medals were won by «Sky-Wave» and «Navy» robots built by Rafał Cymiński.

The fourth silver was won in the Nano Sumo category, where robots were tasked to push each other off the ring. This part was won by the robot «Stasio» constructed by Michał Piotrowicz and Michał Burdka. RoboGames is the largest robotic tournament in the world that takes place every year in the Silicon Valley. The Scientific Circle «KoNaR» has operated at the Department of cybernetics and robotics, at the Faculty of Electronics of the Wrocław University of Technology, continuously since 2003.

Integrated circuits from the Kraków AGH University of Science and Technology to be in devices all over the world

2018-05-18

The AGH University of Science and Technology is an absolute leader among Polish universities in the design of integrated circuits. For many years, its scientists have been involved in their development using high-energy physics, X-ray imaging and neurobiology. This opened the way for cooperation with the Japanese company Rigaku Corporation. As a result, integrated circuits designed in Krakow are used in devices all over the world. The design of integrated circuits is carried out at three faculties: Electrical Engineering, Automatics, Computer Science and Biomedical Engineering; Physics and Applied Computer Science, and Information Technology, Electronics and Telecommunications. According to the Europractice report, which supports the design and production of integrated circuits in Europe - AGH University of Science and Technology is the absolute leader in their design among Polish universities. More about the successes of Krakow scientists in the field of integrated circuit design in the article written by Weronika Szewczyk: <https://www.agh.edu.pl/info/article/uklady-scalone-z-agh-w-urzadzeniach-rigaku-corporation-swiatowego-lidra-produkujacego-aparature-ba/>

PhD studies in Psychology and Computer Science at the Polish-Japanese Academy of Information Technology

2018-05-21

The Polish-Japanese Academy of Information Technology in Warsaw in cooperation with SWPS University of Humanities and Social Sciences launches inter-university interdisciplinary PhD studies in Psychology and Computer Science. - Our PhD studies combine psychology with the computer science and they are a response to the dynamically changing situation of psychology and IT science and to the challenges faced by scientists from both fields. The University emphasizes that computer science is increasingly dealing with research problems in the field of psychology. As an example, it provides automatic detection of emotions or generation of faces expressing the various emotions. In turn, psychology has to face the problem of establishing virtual relations and the impact of new technologies on social interactions. More: <http://www.pja.edu.pl/informatyka/doktoranckie/studia-doktoranckie-informatyka-psychologia>

Polish research apparatus aboard the Chinese spacecraft

2018-05-22

According to the Ministry of Science and Higher Education, the Polish research apparatus constructed by the Space Research Center of the Polish Academy of Sciences will be launched aboard the Chinese space probe as part of the Chang'E-4 mission at the end of May 2018. The Ministry of Science emphasizes that this is the effect of a visit to China paid by Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education and the talks conducted in 2016 with the National Space Science Center of the Chinese Academy of Sciences. - Let us not be confused by the disproportion between China and Poland. The Chinese treat us as an equal partner, we are for them a bridge leading to Central and Eastern Europe – said Deputy Prime Minister Jarosław Gowin. in October 2016 at the conference on the visit to China. The main goal of the Polish-Chinese experiment is the radio observation of the Universe. Investigators are interested in the outermost and oldest regions of the cosmos, as well as the closest surroundings of the Earth and other parts of the Solar System - informs the Ministry of Science and Higher Education.

Mars lander from the Wrocław University of Technology reaches the final of the Mars Society and NASA competition

2018-05-22

The Martian lander „Eagle” prepared by students from the Off-Road Scientific Circle of the Wrocław University of Technology reached the final of the Mars Society and NASA competition - informs Michał Ciepielski from the university information and promotion department. The competition task was to develop the simplest, safest and cheapest lander that can deliver 10 tons of cargo to Mars using technologies that could be developed by 2026. Wrocław students have proposed 3D printing technology for electronics. This is a significant reduction in the mass of systems at low cost - now most of

the temperature, humidity, pressure, wind strength and UV radiation sensors are easily printable. Five projects from Poland, France and the USA, as well as joint projects from Germany and Sweden and from India and Italy have been qualified for the finals. The winners will be announced at the end of August during the convention of The Mars Society in Pasadena.

University of Toruń scientists succeed at the Paris inventions fair

2018-05-22

The inventions of scientists from the Nicolaus Copernicus University in Toruń have been recognized at the 117th International Exhibition of Invention „Concours Lépine 2018” in Paris. Michał Meina from the Faculty of Physics, Astronomy and Applied Informatics and Dr Krzysztof Rykaczewski from the Faculty of Mathematics and Computer Science won Medal of the Minister of Internal Affairs of France and the gold medal „Concours Lépine 2018” for „The method of determining the position of the object, in particular of man, and the device for determining the position of man”. A team of scientists from the faculty of biology and environmental protection headed by Dr Grażyna Dąbrowska was awarded the International Eiffel Award from the French Federation of Inventors for «Method of seed preparation using a biological stimulator». Prof. Jerzy Łukaszewicz and dr Anna Ilnicka from the Department of Materials Chemistry, Adsorption and Catalysis received the he bronze medal for the «Method of producing carbon nanotubes».

Warsaw University of Technology students construct a rocket engine for liquid fuel

2018-05-23

The Warsaw University of Technology students from the MELprop Scientific Group at the Faculty of Power and Aeronautical Engineering have constructed one of the first rocket engines for liquid fuel in Poland. - We prepared it thoroughly. We carried out calculations, simulations, analyzes, we checked every sub-

system step by step and only when we were sure that all was operating, we organized a full test - says the main constructor Alexander Gorgeri. He emphasizes, that the engine is a technology demonstrator and is not a product ready for use in the space industry. Despite of it, at relatively low cost, students are able to refine the technology so that it can be fully utilized. They intend to introduce the necessary modifications to the engine, limit its mass, and carry out further tests. The ultimate goal of the project is to adapt the engine to industrial use. See the engine test of Warsaw University of Technology students: <https://youtu.be/MSdUNSSZeas>

Polskie Koleje Państwowe together with Pesa to build a dual-drive locomotive

2018-05-23

The Management Board of the Polish State Railways Cargo (Polskie Koleje Państwowe) announced that it had signed a letter of intent with the company Pesa Bydgoszcz regarding the construction of a dual-engine diesel-electric locomotive. A similar letter with the Pesa was concluded with the Polish Inter-city State Railways as part of the Luxtorpeda 2.0 program implemented by the National Center for Research and Development in 2016. - The Parties are interested in establishing cooperation for the implementation of joint ventures in the area of research and development for the construction of a new generation of railway vehicles, in particular of a double-engine (diesel) electric locomotive for running freight trains on electrified and non-electrified lines and an autonomous locomotive.

2018 Gruber Cosmology Prize for Prof. Krzysztof Górski from the University of Warsaw

2018-05-24

The Gruber Foundation, operating at Yale University in the US, has granted its prestigious prize to the cosmology team Planck satellite. One of the leaders of this team is Prof. Krzysztof Górski from the Astronomical Observatory of the University of Warsaw. Professor Krzysztof Górski participated in studies on cosmic background radiation since the early 1990s. In the period 1993-1996 he was a member of the COBE satellite team, which for the first time measured the anisotropy of the cosmic background radiation (Gruber and Nobel Prize in 2006). Since 1996, Prof. Górski has been directly involved in the work in the Planck team.

Polish-German Center for Hybrid Lightweight Structures established in Gliwice

2018-05-24

Experts from Germany and Poland will jointly conduct research on new materials and hybrid constructions. The agreement on the establishment of the Polish-German Center for Hybrid Lightweight Structures was signed in Gliwice. The agreement was concluded by Silesian University of Technology, city of Gliwice, Katowice Special Economic Zone, Federation of Aviation Firms «Bielsko» Institute of Light Engineering and Technology Polymer Technical University in Dresden, as well as Technical University Bergakademie in Freiberg. Cooperation between representatives of science, industry and self-government from Poland is to help in the development of modern technologies for the design of lightweight constructions. The creation of the center is a response to the expectations of modern industry regarding the development of innovative material technologies and the rapid commercialization of research results.

University of Lodz to hold open lecture „Man and new technologies. The Humanistic Perspective”

2018-05-28

The Social Innovation Center of the University of Lodz invites participants to an open meeting as part of the „For Practice” program on May 30. During the event, Dr. Marta Songin-Mokrzan will give a lecture on „Man and new technologies. The humanistic perspective.” The lecture will address issues of human identity in opposition to non-human factors - animals and products of technology such as robots or androids. The scholar will also explore the issue of the practical application of the humanities in new technologies. Marta Songin-Mokrzan is a PhD in the field of ethnology, assistant professor at the Laboratory of Practical Anthropology at the Institute of Ethnology and Cultural Anthropology at the Faculty of Philosophy and History of the University of Lodz. She deals with the anthropology of materiality, anthropology of technology, ethnography of production processes, philosophy and ontology of machines.

Silesian University of Technology cars to come fastest on the Kirkistown track

2018-05-28

The Silesian Greenpower team won the first and second place in the electric cars race of F24 + formula at the Kirkistown track in Northern Ireland. Students of the Silesian University of Technology proved once again that their cars are unrivaled. Gliwice students put up two cars for the race: SG Bullet II and SG Bullet240W. Both performed well on the track and took the first and the second places in the race. The fastest was SG Bullet II, followed by SG Bullet240W, which was also awarded for the fastest lap. Greenpower Formula F24 + competitions are held on professional Formula 1 tracks. Cars are tasked with overcoming the maximum distance in an hour. The whole competition consists of nine races on various tracks, including the final round.

Teams can participate in all races, but in the general classification the three best results count. The final round is obligatory.

New PhD studies: Digital Humanities

2018-05-30

Literary Research of the Polish Academy of Sciences and the Polish-Japanese Academy of Information Technology started recruitment for a new interdisciplinary PhD program Digital humanities. Candidates must have a university degree in any field of humanities or IT and should have a good command of English in speech and writing (minimum level B2 certified by an appropriate document). By the end of August 2018, the documents provided by the candidates will be evaluated. In the first half of September future students should present the idea of their research project in the field of digital humanities before the recruitment committee. More: <http://ibl.waw.pl/pl/edukacja/-interdyscyplinarne-studia-doktoranckie-humanistyka>

Researchers from the University of Zielona Góra win grants in OPUS and PRELUDIUM competitions

2018-05-30

Dr Eng Wojciech Paszke from University of Zielona Góra, Prof Eng Marcin Witczak, from the Faculty of Computer Science in Electrical Engineering and Automation and Eng Marta Nycz from the mechanical department of the University of Zielona Góra obtained grants in OPUS and PRELUDIUM calls. Dr Eng Wojciech Paszke runs the project «Learning-based methods ensuring high quality of resistant control.» The project will be carried out until 2021 with the scientists from Great Britain and China. Professor Dr Eng Marcin Witczak represents a research team conducting the project „Controlling the life span of complex systems using the multiple damage estimation strategy”. Eng Marta Nycz from the Faculty of Mechanical Engineering runs the project „Electrochemical method for determining the level of thermal shock proteins using biosensors based on the substrate of titanium dioxide nanotube on titanium foil modified with silver nanoparticles”. More about the projects: <http://www.infoserwis.uz.zgora.pl/index.php?troje-naukowcow-z-uz-otrzymalo-granty-ncn>

Silesian University of Technology student becomes champion in Polish programming

2018-05-30

Marcin Podsiadły- a student of the Automation, Electronics and Computer Science Faculty at the Silesian University of Technology won the Polish Programmers Championships at the Wrocław University of Technology. Over 90 students and students from all over the country participated in the final of the competition. Students joined the championships in one of two age categories: master - intended for secondary school students and expert – for regular students. Marcin Podsiadły is a student of automation and robotics and he took the first place in the expert category. He won a paid internship in the

automation and IT industry Procom System and 5 annual licenses for additional software for the university. The Polish PLC Programmers' Championship is an event bringing together students and students from all over Poland as well as potential employers from the industrial automation sector. The organizer of the competition is the Wrocław University of Technology and the «Automatyk» Students' Scientific Association.

Architects from the Gdansk University of Technology wins the arturbain.fr contest

2018-06-04

The employees and students of the architecture faculty at Gdańsk University of Technology took the first three places in the international arturbain.fr competition. This year's the motto of the contest was „Pour un réseau d'espaces publics accessibles à tous” - „Network of public spaces available to everyone”. The laureates are didactic employees: architect Dr Katarzyna Zielonko-Jung, architect Dr Izabela Burda, architect of the Chamber of Architects of the Republic of Poland Janusz Gujski and students of the architecture department - Patrycja Marcińska, Anastasiia Volyk, Aneta Szrot, Alicja Sikorska, Arnaud Gaultier and Pauline Ribault. The international arturbain.fr contest has been organized for 27 years by Séminaire Robert Auzelle, a public benefit organization of the Ministère du Logement et de l'Habitat durable in Paris. The public presentation of the awarded works and the awards ceremony will take place on June 8 in Paris.

Silesian University of Technology to talk start-ups

2018-06-05

The Center for Innovation and Technology Transfer of the Silesian University of Technology in Gliwice along with the Mechanics, Technology and Transport faculties and Academic Incubator organize on Wednesday 6 June 2018 the meeting „Local SmartLab - START-UP with success. From incubation to acceleration. „ The meeting will be devoted to solutions in the field of machine building, material engineering and transport. It will combine lectures,

discussion of experts and practical workshops. During the panel, experts will talk about how to effectively promote business through social media, how the local government can support business development through various initiatives and where to get the money to finance the idea and where to seek support. More: <https://www.facebook.com/events/191896891444324/>

Energy Management specialization at the VISTULA Academy in Warsaw

2018-06-05

The Vistula Academy of Finance and Business in Warsaw is launching new Energy Management specialization. Energy Management is Master's studies in English, which will allow students to explore the secrets of various energy sources: conventional, renewable, as well as nuclear energy. In their course the issues related to „global energy markets, needs analysis, supply chain management and crisis management” will be discussed. The studies are co-financed from European funds. The program will be developed in close cooperation with professionals from the energy industry. More: https://apply.vistula.edu.pl/?_ga=2.174564962.1362139288.1528035651-1621160966.1528035651

Polish students dominated the Martian robot competition University Rover Challenge 2018

2018-06-06

The Martian rover from the Czestochowa University of Technology won the University Rover Challenge 2018 competition. The Kielce University of Technology team was third, the fourth place was taken by the Technical University of Lodz. The best in the world Martian rover designed and led to victory Students of the scientific circle of computer design of mechatronic devices and machines of the Czestochowa University of Technology, who form the PCz Rover Team constructed the best Martian rover in the world. In the final of this year's competition of Martian robots held in the desert in the US state of Utah there were 36 teams from 10 countries, including 6 from Poland. The winning rover received the title World's Top Martian Rover - the best rover in the world. The prize in the competition includes the possibility of presenting the robot at the international meeting of the International Mars Society Convention.

Civil Engineering students of the Silesian University of Technology distinguished in the Builder magazine competition

2018-06-06

Students of the Faculty of Civil Engineering at the Silesian University of Technology - Karolina Balcer and Magdalena Skrocka have received a distinction in the first nationwide Competition for Young Engineers of the Builder magazine. Participants of the competition had to perform one of the four tasks proposed by the organizers. Two tasks were projects and two were project implementation. Students of the Silesian University of Technology chose the implementation task. The topic of their work was „Technical and economic comparative analysis of the execution of a reinforced concrete ceiling”. The competition for Young Engineers is implemented as

part of the „Builder For The Young Engineers” project that supports students and young civil engineers in their professional development. The competition reveals the authors of the best works - characterized by ingenuity, openness, high quality of projects, correctness of applied material and technological solutions.

Wrocław University of Technology students dominated the Student Constructions competition KOKOS 2018

2018-06-07

Students of the Wrocław University of Technology won in three of four categories of the Student Constructions Competition KOKOS 2018. The awards were presented during the ceremony in Krakow. The PWR Aerospace team was awarded for the „Ap4Hab” project. They sent a balloon with a mobile phone to the stratosphere as an on-board computer. The jury distinguished them in the Sky category as the construction moving in the air and space. Students from the PWR Racing Team won in the Cars category. Their RT08 racing car turned out to be unrivaled. Light Electric Motorcycle Lem Falcon won in the Joker category - constructions out of existing categories. Only the category of Ecology was won by the team of another university - the Krakow AGH University of Science and Technology for the solar-powered boat Solar Boat.

Students of the Silesian University of Technology are the laureates of the international Diligent Design Contest

2018-06-07

Students of the faculty of automation, electronics and computer science at the Silesian University of Technology took the third place in the 14th international Diligent Design Contest competition in Cluj-Napoca in Romania. Young engineers - Przemysław Mazur, Robert Nawrath and Marcin Beberok

- have developed an industrial controller PLC compatible with the international standard including a central unit, APB bus, function block modules, I / O modules and a serial bus interface. An integral part of the designed system is a programmer with an operator panel. As part of the presentation, students wrote a demonstration program, thus proving the high performance of their controller. The jury of this competition appreciated their unique and innovative solutions.

AGH University of Science and Technology in Krakow to develop new drilling technology

2018-06-11

The AGH University of Science and Technology in Krakow and the Polish Oil and Gas Company have completed the first demonstration phase of the MiniDrill project developing a new drilling technology. It is an innovative solution that can increase hydrocarbon production and reduce drilling costs. Innovative technology involves drilling a large number of parallel small diameter holes using a high pressure jet of water. Prof. Rafał Wiśniowski, dean of the Faculty of Drilling, Oil and Gas emphasizes that employees of the Faculty have been creating innovative solutions in drilling technologies for over 50 years. Thanks to this, it is possible to drill in new areas such as ocean depths or extraterrestrial celestial bodies. Currently, it is extremely important to improve existing methods and create new solutions in the field of acquiring liquid resources on our planet.

Students of the Silesian University of Technology win in Shell Eco Marathon

2018-06-12

Students of the Silesian University of Technology won the competition Shell Eco Marathon in the BatteryElectric Prototype category at the RKC Carting Paris. The victory in Paris assures Wrocław University admission to the Shell Eco-marathon Europe Championship. The competition in France lasted a week. Students from the SmartPower team successfully passed the technical inspection and took the first place in the BatteryElectric Prototype category. The designers hope that the France experience will help them to success at the Shell Eco-marathon Europe Championships planned for July. The final in London is the 34th competition of energy-saving constructions. The first such competition was held in Paris in 1985 and 25 wooden vehicles started then. The victory is not the only success of the Wrocław Technological University. Previously, they awarded the prize for the Best University at the Hydrogen Horizon Automotive Challenge.

University of Zielona Góra in the Polish Consortium ATHENA-PL

2018-06-12

University of Zielona Góra became a part of the Polish Consortium ATHENA-PL. The aim of the Consortium is to coordinate the activities of scientists and engineers from Poland within the project of construction and use of the ATHENA satellite (Advanced Telescope for High-Energy Astrophysics) - informs Ewa Sapeńko the university spokesman. ATHENA will observe the sky in the soft X-ray radiation and add the knowledge about the evolution of clusters of matter in space. The Polish team will take care of construction of subassemblies of one of the two main instruments and simulations allowing to assess the possibilities of observation of various phenomena and objects. The consortium is formed by the Nicolaus Copernicus Astronomical Center of the Polish Academy of Sciences (PAN), Space Research Center PAS and Center for Theoretical Physics PAS

in Warsaw, National Center for Nuclear Research in Otwock, as well as Jagiellonian, Wrocław, Szczecin, Łódź, Zielona Góra, Białystok, Kielce and Toruń universities.

Sophia robot receives the student transcript of the AGH University of Science and Technology in Krakow

2018-06-15

Sophia, a humanoid robot is the special guest at the largest congress of new technologies in Central and Eastern Europe Impact'18, held in Krakow. It received a student transcript of AGH University of Science and Technology (AGH) during the event. Sophia, who visited Poland for the first time, last year received the citizenship of Saudi Arabia as the first robot in the world. According to Anna Żmuda-Muszyńska, a spokesman for the AGH University of Science and Technology in Kraków, the university has been carrying out very advanced works related to implementing solutions based on artificial intelligence for several decades. Vice-rector for cooperation of the AGH University of Science and Technology in Kraków Prof. Jerzy Lis handing the student transcript to the robot emphasized: - This gesture, apart from its symbolic expression, is also a signal for the world that technical sciences are ready to face the challenges of artificial development intelligence. Vice-Rector also added: - Developing issues related to the implementation of artificial intelligence is a must and a duty of the university to answer the challenges of the future.

Students of Wrocław University of Technology design running trolleys for disabled children

2018-06-18

Students of the Wrocław University of Technology prepared about 30 designs of running wheelchairs for disabled children as part of an action organized with the Medical University of Wrocław. - We thought it would be a fantastic thing to create a special stroller for disabled children. We were not able to do it ourselves, so I started working with scientists from the Wrocław University of Technology and I found the volunteers easy to help - says Dr Tomasz Zatoński from the Medical University, one of the initiators of the competition. The stroller for children with disabilities must be safe and comfortable, protect the spine and provide stability during turns and on uneven terrain. The structure should also be resistant and light, protected against wind and rain, easy to assemble, and be equipped with a mechatronic diagnostic system – covering overloads and vibration, which a disabled athlete is subjected to while running.

Lodz University of Technology launches new laboratory to help smart buildings

2018-06-19

The Smart Home Grenton system laboratory was opened at the Department of Electrical Equipment of the Lodz University of Technology. It will enable students to learn the concept, design and programming of building management systems. The laboratory is the result of cooperation between the University and the Krakow-based company Grenton, one of the leading designers and producers of innovative building automation systems. The laboratory has been equipped with Grenton drivers, which allows students to visualize the effects of the system in the real object. Smart Home Grenton will be included in the first in Poland program of studies Intelligent Building Control Systems, which allows students to obtain interdisciplinary competencies required for effective designing, programming and

integration of management systems in intelligent and energy-efficient buildings.

Landscape architects of the University of Life Sciences develop the concept of the Wrocław-Fabryczna Park

2018-06-19

Linear Park Wrocław-Fabryczna will be built on the site of a closed railway siding in Wrocław. This is the first investment in the city connecting new office buildings with the public green area. The design was created in the Study and Design Studio of the Institute of Landscape Architecture at the Wrocław University of Environmental and Life Sciences - says Dr. Justyna Rubaszek, head of the team developing the project. The design of the park is part of the global tendency to transform post-railway areas into green areas. Linear parks are an important element of the city's green infrastructure - they connect functionally and spatially dispersed green and open areas, thus facilitating access to them. Their linear layout has also ecological value. The park, with a total length of approx. 600 m, is planned together with new office developments arising in the area of Strzegomska and Fabryczna streets, in the new business center of Wrocław. More: http://www.glos.upwr.edu.pl/aktualnosci/47862/powstanie_park_linearny_wroclaw_fabryczna.html

International scientific conference „Renewable Energy Sources – technology and innovations”

2018-06-20

The Department of Energy Resources of the Faculty of Geology, Geophysics and Environmental Protection of the AGH University of Science and Technology in Krakow and the Department of Mechanical Engineering and Agrophysics of the Production Engineering and Energy Department of the University of Agriculture in Krakow organize an international scientific conference on June 20-22 in Krynica V entitled „Renewable Energy Sources - Technology and innovations.” The conference will be attended by

representatives of scientific communities, local governments and energy industry entrepreneurs. The thematic scope of the event w the theoretical and practical aspects of modern technologies of renewable energy sources such as: solar energy, geothermal energy, biomass and biomass fuels, combustion, co-firing and cogeneration, heat pumps and wind energy. More: <http://www.renewenergy.pl/>

Students of three Wrocław universities implemented the Joint Architectural Initiative

2018-06-20

Three Wrocław universities summarized the Joint Architectural Initiative. Students of the Academy of Physical Education, Technological University and Academy of Fine Arts worked together with teachers on the elimination of architectural, communication and technical barriers in the apartments of people with disabilities. Mixed teams completed housing adaptation projects: for a person with dementia, with multiple sclerosis, for a blind person and for a wheelchair person. They also developed the architectural concept of a rehabilitation and education center with an independence home for patients with Prader-Willi syndrome. The completed project shows how important is the approach to the subject from the point of view of different positions. The work of students and tutors allows to shape an appropriate approach to investors / patients placing them at the center of the project, not as recipients.

Students-architects of the Wrocław University of Technology rewarded abroad

2018-06-21

Two works from the Wrocław University of Technology were honored by the Association of Polish Architects (SARP) in France. Paulina Gocoł and Wojciech Motyka received equal prizes. In turn, Zofia Fedorów took the third place in the international competition for the design of the Museum of Language in London. The Association of Architects in France awards the prize for the most interesting engineering project. 18 works from 18 colleges participated in this year's edition. The jury chose the work of Paulina Gocoł for her work entitled «Introverus: Experimental theater and promenade, Wrocław - Na Grobli» and the project of Wojciech Motyka - «Hermitage: House of creative work». The work of Zofia Fedor from the University took the third place in the international competition for the Museum of Language in London organized by Archasm. She managed to overcome almost 300 works created by professional architects and students from around the world - informs the Wrocław University on the website.

Young scientists patent a device for beach foot cleaning

2018-06-22

Graduates from the University of Silesia, the Silesian University of Technology and the AGH University of Science and Technology in Kraków have designed a foot cleaning device, which can be used by people leaving the beaches. The device is already protected by patent. It also enables disinfection of the feet in swimming pools - informed the spokesperson of the University of Silesia Jacek Szymik-Kozaczko. The device created by Joanna Śróbka, Łukasz Cyganik, Paulina Cyganik and Jolanta Rajca consists of a platform with a built-in cleaning chamber and a seat. The cleaning chamber is equipped with a set of at least six nozzles supplied with a low pressure air stream ended with silicone fibrils to facilitate cleaning of the feet. The authors consider the use of bactericidal and fungicidal agents or materials, disinfecting the skin of a man leaving the beach, a

pool space, or other places where bare feet come into contact with the ground.

Scientists of the Wrocław University of Technology become laureates of the „Best technical achievement of 2017” competition

2018-06-22

The Association of Polish Engineers and Technicians announced the results of the nationwide competition for the „Best technical achievement of 2017”. The first place in the „Research and development works and positions” category was taken by scientists from the mechanical faculty of the Wrocław University of Technology. The project «A new generation electric vehicle with adaptive operating properties as a base platform for universal applications» was created at the Department of Mechanical Engineering of Industrial Machines and Vehicles. The work of Prof. Piotr Dudziński, Gustaw Sierzputowski and Adam Konieczny is a unique modular chassis structure that allows configuring a wide range of vehicle variants with any suspension system, vehicle turn layout, number of drive wheels and chassis geometry. The construction can be used in the mining, agricultural and construction industries and also in the army and fire brigade.

Graduate of the College of Ecology and Management awarded by the Association of Polish Architects in France

2018-06-27

Engineer architect Volodymyr Melymuka from the College of Ecology and Management in Warsaw received an honorary distinction and a cash prize for the project „Museum of Modern Art and Teatr Rozmaitości” in the competition for the most interesting engineering diploma project. The competition was organized by the Association of Polish Architects in France - says Katarzyna Nowakowska from the marketing and international cooperation department of the Warsaw university. The plot for

the project is located in a very attractive place in the Polish capital, at the foot of the Palace of Culture and Science on the Plac Defilad. Location was one of the main design challenges of the work, because the building had to fit in the environment and at the same time arouse interest. In the vicinity of the plot there are many communication routes, including two metro lines, which was quite a huge problem. The author treated this as an asset and placed a car park and a bus stop in the basement of the building. The work «Museum of Modern Art and Teatr Rozmaitości» was done under the supervision of Dr. Eng. Artur Bulawa-Gabryszewski.

Construction students of the Wrocław University of Technology win the Builder journal competition

2018-06-27

Students of the Faculty of Civil and Water Engineering at the Wrocław University of Technology won the first Competition for Young Construction Engineers organized by the journal „Builder”. Not only students but also graduates and PhD students of technical universities took part in the competition. The competition was held as part of the «Builder For The Future» program, which is to facilitate the professional start for young architects and construction engineers. Participants had to choose one of the design tasks - to design a foot-bicycle path or municipal ground garage, or an implementation task - to optimize the implementation of a reinforced concrete ceiling. The winners, Veronika Olczak, Małgorzata Zielińska, Martyna Lewek and Mateusz Psiuk, chose the implementation task. - Preparing the optimization was really demanding. We checked different ways of reinforcement, ceilings and eventually we were able to prepare the right project - says Martyna Lewek from the University.

University of Szczecin signs a contract with Szajna Laboratorium Optyczne

2018-06-27

The University of Szczecin has signed a contract with Szajna Laboratorium Optyczne. The document assumes cooperation in conducting didactic classes, providing the university with information materials about the industry profile, consulting in creating and modifying study plans related to spectacle optics, co-organizing workshops, symposia, exhibitions and practices. Ophthalmic optics is a study where it is very important to train practical skills. Hence the university and partners will provide a large number of classes conducted in laboratories and practices taking place in companies with an optical profile. This requires cooperation with employers, optical factories, laboratories, as well as Polish and global companies producing lenses as well as optical materials and equipment. Earlier, the University signed agreements with local entrepreneurs and global companies in the industry, as well as with the Polish Association of the Blind Persons in the West Pomeranian Region.

Polish scientific instruments aboard the Chinese lunar probe

2018-06-28

Polish scientific instruments aboard the Longjiang-2 lunar probe operate without a hitch - informs the Space Research Center of the Polish Academy of Sciences, which was responsible for the development of the apparatus. The Longjiang-2 spacecraft, launched into space on May 20, 2018 from the Xichang spaceport in China, has on board a radio device for observing the universe. It was made by research teams from the Space Research Center of the Polish Academy of Sciences and the National Center for Space Research of the Chinese Academy of Sciences. Tests of equipment in space showed that the instruments are working properly. After calibration measurements, the device will start regular scientific observations. Polish works are carried out as part of the «Discovering the Sky at Longest Wave-

length-Pathfinder» project. Cooperation between the Space Research Center of the Polish Academy of Sciences and Chinese partners was financed by the Ministry of Science and Higher Education.

Rover from the Czestochowa University of Technology win the University Rover Challenge 2018.

2018-06-29

The Mars rover designed and built by students of the scientific circle of computer design of mechatronic devices and machines of the Czestochowa University of Technology won the University Rover Challenge 2018 competition. Over 500 students from 35 teams from around the world participated in the competition at Mars Desert Research Station in the US state Utah. The construction of Czestochowa students triumphed significantly and overtook the defenders of the title - Missouri University of Science & Technology team - by over 30 points. The third place was taken by the team of the Kielce University of Technology. The leader of the winning team of constructors is Piotr Ptak - a student of the Faculty of Mechanical Engineering and Computer Science, and the whole project is headed by Prof. Eng Dawid Cekus from Czestochowa University of Technology. More about the competition: <http://urc.marssociety.org/home/urc-news>

Maritime University of Szczecin to construct unmanned ship

2018-07-02

The constructors of the Department of Ocean Engineering and Shipbuilding of the Maritime University of Szczecin are creating an ecological unmanned ship. The unit's hull is created, the drive will soon be installed and tests will begin on the water. Photovoltaic cells and fuel cells will be used for power supply. In parallel with the construction of the model, also laboratory work on an autonomous control system is underway. Once completed, the system will be installed in the ship. The tests will begin at the experimental pool of the Maritime University of

Szczecin. After the successful completion of tests with autonomous control, another model of the unmanned vehicle will be built and tests will be carried out to provide the exchange of information between floating unmanned ships. Then, research and design work on the ecological unmanned transport ship will start - announced the constructors.

Competition of flying and driving unmanned vehicles at the Gdańsk University of Technology

2018-07-02

Gdansk University of Technology invites participants to the competition of unmanned, autonomous flying and traveling vehicles Intelligent Autonomous Vehicles Cup 2018, which will take place on July 6 from 9:00 to 15:00 at the Academic Sports Center of the Gdańsk university. The plan includes three competitions: Drone Race, Marker Search and Free-style, in which the players will surprise viewers with their ingenuity. The competition is organized by the faculties of Electronics, Telecommunications and Information Technology, Electrotechnics and Automation and the SafeIDEA Scientific Circle. The event precedes the conference IAV 2019, dedicated to smart autonomous vehicles. Owners of autonomous and remotely controlled vehicles can participate in the competition after registration via: eti.pg.edu.pl/safeidea/rejestracja.

50th anniversary of Faculty of Fundamental Problems of Technology at the Wrocław University of Technology

2018-07-03

The Faculty of Fundamental Problems of Technology at the Wrocław University of Technology celebrates this year its 50th anniversary. There are 5 fields of study at the faculty - technical physics, computer science, biomedical engineering, quantum engineering and optics. The faculty scientists educate about 2 thousand students. The Faculty of Fundamental Problems of Technology (WPPT) was established on September 1, 1968 as the first unit of this type in Poland. At present, there are about 180 scientists employed in the department - including 19 professors, 32 assistant professors and over 100 scientists holding PhD title. Until now, over 7.5 thousand graduates at the WPPT have completed their studies. They are graduates who have held or occupy prominent positions in public administration, science and business. The Faculty's employees run math and physics classes on almost all fields of study at the Wrocław University of Technology, contributing significantly to the education of thousands of engineers. More: <http://wppt.pwr.edu.pl/50-lecie-wppt>

Students of the Silesian University of Technology win the Volkswagen BE THE BEST!

2018-07-04

Students of the Automation, Electronics and Computer Science Faculty of the Silesian University of Technology won the nationwide Volkswagen BE THE BEST competition. Marek Bonk and Antoni Zegartowski have developed an innovative design of the system of supervision over the removal of failures at the welding room along with the application for mobile devices. BE THE BEST! is a competition organized by Volkswagen Poznań. Participants individually or in two-person teams choose one of the proposed topics, described by professional departments as a case study and create their own project. The best works are rewarded and innovative ideas

have the chance to be implemented in Volkswagen factories. BE THE BEST! competition is an example of practical cooperation between science and business. The innovative projects developed by the students concern problems that the employees of the company deal with on a daily basis. It is an opportunity to confront theoretical knowledge with the real business situation.

Students of the AGH University of Science and Technology construct an electric racing car

2018-07-05

On Thursday, July 5, students at the AGH University of Science and Technology in Krakow will present their latest construction, an electric race car. After four cars with internal combustion engines, students working in the AGH Racing Team will present a racing machine powered by nearly a thousand lithium-ion cells. The students will test the full potential of the latest design next week - during the international Formula Student competition in the Netherlands - says Anna Żmuda-Muszyńska, spokesman for the Krakow university. See the movie advertising the premiere of the car: www.bit.ly/PremieraBolidu

European Center of Aviation Simulators located near Rzeszów

2018-07-06

The Polish Agency for Enterprise Development has signed a contract with a consortium of four companies to co-finance the project „European Center of Aviation Simulators”, which will be implemented in the Podkarpackie Science and Technology Park „Aeropolis” in Jasionka near Rzeszów. Its goal is to launch the «Royal Fly» brand providing the flight simulator services for education, training and entertainment purposes. They will be the first services in the world that combine the use of technologically advanced flight simulators, professional aviation training on real aircraft and aviation events for the aviation enthusiasts. The Polish

Agency for Enterprise Development co-financed the project with an amount of almost PLN 10.5 million.

Polish DESIS instrument reaches the International Space Station

2018-07-09

The Dragon ship with the DESIS instrument on board reached the International Space Station. The device will be used for satellite observation of the Earth. The engineers of the Space Research Center from the Polish Academy of Sciences participated in its construction. DESIS (DLR Earth Sensing Imaging Spectrometer) is designed to conduct hyperspectral observations of our planet, which means simultaneous imaging of the surface of the globe in 235 ranges of electromagnetic radiation. Polish engineers were responsible for the design and implementation of the DESIS-POI system, which controls and positions the movable input mirror of the sensor. This mirror is the first element of DESIS, where radiation comes from the surface of the Earth. The task of the mirror is to direct the radiation to the further part of the instrument, including the next immobile mirrors and the telescope - explains the Space Research Center.

Graduate of the Silesian University of Technology becomes a laureate of the Siemens Award

2018-07-09

Paweł Mync, a graduate of the mechanical engineering department of the Silesian University of Technology won the second prize of the 8th Siemens Award Competition for graduates of automation and robotics. The young engineer was awarded for his master's thesis „Application of an expert system for diagnosing a selected automation system”. The matter discussed in the diploma thesis refers to the need to apply new methodologies and measures enabling practical implementation of Industry 4.0 concept. The solution proposed at work is an innovative and practical approach to the construction of diagnostic expert systems operating in the cloud computing. In this year's competition, 26 diploma theses were submitted, which in the opinion of the jury members presented a very high and even level. The works were evaluated in terms of the innovativeness of the idea, the practical application possibilities, the scientific level and the quality of the work.

Students of the Lodz University of Technology win international competition for the project of a home wind turbine

2018-07-10

GUST - a team of students from the Lodz University of Technology won the international competition International Small Wind Turbine Contest 2018 organized by the NHL University of Applied Sciences in the Dutch Leeuwarden. Ten teams from around the world took part in this year's competition for the home wind turbine. GUST (Generative Urban Small Turbine) is a student project launched in October 2015 and operating within the Students' Scientific Circle of Power Engineers at the Institute of Fluid-Flow Machinery at the Polytechnic. During the competition in the Netherlands, the team from the

Technical University of Lodz for the first time presented two turbines - one with a horizontal axis and the other with a vertical axis of rotation. Students of the Lodz University of Technology received a grant from the Ministry of Science and Higher Education for the project in the competition Najlepsi z najlepszych! 2.0.

Inventions of the University of Technology and Life Sciences in Bydgoszcz awarded in Třinec

2018-07-10

Two inventions of the University of Technology and Life Sciences in Bydgoszcz received gold medals at the INVENT ARENA 2018 Exhibition of Technical Innovation of Patents and Inventions in the Czech city of Třinec. The department of technology and chemical engineering and the department of mechanical engineering of the University of Technology and Life Sciences presented their works and innovations. The first awarded invention is: «The design of the valve for emptying the tank from granular materials for a vibrating apparatus with a propeller-screw drive system» by Dr Eng Marek Domoradzki, Dr Eng Wojciech Poćwiardowski and Eng Joanna Szulc. The second gold medal was received by Dr MS Stanisław Jung, MSc. Marek Andryszczyk and Eng. Marcin Głowacki for «Device for the rehabilitation of the radial-wrist joint».

Innovative flight simulator to be created at the Silesian University of Technology

2018-07-11

Scientists from the Silesian University of Technology are developing a prototype of an innovative flight simulator. The project obtained a grant from the Horizon 2020 program as part of the Research and Innovation Staff Exchange (RISE) funding scheme. The WrightBroS project (Working in a Collaborative Factory of the Flight Simulators Branch of RISE) will be coordinated by the Virtual Flying Laboratory at the Faculty of Automation, Electronics and Computer Science. The University of Technology will implement

it together with partners from Austria - LG Nexera Business Solutions AG from Vienna and from Slovakia - Virtual Reality Media from Trenčin, professional flight simulators manufacturers. The simulator uses the latest developments in augmented reality technology, based on the system created in the project to acquire and process expert procedural knowledge related to service and maintenance.

Szczecin students in the final of The Trial by Vinci Construction contest

2018-07-11

Students of the West Pomeranian University of Technology performed well in the final of The Trial by Vinci Construction- competition. The aim was to prepare a conceptual design in the categories Constructions of the future, Sustainable construction and Cities above and below cities. The team prepared a project entitled «Floating Garden Poland» referring directly to the conditions of Szczecin, where more than a half of the area are reservoirs and green areas. Students proposed solutions based on the 4R principle: the use of old sea containers (Reuse) for the implementation of small residential units with a high energy standards (Reduce); their energy supply using renewable energy sources (Renewable) - photovoltaic panels and a heat pump using water-ice phase transformation - limiting the negative impact on the environment. The treatment of water in a small wastewater treatment plant (Recycle) was also planned.

Polish scientists implementing the EDU-ARCTIC project

2018-07-16

EDU-ARCTIC is a Polish project selected for the implementation of 205 ideas devoted to education and popularization of science in the Global Climate Change category, as part of the European Union's Horizon 2020 program. The aim of the project is to use Arctic research as a tool to strengthen science education programs throughout Europe. The project is to encourage students aged 13 to 20 to continue their education in the field of science, technology, engineering and mathematics (STEM). EDU-ARCTIC will use a variety of tools to provide an innovative approach to teaching STEM subjects, including on-line lessons with scientists from the polar bases. The project will also organize competitions for students who will be able to win trips to the Arctic research station. The creators of the project are scientists from the Institute of Geophysics of the Polish Academy of Sciences.

Student at Krakow University of Technology designs tilting bike

2018-07-16

Wojciech Janas, a student of the Faculty of Mechanical Engineering of the Krakow University of Technology, as part of his engineering and master's thesis, developed bicycle designs with special devices that change the regular single-track bike into a stable three-seater bicycle or a racer for a teenager. The tilting bike has been patented in the Polish Patent Office. Creating a three-wheeled vehicle was the first idea for an engineering work. The main idea was the changing an ordinary bike into a three-wheeled vehicle, which is more stable, and its use would bring more pleasure to people of all ages. The change had to be smooth without any changes in the construction of the bicycle - Janas explains. His solution was modeled on the French KIFFY vehicle. The difference is that the French bicycle is produced as a ready tricycle, and his construction easily passes from two to three wheeled and vice versa.

Student rocket of the AGH University of Science and Technology in Krakow ranked second in the US competition

2018-07-17

The „Turbulence” rocket created by students of the AGH University of Science and Technology in Krakow took second place in the IREC rocket competition in the USA in the category of liquid-fueled and reaching the level of over 9 km rockets. Team AGH Space Systems is the first and only team from Poland so far, which took part in the prestigious Spaceport America Cup 2018 competition - informs Anna Żmuda-Muszyńska, AGH spokesman. The competition was attended by 132 teams from around the world that competed in six categories. Each team was evaluated in terms of technical documentation, quality of the final design, flight and recovery of the rocket, the amount of own hand-made and designed elements and the overall assessment of the team professionalism. Taking into account all characteristics, „Turbulence” won second place in its category.

Hydrogen-powered car from the Silesian University of Technology comes fourth at the Shell Eco-marathon in London

2018-07-17

Students of the Silesian University of Technology designed a car that won the 4th place in London competition in the category of Urban Concept Hydrogen vehicles. This is the best result among all Polish teams participating in the competition. The task of the teams taking part in the competition was to design the most efficient vehicles in terms of energy saving, and then to drive them as far as possible on one fuel unit. The car, constructed by the SmartPower team, was presented in the category of hydrogen-powered urban vehicles and resulted in 0.117 km / m³ of hydrogen. Shell Eco-marathon is one of the most prestigious professions for students of technical universities organized every year in America, Europe and Asia. Nearly 180 teams from

24 countries applied for this year's edition - including 7 teams from Poland.

Scientists from the University of Silesia create new loudspeaker

2018-07-18

Researchers from the University of Silesia have developed a new loudspeaker for study rooms. Their invention - a set of speakers occupying a small space and at the same time ensuring very good sound quality has been protected by the European Patent Office. Dr Eng Robert Koprowski and Prof. Eng. Zygmunt Wróbel, scientists from the Faculty of Computer Science and Materials Science, University of Silesia, constructed an innovative loudspeaker, in which empty waveguides and chambers were used and thus the processing range was increased. This guarantees that the music is played with a satisfying quality, and users will be able to receive a high-quality set that takes up less space than constructions currently available on the market.

Scientists from the AGH University of Science and Technology develop a device to bring sunlight to shady rooms

2018-07-20

How to illuminate dark offices or flats with natural light and thus save on electricity charges? The problem of shaded rooms is solved by the design of scientists from the AGH University of Science and Technology in Krakow. The spherical heliostat will bring sunlight to the dark corners of our homes. The device was prepared by Paweł Wajss from the Faculty of Energy and Fuels as part of his PhD program. The spherical heliostat brings sunlight into the room. In the center of the house, the flat mirror reflects the sunlight. There is also a mechanism for setting the device in the right direction and this way permanently illuminating the dark kitchen or corridor. The proposed construction also solves the problem of wrongly located rooms, with small windows or shaded by other objects.

Minister of Science honors the invention of the Białystok University of Technology

2018-07-20

Hermes - a hybrid attachment for the wheelchair drive of a disabled person constructed by students of the Białystok University of Technology, was awarded with a special diploma of Minister of Science and Higher Education Jarosław Gowin. Hermes was created for disabled people using wheelchairs. It is a lightweight wheelchair, equipped with electric and manual drive. Thanks to it, the disabled person's wheelchair can be driven either manually, through a crank mechanism included in the steering wheel or thanks to a programmable electric motor with an energy recovery system during braking. The electric drive makes it possible to continue driving in the event of fatigue and it helps to overcome uneven terrain and curbs. The project was carried out in the student scientific club Orthos at the Faculty of Mechanical Engineering of the Białystok University of Technology.

Car of the Wrocław University of Technology comes third in the Student Formula competition in Italy

2018-07-20

The PWR Racing Team car took the third place in the general classification of the competition at Riccardo Paletti in the Italian Varano. The designers from the Wrocław University of Technology did not manage to repeat the victory from last year - informs Michał Ciepielski from the Information and Promotion Department at the Wrocław University. The German team of the Erlangen-Nuremberg University took the second place, and young constructors from the Austrian Technical University in Graz won the competition. Wrocław University of Technology will have two more starts this season - in the Czech Republic (July 31-August 4) and Germany (August 6-12). Formula Student is an international engineering competition for student teams from around the world. The competitors must design a car, construct it and achieve the best results on the track, as well as present the business concept of its vehicle.

Scientist of the Nicolaus Copernicus University in Toruń wins the competition in the TEAM program

2018-07-20

Dr Ireneusz Grulkowski from the Institute of Physics of the Nicolaus Copernicus University in Toruń will receive almost PLN 3.5 million to create a research team. The money comes from the competition of the Foundation for Polish Science in the TEAM program. The grant will allow the employee of the Department of Biophysics and Medical Physics at the University of Toruń to carry out the project «Lenticular and vitreal light scattering and refraction for tomorrow's eye diagnostics». Dr Grulkowski heads a team in Bio-Optics and Optical Engineering in Toruń. He uses advanced techniques of optical engineering in the development of new imaging methods dedicated to biology and medicine. His team cooperates with many centers in the country and abroad. His research on the new generation of optical tomographs has been awarded by the American Optical Society of America.

Wrocław student awarded for the design of a model housing estate on the coast of the Al Jadda bay

2018-07-24

The design of the estate in Dubai by Joanna Wnuczek from the architecture department of the Wrocław University of Technology was awarded in the international competition MultiComfort House Student Contest. It was already the 14th competition, organized by Saint-Gobain with the support of Dubai Municipality and Dubai Properties Group. Its participants were to prepare an architectural and urban design of a model housing estate on the coast of Al Jaddaf bay in Dubai. 50 works from 28 countries were qualified for the finals. The designs had to fit into the architectural trend embedded in local traditions. The authors also had to take into account the weather conditions in Dubai. In summer, the average temperature is over 40 degrees Celsius, and the hot climate is accompanied by a sharp wind, causing sandstorms. In her project, a

Wrocław student used spacious terraces referring to the eastern architecture, glass facades of buildings and traditional wind towers - wind catchers.

Team of the Częstochowa University of Technology wins the Polish Smart Development Award

2018-07-24

The PCz Rover Team team from the Częstochowa University of Technology became the laureate of the Polish Intellectual Development Award 2018 in the category „Young innovative leaders of Polish science”. The prize was awarded for the most spectacular success of Polish student society - victory of the University Rover Challenge 2018. The Polish Smart Development Award is a nationwide prize appreciating local governments, subordinate companies and enterprises contributing to sustainable development through their innovative investments and solutions. The second group of laureates are universities, scientific units, centers, institutions and enterprises implementing innovative projects.

Silesian University of Technology to cooperate with Zakłady Urządzeń Komputerowych ELZAB SA

2018-07-25

Silesian University of Technology in Gliwice starts the cooperation with Zakłady Urządzeń Komputerowych ELZAB S.A. The partners will cooperate primarily in the implementation of research, development, implementation and production works and projects, as well as in the commercialization of developed solutions. The cooperation will include projects related to pulse pump and other medical electronics devices, mechatronic and power devices, as well as electromobility - especially for charging stations and hydrogen production stations. The partners will also cooperate on projects in the field of industrial automation and other electronic and electrical devices. The agreement will allow the university and the company to use mutual knowledge and experience. One of the main goals of joint projects is to implement their results into business operations.

Silesian University of Technology to examine the welding processes of stainless steel

2018-07-27

Silesian University of Technology will implement the i-Weld Project (Integration of advanced experiments, computation and data for Duplex Stainless Steel joining Innovation). Researchers will conduct research on duplex stainless steel welding using a modern data exchange system. The aim of the project financed from the Horizon 2020 program as part of the Research and Innovation Staff Exchange (RISE) scheme is the development of new materials and processing processes. Within its framework, optimal welding conditions will be established ensuring high mechanical properties and corrosion resistance. The obtained data will then be used to develop a new manufacturing technology. The coordinator of the project is the John Moores University in Liverpool, at the Sile-

sian University of Technology, the research will be coordinated by Dr Eng Zbigniew Brytan from the mechanical department.

Autonomous underwater robot presented by the Wrocław University of Technology in San Diego

2018-07-30

Students of the Wrocław University of Technology have constructed a robot that will take part in the prestigious competition of autonomous robotic submarines RoboSub in the United States. The machine will face competitors from leading American technical universities - informs Michał Ciepielski from the information and promotion department of the University. The robot has been made of aluminum and laminate. The machine is equipped with a gripper, 4 cameras, 7 engines, as well as specialized position sensors. The robot also has pressure and leak sensors - signaling the smallest moisture. The strategic partner of the project is the National Center for Research and Development The RoboSub Competition in San Diego will also include teams from leading American technical universities - Caltech and MIT. The leitmotif of the event will be the casino, and the robots will have seven tasks to complete with increasing difficulty. All competitions will be played in a pool with a depth of 3 to approx. 15 m.

Satellite of students of Warsaw University of Technology ready to take off

2018-08-02

PW-Sat2 satellite constructed by members of the Student Astronautical Circle of Warsaw University of Technology has been fully integrated, tested and prepared for launch. It has just been connected to the QuadPack, - a container in which the satellite will be located during the launch of the rocket. Successful connection with QuadPack took place on July 26, 2018 at the headquarters of Innovative Space Logistics in Delft, the Netherlands. In autumn, the container will be transported to the United States, where it will be placed in the SpaceX Fal-

con 9 rocket. PW-Sat2 will be raised on board the Falcon 9 rocket along with SSO-A mission from the Vandenberg base in California. According to the latest data, along with PW-Sat2, more than 70 other satellites will be carried into space.

First Polish-Finnish observation satellite launched in orbit around Earth this year

2018-08-02

The ICEYE-X2 satellite is a joint work of the Finnish ICEYE cosmic start-up and the Polish company Creotech Instruments S.A. As representatives of both companies announced they will launch together the satellite to the orbit around the Earth. The ICEYE-X2 satellite weighs approximately 85 kg and is equipped with an innovative SAR radar created by ICEYE, which will allow observation of the Earth's surface regardless of weather conditions. Creotech Instruments S.A. constructed selected components of the satellite and worked on its integration. Creotech Instruments S.A. has been striving to become a satellite integrator for many years. With the financial support of the National Center for Research and Development, it develops the HyperSat microsatellite platform.

Silesian University of Technology to develop a device to assess the surgical drills

2018-08-02

University of Technology has established cooperation with Rudpol-OPA. The partners will jointly implement the device to assess the degree of wear of surgical drills. The project will involve primarily the department of biomedical engineering. - For our department, wide cooperation is extremely important, especially since we have ambitious development plans. We want solutions from our laboratories to be revived for the benefit of industry - says the dean of the faculty, Prof. Marek Gzik. Under the agreement, the Silesian University of Technology undertook to perform a service and research work entitled „Development of a design, implementation documentation and implementation of a working prototype device for assessing the degree of wear of surgical drills“.

„Capsule of time“ - a competition for students and architecture graduates

2018-08-07

The „TworzyMY Kraków“ Foundation organizes a competition aimed at students and graduates of architectural and artistic faculties. The aim of the competition is to select the best project of a small or medium «architectural sculpture». Within the project the participants are to create the original vision of the «Capsule of time». The idea should have an innovative architectural solution and combine the elements of modern art with the use of innovative technological solutions of the future. The winning project will be implemented in 2019. It will be permanently placed in Krakow at u Dolnych Młynów 10 Street. The «TworzyMY Kraków» Foundation also provides for its presentation in many places in Poland, on the various exhibitions and fairs of artistic, scientific and cultural character. More: <http://tworzymykrakow.org/konkurs-tworzimy-krakow/>

Subassemblies of satellites and spacecraft constructed In Czechowice-Dziedzice

2018-08-07

Components for satellites and space ships will be constructed in Czechowice-Dziedzice. Thales Alenia Space, global leader in space technologies, will cooperate with the Silesian Science and Technology Center of the Aviation Industry, a company belonging to the Upper Silesian Agency of Entrepreneurship and Development. Thales Alenia Space has already made the first order for structural panels for the Spacebus NEO satellite platform. Simultaneously, Thales Alenia Space will transfer their composite technologies to the Center. Both companies will also jointly implement research and development projects commissioned by the European Space Agency. The SpaceBus NEO platform is a large geostationary telecommunications satellite with a mass of 4 to 6 tons. According to Thales Alenia Space company, the first facility with components made in Poland will be launched into orbit in the second half of 2019.

Polish Space Agency to award the best diploma theses in space engineering

2018-08-08

The Polish Space Agency has announced a competition for the Scientific Prize of the Polish Space Agency for the best student diploma thesis in the field of space engineering. The competition is addressed to scientists who have recently completed first-cycle or second-cycle studies at Polish universities. Their graduate theses should refer to issues in the field of widely understood space engineering in the theoretical aspect and practical solutions. The competition will be organized every year, and the Scientific Prizes of the Polish Space Agency will be awarded for the first time in 2018 for the diploma theses realized in the academic year 2017/2018. The Scientific Prizes of the Polish Space Agency will be awarded to three best diploma theses in each of the two categories - engineering bachelor's and master's thesis. More: https://polsa.gov.pl/images/docs/Regulamin_Konkursu_o_Nagrode_Naukowa_Prezesa_PAK.pdf

Electric motorcycle from Wroclaw University of Technology comes in third in Spain

2018-08-08

Students of the Wroclaw University of Technology took the third place in the general classification of the SmartMoto Challenge electric vehicle competition in Barcelona. The University of Technology won the first place for the best design, the second in static competition. In total, it gave them the third position- said Michał Ciepelski from the Department of Information and Promotion of the university. The students went to Barcelona to present their Light Electric Motor Thunder, which is adapted to rallies in difficult terrain conditions. The vehicle weighs 120 kg and has a power of 30 kW, or about 40 horsepower. Battery capacity, entirely designed by students, allows to drive about 90 km at a speed of 120 km / h. Due to a special system, it can be replaced in a few seconds. In the tournament, all teams had to go through static competition i.e. presentation of the business plan and technical details of the vehicle, and then the vehicles were tested by dynamic tests of power and acceleration.

Students of the Wrocław University of Technology get to the semi-final of RoboSub in California

2018-08-10

Students of the Wrocław University of Technology got to the semi-finals and won a special prize for the best computer simulation in the competition of autonomous robotic submarines RoboSub in California. The team from Wrocław was the only Polish team among 47 teams from technical universities around the world. The body of the underwater robot created by the members of the scientific circle «Robocik» was made of fiberglass laminate. It can go down to the depth of 100 m. It has 7 engines and a number of specialized sensors that determine its location, sensors acting as accelerometer, gyroscope and magnetometer, pressure sensors and leak detectors, signaling even the smallest moisture. It also has four cameras. The RoboSub competition has been held for 20 years, is organized by the Foundation of the Association of Unmanned Automotive Systems and the American Navy Research Office.

New student car from the Lodz University of Technology to compete in Finland

2018-08-13

The team of students of the Lodz University of Technology „Iron Warriors” will take part in the competition of the super-efficient cars Pissaralla Pissimalle 2018 on 18-19 August 2019. The international contest will take place in Nokia in Finland. According to the Lodz University of Technology, «Iron Warriors» are current Polish record holders in the category of the lowest combustion cars. Their vehicle - Eco Arrow 2.2 makes up to 837 km per 1 liter of fuel. Currently, students have developed an improved structure to cross the limit of one thousand kilometers per 1 liter of fuel. The solutions used in their new Eco Arrow 3 car were presented at the end of July 2018 at the International Conference of ISER (The International Society for Engineers and Researchers) in Melbourne, where they participated thanks to funding under the Ministry of Science project «The Best of the Best 2.0»!

Silesian scientist published his monograph in the series „Studies in Computational Intelligence”

2018-08-14

The monograph „Decision Tree and Ensemble Learning Based on Ant Colony Optimization” by Dr. Jan Kozak from the Department of Knowledge Engineering at the University of Economics in Katowice was published in the series „Studies in Computational Intelligence” by Springer. The publication of a Silesian scientist concerns machine learning using computational intelligence. In particular, it is devoted to learning decision trees and classifiers using ant algorithms. The Studies in Computational Intelligence series publishes new achievements and progress in various areas of computational intelligence, and the published books are indexed in databases Web of Science, EI-Compendex, DBLP, SCOPUS, Google Scholar and Springerlink. More: <https://www.springer.com/us/book/9783319937519>

Robot from AGH University of Science and Technology plays the ukulele

2018-08-16

Students from the AGH University of Science and Technology in Krakow constructed the robot that can play the ukulele. It can perform the film music from „The Godfather”, „Pirates of the Caribbean” or „Requiem for a dream”. The UkuRobot already gained publicity in the international media. Four students of Mechatronics Engineering at the Faculty of Mechanical Engineering and Robotics at the AGH Jakub Grela, Adrian Gołab, Mateusz Guzik and Łukasz Jurczak designed and constructed the UkuRobot during the Mechatronic Design classes. The inspiration for the authors was a Lego Mindstorms robot playing the guitar. Young engineers decided to construct their own version not only playing chords and all strings simultaneously, but also single sounds. See videos of the robot's performances: <https://www.youtube.com/channel/UCyEF5MP-jtjXqIKuMOKunXig>

Sumorobots from Bialystok University of Technology receive silver medals in Beijing

2018-08-17

From August 10 to 12, the team SumoMasters from the Białystok University of Technology competed in Beijing in the Robotchallenge 2018. Robots of Białystok's students won 3 silver medals in 3 different categories. Every year, the competition in Beijing gathers an increasing number of participants from many countries of the world. About 1500 robots from 30 countries took part in the challenge this year. Due to such attendance and participation of so many countries, Robotchallenge in China are the second most important competition of the sumorobots in the world. - I am very happy with the attitude and results of our team and the fact that our robots can effectively fight not only in the Mega Sumo, but also in the Mini and Nano Sumo categories - said team supervisor, Dr Eng Rafał Grądzki. More about sumo robots designed at the Faculty of Mechanical Engineering of the Białystok University of Technology can be found at: <https://wm.pb.edu.pl/studenci/kola-naukowe/projekty-studenckie/sumomasters/>

Landscape architects from Krakow University of Technology to present solutions at the London exhibition

2018-08-17

61 projects from 24 countries, including landscape projects of the architects from the Krakow University of Technology will be presented at the IFLA Europe Exhibition 2018 Landscape Architecture as a Common Ground. The exhibition will be officially opened on September 7 in London. The aim of the exhibition is to show the importance of the landscape architect's profession in shaping a common space. The presented projects are to bring closer «the idea of green connections and the reconstruction of water structures as well as pedestrian and bicycle corridors». The curator and coordinator of the exhibition is IFLA Europe general secretary Dr Eng Urszula Forczek-Brataniec from the architecture department of the Krakow University of Technology.

Students of the Bialystok University of Technology receive silver medal in Mars rovers competition in Canada

2018-08-20

The students of the Faculty of Mechanical Engineering at Bialystok University of Technology and their ARGO rover took the second place in the Canadian International Rover Challenge. The Canadian International Rover Challenge is based on the simulation of the Martian mission. The rover is to take samples of the soil and look for life in them, run mining equipment and find a wounded astronaut, seal his space suit and deliver oxygen. The construction of the Argo rover was supported by the Mayor of Bialystok under the agreement on the promotion of the city. Participation in the competition was financed by the project «The best of the best! 2.0.» as part of the Operational Program Knowledge Education Development co-financed by the European Social Fund.

Projects of scientists of the Krakow University of Technology awarded in the „Leader” program

2018-08-21

Three projects from the Faculty of Chemical Engineering and Technology of the Krakow University of Technology were awarded in the ninth „Leader” program organized by the National Center for Research and Development. The Center awarded: project «Development of a method for the preparation of biohybrid hydrogel materials incorporated with a nanocarrier system - a drug as multi-compartmental dressings enabling the treatment of Psoriasis» by Dr Eng Katarzyna Bialik-Wąs, project «Osteochit3D - personalized bioactive 3D printed sponges for advanced bone tissue repair in dentistry» by Dr Eng Marek Piątkowski; and the project of Dr. Jolanta Pulit-Prociak «Development of a method for the preparation of non-toxic active substance carriers based on nanomaterials». Each project was co-financed with PLN 1.2 million.

SmartMoto Challenge - electric motorcycle racing competitions in Wrocław

2018-08-21

Students of the Wrocław University of Technology invite participants to the international competitions of SmartMoto Challenge electric motorcycles. This is the first such event in Poland, earlier competitions were held in Barcelona and Moscow. The Wrocław competition starts on the 24th of August. Student vehicles can be seen on the campus of the Wrocław University of Technology (August 24-25), then on the off-road track at Wzgórze Kilimandżaro in Wrocław (August 26). Seven motorcycles constructed by teams from Poland and Russia are qualified for the competition. The SmartMoto Challenge competition is about designing and constructing a cross-country motorcycle. The main goal of the competition is to use the knowledge gained during the studies in a real industrial project. During the competition, the jury will assess the motorcycle and its static and dynamic capabilities as well as the team's skills in business aspects.

British astronaut to open the European Rover Challenge in Poland

2018-08-24

British astronaut of the European Space Agency Timothy Peake will open the European Rover Challenge, which for the fourth time will be held in Poland on September 14-16, 2018 at the Museum of Nature and Technology in Starachowice. According to the organizers, 400 competitors from around the world will participate in the competition of Mars rovers. In this year's final, 50 teams from six continents will compete, including a record number of teams from Europe. During last three years, the European Rover Challenge has collected over 70,000 visitors and 700 teams, becoming the largest robotics and space event in the world. The Polish government has inscribed the event in the Polish Space Strategy under the name „sources of creating future specialists for the space sector”. More: <http://roverchallenge.eu/pl/home/>

Faculty of Civil Engineering of the Silesian University of Technology receives the certificate of the Accreditation Committee of Technical Universities

2018-08-27

Faculty of Civil Engineering of the Silesian University of Technology receives the certificate of the Accreditation Committee of Technical Universities The Faculty of Civil Engineering of the Silesian University of Technology in recognition of the high quality of building engineering at the engineering and master level received the certificate of the Accreditation Committee of Technical Universities (KAUT) and also was awarded the European quality certificate EUR-ACE Label for the academic years from 2017/2018 to 2022/2023. The award is a confirmation of the very positive assessment of the qualifications of the Faculty of Civil Engineering staff and education, as well as the high qualifications of the faculty graduates. Receiving the KAUT and EUR-ACE certificate, the Faculty of Civil Engineering became one of four accredited high schools in Poland, together with the Krakow University of Technology, the Gdańsk University of Technology and the Military University of Technology.

State Higher Vocational School in Chełm to co-organize the Polish Navigational Championships

2018-08-28

From September 3 to 9, 2018, the State Higher Vocational School in Chełm organizes the Airplane Navigation Polish Championship in the senior and junior categories. The organizer of the championship is the Chełm High School with the participation of the Polish Aeroclub. Professor Dr Eng Arkadiusz Tofil, Rector of the State Higher Vocational School in Chełm, said that the appropriate infrastructure owned by the university and its experience in the organization of air events will contribute to ensuring that the competition is carried out at the highest

level with proper security. The sponsor of the competition is the largest charter airline in Poland - Enter Air, which financially supports the team of the State Higher Vocational School in Chełm. This is the next stage of cooperation between the university and the airline, which has so far resulted in recruitment for the position of a pilot among students.

Geotechnical conferences in Warsaw

2018-08-28

The Polish Geotechnical Committee and the Geoenvironment Department of the Warsaw University of Life Sciences are organizing the 18th National Conference on Soil Mechanics and Geotechnical Engineering and the 7th National Conference of Young Geotechnicians on October 4-7, 2018. The conference «Challenges of geotechnics in Poland» is addressed primarily to designers, contractors, employees of specialist companies, academic staff, PhD students and students dealing with geotechnical issues. As part of the event, there will be four thematic sessions: Research and parameter selection, Modeling and design calculations, Threats and securing buildings and Transport infrastructure. More: <http://kkmgig2018.kg.sggw.pl/index.php/en/>

Conference „Space career paths. We educate staff for the space technology sector „

2018-08-29

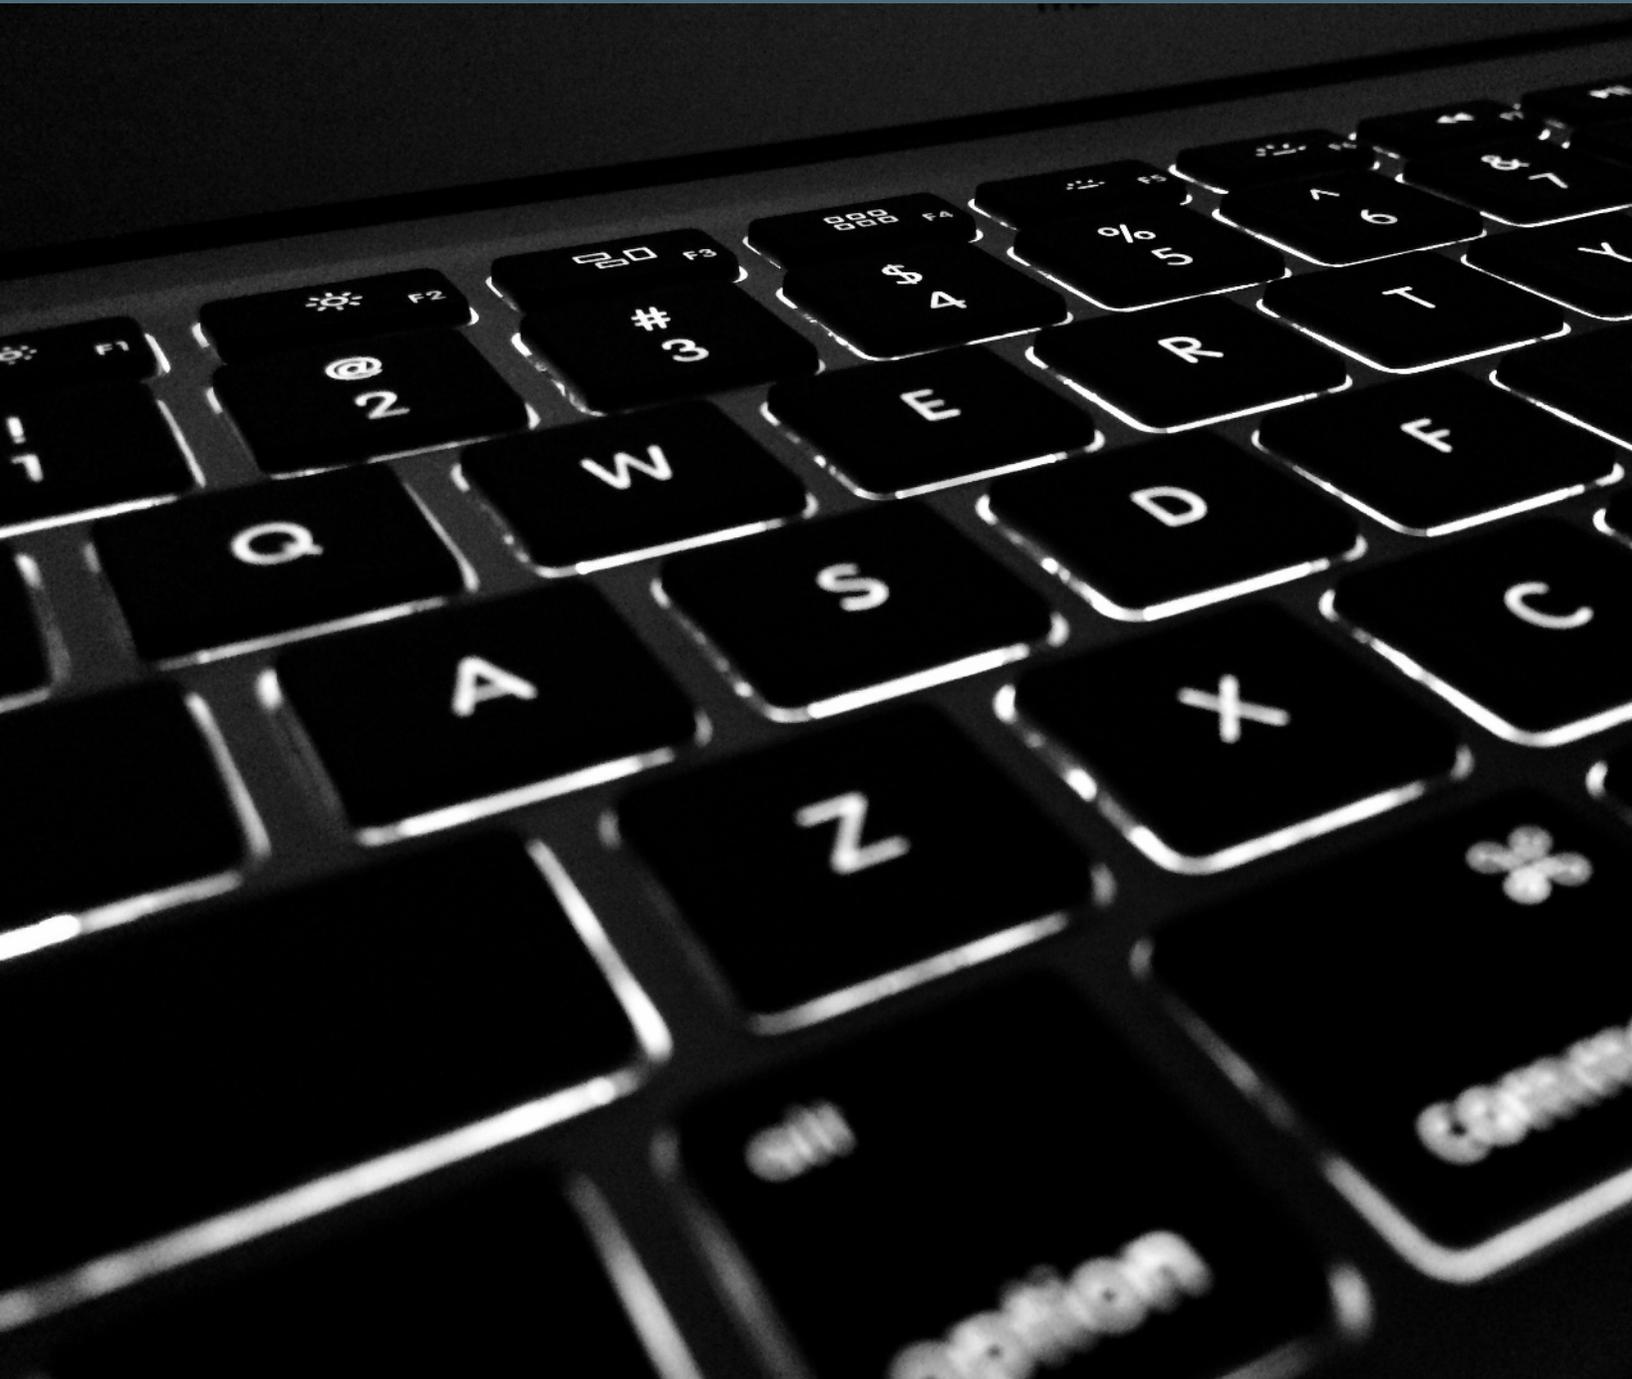

On August 30, 2018, the „Space career paths“ We educate staff for the space technology sector.” conference will be held in Warsaw. During the event, representatives of the Industrial Development Agency will present the offer of domestic and foreign institutions implementing programs that support the development of competencies necessary to work in the space business. The conference is addressed to students, members of student scientific circles, trainees, young researchers and teaching staff from universities and representatives of companies from the space sector. The event will be attended by Minister of entrepreneurship and technology Jadwiga Emilewicz and deputy minister of science and higher education Piotr Dardziński. Registration

for the conference: https://docs.google.com/forms/d/e/1FAIpQLSce_0819WGwqxz-sAYZ8QBifxnw8D-bukXeTrArpAA1Mc9Wk8Q/viewform

Success of robots from the Wrocław University of Technology in Beijing

2018-08-29

Three medals - gold, silver and bronze - were won by students of the Wrocław University of Technology at the international RobotChallenge 2018 competition in Beijing. Nearly 1.5 thousand robots from 30 countries competed in China. The Freestyle Gold medal was won by the social robot Emys Pro from FLASH Robotics within the „Robotic Checkerboard“ program. The silver medal in the same competition was awarded to the SpiceX 3000 realized by students from KoNaR, Revir 3D and Rapid Troopers. The bronze medal in Line Follower Enhanced competition was won by Chen Shi robot. Its task was to pass as quickly as possible the route, with various obstacles to be avoided by the robot. The RobotChallenge competition organized since 2004 is one of the largest and most prestigious events of this type in the world. Poles win the SmartMoto Challenge competition in Wrocław

2018-08-29

Teams of Wrocław and Katowice technical universities won the international competition of SmartMoto Challenge electric motorcycles in Wrocław. It was the first event of this type in Poland. Previously, the SmartMoto Challenge competition took place in Barcelona and Moscow. Seven motorcycles from three Polish and one Russian universities were registered for the three-day competition in Wrocław. The competition was held in two classes - vehicles with a power of 30 kW, in which LEM Thunder from the Wrocław University of Technology won and 8 kW vehicle, where Elektra of the team of the Silesian University of Technology triumphed. In the SmartMoto Challenge competition teams from universities compete, design and construct a cross-country motorcycle from scratch. The main purpose of the competition is to use the knowledge gained during the studies in a real industrial project. During the competition, the motorcycle is assessed by its dynamic and static capabilities as well as the team's skills in business aspects. Vehicle for disabled persons designed at the Krakow University of Technology to be produced for market?

2018-08-30

Designed a few years ago by the students of the Faculty of Mechanical Engineering of the Krakow University of Technology, an ultra-light vehicle for the disabled persons „Buzz” has been prepared for mass production. A car responding to the needs of disabled residents of large cities, was presented in several programs broadcast by Polish Television. - The car can be used in a convenient and safe way and it can be operated only by hands. The users do not have to change from a trolley to a car. They can enter the vehicle on a wheelchair, which is stuck in a driver's seat – inform students. See TV material: <http://panorama.tvp.pl/38674929/auto-dla-osob-na-wozkach>

Mars rover from the Wrocław University of Technology comes second in the Mars Society and NASA competition

2018-08-30

Mars rover from the Wrocław University of Technology comes second in the Mars Society and NASA competition The Martian rover „Eagle” designed by students from the Off-Road Scientific Circle of the Wrocław University of Technology took the second place in the international competition organized by The Mars Society and NASA. One point was missing for its victory. The competition task was to develop a rover that would deliver 10 tonnes of cargo to the Red Planet using only currently available technologies or technologies that can be developed until 2026. The implementation of the project has to be as simple, safe and, most importantly, cost-effective. 15 students from all over the world competed. The teams from Poland, France and the USA as well as two mixed German-Swedish and Italian-Indian groups qualified for the final. The winners were awarded during the international convention The Mars Society in Pasadena. Wrocław constructors received 5,000 dollars. More: <http://pwr.edu.pl/>

Architecture students of the Silesian University of Technology dominated the #ValenciaCall competition

2018-09-03

Students of the Faculty of Architecture of the Silesian University of Technology took first and second place in the international architectural competition #ValenciaCall. The aim of the competition was to design social housing in Valencia, Spain. Contest participants had to take into account the role of the historic city center and the presence of historic buildings, needs of the local community, local culture and tradition, trends in social housing and the purpose of the building. From among over 100 works sent from all over the world, the jury awarded the Casa Española - a work by Paweł Pacak and Katarzyna Ponińska from the Faculty of Architecture of the Silesian University of Technology. The Casa Española is a project based on the atmosphere of the Spanish city and lifestyle of the residents. The work El Espacio of Marta Błaszczuk, Anna Czapla, Filip Gawin, Kacper Kania and Marlena Michalska was awarded the second place. The project is based on three important pillars: diversity, privacy and openness. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListWiadomosci&Page=1&WebPartTitle2=Number&Filter1Field2=Identyfikator&Filter1Value2=2361>

Congress Impact mobility rEvolution'18 in September in Katowice

2018-09-05

The international congress devoted to the challenges faced by the automotive and transport industries in the context of electromobility and hydrogen technologies and the future of intelligent city infrastructure will take place on 12 and 13 September in Katowice. One of the organizers of the congress is the University of Silesia. During Impact mobility rEvolution'18, the automotive and transport industries will

jointly cooperate with technology and telecommunications companies. About two thousand people will take part in the congress including representatives of business, academia, public administration and startups from Poland and abroad. The agenda of the event includes meetings with investors and representatives of science, business and administration, talks with specialists, as well as speeches of over 150 experts. The content of the congress has been divided into seven thematic packages, and the performances will be held in parallel on four separate stages.

„Nowe Gliwice” Education and Business Center invites participants to the Festival of Innovation and Technology

2018-09-06

Future transport issues, innovative aviation solutions, prospects for the development of the space sector and the future of personalized medicine in Poland are the most important themes of the Festival of Innovation and Technology, which will be held on September 14 at the Education and Business Center „Nowe Gliwice”. Expert meetings in the field of medical technologies, innovative medical engineering projects - «Medica Silesia» and the debate of scientists and representatives of the automotive industry «Future of the Mobility» will be held on the large stage of the Center. At the same time, the Aerospace Forum will be organized on the small stage with the participation of science and business representatives to implement the innovative solutions into industry. The festival will be accompanied by an exhibition of innovative solutions created by scientists and enterprises as well as a summary panel promoting the innovation initiative «Silesian Innovator».

„EIT Awareness Day” in Warsaw

2018-09-10

The National Contact Point for Research Programs of the European Union and the European Institute of Innovation and Technology (EIT) in Budapest invite participants to the „EIT Awareness Day”, which will take place on September 25 in Warsaw. During the conference, the current activity of the European Institute of Innovation and Technology in Poland and in Europe as well as the possibilities of cooperation between entities from both Poland and Europe in the area of research, business and education will be presented. Participation in the conference in Warsaw has been confirmed by: Martin Kern - director of the EIT; Piotr Dardziński - secretary of state in the Ministry of Science and Higher Education and Zygmunt Krasieński, director of the National Contact Point for Research Programs of the European Union. More: http://www.kpk.gov.pl/wp-content/uploads/2018/08/EIT-Awareness-Day-_Poland_Agenda-1.pdf

Fraunhofer Design Center opened at the Opole University of Technology

2018-09-10

The Fraunhofer Design Center for Advanced Light Technologies (FPC ALight) was officially opened at the Opole University of Technology. This is the first in Poland branch of one of the most important institutions supporting industry and implementing new technological solutions. The center will deal with «slimming» materials used in automotive, aviation and civil engineering as well as issues related to coal processing, railway and metal industry and electromobility. The partner of the Opole University of Technology in the project is the Science and Technology Park in Opole. The guest of the event was Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin, who supported the project from the beginning. - The opening of the Center is a historic day for the Opole University of Technology, but also for the entire Polish science and economy. I am happy about this as a Pole and a European - said the minister. More: <https://wu.po.opole.pl/wielka-waga-lekkich-technologiei/>

International automotive conference at the Krakow University of Technology

2018-09-11

Institute of Automotive Vehicles and Diesel Engines of the Faculty of Mechanical Engineering of the Krakow University of Technology and the Automotive Commission of the Krakow branch of the Polish Academy of Sciences invite participants to the cyclical international automotive conference „Konmot 2018”. The modern world requires ecological solutions, low energy consumption, safety and easy operation from the automotive industry. The role of engineers and scientists is the implementation and management of construction and operating processes in this field. The conference, which will take place on September 13-14, 2018, will be accompanied by the presentation of ecological city vehicles, designed by students of the Krakow University of Technology under the supervision of the university's academic staff as part of their engineering and master's theses. More: <http://www.konmot.pk.edu.pl/index.php/pl/>

Researchers at the University of Silesia developed a control switch for smart buildings

2018-09-11

Researchers from the University of Silesia have designed a modern touch switch that is used to operate many electrical devices in smart buildings. The device has been protected by a utility model. The switch can be used in the so-called smart homes and in public buildings equipped with advanced technological solutions. It is the size of a classic light switch and can control properly any home or office equipment connected to the integrated system. It can be used to support entry gates, doors, air conditioners, fireplaces, lighting, audiovisual equipment, blinds, displays, sprinklers and cameras. The switch is easy to use - the user does not have to remember which panel supports the selected device. It has four touch areas with the lit icons symbolizing the functions available at the moment. More: <http://www.us.edu.pl/wlaczniak-do-sterowania-wrzadzeniami-elektrycznych-w-budynkach-inteligentnych>

European Technology Forum to start September 26 in Katowice

2018-09-12

On 26 and 27 September, the European Technology Forum will be held in Katowice, during which a group of specialists will discuss European research and technology policy. Plenary sessions and four thematic conferences are planned, including the „Industry 4.0” conference organized by the Silesian University of Technology. The main goal of the Forum is to discuss the priorities of European science and technology policy and funding mechanisms for research and technological development, in particular those planned for implementation under the Horizon Europe program. Experts will discuss the promotion of creating different types of networks and partnerships - both by industry, science, and public authorities - to avoid duplication of efforts and set common research and development goals. During the event, the goals of the Responsible Development Strategy for Poland in the field of research and innovation by 2020 and 2030, will also be presented. More: <http://euroforum.iztech.pl/forum>

Students of the Warsaw University of Technology to take part in the UAV Challenge Medical Express

2018-09-13

Students from the MeAvio Avionics Research Club, operating at the Faculty of Power and Aeronautical Engineering of the Warsaw University of Technology, will take part in the UAV Challenge Medical Express. The competition is held every two years and involves the best academic teams and teams of professionals involved in the construction of unmanned machines from around the world. This year's competition, which will take place from 24 to 28 September 2018, is organized by the University of Queensland and the Australian Institute for Research and Development. The students of the Warsaw University of Technology will present the drone «Marlin», which performs the missions without operator interference and has the option of automatically changing the

flight route in the event of a possible collision with other users of the airspace. It is a combination of a classic aircraft with a combustion engine and an electric-powered multi-rotor.

Team of the Kielce University of Technology wins the European Rover Challenge

2018-09-18

The Impuls team from the Kielce University of Technology in Kielce won the 4th international robotics competition European Rover Challenge, which took place from 14 to 16 September 2018 in Starachowice. The Raptors team from the Lodz University of Technology took the second place, and the third place was taken by the Canadian team Robotics for Space Exploration from the University of Toronto. The winners of the European Rover Challenge will take part in the prestigious AMADEE-2020 analog mission, organized by the Austrian Space Forum on the Arabian Peninsula in 2020. The robot from the Kielce Impuls team has become the official rover of this mission, and team members will be included in the full cycle of field missions in the Mars simulation. Congratulating the teams, Deputy Prime Minister Jarosław Gowin said: «The nations of the world often fought against each other because of land, I hope that the conquest of the cosmos will take place in a completely peaceful way.” See results: <http://roverchallenge.eu/pl/2018/09/16/wyniki-european-rover-challenge-2018/>

Students of the Krakow University of Technology awarded Young Europeans Acting for Road Safety

2018-09-18

Sylwia Pogodzińska and Dawid Dudek from the Krakow University of Technology have won the international Young Europeans Acting for Road Safety (YEARS) competition. The European Transport Safety Council has awarded their project of the reconstruction of a dangerous pedestrian crossing at Okulicki Street in Krakow. This year's competition was attended by 43 teams from all over Europe. Apart

from the team from Krakow, the teams from Milan, Naples and Vilnius were awarded. The YEARS competition is addressed to young European engineers working to improve road safety. - It's really inspiring when you see how these young people deal with security issues on their own. They identified dangerous places by thoroughly examining data, designed innovative solutions, sought support for the project and tried to publicize it in the media - said Antonio Avenoso, Director of the European Transport Safety Council.

Students of the Silesian University of Technology to take part in the UAV Challenge Medical Express competition in Australia

2018-09-20

Students of the Silesian University of Technology associated in the „High Flyers” scientific circle will take part in the UAV Challenge Medical Express competition in Australia. The purpose of the competition is to demonstrate the usefulness of unmanned aircraft in civil applications, in particular where they can save human life. The competition organized by the University of Queensland and the Australian Institute for Research and Development provides the design and construction of an unmanned aircraft that should perform an exploration and rescue mission in the Australian outback. An autonomous drone must find a sick man cut off from the world, land without a runway, take a blood sample, take off and deliver a sample to the laboratory for further medical analysis. The construction of the students of the University is a plane of vertical take off and landing HF-10 VTOL (Vertical Take-Off and Landing) - a hybrid unmanned platform combining the advantages of a classic quadcopter and a plane.

Researchers from the National Center for Nuclear Research working on the battery of the future

2018-09-21

Researchers from the National Center for Nuclear Research in Świerk together with the United States Army Research Laboratory (ARL) are working on a battery of the future that would be developed of atomic nuclei. According to Marek Kotłowski, press officer of the National Center for Nuclear Research, the project will be possible thanks to the grant obtained from the US Army laboratory. Researchers are to concentrate on the study of 186m Rhenium isotope. 1 gram of it can accumulate as much energy as a popular battery for powering an electric car. Theoretically, it is a very attractive source of energy, but it still needs to be able to load and unload such a «battery». In the works on the new battery, the «Maria» reactor, located in Świerk, will be used.

Gdynia specialist to deal with flight autonomy systems based on artificial intelligence

2018-09-27

The company to deal with the use of drones for various tasks and to develop flight autonomy systems based on artificial intelligence (AI) was established in the Pomeranian Science and Technology Park in Gdynia. Specialists in the field of unmanned aviation have consolidated forces with aviation industry experts and launched the company PELIXAR S.A. It will continue to develop projects related to: SAR operations (Search and Rescue) - use of drones for search and rescue with the possibility of towing a drowning person to a safe place. The new company will also deal with the use of drones for industrial measurements of metal tankers, bulk carriers and container ships, and other technical infrastructure, industrial port facilities. They can be used for ships inspections, critical infrastructure monitoring, as well as patrolling and property protection.

Professor Kaliński joins organizing committee of the World Congress on Theory of Machines and Mechanisms

2018-09-27

Professor Krzysztof Kaliński, vice-dean for science at the Faculty of Mechanical Engineering of the Gdańsk University of Technology, became a member of the 15th organizational committee of the 15th IFToMM World Congress, the World Congress of Theory of Machines and Mechanisms to be held in Krakow in 2019. International Congress for Mechanics and Machine Science The World Congress is a prestigious international scientific conference organized every four years in various countries. Next year, after 50 years, it will be held again in Poland. Professor Eng Krzysztof Kaliński graduated from the Faculty of Mechanical Engineering at the Gdańsk University of Technology in 1980, he received his PhD degree in 1988, he was awarded the postdoctoral degree in 2002 and the title of professor of technical sciences in 2013. From 2015 he is a regular professor. In 2003, he set up a scientific group to research dynamic processes, later renamed the Mechatronics Team, which he continues to run to this day.

Researchers from the Cardinal Stefan Wyszyński University printed a 3D copy of a skeleton from 6.5 thousand years ago

2018-09-28

Researchers from the Institute of Ecology and Bioethics in cooperation with the Center of Information Technology of Humanities and Social Sciences of the Cardinal Stefan Wyszyński University in Warsaw printed a 3D copy of the oldest skeleton found in Poland, the so-called Man from Janowice, which is over 6,500 years old. As the Warsaw University informed, the aim of the undertaking is to preserve a valuable finding for future generations and provide the opportunity to present it at museum exhibitions. The project was created thanks to the cooperation of the State Archaeological Museum, Cardinal Ste-

fan Wyszyński University in Warsaw and the 3D Master company and was financed from the National Science Center funds as part of the «Old material with new methods» program.

Students of the Academy of Fine Arts in Wrocław to design accessories and furniture for animals

2018-09-28

Students of the Academy of Fine Arts in Wrocław (ASP) are designing accessories and furniture for animals. The project is carried out with Labvenn company and co-financed from EU funds will end in December. Thanks to co-financing under the «Lower Silesian Bonus for Innovation» the students of the Academy of Fine Arts in Wrocław are developing unique designs and prototypes of bags and bedding and furniture for cats and dogs. Currently, the work is underway to refine the stylistics and functionality of the products. The developed designs are intended for mass production. Labbvenn is a young company from Świebodzice that offers furniture and accessories for animals, which focuses on modern and attractive design solutions. On behalf of the ASP, Renata Wites-Krzyżanowska from Product Design Studio and Ada Brożyna from the Kinetic Design Studio are providing the comprehensive research on the concept of products and their design.

High Flyers team from the Silesian University of Technology took the fifth place in UAV Challenge Medical Express competition

2018-10-05

The drone, constructed by the High Flyers team, took the fifth place in the international UAV Challenge Medical Express competition in Australia. The team of the Silesian University of Technology turned out to be the best European team. The competition included designing and building an unmanned aircraft that had to carry out a search and rescue mission. The drone had to provide blood samples of the

patient from the remote outland spot to the laboratory in the most autonomous way. It had to cover a distance of 44.5 km, avoiding forbidden areas. UAV Challenge Medical Express is one of the most well-known and prestigious competitions in the field of autonomously controlled unmanned flying systems. It is organized by the University of Queensland and the Australian Institute for Research and Development. The competition is supported by Northrop Grumman, Lockheed Martin and Boeing, and the Department of Defense of Australia.

How to write a project application to the European Space Agency

2018-10-08

The Polish Space Agency together with the European Space Agency are organizing on October 16 - 19, 2018 in Warsaw, a training and workshops entitled „How to write good projects in response to ESA Invitation to Tender for R & D activities”. The Polish Space Agency training is addressed to representatives of industrial entities and scientific-research units. The course includes a three-day workshop on writing a project application for the European Space Agency and training on ECSS standards in the field of «Space Project Management». Classes will be conducted in the form of lectures and workshops in groups of several people. The lectures will be led by experts from the European Space Agency: Olivier Pin, Fabio Mazzaglia, Gian Lorenzo Casini, Gertrud Talvik and Stephane Combes. More: <https://polsa.gov.pl/wydarzenia/zapowiedzi/18-zapowiedzi/726-szkolenie-i-warsztaty-how-to-write-good-proposals-in-response-to-an-esa-invitation-to-tender-for-rd-activities>

Young Programmer's Club opened in Nysa

2018-10-08

Over 2.5 thousand children and their parents will be able to participate in programming workshops at the Young Programmer's Club in Nysa for the next two years. Young Programmer's Clubs are workshop spots, where children and youngsters can learn programming in rooms equipped with various teaching aids - tablets, sets of educational robots and educational mats for learning programming. Classes will be conducted by qualified staff. - Our goal is to create a space to bring learning about programming to children and parents from medium-sized cities. We want them to know that this is not a job for the elite, but a great way to spend time together - said Marek Zagórski, the Minister of Digital Affairs during the opening of the Club in Nysa. The opening of the Young Programmer's Clubs is an element of the Educational and informational campaigns project for the dissemination of benefits from the use of digital technologies.

International conference on high-temperature reactors

2018-10-09

HTR 2018 international conference dedicated to high-temperature reactors and their applications will be held in Warsaw on October 10, 2018. The conference is organized by the National Center for Nuclear Research. The HTR 2018 conference aims to exchange information on research and development in the field of HTR technologies and to accelerate its wide application in industrial heat production. The subject matter includes the current construction of HTR reactors in China, reactors proposed for Canadian mines, research results from European, Japanese and American programs, British plans for small reactors, as well as the presentation of Poland's plans in this field. The patrons of the conference are the Minister of Energy, the Minister of Science and Higher Education, the Polish Committee of the World Energy Council and the European Nuclear Cogeneration Industrial Initiative.

Student of the Silesian University of Technology wins a scholarship of New Technologies for Girls

2018-10-10

Nikola Beblik, student of the first year of biomedical engineering at the Silesian University of Technology, received a scholarship of the fourth „New Technologies for Girls” program, implemented by Intel and the Perspektywy Educational Foundation. The «New Technologies for Girls» program is a response to a minimal presence of female scientists in the area of new technologies. According to different approaches, the share of women in the IT industry is up to 15 percent. The creators of the program, the Intel company and the Perspektywy Educational Foundation, have decided to offer their female graduates and students a support program for their individual development. Scholarship holders will receive various substantive and financial support. They will be mentored by experienced Intel employees. They will also receive a scholarship of 12,000. gross PLN, which will cover part of their expenses during the studies. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListWiadomosci&Page=2&WebPartTitle2=News&Filter1Field2=Identyfikator&Filter1Value2=2408>

Award for the Laboratory of Railway Movement of the Krakow University of Technology

2018-10-11

The Office of Rail Transport settled the contest „Safety culture in rail transport”. One of the awards was received by the Krakow University of Technology for launching the Laboratory of Railway Traffic Engineering. The Krakow laboratory is equipped with railway traffic simulators and enables practical learning of traffic management principles and actions in atypical situations. It was established at the Institute of Road, Railway and Transport Engineering at the Faculty of Civil Engineering at the Krakow University. It is equipped with 12 computer workstations, which reflect the work of the traffic

dispatchers. The studio is used for all students of transport, including rail transport specialties. Ultimately, classes are planned for students of Construction with specialty railways.

Dual studies of Electrical Engineering at the Białystok University of Technology

2018-10-12

Białystok University of Technology has signed a contract with 12 companies. Thanks to this, it was possible to run dual studies at the electrotechnical faculty. - We are starting a program that is new not only at the Białystok University of Technology, but also at most universities in our region - said prof. Lech Dzienis, university rector. For students, it will be a unique opportunity to get closer to practice already during their studies. On the other hand, entrepreneurs who have declared their participation in the project will have the opportunity to «educate» their future employees. The contact between students and enterprises will be much closer during these studies than in any other type of education - added the rector of the Białystok University of Technology. Twelve companies from the electrotechnical industry joined the dual degree project at the Białystok University of Technology.

Students of the Warsaw University of Technology working on a two-stage GROT rocket

2018-10-12

Members of the Student Astronautical Circle, which operates at the Faculty of Power and Aeronautical Engineering of the Warsaw University of Technology, presented the project of a two-stage Grot rocket. - This is our new, two-stage construction, aimed to reach the 15 km limit, which is the upper limit of the airspace available to us, and thus beating the Polish record of the flight altitude of the amateur rocket belonging currently to the rocket K1-X of Polish Rocket Society. A slightly modified structure of students' rocket can ultimately fly up to 60 km. The main components of the rocket are a solid propel-

lant engine with a maximum thrust of 7500 N and a narrow hull completed with a brass head. A large engine is supposed to accelerate a smaller tip to almost three times the speed of sound. The tip, thanks to its high inertia and small size can slow down at a slow pace to Earth. More: <https://www.facebook.com/SKA.PW/>

Students of Poznań University of Technology win in the EDP University Challenge 2018 competition

2018-10-15

Poznań University of Technology students took the second and third place in the Polish EDP University Challenge 2018 competition organized by the global leader in the renewable energy market, EDP Renewables. The second place was taken by «Electric Vehicles Energy Storage Management System» by Mikołaj Walkowiak and Józef Borys. The third place was taken by Edyta Bosacka and Damian Sikora, authors of the project «Hill heating system to improve the functioning of bee hive» The task of the EDP University Challenge participants was to prepare the project in one of four areas: Innovation - projects increasing the use of renewable energy sources; Efficiency - researching technological innovations that enable increasing the efficiency of production processes of renewable energy sources; Marketing and strategy - increasing awareness of renewable energy and / or EDP Renewables activity promotion in Poland and Sustainable development - environmental protection and local development.

Lectures by Prof. Yoshida at the Academy of Mining and Metallurgy in Krakow

2018-10-16

By October 18, 2018, in the Energy Center of the AGH University of Science and Technology in Krakow, Professor Kazuya Yoshida from Tohoku University in Japan will hold a series of lectures. Professor Kazuya Yoshida is an outstanding global specialist in the field of construction of satellites and space robots. He also acts as CTO (Chief Technology Officer) in the

company ispace realizing the project of the lander, which is to be soon delivered to the Moon. According to the organizer of the event, which is the Faculty of Mechanical Engineering and Robotics AGH, the Professor Kazuya Yoshida's lectures will be devoted to the following topics: orbital robots, planetary works, microsattellites and future issues.

Agritourism resort with glass houses designed by a student of the Rzeszów University of Technology

2018-10-17

Student of the fifth year of architecture at the Rzeszów University of Technology Jakub Lazarowicz created a project of a modern agrotourism center in the Bieszczady Mountains, which is built up with light, glass summer houses. The diploma project was created under the supervision of Dr. Rafał Mazur from the Faculty of Civil Engineering, Architecture and Architecture at the Rzeszów University of Technology. The assumption of the project was light, glass, towering houses with a modern form, integrated into the Bieszczady nature. They are to refer to the lightness of sails in the Soliński Lake. One of the main inspirations was the climate of this area of the Bieszczady and the Solina Lake. The agrotourism center in this form is an attempt to introduce new quality in this unique area with a huge potential - says Jakub Lazarowicz, the author of the project.

Students of Gdańsk University of Technology receive scholarships of the „New Technologies for Girls” program

2018-10-17

Six Gdańsk University of Technology female students received scholarships from the fourth „New Technologies for Girls” program. The winners will receive financial support, mentoring and the internship at the Intel Research and Development Center in Gdańsk. Scholarships were received by Justyna Dziarnowska (biomedical engineering), Barbara

Klaudiel (automation and robotics), Angelika Konderak (IT), Julia Pacuła (IT), Katarzyna Wojdalska (nanotechnology), Joanna Woźna (IT). Students will receive support in the amount of 12 thousand PLN to cover part of expenses related to studies, mentoring by employees of Intel and the internship at the company's headquarters. The «New Technologies for Girls» program was created by Intel Technology Poland in cooperation with the Educational Foundation «Perspektywy». This is the first scholarship program in Poland designed exclusively for women who see their future in the IT area. More: <https://www.stypendiadladziewczyn.pl/pl/>

CyberLAB team of the National Center for Nuclear Research has detected a gap in the PLC software from Siemens

2018-10-18

Researchers from the National Cybersecurity Laboratory of the Center for Nuclear Research have detected a dangerous gap in the software of one of the commonly used PLC logic controllers, which is used, among others, in nuclear installations. The discovered vulnerability could result in denying access what would lead to loss of connectivity with the controller. The manufacturer has already fixed the gap, recommending necessary corrections to all users. As part of the participation of the National Center for Nuclear Research in the «Enhancing Computer Security Incident Analysis at Nuclear Facilities» program run by the International Atomic Energy Agency, a specialized CyberLAB laboratory is being created.

New electric motorcycle designed by students of the AGH University of Science and Technology in Krakow

2018-10-18

On Thursday, October 18, 2018, the presentation of the latest electric motorcycle constructed by students from the E-Moto AGH team will take place on the campus of the AGH University of Science and Technology in Krakow. The «Staszic» motorcycle is the second motorcycle designed by the team from AGH. During the presentation, students will present the possibilities of the motorcycle during a test drive and will talk about the parameters of their machine, comparing it to their previous design. The latest construction of AGH students took part this year at Red Bull Megawatt 111, the most prestigious competition for off-road motorcycles in Poland.

New laboratory at the University of Technology and Life Sciences in Bydgoszcz

2018-10-18

At the University of Technology and Life Sciences in Bydgoszcz, a new laboratory will be constructed to conduct testing of rail vehicle equipment. The cornerstone for the construction of a new research facility was laid on October 16. The results of the tests carried out in the new hall will be used to improve the reliability of rail vehicles manufactured by the Pojazdy Szynowe PESA Bydgoszcz. The main hall's user will be the Faculty of Mechanical Engineering of the Bydgoszcz University. The building is part of the project «Laboratories of technical and exact sciences dedicated to the development of research potential in the field of innovative solutions and technologies of key importance for the economy of the Kuyavian-Pomeranian Voivodeship». The aim of the project is to improve the quality and increase the possibility of conducting high-quality scientific research, including the implementation.

Graduates-innovators from the Gdańsk University of Technology awarded

2018-10-18

Gdańsk University of Technology for the 16th time awarded the Prof. Romuald Szczęsny Prizes to university graduates. The competition jury rewards student works characterized by a high level of innovation. The first award was received by Szymon Grocholski for the project «Platforms for the rehabilitation of children with cerebral palsy». Awards and financial prizes were also given to: Agnieszka Mikołajczyk for her work «The use of computational intelligence methods for diagnosis and classification of abnormal states - Selected applications in medicine»; Mateusz Bryk for «Analysis of the problems of rapid start-ups and withdrawals of high-power turbines» and Mateusz Burtowy for «Antenna with controlled beam for V2X applications in the IEEE 802.11p standard». Professor Romuald Szczęsny graduated from the Electronics Department of the Gdańsk University. His PhD thesis and pioneering research work focused on modeling and simulation of power electronics systems.

Wrocław University of Technology completes the construction of the GEO-3EM research center Energia, Ekologia, Edukacja

2018-10-22

The construction of a new research center at the Wrocław University of Technology is nearing completion „GEO-3EM Energia, Ekologia, Edukacja”. The new building is being built in the vicinity of the „Polinka” cableway station and the Geocentrum educational and research complex. In a new facility with an area of over 4,500 sq m there will be more than a dozen laboratories, which will be used primarily by scientists from the faculties of land and water construction; chemical; electronics; geoen지니어ing; mining, geology and mechanical department. In the laboratories there will be about 150 specialist devices worth approximately PLN 70 million. The whole facility will serve the purpose of

conducting research and development works focused on strategic areas for the development of the region, such as: spatial mobility, natural and secondary raw materials, production of machinery and equipment, and material processing. The total value of the project is approx. PLN 100 million. The object is to be put into use in early 2019.

National Academic Competition „Concrete Architecture” settled

2018-10-25

The 19th National Competition on Concrete Architecture was organized jointly by the Architecture Department of the Krakow University of Technology and the Association of Cement Producers. The competition included the projects from eleven architectural faculties throughout Poland. They were judged by a jury chaired by Prof. Eng. Kazimierz Kuśnierz, deputy dean of the Architecture Department at the Krakow University of Technology. The equivalent prizes were awarded to: Aleksandra Kozłub from the Białystok University of Technology for the work «Eluwium: Polis of diving, Galway Bay»; Michał Przetaczek from the Andrzej Frycz Modrzewski Krakow Academy for the work «Vineyard Wieliczka» and Anna Kaleta from the Krakow University of Technology for the work «Library of the Krakow University of Technology».

Researchers from Poland and Germany developed a fish and a seal - biomimetic submarines

2018-10-25

Scientific-industrial consortium composed of Naval Academy in Gdynia, Krakow University of Technology, Industrial Institute of Automation and Measurements, R&D Company Forkos Ltd, the Bundeswehr Naval Technology Center and the Fraunhofer Institute presented two biomimetic submarines. The constructions were tested in the Gulf of Gdańsk near the pier in Mechelinki. During the show, the underwater vehicles moved autonomously on the set trajectory, bypassing obstacles and recording the set signals. As part of the European Defense Agency project launched in 2015, two BUVs (Biomimetic Underwater Vehicle) imitated a fish and a seal. In the future, both will act as a shoal of biomimetic underwater vehicles. In 2017, the Polish-German consortium was joined by research centers from Portugal, which are developing the third submarine.

Researchers of the Cardinal Stefan Wyszyński University perform at the 9th Mazovia Development Forum

2018-10-26

The possibilities of modern technology, 3D printing, photogrammetry, unmanned aerial vehicles and VR technology were presented to the participants of the 9th Mazovia Development Forum by scientists from the Center for Digital Science and Technology of the Cardinal Stefan Wyszyński University in Warsaw. The Center experts presented in detail «Application of 3D printing in museology, archeology, architecture and medicine on selected examples implemented by UKSW in Warsaw», «Digitization of cultural heritage monuments using photogrammetry» or «Printing in technology CJP, SLA and FDM. Solid and surface modeling. Models created on the basis of 3D scanning». They also answered questions about «Innovative vocational courses for drone operators, enabling the acquisition of VLOS, BVLOS» and also presented new opportunities for professional development with the use of drones.

Mining Economic Forum in Krakow

2018-10-29

“Act as a miner, think like an economist” - this is the slogan of the Mining Economic Forum, organized on 5-7 November 2019 by the AGH University of Science and Technology in Krakow. The event is organized by the Faculty of Mining and Geoengineering of AGH in cooperation with the Science and Traditions Mining Foundation. The Forum's program is divided into 5 discussion panels: Poland's raw materials policy - challenges and risks; Mining enterprises and their development strategies in creating their value for stakeholders; Support for raw materials enterprises and their suppliers on export markets; New regulations in the field of fuel quality in Poland and Methods of optimization of the production process in opencast mining. More: <http://www.gfe.agh.edu.pl/>

Students of the AGH University of Science and Technology in Krakow develop retractable footbridge

2018-10-31

Students of the AGH University of Science and Technology in Krakow created a retractable footbridge. This is the first project of this type implemented in Poland. The model developed by AGH students is the effect of searching for innovative solutions in architecture. The construction, measuring 3 m, 35 cm long and 50 cm wide, is powered by 14 electric motors. The inspiration for students was the Rolling Bridge in London. However, the AGH model is retracted in a completely different way than the London one as students used their original solutions. The creators of the footbridge are Eng. Michał Pyza and Eng. Piotr Roszkowski from the Scientific Circle of Structural Mechanics «Axiom», which operates at the Faculty of Mining and Geoengineering. The electronic equipment was developed by Tomasz Tatara from the Faculty of Mechanical Engineering and Robotics. See the video: <https://youtu.be/iNjIAEbrn5Y>

Dr Eng Judyta Cichocka from the Wrocław University of Technology becomes the laureate of the journal Polityka Science Award

2018-11-02

Dr Eng Judyta Cichocka from the architecture faculty of the Wrocław University of Technology became a laureate of the Political Science Award. The researcher won commemorative diploma and prize 15 thousand PLN in the technical science category. The laureate deals with parametric design and optimization techniques for architectural design. They consist in modeling in three dimensions using programming, which makes it easier for designers to make formal, spatial and material decisions. Dr Cichocka is a co-author of the «Silvereye» optimization program based on particle swarm optimization. According to the results of its research, it can solve design problems many times faster and more efficiently, what improves the quality and ensures higher energy efficiency of architectural realizations. The Scientific Awards of the journal «Polityka» are awarded in the following categories: humanities, social sciences, technical sciences and life sciences.

Students of the Silesian University of Technology and architects design the Municipal Stadium in Katowice

2018-11-02

The project of an employee and students of the Faculty of Architecture of the Silesian University of Technology won the International Urban and Architectural Competition for the Municipal Stadium Project in Katowice. The construction according to the awarded project will start in two years. The jury awarded the prize for creating a homogeneous, integrated architectural group with minimalist architecture and an intimate scale, which naturally uses the topography of the area and its natural conditions. The authors of the project are Dr Eng Damian Radwański from the architecture department and Marius Schlesiona, jointly creating the RS-Architekci company. The project was co-created by students of the University: Jakub Kaprał, Karolina Rusek, Piotr Szenkowski and Marcin Woźnica. The stadium will be built near the A4 motorway, at the entry way to Katowice from Wrocław. The complex will consist of 6 training fields, a car park for 1.7 thousand cars, football stadium for 15 thousand fans, multifunctional sports hall for approx. 3 thousand spectators and other sports facilities. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListaWiadomosci&Page=1&WebPartTitle2=News&Filter1Field2=Identyfikator&Filter1Value2=2445>

Students of the Wrocław University of Technology to develop a solar boat for the competition in Monaco

2018-11-05

Students of the Wrocław University of Technology are constructing a boat powered by photovoltaic panels, with which they want to take part in international competitions in Monaco. The engine used in the project will have a power of about 5 kW, and the hull is to be made of carbon fiber. The project

involves the construction of a single boat with a length of approx. 5.5 m, equipped with photovoltaic panels and hydrofoils - special bearing flaps mounted under the fuselage. Such solutions are used in hydrofoils, but in the case of solar boats it allows for more efficient use of engine power and panels. After getting the right speed they cause the hull to emerge from the water, thanks to which the resistance decreases and the boat can flow much faster. The competition in Monaco is the largest and most prestigious event of this type in the world. Students and professional teams of constructors compete in three competitions - acceleration, slalom and races. More: <http://pwr.edu.pl/uczelnia/aktualnosci/lodz-solarna-na-zawody-w-monako-11014.html>

Autonomous ship created at the Maritime University of Szczecin

2018-11-05

The Maritime University of Szczecin has completed the first stage of building an autonomous unmanned ship. The ship was developed by the Department of Ocean Engineering and Shipbuilding and passed the first tests on waters. Launching the ship completes the first stage of construction, from the design and construction of the model and equipping it with propellers on the bow and stern to installing the power, remote control and telemetry systems. In the next stages of constructing, the autonomous ship will be provided with installation of sensors for measuring position, speed, course, distance from the wharf or other objects; development of a mathematical model for controlling the ship and its verification on the water; construction and installation of a computer system of autonomous control of the ship as well as development of algorithms and software for autonomous control of the ship and procedures for its communication with other units.

Fiat Chrysler Automobiles Award

2018-11-06

Until 15 November 2018 students can submit master's theses and PhD dissertations within the 20th competition for the Fiat Chrysler Automobiles Award

(FCA). The competition is for students dealing with the issues devoted to the broadly understood Automotive subjects and who defended their theses at the Warsaw University of Technology in the academic year 2017/2018. The aim of the competition is to support young scientists interested in Automotive topics, including innovative construction solutions and research methods. The Competition for the Fiat Chrysler Automobiles Award is announced on the basis of an agreement on scientific and technical cooperation between the FIAT Research Center and the FCA companies that co-finance prizes and three Polish universities: Warsaw University of Technology, Silesian University of Technology in Gliwice and the Technical and Humanities Academy in Bielsko-Biała.

Students of the Silesian University of Technology awarded for the electric motorcycle „Elektra”

2018-11-06

Student Scientific Circle of the Silesian University of Technology - PolSI Racing received the Internet users award in the KoKoN Scientific Circles' Competition for the project „Construction of an electric motorcycle PolSI eRacing” Elektra”. The KoKoN competition is addressed to students of technical universities operating in scientific circles. It is to encourage students to take part in scientific and social activities and to help integrate the student community and build dialogue between technical universities in Poland and external companies. The prizes were awarded in six categories: engineering project; conferences; research; innovation and new technologies; IT and Internet users' award. The organizer of the nationwide KoKoN competition is the Technical Universities Forum, which is made up of students' self-governments of Polish technical universities. 46 projects were submitted to the competition for the Internet users' award, with over 3.5 thousand Internet users voted.

Creators of the PW-Sat2 satellite looking for sponsors of their trip to the USA

2018-11-07

Students of the Warsaw University of Technology who have developed the PW-Sat2 satellite, are looking for sponsors of their trip to the United States to see the launch of the rocket with their satellite on board. PW-Sat2 is to be taken out into space on board the Falcon 9 rocket. The currently scheduled launch date of the rocket is November 19. It will be launched from the Vandenberg base in California. PW-Sat2 is a small satellite with dimensions of 10x10x20 cm, whose main goal is to fight space debris. Students can be supported by paying the money for their trip through the site zrzutka.pl at: <https://zrzutka.pl/e6gdvw>

University of Zielona Góra to launch Laboratory of Materials Testing Engineering

2018-11-07

The University of Zielona Góra will receive almost PLN 12 million to create a Laboratory for Materials Research Engineering. The money comes from the Ministry of Science and Higher Education as part of the Regional Initiative of Excellence program. The research in the Laboratory will be carried out in the field of nanotechnology; the effect of vacuum and radiation on the properties of materials; methods of coating materials, properties of materials and metamaterials (including strength); research on optical methods of meta, micro and nanomechanical systems. The project is to be used to increase the research potential of current research groups, to further develop international cooperation in the field of science, to develop methods of increasing innovation and greater effectiveness in obtaining funds for research. It is also intended to prepare young research staff to work in interdisciplinary teams.

Gdańsk University of Technology scientists developing an innovative method to determine the trajectory of a rail vehicle

2018-11-09

Scientists from the Faculty of Electrical Engineering and Automation and Faculty of Civil Engineering and Environment at the Gdańsk University of Technology participate in a research and development project of the innovative method for determining the precise trajectory of a rail vehicle. Within its framework, a reliable and precise method for determining the axis of the railway track will be developed using the mobile satellite measurement method, in order to record the geometrical shape of railway lines in the public reference system PUWG2000. Precise identification of railway track axes creates a number of possibilities related to the use of digital data on the location of tracks and accompanying engineering structures. The project implemented by a consortium of the Gdańsk University of Technology and the Maritime University in Gdynia received funding under the BRİK program - Research and Development in Railway Infrastructure. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGNcmoQv7K0/content/naukowcy-z-pg-opracowuja-innowacyjna-metode-momiarow-mobilnych-zycie-anten-atel-itarnych

Satellite with the Wrocław telecommunications system to launch into space

2018-11-14

The scientific satellite ESEO S-50 is prepared for a flight into space with telecommunications system, constructed by scientists and students of the Wrocław University of Technology. The launch from the Vandenberg space base in California is scheduled for November 19. The system, developed and created entirely at the University, consists of a microwave transmitter, an on-board computer and a microwave antenna. Its task is to manage the exchange of transmitted data. The whole device weighs 0.8 kg, while the antenna is made of ul-

tra-light materials and weighs less than 40 grams. The transmitter allows to transfer satellite data to a ground station with a speed of 10 Mbit / sec. The ESEO (European Student Earth Orbiter) satellite was created as part of the educational program of the European Space Agency, implemented since 2000. It will be lifted on the SpaceX Falcon 9 rocket to 550 km orbit.

Poland in Space - cosmic November

2018-11-15

- We have talented, ambitious students who are passionate about space technologies. Warsaw University of Technology is a leader in this field. Thanks to the PW-Sat2 mission and, I hope, the successful PW-Sat2 mission, it will be possible to activate other academic centers in Poland - said Grzegorz Brona, president of the Polish Space Agency, in an interview for Space24. Grzegorz Brona announced that in the second half of November 2018, apart from launching the Polish student satellite PW-Sat2 into space, launching the Finnish-Polish satellite observation Earth ICEYE-X2, launching the satellite of the European Space Agency with a telecommunications system prepared in Poland, launching the test Polish suborbital rocket to the height of 15 km and Mars landing of the NASA InSight probe with the Polish mechanism are planned. The events will be promoted by the campaign under the slogan «Poland in Space - cosmic November» implemented with the support of the Polish Space Agency and the Ministry of Enterprise and Technology.

Students of Białystok University of Technology to participate at IMAV 2018 competition in Australia

2018-11-21

Until November 23, 2018 students of the Białystok University of Technology were taking part in the International Micro Air Vehicle Competition and Conference in Melbourne. Students from the Robotic Science Club and the Mechatronics Scientific Circle of the Białystok University flew to Australia for IMAV 2018 to present their four drones. Students' drones are original, independently constructed four-rotor vehicles with on-board computers and own software. The drone competition includes the creation of a map of the area, finding a wounded firefighter in the forest, detecting metal hidden underground and locating the position of the simulated threat.

Park of Space Technologies in Zielona Góra will be launched soon

2018-11-22

The administration of the Lubuskie voivodship announces a call for the implementation of the „Park of Space Technologies in Zielona Góra” project. The park is to be built on a plot in Nowy Kisielin belonging to the University of Zielona Góra. The concept of the Park assumes that the basis for its activities will be modern and professionally equipped laboratories, devices and test stands as well as data processing centers, whose profile will correspond to the directions of research and implementation work expected by companies operating in the innovation and space area. The park is to increase the innovativeness of the region. The Letter of Intent confirming the will to cooperate for the implementation of the project was signed in April by the Lubuskie Voivodeship, the Space Research Center PAS and the University of Zielona Góra. The partner is the HERTZ Systems Ltd. More: <http://www.infoserwis.uz.zgora.pl/index.php?rusza-konkurs-na-budow-parku-technologiei-kosmicznych>

PKP Group and the Industrial Development Agency S.A. to look for innovation for the railways

2018-11-23

As part of launched „INNOVATIONS - # Kolej2023” the start-ups will be able to submit their modern solutions that may be applicable on the railway. The jury composed of representatives of four railway companies and venture capital funds will select the winners for attractive financial prizes. The organizers will look for modern solutions in the following categories: Railway for a Passenger; Innovative Railway Technology; Modern Marketing and Sales and Ecology, Electro-efficiency, Electromobility. Representatives of start-ups, small and medium-sized enterprises and research and development units may report to the competition. Developers of exceptionally interesting solutions can get the chance to carry out a pilot implementation within the infrastructure of the PKP Group. The competition is organized by PKP S.A., PKP Intercity S.A., PKP Polskie Linie Kolejowe S.A., PKP CARGO S.A. and Agencja Rozwoju Przemysłu S.A.

West Pomeranian University of Technology awarded in the contest „Website without barriers”

2018-11-23

The website of the West Pomeranian University of Technology in Szczecin was awarded in the nationwide competition „Website without barriers.” The jury awarded the service that complies with WCAG 2.0 requirements and has been consistently maintained and supplemented in a friendly way for people with disabilities. WCAG 2.0 is a wide range of recommendations for creating websites to be more accessible. This award means that the service is friendly and adapted to the needs of people with various disabilities: blindness, partially sighted, deaf or with restricted organs. The prize was won by Anna Czekalska, www.zut.edu.pl website coordinator and administrator, who creates the university website every day implementing WCAG 2.0 standards. She also trains content editors and coordinates their work.

Automotive laboratory at the West Pomeranian University of Technology

2018-11-26

The Faculty of Computer Science of the West Pomeranian University of Technology in Szczecin has launched the GlobalLogic Automotive Lab, dedicated to the automotive issues. Students will acquire knowledge and practical skills in the field of hardware and software for the automotive industry and embedded systems. GlobalLogic has equipped the laboratory with the necessary equipment. Each single workshop has an infrastructure that reflects processing the part of the on-board electronics of the vehicle and software functioning in modern cars. Students will have the opportunity to learn programming electronic car systems with an example of implementation of various types of sensors (e.g. proximity sensors, temperature), and a simple multimedia system controlled by a simulated and real steering wheel. They will also learn in practice the protocols used for communication between various electronic components.

Day of the Young Engineer at the Krakow University of Technology

2018-11-27

The Krakow University of Technology together with the Builder journal, as part of the „Builder for the Young Engineers” educational program, is organizing the Day of the Young Engineer on November 29, 2018. The participants of the event will take part in lectures divided into two thematic blocks. The first will be devoted to solutions and technologies in modern construction. The second one will discuss engineering challenges based on specific examples of completed investments. The lectures will be conducted by outstanding engineers representing the largest companies from the construction industry. More: <http://buildercorp.pl/2018/11/14/dzien-mlodego-inzyniera-krakow-29-11-2018/>

Date for launching a rocket with a satellite of Warsaw University of Technology's students

2018-11-28

SpaceX (Space Exploration Technologies Corporation) plans to launch a Falcon 9 rocket on Wednesday, November 28. The satellite is constructed by students of the Warsaw University of Technology and will be launched to the orbit of Earth. The most important target of the PW-Sat2 mission will be testing the deorbiting sail. The strategic partner of the project are Polish companies Future Processing and FP Instruments, involved in the software and purchase of the on-board computer. The start can be postponed for one day, on Thursday, November 29. The PW-Sat2 project was launched in 2013. Students worked on satellite components in the Space Research Center of the Polish Academy of Sciences, the Center for Advanced Materials and Technologies CEZAMAT and the Innovation Management and Technology Transfers Center at the Warsaw University of Technology.

Works of young architects from Vienna presented at the exhibition of the Wrocław University of Technology

2018-11-28

Until December 2, the exhibition „YoVA 4 Young Viennese Architects and Landscape Architects” - „Young Viennese architects and landscape architects” - can be visited at the Center for Knowledge and Science and Technology Information of the Wrocław University of Technology. The exhibition presents the works of young architects from the 11 Vienna design offices, selected for a competition organized by Vienna authorities. Only those partners that have their headquarters in Vienna could take part in it, provided they implemented at least one project in Vienna, and the age of the studio owner does not exceed 45 years. The YoVA 4 is the fourth Young Architects competition, and the catalogue of the companies present at the exhibition is a collective portfolio of the young generation of Viennese

architects. The exhibition was organized in cooperation with the Austrian Consulate in Wrocław.

Students' science club of the Wrocław University of Technology wins the Pro Juvenes competition

2018-11-29

The „Robocik” Scientific Association of Automation and Robotics won the Pro Juvenes competition organized by the Students' Parliament of Poland. Students of the Wrocław University of Technology were appreciated for their creative activities and innovative projects. The main project of the young constructors is the autonomous underwater robot. In August 2018, it took part in the RoboSub competition in California, reaching the semi-finals and winning a special prize for the best computer simulation in the Unity environment. Students announce the construction of a new version of the robot to fight for top positions in the competition. The «Robocik» has been operating at the Faculty of Mechanical Engineering since 1997 and is one of the oldest at the university. The student projects included sorting industrial robot using artificial neural networks, a vision system for work, as well as an autonomous vehicle model.

Opole vocational education support project is the best in Europe

2018-11-29

The project „Opole Vocational Schools closer to the Labor Market2” implemented in the partnership of the Opole University of Technology with the Regional Education Support Team, the Opolskie Center for Economic Development and the Opole City Office was recognized as the best in Europe in the category „European funds for excellence”. As part of it, preparatory courses for technical studies for technical secondary school students and classes for vocational school students took place at the university - including programming lessons using ArduinoUNO circuits, AutoCAD support, programming using Lego Mindstorms EV3 and 2D and 3D computer graphics. The project also included workshop activities in the

combustion engine laboratory, aerodynamics and hydrodynamics laboratory for machines, devices and building structures, and the reverse engineering automation and reflexology laboratory and a teacher training course «3D graphics modeling and animation of objects in the Blender».

Students of Construction Faculty of the Lodz University of Technology win the 4th National Competition of Wooden Bridges

2018-12-04

Students of the Faculty of Civil Engineering, Architecture and Environmental Engineering of the Lodz University of Technology won the IV National Competition of Wooden Bridges. This is the second victory of the students from Lodz, as they also won last year's competition. During the competition in 2017, the bridge constructed by students from Lodz endured the weight of 68.40 kN, this year it endured the weight by almost 12 kN higher than in the previous year, exactly - 80.89kN. The suspended structure has been designed based on the carpentry solutions of the primary girders, based on modern connections.

XIV Polish-German Student Metallurgy Seminary in Krakow

2018-12-04

The 14th Polish-German Student Metallurgy Seminar will be held on December 6-7, 2018 at the AGH University of Science and Technology in Krakow. The event is organized by the Student Scientific Society of Metallurgy of Steel and Steel. The seminar has been organized for 13 years and is held alternately in Krakow and in Freiberg in Germany. It is the result of cooperation between two friendly faculties: Faculty of Metal Engineering and Computer Science, AGH and Institut für Eisen - und Stahltechnologie TU Bergakademie Freiberg. The seminar will also be attended by representatives of the Silesian University of Technology, the Częstochowa University of Technology and students from the Czech Republic, Japan, China and Ukraine.

Graduates of the Krakow University of Technology become laureates of the Honorary Award of the Association of Polish Architects

2018-12-06

The Association of Polish Architects (SARP) awarded the graduates of the Krakow University of Technology: Piotr Lewicki and Kazimierz Łatak. Architects from Krakow for their outstanding creative activity. The jury emphasized that most of Piotr Lewicki and Kazimierz Łatak projects have unique features that confirm the identity of the place and enrich the natural and cultural environment. Their projects of multi-family buildings in Wrocław, the development of the Ghetto Heroes Square in Kraków and the 100-year anniversary hall of the Cracovia sports club are particularly noteworthy. Piotr Lewicki and Kazimierz Łatak graduated from the Architecture Department of the Krakow University of Technology in 1990. Kazimierz Łatak is also a graduate of the Faculty of Civil Engineering. In the years 1992-1999, architects were employees of the Krakow University of Technology. More: http://www.sarp.org.pl/pokaz/honorowa_nagrada_sarp_2018,2644/

Students of the Wrocław University of Technology won the housing architecture competition

2018-12-06

Students of the Faculty of Architecture of the Wrocław University of Technology took first and third place in the national competition „Habitat Now” for projects in the field of housing architecture. The first prize was received by Katarzyna Ponińska for the work «Connectiv housing» - My project is of course conceptual, but it also draws attention to important aspects that are neglected in today's designing of developer housing, namely security, understood as a higher social awareness and better neighbor relations, not a fence, monitoring or guard, but rather connection with nature, a substitute for rural life in

the city. The whole idea is connected in the form of a city Multifamily residential housing, which makes the project more real and accessible. The third place was taken by Wojciech Szkarłata for „Sport & Living Hybrid” project. The concept assumes combining a large-scale facility with a sports function in a multi-family housing, which facilitates interpersonal relations and human contact with sport.

Students of the Białystok University of Technology win Robotex 2018 competition

2018-12-07

Students of the Białystok University of Technology won the second and third place in the finals of the Robotex robotics competition 2018. The competition took place in Estonian Tallinn. This is another success of students from Białystok, the world champions in constructing and fighting robots on the ring. Students from the mechanical faculty of the Białystok University of Technology have already won at international robotics competitions in China, the United States and Romania. Financial support for the construction and improvement of their constructions and participation in the competition was given to the team as part of the project of the Ministry of Science and Higher Education «The best of the best! 3.0. «

Research on the impact of building heating on air quality in Wrocław

2018-12-07

Researchers from the architecture and environmental engineering faculty at the Wrocław University of Technology will examine the impact of building heating on air quality in Wrocław. The study will be financed by the Municipal Office in Wrocław. This big problem facing Polish cities is so-called low emissions related to the combustion of solid fuels as hard coal, lignite, wood, eco-pea coal or biomass for heating buildings. Scientists from the University will start this year's several-stage research to determine the density of heat sources for solid fuels depending on the characteristic parameters of build-

ings. Researchers will check the actual operation of the heating installation, the area heated by a single source, the dynamics of the current changes in the method of housing heating and social attitudes towards the planned changes. In addition, field tests are to show the percentage of units equipped with smoke / carbon detectors. More: <http://pwr.edu.pl/uczelnia/aktualnosci/wspolne-badania-nad-poprawa-jakosci-powietrza-we-wroclawiu-11041.html>

Lodz University of Technology starts cooperation with Wielton S.A.

2018-12-10

Lodz University of Technology has started cooperation with the Polish company Wielton S.A. - the largest manufacturer of semi-trailers, trailers and car bodies in Poland. Wielton is one of the largest manufacturers in the world. The letter of intent regarding cooperation was signed by Prof. Sławomir Wiak, rector of the Lodz University of Technology and Mariusz Golec, President of the Board of Wielton S.A. In the signed document, the parties expressed their willingness to undertake joint activities in the field of cooperation between the academic community and the Wielton company by educating students for meeting the needs of an economic partner, creating a dual degree program, providing internships in the company. The cooperation will also concern joint research and cooperation in gaining funds for project financing.

University of Zielona Góra receives Elsevier Award

2018-12-11

The University of Zielona Góra received the Elsevier Research Impact Leaders award in 2018 in the Engineering and Technology category (engineering and technical sciences) for publications and citation in the field of material engineering. - The competition was really high in the Engineering and Technology category. Small differences in results of the competitors proved that the level is very balanced not only among the nominees, but generally, among all universities in the country. The winners' publications were cited at 117% of the world average. The citation rate is, apart from the increase in the number of publications in the most prestigious scientific journals, and publications with the participation of foreign co-authors, the most important evaluation criterion. The award promotes high quality research and internationalization, and identifies and distinguishes universities whose research work has the greatest impact on the visibility of Polish science in the world.

AGH University of Science and Technology becomes a leader in the competition „Modern material technologies - TECHMATSTRATEG”

2018-12-12

The National Center for Research and Development has announced the results of the second competition as part of the strategic research and development program „Modern material technologies TECHMATSTRATEG”. Half of the 12 projects recommended for financing will be carried out by the consortia with the participation of the AGH University of Science and Technology in Kraków.

The TECHMATSTRATEG program covers five strategic areas: construction materials technologies, technologies of photonic and nanoelectronic materials, technologies of functional materials and materials with designed properties, waste-free material technologies and technologies of biodegradable engi-

neering materials and material technologies for energy storage and transmission. TECHMATSTRATEG is to stimulate the growth of innovation and competitiveness of the Polish economy. The total budget of the program is approx. PLN 200 million.

Mars rover developed by students of the Wrocław University of Technology awarded in Estonia

2018-12-12

The Unconventional Vehicles Circle OFF-ROAD took first place in the prestigious Robotex 2018 competition in Estonia. Students of Wrocław University of Technology were awarded for their Mars rover Scorpio X. Scorpio X is the sixth rover created by members of the OFF-ROAD circle. It has a modular structure, and its construction was made mainly of aviation aluminium and polyamide, light materials with excellent mechanical properties. The tires of the vehicle have very good adhesion features due to being made of corduroy and filled with foam granulate. The rover has four-wheel drive, each wheel is powered by a separate BLDC 250W engine. Thanks to this, it has enough power to overcome even the most demanding terrain and obstacles, such as holes and steep approaches. Robotex is the biggest international event addressed to fans of robotics. It takes place in the exhibition center in Tallinn. More: <http://pwr.edu.pl/uczelnia/aktualnosci/scorpio-x-nagrodzony-w-estonii-11049.html>

Polish suborbital rocket from the SIR segment designed in Gdynia

2018-12-12

Engineers from the SpaceForest company are working on a suborbital project of SIR (Suborbital Inexpensive Rocket) rockets. Their rocket Perun will compete with other rockets of this type. The Perun is designed and developed by SpaceForest as part of a project co-financed by the National Center for Research and Development. The aim of the project is to create the first Polish rocket capable of 50 kg of cargo to the altitude of 150 km. The launch of a full-

size rocket model is planned for the fourth quarter of 2019, while the ready rocket is to be launched in 2022. According to the president of Space Forest - Robert Magiera - Perun will be able to offer a profitable platform for research in the microgravity environment and can become an attractive commercial choice for clients on the Polish and foreign markets, offering the lowest prices for such services in the world.

Warsaw University of Technology to launch CENAGIS - Center for Scientific Geospatial Analysis and Satellite Calculation

2018-12-13

Warsaw University of Technology is planning to establish a center of world-class geospatial scientific analyses that will use the latest geoinformatic and IT technologies. This is the goal of the CENAGIS project carried out by the Warsaw University of Technology together with the companies OPEGIEKA Elbląg, Hexagon and Cloudferro. The project «Center for Scientific Geospatial Analysis and Satellite Calculation (CENAGIS) and laboratories for testing / certification of geomatic products» will be co-financed from the Regional Operational Program of the Mazowieckie Voivodeship. The value of the project is nearly PLN 25 million, of which the European Union will allocate PLN 18.8 million. The main idea of geospatial scientific analyses within the CENAGIS framework will be the development of new models and algorithms for data analysis for industry, services and offices.

Students of the Wrocław University of Technology designed the reconstruction of the Senior House in Görlitz

2018-12-13

Students of the architecture faculty of the Wrocław University of Technology have developed a project for the extension of the Zentralhospital Senior House in Görlitz. The university established cooperation with the local City Hall. The project was created as part of the course „Residential architecture for the elderly people”. The architects will take care of the facility built in 1863 as a hospital for the elderly people. Currently, however, it requires expansion and adaptation to the needs of people with disabilities. The main guidelines include the creation of 6 modules with 12-14 single rooms and a common space with a kitchen, a communal dining room and a common room. The rooms were to be equipped with kitchenettes and bathrooms. The participants of the course presented their works at a special show in Zentralhospital with the participation of representatives of local authorities, investor and lecturers of the Brandenburgische Technische Universität from Cottbus. Currently, student projects can be viewed at the City Hall of Görlitz.

Students of the Silesian University of Technology present the Quarado car

2018-12-17

Students of the Silesian University of Technology presented their latest vehicle - the Quarado car, which will take part in the Formula Student competition in the summer. The vehicle has a capacity of 95 hp, weighs only 220 kg and accelerates to a hundred km per hour in 3.5 seconds. The work of young engineers from the Student Scientific Club PolSI Racing is an improved and lighter version of the SW-01 car. The goal of the modification was to improve the performance results of the car. This was achieved by reducing the weight of the vehicle, modifying the drive and the chassis. The «revised» car weighs 220 kg, its engine power was increased from 75 to 95 hp. It is lighter than the original by 60

kg, which also translated into better acceleration. SW-02, the Quarado car, reaches a speed of 100 km / h in 3.5 seconds with one second less than SW-01. Currently, the car will pass necessary tests, then the drivers will have training to improve their skills for the competition. The next stage will be implementing the modifications.

Institute of Aviation to undertake cooperation with the Jenbacher group companies

2018-12-18

The Institute of Aviation in Warsaw signed a framework agreement on cooperation with Jenbacher Ltd and INNIO Jenbacher GmbH & Co OG. The contract concerns cooperation in the field of scientific research, expertise and technical analysis and engineering services - in particular through the constant use of the laboratory base of the Institute of Aviation for the needs of the activities of companies from the Jenbacher group. Jenbacher Werke was founded in 1959 and produced gas and diesel engines as well as locomotives. In 2003, the company was bought by General Electric. INNIO Jenbacher GmbH & Co OG is a leading provider of gas engine technology, power equipment and digital platform and related services in the area of electricity generation and gas compression. The Polish company Jenbacher Ltd concentrates in its activities on research and development.

Day of the Young Architect held at the College of Ecology and Management

2018-12-21

The Builder magazine held the Young Architect's Day at the College of Ecology and Management (WSEiZ) in Warsaw. The event was attended by architecture students from various universities and students of two architectural and construction schools from Warsaw. Participants of the Young Architects Day had the opportunity to participate in lectures, workshops conducted by outstanding architects and in industry consultations with representatives of sev-

eral companies. Participants of the event were welcomed by the rector of the University of Economics, Dr Monika Madej, Dean of the Faculty of Architecture Dr Eng. Małgorzata Leszczyńska-Domańska and Marek Zdziebłowski, publisher of the «Builder» magazine. The inaugural lecture «Specification of the design of medical facilities» was given by Dr Eng. Michał Grzymała-Kazłowski, lecturer at WSEiZ and owner of the Archimed architectural studio.

Rzeszów University of Technology launches dual studies

2018-12-21

Rzeszów University of Technology (PRz) launches dual studies with a practical profile, under which full-time students will combine learning and gaining professional experience. This model will educate students of mechanical engineering for the aviation industry at the Faculty of Mechanical Engineering and Aeronautics, as well as automation and robotics at the Faculty of Electrical and Computer Engineering. The system of dual studies is just gaining popularity among Polish universities. It is a good example of the synergy of the activities of universities and employers - believes Dr Eng. Grzegorz Masłowski, Prof. PRz, Vice Rector for Education at the Rzeszów University of Technology. The aim of dual studies is to raise key competences and practical qualifications of students of the Rzeszów University of Technology. Dual studies will include 72 people and will be conducted as part of the second-cycle studies.

KomPlasTech 2019 - the 26th international conference organized by the AGH University of Science and Technology

2018-12-28

The Faculty of Metal Engineering and Computer Science of the AGH University of Science and Technology in Krakow, in consultation with the AGH UST AGH UST Academics and Graduates Foundation, organizes the 26th International Conference „Computer Methods in Materials Technology - KomPlas-Tech 2019” from 13 to 16 January in Zakopane. The event is part of the 100-year anniversary of the AGH. The aim of the conference is to present scientific achievements and exchange experiences in the field of representatives of science and industry in the field of IT applications in various fields of metal processing, as well as industrial processes management. More: <http://www.komplastech.agh.edu.pl/index.php>

Fokker D.VII aircraft recreated at the Poznan University of Technology

2019-01-02

Aviation enthusiasts from the Poznań University of Technology reconstructed three Fokker D.VII planes. Flying replicas of aircraft captured by Wielkopolska insurgents in December 1918 at the Ławica airport in Poznań were one of the attractions of the picnic on the occasion of the 100th anniversary of the Greater Poland Uprising. In December 1918, Polish insurgents captured 300 German machines in Poznań, which later became the beginning of the interwar Polish aviation and took part in the Polish-Bolshevik war. Aircraft replicas weigh about 400 kg (the original weighed 540 kg). They differ in the covering materials - the originals were made of impregnated flax, a replica is made of polyethylene material. Airplanes were equipped with electronics, avionics and engines based on Volkswagen elements, and also machine-gun mimics. The propellers have been ordered from a specialist manufactory. The machines form the Greater Poland Squadron

of Freedom. It is a project supported by the Poznan University of Technology, the voivodship self-government, and the Polish Motosport Association.

PW-Sat2 satellite's deorbiting sail is unfolded!

2019-01-03

On December 29, 2018, the key point of the student satellite mission of the Warsaw University of Technology (PW) was completed. Within experiment schedule the deorbiting sail received sent signal and was unfolded. The unfolding of the sail took place earlier than planned. This reason was a warning from the US office regarding the tracking of space debris with a facility threatening the PW-Sat2 satellite. On December 27, 2018, the object marked SCC # 39841 passed PW-Sat2 at a speed of about 3.6 km / s, at a distance of only 79 meters. A deorbit sail increases the aerodynamic resistance of the satellite, and thus it will reduce its velocity in orbit. Later, the satellite will fall lower, until it finally burns in the atmosphere of the Earth. According to Warsaw students, this should happen within 12 months. A satellite without a deorbiting sail would have been in orbit for up to 20 years.

Wrocław University of Technology to launch two new laboratories

2019-01-03

Two new laboratories have been created in the department of basic problems of technology at the Wrocław University of Technology to conduct cancer cell research. The Biopharmaceutical Laboratory in Nanoscale will run microscopic examination of tissues and biomaterials, research on cancer cells and changes of DNA under the influence of physical and pharmacological factors. The laboratory has been equipped with an atomic force microscope, which allows obtaining an image with a resolution of the order of the dimensions of a single atom and to test single DNA strands. The Laboratory of Biomedical Measurement Techniques will allow for research related to the use of optical techniques for measuring various types of objects. In the laboratory the scientists will use a confocal microscope to determine

cellular parameters by fluorescent methods in living and fixed cells. More: <http://pwr.edu.pl/uczelnia/aktualnosci/nowoczesny-sprzet-i-strozwajowe-badania-nowe-laboratoria-na-w11-11061.html>

Silesian University of Technology to announce a competition for the application of computational techniques in thermal technology

2019-01-04

The Institute of Thermal Technology of the Silesian University of Technology together with industrial partners announced a nationwide competition for the best master's thesis on the application of calculation methods for the simulation of thermal processes. The aim of the competition is to promote students' achievements in the field of application of computational techniques in the wider thermal technology. This year's competition is limited for the master's theses and outstanding engineering works defended between 1 January and 31 December 2018. The theses can be written in Polish or English. The deadline for applying is 30 January. The winner of the competition will receive approx. 3 thousand PLN, the second place - 2 thousand PLN, and next three places will be rewarded with the amount of approx. PLN 1,000. Thanks to the presence of representatives of industry and software companies in the jury, information about the best works and their authors will be shared with potential employers. More: <http://www.itc.polsl.pl/index.php?lang=en>

Warsaw University of Technology begins the construction of the PW-Sat3 satellite

2019-01-07

- We are currently commencing the construction of the PW-Sat3 satellite at the Faculty of Power and Aeronautical Engineering of the Warsaw University of Technology. It will be developed by the next generation of students - announces the deputy coordinator of the PW-Sat2 project, Dominik Roszkowski. Within 4 weeks the PW-Sat2 satellite carried out all the planned tasks. The success of the mission proves that the technology of the deorbitation sail developed by students from Warsaw can help solve the problem of space debris that may damage probes, ships, as well as the International Space Station. The unfolding of a deorbiting sail made of a mylar film 10 times thinner than the human hair was the main task of the satellite. During the mission, it was also possible to take the first Polish satellite image of the Earth. The photograph shows southern Sweden, clouds over Norway, a fragment of the North Sea and the Baltic Sea. See photos from the PW-Sat2 satellite: <https://radio.pw-sat.pl/gallery>

Student of Gdansk University of Technology wins the Young Innovation competition for PGNiG

2019-01-07

Eng. Jędrzej Wrzaskowski, a student of Power Engineering of the Gdańsk University of Technology, took the second place in the fourth competition for the research and development project Young Innovation for PGNiG (Polish Oil and Gas Mining). The subject of his work is „Demonstration system for obtaining hydrogen from DME as an element of electromobility”. The awarded work contains a proposal to solve the problem of hydrogen storage. It assumes the use of synthetic fuel DME (dimethyl ether) as a carrier, and then the recovery of hydrogen in the process of steam reforming. The small size of the installation allows it to be mounted in

an electric vehicle powered by a fuel cell, enabling the use of hydrogen in a safe and ecological way. The Innovative Young Competition for PGNiG aims to find innovative ideas from the areas of activity of the PGNiG Group, which may initiate the implementation of research and development projects.

Architecture students of the Wrocław University of Science and Technology awarded for the Best Social Project 2018

2019-01-07

Students of the architecture faculty at the Wrocław University of Science and Technology received a distinction in the competition for the Best Social Project 2018. The award was granted for the help of disabled people in the design of their apartments. The awarded project is the Joint Architectural Initiative (WIA), which has been run for 8 years by the Association for Support of the Development of Disabled People and the PoPArch Scientific Circle. The aim of the WIA is to help people with disabilities to remove architectural and technical barriers and to communicate. The WIA also trains students of the Faculty of Architecture at the University and the Faculty of Interior Design and Design at the Academy of Fine Arts to create projects that comply with the principles of universal design. The first place in the competition was awarded by the Harvest project of company AmRest, which is implemented jointly with the Food Banks. They were awarded for their program to prevent a large scale food waste at KFC restaurants.

XI Robotic Arena to be held in the Wrocław Congress Center

2019-01-10

On January 12, robots from around the world will compete under the 11th Robotic Arena in the Wrocław Congress Center. The competition is organized by the Scientific Circle „KoNaR”, operating at the electronics faculty of the Wrocław University of Technology and the student organization BEST Wrocław. During this year's competition, the organizers prepared new tasks: Combat of robots with

saws, knives, hammers and pickaxes and Rescue task, i.e. searching for a missing person in a maze, and then transporting them to a safe base. This year, drones will appear on the Robotic Arena. The following tournaments are: Drone (performing the figure resembling the symbol of infinity along the designated route) and Drone Sandbox - fighting for the title of ace of the sky on a specially prepared track. Robotic Arena is one of the largest robotic events in Poland. The aim of the competition is to have fun, integrate the environment and promote robotics.

President of the Polish Space Agency to award the best student diploma theses in the field of space engineering

2019-01-14

The Contest Jury of the Scientific Award of the President of the Polish Space Agency awarded the best student diploma theses in the field of space engineering. In the category of engineering works, the jury awarded Piotr Skoczylas of Rzeszow Technological University for his thesis titled: «The Theseus engine. A proposal for the reliable and affordable suborbital propulsion system». In the master's thesis category, the first prize was received by Michał Hałoń from the Warsaw University of Technology for his work «Detecting and Recognizing Markers for the European Rover Challenge mobile robot competition». The aim of the competition is to promote individual and team achievements of students of Polish universities in the field of space engineering, conducting educational activities in the field of research and use of space and conducting promotional activities in the field of the outer space.

Graduate of Architecture department at Rzeszów University of Technology wins nomination to ArchiPrix International 2019

2019-01-15

Luiza Pośluszny, graduate of architecture at the Faculty of Civil and Environmental Engineering and Architecture of the Rzeszów University of Technology received a nomination for the ArchiPrix International 2019 competition as an award for her diploma thesis „Roofs of the city - the concept of urban reconstruction”. It is an international competition organized in the form of a biennial competition, presenting the best diploma projects sent from around the world. In her project, Luiza Pośluszny focused on the space above people. She chose Wrocław to implement her diploma thesis. - My work draws attention to the problem of non-functional places with potential. It is an attempt to improve the quality of urban space with the possibility of free shaping of roofs of the city - explains Luiza Pośluszny. More: <http://www.archiprix.org/2019/?m=22>

Institute of Aviation together with the Gyro-Tech company developed innovative helicopter rotors

2019-01-17

The Institute of Aviation completed a research project carried out jointly with the Gyro-Tech Innovation in Aviation company. The innovative helicopter rotors have been developed as a result of the project based on ground and air tests. They have demonstrated global quality and the highest competitiveness in relation to the helicopters currently used in the world. As part of joint work on the project «Innovative composite rotors for ultralight helicopters», the Institute of Aviation developed two types of rotors, including one developed at the Institute of Aviation and dedicated specifically to the light helicopters. The manager of the project was Tomasz Szczepanik from the Center for Transport and Energy Conversion of the Institute of Aviation, and

the entire undertaking was co-financed from the Intelligent Development Operational Program. See the video of the trials and tests: <https://youtu.be/xjYpnoeEn8>

Architectural success of students of the Wrocław University of Science and Technology

2019-01-17

Students of the Wrocław University of Science and Technology took the third place in the international architectural competition. Their forest meditation cabin allows for deep concentration and it is also ecological. The competition task was to develop a one-man, year-round house with an area of max. 15 sq m, which could stand in the forest surrounding Lake Bezidbene in Latvia. The cabin is to allow quiet meditation of the nature around and additionally it should be equipped with heating, kitchen and sanitary facilities, water and food supplies for one person. The design of Karolina Kiepińska, Marta Lisiakiewicz, Emilia Oworuszko and Aleksandra Białkowska assumes that the construction will be made mostly of wood, but due to its all-season character, the walls have been insulated. The energy for lighting the interior is provided by photovoltaic panels, and the building is heated by a heating oil stove. Projects of the Silesian University of Technology co-financed in the 3rd TANGO Call

2019-01-21

Projects of electrical, automation, electronics and computer science as well as environmental and energy engineering faculties at the Silesian University of Technology will receive funding from the National Center for Research and Development and the National Science Center. Co-financing is granted to projects: «Probe for dynamic measurements of fluid parameters in two-phase flows, mainly in wet

steam» under the supervision of Dr Eng. Sławomir Dykas from the faculty of Environmental engineering and energy, «Innovative photonic measurement system for biomedical applications» under the supervision of Prof. Paweł Karasiński from the Electrical department and «Application of three-dimensional vascular network models” under the direction of Dr Eng. Krzysztof Psiuk-Maksymowicz from the faculty of Automation, Electronics and Computer Science. The money is allocated from the support program for the practical use of TANGO basic research results. In total, from 11 projects 6 of them will receive financing within the TANGO call.

Bydgoszcz scientists to help design the roofing of the ski jumping hill

2019-01-23

University of Technology and Life Sciences in Bydgoszcz (UTP) signed a letter of intent on cooperation with the Archigeum company. Under the agreement, the scientists from Bydgoszcz will join the research to build a roofing of the Wielka Krokiew runaway - a ski jumping hill in Zakopane. The idea of a tunnel protecting jumpers against snowfall and giving thermal protection before jumping was created by the Archigeum Architecture Design Workshop from Zielonka. The project has already gained the acceptance of the International Ski Federation FIS in Switzerland. Scientists from the University of Bydgoszcz under the direction of Dr Eng. Dariusz Skibicki from the Department of Computer Methods will perform strength calculations of the structure using the finite element method and will model the wind and snow load.

Krakow University of Technology launches the Laboratory of Railway Traffic Engineering

2019-01-24

Krakow University of Technology officially opened Laboratory of Railway Traffic Engineering. The laboratory is equipped with a railway traffic simulator created at the Krakow University. The laboratory consists of 12 computers, which reflect the work of the traffic dispatchers in one net. The assumptions and functionality of the model system are similar to solutions used in the process of training of on-duty traffic officers. Work on the preparation of the Railway Traffic Engineering Laboratory has been continued at the Krakow university since 2014. The project was awarded by the Office of Rail Transport in last year's competition «Culture of safety in rail transport».

Koszalin University of Technology to launch new research and implementation center for surface engineering

2019-01-25

The Koszalin University of Technology (PK) is launching a research and implementation center for surface engineering, process design and simulation as well as vibroacoustic research. The cost of the project is PLN 3.35 million. The Center is to refine and expand the research and service offer of the university in the field of surface treatment, including heat treatment, thermo-chemical, plasma and PVD coatings (application of a hardener). The University has equipment for applying coatings using PVD and diamond-like coatings based on carbon. - Our activity is to modify the surface of the tools to increase their durability. This can be achieved by plasma nitriding and application of anti-wear coatings - says Vice-rector of the Polish Academy of Sciences, Prof. Witold Gulbiński. Equipping tools with wear-resistant coatings often extend their durability, which reduces production costs. The University has already implemented several such research and development projects.

Silesian University of Technology to cooperate with the Kiev National University of Building and Architecture

2019-01-25

Silesian University of Technology has signed an agreement on cooperation with the Kiev National University of Building and Architecture. The contract has been concluded for 5 years and assumes cooperation in the field of education, research and administration. The document includes the exchange of academic staff and students, providing for student apprenticeships, cooperation in the field of didactics and implementation of research programs, as well as joint scientific support for PhD students. - As a representative of the Ukraine, I am very pleased with the opportunity to establish cooperation with the Silesian University of Technology, one of the leading universities of technology in Poland. Our universities share a very similar profile of scientific and didactic activity, which will further facilitate our cooperation. I will be in favor of developing all the directions of cooperation written in the agreement - says the rector of the Kiev university, Prof. Volodymyr Tkachenko.

Students of Warsaw University of Technology changing Starachowice

2019-01-31

The students of geodesy and cartography of the Warsaw University of Technology arrived to Starachowice, a town of 50,000 inhabitants in the Świętokrzyskie Province, with their own works, presenting not very attractive places of Starachowice before and after the changes. The students were invited by the city authorities, as part of the cooperation that has been going on for several years. Projects were presented at the seminar organized in the municipal office of changes in settlements and municipal facilities. Marek Materak, mayor of Starachowice stressed that student projects presented 4 years ago, concerning the new development of the city park have been implemented. He assured that also this year's proposals of Warsaw students will

be implemented.

Patent for the use of waste CRT glass plates

2019-01-31

Employees of the Ceramics and Concrete Department of the Institute of Ceramics and Building Materials in Warsaw obtained patent for the invention: „The method of production of glass cladding or façade claddings from waste CRT glass and glass plate with CRT”. The production of plates according to the patented invention enables to obtain glass plates from the wasted CRT glass and a small amount of generally available inorganic materials. The invention has been submitted to the European Patent Office for protection in other European countries, and its worth is also evidenced by the interest of ceramic tile manufacturers intending to use it for the production of glass tiles on an industrial scale.

Rzeszow University of Technology to help create classes for aircraft mechanics

2019-02-01

The Rzeszów University of Technology will support the creation and providing aviation technician classes and avionics technician classes at the School Complex No. 2 in Łańcut. This is the result of the agreement signed between the university and the municipality in Łańcut. Classes of the aviation industry at the School Complex No. 2 in Łańcut are the effect of the agreement signed by the Poviats Eldership in Łańcut with EME Areo. The company, which is a joint venture of the tycoons in the aviation industry - German airlines Lufthansa and MTU Aero Engines, is building in Jasionka near Rzeszów a plant where the latest generation of aircraft engines will be serviced. Ultimately, it is planned to employ over 1,000 people, half of whom will be aircraft mechanics. The company is to help develop training programs in new classes and provide internships.

Graduate of the Gdańsk University of Technology becomes a laureate of the President of the Polish Space Agency

2019-02-01

Luiza Leszkowska, a graduate in electronics and telecommunications (specialty: Wireless Communication Engineering) at the Gdańsk University of Technology received the 3rd degree Scientific Award of the President of the Polish Space Agency for the best master's thesis in the field of space engineering. The laureate's work «A multi-layered planar antenna with a layer of superstratum for satellite applications in the X band», written under the supervision of Dr Eng. Łukasz Kulas and Eng. Mateusz Rzymowski from the Department of Microwave and Antenna Engineering at the Faculty of Electronics, Telecommunications and Informatics presents a new antenna design. The graduate's concept can be used in CubeSat type nanosatellites, for example for fast transmission of images recorded by satellites working in constellations. The winner of the competition also wrote her engineering work: «Circular polarization antennas for CubeSat nanosatellites» about this topic. Her promoter was Dr Eng. Krzysztof Nyka.

Silesian University of Technology to launch an interdisciplinary course - nanotechnology

2019-02-01

Silesian University of Technology is launching the second degree studies on the interdisciplinary field of nanotechnology implemented by seven faculties of the university. Classes will be conducted in the summer semester, in the design mode with individual academic care. Students of the new field will acquire interdisciplinary knowledge in the field of physics, chemistry, material engineering, designing the structure and properties of engineering materials, as well as their production technologies combined with the ability to use modern IT tools used

for numerical simulations of phenomena and processes in nanotechnology. Graduates will become the appropriate staff for technologically advanced industrial enterprises in the sectors of modern technologies related to electronics, optoelectronics, optics, photonics, medicine and pharmacy, environmental protection, automotive, aerospace, machine, textile and clothing, cosmetics, agricultural and food industries.

Opole University of Technology receives a new electron microscope

2019-02-01

A specialized material engineering laboratory of the Opole University of Technology has been equipped with the Scanning Electron Microscope JSM-840A with the Energy Dispersive Spectroscopy (EDS) system enabling work at magnifications up to 300,000 times. The new microscope, in combination with EDS X-ray microanalysis, is a powerful tool allowing to determine the elemental composition of samples with a size of several micrometres or create a map of the distribution of elements in a larger area of the sample with micrometric spatial resolution. Scanning electron microscopy with the EDS system is a useful and increasingly common technique for characterizing surfaces and structure of materials - mainly morphology and elemental composition. It allows the observation of both organic and mineral samples at very high magnifications, and its use is very wide.

Student of the AGH University of Science and Technology built a robot from the „Star Wars”

2019-02-04

Weronika Muszyńska, student of the Faculty of Metal Engineering and Computer Science at AGH University of Science and Technology in Krakow, has built a replica of the BB-8 robot appearing in the latest parts of the Star Wars saga, as part of her engineering work. She designed «BB-8 mobile robot and implementation of control software» and thus

replicated the droid in 1: 1 scale, using parts printed in 3D technology. Her model can move, and the user is able to manage it using a specially written application and software prepared by the constructor. BB-8 moves in the same way as its film prototype.

Prototype of a patrol and intervention vehicle tested by Poznan policemen

2019-02-06

„The Praetorian” - is a patrol and intervention vehicle for the police, which was created with the participation of the Special Purpose Vehicle of the University of Economics in Poznan, started a month-long test in the conditions of daily work of officers. The vehicle's prototype was created as part of a research and development project by a consortium of three partners: the Polish Platform for Homeland Security (coordinator); Target Company UEP (scientific partner) and Automotive House GERMAZ (industrial partner). The project aims to create a vehicle best suited to the needs and expectations of police officers. During the work on the Praetorian prototype, 20 proprietary solutions have been created that ensure the multifunctionality of the vehicle and the possibility of its complete configuration. The car will work both in everyday patrol, as well as in the situation of securing a mass event such as a match or concert.

Conference „Silesian Channel and Waterway of the Upper Vistula - opportunities and challenges”

2019-02-12

The Silesian Water Center of the University of Silesia and the Department of Engineering and Water Management of the Krakow University of Technology invite participants to the scientific conference on “Silesian Channel and Waterway of the Upper Vistula - opportunities and challenges”. Participants will discuss the planned development of inland waterway transport in Poland as an opportunity for the diversification of transport. The conference include the history of the Silesian Channel and the Waterway of the Upper Vistula - goals, routes, stage of completion, class and stock, as well as the planned scope of works; hydrological and hydrotechnical conditions and water management for its functioning as well as present and future spatial conditions with the indication of strategic nodes. The organizers also plan to discuss the economic effects of the construction of the Silesian Channel, the modernization of the Upper Vistula Waterway and the principles of cooperation of the industry environment with government institutions and local self-government.

Professor Jerzy Lis receives The Bridge Building Award

2019-02-13

Professor Eng. Jerzy Lis, prorector for cooperation at the AGH University of Science and Technology in Krakow, was awarded the „The Bridge Building Award”. It is awarded annually by the American Ceramic Society to a non-US scientist, who made a unique contribution to the development of ceramic engineering. The prize was awarded during the 43rd International ICACC Conference (International Conference & Exposition on Advanced Ceramics and Composites), which took place on January 22-27, 2019 in Daytona Beach, Florida. It is one of the most important world meetings of scientists and representatives of the ceramic industry. Additionally, Professor Jerzy Lis was invited to deliver a plenary lecture entitled «Processing of complex ceramic ma-

terials by rapid high-energy techniques».

Female students of technical universities to participate in the project „Siemens Engineer 4.0”

2019-02-13

By March 3, 2019, female students of technical universities can apply for the „Engineer 4.0” program, organized by Siemens. The project will include specialist workshops, and participants will get a chance to go to Hannover Messe in April. The program partner are the Perspektywy Education Foundation and the Ministry of Entrepreneurship and Technology. Participants will receive workshops conducted by members of the Siemens board and experts in the field of industrial technology from such companies as KUKA and Daimler. The „Siemens Engineer 4.0” educational project is part of the initiative of Siemens and the Perspektywy Education Foundation „Women’s potential for the technology industry”, which supports women’s career in engineering professions. More information and registration: www.siemens.pl/inzynierki4-0

Rzeszów University of Technology ends to invite students for dual studies

2019-02-14

Only until February 14 students can apply for dual studies started by the Rzeszów University of Technology. This model allows to educate students about mechanical engineering for the aviation industry as well as automation and robotics. The aim of the studies combining science and gaining professional experience is to raise the key competences and practical qualifications of students of the Rzeszów University of Technology. Therefore, the Faculty of Mechanical Engineering and Aeronautics will launch a new field of study with a practical profile in three specialties: mechanics and mechanical engineering, mechatronics and aircraft engines for 47 students. The faculty of electrical engineering and robotics will be created at the Faculty of Electrical and Informatics for 25 students.

Scientists from the Poznan University of Technology become laureates of the Competition for the Minister of Investment and Development Award

2019-02-18

Researchers from Poznan University of Technology (PP) became the laureates of the Competition for the Minister of Investment and Development Award for diploma theses, PhD and post PhD dissertations as well as publications in the fields of architecture and construction, planning and spatial development and housing. The laureate of the competition in the post PhD dissertation category was Dr Eng. Agnieszka Rumieź for her PhD dissertation «Improvisation as a strategy in architectural creativity.» The supervisors of the work were Dr Piotr Marciniak, and Dr Jerzy Suchanek. The awards in the master’s thesis category were received by Adam Jankowski for the work «Scientific station with hotel facilities of the Łązy nature reserve» (supervisor: Dr Maciej Janowski, Ph.D., Eng.) and Adrianna Pacion for the work «Sanatorium Clinic in Czarna Góra» (supervisor: architect Agata Gawlak).

Cooperation between universities from Leszno and German Darmstadt

2019-02-18

Jan Amos Komensky State Higher Vocational School (PWSZ) in Leszno signed a strategic cooperation agreement with the German Hochschule Darmstadt-University of Applied Sciences. Agreement was signed by Prof. Maciej Pietrzak, the Rector of the PWSZ during his visit in Darmstadt. It will enable all graduates of the University of Leszno to participate in the fields of electrical engineering and mechatronics and to continue their studies at the second level studies in Germany without examinations, without program differences and without tuition fees. Other provisions of the agreement are provided paid internships in renowned German corporations. Hochschule Darmstadt-University of Applied Sciences is one of the largest German vocational universities with an offer of over 50 fields of study. The university has about 15 thousand students with 18 percent foreign students.

Wall of lights designed in Gdynia used at Grammy Awards

2019-02-19

A huge wall of lights designed in the studio of the Portman Custom Lights company - located in the Pomeranian Science and Technology Park Gdynia - was used during awards of the American music industry - Grammy 2019 in Los Angeles. The lighting designed in Gdynia was the main element of the setting of the performance of Miley Cyrus and Shawna Mendes, during which the artists performed the song «In your Blood». Constructors from Portman Custom Lights repeated their success in 2017 when their fittings appeared for the first time during the Oscars' music gala. They also proved that the enthusiasm of light designers from around the world over Polish lights is not only a result of newness, but rather a confirmation of the quality «made in Poland» lamps in the world.

Gdańsk University of Technology scientists co-created the first Polish telescopic loader

2019-02-21

Scientists from the Gdańsk University of Technology worked on the creation of the first Polish telehandler AGroLeo. It is narrower and more manoeuvrable than other loaders with the same capacity. It will be used in agriculture and construction. AGroLeo is one of the most versatile handlers on the market, distinguished by relatively small dimensions in relation to the lifting capacity. It can move in any area, including narrow squares and even in buildings. Central adjustment of the telescope boom ensures good stability of the vehicle despite its small width. The team of Hydraulics and Pneumatics of the Faculty of Mechanical Engineering of the Gdańsk University of Technology, commissioned by Adam Gordziejczyk Hydro-Metal company, made a hydraulic drive project, construction documentation and strength calculations for the frame and loader boom. The Hydro-Metal company obtained funding from the Polish Agency for Industry Development for the project as part of the «Bonus for Innovations» program.

Students of the architecture faculty of the Silesian University of Technology awarded in the international competition

2019-02-21

Students of the 3rd year of the Faculty of Architecture at the Silesian University of Technology - Karolina Słomiany, Natalia Tadla and Kamil Wróbel - were awarded in the international competition „La Ville Vertical” Vertical City Design Competition. They located their project of a unique building in the center of Katowice. - We have designed more than a hundred-meter building on a plot in the center of Katowice, next to the railway station. Katowice is located in one of the most polluted regions in Poland. The idea was to design a building that would

not only be harmless to the environment, but also help clean the air. The students wanted to create a place in the city center, where people could live like in the suburbs and enjoy the benefits of green areas. The building is adapted for the disabled, has a green roof available for everyone. It also has an underground parking for bicycles - thus supporting ecological communication.

Seminar on space mining to be held in the Warsaw Kozminski University

2019-02-27

The Center for Space Studies of Kozminski University (ALK) in Warsaw organizes on February 28, 2019 the seminar „Cosmic mining - the perspective of the Polish and international space industry”. The event's partners will be experts from the Space Research Center of the Polish Academy of Sciences and The Hague International Space Resource Governance Working Group, who will share knowledge in the field of technological and legal aspects of space mining. Seminar participants including invited engineers, economists and lawyers will try to answer questions about key technological aspects related to the extraction of raw materials in space conditions and learn to try to regulate the issue of cosmic mining in Polish law.

Krakow University of Technology to complete the project „European Technical Heritage”

2019-02-27

In April 2019, the AGH University of Science and Technology in Kraków will complete the project „European Technical Heritage” (EDT), implemented for three years by the Library of the Krakow University of Technology. Its purpose is to popularize historical and contemporary publications in the field of technical sciences in an innovative IT environment. The effect of the project is the digitalization of over 6,000 volumes of books and magazines that have not been processed in other scientific institutions before and have not been available on-line. The Library of the Krakow University of Technology has selected a collection of publications on Lvov and works published there before 1945 and a collection of prints published between the 16th and 20th centuries. Also, the Main Library of the AGH University of Science and Technology chose a collection of periodicals from the 19th and 20th centuries to be digitalized. The collections popularized by the EDT project will serve to popularize knowledge in the field of technical sciences, natural sciences, architecture, art, history, cultural studies, library science and bibliophilia.

Students from the Warsaw University of Technology developing a device to store energy in compressed air

2019-03-01

Students from the Student Energy Storage Circle at the Warsaw University of Technology (PW) are working on a project to develop an energy storage in compressed air. The project of the Student Energy Storage Circle PW has been completed: Compressed Energy Energy Storage (CAES) project. The team had been working on it for over a dozen months. The students have completed most of the construction works including «preparing the valve part for flow regulation, preparing the pipes, connecting them with air reservoirs, sealing all connections and con-

structing a heat exchanger». The model is developed in adiabatic technology, which means that the heat from the compression process is used to heat the air before the turbine. It is an innovative technology thanks to which the «need to bring energy from outside the system» is avoided. The final stage of works will be the construction of a Tesla turbine that will drive a small generator of electricity.

Engineers of the Cardinal Stefan Wyszyński University to work for industry

2019-03-05

The research team of the Department of Environmental and Bioeconomy Biotechnology of the University of Cardinal Stefan Wyszyński (UKSW) in Warsaw created a project for Jastrzębska Spółka Węglowa (JSW) as part of the implementation of the UKSW strategy for cooperation between universities and industry. Project under the name «Study on water and sewage analysis for JSW S.A. The «Knurów-Szczygłowice” Coal Mine in the aspect of EU directives in force and the provisions of the new Water Law Act” has been implemented under an agreement concluded by the Rector of UKSW and the JSW Management Board. The implementation of the research service included the development of the formal and legal status of the water and sewage management of the «Knurów-Szczygłowice» mine in the aspect of adapting to the requirements of the new «Water Law» and the provisions of European Union directives.

West Pomeranian University of Technology receives European certificate

2019-03-05

Two majors at the Faculty of Mechanical Engineering and Mechatronics of the West Pomeranian University of Technology in Szczecin, Material engineering and Transport obtained the European quality certificate for the EUR-ACE Label. Certificates are awarded for 5 years. Thanks to them, the university obtains confirmation of the high quality of education of engineers, conducting its education

in accordance with standards set by professional organizations, and that the accredited program is based on the effects of education. EUR ACE Label is a certificate developed by the European Network for Engineering Accreditation. It is important for employers who obtain assurance that the candidate's competences in terms of knowledge, understanding and practical skills are in line with international standards in the field of education of engineers in accordance with the standards and principles adopted in Europe.

State Higher Vocational School in Nysa to launch an architectural model studio

2019-03-07

The Institute of Technical Sciences of the State Higher Vocational School in Nysa is launching a new architectural model studio. It allows students to develop various types of architectural objects and urban complexes independently. In the new studio students have at their disposal advanced equipment for assembling the models CNC milling machine, mini paint chamber with a set of compressors and airbrushes, model tools for processing wood-based materials and plastics, and other micro tools. The architectural model studio perfectly complements the educational infrastructure of architecture as a laboratory of building materials; drawing studio; painting studio; sculpture studio; a computer lab equipped with specialized CAD and CAE software and an atelier for students.

Katowice students to launch NIKISZ 4.0 project

2019-03-11

Students of the Faculty of Economics, of Programming of Urban Development at the University of Economics in Katowice, together with students of the Faculty of Architecture at the Silesian University of Technology are launching their strategic and project work as part of the NIKISZ 4.0 project organized by the City of Katowice. The aim of the project is to develop interdisciplinary variant of the strategies and concepts for development of post-industrial areas and facilities in Katowice's Nikiszowiec district by student teams. The best projects will receive financial prizes funded by the City of Katowice. The work of students of Urban Development Programming is coordinated by Dr Adam Drobnik from University of Economics and Dr Radosław Cyran from the Department of Strategic and Regional Studies.

Gdynia MUSE unmanned boat project awarded in Sweden

2019-03-13

The Searis Technologies company from Gdynia received the Stena Line Propeller Prize for the MUSE (Multipurpose Unmanned Surface Explorer) project transferring instruments for hydrographic and hydrological research. Stena Line Propeller Prize is an award for entrepreneurs granted annually to young innovative companies of the Baltic Sea region in the field of ICT and marine technologies. The awards were given at the Innovation Day conference in Karlskrona in Sweden. In the last season, the MUSE carried out research tasks at Polish Polar Station on Spitsbergen. The boat piloted by scientists from the Department of Oceanography and Geography of the University of Gdańsk collected samples and examined water at the glacier located in the Hornsund fjord. Despite the arctic conditions, the MUSE has fully implemented the research program by providing dozens of samples and measurements from various depths.

Students of the Wrocław University of Technology receive SAE Aero Design East 2019 medals

2019-03-14

Five medals including two silver and three bronze were won by students of the Wrocław University of Technology at the SAE Aero Design East 2019 flight constructions at Fort Worth, Texas. Over 80 teams from around the world participated in the competition. Students from the JetStream team with their aircraft competed in the Advanced and Micro classes. The wingspan of their machine was 3.65 m and 1 m, respectively. The task in the Advanced class was a mission simulating the colonization of Mars. Its first part consisted of rising several dozen foam football balls and a dozen or so pint bottles with water to a height of about 30 m and dropping to the target. In the next stage, the goal was to drop three fully autonomous gliders attached to the matrix plane. In the Micro category, the task was to transfer the largest possible weight in the lightest possible plane and to fold the machine in the shortest possible time. Institute of Non-Ferrous Metals in Gliwice joins the project of high-performance 3D printing technology

2019-03-15

The Institute of Non-Ferrous Metals in Gliwice is the leader of the „3DMPWIRE - High-Efficiency 3D Printing Technology using the wire in the form of a Cu-based wire”. As part of the project, the production technology will be developed from copper-based alloys, using 3DMP (3D Wire Printing Arc Additive Manufacturing) of components resistant to aggressive corrosive marine environments. The technology developed in the project will be used to produce blades for marine turbines, propellers and other elements for applications in the maritime industry. The Upscaling project financed under the European Institute of Innovation and Technology

Raw Materials is carried out in a consortium composed of: Institute of Non-Ferrous Metals (Poland); Gefertec GmbH (Germany); Tecnalía (Spain); ENEA (Italy) and Ghent University (Belgium).

Warsaw University of Technology agrees on cooperation with Polimex-Mostostal

2019-03-18

Prof. Eng. Jan Szmidt, rector of the Warsaw University of Technology (WUT), Krzysztof Figat, president of the board of Polimex-Mostostal, and Przemysław Janiszewski, vice-president of Polimex-Mostostal signed an agreement on scientific and technical cooperation. Combining the scientific and research potential with practical knowledge and experience of one of the leaders of engineering and executive companies in Poland will allow to develop competences and promote best practices in the construction, energy, oil, chemistry and gas industries as well as production. Cooperation is planned for educational, development, investment and modernization projects. The agreement includes the implementation of scholarship programs for the best students and graduates of the WUT, as an investment to create a back-up of the competent staff of future employees of the Polimex-Mostostal group. The agreement also provides for cooperation in the organization of training courses and post-graduate studies dedicated to the company's engineering and technical staff.

International design conference 2019 Agrafa to be held in April in Katowice

2019-03-18

The Academy of Fine Arts in Katowice invites participants on 4th and 5th April to the 6th international design conference Agrafa 2019. The organizers are planning an international review of the latest student achievements and an accompanying design workshop. They are providing for a opportunity to discuss about how to use the extraordinary possibilities of the 21st century and their consequence in the everyday life, in the environments where people have their relationships. The conference aims to predict what role of the designer in future scenarios. The history of those design events taking place under a common name Agrafa dates back to the early 90s of the twentieth century, when the Nationwide Review of Graphic Design for Students of Fine Art Schools was organized for the first time. The Agrafa has been accompanying international conferences devoted to graphic design tasks since 2007. More: <https://agrafa.asp.katowice.pl/>

Building of the Faculty of Radio and Television of the University of Silesia awarded with Grand Prix of the Brick Award 2019

2019-03-19

The building of the Faculty of Radio and Television of the University of Silesia was awarded with the Grand Prix of the Polish version of international architectural competition Brick Award 2019. The facility also received the prize in the category public spaces. By granting the Grand Prix, the jury appreciated the advantages of the new headquarters of the Katowice Film School as a contemporary building, at the same time timeless, subtly inscribing into the local context and combining the experience of cultures of northern and southern Europe. The authors of the winning design are Baas Arquitectura, Grupa 5 Architekci and the Małecy Biuro Projektowe. Brick Award is an award that distinguishes buildings with original ceramic architecture. The international

competition for over 14 years (for 4 years in Poland) has been organized by the Wienerberger company, which produces such materials. The winning realization will represent Polish architecture in the world Wienerberger Brick Award 2020. More: <https://www.us.edu.pl/grand-prix-brick-award-2019-dla-wydzu-u--radia-i-telewizji-im-krzysztofa-kieslowskiego>

Multifunctional SMART furniture awarded Gold Medal of the Poznań International Fair

2019-03-20

A multi-functional piece of furniture for sleeping, storage and work SMART designed by Zuzanna Klorek, graduate of the wood technology department at the University of Life Sciences in Poznań, won the gold medal at the Poznań International Fair. SMART is a multifunctional furniture dedicated primarily to small spaces. It simultaneously has three functions: sleeping, work and storage. The thoughtful design ensures its safe and intuitive use. The most characteristic element is the rotating table top, which can be used in any position. The project underwent a commercialization carried out by the team of the Center for Innovation and Technology Transfer at the University of Life Sciences in Poznań. The purchaser of the technology license in the composition of which the awarded industrial design is entered is the company Idźczak Meble. Last year, the SMART furniture was also awarded the «Diamond of Furniture» prize.

Students of the Wrocław University of Technology reach finals of the CanSat Competition United States

2019-03-21

Students of the Wrocław University of Technology qualified for the finals of the international competition CanSat Competition United States. The competition simulates a real space mission including launching a rocket with a probe in the middle, launching it at a specific altitude, with use of a ground station

to control all device parameters. Students' task is to develop a small probe, which will be dropped at an altitude of 700 meters and will collect data while falling. The weight of the device cannot exceed 500 grams, the probe must have specific dimensions (12.5 cm in diameter and 30 cm in length), and the cost of its construction must not exceed 1000 dollars. The design must withstand overloads of 30G and extremely high temperatures. The competition will be held at the airfield in Stephenville, Texas in mid-June. 40 teams from around the world are invited to take part in it. New promoting film of the largest wind tunnel in Poland

2019-03-26

The Institute of Aviation in Warsaw presented a film about flight tests of the Polish national team of ski jumpers, who trained in the largest wind tunnel in Poland. These are the first and only shots of this type presenting the research capabilities of this facility with the participation of athletes. The film presents the largest in Poland and Central and Eastern Europe wind tunnel (T-3) which is located in the Aerodynamic Research Laboratory of the Institute of Aviation. The dimensions and research capabilities of the facility are impressive. The measuring space is 5 m in diameter and 6.5 m in length. Engine power (5.6 MW) and maximum air velocity (90 m / s) allow to include the Institute of Aviation tunnel into the world's leading wind tunnel. See the video: <https://youtu.be/dhkvH7mLZR0>

PhD student of the University of Gdańsk to create a historical computer game

2019-03-26

The project of the PhD student of the Faculty of History at the University of Gdańsk „Modern methods of disseminating the results of historical research: computer game” received funding under the Dissemination Program of Science 2019 funded by the Ministry of Science and Higher Education. The author of the project is Waclaw Kulczykowski, an employee and PhD student at the Gdańsk University, who in 2015 carried out a similar task. As part of the project «Archeology Live & Online» financed by the Foundation for Polish Science - together with Mateusz Sokalszczuk (scriptwelder studio) created the online educational game «Excavate!». The game uses the results of authentic archaeological research conducted by Kulczykowski, MA at the historic cemetery in Nowy Monastyrzysk. The game has gained international reach. It has been played over a million times.

Students of the Wrocław University of Technology to build a solar boat

2019-03-26

Students from the „Flow” and „Płomień” research groups operating at the Faculty of Power Engineering and Energetics at the Wrocław University of Technology are developing a solar boat. The composite form of the fuselage is ready, the first buoyancy tests on the Oder will commence soon. A boat with a length of approx. 5.5 m will be equipped with photovoltaic panels with an area of 6 sq m. The structure will also have hydro-wings, i.e. special bearing flaps, which are mounted under the fuselage. When they acquire the right speed, they cause the hull to rise from the water, thanks to which the resistance decreases and the boat can flow much faster. The construction is to start in international competitions, which will be held in Monaco in July - the largest and most prestigious event of this type in the world. The event welcomes not only university teams, but also professional constructors. The

teams compete in three competitions - acceleration, slalom and races. More: <https://pwr.edu.pl/uczelnia/aktualnosci/lodz-solarna-wkrotce-na-odrze-11139.html>

Nano and Micromechanics Conference CNM2019 to be held at Rzeszów University of Technology

2019-03-27

Rzeszów University of Technology will host the Nano and Micromechanics Conference CNM2019. The event, which will take place in July this year, as part of the National Academic Exchange Agency (NAWA) project is organized by Rzeszów University of Technology, Institute of Fundamental Problems of Technology of the Polish Academy of Sciences (PAN) and the Committee of Mechanics of the Polish Academy of Sciences. The CNM 2019 conference is an international meeting devoted to micro and nanomechanics, which takes place every two years in Poland. The conference is addressed to engineers and scientists from both academia and industry from around the world to discuss the latest developments and future changes in nano- and micro-mechanics. The aim of the conference is to familiarize with the latest knowledge in the multidisciplinary area of nanotechnology and microtechnology in the fields of mechanics, fluids, physics, chemistry, biotechnology and biomedicine.

Polish Space Agency to hold a conference on the development of missile technologies in Poland

2019-03-28

The Polish Space Agency and the Institute of Aviation in Warsaw are organizing a conference „Development and application of missile technologies in Poland - a new opening”, which will be held on April 16, 2019 at the Institute of Aviation. The purpose of the event is to present the achievements and potential of national research and industrial entities associated with missile technologies and to indicate areas of interest of the Polish Army in this field. The opening speech of the conference, devoted to the history of development of rocket propulsion in Poland, will be given by Prof. Eng. Piotr Wolański, honorary chairman of the Space and Satellite Research Committee of the Polish Academy of Sciences. The conference was held under the patronage of the Ministry of Enterprise and Technology.

New authorities of the Space and Satellite Research Committee of the Polish Academy of Sciences

2019-03-28

After 16 years Prof. Piotr Wolański ceased to be the chairman of the Space and Satellite Research Committee of the Polish Academy of Sciences (PAN). The president of the Polish Academy of Sciences appointed the new head of the Committee: Prof. Zbigniew Kłos of the Space Research Center of the Polish Academy of Sciences. In addition, the Presidium of the PAN appointed Dr Eng. Leszek Loroach, Dr Eng. Adam Okniński and Dr Grzegorz Brona to the Space and Satellite Research Committee (KBKIS) at the Presidium of the Polish Academy of Sciences for the term 2019-2022. Dr Eng. Leszek Loroach, director of the Aerospace Technology Center at the Institute of Aviation, was elected to the post of the 2nd Vice President of the Space and Satellite Research Committee of the Polish Academy of Sciences. Dr Eng. Adam Okniński, head of the Department of Space Technology at the Institute of Aviation, was

appointed to create the Sections of the KBKIS PAN Exit Systems. Dr Grzegorz Brona becomes the president of the Polish Agency of Space.

Maria Curie-Skłodowska University in Lublin to launch Programming Academy

2019-03-29

Students can apply for a competition „Algorithms and data structures” and the course „Fundamentals of Programming”, organized as part of the Academy of Programming at the Maria Curie-Skłodowska University in Lublin (UMCS). The programs are addressed to a wide range of students interested in programming and are aimed at popularizing information technology among students of schools in the Lublin province. The organizer of the initiatives is the UMCS Institute of Computer Science in Lublin. UMCS Programming Academy is a long-term educational project that aims to popularize information technology among school students from the Lublin province. The Academy’s offer is addressed not only to top managers, but also to a wide range of students interested in programming. The organizers want to motivate students to broaden their horizons and prove that IT issues can be presented in an interesting and accessible form. More: www.ap.umcs.pl

Students of the Wrocław University of Technology to develop a new underwater robot

2019-03-29

Students from the „Robocik” Scientific Club operating of the Faculty of Mechanical Engineering of the Wrocław University of Technology are developing a new version of the autonomous underwater robot to present it in international competitions in the USA. The new model will be larger, equipped with more engines and a completely new manipulator. Students already have a fully completed boat model and a frame made of polypropylene. The manipulator is also prepared and tests will begin soon at the pool of the Academy of Physical Education. The new boat will be bigger and will attract observ-

ers with their futuristic look. This is mainly due to practical reasons - the issue of water resistance and the changed way of placing electronics inside the hull. The design will be lighter and equipped with more engines; four to move horizontally and additional four to move vertically. More: <https://pwr.edu.pl/uczelnia/aktualnosci/z-nowym-robota-podwodnym-wystaraja-w-usa-11146.html>

Poznań branch of the Institute of Non-Ferrous Metals in Gliwice to modernize its laboratory

2019-04-02

The Poznań branch of the Institute of Non-Ferrous Metals in Gliwice will modernize its laboratory. The project „Modernization of the Laboratory to increase research capabilities for the development of the automotive market and electromobility” is co-financed from the European Regional Development Fund. The aim of the project is to create a modern research base in the field of electromobility that allows conducting research in accordance with the safety requirements for energy storage systems (RESS) and battery testing for electric vehicles. The leader of the consortium established to implement the project is the Poznań branch of the Institute of Non-Ferrous Metals, the other members are: EXIDE Technologies SA, Poznań; Przemysłowy Instytut Motoryzacji PIMOT, Warsaw and the Institute for Automotive Research and Development BOSMAL Sp. z o.o., Bielsko-Biała.

Poznań scientists to build an observation complex of five modern telescopes

2019-04-03

Scientists at the Adam Mickiewicz University in Poznań will search the sky through five modern telescopes. The Sierakowski Landscape Park is an ideal place for such researches. The university received a grant - PLN 3 million for this purchase. Currently, the university strives to obtain permission to build an observation complex. The whole set of four smaller telescopes and one larger device will be installed in the Sierakowski Landscape Park, 70 km from Poznań. - This is the Dark Sky Park, where the lights from Poznan do not reach - says Dr Kaminski - However, this is not the final destination, because in time we will want to move. Where? We do not know that yet - says project coordinator, Dr Krzysztof Kamiński. Dr Kaminski has just returned from Arizona (US), where he visited the observatory where the Polish telescope from the Poznan University is located.

Conference „Alone together” in English York supported by the rector of the University of Szczecin

2019-04-03

English York St. John University and the University of Szczecin invite participants from 10 to 12 April to the international multidisciplinary conference „Alone together” dedicated to loneliness in the community. The conference will be held in York, United Kingdom under the honorary auspices of the rector of the University of York, Prof. Karen Stanton and the rector of the University of Szczecin, Prof. Edward Włodarczyk. - Our intention is to hold a global meeting of researchers and enthusiasts of loneliness, representing various disciplines (pedagogy, psychology, philosophy and cognitive science, theology, medicine, art and others). York St. John University is a university founded in 1841. It has 6,000 students, including 500 foreigners. Applications are accepted via the conference website: www.yorks.ac.uk/alonetogether

Silesian University of Technology launched the Academy of Materials Science and Technology for schools

2019-04-03

The Faculty of Mechanical Engineering at the Silesian University of Technology started the Academy of Materials Science and Technology. It is attended by 300 pupils, qualified from secondary schools. Each participant will take part in eight thematic laboratory classes and will listen to four popular lectures. - This is an initiative created for talented young people and creative teachers, the first on such a scale in the field of materials science and technology - says the program coordinator, Dr Agata Śliwa. Selected lectures are held in the form of popular science talks, which allow students to discover scientific facts about materials and technologies of the future. After the lectures, participants in small laboratory groups can literally touch the discussed issues within a strictly planned classes. Due to the great interest, the organizers will launch the Academy also in future. More: <https://www.materialowa.pl/>

New leadership of the Polish Space Agency

2019-04-04

On 1 April 2019, Prime Minister Mateusz Morawiecki appointed Michał Szaniawski as acting president of the Polish Space Agency (PAK). Michał Szaniawski replaced Dr Grzegorz Brona who resigned. He is a graduate of Katholieke Universiteit Leuven (Belgium) and the University of Warsaw. He also completed specialist courses at the International Space University in Strasbourg and the Wirtschaftsuniversität in Vienna. In recent years, Szaniawski was the vice president of the Industrial Development Agency, and also an adviser to Jadwiga Emilewicz, Minister of Entrepreneurship and Technology. During this time, he was responsible for creating the Space Technology Sector Support Program in Poland and negotiations on Poland's accession to the European Space Situation Awareness Program (EUSST). From November 2018, he was a member of the Council of the Polish Space Agency.

Student of the Wrocław University of Technology becomes a laureate of a competition organized by Siemens

2019-04-04

Aleksandra Chudzyńska, student of the electronics department of microsystems and photonics of the Wrocław University of Technology, won the competition organized by Siemens. She was awarded for her film „Engineer's work in response to the challenges of the modern world”. The competition was one of the elements of the program for students of technical faculties «Female engineers 4.0». The program was performed in the form of specialist workshops on broadly defined Industry 4.0. It was organized by Siemens with support of the Perspektywy Educational Foundation and the Ministry of Enterprise and Technology. The scope of the workshop also included areas related to personal development in the labor market - communication, personal branding and mentoring. Thirty students from Poland participated in the classes. Their course included issues from „Virtual and augmented reality”, „New production setup”, „Robotization in the world of Industry 4.0” and „Designing innovation in the spirit of design thinking”. The winning film: <https://www.youtube.com/watch?v=DrXq5Zjuj2E>

Silesian University of Technology to cooperate with secondary schools educating aviation mechanics

2019-04-04

Silesian University of Technology actively develops teaching activities in the field of aviation technology as well as in cooperation with leading secondary schools teaching in these courses. Cooperation agreements were signed with Complex of Automotive Schools in Gliwice and Complex of Mechanical Schools No. 4 in Krakow. The agreements define the principles of cooperation under the cooperation, classes profiled occupations: mechanical technician aerospace and avionics technician. In order to implement the agreement, the University of Technology will support the school through the implementation of practical activities in the emerging objects currently the Academic Aviation Training Center at the Silesian University of Technology Gliwice airport. Cooperation will involve, supporting the content of the teaching process, in order to prepare young people to study in the fields of aviation and to work after graduation. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListaWiadomosci&Page=1&WebPartTitle2=Wiadomosc&Filter1Field2=Identyfikacja&Filter1Value2=2647>

Scientists of the Wrocław University of Technology created a portal with plans and visualizations of Silesian castles

2019-04-05

Researchers from the Wrocław University of Technology architecture department created the portal „From the gord to the castle” containing plans, visualisations and sections of about 200 Silesian medieval fortifications, castles and manors. Their remains in the field can now be seen only by the expert eye of an archaeologist. Dr Maria Legut-Pintal and Eng. Paweł Rajski collected and analyzed hundreds of files, photos and models over the past few years,

using data from aerial laser scanning made available by the Center for Geodetic and Cartographic Documentation. In this way, they implemented a project financed by the National Science Center. Researchers want to enlarge the facilities base in the future. They also think about the proposal to combine it with other similar, already existing databases, such as the Polish Academy of Sciences or the National Institute of Heritage, which present primarily historical data and the effects of previous research. More: <https://pwr.edu.pl/uczelnia/aktualnosci/sredniowieczne-grody-i-zamki-w-trojwymiarze-11152.html>

Lodz University of Technology to launch Nationwide Student Seminar TEXTIL 2019

2019-04-09

The Faculty of Textile Technology and Design of the Lodz University of Technology invites participants on April 9, 2019, to the National Student Seminar TEXTIL 2019 „Young Fashion Design University of Technology”. The event is an opportunity for young people to present their creativity, show projects and to get acquainted with the potential and offer of the Faculty. The competition part of the TEXTIL 2019 seminar includes: fashion shows, model exhibitions and multimedia presentations. TEXTIL 2019 is also an opportunity to participate in 1.5-hour workshop classes, presenting modern textile technologies in the field of clothing, design, knitting, metrology and synthetic fibers as well as multimedia activities.

Students of the University of Warsaw receive gold medal in the Academic World Championships in Team Programming

2019-04-09

Students of the Faculty of Mathematics, Computer Science and Mechanics of the University of Warsaw (WMIM UW) took the fourth place and won a gold medal in this year's Academic World Championships in Team Programming, which took place in Porto. At the same competition, the 6th position and silver

medal was received by the team of the University of Wrocław. The gold medals under the Championships are awarded to the four best teams. The winners of places from 5 to 8 are awarded with silver medals, while the bronze ones are awarded to teams that took places from 9 to 12. In the 43rd International Collegiate Programming Contest, 135 teams took part from the world. Students of the University of Warsaw University of Science and Technology Jakub Boguta, Konrad Paluszek and Mateusz Radecki solved eight out of eleven tasks prepared by the organizers. This year's world champion became a team from the Moscow State University before the Massachusetts Institute of Technology and the Tokyo University. See results: <https://icpc.baylor.edu/worldfinals/results>

Programmers of the University of Wrocław receive the silver medal of the World Cup

2019-04-09

The team of programmers from the University of Wrocław (UW) won a silver medal during the World Team Programming Championships. The team of the University of Moscow won the competition. The teams from the Massachusetts Institute of Technology, the University of Tokyo the University of Warsaw also received golden medals. This year's finals took place on April 4 in Portugal. University of Warsaw team: Anadi Agrawal, Michał Górniak and Jarosław Kwiecień solved 8 tasks, which brought them sixth place and silver medal (4 medals of each colour were awarded). The World Team Programming Championships are the largest and most prestigious programming competitions. 50,000 students from 3,000 world universities fought for qualifiers to the finals. The competition consists of three-person teams that solve algorithmic tasks based on real IT problems, practicing cooperation, creativity and the ability to act under time pressure.

Students of the Wrocław University of Technology to develop a rocket for competitions in the United States

2019-04-09

Members of the In Space scientific club operating at the Wrocław University of Technology are preparing to participate in the student rocket competition Intercollegiate Rocket Engineering Competition. Over 120 student teams from all over the world have applied for the competition in the USA. Wrocław students will start in the category of rockets powered by hybrid engines. Their engine will consist of two main parts: a cylinder with an oxidizer - nitrous oxide and combustion chamber filled with fuel - polypropylene. The most important task of the rocket is to rise to 10,000. feet, or exactly 3048 m. For each meter more or less the team will lose points. According to student estimates, their rocket - «Ninety Nine» - will weigh about 18 kg and measure about 2.6 m. Its proper functioning is to provide three main electronic circuits. In addition, it will transmit its GPS position and speed and altitude data in real time. Warsaw University of Technology students winning SAE Aero Design in California

2019-04-10

Students from the Interfaculty Scientific Circle SAE Aero Design, operating at the Faculty of Power and Aeronautical Engineering of Warsaw University of Technology, took the two first places, one second and three thirds in international SAE Aero Design competition for students involved in the design and construction of unmanned aircraft. Warsaw students took part in all three competition classes: Regular, Micro and Advanced. They were invincible in the Regular class - they won the general classification and classification of flights. In addition, they took the second place in the flight classification and the third place in the overall Micro class classifica-

tion, and in the Advanced class they took the third place in the flights and the third in the total score. The SAE Aero Design competition lasted from 5 to 7 April 2019 and took place in Van Nuys, California.

Researchers of the Wrocław University of Science and Technology to develop a technology for measuring the adhesion of body surfaces

2019-04-10

The project of scientists of the microsystems and photonics department at the Wrocław University of Science and Technology received funding from the Tango 3 program. The team led by Prof. Teodor Gotszalk will develop practical research of a previously developed new technology for measuring the surface adhesion of bodies. Their research is a part of the base project of the National Center for Science Opus, concerned the metrology of molecular interaction forces using electromagnetically moved microsystem systems - MetMolMEMS. The researchers have developed a new concept for measuring adhesion, which in essence is the sum of the chemical interactions of molecules found on two contact surfaces. The developed measurement technology - after some modifications - will be able to find application in the production of surfactants, e.g. in the cosmetics industry. This will allow to determine the degree of adhesion, that determines whether the product has stronger or weaker performance. More: <https://pwr.edu.pl/uczelnia/aktualnosci/rozwijanie-nowej-technologiei-pomiaru-adhezji-na-w12-11159.html>

University of Lower Silesia in Wrocław examines the importance of robotics in social work

2019-04-10

The University of Lower Silesia in Wrocław together with partners from four European countries are implementing the PProSPero project: Pedagogy of Robotics in the Social Professions in Europe. The

activities are carried out under the ERASMUS PLUS KA203 program - Strategic Partnership for Higher Education. The project concerns the importance of robotics in contemporary social work. Researchers are investigating how the dissemination of solutions related to artificial intelligence and robotics changes the realities of work in the broadly understood social work. The result of the project will be a proposal for an education program for students of social work and / or social pedagogy taking into account the issues of social robotics. The partners of the project are: the Institute of Technology SLIGO in Ireland, the National University of Ireland Galway and The Alzheimer Society of Ireland; Danish VIA University College and Holsterbro Kommune, the Dutch Twente University and the Spanish Universitat de Valencia.

Projects of the University of Humanities and Natural Sciences in Częstochowa co-financed from the STER program

2019-04-10

Two programs submitted by the University of Humanities and Natural Sciences in Częstochowa (UJD) have received funding under the STER Program "Doctoral scholarships for foreigners" of the National Academic Exchange Agency (NAWA). The first project is «Polish-language and / or German-language literature in the European context: modernity - media - tradition - (inter) culture - emigration - reception» led by Dr Anna Majkiewicz. The second funding was given to the application of Dr Magdalena Bator for her research in linguistics «Polish and / or English in a European context: history - media - discourse - culture». The aim of the STER Program is to internationalize doctoral schools by increasing the attractiveness of the offer addressed to foreign candidates for doctoral schools run by Polish institutions.

Lublin scientists working on optimizing the propulsion system of the speedway motor

2019-04-11

The Lublin University of Technology has started cooperation with Speed Car Motor Lublin club. Its goal is to optimize the propulsion system of the speedway motor and obtain its maximum race performance. The university will develop a system for active registration, transmission and data analysis dedicated to speedway sports. Such a system will allow to upgrade speedway games to a higher technological level. Researchers from the technical university and mechanics from Motor Lublin will work on improving driving techniques. - Our goal is to provide technological support to the Motoru Lublin team, which advanced to the PGE Ekstraliga 2019 games - says Prof. Mirosław Wendeker, head of the Department of Thermodynamics, Fluid Mechanics and Air Drives. The research will be financed from the Regional Initiative Excellence project from the funds of the Ministry of Science and Higher Education.

Wrocław robotics students win medals in Goeteborg

2019-04-11

Students from the scientific circle of KoNaR robotics operating at the Wrocław University of Technology won two gold and one silver medal at the international Robot-SM competition in Sweden. The trip to the competition was funded by the Ministry of Science and Higher Education from the grant The best of the best 3.0. During the competition in Göteborg, representatives of the KoNaR Robot Science Club won three medals with their robots. Once again, the technicians from the University of Technology showed the highest category in Sumo competition, winning gold medals in both mini and micro categories. They also added silver medal in the Linefollower competition, which consisted of driving on time on a well-defined route. Robot-SM competitions have been held since 2006 at the Chalmers Technological University in Gothenburg. The rivalry takes place in

four categories: Sumo, Line Following, Folkrace and Freestyle.

Student of the Silesian University of Technology becomes the laureate of the Siemens competition „Inżynierki 4.0”

2019-04-12

Marzena Sudoł, a student at the Silesian University of Technology, became one of the four laureates of the Siemens competition „Inżynierki 4.0”, which is organized for female students of technical universities. Participants of the competition had to make a short film about the work of an engineer. The «Inżynierki 4.0» project supported by the Perspektywy Education Foundation and the Ministry of Entrepreneurship and Technology include specialized workshops and classes conducted by experts in industrial technology, digitization and communication. Its participants could also take part in the competition to receive the main prize: a trip to Hannover to the largest Hannover Messe 2019 industrial fair and to visit the German smart factory. The task was to create a movie illustrating the slogan: „The engineer’s work is an answer to the challenges of the modern world”. Film laureate: <https://www.youtube.com/watch?feature=youtu.be&v=xjqQSgrKqUc&app=desktop>

Dr Piotr Wesołowski from the Wrocław University of Science and Technology to present its project in China

2019-04-12

Construction project of Dr Piotr Wesołowski from the architecture faculty of the Wrocław University of Science and Technology was included in 32 works selected from over two thousand projects that were sent to the Zhengzhou International Sculpture Exhibition in China. Twenty-three competition works are installations of artists from China, and the other nine come from Spain, Japan, Belgium, South Africa, Bulgaria, Ukraine, Kosovo and Poland. Dr Eng.

Piotr Wesołowski from the Department of Drawing, Painting and Sculpture at the Faculty of Architecture of the Wrocław University of Science and Technology presented his work «Sun, Peasant and Donkey». The work is now shown at an exhibition at the China Sculpture Institute. The constructions are assessed by the guests and by the jurors, who evaluate the creativity of works, their uniqueness and aesthetics, as well as the issue of strength, safety or environmental friendliness. The authors of the best projects will receive cash prizes, and above all their installations will be placed in the city sculpture park. More: <https://pwr.edu.pl/uczelnia/aktualnosci/praca-dr-piotra-wesolowskiego-na-wystawie-w-chinach-11161.html>

Students of the Wrocław University of Science and Technology win SAE Aero West medals in the USA

2019-04-15

Students of the Wrocław University of Science and Technology have won four medals of the SAE Aero West competition in the USA. At the California Van Nuys airport, the young constructors took second place in the general classification of the most demanding Advanced class. Students from the Academic Aviation Club competed in two categories - Micro and Advanced, which goal was a simulated colonization of Mars. It was necessary to rise to a height of about 30 m and throw down the «habitats» in the form of dozens of foam football balls and a dozen or so half-liter bottles of water. The second task was to drop three fully autonomous gliders attached to the mother plane. SAE Aero West competitions are held from 1995 onwards. They are organized by the Society of Automotive Engineers. Students from technical universities from around the world compete in it. They design and develop remotely controlled aircraft models that are supposed to take as much weight as possible with the lowest possible own weight. More: <https://pwr.edu.pl/uczelnia/aktualnosci/jetstream-z-drugim-miejscem-na-zawodach-sae-aerodesign-west-11164.html>

Institute of Aviation to hold a conference on the development of missile technologies in Poland

2019-04-16

On Tuesday, April 16, 2019, Polish Space Agency and the Institute of Aviation will hold the conference „Development and application of missile technologies in Poland - a new opening”. The aim of the event will be to present the achievements and potential of national research and industrial entities associated with missile technologies and to indicate areas of interest of the Polish Army in this field. The conference is supported by the Ministry of Enterprise and Technology See the conference program: https://polsa.gov.pl/images/konferencja_rakietowa_2019/Pierwsza_konferencja_rakietowa-agenda.pdf

Silesian University of Technology cooperates with the Military Central Office of Construction and Technology

2019-04-16

Silesian University of Technology has signed an agreement on cooperation with the Military Central Office of Construction and Technology S.A. with headquarters in Warsaw. The university strengthens cooperation with research institutes and aviation industry companies. The agreement provides for cooperation in the field of research and teaching as well as research and development in the field of aviation technology. It will consist of joint running and conducting scientific research as well as research and development and implementation works, programs for improving the qualifications of research and engineering and technical staff. Military Central Office of Construction and Technology deals with the construction and production of modern equipment for defense purposes. It is the only company in Poland that completely equips military airports with above-ground servicing of aircraft. Currently, the company is also targeting its offer for the civil sector.

New research center of the Wrocław University of Science and Technology to launch new laboratories

2019-04-16

Twelve specialized laboratories with modern equipment will be located in the newly opened GEO-3EM research center of the Wrocław University of Technology. The value of the investment is PLN 102.6 million. The Center was established in the vicinity of the „Polinka” cableway station and the Geocentrum educational and research complex. The three-story building has over 100 different rooms - laboratories, a conference room and warehouse and administration facilities. This infrastructure will be used by scientists from civil and water, chemical, electronics, geoengineering, mining, geology and mechanical faculties. The facility is adapted to the needs of the disabled students. 12 laboratories have been located in the building including Laboratory of Hydrometallurgy Processes, Laboratory of Polymer Plastics Processing, Laboratory of Earth Sciences and Mineral Engineering and Accredited Tape Laboratory and Accredited Laboratory of Work Safety. More: <https://pwr.edu.pl/uczelnia/aktualnosci/centrum-geo-3em-otwarte-nowoczesne-laboratoria-dla-dolnego-slaska-11166.html>

Mayor of Warsaw promises scholarships for PhD students interested in researching the capital city

2019-04-17

The Warsaw School of Economics (SGH) and the capital city of Warsaw have signed an agreement on cooperation in providing sustainable development of the city as well as spatial and economic policy. On the occasion of the event, the president of Warsaw announced a scholarship program for PhD students interested in researching Warsaw. - It is a chance for development for young scientists - said Rafał Trzaskowski. Both the agreement and the scholarships for PhD students will enable effective implementation of the objectives of the Warsaw2030 Strategy, i.e. our city as an open and friendly metropolis with

active residents. The agreement will allow to further use the potential of the Warsaw science sector to improve the quality of life in the city, to include researchers in the dialogue on the development of the city - added Mayor Trzaskowski. The agreement also includes the working group that will elaborate recommendations on spatial changes of the area in front of the SGH main building and the inclusion of the campus in the public space of the city.

Students of the Wrocław University of Science and Technology to fly to the USA for the University Rover Challenge 2019

2019-04-17

Students of the Wrocław University of Technology qualified for the races of the University Rover Challenge 2019 Mars rovers, which will take place in the USA at the turn of May and June. In the final they will compete with 35 teams from all over the world. Students will present their Scorpio X rover. The design has all-wheel drive, each powered by a separate engine. The rover's tires are made of cordura and filled with a special foam. This is the original solution of Wrocław constructors. The construction of the rover was made largely of light materials - aviation aluminium and polyamide. Scorpio X has a modular structure, which allows users to attach additional elements to it and modify any existing components. The University Rover Challenge has been organized for thirteen years and the rivalry takes place in the desert of Utah, at the Mars Desert Research Station. This is one of the largest and most important international races for Mars rovers. More: <https://pwr.edu.pl/uczelnia/aktualnosci/lazik-scorpio-na-zawody-w-usa-11163.html>

Polish satellites launched into space

2019-04-19

On 17 April 2019, just before 23 o'clock in Poland, on the American island of Wallops, NASA launched a Cygnus spacecraft with two Polish satellites: KRAKsat, which was developed by students of the AGH University of Science and Technology in Krakow with the participation of students of the Kraków Jagiellonian University and the first Polish commercial satellite Światowid. The task of KRAKsat is to check whether the magnetic fluid, or ferrofluid, set in motion affects the position of the satellite in space. The satellite also has a microSD card with photo and graphic works of 1,200 interaunts, selected during the competition «I'm flying into space!». The Światowid is a communication satellite developed by the SatRevolution company from Wrocław. Its task will be to monitor the Earth's surface, including water status and air quality.

Polish Space Agency concluded an agreement with the US Strategic Command

2019-04-19

Poland will gain access to data and services related to „situational awareness” in space, such as warnings about collisions, fragmentation or uncontrolled entry into the atmosphere of satellite objects. They will be provided by the 18th Air Force Space Command's 18th Space Control Squadron. Polish-American agreements in this matter were signed by Michał Szaniawski, President of the Polish Space Agency (PAK) and Admiral Richard Correll, Director of Strategies and Strategies of the United States (United States Strategic Command - USSTRATCOM) during the 35th Space Symposium in Colorado Springs in the USA. The signing of the agreement will help develop Polish competence in situational awareness in space, including in particular the development of the national SSA Operational Center, whose activities will serve strengthening the security of Polish and allied satellites in space - said Michał Szaniawski.

XXIV Competition for the Siemens Award

2019-04-24

Until 30 April 2019, scholars can submit their work in the XXIV Competition for the Siemens Award. The competition is organized on the basis of an agreement between Warsaw University of Technology (PW) and Siemens Company. Its aim is to promote outstanding achievements in technology and scientific research conducted by employees of academic and non-academic institutions in Poland. The competition should report works related to the scope of Siemens AG's activity, and above all to the following areas of science and engineering: electrical engineering and energy, in particular in the generation, transmission and use of electricity; electronics and information technology as well as automation and robotics; rail transport, traffic management and control. More: <https://www.biuletyn.pw.edu.pl/content/download/14943/87040/file/Regulamin%20Konkursu%20o%20Nagrod%C4%99%20Siemensa.pdf>

Polish training technology awarded at the exhibition of inventiveness in Geneva

2019-04-25

The training technology developed in the consortium of the Land Forces Academy in Wrocław and the Lublin University of Technology won the silver medal at the 47th International Exhibition of Innovation and Invention in Geneva. Polish engineers presented in Geneva technology for operators of unmanned aerial vehicles, possible for wide application in training in virtual space. The solution has been submitted for protection in the Patent Office. The invention allows a significant reduction in training costs for operators of unmanned aircraft. It is a development solution - in the future, it will allow operators of any equipment and utilities to be equipped with land forces before the operator will be able to handle the actual equipment.

Poznań Foundation for Clean Energy to hold a conference on photovoltaics, electromobility, energy storage

2019-04-26

The Foundation for Clean Energy invites participants from 29 to 31 May to Poznan for the VIII Scientific and Training Conference „Photovoltaics, electromobility, energy storage - towards a new energy policy”. The conference will be devoted to good practices in the implementation and design of photovoltaic installations and the directions of changes in the Polish renewable energy sector. The organizers of the conference are the Institute of Electrical Power Engineering of the Poznan University of Technology, the Workshop of Energy Policy and Security of the University of Zielona Góra and the Faculty of Political Sciences and Journalism of the Adam Mickiewicz University in Poznań. The organizers are planning to discuss proper installation of solar installations, their marking, measurements, reception and safety; lightning and surge protection, presentation of technical solutions and storage of electricity from photovoltaic installations.

First Polish portal dedicated to artificial intelligence

2019-04-30

Warsaw Information Processing Center - National Research Institute (OPI PIB) with the support of the Ministry of Science and Higher Education launched the first Polish website devoted entirely to artificial intelligence, automation and robotics. The site szucznainteligencja.org.pl will present technological innovations related to artificial intelligence, materials on the subject of scientific research in the area of AI conducted in Poland and abroad, and AI development strategies. The new medium combines information and educational functions. The news section presents the latest information on research and practical applications of the broadly understood AI. The portal also presents ideas related to digital technologies and AI, the profiles of their authors and information on the most important AI events in the country and around the world.

Students of the Warsaw University of Technology beat the Polish record in the height of the amateur rocket's flight

2019-05-02

Students from the Student Astronautic Circle operating at the Faculty of Power and Aeronautical Engineering of the Warsaw University of Technology (PW) broke the Polish record in the height of the amateur rocket flight. „Grot”, a rocket of PW students, reached the height of 18.5 kilometers. Its main elements are a large engine for solid fuel and a narrow hull completed with a head made of brass. The rocket flew at a maximum speed of 750 m / s (Mach 2.1). „Grot” instead of parachuting, took a ballistic flight. Thanks to precise GPS instructions given by the rocket, students regained its elements.

Graduate of the University of Technology and Life Sciences in Bydgoszcz created the longest wind blade

2019-05-02

LM Wind Power in its plant in Cherbourg, France, has produced a windblade with the length exceeding 100 meters for the first time in the history of wind energy. The director of the team supervising the work is Łukasz Cejrowski, a graduate of the University of Technology and Life Sciences in Bydgoszcz. The windblade produced in Cherbourg is 107 meters long and will be tested to get the necessary certificates for commercialization and to demonstrate the ability to work without problems for over 20 years. The new blades will be used in the largest offshore wind turbines in the world - General Electric Heliade-X with a unit power of 12 MW.

Krakow University of Technology signs an agreement with the company POLREGIO

2019-05-06

The Institute of Rail Vehicles of the Faculty of Mechanical Engineering of the Krakow University of Technology concluded with the Małopolska Branch of the company „Przewozy Regionalne” - POLREGIO agreement on cooperation in the field of didactics and research. Thanks to the signed agreement, students of the innovative dual specialty of rail vehicle engineering can learn more about the construction and operation of trains with the possibility of participating in train driver's work. The specialty Rail Vehicle Engineering was launched in 2017 and is carried out in the dual system of the courses Transport and Engineering of transport. It is a response to the dynamically developing rail vehicle construction sector and the resulting demand for qualified engineering staff in this industry.

Wroclaw Space startup cooperates on the European moon mission

2019-05-06

Space startups from Poland and Germany signed a letter of intent to develop the technology needed to send a microsatellite to the Moon's orbit. The Polish signatory of the document is the Scanway company located in the Wrocław Technology Park. One of the most interesting aspects of the lunar mission is the declaration of providing two experiments for university teams from Poland and Germany selected in national competitions. This initiative aims to engage young professionals in the development of their space skills and ambitions. Student projects that will receive a lunar ticket will be selected in 2021. Scanway and German Orbital Systems are two companies related to the New Space market namely modern space technologies. Both companies develop innovative solutions for small CubeSat satellites and have a portfolio of many cosmic implementations in their portfolio. More: <http://www.technologypark.pl/aktualnosci/scanway-wysle-satelite-na-ksiezyc>

New competition in ICT technologies

2019-05-07

The European CHIST-ERA network has announced a new competition in the area of information and communication technologies. The launch is planned for October 2019. Participants can submit applications for financing research projects in the following thematic areas: Explainable Machine Learning-based Artificial Intelligence; Novel Computational Approaches for Environmental Sustainability. The detailed thematic scope of the competition will be specified during the CHIST-ERA 2019 Conference, which will be held on June 11-13, 2019 in Tallinn (Estonia). Participation in the event is free and open to all interested scientists. More: <http://www.chistera.eu/conference-2019-programme-overview>

European Space Agency to send a Polish device in the lunar mission

2019-05-08

The engineers of the Space Research Center of the Polish Academy of Sciences, are working on the construction of a small excavator, which will be launched with a lander developed by the European Space Agency (ESA) to the Moon. The excavator will dig the oxygen-rich regolith. The Polish device is to transfer regolith to a thermochemical reactor to produce water. The European Space Agency (ESA) intends to send a lander to the Moon by 2025. It will be used to carry out further research, which will show the possibility of obtaining oxygen or water from the local mineral resources. This will be the first ever mission focused on using the Moon's resources.

Students of the Poznan University of Technology take the second place in the competition for the skyscraper of the future

2019-05-08

Students of the architecture faculty at the Poznan University of Technology - Klaudia Gołaszewska and Marek Grodzicki, took the second place in the prestigious international competition, Evolo 2019, for innovative skyscrapers of the future. The Skyscraper Competition has been organized since 2006 and it is one of the most prestigious architectural competitions of skyscrapers. It allows to emerge outstanding ideas that define the design of skyscrapers by implementing new technologies, materials, programs, aesthetics and spatial organization along with research on globalization, flexibility, adaptability and the digital revolution. The concept of Poznan students, airscrapers uses the effect of the chimney draft. It sucks the air at the surface of the earth, cleansing it through a complex filtration system. The tower is 800 meters high and has 60 meters in diameter. It consists of 3 inlet; solar and green modules to realise a specific task within one integrated functional system.

Opole University of Technology to hold Polish-German seminar

2019-05-08

The Fraunhofer Design Center for Advanced Light Technologies at the Opole University of Technology together with the Technische Universität Chemnitz and the Science and Technology Park in Opole are inviting participants to the Polish-German seminar „Composite production and recycling”. The program includes speeches by scholars from Polish and German scientific institutions and representatives of enterprises. The topics of the seminar are including production and environmental assessment of hybrid composites and structures with recycled plastic for vibration damping; recycling of duroplastic composites and preparation of polymer composites. The seminar, scheduled for 14 May, is addressed to representatives of science, industry, local governments and other interested entities and students. It will enable the exchange of experiences, mutual popularization of Polish and German solutions, and the initiation of future research projects. More information at: www.fpc.po.opole.pl

Project of Wroclaw students awarded in the competition eVolo 2019 Skyscraper Competition

2019-05-09

The project of a skyscraper cleansing the ocean of rubbish designed by students of the architecture faculty of the Wrocław University of Science and Technology was awarded as one of the 30 best works in the competition eVolo 2019 Skyscraper Competition. The project of Wrocław students would have a huge, floating piston, pressing waste directly in the water. It would take away only the most contaminated water without using pumps or underpressure. The only force pressing the garbage would be gravity. Then a press with a diameter of more than 4.5 meters would crush the garbage, thus forming discs whose height would depend on the density and type of waste. Then the garbage would go to a special buffer to be picked up by the ship and destined for

utilization. 478 works were submitted to this year's competition. The jury selected three finalists and awarded 27 prizes. The Wrocław prized students are Szymon Ciupiński, Karol Łącki and Dominik Pierzchlewicz. More: <https://pwr.edu.pl/uczelnia/aktualnosci/studenci-z-w1-wyroznieni-w-miedzynarodowego-konkursie-evolo-11183.html>

Architects of the Gdańsk University of Technology awarded for research and protection of monuments

2019-05-10

Professor Eng. Maria Sołtysik and Dr Eng. Robert Hirsch from the Faculty of Architecture of the Gdańsk University of Technology received the Silver Medals „Meritorious for Culture Gloria Artis”, and Dr Eng. Anna Orchowska-Smolińska received the silver medal „For taking care of the monuments”. Professor Sołtysik was awarded for her enormous contribution to the research on spatial development and architecture of Gdynia, as well as for the discovery and dissemination of the Gdynia heritage on a supra-local scale. Dr Robert Hirsch was awarded for his involvement in research and protection of Pomeranian monuments - in particular for the protection of the monuments of Gdynia as the Municipal Historic Monument Conservator. The activity of Dr Eng. Anna Orchowska-Smolińska, architect and conservator of monuments, was honored with the silver medal «For the protection of monuments». All the winners are employees of the Department of History, Theory of Architecture and Monument Conservation.

Success of students of the AGH University of Science and Technology in Krakow

2019-05-14

Students of the Academy of Mining and Metallurgy in Kraków (AGH) won the European qualifiers in two prestigious oil and gas competitions. They won individual SPE Europe Regional Student Paper Contest and team PetroBowl competition. As a reward, they will represent Europe in the world finals that will take place at the end of September and the beginning of October in Calgary (Canada) during the most important conference of the oil industry Annual Technical Conference and Exhibition (ATCE). In the team competition, students representing the Faculty of Drilling, Oil and Gas as well as the Faculty of Geology, Geophysics and Environmental Protection defeated other teams from European universities. In an individual competition, Michał Figiel from the Faculty of Drilling, Oil and Gas took the first place in the Undergraduate category for his work titled «Randomness of geophysical log data» on the use of fractal calculus and chaos theory for the quantitative description of irregularities in geophysical curves.

AGH University of Science and Technology in Krakow to hold 2nd Cosmic Mining Conference

2019-05-15

The ISME Group (Ideas for Space Mining Engineering) is organizing the 2nd Cosmic Mining Conference on 16 May 2019 at the AGH University of Science and Technology in Krakow. The conference is devoted to space mining, the geological aspects, engineering of devices, vehicles and machines, as well as legal and economic problems that should be considered in order to implement this futuristic idea. The conference is divided into three sections: Mechanical Engineering, focused on technological, constructional and material issues, Mining and Geology, which takes into account geological aspects of exploitation of extraterrestrial resources and Law and Economics, dedicated to the analysis of eco-

nomical aspects of Space mining, international regulations concerning the acquisition and exploitation of resources beyond the Earth.

Students of the Wrocław University of Science and Technology become the best in two categories of the Student Construction Competition

2019-05-15

Representatives of the Wrocław University of Science and Technology won the Student Constructions Competition KOKOS organized by the Independent Students' Union in two categories. Their winning designs include the LEM Thunder electric motorcycle and the Scorpio Mars rover. LEM Thunder is the first light electric motorbike in Poland adapted to rallies in difficult terrain conditions. It weighs 120 kg and has a power of 30 kW, or about 40 HP, which is a very good power to weight ratio, an extremely important factor in off-road rallies. It was developed by students from the Scientific Student Club of Vehicles and Scientific Mobile Robots. The motorcycle won the Ecology category. The second awarded project is the Scorpio X rover, which was developed by students from the Off-Road Scientific Club. It has four-wheel drive and modular construction, which was made mainly of aviation aluminium and polyamide - light materials with excellent mechanical properties. The rover took first place in the Smart Robots category. More: <https://pwr.edu.pl/uczelnia/aktualnosci/studentenci-nagrodzeni-kokos-ami-11190.html>

University of Warmia and Mazury awarded the medal of the Association of Polish Electrical Engineers

2019-05-16

The University of Warmia and Mazury in Olsztyn was awarded the Medal of Professor Stanisław Fryze of the Association of Polish Electrical Engineers. On behalf of the university, the medal was received by Prof. Jerzy Jaroszewski, Vice-Rector for Science. The

Association of Polish Electrical Engineers celebrates its 100th anniversary this year. This is a scientific and technical non-governmental organization. The Association awards the Medal to academic teachers or high schools for outstanding scientific and didactic activity in the field of electricians as well as institutions and schools for merit in supporting didactic activities related to electrical engineering, energy, bionics, and information technologies. The University of Warmia and Mazury conducts education in the field of technical sciences mainly at the faculties of Technical Sciences and Geodesy of Spatial Engineering and Construction.

University of Technology and Life Sciences in Bydgoszcz to hold Conference Contemporary problems of construction, Innovative solutions

2019-05-16

The Scientific Association for Building Project Management at the University of Technology and Life Sciences in Bydgoszcz is inviting participants on May 22 to the 5th International Scientific Conference Contemporary Problems of Construction, Innovative Solutions (Civil Engineering - Present Problems, Innovative Solutions CEPPIS). The conference is an opportunity to present the results of research, as well as to exchange experiences. The theme of this year's meeting is Circular Economy in construction. The main goal of the conference is to promote more efficient resource management in investment and construction projects based on the closed-loop rule. CEPPIS is a flagship event organized by the COMA Scientific Association for Building Project Management. It is attended by scientists from around the world dealing with contemporary construction problems. The official language of the conference is English.

29th international conference „Construction failures”

2019-05-20

Over 400 participants and about 20 construction companies have announced their participation in the 29th International Conference on Structural Failure, which will take place on 20 - 24 May 2019 in Międzyzdroje. One of the organizers of the event is the West Pomeranian University of Technology in Szczecin (ZUT). The event has been a forum for the exchange of views and experiences of scientists, investors, designers, contractors and construction managers responsible for the security of building structures for over 40 years. Above 100 papers were accepted for the conference. The topics include failure of reinforced concrete structures, geotechnical aspects of failure, failures of temples and historic buildings, failures of bridge and road objects, or even floor failures.

Students of the Białystok University of Technology win the BRICO competition 2019

2019-05-21

Students of Białystok University of Technology won the international competition BRICO 2019 in Estonia. Two four-person teams from the Białystok University of Technology designed and made steel structures especially for BRICO 2019. Each of the bridges with a span of 5 meters and a maximum height of 2 meters was to transfer 1000 kg of vertical load with the least deflection of the structure. In addition, the originality and aesthetics of the models were important in the competition. This year, 9 teams from three countries: Estonia, Lithuania and Poland have applied to the competition. The Białystok bridge named Steel Spiders took the first place.

Electrotechnical Institute to launch a branch in Chełm

2019-05-21

The Electrotechnical Institute operating within the Łukasiewicz Research Network will establish its branch in Chełm. The Institute wants to acquire students of the Chełm State Higher Vocational School

(PWSZ) as future employees. - The establishment of the branch of the Institute of Electrical Engineering is an opportunity for our city also for additional jobs. Ultimately it will be about 50 jobs. The headquarters will be located in the premises of the State Higher Vocational School in Chełm and research work will be conducted there - said Jakub Banaszek, the Mayor of Chełm. The Electrotechnical Institute is a research institute conducting research and development works, unit and low-volume production, experimental production, as well as product certification, publishing and standardization work in the electrical engineering.

Students of the Wrocław University of Science and Technology win the Student Formula competition in the United States

2019-05-21

Young designers of the Wrocław University of Science Technology have won a special sponsorship award in the Student Formula competition in the United States. The PWR Racing Team PWR race car took 17th place in the general classification for 120 starting teams from around the world. Students presented the conceptual and technological perspective, a cost estimation and a business plan of their project to a potential car manufacturing company. In the practical part the car made the 22 km route (Endurance) and raced on time (Autocross). The final score also included the fuel consumption during the race (Efficiency), acceleration on a straight stretch of 75 m (Acceleration) and the passage of the car on a tight eight-track (Skidpad). The Student Formula competition has been organized for 40 years on the most famous tracks in the world - Hockenheimring, Silverstone, or Circuit de Barcelona-Catalunya. The jury include experts from large automotive concerns. More: <https://pwr.edu.pl/uczelnia/aktualnosci/udany-start-naszego-bolidu-w-michigan-11191.html>

Academy of Young Scholars and Artists to invite new members

2019-05-21

The Academy of Young Scholars and Artists is an initiative supporting interdisciplinary intellectual exchange and active development of young scientists and artists of Lower Silesian higher education institutions and scientific institutes. They can apply for Academy until May 31. The Academy is an initiative of interdisciplinary, inter-university and elite character to be a stimulator of the development of the potential, boldness and unconventionality of young people and the process of so-called «Knowledge triangle». It helps shape the image of Wrocław as an ambitious academic and scientific center that is friendly to young people. The members of the Academy can be people up to 35 years of age, distinguished for their outstanding scientific or artistic achievements and sharing an interest in active cooperation with representatives of various fields of science and art. The term of the Academy member will last 5 years. More: <https://uni.wroc.pl/zglos-siedo-akademii-mlodych-uczonych-i-artystow/>

Students of the Wrocław University of Science and Technology qualified for the final of the Student Aerospace Challenge

2019-05-22

The students of the Wrocław University of Science and Technology as the only Poles qualified for the final of the cosmic Student Aerospace Challenge competition organized by The Astronaut Club Européen. On June 6, they will present their model of a six-man crew cabin for suborbital flights in Paris. The plane, designed by the students, is 15 meters long and 10 m wide. It allows load factor about 3g, and the weightless passengers can stay in it for about three minutes. In their projects they had to consider issues of life support systems, internal pressure and ejection systems. Beata Suścicka from the architecture department, Justyna Pelc from the IT and management department, Magdalena Łabowska

and Piotr Torchała from the mechanical department worked on that solution. Student Aerospace Challenge is a competition for students from member countries of the European Space Agency. 36 teams from Europe applied for the current competition. More: <https://pwr.edu.pl/uczelnia/aktualnosci/nasi-studenci-w-finale-miedzynarodowego-konkursu-student-aerospace-challenge-11197.html>

Racing cars of Silesian University of Technology awarded in Greenpower Formula F24 + races

2019-05-23

The team of the Silesian University of Technology „Silesian Greenpower” won the first and second place in the international F24 + electric car racing on the Kirkstown ring in Northern Ireland. The University’s team exhibited two cars: Bullet SGR and Bullet III. The Greenpower Formula F24 + competition takes place on the professional Formula 1 tracks. Cars participating in them are to overcome the longest possible distance in one hour. The competition includes ten races on various tracks, including the final round. Teams can participate in all races, but in the general classification only the best three results count, including the mandatory final race. Greenpower Formula F24 + is also a great opportunity to test students’ abilities and exchange technical knowledge between teams of different universities and companies.

Three scientists from the Wrocław University of Science and Technology receive grants under the Preludium program

2019-05-23

Three young scientists from the Wrocław University of Science and Technology have obtained grants from the Preludium program of the National Science Center, which funds research projects for people starting their careers without a PhD degree. The team implementing the project should have a maximum of three people. There are no age limits. The research could be scheduled for a year, two or three

years. Grants were awarded to: Monika Duda (mechanical faculty, «Analysis of the effect of fatigue crack closing in the conditions of complex state of stress in terms of energy»); Karol Gotfryd (department of basic problems of technology, for «Algorithmic aspects of processing and analysis of large data sets in distributed systems») and Karolina Kordek (chemical department for «The influence of thermal modification of carbon fibers on their electrocatalytic properties in the reaction of oxygen separation from water»).

Sanok Higher Vocational School to launch Mechanics and Mechanical Engineering

2019-05-24

From October 2019, the State Higher Vocational School in Sanok will start Master’s programs in the field of Mechanics and Mechanical Engineering. After 4 semesters of education in master’s studies, the graduates will obtain the title of master engineer. They will be prepared to take up work in companies of machinery industry, involved in the manufacturing and operating machines, design, construction and technological units, as well as organization, maintenance of production and automation of technological processes. Students can apply for studies from June 1, 2019.

Scientists of Wrocław University of Science and Technology receive awards and distinctions for technical achievements

2019-05-27

Three teams of scientists from the Faculty of Mechanical Engineering at the Wrocław University of Science and Technology have won prizes and distinctions in this year's competition of the Association of Engineers and Technicians of Polish Mechanics for the best technical achievements. In the category of achievements implemented in the industry, the team of Prof. Zbigniew Mirski was awarded for «Innovative technologies of soft and hard soldering of hard-to-weld aluminum, magnesium and titanium alloys in unlike connections». In the category of works and scientific and research positions, the team of Prof. Andrzej Ambroziak took third place for the «Application of generative technologies for the production of mechanical elements from iron-based amorphous materials». The award in the category of works and scientific and research positions was received by Prof. Piotr Dudziński and Dr Eng. Andrzej Kosiara for «A research demonstrator of the new generation of a comprehensive system of automatic operator support for mobile machines with a work manipulator». More: <https://pwr.edu.pl/uczelnia/aktualnosci/nagrody-i-wyroznienia-dla-naszycz-naukowcow-w-konkursie-simp-11212.html>

Poznan University of Technology to launch a modern astronomical observatory

2019-05-27

SkyLab - a unique astronomical observatory used to conduct industrial research and research and development of the optical observation systems was launched at the Poznan University of Technology. The ceremony was attended by Deputy Prime Minister and Minister of Science and Higher Education, Jarosław Gowin. The laboratory was launched in a special astronomical dome on the roof of the lab-

oratory hall at the Piotrowo campus. Thanks to the apparatus, scholars can observe objects of size of a pixel from a distance of one kilometre, which allows them to monitor space debris being a threat to satellites. SkyLab research team's new competences in the construction of observation equipment will contribute to the construction of national technical and intellectual potential for the use of space, strengthen Poland's position, and even allow to be a leader in the field of observation of space objects. More: <https://www.put.poznan.pl/en/aktualnosci/skylab-unikatowe-observatorium-astronomiczne>

Student Construction Competition KoKoS 2019

2019-05-28

Michał Zwierz, a student of the AGH University of Science and Technology in Kraków, designed a wheelchair with increased mobility, which won the LifeScience category in the Student Construction Competition KoKoS 2019. He studies Automation and Robotics at the Faculty of Mechanical Engineering and Robotics. Over 36 projects have been submitted to this year's KoKoS Student Construction Competition. The winners in the remaining categories are: Railway - a locomotive (scale model 1: 5,5) implemented as part of the Railway Challenge by Poznan University of Technology, Joker - locator for recreational divers Wavy by Lodz University of Technology. Smart Robots - a mobile research platform Scorpio X by Wrocław University of Science and Technology, Vehicle - car Maria of the Motorsport team from Poznan University of Technology, Ecology - motorcycle LEM Thunder by team LEM Wrocław University of Science and Technology).

Architect from the Gdańsk University of Technology publishes in „Nature”

2019-05-28

Dr Eng. Karolina M. Zielińska-Dąbkowska, assistant professor at the Department of Urban Architecture and the Cultural Department of the Faculty of Architecture at the Gdańsk University of Technology has published her article in the latest issue of journal „Nature”. In the text, the Gdansk scientist warns

that skyscrapers, which number in modern metropolises has grown by 141% over the decade, deprive residents of access to natural light, posing a threat to health, well-being and sustainable development of cities. Such development will include new urban areas not only in Asia, but also in historic European cities. The price of development is limited access to natural light, which is important for our health and well-being. Researchers have proved that the lack of exposure to the sun's rays may contribute to deficiencies of vitamin D or myopia, which by 2050 is to affect half of the world's population.

Lublin University of Technology and Polish Post to sign agreement on cooperation

2019-05-29

The Polish Post has signed a contract with the Lublin University of Technology on cooperation in the field of electromobility, photovoltaics and transport. The signing ceremony took place on 27 May 2019 at Lublin University of Technology. Under the scientific and technical cooperation agreement, the postal operator and the university will jointly implement projects co-financed from European Union funds, which concern research and the possible construction of photovoltaic installations in the Polish Post sorting plant in Lublin. One of the planned projects will be the construction of an energy warehouse. Its connection to the photovoltaic installation will allow the charging and subsequent transfer of energy storage to electric cars of the Polish Post. The Lublin technical university will cooperate with the Polish Post Office also in the organization of student internships, the implementation of diploma theses as well as research and development.

Krakow University of Technology to launch a new study

2019-05-30

Clean air engineering is a totally new field of study in Poland. It has been introduced by the Krakow University of Technology (PK) and added to its didactic offer in next academic year. The applications can be submitted since June 10. The new course will be run from October 2019 jointly by three departments of PK: Civil Engineering, Mechanical Engineering and Environmental and Energy Engineering. Dr Eng. Piotr Beńko, co-creator of the education program of this new course explained that the need to create the «clean air engineering» course results from the growing importance of air quality issues, including its impact on human health and the environment, especially in the context of intensive urban development and climate change. Regular studies in the field of Clean air engineering will last 3.5 years. Krakow University of Technology has prepared 36 places for its students.

Researcher of the University of Zielona Gora becomes an expert of the National Center for Research and Development

2019-05-30

Dr Eng. Zbigniew Fedyczak, Prof. University of Zielona Góra, from the Institute of Electrical Engineering, Faculty of Computer Science, Electrical Engineering and Automation, was appointed to the Team of Experts of the National Center for Research and Development for development of renewable energy in transport. The aim of the team's work is to coordinate the Center's activities related to economic and technical analysis in search of the optimal structure of the use of energy from renewable sources in transport (in particular biocomponents and liquid biofuels and electricity) in 2020 and subsequent years. The team's task is to analyze the development of renewable energy in transport - in particular, review and analysis of existing concepts, verification of the potential of domestic industry and scientific

and research units, identification of market potential of using renewable energy sources in transport and identification of barriers to the development of this area.

Rzeszów University of Technology signs agreement on cooperation with Linetech Aircraft Maintenance

2019-05-31

Rzeszów University of Technology and Linetech Aircraft Maintenance have signed a cooperation agreement. They will jointly train aviation engineers, support students' research and projects. The strategic cooperation agreement includes practical training of aviation engineers, R & D support of the projects addressed to academic lecturers, scientific groups or even sports sections. Rzeszów University of Technology has been training civil aviation pilots for over 40 years, and since 2007 it has added also aviation mechanics. Graduates of the university are becoming engineers of manufacturing companies from the Aviation Valley. LINETECH Aircraft Maintenance is a service provider of MRO (Maintenance, Repair, Overhaul / Service, Repair, Regeneration) for Boeing 737, Airbus A320 and one of the leading services for Embraer brand products. - The contract with Linetech expands the possibilities of our cooperation with the aviation sector. They will be used by both students and our lecturers. This is an important part of our development strategy - says Tadeusz Markowski, rector of the Rzeszów University of Technology.

Two projects of students of the Wrocław University of Science and Technology qualified to the semi-final of the Mars Colony Prize Competition

2019-05-31

Two teams of students from Wrocław University of Science and Technology advanced to the semi-finals of the competition for the creating Martian base

for a thousand people organized by the Mars Society. The authors of the „Ideacity” and the „Twardowsky” projects joined the group of 25 best teams from around the world. Participants of the Mars Colony Prize Competition had to create a project of a self-sufficient Martian colony for a thousand people. It should import the least amount of goods from the Earth, and at the same time produce goods for export. Semi-finalists include teams from the USA, Great Britain, Japan, Poland, France, Switzerland, Sweden, Finland and Israel. Assumption of the competition is that the colony produces food for its residents, just like building materials needed for its development. Self-sufficiency also means that the base is constantly producing clothes, vehicles, machines and many everyday products, as people in a typical Earth city. More: <https://pwr.edu.pl/uczelnia/aktualnosci/dwa-projekty-studentow-pwr-w-polfi-nale-mars-colony-prize-competition-11222.html>

Students of the Kielce University of Technology win the University Rover Challenge 2019

2019-06-04

We have World Champions! The team developing Martian robot Impuls from the Kielce University of Technology won the prestigious University Rover Challenge 2019, held in US. They defeated over 80 teams from around the world. Prime Minister Mateusz Morawiecki sent his congratulations via Twitter, to the Kielce students. He stressed that it is «a further confirmation of the potential of Polish science and economy». This year's University Rover Challenge competition took place in the Utah desert in the USA in the base simulating Martian conditions.

Students of the Wrocław University of Science and Technology become the best in the European BEST Engineering Competition-Poland

2019-06-04

Students of the IT and management department of the Wrocław University of Technology have won the European BEST Engineering Competition (EBEC) in Poland. They will represent Poland at the finals in Italy. EBEC is an international competition organized in 30 countries. The event is prepared by 6 local groups from Polish technical universities - AGH Kraków and five technical universities: Gdańsk, Łódź, Silesia Warszawa and Wrocław universities. The competition was divided into four stages. The first of them was the elimination test, then the local finals were held, after which the best teams met for the nationwide competition in Gliwice. Four teams in four categories competed in the categories: Team Design and Case Study. The first category was intended for constructors and the second one for analysts. The winning team from Wrocław include Mateusz Zimoch, Adam Gurgul, Piotr Zieliński and Piotr Grzybowski. More: <https://pwr.edu.pl/uczelnia/aktualnosci/danolodzy-stosowani-najlepsza-polska-druzyna-11230.html>

International conference dedicated to intelligent transport systems

2019-06-06

Until June 7, 2019, Krakow University of Technology (PK) is holding the 6th International Conference on Models and Technologies for Intelligent Transport Systems. From June 5, 120 specialists from 52 scientific centers in the world will take part in the event. They will give over 100 papers prepared by 350 authors from 24 countries. The conference every two years brings together the most important global centers and scholars dealing with intelligent transport systems (ITS). It connects the environment of scientists dealing with this subject with the en-

vironment of transport system engineers. At the conference, researchers from leading universities propose innovative models of the modern ITS systems - announces Dr Andrzej Szarata, dean of the Civil Engineering Department of the Polish Academy of Sciences.

Wrocław students receive three medals at the competition in Tashkent

2019-06-06

Students of the Wrocław University of Technology won one gold and two bronze medals during the „Youth Innovation” competition held in Tashkent for the best scientific projects carried out by scientists up to the age of 25. The competition was part of the international Construction conference - The Formation of Living Environment organized in the capital of Uzbekistan (FORM-2019). The competition jury rewarded not only creative projects and solutions, but also the way young researchers conducted research (the level of computation and their methodology). The authors of the awarded projects: Grzegorz Nowak, Nikola Dudek and Piotr Prokopowicz are members of the scientific club «Mole» operating at the faculty of civil engineering at the Wrocław University.

PhD student of the Wrocław University of Science and Technology wins the Wrocław Magnolia competition

2019-06-07

Paulina Kanaś, PhD student of the Faculty of Environmental Engineering at the Wrocław University of Technology, took the first place in the 16th Wrocław Magnolia competition. It evaluates master's theses, which can improve the quality of life of Wrocław residents. PhD student was awarded for the work «Analysis of the possibility of transforming a single-family building into a zero energy building” written under the guidance of Prof. Jan Danielewicz. In the award-winning work, the basis for analysis were two models of single-family houses with comparable usable space that meet the ba-

sic requirements for thermal protection with gravity ventilation, equipped with underfloor heating and a system for preparing domestic hot water with a storage tank. The key differences between the two buildings were dormers, balconies and overhangs. This allowed to show the influence of building geometry on the heating energy demand.

Kielce University of Technology to launch a new study Automation and electrical engineering

2019-06-10

Kielce University of Technology in Kielce is launching a new study and six new specialties. Automation and electrical engineering is a new study in the educational offer of the Faculty of Electrical Engineering, Automatics and Computer Science, which is to encourage candidates to study at the university and increase their chances to find an attractive job. Students who will complete Automation and electrical engineering will be prepared to work as an automatic-electrician, their knowledge will be adapted to the requirements of plants using automated and robotic production lines, vision systems, Industry 4.0 technologies and the Internet of Things. More: <https://tu.kielce.pl/start/dolacz-do-nas/internetowa-rejestracja-kandydatow-na-studia/>

Coimbra Group meets at the Jagiellonian University in Krakow

2019-06-10

From June 5 to June 6 2019, the Jagiellonian University in Krakow was holding a conference of representatives of the prestigious university network Coimbra Group. The Coimbra Group is a network of universities established in 1985, comprising 39 oldest and most prestigious universities in Europe. The organization's goal is to consolidate ties between the oldest universities in Europe with high standards of teaching and research. Coimbra Group universities cooperate within the working groups in order to develop academic solution in the field of student and employee mobility, research, as well as to shape European educational policy. The event started with an international conference «Women in the University - the past and the future». The aim of the conference was to assess the situation of women in universities and identify strategies that can help increase their role in the higher education sector and their contribution to the development of science.

SimLE scientific club from Gdansk University of Technology wins the Red Rose competition

2019-06-11

The scientific club from the Gdańsk University of Technology won the Red Rose competition. This year, the statuette and scholarship in the amount of 12 thousand PLN was received by the SimLE Inter-Faculty Scientific Club, which defeated 7 clubs from Pomeranian universities in the final. SimLE is a science club whose aim is to carry out technical projects, including: Stardust (mission of stratospheric balloons, construction of a vacuum chamber and rocket stabilization system), SimBa (construction of actively controlled low-level rockets), Seafarer (construction of an autonomous sailing yacht) and Skyhawk (construction of the Cessna 172N aircraft simulator). Students from SimLE cooperate with Pomeranian business. With the developer Hossa, they

adapted one of the Gdańsk tenement houses, creating a dormitory for 21 students. They also worked with the Remontowa Holding group on the creation of an interactive exhibition at the Maritime Museum in Gdańsk and with a company Space Forest for preparing the test platform for the stratospheric rocket stabilization system.

Graduate of the Silesian University of Technology wins the prize of the Association of Polish Architects

2019-06-12

Karolina Chodura, a graduate of the architecture faculty of the Silesian University of Technology, received the DIPLOMA OF THE YEAR awarded by the Association of Polish Architects for the best diploma project. The award was given for the work «Topography of oblivion. Design of the museum and memorial park in the Liban quarry in Krakow» prepared at the Faculty of Architecture of the Silesian University of Technology under the supervision of Dr Eng. Jan Kubeca. - Just like in music, the melody is composed not only of notes, it also needs pauses, in architecture sometimes you need a void, free space, in the Virilovsky's words «espace vide» (...) We were looking for such a diploma. Wise, conscious, sensitive. The diploma, which will show the high level of young and already mature Polish architecture.

Mayor of the City of Gdańsk and the Gdańsk Scientific Society awarded researchers from the Gdańsk University of Technology

2019-06-12

The PhD theses of two researchers from the Faculty of Civil Engineering and Environment of the Gdańsk University of Technology were awarded by the Mayor of the City of Gdańsk and the Gdańsk Scientific Society for outstanding achievements in the field of technical sciences. PhD dissertation of Dr Eng. Dominika Sobotka „The study of the effectiveness of nitrogen removal from sewage in a sequential re-

actor with granular anammox sediment”, describes a method of improving the energy efficiency of sewage treatment plants. The scientist proposes to replace the processes of nitrification and denitrification used today with alternative technologies based on the process of „anaerobic” oxidation of ammonium nitrogen. The research of Dr Eng. Katarzyna Szepietowska „Polynomial Chaos Expansion in Bio- and Structural Mechanics” refers to the innovative method of probabilistic support of surgeons in the treatment of abdominal hernia.

Students of the Wrocław University of Science and Technology win the Student Aerospace Challenge

2019-06-12

The model of the aircraft cabin for suborbital flights developed by students of Wrocław University of Science and Technology won the international Student Aerospace Challenge. The final jury evaluated 14 academic projects from all over Europe. Contest participants could choose from ten issues related to suborbital flights. The tasks concerned economic aspects of flight, aerodynamics and flight control, medical issues and aircraft control. Wrocław students, acting as the Innospace group, focused on problems related to the work of crew cabin and its equipment. Student Aerospace Challenge is an annual competition for students from member countries of the European Space Agency. It is organized by the French association promoting space tourism - Astronaute Club Européen. 36 teams applied for this year's competition. The top 14 presented their projects in the final in Paris. More: <https://pwr.edu.pl/uczelnia/aktualnosci/studenci-pwr-najlepsi-zwyeczyli-w-student-aerospace-challenge-11243.html>

Researchers from Poznan University of Technology describe the structure of atoms from space

2019-06-12

Researchers from the Poznan University of Technology are working on creating a precise description of the atom structure. The goal is to determine the exact wave function to be able to predict the properties of atoms originating from space. Thanks to the use of the computational power of the Microsoft Azure cloud, physicists from the Department of Quantum Engineering and Metrology at the Poznań university work on creating a precise description of the structure of the atom that can be used to describe the properties of the elements occurring in nature. Researchers measure the waves of the spectral lines of the atoms of the elements studied, then these data are exported to the Azure cloud, where further calculations are made. Knowing the exact wave function will enable to predict the properties of atoms, which will provide the better interpretation of data from space.

XI conference „Theoretical and practical aspects of distance learning”

2019-06-12

The faculty of ethnology and education sciences with the faculty of computer science and materials science at the University of Silesia are inviting participants to the 11th international scientific conference „Theoretical and practical aspects of distance learning.” The topic of the meeting will be „E-learning and STEM Education”. The organizers are planning a discussion in the following areas: E-learning and STEM education (Science, Technology, Engineering, Maths); E-environment and cyberspace; E-learning in the development of key competences and E-learning and development of intercultural competences in various countries; E-learning methodology - implementation and evaluation; Effective use of ICT tools in education; Alternative methods, forms and techniques in distance learning and Theoretical and methodological aspects of e-learning.

The conference will be held on October 14 and 15 in Katowice and Sosnowiec. The honorary patron of the event will be Deputy Prime Minister, Minister of Science and Higher Education, Jarosław Gowin.

Students of the Silesian University of Technology win the architectural competition Multi Comfort Student Contest

2019-06-13

The project „CO.Living” of Anna Toborek and Joanna Machera, students of the architecture faculty of the Silesian University of Technology, won the prestigious international competition Multi Comfort Student Contest. The competition has been organized since 2004 by Saint-Gobain for students of architecture. Polish students have been taking part in it since 2012, but for the first time the Polish team took the first place. The theme of this year's competition was to revive and restore the integration of the metro station Crescenzago in Milan in line with the vision of # milano2030. The task consisted of the creation of new housing and renovation strategies for the three existing multi-family buildings. Students from the Silesian university in the final defeated 60 teams from 35 countries, as a reward they will go on an internship to a well-known architectural studio in Milan. The second place was taken by the team from Côte d'Ivoire, the third by the team from Belarus. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListWiadomosci&Page=1&WebPartTitle2=News&Filter1Field2=Identyfikator&Filter1Value2=2748>

Lodz University of Technology signs an agreement with the company Korona Candles

2019-06-14

Vice-Rector for Science of the Lodz University of Technology (PŁ) Prof. Ireneusz Zbiciński and the President of the Management Board of Korona Candles Andrzej Wróbel signed a cooperation agreement. The Korona Candles is a leading producer of the candles in the world. The cooperation will

assure research and development works, especially those with potential of implementation. Their joint activities will include mechatronics, automation and robotics, production engineering, material engineering (plastics, composites) and chemistry. The contract includes a declaration of selecting the best PŁ students for apprenticeships and internships at Korona Candles. Particular attention is paid by the partners to conducting practical classes and dedicated courses by employees of Korona Candles.

Industrial Development Agency involved in space robotics

2019-06-17

The Industrial Development Agency is engaging its capital in PIAP Space. According to the signed agreement, the IDA will subscribe a new issue of shares in the PIAP Space capital for over PLN 3 million. The Industrial Research Institute of Automation and Measurements PIAP belonging to the Łukasiewicz Research Network remains the majority shareholder. The PIAP Institute is one of the market leaders in the field of robotics for the defense sector in Europe. The involvement of ARP is a model example of cooperation between state institutions for the development of Polish technological solutions. The creation of PIAP Space allowed to develop a more active and commercial approach to the implemented projects. Space robotics is one of the Polish technological niches and specializations on the space market - said Dariusz Śliwowski, vice president of the Industrial Development Agency.

Lodz University of Technology to launch new courses Automation and robot control

2019-06-17

On Friday, June 14, 2019 Lodz University of Technology started accepting applications for studies in the academic year 2019/2020. The new course available for secondary school graduates is Automation and robot control. The Lodz University of Technology has prepared 4,290 places for full-time first-cycle studies for pupils who passed final exams and 1150 places for second-degree stationary degrees, most often available for engineers. PŁ as a novelty presents automation and robot control. The studies will be conducted at the Faculty of Electrical Engineering, Electronics, Computer Science and Automation.

Students of the State Higher Vocational School in Krosno win the competitions in the Netherlands

2019-06-18

Students of the State Higher Vocational School (PWSZ) in Krosno from the Rotor Scientific Club beat their own record of the length of the route by the car on 1 liter of ethanol. At Shell Eco Marathon in the Netherlands they traveled 749 km and won the first place in Europe. The students of Krosno School in 2016 developed a car, which is designed to take the longest drive on 1 liter of ethanol. Every year, students, in cooperation with lecturers and local companies, try to modernize the vehicle and compete in international competitions for students organized by the Shell oil concern. In 2016, the car passed 133 km, a year later 306 km, in 2018 it was already 498 km. This year, the vehicle traveled 749 km on 1 liter of ethanol.

President of Poland participated in drones tests in Nevada

2019-06-18

During the visit to Reno, Nevada, Polish President Andrzej Duda watched drones flying in urban areas. He also participated in the show of the Polish drone MOSUPS, created by a consortium whose leader is the Warsaw Institute of Aviation. These tests are part of the NIAS-NASA-ILOT project - the largest American-Polish project for testing unmanned aerial vehicles. Łukasiewicz Research Network – Aviation institute (ILOT) is the only foreign institution invited to participate in American shows. The purpose of the tests is the implementation of new technologies enabling simultaneous moving of a larger number of such devices in a urbanized area in a way that does not pose a threat to city dwellers or air traffic.

Scientist from the Lodz University of Technology wins the TECHNICUS 2019 competition

2019-06-19

Dr Eng. Jakub Szczepaniak from the Lodz University of Technology, the author of the book „IFE-Everything is Mathematics”, won the TECHNICUS 2019 competition for the best technical book and for the best technical guide. Dr Eng. Szczepaniak is a lecturer at the Center for Teaching Mathematics and Physics and the International Education Center (IFE) of the Lodz University of Technology (PŁ). He received several times the title of the best academic teacher, awarded by the Students' Self-Government and he is the author of many books popularizing mathematics. The TECHNICUS competition supports and promotes publishers and authors whose book publications are distinguished by a high substantive and editorial values.

Professor Piotr Kasprzak awarded the title of Doctor Honoris Causa by the Warsaw Medical University

2019-06-19

The Medical University of Warsaw (WUM) at the request of the First Medical Faculty of WUM honored Prof. Piotr Kasprzak with the title of Doctor Honoris Causa for outstanding scientific, didactic and clinical achievements of global significance in the field of vascular surgery and his huge contribution to the development of this specialization at the Warsaw Medical University. Professor Piotr Kasprzak is one of the most prominent European vascular surgeons and enjoys the recognition of the surgical environment around the world. The subject of special interest of Prof. Kasprzak include modern, minimally invasive, endovascular surgical techniques, in the performance of which he achieved a rare perfection. In this area, he is the undisputed world leader. From April 1995 to the present, Prof. Piotr Kasprzak is also employed at the university clinic in Regensburg.

VIII Congress of Metrology held in Augustów

2019-06-21

On June 9-13, 2019, the VIII Congress of Metrology took place in Augustów. The meeting was organized by the Faculty of Electrical Engineering and the Faculty of Mechanical Engineering of the Białystok University of Technology in cooperation with the Białystok Branch of the Polish Society of Theoretical and Applied Electrotechnics. The aim of the Congress of Metrology was to exchange views and experiences and present the results of research on the problems of modern metrology. The subject of unit measurement standards, service of measures, evaluation of measurement accuracy, measurement and data transmission systems, measuring transducers, signal processing methods and measurements of mechanical, electrical, geometric and chemical quantities were discussed. The Congress of Metrology is a scientific conference in which the majority of national centers dealing with metrology and its application take part. Scientific support over the Con-

gress was taken up by the Committee of Metrology and Scientific Equipment of the Polish Academy of Sciences.

Researchers from the Rzeszów University of Technology developed a catalog of typical road structures for bridge structures and culverts

2019-06-21

The team of Prof. Tomasz Siwowski from the Department of Roads and Bridges at the Faculty of Civil and Environmental Engineering and Architecture of the Rzeszów University of Technology has developed a catalog of typical road constructions of bridge structures and culverts. The recommendation for the use of the catalog was signed by the Minister of Infrastructure Andrzej Adamczyk. The catalog will allow engineers to reduce the costs of designing and building facilities of this type on Polish roads. It contains over 50 typical projects of bridges and culverts for roads of all categories. The catalog authors used solutions applied in recent years in investments carried out in Poland and other European Union countries. The use of the catalog, which has been made available on the website of the Ministry of Infrastructure, is free of charge.

Koszalin University of Technology to cooperate with Goodvalley

2019-06-24

Koszalin University of Technology has signed a cooperation agreement with Goodvalley. The agreement concerns the implementation of apprenticeships by students and paid internships in plants and farms owned by the company. The company also plans to support students in the preparation of diploma theses. The contract concerns 800 students of five faculties of the mechanical faculty: food technology and human nutrition, energy, mechanics and mechanical engineering, management and production engineering as well as transport. Goodvalley representatives declared their willingness to participate in shaping the study program so that they would

be even more adapted to the needs of future employers. In this way, the company will co-decide on the scope of competences acquired by students. The Danish company Goodvalley, operating in Denmark, has been operating on the Polish market since the early 1990s in the agricultural and food processing industry. It also runs biogas plants. In Poland, its plants are located in Przechlewo.

Gdańsk University of Technology and Sopot signed a license agreement for the use of Accessibility Standards

2019-06-24

Sopot is the fifth city in Poland that will use the Accessibility Standards developed at Gdańsk University of Technology to design public spaces in order to create a friendly space for all users, in particular people with disabilities. Accessibility Standards contain necessary information and solutions to design and modernize public space in accordance with the principles of universal design in order to unify solutions used in the city. They refer to Polish legal regulations as well as standards of EU. By signing the contract, Sopot joined the group of cities that want to be residents-friendly in terms of creating spatial conditions that facilitate the use of public places for the elderly and disabled people, parents with a baby in a wheelchair, pregnant women, and people with temporary mobility limitations. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmo-Qv7K0/content/politechnika-gdanska-i-sopot-podpisaly-umowe-licencji-na-opowiana-ze-standar-dow-depeptosci

Institute of Engineering and Biomedical Materials and Institute of Materials to hold the Engineering Material Technologies Conference in Silesia'2019 in October in Zawiercie

2019-06-24

Institute of Engineering and Biomedical Materials and Institute of Materials Engineering of the Silesian University of Technology, Łukasiewicz Research Network, Institute of Non-Ferrous Metals and Institute of Ferrous Metallurgy and the Association of Graduates of the Silesian University of Technology and the Club of Materials Science and Engineering are inviting participants to the scientific conference Material Technologies in Silesia'01019. The organizers of the conference, planned from October 13 to 16, in Zawiercie, are planning to discuss the coordination of research and implementation of material technologies most economically important as well as the system of dual education and industry expectations in relation to the technical university graduate. Also, they intend to talk about the issue of product quality of planning and manufacturing technology, quality engineering of manufacturing processes, technological aspects of quality: material, design, product and laboratory tests. More: <http://mts.polsl.pl/>

Architecture department of the Silesian University of Technology takes the 1st place in the Top 10 for the Future competition

2019-06-25

The architecture faculty of the Silesian University of Technology took the first place in the Top 10 for the Future ranking, organized by the journal Builder monthly. The criteria for the evaluation of faculties included: the number of lectures, exercises, case-studies, workshops, consultations and competitions organized as well as all the initiatives of scientific groups and student groups. The prizes

were also won by individual students. In the Young Architect Manifesto competition, the second prize was received by Bartosz Słomka for his work «Tunnel». The awards were also received by Wojciech Szkarłat for the work «Sport & Living Hybrid», Marta Błaszczuk and Kacper Kania for the work «GlazeNet» and Katarzyna Przybyła for the work «Genesis - Oceanization, Scientific and residential base». In addition, Marta Lata and Mateusz Pietryga, students, who have earlier cooperated within the work «Playground for Architects» with graduates Dobrochna Lato and Agata Czechowska, won the award in the Young Architect's Challenge competition.

Silesian Erne team comes fourth in the drone competition Droniada 2019

2019-06-26

Silesian Erne team, from the inter-faculty Student Research Club „Application of Methods of Artificial Intelligence AI-METH” operating at the Silesian University of Technology, took fourth place in the competition of drones Droniada 2019. The competition included three competitions - transporting shipments («Air bridge - universal cargo module»), searching and tracking a stolen car («Auto on radio») and building a wall of foam bricks («Give a brick»). The Silesian Erne team won the Open Link Special Prize for the fastest delivery of the shipment in the «Air Bridge» competition and the Special Award of the Institute of Aviation for the fastest car finding based on the color of the car in the «Auto on Radio» competition. The competitions were organized under the honorary patronage of Minister of Science and Higher Education Jarosław Gowin, President of the Civil Aviation Authority Piotr Samson and Minister of Infrastructure Andrzej Adamczyk.

Institute of Non-Ferrous Metals in Gliwice to receive over 850,000 PLN

2019-06-27

Research Network Łukasiewicz - Institute of Non-Ferrous Metals in Gliwice was included in the consortium, which will carry out the project „Multiscale

analysis of microstructure changes of surface layers resistant to abrasion of plasma sprayed and remelted using concentrated energy sources in the aspect of improving their mechanical properties”. The consortium include: Akademia Górniczo-Hutnicza in Kraków as the Leader; Research Network Łukasiewicz – Institute of Welding and Research Network Łukasiewicz - Institute of Non-Ferrous Metals. They are planning to investigate the phenomena occurring during laser or electron beam remelting of layers based on nickel alloys doped with renewable Ni-Cr-Re sprayed plasma. The total cost of the project is over 850,000. PLN. The money is allocated from the budget of the National Science Center.

Students of the Wrocław University of Science and Technology win the international architectural competition

2019-06-27

The design of Anna Domagała and Jakub Pietrucha from the architecture faculty of the Wrocław University of Technology was considered the best in the competition The International Finsa Award for Architects & Designers. Students will now supervise the construction of the pavilion that they have designed. The competition is organized by the British company Finsa producing chipboard and MDF. It is to encourage the exploration of the topic of wood use in construction and other ecological and recyclable materials, and then use this knowledge in practice by designing a specific object This year's competition task was to design Woodside Pavilion - a temporary structure for the local community with a view to organizing various artistic events there. The construction cost should not exceed 15 thousand pounds. The pavilion will be built in Woodside - part of the port town of Birkenhead on the outskirts of Liverpool. More: <https://pwr.edu.pl/uczelnia/aktualnosci/studenci-pwr-zwyciezili-w-konkursie-finsa-11252.html>

Students of Gdańsk University of Technology develop an autonomous sailing boat

2019-06-28

Students of the SimLE Technical Club of Gdańsk University of Technology are working on the creation of a sailing boat, which is to operate fully autonomously. In autumn, the first fully autonomous cruise of their yacht on the Puck Bay is planned. One of the potential goals of the «Seafarer» project is to take part in the Microtransat Challenge, where an independent boat should cross the Atlantic Ocean. No one in the world has succeeded so far. The task is difficult to implement, because the boat can have a maximum of 2.4 m in length, it must be fully independent, there is no possibility of remote control, and must be moved only by the wind. Until now, the students managed to create a test boat hull (about 1.5 m long) for testing electronics and control algorithms. The boat already has a sail, rigging and also the electronics needed for control. The design has successfully passed the first tests on the water.

Students of the Wrocław University of Technology to participate in the Student Formula competition

2019-06-28

Students of PWR Racing Team of the Wrocław University of Technology are preparing to take part in the Student Formula competition in July in Hungary and Italy, and in August in Germany and the Czech Republic. The RTX car was designed and constructed with using the latest technologies. The RTX supporting structure consists of a carbon fiber monocoque with an aluminum spacer and a steel frame. The car uses a two-link push-rod suspension with three shock arms in the T-bar system for the front axle. The vehicle weighs 190 kg - slightly more than the previous RT09 car. The heart of the car is the Honda CBR 600RR engine with 85 hp and 63 Nm of torque, combined with the intake system designed by the students and titanium exhaust manifold. The U-bar stabilizer is mounted on the rear axle. The car is equipped with low profile 16-inch tires mounted on carbon fiber rims.

Scientists of the Silesian University of Technology awarded at the conference in Brno

2019-06-28

Professor Magdalena Jabłońska and Dr Eng. Mariusz Wnęk from the Silesian University of Technology were awarded during the 28th international conference on metallurgy and materials - Metal 2019 in Brno, Czech Republic. The event was attended by scientists from Europe and Algeria, China, Egypt, India, Iran, Israel, Japan, Canada, Korea, Tunisia, Turkey and Uzbekistan. As part of the conference, a session was held, on which 253 posters were presented. The evaluation committee awarded three prizes and five awards. Two of them were received by the scholars of the Materials engineering and metallurgy department of the Silesian university. Professor Magdalena Jabłońska from the Institute of Materials Science and Engineering was awarded for the „Investigation on properties of structural steels deformed at dynamic conditions”, and Dr Eng. Mariusz Wnęk from the Department of Industrial Informatics for the work „Digital modification of fuel consumption and CO2 emission”.

Dr Piotr Achinger receives the Medal of the Young Scientist of the Warsaw University of Technology

2019-07-02

Dr Piotr Achinger from the Mathematical Institute of the Polish Academy of Sciences received the Medal of the Young Scientist awarded by the Warsaw University of Technology for his breakthrough in research on the topology of algebraic manifolds and their applications. The Young Scholar Medal, established in 2007, is awarded for outstanding and recognized achievements in the field of science and technical innovation and other outstanding creative achievements. The medal is given by the rector of the Warsaw University of Technology at the request of the Medal Chapter to a scholar who is under 35 years. The distinction is to promote the achievements of young scientists characterized by the in-

dependence of creative concepts and the special dynamics of development. Dr Piotr Achinger is one of the four ERC Starting Grant 2018 winners. He received the grant of EUR 1 007 500 for the project about the acronym KAPIBARA (Homory Theory of Algebraic Varieties and Wild Ramification), which deals with the broadly understood topology of algebraic manifolds, with applications for arithmetic, mathematical physics and differential equations. «

Two majors of the Lodz University of Technology receive the certificates of the European Network for Accreditation of Engineering Education

2019-07-02

Two majors of the Lodz University of Technology: Construction and Management and Production engineering have been awarded the certificates of the Accreditation Committee of Technical Universities (KAUT) and the European Network for Accreditation of Engineering Education (ENAAE), in recognition of their thigh quality. Both majors were accredited for five years, until 2023. Construction at the Faculty of Civil Engineering, Architecture and Environmental Engineering received a certificate for full studies, and Management and Production Engineering at the Faculty of Management and Production Engineering for the baccalaureate studies. ENAAE is a European organization dedicated to the training of engineers. One of ENEAA's activities is to provide European education programs with certificates confirming a high level of education and compliance with the Bologna norms and principles adopted in Europe.

Chel m Aviation Training Center to train flight dispatchers

2019-07-03

The Aviation Training Center of the State Higher Vocational School (PWSZ) in Chel m received a Civil Aviation Authority certificate authorizing to conduct training activities in civil aviation in the scope of theoretical and practical training to obtain the FDL air dispatcher license (Flight Dispatch License). Thanks to this decision, the newly created Air Dispatcher Education Center of the University of Chel m has obtained the required qualifications and as the first academic center in Poland will offer free specialty of the Air Dispatcher. In order to obtain the Air Dispatcher's license, the student must complete 90 work shifts under the supervision of a licensed air dispatcher with air operators, also from the LOT.

Students of the Pozna n University of Technology receive distinction in the Railway Challenge

2019-07-03

Students of Pozna n University of Technology took part in the Railway Challenge in Great Britain. In their debut, they gained a special distinction from jury - for the original design, materials used and innovations, as well as the elegance and aesthetics of the presented locomotive. The Railway Challenge takes place every year in British Stapleford. Teams representing universities, clubs or workplaces from around the world are participating in the competition for the best locomotive. The basic assumption of the competition is to create a locomotive that can start for a tender prepared by a large corporation. The competition includes performance on the track, the checking of reliability of the locomotive, the maintenance, the noise emitted, the comfort of driving, as well as the possibility of recovering energy generated during braking. In addition, teams must submit their project and convince the competition jury.

Wroc law scientists trying to print high-quality metallic glass

2019-07-05

Scientists of the Wroc law University of Science and Technology are working on 3D printing technology for metallic glasses. It will be able to manufacture larger and more durable parts of machines and devices. The project won the award of the Association of Engineers and Technicians of Polish Mechanics. The team of Prof. Andrzej Ambroziak from the Department of Materials Science, Strength and Welding has focused on the problem of manufacturing mechanical elements from iron-based amorphous materials through generative technologies (called 3D printing). His team also include Dr Eng. Aleksandra Ma lachowska from the Wroc law University of Science and Technology and Dr Eng. Wirginia Pilarczyk. Part of the research was carried out under the Cornet project jointly by the mechanical faculty of the University and German partners: DVS-FV (Forschungsvereinigung Schwei en und verwandte Verfahrene.V.) And Technische Universit t Chemnitz and the Nanonet Foundation. More: <https://pwr.edu.pl/uczelnia/aktualnosci/czy-da-sie-wydrukowac-szkla-metaliczne-wysokiej-jakosci-11268.html>

Silesian University of Technology begins the practical flight training of students at the airport in Gliwice

2019-07-05

The Academic Center for Aviation Training at the Silesian University of Technology (ATO POLSL) begins the practical aviation training of students. Thanks to the Certificate for the Approved Training Organization No. PL / ATO - 78, the university can conduct training for the airline pilots - ATPL (A). - This is the culmination of our long, hard work and efforts. For many years, the Silesian University of Technology has put a lot of emphasis on educating personnel for the aviation industry. This is one of the priority directions for the development of our

university - says rector of the University of Technology, Prof. Arkadiusz M zyk. ATO POLSL was established as part of the Center for Civil Aviation Personnel Education in Central and Eastern Europe. Its appointment was an initiative of the G rno l skie Towarzystwo Lotnicze SA, the Silesian University of Technology and the Civil Aviation Office. The Center meets the requirements of international and national aviation regulations on the certification of civil aviation activities and can conduct flight training within ATPL (A). More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListWiadomosci&Page=1&WebPartTitle2=Number&Filter1Field2=Identyfikator&Filter1Value2=2769>

Bia ystok students from Poland and Spain learn to design energy-efficient homes

2019-07-05

Students from the Bia ystok University of Technology (PB) and the Spanish University of Cordoba began July VIPSKILLS summer school classes. This is the third international venture, where young engineers learn to design energy-efficient homes. Summer school classes will take place at the Faculty of Civil and Environmental Engineering, which is the leader of the EFE VIPSKILLS project - Environmentally Friendly Engineering. Virtual and Intensive Course Developing Practical Skills of Future Engineers. The Bia ystok University of Technology and the Spanish University of Cordoba joined the project. Each university has sent eight students to the summer school. Spaniards are students of Construction industry, Poles represent the Environmental engineering. In international and multidisciplinary couples, they will develop optimal, ecological solutions for homes located in different climatic zones.

Student of the Wrocław University of Science and Technology honored in an international architectural competition

2019-07-08

Agata Mila, a third year student of architecture at the Wrocław University of Science and Technology, was awarded in the international Pavilosta Poets Huts competition. The jury appreciated her project of a complex of houses for poets in the Latvian town of Pavilosta. The subject of the competition was the design of a small complex of buildings for poets to escape the hustle and bustle of everyday life and create the ideal conditions for writing. Poets' huts would be built in the port town of Pavilosta associated with beaches and fishing. A young architect from Wrocław proposed that the huts could be ... towers, reminding that in literature this type of building often expresses loneliness allowing for contemplation of the surroundings and nature. The project was awarded by the jury, which took into account connection of architecture with nature, use of ecological or recyclable materials and low project costs. More: <https://pwr.edu.pl/uczelnia/aktualnosci/wyroznienie-dla-studentki-z-w1-w-miedzynarodowego-konkursie-11267.html>

Vehicle of students of the Lodz University of Technology to participate in the Bridgestone World Solar Challenge

2019-07-09

On Friday, July 5, 2019, students of Lodz University of Technology (PŁ) from Lodz Solar Team presented their new electric vehicle Eagle Two powered by solar energy. In October 2019 it will represent Poland in Australia during the Bridgestone World Solar Challenge. The car is equipped with 5 sq m of photovoltaic panels so it can move using only solar energy. If users drive at night, it uses a 60 kWh battery. The battery, when fully charged, is sufficient to drive 2400 km! The car has two BLDC engines,

tailored to the Eagle Two characteristics, with a total power of 10 kW, which can accelerate the car up to 140 km / h. Bridgestone World Solar Challenge is the largest race for electric cars powered by solar energy. For 32 years, it has been held in Australia. So far, it has been attended by 465 teams and over 10,000 participants, who every two years overcome the distance between Darwin and Adelaide equal to 3,000 kilometers.

Electric motorcycle students of the Wrocław University of Technology ready for the competition in Barcelona

2019-07-09

Students of Wrocław University of Science and Technology will participate in the competition Smart Moto Challenge. Their latest design LEM Thunder v2 electric motorcycle is ready to compete in Barcelona. The vehicle was constructed by students from the Scientific Club of Vehicles and Mobile Robots. Like a year ago, their motorcycle is adapted for off-road driving. LEM Thunder v2 has a new durable chrome-molybdenum steel frame and a new battery with a two-fan system for improved cooling. It also received an exceptional starting number: «71», referring to the telephone area code to Wrocław. At the competition in Barcelona, Wrocław students will compete with teams from all over Europe, including two teams from Poland. Motorcycles will participate in dynamic and static competitions, the idea for implementing prototypes for mass production will also be assessed. More: <https://pwr.edu.pl/uczelnia/aktualnosci/elektryzujaca-premiera-nowego-motocykla-studentow-pwr-11276.html>

Scholars of the Gdańsk University of Technology win the national Master of Technology competition

2019-07-10

The scholars of the Gdańsk University of Technology have won the nationwide Master of Technology competition in the field of environmental engineering. The Federation Commission of Scientific and

Technical Associations NOT awarded the technical solution „Improving the energy consumption of wastewater treatment plants as a result of changing the control system of the aeration process”. Researchers have developed a universal aeration control system for municipal wastewater treatment plants. Its implementation has allowed to reduce energy consumption of technological systems while obtaining the ecological effect and high efficiency of wastewater treatment. The project implemented in the years 2016-2018 was financed from the funds of the Voivodship Fund for Environmental Protection and Water Management in Gdańsk. The authors of the awarded solution are: Dr Eng. Sylwia Fudała-Książek, Dr Eng. Anna Remiszewska-Skwarek, Dr Eng. Aneta Łuczkiwicz, Eng. Rafał Węglarek, Dr Eng. Ewa Zaborowska and Dr Eng. Marek Chodnicki.

PoliWrocket's successful debut on rocket competition in the USA

2019-07-10

The PoliWrocket team from the Wrocław University of Science and Technology took the fourth place in its category in the Intercollegiate Rocket Engineering Competition. At the competition in New Mexico, young constructors made their debut with the „Ninety-Nine” - a rocket weighing 16 kg (without fuel) and measuring 3.1 m. The most important task was to rise to the height of 10,000. feet - 3048 m. For each meter more or less the teams lost points. The time of the documentation provided and the technical project as well as the correctness of the flight were also assessed as well as the distance from the designated height and the recovery phase of the rocket. PoliWrocket scored the most points for the «design implementation», i.e. technical solutions and reports sent before the competition itself. The team consists of students of mechanical, mechanical and energy, computer science and management, electronics, chemical and basic technical problems faculties, and student of the Academic Secondary School. More: <https://pwr.edu.pl/uczelnia/aktualnosci/udany-debiut-poliwrocket-na-zawodach-rakietowych-w--1-1988.html>

Underwater robot ROV 4.0 of the Wrocław University of Science and Technology to participate in competition in the USA

2019-07-11

Underwater robot ROV 4.0 developed by members of the Robocik scientific club operating at the Wrocław University of Science and Technology is ready to take part in international competitions in the USA. ROV 4.0 can detect obstacles of one centimeter and has a six-torpedo launcher. ROV 4.0 is the fourth and most advanced construction that was created at the Wrocław University of Science and Technology. It has a cylindrical structure, which allowed to increase the depth of immersion up to 100 meters. The frame is made of plastic, the constructors have installed an extensive vision system and added a manipulator for precise underwater work. During the competition in San Diego, the robot will have to float in the pool using colorful markers and ultrasound transmitters placed on the bottom of the pool, lift openwork cubic structure and drop it into a marked container and open a small container and bring out the element from inside. More: <https://pwr.edu.pl/uczelnia/aktualnosci/rov-40-gotowy-podwodny-robot-z-pwr-ma-podbic-usa-11274.html>

Competition for the best master's thesis „Wood in Architecture 2019”

2019-07-12

Białystok University of Technology (PB) is inviting participants to take part in the nationwide competition „Wood in Architecture 2019”, for the best master thesis, which show the advantages of wood as a construction, building and ending material. The competition is the result of cooperation of the Architecture Department PB with Unibep SA and Danwood SA. The Podlasie region has always been associated with wooden architecture, and both companies, based in Bielsk Podlaski, belong to the largest producers of wooden dwellings in Europe. The works can be submitted from October 1 to October 22. Jury of the competition under the

Dean of the Faculty of Architecture PB Dr Eng. Aleksandr Asanowicz will assess the works and award the following prizes: First Prize - PLN 8,000, Second Prize - PLN 6,000, Third Prize - PLN 4,000 and two equivalent additional prizes - PLN 2,000 each. More: <http://drewnowarchitekturze.pl/index.php/regulamin/>

Students of the West Pomeranian University of Technology reach the final of the international competition

2019-07-12

Students of the Faculty of Civil Engineering and Architecture of the West Pomeranian University of Technology have reached the final of the competition for the design of the Embassy of the Czech Republic in Addis Ababa, Ethiopia. The contest organized by the Ministry of Interior of the Czech Republic, the Architecture Department of the Czech University of Technology in Prague and the Inspireli Awards were received by 281 works from around the world. Anna Mierzyńska and Andrzej Chuchra - students of master's studies in the field of architecture at the Faculty of Civil Engineering and Architecture qualified for the final. The inspiration for the creation of their project has become a symbol of the Czech Republic a leaf of lime tree. The outline of the leaf has been transformed into forms of ceramic shapes, from which the characteristic openwork shutters were designed. The whole project is designed in a laterite inspired color, a local sedimentary rock that is characteristic for regions with a humid and hot climate.

Students of the AGH University of Science and Technology in Krakow develop a solar airplane

2019-07-15

On Wednesday, July 10, 2019, students of the AGH University of Science and Technology in Krakow organized the premiere show of a solar airplane. An unmanned vehicle powered exclusively by solar energy was presented at the Museum of Polish Avia-

tion. This is the first student project of this type in Poland. The solar plane designed by the AGH Solar Plane team has a wingspan of 3.8 m, weighs 5 kg and can reach speeds of about 50 km / h. During the day it takes energy from 48 photovoltaic panels placed on the wings. Their power depends on the intensity of the sun, from 150 to 180 W, which fully covers the demand for energy during the flight. AGH Solar Plane is a student science club whose aim is to disseminate modern technologies combining electromobility with renewable energy sources. The team, founded in October 2017, currently includes about 50 people and has already achieved successes at scientific conferences in Japan and the United States.

Electric car of Poznan students ready for racing

2019-07-15

Students from the Poznan University of Technology (PUT) Motorsport research club operating at the Poznan University of Technology will take part in the Student Formula electric car competition. The latest design of the constructors - „Rusalka” will start in races in Hungary, Italy and the Czech Republic. The new car has got the improved efficiency of the cooling system, and a new aerodynamic package. «Rusalka» also has a stiffened suspension and easier handling. The suspension was made of carbon fiber tubes with aluminum fastening elements. This allows designers to minimize the weight of the car, providing maximum rigidity of the structure. Before the first race, a 100 kilowatt car engine was also strengthened, a new one is 50% more efficient. The radiator and aerodynamic system were also improved. In the rear part of the car the DRS was used, i.e. a system of reducing air resistance, whose task is to reduce forces directed in the opposite direction of travel. More: <https://www.put.poznan.pl/en/aktualnosc/piaty-bolid-put-motorsport>

Network of Regional Specialist Observatories to grow

2019-07-15

The consortium of the Silesian University of Technology and the Łukasiewicz Research Network - the Institute of Non-Ferrous Metals in Gliwice joined the Network of Regional Specialist Observatories. Enhancing the network with an observatory in the field of production technology and material processing will help improve the management of the development of regional scientific and technological potential. The goal of the network, created in 2013, is to develop communication and cooperation, as well as provide the data exchange between business and the scientific and research environment as well as institutions of business environment. After the admission of new members, the network will include seven observatories, which will allow to assure a comprehensive way of managing the prototechnological development of the region in a broad partnership coordinated by the voivodship self-government. The partnership is to be systematically expanded in accordance with the eight technological areas designated in the Technology Development Program of the Silesian Voivodship.

Two teams of the Wrocław University of Science and Technology reach the final of the Mars Colony Prize competition

2019-07-16

From among the hundred projects of Mars colonies sent from around the world, the organization Mars Society chose ten projects. Their authors will present their solutions in the USA. Two teams from Poland reached the final of the Mars Colony Prize. Both teams include students of the Wrocław University of Technology. The Polish proposals of the Martian housing estate are «Ideacity» and «Twardowsky». They qualified for the finals with projects developed by Russians, Swedes, Americans, French and Swiss. The Polish projects will be presented at the Mars Society Convention at the University of Southern Cali-

fornia. The subject of the competition is the project of a self-sufficient Martian colony for a thousand people. The housing estate should import as few goods as possible from the Earth, and at the same time produce goods for export. It has to produce energy and food for its inhabitants, building materials needed for expansion, as well as clothes and all products of everyday use. More: <https://pwr.edu.pl/uczelnia/aktualnosci/dwa-zespoly-z-pwr-w-finale-konkursu-mars-colony-prize-11271.html>

Rzeszow University of Technology integrates automatic start and landing systems for unmanned aircraft

2019-07-18

Until July 20, 2019, the Aviation Training Center in Jasionka near Rzeszów will start the first stage of integration of automatic take off and landing systems - ATOL and the automatic taxiing system for AUTOTAXI unmanned aerial vehicles. The work is carried out on behalf of the European Defense Agency as part of the Enhanced RPAS Automation project, which aims to support the regulation of unmanned aircraft movements in a non-segregated European airspace. Demonstrators of the systems are installed on board of the Czajka MP-02 aircraft, which are operated by PRz (the operator is the Avionics and Control Department) and the Institute of Aviation. The PRz project has been assigned as the leader responsible for the integration of systems provided by partners on board aircraft-demonstrators. The Rzeszow University of Technology will also be responsible for demonstrating the results of the project for high-level representatives of European defense institutions.

Wrocław University of Science and Technology and Volvo to cooperate closely

2019-07-19

Wrocław University of Science and Technology and the Volvo concern have signed a cooperation agreement. The agreement assumes the conduct and

development of innovative scientific projects, the creation of joint educational programs, the organization of apprenticeships and the implementation of PhD diploma theses. Representatives of both parties have declared their willingness to develop the current fruitful cooperation, both in the field of research and projects, as well as the education of young scientific staff. The scope of the contract will allow the parties for the implementation of various projects opening prospects of development and raising competitiveness through the use of experience, knowledge of employees and the potential of both Wrocław University of Science Technology and Volvo. Students of the Silesian University of Technology joins the prestigious competition Shell Eco-marathon Europe 2019

2019-07-22

The Smart Power PolSI team representing the Silesian University of Technology participated in the 34th Shell Eco-marathon Europe in London. The electric car MuSHELLka constructed by the students took the 30th place in the prototype category. Every year, Shell Eco-marathon Europe brings together students from all over Europe and Africa who take part in the competition of designing, building and testing on a professional track with the utmost energy efficiency in three petrol, hydrogen and electric categories. This year over 1500 participants from 28 countries took part in the competition, constructing totally 140 cars. SmartPowerPolSI is a team operating within the Students' Scientific Society for Modeling Machine Structures at the Silesian University of Technology. It joins enthusiasts from the mechanical technological; automation; electronics and computer science as well as chemical faculties.

Warsaw students presented the Formula Student car

2019-07-23

Students of the Warsaw University of Technology (PW) and Warsaw School of Economics (SGH) in Warsaw, who are forming the Proton Dynamic team presented the car PD1 at the Faculty of Automotive and Construction Machinery PW. The event was a summary of the Proton Dynamic works on electric Formula Student car as a result of the two-year process. PD1 is characterized by its lightness. Its weight without a driver is 240 kg. The electric motor provides a maximum power of 80 kW, and high-current lithium-ion cells are responsible for energy supply. The vehicle accelerates at below 4s 0-100 km / h, and its maximum speed is 105 km / h. Interestingly, the steering wheel of the car was made in 3D printing technology. Most of the components were designed and made by the students themselves, with the support of sponsors.

Wrocław University of Science and Technology to hold conference Modern Electric Power Systems in September

2019-07-23

The Department of Electrical Power Engineering at the Wrocław University of Science and Technology and the Institute of Electrical and Electronics Engineers are inviting participants from 9 to 12 September to the international conference Modern Electric Power Systems. This is the sixth meeting of scientists and specialists of the electrical industry. They will present works in the field of electrical power systems concerning both theoretical and practical applications. The conference topics include system planning and management, electricity markets and energy finance, emissions trading, energy prices and load forecasting, energy policy, system stability analysis, distributed energy and renewable energy sources, intelligent networks, modeling and simulation diagnostics, application of artificial intelligence methods, information technologies and internet, as well as communication and cybersecurity.

University of Silesia to hold 46th international congress on technical history

2019-07-23

The Faculty of Social Sciences of the University of Silesia in Katowice will host the participants of the 46th Symposium of the International Committee of the History of Technology on July 27 (ICOHTEC). The congress concerns the relationship between technology and power. The congress, attended by about 150 scientists, is accompanied by workshops, meetings and trips to places associated with technology. An important element of the event is the summer school - a forum for young scientists, undertaking in their research issues related to the history of technology and its role for the development of societies throughout history. ICOHTEC was founded in 1968 in Paris, and its aim was to integrate scientific communities on both sides of the so-called iron curtain. Currently, members of the organization are scholars from Europe, as well as from the Americas, Japan, India and Australia. The Committee organizes regular conferences gathering a large group of researchers from around the world. More: www.katowice2019.icohtec.org

Success of the Wrocław University of Science and Technology Wrocław University in the SmartMoto Challenge competition in Barcelona

2019-07-25

Light Electric Motorcycle LEM Thunder v2 developed by Wrocław University of Science and Technology students took second place in their class in international competition in Barcelona. The motorcycle won the most difficult part of the competition – the endurance race. This year's SmartMoto Challenge competition in Barcelona was addressed for motorcycles adapted for off-road driving. The teams including from Poland, Spain and Russia started in the competition. The Wrocław university presented LEM Thunder v2, which fought in the category of

machines with a capacity of up to 30 kW. Eventually, LEM Thunder brought four prizes. First of all, in the general classification of the entire competition, Wrocław's students won the silver medal, after the team from the Russian RUDN University. They also won second place in both dynamic and static competition classifications. In addition, the jury honored their motorcycle for the best design. Researcher of the Adam Mickiewicz University in Poznań joins the International Cartographic Association

2019-07-30

Dr Eng. Łukasz Halik from the Adam Mickiewicz University in Poznań became the vice-chairman of the topographic map commission of the International Cartographic Association. The choice was made during the XXIX International Cartographic Conference in Tokyo. One of the main tasks of the new vice-chairman will be to create a map portal, presenting synthetic information on the National Topographic Topography Agencies, and in the long run on topographic maps created in individual countries of the world. Scientific interests of Dr Eng. Łukasz Halik include the use of enhanced technology and virtual reality in presenting spatial objects of the real world. Currently, he is conducting research on the possibilities of topographic data visualization in the immersive system of virtual reality.

Researchers from the University of Silesia join the DEEPWATER-CE project

2019-07-31

Employees of the Department of Hydrogeology and Engineering Geology at the Faculty of Earth Sciences of the University of Silesia are taking part in the project DEEPWATER-CE, which aims to support planning and management of water resources by implementing systems of artificial power (Managed Aquifer Recharge - MAR) as a solution to the problem of water scarcity caused by climate change. The project involves 8 partners from 5 countries: Hungary (Hungarian Mining and Geological Service, Geogold Kárpátia sp. Z o. O.), Croatia (Water and Sewer Company in Split, Croatian Geological Survey), Slovakia (Water Research Institute), Germany (University of Technical in Munich) and Poland (National Water Farm «Wody Polskie» and the University of Silesia). The project is financed from the funds of the trans-national Interreg Central Europe program. The total budget of the project is over 1.7 million euros. The completion of the project is planned for 2022. More: <https://www.us.edu.pl/projekt-deepwater-ce-na-wydziale-nauk-o-ziemi-us>

State Higher Vocational School in Chełm signs a new agreement with a company from the aviation industry

2019-08-02

LOT Aircraft Maintenance Services (LOTAMS) will support the education of students of the State Higher Vocational School (PWSZ) in Chełm, who study the aviation mechanics specialty. On the basis of the agreement, PWSZ graduates in Chełm will be able to be employed at LOTAMS (Aircraft Maintenance Services). This company is a provider of aircraft maintenance services and the only Embraer Authorized Service Center in Central and Eastern Europe. The signed agreement sets out in detail the scope of cooperation, which will concern the organization of apprenticeships and internships for students, graduates and lecturers of the State Higher Vocational School in Chełm. Chełm School, previously signed similar agreements with PLL LOT, Wizzair and Enter Air.

PhD student of Gdańsk University of Technology receives Siemens award for a gripper with the functions of a human hand

2019-08-02

Jacek Szkopek, PhD student of the Faculty of Electrical Engineering and Automation at the Gdańsk University of Technology created an anthropomorphic gripper driven by pneumatic muscles. His work won the third award in the 9th Competition for the Siemens Award for Graduates in Automation and Robotics. The design of the gripper, made in 3D printing technology, reflects the anatomical structure of the human hand, and, above all, its skeletal system. The system of tendons, which has been guided inside the phalanges, allows bending and straightening of individual joints. Also, artificial muscles with appropriate tendons constitute a drive system. - Biomimic solutions are gaining more and more popularity. My design allows you to manipulate objects of various shapes and artistic properties, and at the same time it is fully adapted to research on technical solutions, from mechanics to control algorithms. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGNcmoQv7K0/content/nagroda-siemensa-za-chwytyk-o-funkcje-ludzkiej-dloni

Students of the Białystok University of Technology prepared for robotics competition in Beijing

2019-08-05

The SumoMasters team from the Mechanical Department of the Białystok University of Technology (PB) is going to participate in the RobotChallenge robotics competition in Beijing, which will take place on August 9 - 11, 2019. The team from the Robotic Science Club is composed of Piotr Wasilewski, Marcin Dziubek, Łukasz Kotarski, Michał Falkowski, and Jerzy Matusiewicz and works under the supervision of Dr Eng. Rafał Grądzki. The team is preparing up to 11 robots to China. Every year, the competition in Beijing gathers an increasing number

of participants from different countries of the world. Almost 2,300 participants with 1,478 robots from 30 countries took part in the competition last year. Thanks to such attendance and participation of so many countries, competitions in China are the largest sumo robots competition in the world. Last year, the SumoMasters team returned from China with three silver medals - in the categories Megasumo, Minisumo, Nanosumo - reminds Dr Grądzki.

Architects from the MOA Masters of Arts receive Platinum A'Design Award

2019-08-05

The MOA Masters of Arts office housed in the Pomeranian Science and Technology Park Gdynia was awarded the A'Design Award & Competition - the world's largest competition for the best design, concepts, products and design services. MOA Masters of Arts operates on the design and exhibition market. It is an interdisciplinary design office providing business with clever and innovative solutions in the field of unique exhibition stands. Gdynia's Parkers returned from Italian Como with the prize in the Interior Architecture and Space Design category. The main idea of the awarded stand designed for OKA (a German manufacturer of office furniture) was to capture the so-called a flash of design genius that appears in the minds of designers working on a new idea. In the case of OKA, it is a clean, well-thought-out design, which can be found in individual furniture exhibited at the stand. More: <https://ppnt.pl/platinum-adesign-award-dla-architektow-z-moa-masters-of-arts/>

Students of the Silesian University of Technology to participate the European BEST Engineering Competition

2019-08-06

Students of the Silesian University of Technology Aleksander Spyra, Bartosz Kowalski, Przemysław Giza and Paweł Sanocki won awards in the Team Design category in the final of the European BEST Engineering Competition (EBEC) in Turin. The Team Design category includes designing and constructing a device that solves a specific engineering problem (e.g. a mechanism that uses a steady stream of air to raise as much mass as possible). The category allows to check how students can cope with limited resources of materials and time. EBEC is an international event organized by the Board of European Students of Technology. The competition is addressed to students of technical universities and include their engineering knowledge, creativity and innovative thinking. It consists of two categories: Case Study and Team Design.

Autonomous transport is the future

2019-08-08

Will new technologies reduce the number of accidents on Polish roads? Will drivers lose their job and be replaced by computers? These questions will be tackled by the consortium of the Ministry of Infrastructure, the Motor Transport Institute (ITS) and the Faculty of Transport of the Warsaw University of Technology under the AV-PL-ROAD project. The project acronym means Autonomous Vehicles (AV) and vehicles communicating with other vehicles and infrastructure (Connected Autonomous Driving - CAD). The AV-PL-ROAD project implemented since December 2018 aims to prepare Poland for new challenges related to the safe implementation of automated and, in the future, autonomous vehicles into road traffic. One of its important aspects is the idea to create a CAD Competence Center. Thus ITS develops competences as well as invests in research equipment in the field of testing autonomous technologies.

RTX car of the Wrocław University of Science and Technology comes fifth in the Formula Student competition in Italy

2019-08-08

The students of the Wrocław University of Science and Technology developed the RTX car that took fifth place in the general classification of the Formula Student competition in Italy. RTX is the tenth car constructed by students of the Wrocław University of Science and Technology. Their work on the vehicle began at the end of September last year, in total nearly 60 people were involved in the project. The PWR Racing Team took the third place in the Business Plan Presentation competition. The jury appreciated the design solutions, aesthetics and professional preparation of the presentation. The car was also distinguished by the unique sound of the engine, which was often mentioned by commentators during the race. Young designers failed to be on the podium in dynamic competitions due to problems with the gearbox, but ultimately their results gave them the fifth place in the general classification.

Good performance of the Poznań University of Technology constructors at Formula Student competitions in Italy

2019-08-09

Students of the Poznań University of Technology participated in Formula Student competitions. After good performances in dynamic events at the Autodromo Riccardo Paletti track in Varano, the PUT Motorsport team is tenth in the overall ranking. During the competition Poznań engineers presented their fifth combustion engine – the Rusalka. The car is charged with new technologies, in 60 percent it consists of innovative composite materials made on the basis of simulations carried out by students. The Rusalka took second place in Skid Pad, a competition checking the possibilities of suspension constructed by students, the fourth place in Accel-

eration - competition checking the maximum acceleration of the car, the seventh place in Autocross - checking qualifications for the endurance race and drivers' skills and fourth place in the Endurance & Efficiency endurance race.

Transport faculty at the Gdańsk University of Technology to receive KAUT accreditation

2019-08-12

The Accreditation Committee of Technical Colleges (KAUT) has accredited the Transport field of study at the Faculty of Civil and Environmental Engineering of the Gdańsk University of Technology. The accreditation will be valid until the academic year 2022/2023. KAUT is an environmental commission working to improve the quality of education of Polish technical universities. It was established by the Conference of Rectors of Polish Technical Universities and belongs to the European accreditation commission. In September 2013, it obtained the license from the European Network for Accreditation of Engineering Education to grant the European certificate EUR-ACE Label. Thus, organizations that receive the KAUT certificate simultaneously receive the EUR-ACE certificate for the studies. KAUT accreditations cover five more fields of study at the University of Technology: Biotechnology, Civil Engineering, Electrical Engineering, Computer Science as well as Mechanics and Machine Construction.

Students of Wrocław University of Science and Technology took the bronze in the Red Bull flight competition in Gdynia

2019-08-13

Students of the Wrocław University of Science and Technology took the third place in the „Red Bull Flight Competition 2019” competition in Gdynia. Their glider flew nearly 18 meters before it fell into the sea. The competition of 39 teams from all over Poland consisted of several stages. The first was a 30-second artistic performance, which was to go into a smooth start. Then the glider was accelerated on a 30 m long ramp and pushed into the water from the height of six meters. The flight distance was recorded until the machine first came into contact with water. The «Bulls from the University of Technology» team consisted of students working on a daily basis at the Academic Aviation Club, the Scientific Circle of Vehicles and Mobile Robots and the Scientific Club of Composite Materials. The inspiration for designers of the glider were two planes: the popular F-16 fighter jet and one of the most popular aerobatic aircraft in the world, Zivko Edge 540.

Amateur inventors invited to Garage Inventions Review in the 4th Silesian Science Festival

2019-08-14

Until September 30, participants can apply to the Garage Inventions Review as part of the 4th Silesian Science Festival Katowice. During the event at the International Congress Center, amateur inventors, device constructors and engineers working out interesting technical solutions will have the opportunity to present the results of their work. All submitted proposals will be analyzed by an expert committee, which will assess them primarily in terms of practicality. The authors of the most interesting projects will be invited to participate in the Festival, and the best projects will be awarded by the festival audience, regional media readers and

an expert commission. Review of Garage Inventions OFF Science is an initiative presenting the achievements of people involved in the popular science. The event is addressed to designers and inventors of all ages, acting individually or in teams. Applications are accepted electronically. The registration form is available at: www.slaskifestiwalnauki.pl

Students of Warsaw University took the third place in the international Mars rover competitions

2019-08-16

The Rover Team from University of Warsaw took third place in the Mars Canadian International Rover Challenge 2019. 12 student teams took part in the finals, which were held in Drumheller in Canada. During the competition, each team performed 5 tasks that were assessed for the design of rovers and the skills of their operators. They included moving on difficult terrain, collecting surface samples and repairing equipment. The first place in the competition was taken by the OSURC Mars Rover team from Oregon State University, and the second by Husky Robotics from the University of Washington. The UW team, which took third place, consists of the students of the faculties of Physics, Geology, Mathematics, Computer Science and Mechanics and the College of MISMap.

Universality- Polish startup for students, lecturers and entrepreneurs

2019-08-16

The Universality platform was created for both students and lecturers. It is intended for people interested in technical and IT fields. It was created thanks to the support of the National Center for Research and Development under the e-Pionier program. Lecturers can post tasks for students on the platform, and thus THE STUDENTS can expand their knowledge. The portal is also intended for companies that are looking for students to work in the technology industry. The originator of the creation of the university startup is Jerzy Czepiel, an academic employee

of the Jagiellonian University in Krakow. The portal is a response to the needs of young people who want to develop and expand their knowledge in technical fields.

Students of the Wrocław University of Science and Technology researching the Grodno Castle

2019-08-16

During the research and design works at the Grodno Castle in Zagórze Śląskie, students of the architecture department of the Wrocław University of Technology discovered that the stronghold was not expanded in the 16th century - as it was thought so far - but much earlier, in the Middle Ages. Young architects came to Zagórze Śląskie for the fifth «Castles and their shadows» workshops organized by the ArcHist Scientific Society of the History of Architecture. They spent over a week at the Grodno Castle, studying it and creating projects that will help better present the history and architecture of the object. Students participating in the workshops prepared virtual models of three stages in the history of Grodno Castle. The earliest shows the fortress during the time of Prince Bolko I, i.e. at the turn of the thirteenth and fourteenth centuries, the next stage presents Grodno around the mid-fourteenth century during the reign of Prince Bolko II. The last of the virtual presentations is a Renaissance castle - this was how the stronghold could look between the 15th and 16th centuries. More: <https://pwr.edu.pl/uczelnia/aktualnosci/studenckie-badania-na-zamku-grodno-zdjecia--wizualizacje-11308.html>

Gdańsk University of Technology controls the construction of viaducts important for Gdańsk

2019-08-16

Scientists of the Department of Strength of Materials at the Faculty of Civil and Environmental Engineering of the Gdańsk University of Technology (PG) will exercise scientific supervision over key investments in Gdańsk's infrastructure. As part of the Viaduct Biskupia Górka investment, 3 viaducts and a bridge over the Radunia Canal will be built. PG employees supervising them simultaneously gather material for the preparation of scientific publications. The load tests on the viaduct were attended by Prof. Krzysztof Wilde, rector of the university and Alan Aleksandrowicz, vice president of Gdańsk for economic affairs. Scientists from the Gdańsk University of Technology will also supervise another interesting object - the Venetian flyover, which is a fragment of the so-called Nowa Bulońska Road. The technology used in this construction allows for the elimination of noise and ice when traveling on an overpass. In winter, there will be no icy surface here - assures Mikołaj Miśkiewicz, assistant professor at the Department of Material Strength and manager of the bridge laboratory. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/politechnika-gdanska-nadzoruje-budowe-wa-znych-dla-gdanska-wiaduktow

In September Kielce to hold the European Mars Rover Competition

2019-08-19

The 5th European Rover Challenge will take place from 13 to 15 September in Kielce. The Świętokrzyskie Voivodship donated 100,000 PLN to their organization as well as to the scientific and business conference. 40 teams from 15 countries have qualified for participation in the Mars rover competition. The finalists include representatives of Germany, Canada, Great Britain, Poland, Turkey, India and Australia. Last year's winner - the Kielce University of Technology will be also present. During the event, there will be 40 stands on the cam-

pus of the Kielce University of Technology, where the companies will present the use of space technologies including the Polish space sector companies participating in space missions of the European Space Agency and NASA. Presentations and workshops on robot construction and hologram simulations.

Scorpio Rover from Wrocław University of Science and Technology comes fifth in international competitions in Canada

2019-08-20

The Scorpio rover developed by students of Wrocław University of Technology took the fifth place during the Canadian International Rover Challenge. 12 teams from around the world took part in the Mars rover competition in Drumheller, Alberta, Canada, according to the university. The organizers prepared five competitions for participants: searching for a broken lander; help in repairing the damaged habitat; collecting soil samples; finding and helping a wounded astronaut and collecting items lost during the evacuation of the base. Each task had to be completed as soon as possible and extremely precisely. Scorpio X rover developed by students from the Off-Road Science Club has a modular structure, which allows to attach additional elements to it and virtually modify any existing components. The structure was developed largely of lightweight materials - aircraft aluminum and polyamide, which have good mechanical properties. More: <https://pwr.edu.pl/uczelnia/aktualnosci/piate-miejsce-lazika-scorpio-w-miedzranic-zowych-zawodach-marsjanskich-11310.html>

Car of the Wrocław University of Science and Technology comes the second at the competition in the Czech Republic

2019-08-22

Students from the PWR Racing Team took second place in the general classification of the international Formula Student competition on the Czech

track „Most”. Young constructors from the Wrocław University of Science and Technology got medals in three competitions. 32 teams from the Czech Republic, Germany, Bulgaria and Poland took part in the competition. It began with mandatory technical control and static competition, in which Wrocław students took the third place in Engineering Design, the fourth place in Business Plan Presentation and the seventh in Cost and Manufacturing Report. In Skid Pad, which is driving in the track of the shape «eight», the RTX car took the fifth place. In the acceleration test at the distance of 75 meters it was the fourth. This finally gave it the second place in the general classification. Formula Student is an international competition of student teams from around the world. Participants must design a car, build, achieve the best results on the track, and present its business concept. More: <https://pwr.edu.pl/uczelnia/aktualnosci/bolid-rtx-o-krok-od-zwyciestwa-w-czechach-11311.html>

Students from Rzeszów to examine the Potockis' villa in Ukraine

2019-08-27

Students from the Faculty of Civil Engineering, Environmental Engineering and Architecture of Rzeszów University of Technology (PRz) will travel to Ukraine in September to explore the nineteenth-century Potockis' villa, which is part of a complex of historic buildings in Antoniny. The Potockis' villa is located in Antoniny next to Żytomierz, and the whole complex consists of several dozen buildings. The villa that will be analyzed is a former clerical casino with living quarters. The students are planning to make an inventory of the facade, which is the most impressive part of the villa, and testing the materials inside the building, including plasterwork. The complex in Antoniny has not been studied yet and has no conservation documentation. It will be the first such trip to Ukraine organized by the Rzeszów University of Technology. Earlier similar trips were organized in Poland.

University in Suwałki launches an Mechatronic Application Center

2019-08-28

The State Higher Vocational School (PWSZ) in Suwałki has gained new modern studios. After the Medical Simulation Center, the Mechatronic Application Center was launched. These are specialized laboratories mainly for students of management and production engineering. The four neighboring studios own one of the most modern equipment in the field of pneumatics, electrotechnics and numerical control in Poland. All this will allow students to learn about the practical version of mechatronics and the equipment on which currently the most modern companies work. The Application Center of Mechatronics is one of the elements of the «Vocational training» project, co-financed from the European Regional Development Fund and from the state budget under the Regional Operational Program of the Podlasie Voivodeship. The project will also include a transport and agri-food processing laboratory. The project value is almost PLN 4 million.

Lublin University of Technology to develop a new generation aircraft

2019-08-29

Scientists from the Lublin University of Technology (PL) are working on a new generation aircraft that combines the features of gyroplanes and multi-rotor aircraft. Combining the advantages of a gyroplane i.e. a light, simple and cheap machine, with a multi-rotor assembly enabling vertical take-off and landing, will allow to design a flying ship with completely new properties - says project manager Dr Eng. Zbigniew Czyż from the Department of Thermodynamics, Fluid Mechanics and Aviation Drives PL. SafeGyro, a hybrid unmanned aerial vehicle of vertical take-off and landing with the possibility of autorotation flight, will be economical to use and safe, and capable of performing tasks previously assigned to conventional air machines. Its advantage is also a relatively low price compared to an unmanned helicopter with similar take-off mass -

adds Dr Eng. Czyż. The work on the project will last 3 years. Its costs nearly PLN 1.5 million. The funds were granted by the National Center for Research and Development under the Leader X program.

ZUT Materials Fire Testing Laboratory in Szczecin extended the accreditation

2019-08-29

Materials Fire Testing Laboratory at the Faculty of Marine Technology and Transport of the West Pomeranian University of Technology in Szczecin extended the validity of the Accreditation Certificate No. AB 304 issued by the Polish Center for Accreditation for another four-year cycle. The current Certificate confirms that the Laboratory meets the requirements of the amended PN-EN ISO / IEC 17025: 2018-02 standard. The accredited activity of the Laboratory includes 31 standardized methods for testing the combustible properties of materials used in construction, shipbuilding, sea and land transport in determining the compliance of products with the requirements of the relevant provisions. The university laboratory was accredited by the Polish Center for Accreditation in 2000. It has also been recognized by the Polish Register of Shipping since 1974. For many years, as one of three Polish laboratories, it has been on the list of research laboratories recognized by the IMO International Maritime Organization.

Student of the Krakow University of Technology receives an award in the Mars colony design competition

2019-09-02

Michał Ptak, an architecture student at the Krakow University of Technology (PK), won the second prize in the international architectural competition for the design of the first colony on Mars. The concept of «The One to Three Shelter» was awarded with a prize of 5,000 dollars. It assumes the construction of a modular and multifunctional residential base on Mars, which will be a safe shelter, a laboratory for research and a place for exercise and rest. The

competition design was Michał Ptak's master's thesis, delivered in the summer at the Faculty of Architecture of the PK. The «First Colony on Mars» competition was organized as part of the KLAF 2019 international architectural festival in Kuala Lumpur, Malaysia. Over 120 projects from around the world have been submitted to the competition.

Lublin University of Technology to launch High-voltage engineering research and development center

2019-09-04

Lublin University of Technology with EnergoTech Lublin established a Research and Development Center for High Voltage Engineering. The new center will deal with advanced research on the development and implementation into the power industry of innovative methods of diagnostics and monitoring of medium and high voltage cables and overhead lines as well as switchgear dedicated to these networks. Employees and students of the Lublin University of Technology will gain new, innovative scientific and educational facilities. In addition to specialized research, the center will also serve students and PhD students to acquire knowledge based on new technologies. - Teaching is very important to us and we want to educate students in accordance with the latest technological achievements - said Prof. Piotr Kacejko, rector of the Lublin University of Technology.

University of Wrocław becomes a partner of the German research center

2019-09-06

A new research institute CASUS (Center for Advanced Systems Understanding) has started operating in Gorerlitz, Germany. Its researchers will model complex systems using artificial intelligence. The University of Wrocław is one of the partners of the institute. - The Institute will be involved in the study, and more specifically in modeling of complex systems, i.e. metasystems. Interdisciplinary research will cover many areas of science, and the common feature is the use of similar tools: mathematics, computer science, artificial intelligence and large data sets - says Leszek Pacholski from the Institute of Computer Science of the University of Wrocław. The Institute's partners are University of Wrocław, Helmholtz-Zentrum Dresden-Rossendorf, the Center for Environmental Research Helmholtz, Max Planck Institute of Molecular Cell Biology, Genetics and Technische Universität Dresden / Center for Information Services and High Power Computing. More: <https://uni.wroc.pl/uwr-partnerem-niemieckiego-osrodka-badawczy/>

Scientists from around the world participate in the 4th Polish Congress of Mechanics in Krakow

2019-09-09

Over 500 world-famous specialists dealing with the mechanics and physics take part in the 4th Polish Congress of Mechanics, which takes place in Krakow on September 8-12, 2019. The event is linked to the 23rd International Conference on Computer Methods in Mechanics. The main organizers of the events are the Krakow University of Technology, AGH University of Science and Technology in Kraków and the Jagiellonian University in Kraków. The aim of the Congress is to present the current state of research in the discipline of Mechanical Engineering, as well as to analyze the relationship between the technical sciences and the economy. The organizers emphasize, that the event promotes the internationalization of Polish science by creating

a platform for participants from different countries to be helped in establishing contacts and discussing important scientific problems. The event is attended by over 500 scientists from around the world, including: Prof. Leszek Demkowicz (University of Texas at Austin, USA), Prof. Fionn Dunne (Imperial College London, Great Britain), Prof. Shaker Meguid (University of Toronto, Canada), Prof. Franz G. Rammerstorfer (Technical University of Vienna, Austria), Prof. Jerzy Pamin (Krakow University of Technology).

MBA studies for the IT industry at the Polish-Japanese Academy of Information Technology

2019-09-10

The Polish-Japanese Academy of Information Technology (PJATK) in Warsaw is inviting participants to the MBA studies addressed to the IT industry. This unique curriculum is oriented to the needs of the IT market and targeted at people who want to expand their knowledge in the field of IT and project management as well as improve their managerial skills. The classes are implemented in the form of workshops and seminars and students will learn about IT project management methods and tools, issues related to human resources management, enterprise financial management, issues in the field of labor law and copyright. The studies will last two semesters. The MBA study program for the IT industry is addressed to middle, senior and top management. The condition for undertaking studies are completed studies and several years of professional experience. Application process will be conducted until September 30, 2019.

Wrocław University of Science and Technology graduates reach the final of the international competition for the factory of the future

2019-09-13

„ReFactory”, a student project of a factory that converts electronic waste into raw material for 3D printers by Patrycja Czechowska and Katarzyna Winkler

from the architecture department of the Wrocław University of Science and Technology reached the final of The 4. Annual Inspireli Awards. The project was created as part of the «Architectural Design» classes. The students were to create the concept of a factory of the future that could function in about ten years. They decided to place their plant in the Wrocław city port of Kleczków. Inspireli Awards is an international competition for students of architecture held under the auspices of the well-known and prestigious ArchDaily website. 887 projects from 86 countries were submitted for competition. The jury selected 30 finalists in the following categories: architecture, urban planning and interior design. The winners will be announced on October 10 at a gala at the Czech Technical University in Prague. Shanghai-Warsaw Artificial Intelligence Laboratory opened

2019-09-16

The development of artificial intelligence algorithms and their application for data analysis are the main tasks of the Shanghai-Warsaw Laboratory of Artificial Intelligence, which was established at the Faculty of Electronics and Information Technology of the Warsaw University of Technology (PW). The laboratory will deal with the development of artificial intelligence algorithms and their use for data analysis. It will have two headquarters, located at the Faculty of Electronics and Information Technology of the Warsaw University of Technology and in Shanghai. During the official opening of the Laboratory, the scholars discussed the analysis of textual data, publications and patents to support talent management, which tasks have been implemented in the laboratory since March this year. Future projects on DNA sequence analysis, medical image analysis and financial data were also considered.

Institute of Non-Ferrous Metals of the Łukasiewicz research network presented at the International Defense Industry Exhibition

2019-09-16

Researchers from the Institute of Non-Ferrous Metals of the Łukasiewicz research network presented their projects at the 27th International Defense Industry Exhibition in Kielce. Researchers presented products developed and manufactured by the Institute: a new generation battery to power unmanned platforms, programmable thermal rocket ammunition batteries, dual-use hybrid energy storage and buffer system, and additional modular armor for wheeled armored personnel carriers and «ModPanc» tracked platforms. Representatives of the Institute from Skawina and Poznań answered questions, talked about the extensive activities of the Institute in the field of defense and security of the country, and provided information on ongoing research projects related to military innovation. Kielce University of Technology wins the European Rover Challenge

2019-09-18

The Impuls team from the Kielce University of Technology once again won the European Robot Rover Challenge. The second place was taken by the team from the AGH University of Science and Technology in Krakow, and the third by designers from the Technical University of Ostrava, Czech Republic. The best team award was presented by Prime Minister Mateusz Morawiecki, who was a special guest of the event. - I cordially congratulate the winners and all participants of the European Rover Challenge. I am full of admiration that the technical traditions that Stanisław Staszic initiated in Kielce, opening the first technical university here in Poland, are continued at the Kielce University of Technology. Its students are following the best creators and engineers. On the one hand, these cosmic inventions mean a scientific

voyage into space, but on the other they are building a future for humanity. Congratulations on inventiveness, innovation and difficult skills. - said Prime Minister Mateusz Morawiecki. 28 teams and about 400 young constructors from 12 countries took part in the fifth competition European Rover Challenge.

Silesian University of Technology begins cooperation with EMT-Systems Sp. z o.o.

2019-09-18

The Silesian University of Technology has signed an agreement with the company EMT-Systems Sp. z o.o. specializing in the organization of courses and training in mechatronics and engineering techniques. Partners have committed to cooperate in the field of research, education and human resources. The signatories will appoint a team of specialists for strategic technical and organizational solutions, will agree on the topics of research and master's theses, as well as present and promote their achievements and jointly raise funds. The University of Technology will educate EMT-Systems employees through studies and refresher courses, organize trainings using its didactic base, propose topics of theses in accordance with the needs of the company. EMT-Systems will organize internships and teaching trips for students, as well as the recruitment of engineering staff from the university graduates. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListaWiadomosci&Page=1&WebPartTitle2=Wiadomosc&Filter1Field2=Identifier&Filter1Value2=2825>

Success of students and graduates of the Poznań University of Technology in the architectural competition

2019-09-19

Students and graduates of the Faculty of Architecture of Poznań University of Technology took first place in the competition for the concept of a vantage point for the construction of the Museum of Modern Art in Warsaw. The pavilion will be built in

spring 2020. Their design has the form of a frame placed on a platform to watch the construction of the Museum. The scaffolding forming the viewpoint corresponds to the daily life of the construction site. The simplicity of form and the use of steel construction as the main architectural means of expression give the block a light character. The jury appreciated the simplicity of the project, which accompanies the ongoing construction, but at the same time does not deepen the visual chaos of the downtown and full of colorful advertisements of the frontage of Marszałkowska Street. The selected technology allows recycling most of the materials, and its main building material - tube-coupling scaffoldings will be reused after dismantling the installation. More: <https://www.put.poznan.pl/pl/aktualnosc/sukces-studentow-architektury>

Modern GPR radars of PKP Polskie Linie Kolejowe S.A. to increase the quality of investments

2019-09-20

Georadars for over 1.8 million PLN will be purchased by PKP Polskie Linie Kolejowe S.A. Modern devices will speed up the assessment of the soil condition for future investment areas. The study will allow to „look” deep into the earth up to 20 meters. Railway workers will use the specialized equipment to examine the condition of the ground even for 15 km of lines a day. GPR surveys are one of the best methods enabling precise assessment of the condition of the railway surface, the subrailing and the soil layers. Measurements will enable to indicate the so-called weak places, such as cracks and loose soil. The tests will provide full information on the condition of the ground without interfering with the rails. Thanks to this, there are no changes in trains schedules. The devices will be equipped with measuring antennas ensuring the ability to check the quality of concrete layers in engineering structures, e.g. bridges, viaducts, retaining walls. This will allow users to detect quickly if there are any invisible cracks in the structures.

Scientist of the Wrocław University of Science and Technology becomes the finalist of the 19th Polityka Science Awards

2019-09-24

Dr Eng. Mariusz Ptak from the Faculty of Mechanical Engineering of the Wrocław University of Science and Technology became a finalist of the 19th Political Science Awards in the „Technical Sciences” category. The winners will be announced on October 20 during a gala in Warsaw. Dr Eng. Mariusz Ptak works in the Department of Machine Design and Testing at the Faculty of Mechanical Engineering of the Wrocław University of Science and Technology. In his research work he deals with numerical simulations, biomechanics of head injuries, reconstruction of road accidents and safety of pedestrians, cyclists and motorcyclists. The results of his research will include three numerical models of the brain for a child, an adult and an elderly person, which in the future can be helped, for example, by companies that produce helmets to better protect. The scientific awards of the Polityka weekly journal are awarded in five conventional categories: humanities, social sciences, exact sciences, technical sciences and life sciences. In total, the weekly Polityka has already awarded over 300 people.

Krakow University of Technology works out a pioneering method of city ventilation

2019-09-25

„Dynamic ventilation and smog reduction in urbanized areas by the case of Krakow” is the title of the conference organized by the Institute of Structural Mechanics of the Faculty of Civil Engineering of the Krakow University of Technology (PK) and the Wind Engineering Laboratory of the PK, which will take place on September 26, 2019. During the event, the Krakow scientists will present and discussed the method of ventilation of the towers and chimneys. The pioneering solution was developed by a team

of scientists from the University of Technology. The method of city ventilation proposed by PK scientists is to be implemented «in horizontal ventilation channels through series of parallel systems of special ventilation towers cooperating with vertical ventilation of chimneys». Research shows that the method we propose is an effective method to improve the ventilation of cities, which significantly reduces air pollution - says Prof. Eng. Andrzej Flaga, head of the PK laboratory. According to scientists from PK, research has confirmed that the innovative idea to fight smog is also economically justified. The method will be patented.

Graduate of the Wrocław University of Technology becomes the finalist of the competition for the design of the Czech embassy

2019-09-25

Patrycja Czechowska, a graduate of the Wrocław University of Technology is one of the 25 finalists of the international competition for the project of the Embassy of the Czech Republic in Addis Abeba in Ethiopia. The competition will be settled in October. The task of participants in the competition organized by the Ministry of Foreign Affairs of the Czech Republic and the Architecture Department of the Czech Technical University in Prague was to design a complex of embassy facilities in Addis Abeba. 281 works were submitted from all over the world. The organizers selected 25 finalists from the Czech Republic, India, China, Iran, Israel, Armenia, Slovakia, Germany, Brazil, Lebanon, Argentina and Poland. In her design the finalist decided to combine the tradition of Ethiopian architecture with Czech minimalism. Under construction, she wants to use the construction method that has been used in Africa for several thousand years - Rammed Earth i.e. soil compacted in formwork. More: <https://pwr.edu.pl/uczelnia/aktualnosci/studentka-pwr-w-fina-le-konkursu-na-projekt-ambasady-czech-visualizacje-11329.html>

Wroclaw Centenary Hall in the international European project InnovaConcrete

2019-09-26

Scientists from the Department of Building Structures of the Wrocław University of Technology are participating in the international European project InnovaConcrete. As part of the project, the scientists are testing modern conservation materials to protect historic concrete of Wrocław's Centenary Hall. Scientists, under the guidance of Prof. Jerzy Jasieńka, vice-rector of the Wrocław University of Technology are testing impregnants, consolidants, steel nano-inhibitors, hydrophobizers, cleaning gels and bioenzymes that support self-repair of the structure for the Centenary Hall. The InnovaConcrete project is co-created by an interdisciplinary team of partners responsible for the scientific research of building materials in the field of numerical simulations and laboratory tests. Verification of the effectiveness of the tested and developed materials will be also provided for sculptures by Eduardo Chillid in Spain, Memorial Towers in Italy and Arseniusz Romanowicz Station in Warsaw.

Scientists of the University of Silesia join the transnational DEEPWATER-CE project

2019-09-27

Researchers from the Department of Hydrogeology and Engineering Geology at the Faculty of Earth Sciences of the University of Silesia are participating in the transnational DEEPWATER-CE project „Developing an integrated approach in implementing solutions for the management of additional groundwater supply to facilitate the protection of Central Europe’s water resources threatened by climate change and user conflicts“. The main goal of the project funded under the Interreg Central Europe program is to support water resource planning and management by implementing Managed Aquifer Recharge systems as a solution to the problem of water scarcity caused by climate change. The project involves 8 partners from Hungary, Croatia, Slovakia, Germany and Poland. Their meeting will take place on 30 September in Sosnowiec, which will be an opportunity to get acquainted with the opinion of participants and their experience related to additional groundwater supply.

Wrocław University of Science and Technology to launch a new generation of rods and anchors for special tasks

2019-09-30

Researchers from the Wrocław University of Science and Technology and the University of Porto and the University of Coimbra from Portugal are starting work on a new technology for the production of composite reinforcing bars and anchors, which will be competitive with commonly used steel reinforcing bars. Work on a new generation of composite rods for concrete and soil reinforcement is possible thanks to a grant from the National Center for Research and Development. The scientists are striving to develop elements that will be more competitive and cheaper than existing composite rods and anchors. The developed products will have a new, multi-layered structure guaranteeing a progressive method of destruction during critical loading and

providing the structure security. The new interdisciplinary team of chemists, materials engineers, mechanics and construction engineers will be working out the new technology. More: <https://pwr.edu.pl/uczelnia/aktualnosci/na-pwr-powstaje-nowanigeneracja-pretow-i-kotew-do-zadan-specjalnych-11334.html>

Silesian University of Technology implementing the European MineHeritage project

2019-09-30

The MineHeritage project has started at the Department of Mining Exploitation of the Faculty of Mining, Safety Engineering and Industrial Automation of the Silesian University of Technology, which aims to show how important mineral resources have and still have in the development of civilization. Through the history of mining, MineHeritage will show the importance of mineral resources in the development of Europe, European culture and society. The creators of the project want to encourage schoolchildren and young people to learn about the history of mineral mining in Europe through a multi-level internet game and application for mobile devices for exploration as part of cultural tourism. The project is financed by the European Institute of Innovation and Technology (EIT), which is a body of the European Union, as part of the HORIZON 2020 Framework Program for Research and Innovation of the EU and the funds of the Ministry of Science and Higher Education. 13 scientific units from 11 European countries participate in the program. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListaWiadomosci&Page=1&WebPartTitle2=Wiadomosc&Filter1Field2=Identifier&Filter1Value2=2838>

PhD students of the Wrocław University of Science and Technology are the best in programming a swarm of autonomous drones

2019-10-01

Radosław Grymin and Piotr Semberecki, PhD students of the Wrocław University of Science and Technology, won the programming competition of the autonomous drone swarm at the Czech Technical University in Prague as part of the Institute of Electrical and Electronics Engineers Robotics and Automation Society (IEEE RAS) summer school. The competition was improving the trajectory planning algorithm for two autonomous drones whose task was to inspect the given areas. Wrocław PhD students defeated teams from the German Space Agency, Cornell University (USA) and Oxford University (United Kingdom). IEEE RAS is an international association of electricians and electronics specialists, who deals with the development of automation and robotics. It operates in 65 countries with over 15,000 people. It organizes summer schools on multi-robot systems collecting the most innovative approaches to solving problems related to controlling the so-called swarm of robots. President of the Polish Space Agency to launch competition for the Scientific Award

2019-10-01

The Polish Space Agency (PAK) is launching the second PAK President's Scientific Award competition for the best student engineering thesis in the field of space engineering completed in the 2018/2019 academic year. The competition is open to people who have completed their studies at Polish universities in the year of the award. The diploma theses should refer to issues in the space engineering in the theoretical aspect and practical solutions. - Space technologies, research related to space engineering - these are difficult issues. Through this competition, the Polish Space Agency wants to appreciate those who were not afraid of the complexity of the subject. They took the challenge, put a lot of effort, which resulted in their theses. We hope that students and young graduates who have taken up the challenge of researching space issues in their projects will not stop there and decide to work in the Polish space sector - said Michał Szaniawski, the president of the Polish Space Agency. Individual or collective diploma theses that have received a positive grade from a home university and meet the criteria set out in the competition regulations may be submitted by authors or their universities until October 30, 2019. More: <https://pak.bip.gov.pl/konkursy/konkurs-o-nagrode-naukowa-prezesa-pak-za-najlepsza-prace-dyplomowa.html>

Scientist of the University of Szczecin becomes a laureate of the Competition for the Best IT Book

2019-10-01

Polish IT Societies selected the Best Polish IT Book of 2019. The competition was conducted in the following categories: the best textbook and popular science publication as well as the best scientific publication. One of the awarded authors is a scientist of the University of Szczecin. In the category of scientific publications, the jury decided not to award the main prize and it gave just one distinction. It

was obtained by Dr Karol Kuczera from the University of Szczecin for the book «Virtual organization». Prof. Wojciech Dyduch from the University of Economics in Katowice, emphasized in his review the methodological and substantive correctness of this publication. - The book has a large theoretical and conceptual worth, it is provided with original considerations, interesting combinations, operationalizations and empirical illustrations.

21st Fiat Chrysler Automobiles Award Competition

2019-10-07

Warsaw University of Technology (PW) announced the 21st Fiat Chrysler Automobiles (FCA) Award Competition, promoting the best engineering, master's and doctoral dissertations written at the Warsaw University of Technology in the 2018/2019 academic year in the automotive field. The Fiat Chrysler Automobiles (FCA) Award Competition is announced on the basis of an agreement on scientific and technical cooperation between the FIAT Research Center (Centro Ricerche Fiat), companies of the FCA group (FCA Poland SA, FCA Powertrain Poland, Magneti Marelli Poland Ltd., Teksid Iron Poland Ltd.), which are co-financing awards and three Polish universities: Warsaw University of Technology, Silesian University of Technology in Gliwice and the University of Technology and Humanities in Bielsko-Biała. The Fiat Chrysler Automobiles FCA Award Competition supports young scientists interested in automotive issues, including innovative design solutions and research methods.

Experimental pavilion made of ecological materials erected in Wrocław

2019-10-07

Students from the scientific group Humanization of the Urban Environment of the Wrocław University of Science Technology will build an experimental pavilion made of ecological materials. Their action is part of the celebration of the 25th anniversary of the Architektura-Murator publishing house. ARCH / BOX - experimental temporary pavilion will be created from environmentally friendly materials such as

cardboard and paper. Its design, reinterpreting the Gothic style, will be a reference to the cloisters of the museum located in the former Bernardine monastery. The building will be located in front of the Architecture Museum in Wrocław. The rod structure will lack surface fillings between the ribs, which in the original Gothic style were bricks or stone. The object is to resemble the ruins of Gothic temples, and its elegant proportions and completed form made of modern materials are to resemble a prefabricated product that has just left the factory and is ready for commercial use. More: <https://pwr.edu.pl/uczelnia/aktualnosci/we-wroclawiu-stanie-obiekt-niemozliwy-11341.html>

Bydgoszcz scientist publishes in the International Journal of Engineering Science

2019-10-07

Dr Mieczysław Cieszko from the Institute of Mechanics and Applied Computer Science in Bydgoszcz published a scientific article in the renown journal of engineering and technical sciences - International Journal of Engineering Science. His article deals with issues of mathematical description of liquid and gas transport in unsaturated porous materials of fundamental importance in many areas of engineering. This applies to water flow in soils, oil and gas extraction, geophysics, drying, as well as engineering of porous materials. Differential equations describing static acids and stationary acids of capillary transport processes in such materials were included. The considerations were based on the macroscopic theory of liquid and gas transport in unsaturated porous materials, proposed by a Bydgoszcz scientist in 2016. According to it, these processes occur in five-dimensional pressure-time-space. More: <https://www.ukw.edu.pl/strona/aktualnosci/aktualnosci/56984/ukwpublikacjaprofmieczyslawacieszko>

Institute of Non-Ferrous Metals to implement the project for over PLN 14 million

2019-10-08

Research Network Łukasiewicz - Institute of Non-Ferrous Metals The Light Metals Division in Skawina began the implementation of the project entitled „Welding extrusion of high-strength aluminum alloy sections of the 7xxx series”. The aim of the project is to develop and implement technology for extruding closed profiles from hard-deformable aluminum alloys. The project is co-financed by the National Center for Research and Development under the Modern Materials Technologies - TECHMATSTRATEG program. The project is implemented by a consortium composed of: Research Network Łukasiewicz - Institute of Non-Ferrous Metals Light Metals Division (leader); AGH University of Science and Technology in Kraków, Department of Non-Ferrous Metals; Albatros Aluminum. The total cost of the project is over PLN 14 million.

Consortium of universities and companies to search technology reducing road construction costs

2019-10-09

The Warsaw University of Technology, Gdańsk University of Technology and the Road and Bridge Research Institute in Warsaw together with Orlen Asphalt, Lotos Group and Budimex have created a consortium for the development of technologies that increase durability and reduce road construction costs. The consortium is implementing the research project «Optimizing the asphalt structure of the road surface through the use of modified asphalt». The producers and scientists want to confirm the impact of use of polymer on modified and highly modified bitumens, i.e. asphalt HiMA (Highly Modified Asphalt) on the durability of the road surface, and consequently on reducing the costs of road construction and maintenance. The results of the research will be known next year and should show the advantages of building roads with use of polymer-modified asphalt. Scientists will examine, also

impact of using modified bitumen and PMB HiMA for different layers of road construction.

Graduate of the State Higher Vocational School in Głogów wins the Industrial Development Agency competition

2019-10-09

Grzegorz Kocór, a graduate of the State Higher Vocational School in Głogów, has won the prestigious competition for the Award of the President of the Industrial Development Agency S.A. for the best master's, bachelor's and engineering thesis under the honorary patronage of the Chancellery of the Prime Minister and the Ministry of Science and Higher Education. The work «Analysis of the operation of winding machines powered by a converter» won the second prize in the category of engineering work. The aim of the competition was to increase the interest of the academic community in key issues for the development of the Polish economy and to select the best works in the areas of: innovation in industry, restructuring and effective management of the enterprise. The ceremonial gala of the winners and the distribution of awards took place in Warsaw with the participation of the Minister of Science and Higher Education Jarosław Gowin.

Koszalin University of Technology to receive EU money for research projects

2019-10-10

The Rapid Prototyping Center and the Center for Measuring Physical and Mechanical Properties of Wood Materials will be created at the Koszalin University of Technology. Both projects are co-financed from the Regional Operational Program of the West Pomeranian Voivodeship. The Center for Measuring Physical and Mechanical Properties of Materials will be created at the branch of the Koszalin University of Technology in Szczecinek. The center will gain infrastructure that will complement the equipment base used to carry out research expanding the implementation offer for the modern industry of the

region. The Rapid Prototyping Center is a project implemented at the mechanical faculty of the university. It will be a modern research and implementation center, enabling research in the field of incremental techniques, modeling and simulation of deformation mechanisms and processes, comprehensive strength tests and reverse engineering using a 3D laser scanner.

Student of the AGH University of Science and Technology designs an electric surfboard

2019-10-11

Igor Łukasiewicz, a student of Mechanics and Machine Design Faculty at the AGH University of Science and Technology in Kraków designed an electric surfboard. This environmentally friendly and innovative project was created as part of his master's thesis. The device is a type of emission-free water equipment that allows surfing in various waters, using an electric motor powered by lithium-ion batteries. Hydro-wings are an interesting element of the vehicle. They are devices generating power that lifts the board above the water surface. Thanks to this, the user has the impression of floating in the air. The board is 1.5 m long, while its pylon, on which the wings are mounted, is 0.85 m. The board weighs 9 kg, and the whole device together with electronics and batteries weighs 17 kg. Vehicles of this type can reach speeds of up to 40 km / h, and the battery capacity is sufficient for an hour of entertainment on the water.

Photo by Nicole Avagliano from Pexels

Students of Wrocław University of Science and Technology to receive almost 1.5 million PLN for their projects

2019-10-14

Nine projects prepared by students of the Wrocław University of Technology received funding under the „The best of the best! 4.0. „ They will receive about PLN 1.5 million for the implementation of their plans, tests and trips. The largest funding was granted to students from the PWR Solar Boat Team who are working on a single-person boat equipped with photovoltaic panels and hydro-wings. Thanks to the grant, they will take part in international solar boat competitions in the United States and the Netherlands. Further co-financed projects include trips of the members of the Academic Aviation Club to a series of world competitions of unmanned and autonomous aircraft, presentation of innovative constructions of the KoNaR Robotics Scientific Club at international competitions, conferences and fairs, as well as raising the level of competence of the PWR In Space Scientific Club members by participating in international Spaceport America competitions Cup 2020. More: <https://pwr.edu.pl/uczelnia/aktualnosci/poltora-miliona-dla-najlepszyc-studentow-z-pwr-11350.html>

National Academic Competition „Concrete Architecture” completed

2019-10-14

The winners of the 20th National Academic Competition for the best thesis „Concrete Architecture”, jointly organized by the Architecture Department of the Krakow University of Technology (PK) and the Cement Producers Association. The winners of the main prizes of the «Concrete Architecture 2019» competition are: Krzysztof Jędrzejewski from the Faculty of Civil Engineering, Architecture and Environmental Engineering of the Lodz University of Technology for the work titled «4 Freedoms - Museum in New York»; Aleksandra Kubacka from the Faculty of Architecture of the Krakow University of

Technology, author of the work «Museum of Polish Technical Thought at the runway of the former Rakowice-Czyżyny airport in Krakow» and Natalia Skolimowska-Wróbel from the Faculty of Architecture of the Warsaw University of Technology for the work «Analysis of the relationship between the university campus and the city. Student house design with services at the Warsaw School of Economics.» More: <http://www.beton.arch.pk.edu.pl/>

Researchers from the AGH University of Science and Technology to study Mars using light satellites

2019-10-15

AGH University of Science and Technology (AGH) together with universities from all over Poland and SatRevolution has created a consortium with the leading space sector company in the world - Virgin Orbit. The goal of the signed agreement is to develop and send light research satellites into orbit. The start of the first poll is planned for 2022. The satellite will weigh less than 50 kg and belongs to the category „cube sat”. Its task will be to photograph the surface of Mars and its moon - Phobos, analyze the composition of the Martian atmosphere or even search for water layers beneath the planet’s surface. AGH scientists in the project will be responsible for creating a ship orientation system, which will allow to navigate the satellite. They will also construct apparatus that processes images of the planet’s surface to help select a place for the landing of the American space probe.

Warsaw University of Technology to launch Aerial Research Center

2019-10-16

The Warsaw University of Technology is launching Aviation Research Center near Przasnysz. The university obtained PLN 33 million from EU funds for this project. The project tender has already been completed for the construction of a two-storey laboratory of drones, composites and gluing workshops, CNC machine tools and 3D printing machines. It will

also house a research and data processing center for measuring flights, a drone monitoring system, aircraft and propulsion laboratories, a measurement and computer-computing laboratory, as well as hangars for work on unmanned systems. The start of construction works is planned for this year. The investment is expected to be completed by the end of 2020.

Researcher of the Opole University of Technology receives Medal of Sendzimir

2019-10-18

Dr Grzegorz Królczyk from the mechanical faculty of the Opole University of Technology was awarded the Honorary Medal of Tadeusz Sendzimir for outstanding achievements. This prestigious prize is awarded by the National Council of the Association of Polish Inventors and Rationalizers. The medal is awarded to the most outstanding creators of technology and organizers of the innovation movement in Poland. Until now, 311 scientists and developers received it for the development of innovation. The laureate’s main scientific interests focus on analysis and improvement of production processes, surface metrology and surface engineering as well as sustainable production as a tool for practical implementation of the concept of social responsibility in the area of machining and surface metrology as a source of information about the stereometric features of machined surfaces. More: <https://wu.po.opole.pl/profesor-politechniki-w-gronie-najwybitnych-innowatorow-w-polsce/>

Flying University of Roads

2019-10-21

The Flying University of Roads (LUD) is an informal organization created in 2018 by researchers from the Lublin University of Technology and the Białystok University of Technology, aimed at exchanging and transferring scientific and practical experience in the field of road construction. LUD is mainly focused on educational and research activities. From October 17, 2019, 30 students from the «Drogowiec» Scientific Club of the Białystok University of Technology and the Road and Science Association of the Lublin University of Technology have been participated in workshops of the Faculty of Civil Engineering and Architecture of the Lublin University of Technology. During the course, students will learn the latest methods of testing asphalt and asphalt mixtures, technical and operational parameters of road surfaces, analyze vehicle traffic and road noise, road costs as well as deepen their knowledge about trends in calming traffic. - In the specialists' environment, there has not yet been an idea on how to interest young people in this field. We hope that the Flying University of Roads will change that - said Dr Eng. Marta Wasilewska, originator and co-organizer of the University, employee of the Faculty of Civil and Environmental Engineering of the Białystok University of Technology.

Projects of students of Wrocław University of Science and Technology succeed in the Mars Colony Prize competition

2019-10-23

Students of the Wrocław University of Science and Technology took high places in the international Mars Colony Prize competition for a housing estate project on the Red Planet. The authors of the „Twardowsky” concept won the second place, and the „Ideacity” project came the fifth. One hundred projects from around the world were evaluated within the competition. The competition task was to design a self-sufficient Martian colony for a thousand people. The estate should import as few goods from

Earth as possible and produce products for export in order to make a living. The city must itself produce food for residents, materials needed for expansion, energy, clothing, vehicles, machinery and all everyday products. Wrocław regular and doctoral students participating in the Space is More group and the Off-Road Scientific Club of Vehicles and Mobile Robots with the help of several members from the MOS Scientific Club and the LabDigiFab initiative designed the „Twardowsky” project. The «Ideacity» concept was created by students from the Inospace group. More: <https://pwr.edu.pl/uczelnia/aktualnosci/projekt-twardowsky-z-druga-nagroda-w-usa-11369.html>

Koszalin University of Technology receives money for the purchase of equipment for innovative research

2019-10-24

Koszalin University of Technology has obtained a grant for the purchase of equipment for conducting scientific research regarding the assessment of the technical condition of buildings. The subsidy of 532 thousand PLN is allocated by the Ministry of Science and Higher Education. The money will be used to purchase specialized measuring equipment used in construction and geodesy. The set includes: a ground-based laser scanner with a thermal camera, a set of shields and a tablet for mobile cooperation with the scanner. The apparatus can be used to conduct scientific research in laboratory and field conditions. The technique of terrestrial laser scanning is based on remote measurement of the object and creating, based on the data obtained in this way, a detailed image of it. This allows specialists to assess the technical condition of various buildings: detect defects, cracks and other defects. On the basis of a detailed analysis of surface changes, it is also possible to evaluate the progressing changes in the structure of objects. More: <http://www.tu.koszalin.pl/art/1958>

Dr Eng. Mariusz Ptak from the Wrocław University of Science and Technology to receive Scientific Award of the weekly Polityka

2019-10-24

Dr Eng. Mariusz Ptak from the Wrocław University of Science and Technology won the scientific award in the competition of the weekly Polityka in the category of technical sciences. The laureate works at the Department of Machine Design and Research, where he deals with numerical models of the human head, which are used to simulate craniocerebral trauma. Dr Ptak and the aHEAD team have developed three numerical models of the head to study injuries in people of different ages. His original idea is a multi-sensor band equipped with an electroencephalography system that allows to record overloads acting on the head. The aim of the research is to improve diagnostic methods and imaging of the impact of the brain structure, simulating the consequences of road accidents and improving head protection devices, including bicycle and motorcycle helmets. The laureate is the author or co-author of 40 articles in reputable international magazines, participant of many important research projects, author of patents and implementations.

Polish nanosatellite to study Mars

2019-10-25

Preparation of the Martian nanosatellite mission is the main goal of the consortium, which was created by Polish universities and the companies SatRevolution and Virgin Orbit. The scientific director of the project is prof. Jan Dziuban from the Wrocław University of Science and Technology. The consortium also includes AGH University of Science and Technology in Krakow, Warsaw University of Technology, Gdańsk, Poznań and Łódź University of Technology, as well as the Catholic University of Lublin and the University of Life Sciences in Wrocław. Researchers at these universities will be responsible for developing scientific solutions, connectivity, software and development of on-board instruments that will be on board nanosatellites. SatRevolution's task will be to design and build a nanosatellite between 6 and 12 U (1 U is 1 cubic decimeter) depending on the use of engines. Company Virgin Orbit is responsible for mission planning, taking the load into space and cooperating in mission control and signal transmission. Professor Mariusz Malinowski becomes president of the IEEE Industrial Electronics Society

2019-10-25

The scientist is the head of the Industrial Electronics Department at the Institute of Control and Industrial Electronics at the Faculty of Electrical Engineering of the Warsaw University of Technology. It is the culmination of his many years of work and activity at the Institute of Electrical and Electronics Engineers (IEEE), which one of the branches is IEEE IES. Professor Mariusz Malinowski was elected for the position of president-elect in 2020-2021 and he will be the president of the IEEE IES in the years 2022-2023. The selection was made during the last IEEE IES board meeting that took place on October 18, 2019 in Lisbon. Professor Malinowski was the editor-in-chief of «IEEE Industrial Electronics Magazine» and an assistant editor at «IEEE Transaction on Industrial Electronics» and «IEEE Transac-

tion on Power Electronics». He co-organized over 20 international IEEE conferences. Currently, he is the chairman of the Polish Section of IEEE and the vice president of publications in the IEEE Industrial Electronics Society. He holds the highest title in IEEE marked as IEEE Fellow, which is awarded for special technical and organizational achievements.

Polish-American cooperation in the field of space exploration

2019-10-29

During the jubilee 70th International Astronautical Congress in Washington, representatives of the Polish Space Agency (POLSA) and the American National Aeronautics and Space Administration (NASA) signed an agreement on cooperation in space exploration. Over the past 40 years, more than 80 solutions designed and constructed by Polish scientists and engineers have been used in various international space missions, and seven years of membership in the European Space Agency (ESA) have contributed to the dynamic development of the Polish space sector including over 350 Polish companies. Polish companies and research and development institutes cooperate with ESA and other national agencies, including NASA, DLR, JAXA and CNSA. The significant achievements of Polish scientists include sensors and probes as well as other components of Mars Curiosity and NASA InSight landers.

Institute of Precision Mechanics cooperates with the Bulgarian Academy of Sciences

2019-10-30

Institute of Precision Mechanics (Łukasiewicz network) has concluded an indefinite cooperation agreement with the Bulgarian Academy of Sciences (BAS). This is the result of previous projects carried out by ŁUKASIEWICZ-IMP and BAS, also with the participation of the Institute of Metallurgy and Materials Science of the Polish Academy of Sciences in the field of manufacturing and implementation of

composite coatings based, among others on DLC nanodiamonds. - Łukasiewicz research network is open to all forms of networking and cooperation leading to the development and commercialization of projects. We have extensive competences in the field of automation, chemistry, biomedicine, teleinformatics, material engineering and advanced manufacturing techniques. Our 4.5 thousand best specialists, research workers and a unique research infrastructure make us an attractive partner for both business seeking innovation and scientific institutions wanting to develop their R&D projects - said Michał Janasik, vice president of the Łukasiewicz Research Network.

Polish-German consortium began work on modern composites

2019-11-05

Faculty of Mechanical Engineering at the Białystok University of Technology is launching a new international research and development project „New metal matrix composites reinforced with natural diatoms”. The project will be implemented by a consortium whose partners are Polish Metalworking Cluster and Białystok University of Technology, and German Fraunhofer Institute and Stifterverband Metalle. The Polish part of the project is financed by the National Center for Research and Development (as part of the international competition for research projects of the CORNET 26 initiative) with nearly PLN 1 million 300 thousand allocated for this purpose, of which Białystok University of Technology will receive PLN 745 thousand. The task of scientists from the Białystok University of Technology is to produce, and later examine and describe modern composite materials of metallic matrix with natural reinforcement in the form of diatom shells.

Invention of Wrocław scientists awarded at the invention fair in Valencia

2019-11-06

Professor Piotr Dudziński and Dr Eng. Andrzej Kosira from the Department of Engineering of Working Machines and Industrial Vehicles of the Faculty of Mechanical Engineering of the Wrocław University of Technology won the gold medal and distinction at the international invention fair in Spanish Valencia. They received the award for an innovative system for monitoring the subversive stability of mobile working machines on a tracked chassis. It allows detecting threats of loss of stability of machines equipped with a manipulator - it can warn the vehicle operator, correct drive settings or completely block the possibility of the machine making dangerous movements. It is the only system in the world that is able to detect threats of loss of stability as a result of sliding the slope on which the machine stands. Due to its modular design, it can also be easily integrated with other systems supporting the operator during work. As a result, it significantly improves the level of machine safety and productivity. More: <https://pwr.edu.pl/uczelnia/aktualnosci/wynalazek-z-mechanicznych-ze-zlotem-na-targach-w-walencji-11376.html>

Invention of Wrocław scientists awarded at the invention fair in Valencia

2019-11-07

Professor Piotr Dudziński and Dr Eng. Andrzej Kosira from the Department of Engineering of Working Machines and Industrial Vehicles of the Faculty of Mechanical Engineering of the Wrocław University of Technology won the gold medal and distinction at the international invention fair in Spanish Valencia. They received the award for an innovative system for monitoring the subversive stability of mobile working machines on a tracked chassis. It allows detecting threats of loss of stability of machines equipped with a manipulator. This way it can warn the vehicle operator to correct drive settings or completely block the possibility of the machine making

dangerous movements. It is the only system in the world that is able to detect threats of loss of stability as a result of sliding the slope. Due to its modular design, it can also be easily integrated with other systems supporting the operator during work. As a result, it significantly improves the level of machine safety and productivity. Warsaw University of Technology students to succeed in the famous robot competition

2019-11-08

Robot Melson is a design of the Scientific Society of Robotics KNR operating at the Faculty of Power and Aeronautics of the Warsaw University of Technology (PW). The robot took first place in the Humanoid Robot category, second place in the Humanoid Sumo category and also was awarded in the Freestyle Showcase category at the International Robotic Competition RoboChallenge 2019, which took place in Romania. RoboChallenge is the largest robot competition organized in Europe and one of the largest in the world. This year's competition was attended by 158 teams from 17 countries, including 615 participants and 533 robots participating in 14 competition events. The competition was carried out as part of the project - «The best of the best! 4.0.», implemented as part of the Operational Program Knowledge Education Development 2014-2020 and co-financed by the European Social Fund.

Silesian University of Technology launches third Palo Alto Networks Academy program

2019-11-12

The Silesian University of Technology together with ING Tech Poland, Palo Alto and Comp SA is preparing another set of lectures and workshops for people studying IT - the Palo Alto Networks Academy program. The program aims to deepen students' knowledge of topics related to computer networks

and IT security. The classes will be held at the Silesian University of Technology in Gliwice or Katowice by specialists from ING Tech Poland and Palo Alto using modern equipment supplied to the university by Comp SA. All participants of the training will receive the Palo Alto Networks certificate.

Participants can apply for the third program until November 22 via the registration form: https://politechnikacati.rstat.pl/survey/survey/index/form_id/50

Student of the West Pomeranian University of Technology in Szczecin receives Intel Technology scholarship

2019-11-12

Hanna Gałuszka, a student of automation and robotics of the West Pomeranian University of Technology in Szczecin, was one of the 25 best students of computer science and related fields - recipients of scholarships in the Intel Technology program and the Perspektywy Educational Foundation „New Technologies for Girls 2018”. «New Technologies for girls» is a pioneering scholarship program for young women linking their future with the IT industry. Its purpose is to provide talented high school graduates and students with support in science and in the field of planning and development of professional careers in the technology industry. Over the next year, scholarship holders will receive financial and substantive support. They will be under the care of an experienced Intel mentor. They will receive a scholarship of 12,000. PLN gross, which will cover part of the expenses incurred in connection with studies. More: <https://www.zut.edu.pl/zut-strona-glowna/informacje-biezace/article/wybrano-na-jzdolniejsze-studentki-w-kraju-wsrod-nich-studentka-z-zut-w-szczecinie.html>

Specialists to work on innovative motor insurance risk assessment system

2019-11-14

Świętokrzyski University of Technology, Łukasiewicz Research Network - Automotive Industry Institute and Globtrak will join forces for the providing safety of drivers on the road. The consortium will develop an innovative motor insurance risk assessment system. The Kielce University of Technology will study drivers' habits and driving techniques. For different categories and in different weather conditions. Special devices will be installed in the cars that will send data to the central computer. On their basis, university employees will develop an assessment for a driver. Research is interesting for transport and insurance companies - says Prof. Tomasz Lech Stańczyk, dean of the Faculty of Mechatronics and Machine Building and project manager. The work on creating the system has already begun. The value of the entire project is over 4.3 million PLN. Co-financing in the amount of PLN 3.8 million is granted by the National Center for Research and Development.

Researchers of the Wrocław University of Science and Technology to receive grants from the Miniatura program

2019-11-18

Four scientists from the Wrocław University of Science and Technology will implement their projects thanks to grants from the National Science Center. Researchers have gained almost 125,000 in total for their activities from the Miniatura program. Dr Eng. Grzegorz Dudzik from the electronics department will implement the project «Investigating the photothermal effect to control the frequency of solid-state microlasers with second harmonic generation», and Dr Eng. Robert Giel from the mechanical faculty will implement the project «Multi-criteria route planning method for waste collection enterprises». Also, thanks to the funding, two scientists from the Wrocław university will carry out research trips: Dr Eng. Krzysztof Konieczny from the faculty of computer science and management for «Pho-

tochemistry in extreme conditions: intramolecular photochemical reactions in crystalline materials studied at high pressure», and Dr Eng. Małgorzata Sulkowska from the faculty of basic technical problems for «Storing algorithms - a new approach».

XXI Scientific and Technical Conference „Geosynthetics and technical textiles in construction and environmental protection”

2019-11-19

The Faculty of Materials, Construction and Environmental Engineering of the University of Technology and Humanities in Bielsko Biała is a co-organizer of the 21st Scientific and Technical Conference „Geosynthetics and technical textiles in construction and environmental protection”. The conference and training workshops «Application of geosynthetics and technical textiles in engineering facilities» will be held from November 20-22 in Ustroń. The purpose of both events is to present research results, the latest scientific and technical achievements in geosynthetics, fibers and technical textiles used in environmental engineering and construction. The conference should interest producers, investors, designers, contractors, researchers and students interested in issues related to the use of geosynthetics and technical fibers and textiles in construction and environmental engineering.

Graduate of the Wrocław University of Science and Technology becomes a laureate of the competition of the Association of Polish Engineers and Technicians

2019-11-19

The thesis of Tomasz Targosz, a graduate of the mechanical faculty of the Wrocław University of Science and Technology, won the Wrocław competition of the Association of Polish Engineers and Technicians. The laureate worked in the testing department of Sitech and there he developed from scratch

a measuring stand for the analysis of the functional properties of a manual car backrest tilt regulator. His work enabled to carry out a comprehensive analysis of the functional properties of the regulator (dependencies between physical properties such as torque, angular speed, angle of rotation in the backrest regulator, as well as the angular speed and angle of the backrest itself). The new stand is also more automated. The worker fixes the backrest of the chair and connects the whole system with the motor and sensor to it, and during the measurement does not even need to touch the device. The previous apparatus required manual data processing. More: <https://pwr.edu.pl/uczelnia/aktualnosci/student-w10-zbudowal-stanowisko-pomiarowe-dla-foteli-samochodowych-11394.html>

Polish research centers join the international educational project Future Space

2019-11-22

The international educational project Future Space provides science education through Space sciences and inspiration for professional development in the space sector. The program is implemented by a consortium led by the Space Research Center of the Polish Academy of Sciences. It also includes the Polish Space Agency, the Center for IT Education and Computer Applications, the Dutch NEMO Science Museum and the Greek Science Center and NOESIS Technology Museum. Consortium representatives hope that the implementation of the project will result in long-term benefits: it will improve the quality of science and science teaching and will contribute to arousing interest in STEM (Science, Technology, Engineering and Math) of young people, who will increase the number of candidates for studies related to the Space sciences and inspire to implement space projects.

Computer from Cyfronet among the 500 fastest computers in the world

2019-11-26

In Denver, USA, the latest TOP500 list of the fastest supercomputers in the world was announced during the Supercomputing'19 conference. The ranking included Prometheus from the Academic Computer Center CYFRONET of the AGH University of Science and Technology in Kraków, which again took 241 place and remains the only supercomputer from Poland in this ranking. Prometheus developed at ACK Cyfronet AGH has remained the fastest supercomputer in Poland since its launch in 2015. This title was granted to it for theoretical computing power of 2.4 PFlops (PetaFlops). To illustrate the speed of work of Prometheus, it would need to use the power of over 50 thousand top-class PCs in the most powerful configuration, additionally connected by a super-fast network and managed by special software to meet Prometheus capabilities - said Prof. Kazimierz Wiatr, director of ACK Cyfronet AGH.

Student of the West Pomeranian University of Technology awarded in the competition for young engineers

2019-11-26

Maciej Hamulak, a student of mechanics and machine construction of the West Pomeranian University of Technology took the third place in the 18th SOLIDWORKS Student Design Competition - the oldest and most prestigious competition for young engineers. Various works are submitted for the competition, including everyday products, furniture, tools to complex machines and vehicles. The laureate designed a vertical CNC milling machine (digitally controlled) that enables machining of flat and shaped surfaces such as grooves or threads in details of any material. The competition organized by DPS Software is attended by students who use SOLIDWORKS software for designing to generate the spatial geometry of the designed detail. The organizers do not impose project topics - they all

depend on the imagination and creativity of the participants.

Success of the Wrocław University of Science and Technology robot at competitions in China

2019-11-26

Robotics from the KoNaR Scientific Society operating at the Wrocław University of Science and Technology took the second place at the international competition „Minesweepers: towards a landmine-free world” in Macau, China. 80 teams from around the world competed in the tournament. Their main task was to search for mock-up mines. Wrocław students presented Ariadna robot in China. Its body was made of aluminum profiles and dibond panels, which is a material that is twice as light as aluminum, and at the same time durable. Smaller fixings were made of acrylic and PLA glass in the 3D printing process. The main task of „Ariadna” was to independently search the designated area and properly signalize mock-up underground and ground mines. The competition regulations also imposed the need for autonomous map generation with a classification of mines. In addition, the robot had to safely remove surface mines from the arena, for which a manipulator with an electromagnetic gripper was used. More: <https://pwr.edu.pl/uczelnia/aktualnosci/sukces-robota-pwr-na-zawodach-w-chinach-11406.html>

Poznan University of Technology projects awarded in the competition „The best of the best! 4.0. „

2019-11-27

Four projects of students of the Poznan University of Technology received funding from the competition „The best of the best! 4.0.” as part of the Operational Program Knowledge Education Development co-financed by the European Social Fund. The funding will enable the team of University of Technology to participate in the Railway Challenge with PUTrain - the first Polish student locomotive, participation in

Formula SAE-A 2019 in Australia, as well as participation in the IREC Spaceport America Cup 2020 with a hybrid fuel-powered rocket and SAE academic competition Aero Design USA East & West 2020 and AUVSI SUAS 2020. «Best of the best! 4.0.» is a project whose goal is to support extremely gifted students in the development of their scientific activity, innovation and creativity, by supporting their participation in international competitions, competitions, conferences.

Students of the Wrocław University of Science and Technology win the architectural competition in Kaunas

2019-11-27

The project of the Multicultural Student Center by students of the Wrocław University of Science and Technology was awarded as the best in the international competition „Studios KAFé 2019” organized by the Kaunas branch of the Lithuanian Architects’ Union. The competition accompanied the Kaunas Architecture Festival, has been organized for every three years. The theme of this competition was «Architecture of characteristic points (landmarks) - creating or destroying the identity of the city». The participants could choose one of five design themes. Representatives of the Faculty of Architecture of the Wrocław University of Science and Technology: Paulina Górecka, Łukasz Gnatek and Weronika Kessler decided to deal with the concept of the Multicultural Student Center, which could be built at Vyduno Avenue, next to the Ažuolynas Park? which is the largest municipal oak forest in Europe. More: <https://pwr.edu.pl/uczelnia/aktualnosci/studenci-pwr-wygrali-konkurs-architektoniczny-w-kownie-11399.html>

Scholars of Lublin University of Technology developing a solution decreasing heating costs

2019-11-28

How to provide buildings of a large number of rooms with the right temperature and at the same time reduce energy bills? The team under the direction of Dr Eng. Tomasz Cholewa from the Faculty of Environmental Engineering of the Lublin University of Technology (PL) is working on an innovative heat supply control system for large buildings. -For now, we are conducting tests on a laboratory scale. We focus on optimizing the types of external IT system architecture and forecast module installed in the facilities. The next stage is verification of our solution in existing residential and public buildings located in the Lubelskie Voivodeship - says Dr Eng. Tomasz Cholewa. The innovation of the solution is based on the fact that their controller will react in advance to the expected weather conditions and individual behavior of users, which will allow optimization of heat supply to the facility.

University of Poznań joins a consortium forming the Academy of Innovative Applications of Digital Technologies

2019-11-28

The Ministry of Digitalization together with universities in the country are creating a model of systemic education of the highest class specialists in artificial intelligence, machine learning and cyber security. Adam Mickiewicz University in Poznań will join the consortium established to create the Academy of Innovative Applications of Digital Technologies (AI Tech). - The idea of the Ministry of Digitization of the creation of AI Tech is very good news for candidates for full studies at the Faculty of Mathematics and Computer Science of our University - says Vice-Rector - Prof. Marek Nawrocki. Students can participate in internships at leading universities in the country and abroad, internships at leading

IT companies, lectures by experts and invited scientists. Universities are to educate so that graduates are not only excellent IT specialists, but also people with broader managerial skills, able to take on business and scientific challenges, including implementation doctorates. More: <https://amu.edu.pl/dla-mediow/komunikaty-prasowe/bedziemy-ksztalcic-najlepych-specjalistow-cyfrowej-gospodarki>

Professor Michał Pióro from the Warsaw University of Technology awarded the Best Paper Award

2019-11-29

Professor Michał Piórka from the Faculty of Electronics and Information Technology of the Warsaw University of Technology (PW) and Yoann Fouquet, Dritan Nace and Michael Poss received the Best Paper Award for the years 2016-2018, granted by the international INFORMS Association. The scientists from the Warsaw University of Technology received the award for their article «Optimizing Flow Thinning Protection in Multicommodity Networks with Variable Link Capacity», published in the journal Operations Research in 2016. The awarded work concerns the use of robust optimization techniques for the design of wireless telecommunications networks in which the available bandwidths are subject to constant fluctuations caused by adverse weather conditions. Headquartered in the USA, INFORMS (The Institute for Operations Research and the Management Sciences) is a leading global organization gathering over 12,500 specialists in the field of operational research and management sciences.

Student of the University of Life Sciences in Poznań wins the competition in Germany

2019-11-29

Sebastian Stempniak, agricultural engineering student at the Faculty of Agriculture and Bioengineering of the University of Life Sciences in Poznań took first place in the competition „Helmut Claas Scholarship 2019” in Harsewinkel (Germany). The Helmut Claas Foundation has awarded agricultural science

students from various European countries for the twentieth time awards for outstanding engineering work, which are projects of modern agricultural machinery design solutions or bringing innovative solutions to applied agricultural production technologies. The award-winning work of a Poznań student is «Design of a device for applying protective liquid during potato tuber harvesting». The laureate received 2,000 euro for his invention.

Young scientists of the West Pomeranian University of Technology appreciated by the minister

2019-11-29

Dr Sandra Ilona Paszkiewicz and Dr Piotr Franciszczak from the Faculty of Mechanical Engineering and Mechatronics of the West Pomeranian University of Technology were among 211 outstanding young scientists who received scholarships from the Minister of Science and Higher Education. Szczecin scholarship holders conduct scientific research in the field of material engineering. Dr Paszkiewicz investigates the synthesis of new polymer materials based partly or entirely on renewable raw materials (including compounds of plant origin, such as starch or lignocellulose). Dr Franciszczak deals with short fiber reinforced composites for injection processing. The manufacturing processes developed by him are to ensure higher mechanical parameters and reduce material costs. Winners of ministerial scholarships will receive PLN 5,390 per month for up to 3 years. The Ministry of Science allocated a total of over PLN 40 million to finance the research of young scientists.

11th International Conference X-Ray Investigations of Polymer Structure - XIPS 2019

2019-12-02

The Institute of Textile and Polymer Materials Engineering of the University of Technology and Humanities in Bielsko-Biala, in cooperation with the chemistry department of the University of Leuven and the Committee on Materials Science of the Polish Academy of Sciences, are inviting participants from 3rd to 6th December to the 11th International Conference X-Ray Investigations of Polymer Structure - XIPS 2019. The conference is a forum known in the European and national scientific community for presenting the latest achievements in the field of structural polymer research and the promotion of research methods based on x-ray scattering. It will be attended by scientists from Belgium, Denmark, Japan, France, Germany and Poland - from the AGH University of Science and Technology in Krakow, the Lodz University of Technology and the Center of Molecular and Macromolecular Research of the Polish Academy of Sciences in Lodz, Wroclaw University of Science and Technology, Maria Curie-Skłodowska University in Lublin, Adam Mickiewicz University in Poznań and the SOLARIS National Synchrotron Radiation Center in Krakow.

Krakow University of Technology begins cooperation with Siemens Mobility

2019-12-04

Krakow University of Technology (PK) and Siemens Mobility have concluded a cooperation agreement in the field of science and education. On its basis, Siemens Mobility will support the faculty of transport engineering, launched this academic year, conducted at the Faculty of Mechanical Engineering. Siemens Mobility is a global leader producing rail, road and air vehicles, as well as creating specialized solutions in the field of transport and intelligent systems in the field of mobility and logistics. In the field of transport engineering, PK and Siemens Mobility will cooperate on the railway industry, in-

cluding innovative technologies for the production and operation of transport means, intelligent transport systems and solutions in the field of mobility, as well as integrated solutions for transport and logistics.

Scientists of the West Pomeranian University of Technology receive research grants

2019-12-04

Professor Mirosława El Fray, Prof. Sylwia Mozia and Prof. Urszula Narkiewicz from the Faculty of Chemical Technology and Engineering of the West Pomeranian University of Technology obtained almost PLN 4.5 million from the National Science Center for the implementation of its research projects. Professor Eng. Mirosława El Fray received over PLN 1.5 million for conducting research on hybrid and elastomeric polymer networks: synthesis, structure and properties. Professor Eng. Urszula Narkiewicz thanks to a grant of almost 860 thousand PLN will examine the properties of composites based on metal compounds deposited on microporous carbon materials obtained by carbonizing phenolic resins. Professor Eng. Sylwia Mozia has received nearly PLN 2 million for a research project on photocatalytic membrane reactors with immersion membranes for wastewater treatment. More: <https://www.zut.edu.pl/zut-strona-glowna/informacje-biezace/articyle/granty-na-projekty-badczych-dla-naukowcow-z-zut-u-od-narodowego-centrum-nauki.html>

Student of the University of Life Sciences in Wrocław becomes a laureate of an international competition

2019-12-04

Kinga Sadowska, a student of landscape architecture at the University of Environmental and Life Sciences in Wrocław, has won the Vectorworks design scholarship and the Richard Diehl award for the project to revitalize the area in front of the Wrocław Nadodrze train station. The national winners were selected in four competition categories - architecture,

landscape architecture, stage lighting and stage design as well as interior design. Sadowska's project was the best in Poland. At the international level a student from Full Sail University in Florida was a winner. Kinga Sadowska carried out an inventory of land, landscape, photographic and historical analysis, analysis of the condition of buildings, pavement and communication, as well as dendrological inventory. She set the main compositional axes referring to the old layout, but above all she focused on emphasizing the shape of the building. More: <http://www.glos.upwr.edu.pl/aktualnosci/50447/studentka-upwr-laureatka-miedzajonowego-konkursu.html>

Professor Ryszard Horodecki receives the Prize of the Physics Committee of the Polish Academy of Sciences

2019-12-05

Professor Ryszard Horodecki, a correspondent member of the Polish Academy of Sciences (PAN) from the International Center for Theory of Quantum Technologies of the University of Gdańsk becomes a laureate of the Prize of the Physics Committee of the Polish Academy of Sciences. The prize was awarded for outstanding contribution to the theory of quantum computing and the development of this field. A team of scientists led by Prof. Horodecki developed an effective, economic method of detecting a new resource called entanglement, and discovered the so-called States with associated entanglement - black holes in quantum information, and also made a significant contribution to the field of quantum channel theory and quantum information processing. Professor Horodecki is a co-creator of the avant-garde field of science, which is quantum computing. Together with his sons Paweł, Michał and Karol and in cooperation with Prof. Robert Alicki and Prof. Marek Żukowski created a quantum computer science center in Gdańsk, which became a famous global research center in this field.

Graduate of the Krakow University of Technology wins the National Competition for Young Professionals

2019-12-06

Przemysław Nowak, a graduate of the Faculty of Civil Engineering at the Krakow University of Technology (PK), won the 4th National Competition for Young Professionals, organized by the Association of Advisory Engineers and Experts (SIDIR). Professionally active people under the age of 40 could take part in the competition. The works submitted by them were evaluated by the Competition Jury, which included engineers, consultants and scientists. The winners of the competition received not only financial prizes, but also the opportunity to publish their articles in the „Consultant” journal. The winner of the National Competition for Young Professionals, Przemysław Nowak is a graduate of two faculties at the Faculty of Civil Engineering PK - transport (specialty: intelligent transport and logistics systems) and construction (specialty: roads, streets, highways). He is the author of several articles in the journal „Drogownictwo”. He currently works for STRABAG.

Construction of the West Pomeranian University of Technology received a European certificate

2019-12-06

The major of construction at the Faculty of Construction and Architecture of the West Pomeranian University of Technology received the European quality certificate European Accredited Engineer (EUR-ACE) by the Accreditation Committee of Technical Universities (KAUT). EUR-ACE is a type of accreditation created by European engineering organizations. This system was developed by the European Network for Engineering Accreditation (ENAE) network, which brings together national organizations dealing in the quality of engineering education at universities in Ireland, Finland, France, Spain, Kazakhstan, Germany, Poland, Portugal, Russia, Romania, Slovakia, Switzerland, Turkey, Great Britain and Italy. In Poland, KAUT is such an organization. ENAE awards

the Certificate to its technical accredited programs. The document is recognizable in all European countries and confirms the compliance of the study program with the norms and principles adopted in Europe.

Students of the University of Wrocław come third in the European Championships in team programming

2019-12-06

Young IT specialists of the University of Wrocław took the third place in the Central European Academic Championships in Team Programming. The championships of 63 teams took place in Prague. The first two places in the competition were taken by teams from the University of Warsaw, and the fourth by representatives of the Jagiellonian University. An interesting fact is that all the nine top teams solved the same number of tasks, and the places were determined by the time of reporting the solutions. Two more teams from the Wrocław university belonged to the top leaders. The team consisting of Anadi Agrawal, Michał Górniak, Jarosław Kwiecień were promoted to the finals of the World Team Programming Championships, which will take place in June 2020 in Moscow.

Poznań University of Technology to launch innovative locomotive

2019-12-06

Poznan University of Technology students from the Scientific Club of Public Transport Engineers operating at the Faculty of Transport Engineering constructed a locomotive. A half-ton machine of a scale of 1: 5.5 was presented at the Lecture Center of the University of Technology. The young constructors project was realized in the international Railway Challenge 2019 competition organized by the Institution of Mechanical Engineers in Stapleford in Great Britain. The Poznań locomotive received many distinctions in various categories. The PUTrain team won a special award for the materials used and the innovations introduced in the project. As a

debut team in 2019, they won the 7th place in the overall classification of 14 teams. In addition, the team won: 2nd place in the Innovation competition, 2nd place in the Technical Poster competition, 3rd place in the Comfort of Travel competition, 4th place in the Business Presentation competition and 5th place in the Ease of Maintenance competition.

Graduate of the Kazimierz Wielki University becomes a laureate of the competition of the Polish Association of Plastic Processors

2019-12-11

Daniel Mantaj, a graduate of the Kazimierz Wielki University in Bydgoszcz became the winner of the fourth competition of the Polish Association of Plastic Converters for the best diploma thesis in the field of plastics. The aim of the competition was to promote innovative technologies and organization of the plastics processing process and to disseminate knowledge about them. Nine works have been submitted to this year's competition of the Polish Association of Plastic Converters. The competition council composed of specialists in the field of plastics qualified three works to the final. The winning master thesis supervised by Dr Eng. Joanna Paciorek-Sadowska, Prof. of University of Kazimierz Wielki from the Institute of Materials Engineering, is entitled: «Modification of SPPUR / PIR flammable properties by a waste filler from the energy industry». The winner received a prize of 5,000 PLN.

PGE Capital Group to launch hackathon Energy HackOn in Krakow

2019-12-11

PGE Energia Ciepła and PGE Nowa Energia, companies of the PGE Capital Group are organizing hackathon Energy HackOn „Optimization of heat and electricity production”. The event will take place on December 13-14, 2019 at the Energy Center of the AGH University of Science and Technology in Kraków. The participants' task will be to create a prototype of the application used to optimize coverage of heat demand. The data provided by the Polish Energy Group (PGE) will be used for programming tasks. Participants can apply as teams of 2-3 persons. Awards for the two best projects amount 18 thousand PLN. The winners will also have an opportunity to cooperate with PGE experts and even implement their solution. Hackathon Energy HackOn is supported by the Rector of AGH Prof. Eng. Tadeusz Słomka. The scientific partner is the Department of Energy Systems and Environmental Protection Devices at the Faculty of Mechanical Engineering and Robotics AGH.

President of the Polish Space Agency grants Scientific Award

2019-12-13

The Jury of the Scientific Award of the President of the Polish Space Agency awarded prizes in the competition for the best student thesis in the field of space engineering. Awards in the category of engineering works were received by: 1st degree award- Mateusz Guzik for the work „Aerodynamic braking system in a sounding rocket”, AGH University of Science and Technology in Krakow. II degree award- Michał Grendysz for the work „Preliminary project of control system for sounding rocket based on cold gas engines”, Warsaw University of Technology. III degree- Dawid Adamski for the work „Implementation of a laboratory model of the control system and imaging of the location of a Cube type satellite”, Military University of Technology in Warsaw. In the category of MA's theses: 1st degree- Grzegorz

Gajoch for the work „PW-SAT2 Satellite Communication System”, AGH University of Science and Technology in Krakow. II degree- Joanna Marta Najder for the work „Analysis of quality prediction of orbit satellites tracked by SLR stations”, University of Life Sciences in Wrocław. III degree- Piotr Bryłka for the work „The use of low-budget GNSS receivers for the purposes of determining tropospheric delay parameters”, University of Life Sciences in Wrocław.

Graduate of architecture of the Wrocław University of Science and Technology wins the international Hustle Hub competition

2019-12-18

The diploma thesis of Martyna Słowińska from the Wrocław University of Science and Technology won the Hustle Hub - Youth Housing Design Competition '19: Russia. Her task as a participant was to design a co-living facility for young people with an active lifestyle, unwilling to be attached to one place. Hubs should be a place with affordable flats, providing sufficient living space for young people who do not want to take a mortgage, work on several-year contracts and after completing them move to another city or country or are just developing their careers otherwise and do not want to bind with a specific place. Designed by Martyna Słowińska buildings have six floors, an underground car park and a ground floor with a flexible solutions. The facilities would enable and encourage the integration of residents. They would be small private spaces with various types of common spaces. More: <https://pwr.edu.pl/uczelnia/aktualnosci/studentka-architektury-wygrala-miedzarodowy-konkurs-hustle-hub-11438.html>

Student of the Krakow University of Technology designs an electronic hand prosthesis

2019-12-20

Agnieszka Tkaczyk, a student of biomedical engineering at the Faculty of Mechanical Engineering of the Krakow University of Technology (PK) designed an electronic hand prosthesis controlled by muscle impulses. The invention will help amputees return to normal functioning. The project was implemented as part of the 7th ABB Science Club. The initiative of ABB, a company that is a global technology leader in the field of energy and automation, is addressed to students of technical universities and secondary technical schools. Participants of the Science Club, operating at the ABB Corporate Technology Center in Krakow, can benefit from the help of scientists and specialists, technological facilities as well as financial support. Agnieszka Tkaczyk has worked on her invention «Electronic hand prosthesis controlled by muscle impulses» for 9 months. She emphasizes that designing this type of device gives great satisfaction because it will help amputated people to return to normal life.

Students of the Warsaw University of Technology create Star Wars lightsabre

2019-12-24

Aleksandra Fliszkiewicz, a student at the Warsaw University of Technology (PW), created a lightsaber as an engineering thesis. -I presented such an idea to Dr Petelczyc of the Faculty of Physics of the Warsaw University of Technology just after the premiere of the 8th part of Star Wars. The sabre has a green laser and a so-called „lightsabre lens” that focuses the light into the beam. Thanks to this we have obtained the lightsabre effect. The sword's handle is printed on a 3D printer - explains student PW. Dr Eng. Krzysztof Petelczyc says that the lightsabre known from films has several properties that cannot be achieved by the PW students. First of all, the laser beam cannot be seen from the side, unless we find ourselves in fog or smoke. We also can't make two

swords held by knights bounce off of each other. In addition, the movie swords make a characteristic buzzing sound while the laser swords are quiet - adds the scientist.

AGH University of Science and Technology to launch the fastest academic computing system in Poland

2019-12-24

The fastest academic computing system in Poland dedicated to the needs of artificial intelligence with a capacity of over 4 Pflops (petaflops) was launched at the Cyfronet Academic Computer Center of the AGH University of Science and Technology (AGH) in Krakow. The new infrastructure has been added to Prometheus, the largest Polish supercomputer, which will enrich traditional simulations with methods based on machine learning conducted in the same computing environment and on shared data sets. The new infrastructure will enable research using artificial intelligence methods that can also be used to enrich research work based on HPC (high performance computing) simulations. Cyfronet AGH is currently implementing a number of projects using artificial intelligence methods in various fields.

Polish student awarded for the Copenhagen Library copper project

2019-12-24

Agata Jankowska's master's thesis was recognized as the best in a competition organized jointly by the Faculty of Architecture of the Wrocław University of Science and Technology and the European Copper Institute Copper Alliance. The student has created a library project at the post-industrial port quay in Copenhagen. The building designed by Jankowska has 6 floors and over 3,000. sq m of usable floor space. The ground floor include temporary and multi-functional atrium exhibitions in the form of a winter garden that could become a kind of covered public square in the urban fabric and a small gastronomy. This is the third competition in which the best master's theses with the use of copper or its

alloys are selected and accepted at the Faculty of Architecture of the Wrocław university. Innovativeness of the solution of the topic, the possibility of implementing the project and the attractiveness of graphic design and description were also assessed. More: <https://pwr.edu.pl/uczelnia/aktualnosci/biblioteka-na-nabrzezu-w-kopenhadze-najlepkuje-projektem-wyyszneujacym-miedz-11444.html>

Koszalin University of Technology to launch experimental room for students

2019-12-30

Design and Interior Architecture students of the Koszalin University of Technology can now use the new, experimental Room M8 under the „Island” project implemented at the university for over a year. The idea of the project implemented with the participation of second-year MA students in Interior Design is to create a multifunctional, useful facility, tailored to the needs of students, providing comfort in a «brutal post-industrial environment». M8 is a spacious room, divided into five zones, which are used for individual work with laptops, group work, resting, preparing a meal and storing. The hall has an industrial character, but is at the same time it has an open, cozy, warm, atmospheric and artistically developed interior. The opening of the Hall is beginning the testing phase of the new space. The final results of the «Island» project will be presented during the Gdynia Design Days 2020 festival.

University of Humanities and Natural Sciences in Częstochowa to study ecological technologies for the production of cold

2019-12-31

Dr Jarosław Krzywański, Prof. of University of Humanities and Natural Sciences in Częstochowa is implementing the project „Adsorption production of cold”. The aim of the research is to develop ecological technology in which heat is used as the driving

energy of the refrigeration cycle. Research related to the development of adsorptive cooling technology is carried out at the Department of Advanced Computational Methods at the Częstochowa University. The main advantage of adsorption is the use of heat as the driving energy of the refrigeration cycle. The share of electricity in these technologies is marginal and focused on controlling and supplying circulation pumps. Low-temperature sources, solar energy, heat produced in cogeneration or industrial waste heat can be used to power adsorption chillers. The popularization of adsorption technology has a positive effect on increasing the share of renewable energy sources in the overall consumption of electricity. MODERN ECONOMY IN POLISH SCIENCE

2018-2019

Smart Charge - intelligent electromobility

2018-02-01

Designing an optimal system for charging electric vehicles nationwide will be the main task for the participants of the hackathon „Smart Charge - intelligent electromobility“. During the competition, programmers and IT students will launch their own applications on special supercomputers. The event will be held on 15 - 16 February 2018 in Warsaw.

Designing a network of charging stations for e-vehicles is definitely more difficult than solutions for gas stations, where the refueling time is short, the increase of its capacity is relatively easy to implement, and the demand is easy to predict. Restrictions of the distribution network are an important factor, influencing the design and location of the charging station. Here you will find more information: <http://akademia.icm.edu.pl/szkolenia/hackathon-wielkie-wyzwania-programistyczne-edycja-ii-smart-charge-inteligentna-elektromobilnosc/>

Poland advanced in the ranking of the most innovative countries in the world

2018-02-01

In the latest ranking of the most innovative countries in the world by the Bloomberg Innovation Index, Poland advanced by one position and currently is 21st, while in 2016, it was still in the 22rd position. In terms of innovations, Poland is the fastest growing country in Central and Eastern Europe. It is ahead of Canada, New Zealand, Iceland, Spain, Greece and Russia.

Next year Poland is to occupy an even higher position, because the Act on Innovation has entered into force. According to its provisions, the government targets to spend 1.7% of GDP on research and development (R & D) by 2020. Therefore, Poland may soon become a global symbol of innovation. See the ranking: <https://www.bloomberg.com/news/articles/2018-01-22/south-korea-tops-global-innovation-ranking-again-as-u-s-falls>

Polish Agency for Enterprise Development (PARP) invites for applications from medium-sized cities entrepreneurs

2018-02-02

Entrepreneurs operating in medium-sized cities can apply for support to implement their R & D results.

Polish Agency for Enterprise Development (PARP) invites entrepreneurs to apply for co-financing commercialization of their innovative solutions. Funds from the EU program Intelligent Development are provided as part of the Mid-Town Package. Medium-sized cities are county capitals with 15 - 20 thousand inhabitants or cities over 20 thousand (except capitals of provinces) irrespective of their administrative status. Applications for co-financing should be submitted in an electronic version via the Application Generator available on the PARP website by 28 February 2018. More information about the program here: <https://poir.parp.gov.pl/badania/badania-na-rynek>

Blind Date with Norwegians on Valentine's Day

2018-02-05

On February 14, Polish startappers can make an appointment with Norwegian investors.

The Explorer HQ, a Norwegian company operating in Poland, invites to its centers in Warsaw and Białystok to meet potential investors. According to the founder of Explorer HQ, Harald Lervik, „We have discovered a great potential in Poland, related to the fact that Poles are very well educated and focused on their work, and additionally they have a lot of great ideas. It is also important that Polish startappers are seeking a solution to large-scale problems. They do not focus on just one thing that they want to develop at the moment. Such strategic thinking is vital in running start-ups. „ More about the Explorer HQ company: <https://www.explorer-hq.com/>

Agriculture focuses on innovation

2018-02-05

Constructing gas networks and biogas plants in rural areas, support for renewable energy and agricultural biogas production as a source of renewable energy are among the main projects of the National Center for Agricultural Support in the field of innovation.

- One of innovation strategies is power industry in rural areas. With Polska Spółka Gazownictwa, we want to construct many gas networks of island type. They could be supplied from biogas plants, developed in rural areas. Such a network may supply customers within a certain radius, where it is not profitable to build a classic gas pipeline - says Witold Strobel, General Director of the National Center for Agricultural Support. PLN 45 million for pro-innovative services

2018-02-05

Ministry of Investment and Economic Development calls to participate in a competition the Pro-Innovation Service IOB (Business Environment Institutions) for Small and Medium Enterprises within the Smart Development program. Entrepreneurs may submit applications until February 28, 2018.

The good news for SME companies is that a maximum value of eligible costs for pro-innovative services has been increased up to PLN 0.5 million. The co-financing part may amount to PLN 350,000. In addition, the support may cover the costs of investment related to the implementation of technological innovation, with the maximum value of their eligible costs less than PLN 1 million, and this funding may reach up to PLN 700,000. Reduced number of assessment criteria is another facilitation for entrepreneurs. The total amount of available funds is PLN 45 million. More:

Program „Loan for technological innovation” is launched

2018-02-06

The project is addressed to micro, small and medium enterprises. It is intended to implement new innovative technologies and to increase the competitiveness of Polish companies on the international market. Entrepreneurs can finance in such way the purchase of fixed and intangible assets. The subsidy is non-returnable and can amount even 70% of the eligible costs value. The loan may amount to 75% of the investment. The maximum of co-financing can be PLN 6 million. The call for applications starts on February 15 and will last until May 24, 2018. More information about the program here: <https://www.bgk.pl/przedsiębiorstwa/kredyt-na-innowacje-technologiczne/skorzystaj-z-programu-poddzialanie-322-kredyt-na-innowacje-technologiczne-po-ir/>

Government plans to reduce CIT for innovative entrepreneurs

2018-02-07

- We want the government to release the proposal of «innovation box» by the end of the first quarter. It will be a tax incentive that will allow to lower significantly CIT tax for companies successfully commercializing their research and development - said Minister of Enterprise and Technology Jadwiga Emilewicz. The government proposes to lower CIT to 4 percent, if the entrepreneur patented or worked out a new technology or a service and started to sell it with taxable income. More: <https://businessinsider.com.pl/firmy/przepisy/innovation-box-obnizka-cit...>

Conference of innovative start-ups in Warsaw

2018-02-08

On September 9-11, 2018, the seventh Wolves Summit - an international conference for startups, investors and corporate representatives will take place in Warsaw. The conference will be attended by

2,500 guests from over 60 countries, including 400 promising startups. Over 300 investors and 450 representatives of corporations are expected. - We will focus on hardware, Internet of Things, fintech and blockchain - emphasized Piotr Piasek, co-founder of Wolves Summit. Direct meetings of participants and experts will be viral. Before the event begins, they can arrange 15-minute talks to establish business contacts, get information on innovative projects and technologies worth investing their time and money. (Kp) More: <https://www.wolvessummit.com/p>
<https://www.wolvessummit.com/pl>

Polish startups receive public and private money

2018-02-08

In 2017, money from the programs of the Polish Agency for Enterprise Development were transferred to 103 Polish start-ups and innovative companies. Investments amounted to approx. PLN 80 million. Particular subsidies should have not surpassed PLN 800,000. Such support is provided also from acceleration programs and incubators run by Polish private sector companies. For example mBank allocated 50 million euros to the mAccelerator venture capital fund last year. It financed the software Robotic Process Automation (RPA) development projects for banks and companies from the financial sector. This is the first such project in Poland and in Central and Eastern Europe.

New R & D tax incentive provides entrepreneurs with tax benefits

2018-02-08

Thanks to the Innovation Act, Polish entrepreneurs will receive measurable tax benefits while conducting research. The new R & D tax relief, which has been binding since 2018 is considerably more favorable than former solutions and it allows to double deduction of expenses for research and development from the tax base. Once in the form of ordinary deductible expenses, the second time using the tax relief. - In the case of R & D expenses in the amount of net PLN 100,000 the company can include in the tax deductible costs up to net PLN 200,000 - ex-

Twelve start-ups with PricewaterhouseCoopers support

2018-02-08

The 12 most promising start-ups from Poland, the Czech Republic, Estonia, Spain and the UK perform in the next Startup Collider program, run by PricewaterhouseCoopers (PwC). They were selected in a competition among nearly 300 innovative companies from 30 European countries, the Middle East and even both Americas. The condition for participation in the current edition of Startup Collider was to have a product or service ready to be launched in particularly fast-growing fields of computer science: artificial intelligence, data analytics, fintech, Internet of Things, e-commerce, virtual and augmented reality. Start-ups will receive PwC support in the preparation of the first sale. In April 2018 they will take part in Demo Day before investors and potential clients. (Kp)

Plans of the European Innovation Council

2018-02-09

The European Innovation Council is a new project of the European Commission that will receive a budget of EUR 2.7 billion by 2020. It is a new, pilot program with aim to support the most innovative companies and projects. The current financial perspective focuses on several areas: cyber security, migration, circular economy and digitization. By 2020, the European Innovation Council is going to support one thousand projects. This year, talks begin on the future budget of the European Union. According to unofficial information, programs related to the innovative economy will remain within EU priorities, and funds will be still allocated to support new solutions and technologies.

Innovation is not a fashion, it is a must

2018-02-09

Without introducing innovations and increasing expenditures on research and development (R & D), any rapid and dynamic development is practically impossible. These statements are particularly true in the industrial sector, which is particularly exposed to international competition - says the report on the innovation of Polish industry. The authors indicate that the pace of development of the entire economy depends on the condition of Polish industry. According to the Central Statistical Office data, Polish expenditures on innovative industries are provided for PLN 28.3 billion, i.e. by 9% less than a year earlier. In the EU ranking «European Innovation Scoreboard 2017» Poland took the 25th position (together with Croatia) and remained among so-called moderate innovators. More on the report: <https://www.magazynprzemyslowy.pl/zarzadzanie-i-rynek/Innowacyjnosc-pols...>

Financial innovation support program

2018-02-12

The Polish financial innovation market is valued at around 850 million euros. In terms of value, it is the largest market in Central and Eastern Europe. Polish FinTech will be supported by the Polish Financial Supervision Authority. The call is launched for the Innovation Hub program. Innovation Hub is directed to two groups of entities. The first group includes entities planning to start operations as part of the financial market supervised by the Polish Financial Supervision Authority (including startups) that have an innovative product or financial service based on modern information technologies. The second group consists of entities supervised by the Polish Financial Supervision Authority, planning to implement an innovative product or financial service based on modern information technologies. Using the Innovation Hub, the Polish Financial Supervision Authority intends to conduct a dialogue with the FinTech sector entities by providing them with relevant explanations on the questions regarding legal or financial regulations.

To participate in the Program, please fill out the contact form: https://www.knf.gov.pl/dla_rynku/fin_tech/Innovation_Hub/formularz?artic...

Information meeting about the support of companies in the implementation of innovative projects in Stalowa Wola

2018-02-13

The Ministry of Investment and Development invites entrepreneurs to participate in the information meeting dedicated to the support of companies in the implementation of innovative projects. The meeting, which will take place on February 20, 2018 at 10:00 am in the auditorium of the Rzeszów University of Technology in Stalowa Wola, will be attended by Adam Hamryszczak, deputy Minister of Investment and Development. He offers the Ministry's support for start-ups and companies using the results of R & D research, innovation with the use of industrial design, introduction of products and services to foreign markets. The support includes also promotion programs for small and medium-sized enterprises on foreign markets. The meeting is organized in cooperation with: Polish Agency for Enterprise Development, Bank Gospodarstwa Krajowego, National Center for Research and Development, Marshal Office of the Podkarpackie Region, Polish Investment and Trade Agency, Export Credit Insurance Corporation. The registration form and more information about the meeting can be found here: <https://www.funduszeuropejskie.gov.pl/stroiny/o-funduszach/szkolenia/fir...>

MIT Enterprise Forum Poland helps startups

2018-02-14

Fund of Technological Entrepreneurship (Fundacja Przedsiębiorczości Technologicznej) informs that recruitment for the 4th edition of the MIT Enterprise Forum Poland acceleration program is underway. The program is based on the know-how of one of the world's best technology universities - the Massachusetts Institute of Technology. The goal of

the project is to help startups that develop unique technologies to accelerate the commercialization of their solutions. MIT Enterprise Forum Poland envisages acceleration in the general path and in four specialized industry paths. The Lets Fintech path with PKO Bank Polski! is organized in cooperation with the main partner of the program - PKO Bank Polski. The PGNiG Group is a partner of the Energia acceleration path. The «Zdrowie» path is co-created by the Adamed Group, while the Agri-tech path, which appears for the first time in the program, is supported by AgriTech Hub. Also a new path in the accelerator is the Industry 4.0 path dedicated to technology startup companies interested in cooperation with partners from the Lower Silesia Region. Applications to the project can be submitted until February 28 on the website <https://www.mitefpoland.org/>

Poland uses EU funds efficiently

2018-02-16

The Ministry of Investment and Development together with the National Center for Research and Development summarized the year 2017. It is clear that Poles want to invest. Potential investors applied for EU co-funding in 75,000 investments worth PLN 474 billion - said Jerzy Kwieciński - Minister of Investment and Development. The share of Poland in the EU funds for the years 2014-2020 is 22.6 percent. The European Commission has already paid out EUR 7.7 billion, or 27 percent of the whole amount so far transferred to all Member States. - From this result it may be concluded - said Minister Jerzy Kwieciński - that Poland is efficiently implementing projects provided with the European Union funds. Only in 2017 for the innovation support, the National Center for Research and Development allocated almost PLN 7.5 billion to implement research and development works within over 1000 projects.

PLN 200 million for regional science and research agenda

2018-02-20

National Center for Research and Development launches a competition „Regional science and research agendas“. PLN 200 million is allocated for implementing the innovative projects and for conducting research and development works. The call for applications will start on March 15, 2018 and will last until May 15, 2018. The competition is addressed to organizations consisting of at least one scientific organization and at least one enterprise, under condition that a scientific participant is the leader and the formal applicant of the project. The project must include experimental development work. Co-financed projects must be implemented out of the Mazowieckie Region. The thematic scope of regional research and development agendas were based on research issues that fit into regional specializations, submitted by regional Marshal Offices in agreement with representatives of regional scientific centers. They include: a healthy society; bio-economy agro-food industry; sustainable energy, transport and construction; innovative technologies for the environment; innovative technologies and industrial processes. More about the competition: <http://www.ncbr.gov.pl/fundusze-europejskie/poir/konkursy/konkurs-141220...>

Industry 4.0 Conference - Innovative applications for enterprises

2018-02-22

The latest Polish achievements in Industry 4.0 and IT solutions for automation and robotization of enterprises were presented at the Industry 4.0 conference „Innovative applications for enterprises“. The conference was organized by the Rzeszów University of Technology and the National Industry Cluster 4.0, which was established as a result of an initiative in cooperation with the Rzeszów University. What is Industry 4.0? It is a collective term meaning the integration of intelligent machines, systems and introducing changes in production processes that aims to increase production efficiency. This term applies not only to technology, but also to new ways of

working and the new role of people in industry. During the conference, the latest Polish achievements in Industry 4.0 were presented. One of them was the premiere presentation of the first Polish industrial printer 3D SYS PROBE based on selective sintering of polymer powders. This Polish device successfully competes with 3D printers from world-renowned companies. The machine has Ethernet, USB, also uses Wi-Fi and remote connectivity through mobile devices.

In March, Gliwice hosts Deputy PM Gowin at conference on dual education

2018-02-22

On March 5, 2018 the Education and Congress Center of the Silesian University of Technology in Gliwice organizes the second conference on the Dual Education - EDUAL. Deputy Prime Minister and Minister of Science and Higher Education Jarosław Gowin took his patronage over the event. The conference «Dual studies in response to the needs of Industry 4.0» will also be attended by representatives of science and economy, who will discuss the best tailored forms of student education for the needs of science and industry. During the conference, examples of dual education and various activities related to this type of education at Polish universities will be presented. One of the sessions is devoted to best practices, implemented by foreign partners of the Silesian University of Technology. Simultaneously, the Conference of Rectors of Polish Technical Universities will be held in Gliwice with the participation of Deputy Prime Minister Jarosław Gowin. More about the conference: <http://www.edual.polsl.pl/>

Leading Polish manufacturer of 3D printers enters the Italian market

2018-02-26

The innovative company Omni3D from Poznań, a leading Polish manufacturer of 3D printers, is entering the Italian market. It signed a contract with WL3D, a division of the WorkLine Store brand, offering 3D printers, scanners and services in Italy for

20 years. The flagship product - Factory 2.0 is a 3D printer intended for the industry. In May this device will appear in the WL3D offer during the Technology Hub Fair in Milan. This year, the Polish producer plans to develop a sales network in the Nordic countries and the United States. In Poland, it will show its products on the tenth 3D Printing Days in Kielce and INNOFORM fair in Bydgoszcz. Italians are the fifteenth foreign trade partner of Omni3D. Poznań company sells in the Czech Republic, Russia, France, Germany, Switzerland, Great Britain, Australia and New Zealand. (kp) More: www.omni3d.com/pl

Startup Europe Week launched in five Polish cities

2018-02-26

Startup Europe Week 2018 is an initiative of the European Commission and Startup Europe organization. On March 5-9, thousands of dedicated meetings will take place in over 300 cities from almost 50 European countries. In Poland, Katowice, Kraków, Bielsko-Biała, Białystok and Płock participate in the event. The aim of the project is to create a platform for dialogue between startups, young entrepreneurs, and investors, representatives of local governments, business environment institutions and all who are interested in supporting and promoting entrepreneurship in the region. In each city, the event has a different program. In Płock, one of debates topic is «Social innovations + StartUps = innovation close to people». In Białystok, Karolina Modrzejewska from the Department of Communication and Marketing of the Polish Agency for Enterprise Development plans a lecture on funds for innovations from the Polish Agency for Enterprise Development and in Bielsko-Biała Kamil Bargiel from SentiOne will present his own experience in building a startup. More: <http://startupeuropeweek.eu/>

20th competition „Polish product of the future“

2018-03-05

- The development of innovation is one of the pillars of the Strategy for Responsible Development. The „Polish product of the future“ competition shows that Polish innovations are going in the right direction. All awarded projects are to strengthen the Polish economy and raise the standard of living in Poland - emphasized Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. The following winners were awarded: National Center for Nuclear Research for Intraline-IOERT, a medical electron accelerator won the competition in the category Product of the Future for the scientific unit. Instytut Mechanizacji Budownictwa i Górnictwa Skalnego together with NTI Modern Technologies for the technology of managing fly ashes, including industrial and municipal waste, in the production of light aggregates for construction was awarded in the Product category of the Future for the scientific unit and entrepreneur with a special award for the product in the area of eco-innovation: Triggo Spółka Akcyjna for Triggo won the special award of the Patent Office for a double, four-wheeled electric vehicle in the Product of the Future category for the entrepreneur. Medical Simulation Technologies won Special prize for the product submitted by a young and innovative entrepreneur for the simulator used to train specialist doctors in the field of transesophageal echocardiography. Special Award Minister of Entrepreneurship and Technology was handed to FLASH Robotics for EMYS robot teaching children foreign languages.

PLN 500 million for innovations in agriculture

2018-03-06

Modern technologies and innovations are not only intended to modernize European industry, but also agriculture. The program „Biostrateg“, run by the National Center for Research and Development, allocated PLN 500 million for this aim. Deputy Minister of Agriculture Ryszard Zarudski emphasized that it is the first and only such a financial instrument in research and development for agriculture and for-

estry. Currently, 45 projects are implemented under the program. One of them is the project under the name «Strategy for preventing weed resistance to herbicides as an important factor in ensuring sustainable development of the agro-ecosystem» run by the Institute of Plant Protection of National Research Institute in Poznań. With more than PLN 8 million, scientists are examining ways of controlling weeds that occur in the cultivation of crops.

Symposium on the directions of Polish development at the College of Social and Media Culture in Toruń

2018-03-06

Startups, 5G technology, using innovation in the defense sector - such development directions for Poland were indicated by the Minister of Investment and Development Jerzy Kwieciński during the Symposium „Digital Independence. Polish technological thought, from idea to success. „ It took place at the Higher School of Social and Media Culture in Toruń. The biggest problem for startups is currently breaking into the market, rather than simply raising capital for development - said Prime Minister Mateusz Morawiecki during the symposium. In turn, the Minister of Investment and Development, Jerzy Kwieciński, pointed out that half of the startups «flee from Europe» and is bought by other countries, including the United States or Israel. The latter country takes over more startups from the European market than several times bigger France. This shows that a small country, with strong support from the state, is able to build a strong innovation policy. We want to build such a policy - emphasized Minister Kwieciński. More about the symposium: <https://wksim.edu.pl/m-blaszczak-absolwenci-wksim-najlepsi/>

Polish-Chinese cooperation in the development of electromobility

2018-03-07

UNIMOT joint-stock company, the largest Polish independent importer of liquid fuels, plans to actively participate in the development of electromobility in

Poland. UNIMOT considers extending the product range with charging stations for electric vehicles. The company's board of directors signed a preliminary agreement with Wanbang Charge Equipment Co. Ltd. (Star Charge) - the largest independent operator of electric vehicle charging stations in China. As part of the agreement, UNIMOT will also analyze the possibility of producing electric chargers based on Star Charge solutions, as well as launching a joint research and development center to develop those technologies.

Polish delegation visits Japan to cooperate in the energy storage technologies

2018-03-07

Michał Kurtyka, Undersecretary of State in the Ministry of Energy visited Japan. The delegation with Polish representatives of state companies and key institutions supporting the implementation of innovative solutions in Poland visited a factory producing cells for lithium-ion batteries. The delegation members were acquainted with the technologies used in this industry. During the talks, Deputy Minister Kurtyka assured that Poland is ready to cooperate for the development of energy storage technologies. Deputy Minister also took part in the 9th International Rechargeable Battery Expo - Battery Japan. The fair is recognized as the global meeting for representatives of the battery industry. In February 2018, the Polish scientific consortium Pol-Stor-En was founded, established by seven scientific units, whose goal is cooperation in the research on energy storage.

Poland in the European lead in terms of patent applications

2018-03-09

According to the annual report of the European Patent Office in 2017, the number of patent applications filed by Polish inventors, companies and scientific institutes increased by 14 percent. Poles submitted 469 patent applications. In terms of the growth rate of applications, Poland ranks among the European leaders. In the Polish ranking of patent leaders run by the European Patent Office, the Synthos company with 12 patent applications came first. Unlike in other European countries, Polish patents in 2017 were provided by universities and research institutes. As many as four of the seven largest applicants are universities or research institutes. The second most active Polish applicant (7 applications) was the Jagiellonian University, then the University of Gdańsk, the Flaris aircraft manufacturer and the Institute of Biochemistry and Biophysics of the Polish Academy of Sciences (6 applications) and the Warsaw Medical University (5 notifications).

European Innovation Council to be a new opportunity for Polish industry in Horizon 2020

2018-03-12

On 12 April 2018, the Centrum Kreatywności Targowa in Warsaw will host a conference and workshops: „European Council for Innovation - a new opportunity for Polish industry in Horizon 2020”. Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education accepted the honorary patronage on the event. The partners include National Center for Research and Development, Enterprise Europe Network, Employers' Union Polish Clusters, Lewiatan Confederation and National Contact Point for Financial Instruments of European Union Programs. Participants will learn the rules of applying for EU grants, they also receive practical tips related to applying for co-financing from framework programs. The European Innovation Council particularly invites companies interested in applying to the Horizon 2020 Framework Program,

Polish research and development units, beneficiaries of grants, as well as representatives of public and local administration. Registration for the event: <http://www.kpk.gov.pl/?event=europejska-rada-ds-innowacji-eic-nowa-szansa-dla-polskiego-przemyslu-w-horyzoncie-2020>

Polish Agency for Enterprise Development aids foreign start-ups to start their operations in Poland

2018-03-15

Until March 29, 2018, the Polish Agency for Enterprise Development is waiting for applications from entities wishing to become operators within the Polish Prize program. The aim of the program is to present Poland as the country of first choice for foreign start-ups to do business in Central and Eastern Europe. The task of the 3 operators (selected in the competition) will be scouting for and developing foreign talents. The operators will help young companies make the choice to settle and run their business in Poland. Start-ups can also count on a grant of up to PLN 200,000 and the cooperation of Polish investment or industry partners.

Invitation to participate in a project on sharing economic

2018-03-16

The Lublin Foundation for Development invites future and current entrepreneurs to participate in the international SharEEN project implemented by eight partners from the European Union. The goal of the project is to identify and connect sharing economy platforms, exchange experiences and help companies, including social entrepreneurs to take advantage of the opportunities offered by sharing economy. The project includes a series of trainings on sharing economy, coaching and mentoring support, networking for the internationalization of business platforms and promotion of sharing economy initiatives in Europe. More: www.shareen.eu

Poznań Science and Technology Park aids to create innovative startups

2018-03-16

As part of the „Merlin” project, the Poznań Science and Technology Park of the University of Adam Mickiewicz organizes a series of workshops „Lean startup” that help innovators in the ICT industry to create and develop companies to deal with the commercialization of scientific research. The ICT sector is an industry of communication and IT devices as well as accompanying services. The Merlin project, apart from workshops, also includes webinars, meetings with potential clients and investors, networking and the chance to be included in the Startup Europe network. Participation in the Merlin project is free of charge, thanks to financing from the Horizon 2020 Program. More: <https://merlin-ict.eu/>

Report to the Global Impact Challenge if you know how to influence the lives of a billion people

2018-03-19

The application for the first Polish Global Impact Challenge has been started. The contest aims at selecting the most innovative ideas. The idea must be unusual, because presented startup or prototype must positively affect the lives of a billion people over a decade. The prize in the competition is a two-month stay in the Silicon Valley, where the laureate will be able to implement his idea. Applications will be accepted until April 26, 2018. The organizer of the Polish contest is the Digital University Foundation, the sole representative of Singularity University in Poland. Talented scientists, engineers, startup entrepreneurs and entrepreneurs are invited for the competition. The final with a maximum of 10 projects will take place on May 24 and 25 in Warsaw. The jury consists of: Sebastian Kulczyk; Regina Njima (Singularity University); Supreet Singh Manchanda (business angel, Silicon Valley) and Jowita Michalska (Digital University Foundation) <https://su.org/gic/>

New Silk Route discussed at the University of Silesia

2018-03-23

The cooperation with China will be discussed by scientists and students of the University of Silesia. The conference „New Silk Road - geopolitics, economy, culture” is scheduled for Tuesday, March 27 at the Center for Scientific Information and the Academic Library. The discussion will take place within four panels: «China's Geopolitics in the 21st Century»; «Pivot to the Pacific - the future relations of the West countries and China»; «The New Silk Road - a chance for the region or the threat of Chinese domination?» And «Europe, Intermarium, USA or China - potential strategic alliances of Poland». The panelists will try to answer the question whether the Chinese plan to rebuild the old trade route means only benefits. They will pay attention to the opportunities and threats related to Chinese investments and the economic and political expansion of the Middle Kingdom. The event is organized by the Regional Center for International Debate in Katowice, the Institute of Political Sciences and Journalism and the Culture and Law Society of the University of Silesia.

Offer of Gdańsk universities for startups

2018-04-04

The Medical University of Gdańsk with the University of Gdańsk and the Medical Innovation Center plan to become the regional coordination center for the Regional Innovation Scheme (RIS) as part of the EIT Health Hub program. The EIT Health Hub program supports innovation in healthy living and active aging. Gdańsk universities offer their support to startups (operating in the field of life science) as part of InnoStars Award acceleration programs (for beginner startups having a ready-made prototype) and European Health Catapult (for startups and small enterprises with a product ready to the successful production). Interested startups are invited to contact the Technology Transfer Center of the Medical University of Gdańsk by email: naukai-biznes@gumed.edu.pl

Startup house II at the State Higher Vocational School in Elbląg

2018-04-05

From March 2018, for 10 months, the „Startup house II - incubation of enterprises in Elbląg” project will be implemented at the State Higher Vocational School in Elbląg. The project aims to help young entrepreneurs start their business. The current offer is addressed to the SME companies (from the sector of small and medium enterprises), being in the initial stage of development, that is, operating on the market for no longer than 3 years. The free incubation program will include: access to 15 equipped office rooms, specialist trainings (brand building, commercialization of products and services), ICT services, specialist services related to promotion, legal services, accounting services, consultancy in the field of raising funds for business development and support from a dedicated company's angel. The «Startup House II - Incubation of enterprises in Elbląg» project received funding from the Regional Operational Program for the Warmińsko-Mazurskie Voivodeship for 2014-2020. Its total value is nearly PLN one million.

Mazovia Innovator Competition for entrepreneurs and young scientists

2018-04-09

Masovian entrepreneurs and young scientists can apply for the title of Mazovia Innovator for innovative solutions in business and science. The competition is addressed to entrepreneurs of small and medium-sized enterprises, who operate in the Mazovia Region for no more than 10 years and can demonstrate innovative solutions introduced in the last 5 years and used on a daily basis in their company. Also the scientists can apply for if they are no more than 39 of age, have completed a PhD during the last 3 years and live in the Mazovia Region. The Innovator of Mazovia contest is under the honorary patronage of the Marshal of the Mazovian Region. More: <https://innowacyjni.mazovia.pl/dzialania/informator-mazowska/x-edycji-konkursu-innowator-mazowska.html>

University of Gdańsk projects included in the GOSPOSTRATEG program

2018-04-09

Two projects of the University of Gdańsk have received funding under the strategic program „Social and economic development of Poland in the conditions of globalizing markets” - GOSPOSTRATEG. The National Center for Research and Development decided to finance the «Export consortium as an element of the policy of economic development and competitiveness» and «Citizens decide» projects. The first objective is to create conditions for the activation of exports for the small and medium-sized enterprises by developing a strategy of export consortia in Poland and system solutions of support policies for such consortia. The second project is to change in the Act on the legislative initiative for citizens. The changes will allow to use the IT in collecting signatures and will simplify procedures.

Almost PLN 100 million for the expansion of the Lodz University of Technology

2018-04-10

Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education and Prof. Sławomir Wiak, Rector of the Lodz University of Technology, signed an agreement under which the Ministry of Science will allocate PLN 97.5 million for the development of the infrastructure at the Łódź University. As part of this targeted subsidy, a modern conference and teaching center, as well as a laboratory and didactic building of the Faculty of Chemistry of the Lodz University of Technology will be financed. Lodz University of Technology is one of the best technical universities in Poland - said Deputy Prime Minister Jarosław Gowin. - The Chemical Faculty is a strong scientific center of the University of Technology, which needs an adequate infrastructure for further development if we want Łódź to be a city, whose development is based, among others, on modern industry. In this way, we implement a strategy of responsible development, which should turn Poland towards the innovative economy, towards the revolution 4.0 - added the Deputy Prime Minister.

University of Silesia joined the International Entrepreneurship Incubator

2018-04-11

The University of Silesia will be a participant of the International Entrepreneurship Incubator - a network connecting universities, local government units, chambers of commerce and employers' associations from five cities around the world. The incubator opens up wide opportunities for academic companies, which will be able to promote their offer abroad and to appear on the international market. The network agreement was signed during International Entrepreneurship Forum organized in Sierre in Switzerland and in Saint-Étienne in France. The Forum members talked academic entrepreneurship and startups and it was an opportunity to discuss and exchange experiences of delegations representing five cities: Monastyr (Tunisia); Tamatave (Madagascar); Saint-Étienne (France); Sierre (Switzerland) and Katowice (Poland).

Startup Mixer in Rzeszów

2018-04-11

The next series of business meetings Startup Mixer will take place on April 18, 2018 in Rzeszów. The event is organized by Academic Business Incubators Rzeszów operating at the University of Information Technology and Management in Rzeszów and the University of Rzeszów in cooperation with the Investor Service Office of the Municipal Office of Rzeszów. Startup Mixer is a regular meeting, where the entrepreneurs running their own business or just thinking about starting a company have the opportunity to increase their knowledge through lectures given by special guests. They also have the chance to make new, interesting acquaintances during networking sessions. As part of the event, a competition for the best business idea will be organized and new Rzeszów companies and startups will present their potentials. Registration for the event: <https://evenea.pl/imprezy/szkolenia/rzeszow/startup-mixer-18-kwietnia-2018-190328/>

Consultative conference on the State's Policy for Raw Materials in Szczecin

2018-04-16

On April 18, at the University of Szczecin, experts and entrepreneurs will discuss Poland's raw materials policy. The meeting will take place in a series of regional consultative conferences of the Government's State Policy Development Project (PSP). The PSP project consists of nine pillars. The Szczecin discussion will raise the subject related to the 4th Pillar of the State Fire Service, which implements elements of the strategy for securing supplies of key raw materials through import and through international cooperation. Panelists will try to answer the questions whether it is necessary to provide deficit resources from external partners and how it affects the country's economic development. Three panels are planned - «State policy on mineral resources», «Experts and entrepreneurs on international aspects of the SFS» and «Management of mineral resources on the example of amber». The subject of the conference will also be the exploitation of foreign deposits and the Geological Geological Reconnaissance Program (PProGeO).

Congress of Change Leaders to be held in Białystok

2018-04-18

The College of Finance and Management in Białystok organizes on April 20-21 the Congress of Change Leaders under the title „Advantage thanks to cooperation - Challenges of Economy 4.0” The aim of the event is to review the latest methods of management and interpersonal communication and to present good examples of cooperation between business, science and public administration in the modern industry. Andrzej Arendarski, president of the Polish Chamber of Commerce and Andrzej Soldaty, leader of the Platforma Przemysłu Przyszłości project will be the speakers during the conference. The scientific patrons of the Congress are: University of Białystok, Białystok University of Technology and Medical University of Białystok. More: <http://kongresliderowzmian.pl/>

Rector of the Cardinal Stefan Wyszyński University commented on the necessity of cooperation between science and business

2018-04-18

Until the nineteenth century education was the essence of education. In the next era, due to the concept of Wilhelm Humboldt, scientific research appeared as the second pillar of the university's activity. In the 21st century, universities have been already based on three elements: education, research and the economy - said Professor Stanisław Dziekoński, rector of the Cardinal Stefan Wyszyński University in Warsaw, in an interview for the journal „Science and Business”. The Rector drew attention to the necessity of cooperation between universities and business, as one of the main impulses of productivity growth in developed economies. He also stressed the importance of innovations based on knowledge, education, research and development. In this context, it is important to formulate the goal and role of the 21st century university in the economy and the knowledge society. Without a strong relationship between science and business, it will not be possible to introduce innovative solutions in Polish enterprises - added Prof. Dziekoński.

Crystal Brussels Sprout Prize

2018-04-18

Since 2001, the Crystal Brussels Prize has been awarded for successes in the European Union Research and Innovation Framework Programs strengthening scientific excellence and increasing economic competitiveness. This distinction is presented to scientists and entrepreneurs for innovation and contribution to the development of Polish science and economy. The Chapter awarding the Prize is chaired by Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education. This year, the winners will be selected in the following categories: science (universities, research institutes, scientific institutes of the Polish Academy of Sciences); business (enterprises); local government; non-profit entities. The names of the winners

will be announced on June 6 in Warsaw during the Gala of the Brussels Sprout Award.

Declaration of the Visegrad Group on economic cooperation in the field of innovation

2018-04-23

Ministers of the Visegrad Group countries (Poland, Hungary, the Czech Republic and Slovakia) signed a declaration in Budapest on economic cooperation in the areas of competitiveness, innovation and digital transformation. The declaration assumes the use of shared data resources in a modern approach to conducting research and development works, and the implementation of the idea of «Industry 4.0». The countries of the Visegrad Group would also like to include startups in the technological modernization process and deepen the work on cybersecurity and modernizing Internet technologies. - We are observing what the more advanced economies are doing and we are participating in the EU initiative “Digitization of the European Industry”. We are building the Platform for the Future Industry, which will stimulate industrial transformation - said Marcin Ociepa, deputy minister of entrepreneurship and technology, who signed the Budapest Declaration on behalf of Poland.

Agreement between the Pomeranian Medical University and Bank Zachodni WBK

2018-04-23

The Pomeranian Medical University in Szczecin will cooperate with Bank Zachodni WBK - Santander Universidades. The bank will support academic, technological and scientific initiatives, programs, projects or services. The framework agreement was signed by the Vice-Rector for Science of the University – Prof. Jerzy Samochowiec and manager of Santander Universidades in Poland - Wojciech Leśniewski. Its scope includes projects improving the quality of education, supporting research activities, improving institutional management of academic centers, increasing the availability of training programs, promoting international exchange and popularizing cooperation programs. Polish universities are to be modern, innovative and to cooperate with the economy and business - says Prof. Samochowiec. The Vice-Rector adds that the possibility of using Santander's contacts around the world is also an opportunity for scientists.

Competition supporting startups in eastern Poland

2018-04-24

Innovation centers, science parks, science and technology parks, and incubators from Eastern Poland may submit applications in the competition „Starting platforms for new ideas” from April 30. The Polish Agency for Enterprise Development (PARP), the organizer of the competition, will allocate PLN 130 million with aim to transform ideas into business. The competition is to select several Platforms, i.e. partnerships of specialized centers operating as program operators. Each of the Platforms will be located in at least one province of Eastern Poland: Lubelskie, Podkarpackie, Podlasie, Świętokrzyskie or Warmian-Masurian Province. The support will be available to novice entrepreneurs who want to transform their ideas into innovative products or services. The main task of the Platform is to organize «local ecosystems supporting start-up entrepreneurship».

SATIM spin-off company of the AGH University of Science and Technology wins grant from the Industrial Development Agency

2018-04-27

SATIM Satellite Monitoring, a spin-off company from the AGH University of Science and Technology in Kraków received a grant over PLN 170,000. The University receives it under an agreement signed with the Industrial Development Agency as part of the Open Innovation Network project. According to the press release of the AGH University of Science and Technology, the SATIM company was founded by scientists from the Faculty of Geology, Geophysics and Environmental Protection and deals with satellite surveys of subsidence of land in mining and post-mining areas. Funds obtained under the grant of the company's creator will be allocated to software that will improve the services of satellite monitoring of movements of the area. SATIM is one of many successful examples of commercialization of scientific research at the Krakow university. For several years, the company has been conducting research and development projects in cooperation with the European Space Agency.

Startup Weekend in Olsztyn

2018-04-27

On May 11-13, 2018 the University of Warmia and Mazury in Olsztyn organizes Startup Weekend Olsztyn. The participants will be able to create projects and instantly verify their business ideas during this 54-hour marathon. Mentors, businessmen-practitioners, as well as graphics and programming specialists will help with their experience. Anyone who has an innovative idea can participate in the event. More info on page: <http://communities.techstars.com/poland/olsztyn/startup-weekend/12252>

Professor Aleksander Nawrat about innovations

2018-05-07

The changes proposed by the Ministry of Science and Higher Education are intended to release the potential of Polish science. Two new legislation acts on innovation and the Constitution for Science enable Polish universities to commercialize research results, set up their own companies spin-offs or establish their cooperation with business - says Prof. Aleksander Nawrat, deputy director of the National Center for Research and Development in the journal „Wszystko co najważniejsze”. In his article «Course on Innovation» Prof. Aleksander Nawrat presents examples of successful Polish projects financed by the National Center for Research and Development. Last year, 64 competitions were announced and the Center supported 3702 projects with a total funding of PLN 18.5 billion. The role of public administration is to stimulate and support the activities of the scientific, economic and financial environment - concludes Prof. Nawrat. More: <https://wszystkoconajwazniejsze.pl/prof-aleksander-nawrat-kurs-na-innowacje/>

XIV International MBA Congress in Krakow

2018-05-10

On May 18-20, the 14th International Congress of the MBA will be held in Krakow. This is the unique initiative integrating the MBA environment in Poland. The event is organized by the Krakow School of Business of the University of Economics in Krakow. This year's motto is «Local business resources and the global operations of companies.» The congress will consist of five discussion panels, conducted by eminent specialists from the world of science and business. There are also business workshops for all participants. The workshop topics include: Using local resources in globally managed HR projects - a case study, Behavioral economics - irrational consumer decisions and global company decisions, Challenges of global companies on local markets - diversity management in practice, Introduction to agile project management. More: <http://kongresmba.pl/>

XXXV international conference „World economy of the 21st century: Challenges and perspectives”

2018-05-10

The staff of International Economic Relations at the Wrocław University of Economics invite visitors to take part in the XXXV International Scientific Conference „World Economy of the 21st Century: Challenges and Perspectives”. The conference planned for 14 May is closely related to the structural and systemic changes occurring in the global and Polish economy as well as in regions - including Lower Silesia. The participants of the largest and oldest conference in Poland dealing with the problems of regionalism in the era of globalization will discuss pro-export policy of Poland and foreign investments. Active participation of researchers from all Polish academic centers, as well as representatives of state administration, business and the media has been already the tradition of Silesian conferences. Participation in this year's edition was confirmed by over 50 scientists from Poland and abroad.

Polish business supports the development of science

2018-05-11

The Cedrob Group from Ciechanów presented the results of the grant competition „We support development”. Out of over one thousand projects submitted in various categories, 72 were selected. 1 million PLN was allocated for their implementation. In the Science and Development category the Warsaw University of Life Sciences in Warsaw for the project «Ways of managing the bird poultry» and the Institute of Public Initiatives Foundation for the project to create the Polish Leaders Academy were awarded PLN 30,000 each. The other awarded winners include: University of Life Sciences in Poznań for the project «Wheat and corn straw as a potential material for the production of bioethanol and biomethane», Student Scientific Circle at the Medical University of Gdańsk for the project «The impact of silver nanoparticles functionalization on their antimicrobial properties» and the Cardinal Ste-

fan Wyszyński University in Warsaw for the project «Summer School of Young Scientists».

PLN 300 million for innovations in the automotive industry

2018-05-15

The National Center for Research and Development has started the call for proposals in the 2nd competition of the INNOMOTO program. The executive agency of the Minister of Science and Higher Education allocates PLN 300 million for innovative projects in the automotive industry. The INNOMOTO sector program announced in September 2016 by Deputy Prime Minister Jarosław Gowin aims to support innovative solutions for the automotive industry to ultimately increase the competitiveness of the Polish automotive sector in the perspective of 2026. As part of the program, based on the research agenda established in consultation with entrepreneurs, the Center will finance projects implementing innovative solutions for vehicles and drives, production technology, regeneration and recycling as well as innovative parts, components and vehicle systems. The call for proposals in the INNOMOTO competition will last until July 10. The minimum project value is PLN 1 million, and the maximum is PLN 30 million. More: <http://www.ncbr.gov.pl/fundusze-europejskie/poir/konkursy/innomoto2018/>

Nicolaus Copernicus University joins Consortium ATHENA-PL

2018-05-15

The Nicolaus Copernicus University in Toruń joined the Consortium ATHENA-PL. The main purpose is to develop project documentation and to build and integrate ATHENA satellite components (The Advanced Telescope for High-Energy Astrophysics). The ATHENA satellite is a new generation of X-ray telescope gathering information about the formation and evolution of galaxies, star clusters, galaxies and black holes. Consortium ATHENA-PL will deal with technologies for space observation and observations in the field of astrophysics. The consortium

is formed by the Nicolaus Copernicus Astronomical Center of the Polish Academy of Sciences (PAN), Space Research Center PAS and Center for Theoretical Physics PAS in Warsaw, National Center for Nuclear Research in Otwock as well as Jagiellonian, Wrocław, Szczecin, Łódź, Białystok, Kielce and Toruń universities.

Conference on science based innovations at the Lodz University of Technology

2018-05-16

The Association Top 500 Innovators and the Technical University of Łódź invite the participants on 17-18 May 2018 to a conference devoted to science-based innovations. The event will be attended by British and Polish specialists in start-ups - informs the Łódź university. As part of the event, Professor Allan Barrell from Cambridge Worldwide Associates will talk about his observations in British and Polish innovation clusters. Nicholas Coutts will present programs supporting startups, which he co-created in various parts of Europe and Mark Tyl, founder of the Innovation Forum organization, will present an offer for young startups acceleration and support in international development. During the conference a discussion panel on fundraising for start-ups and commercialization of research results is planned. The panel will be attended by Bartosz Sokoliński, Director of the Development and Innovation Bureau of the Industrial Development Agency, Daniel Maksym, Project Director in the Polish Energy Group New Energy and Prof. Alan Barrell. The conference will be held in the Bay of Sport at the Łódź University of Technology at Aleja Politechniki 10.

Professor Chorowski claims new technologies to be coupled with traditional industries

2018-05-21

Poland will use its chance for sustainable development if investments in startups and R & D programs will have a real chance of commercialization, and they will not face any walls separating them from the market - highlighted Prof. Maciej Chorowski, director of the National Center for Research and Development in his latest article in the magazine of the leaders of the opinion „Wszystko co najważniejsze”. Professor Chorowski believes that Poland has to combine new technologies with traditional industrial industries. In his opinion, „it will be possible to become a leading modern economy in new areas, not by imitating today’s undisputed leaders - Google, Facebook, Bookingcom or Uber.” More: <https://wszystkoconajwazniejsze.pl/prof-maciej-chorowski-jak-polska-gospodarka-moze-wykorzystac-nowe-technologie/>

Space 4.0 conference in Krakow

2018-05-22

The Space 4.0 Conference “Solution From The Sky” will be held in Krakow on May 25-26. The event is organized by the Krakow University of Technology together with the Krakow Technology Park. During the conference, the specialists will present satellite data, its acquirement, the use in science and opportunities of commercial use. Students will learn about the acceleration of startups, the processing of satellite data, financing and support of space technologies in Poland. The guest of the conference will be Lluc Diaz, coordinator of the European Space Agency’s technology transfer network. The conference can be attended by representatives of scientific communities, government institutions, large companies implementing programs based on satellite databases, representatives of space business and young companies that are just beginning their adventure using satellite data. Registration for the event: <https://solution-from-the-sky-2018.evena.pl/>

Competence Center of the Future Industry to be established in Koszalin

2018-05-22

Representatives of the Koszalin University of Technology, Koszalin self-government, Pomeranian Regional Development Agency in Słupsk and Technological Park S.A. in Koszalin signed a cooperation agreement on creating the Competence Center of the Future Industry. The Center will act as a training center and will provide entrepreneurs with practical knowledge about available technologies. It will also create demonstrative technological spots and make them available to entrepreneurs for cognitive, test and production purposes. Technological spots of the Center will be created firstly in Koszalin, Słupsk and Szczecinek. Koszalin Competence Center of the Future Industry is the second initiative of this kind in Poland. The first Gliwice center was created by the Silesian University of Technology.

PM Gowin: TANGO 3 to improve the conditions for conducting research and development works in Poland

2018-05-23

The TANGO 3 competition is a joint venture of the National Science Center and the National Center for Research and Development. It is to finance projects that will increase the use of the results of basic research. Its aim is to build a bridge between basic and applied research and industrial research. TANGO 3 will allow both national agencies to improve the conditions for conducting research and development in Poland. The competition gives the opportunity to introduce products, services or technologies into market. Scientific organizations, universities, scientific centers of the Polish Academy of Sciences, and even natural persons can participate in the competition. - We want to enable better transfer of knowledge to the industry and thus fully use the opportunities of Polish science - says Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. The call for proposals will run from June 14 to December 20, 2018.

Krakow University AGH to hold the conference „Science - Start-up - Industry”

2018-05-24

On 5-6 June 2018, the Institute of Technology and Innovation organizes the conference „Innovative ideas of young scientists: Science - Start-up - Industry”, which will take place at the Academic Center for Materials and Nanotechnology of the AGH University of Science and Technology in Krakow. The event will take place as part of the Małopolska Festival of Innovation. Young scientists, PhD students, students and scientific circles will take part in the conference. During it, they will present their own innovative solutions of a scientific-research, technical, organizational, financial and marketing. The purpose is to develop and implement new or improved products, processes or management and sales systems. More: <http://iati.pl/iv-edycji-bezplatnej-konferencji-pt-innowacyjne-pomysly-mlodych-naukowcow-nauka-startup-przemysl/>

Polish start-ups at the Viva Technology fair in Paris

2018-05-28

Polish start-ups supported by the Orange Fab acceleration program were presented at the Viva Technology 2018 international technology start-up fair held in Paris. The company Whirla, proposing a system of wireless phone charging for cafes, offices and shopping centers, Seedia - a manufacturer of solar benches, NaviParking, focused on systems for optimizing and searching for free parking spaces, and JT Weston - application creator Makigami to optimize time-consuming business processes such as invoicing presented their solutions at the fair in Paris. As part of the accelerator, the French telecommunications company Orange supports Polish start-ups in testing solutions, developing a model of cooperation and commercial activities. It offers access to mentors and experts and participation in conferences, fairs and international promotion.

Lower Silesian Capital Club awards „Young Talents”

2018-05-29

Students and PhD students of the University of Life Sciences in Wrocław won in the 3rd „Young Talents” competition organized by the Lower Silesian Capital Club. The aim of the competition is to promote and reward the students achieving significant scientific, artistic, social and sports success in innovative and entrepreneurial activity. Kinga Pilarska, a biotechnology student, won in the category «Success in social activities». In the same category, the second winner was Safoura Reza, a veterinary student. PhD student Żaneta Król received the distinction in the category «Success in innovation» and in the category «Success in science» - PhD students Katarzyna Kornicka and Sabina Lachowicz were awarded. The «Young Talents» competition was organized for the third time. Its jury includes the rectors of Wrocław's universities, representatives of the Lower Silesian Capital Club, entrepreneurs, local and regional authorities. According to the agreement, the Rail Transport Office will give opinions on educational programs in the fields of specialization related to rail transport, offer students the diploma issues and organize internships for students. In turn, the Krakow University of Technology declared the launch and conduct of post-graduate studies, courses and trainings related to rail transport. The university will also implement the results of joint projects and possible patents. It will also carry out research and provides the access to measuring equipment for the Office.

Deputy Prime Minister Jarosław Gowin meets Israeli Prime Minister Benjamin Netanyahu

2018-06-01

During the international conference „Thinking out of the box” devoted to innovation in Israel, the Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin talked to Israeli Prime Minister Benjamin Netanyahu. The talks concerned technological development and research cooperation between the two countries. - The Israeli economy is based on modern technologies, and at the moment it is promoting the concept of Israel as a state of start-ups. In this respect, we can learn a lot from our Israeli friends - said Jarosław Gowin in Jerusalem. He added that the conversation concerned only economic and scientific cooperation, because these two spheres in Israel are inseparable.

GovTech Polska - opening public procurement for innovations

2018-06-04

The GovTech Polska project has been launched. It will be implemented by seven ministries: Finance, Defense, Health, Investment and Development, Entrepreneurship and Technology, Internal Affairs and Digitization Ministries. This project develops the successful FinMinTech project, which involved the IT programmers' help in sealing the tax system. The best IT experts selected in the competition found employment in the finance department and prepared IT solutions aimed at combating tax fraud. GovTech Polska is to be a project that will allow to offer public contracts for small and medium companies and for startups that have innovative solutions, but the scale of their operations does not allow them to start in tenders.

Silesian University of Technology to talk start-ups

2018-06-05

The Center for Innovation and Technology Transfer of the Silesian University of Technology in Gliwice along with the Mechanics, Technology and Transport faculties and Academic Incubator organize on Wednesday 6 June 2018 the meeting „Local SmartLab - START-UP with success. From incubation to acceleration. „ The meeting will be devoted to solutions in the field of machine building, material engineering and transport. It will combine lectures, discussion of experts and practical workshops. During the panel, experts will talk about how to effectively promote business through social media, how the local government can support business development through various initiatives and where to get the money to finance the idea and where to seek support. More: <https://www.facebook.com/events/191896891444324/>

XIV Forum of the New Economy in Katowice

2018-06-06

Representatives of science, business, administration and social organizations will talk about a fair energy transformation for the Silesian Voivodeship. The 14th Forum of the New Economy will take place on Friday, June 8th in the Science and Technology Park Euro-Centrum in Katowice. The discussion is entitled „Silesian Region on the way to the COP 24 Climate Summit”. In addition to workshops and panel discussions, international meetings of entrepreneurs are planned. During the plenary session, invited guests and representatives of the energy, sociology and environmental sectors will talk about preparations for the December climate summit in Katowice. The meeting will be an opportunity to exchange views on the best practices regarding the promotion of entrepreneurship and instruments supporting the development of energy sector enterprises. International conference on the cities impact on competitiveness in the modern economy

2018-06-06

The World Economy Institute of the Warsaw School of Economics is organizing an international scientific conference on innovation and competitiveness. This year, on June 15, participants of the event will try to answer the question how cities can contribute to a competitive advantage in the modern global economy. The conference will analyze the theoretical and practical aspects of international competitiveness and urbanization, including the concepts of metropolitan innovation systems, smart cities, internationalization and cultural diversity. The results of research on the competitive position of selected economies, successful urbanization patterns and the development trends of the largest cities in Poland and in the world will be discussed.

Polish Agency for Enterprise Development Looking to support foreign start-ups to develop their technologies in Poland

2018-06-08

The Polish Agency for Enterprise Development selected six companies (accelerators) that will carry out the pilot Poland Prize program. They are to find young entrepreneurs willing to develop their technologies in Poland. PLN 30 million was allocated to the program. Selected companies are Blue Dot Solutions, Startup Hub Poland Foundation, Huge Thing Alternative Investment Company, Gdańsk Entrepreneurship Foundation, AD Ventures, Brinc Limited. Their task will be to find and subsidize foreign, young technological teams whose technologies could be developed in Poland. Accelerators will receive funds for this purpose from the Poland Prize program, coordinated by the Polish Agency for Enterprise Development. As the Agency underlines in the communication, «the potential for the develop-

ment of start-ups in Poland is significant. In 2023, they will generate up to PLN 2.2 billion, and 50,000 jobs. «

Innovative Economic Development Forum established

2018-06-08

Industrial Development Agency launched the Innovative Economic Development Forum, whose aim is to create conditions for stimulating the cooperation of science and business with the active participation of the state. The Industrial Development Agency emphasizes the Innovative Economic Development Forum that will focus on the identification of breakthrough technologies that have the greatest potential for global commercialization, due to the Polish potential of innovation and international cooperation. The Forum is also to create specialized „innovation ecosystems” in such fields as: mechatronics, ICT, shipbuilding, aerospace, automotive and 3D printing. Tomasz Szejner from Cambridge University became the first President of the Innovative Economic Development Forum.

Experts from the National Center for Research and Development to meet entrepreneurs in 50 Polish cities

2018-06-13

The National Center for Research and Development has launched a series of meetings for entrepreneurs, with the aim to familiarize them with the offer of this executive agency of the Minister of Science and Higher Education and the principles of applying for co-financing. Meetings will take place in 50 cities throughout Poland. During the meetings, the experts will present the possibilities of obtaining subsidies for activities that will allow companies to introduce innovative solutions. As emphasized Prof. Maciej Chorowski, director of the National Center for Research and Development, many entrepreneurs do not undertake innovative activities, either because of fear of risk or lack of knowledge about the

possibilities of obtaining support for their innovative scientific projects. - Our activity meets the needs of such companies. I encourage them to participate in meetings and take advantage of our offer - he adds. More: <https://www.ncbrdlafirm.pl/>

Seminar on the uberization of business, economy and work

2018-06-14

the auspices of the Rector of the University of Lodz and the Marshal of the Łódź Province on June 15, 2018, the seminar „Uberization of business, economy and work” will be held in the Łódź Special Economic Zone. The organizers of the event Polish-American Center of Management (PAM Center) and the Faculty of Management of the University of Lodz inform that the participants will discuss following questions: How does the dissemination of uberization affect the development of business and the labor market? What will the new class of „on-demand workers” bring us? Also, they will discuss the identification of new solutions and business models that undermine traditional business patterns; anticipating the consequences and impact of „uberisation” on employment, payment systems, legal regulations and market activities of companies; analysis of opportunities and threats in the changing labor market. More: <http://pam.uni.lodz.pl/w-pam-center/>

First School for Local Leaders ends in Wrocław

2018-06-18

The University of Economics in Wrocław has ended the first School of Local Leaders realized under a cooperation agreement signed between the Lower Silesian Voivodship and the University of Economics. The goal of the School is to strengthen cooperation between the University, its students and the Lower Silesian local governments in the transfer of knowledge, stimulation of grassroots initiatives, development of entrepreneurship and cooperation networks in the voivodship. In the first event eighteen students from various faculties participated in trainings, lectures, workshops and study trips. The students examined the local needs in several Lower Silesian communes, made diagnoses, carried out research and proposed specific solutions. In the result they propose municipalities to revive the Old Market, promotion and integration of small hotel and restaurant business or creation of a cooperation zone - an entrepreneurship incubator.

Financial support for 400 Polish start-ups

2018-06-22

The development of the program for start-ups, the productivity strategy and national smart specializations, as well as the Platform for Industry of the Future Foundation are current initiatives of the Ministry of Enterprise and Technology. Robert Nowicki, deputy director of the Department of Innovation at the Ministry of Enterprise and Technology, announced that the productivity strategy will soon be made public and the ministry intends to support up to 400 Polish start-ups under the ScaleUp acceleration program. The ScaleUp acceleration program will be a continuation of the pilot project as part of the Start In Poland project. Young, innovative companies can receive co-financing in the amount of up to PLN 250 thousand, and the total budget of the entire acceleration program is PLN 120 million. The program is to operate until 2021.

Recruitment for the MIT Enterprise Forum Poland program

2018-06-26

MIT Enterprise Forum Poland - one of the largest accelerators for technological start-ups in Poland, is recruiting students for the next program based on the know-how of the Massachusetts Institute of Technology. According to MIT Enterprise Forum Poland, start-ups that qualify for the program will have the chance to receive support from leading Polish and international companies, present their technologies to investors from the USA and win 100,000 PLN in the Young Innovator Awards CVC competition. A novelty of this MIT Enterprise Forum program is the InsurTech program addressed to start-ups developing technologies that can be used in the insurance sector. Applications are accepted until July 10, 2018 through the website: www.mitefpoland.org

Congress innoSHARE'18 - LET'S INSPIRE POLAND

2018-06-26

On 27-29 June the Warsaw Palace of Culture and Science is hosting the innoSHARE'18 Congress - LET'S INSPIRE POLAND. Almost 1,000 people from over a dozen countries will share their knowledge and experience in the field of innovation development, cooperation between science and business, internationalization of business, development of start-ups and spin-offs, commercialization of research and creation of new technologies or ground-breaking research. More: <http://www.innoshare.pl/>

Report on research and development activities of Polish enterprises

2018-06-27

55 percent Polish companies conduct research and development - according to the latest report „R & D exemption - a milestone in the development of enterprises' innovation“, prepared for the Ayming Poland. The report was prepared by the agency Kantar Millward Brown, which conducted a market research on R & D activities and the use of an exemption for research and development in companies. From 2018, entrepreneurs conducting research and development activities can deduct as much as 100 percent of eligible costs. Previously, it was 50 percent. After more than two years of Polish proposal of exemption for research and development, as much as 35 percent. entrepreneurs admitted that they did not hear about it. However, only 9 percent entrepreneurs deducted it in the fiscal year 2017. The report shows that as many as 45 percent of business representatives do not conduct research and development activities and do not benefit from exemptions. Companies lose the opportunity to obtain savings that could be spent on business development. See the report: https://www.ayming.pl/typo3conf/ext/almacg/user_upload/Ayming_Poland/PDF_download_files/Ayming_Raport_2018_Ulga_B_R_Krok_milowy_w_rozwoju_innowacyjnosci_przedsiębiorstw.pdf

Cross EU WBA program for women's start-ups

2018-07-09

If you are a founder or manager in a start-up or you target your products to women and seek funding, you can submit your start-up to participate in the Cross EU WBA program (Women Business Angels) and present your business idea in front of the Business Angels network from Poland, Germany, Spain, Greece and Slovakia by August 20. To participate in the project, you must run a start-up in the early stages of development (less than three years). You must also have full copyright for your idea or innovation. Cross EU WBA program directs support for start-ups that meet one of the conditions: the founder of the start-up is a woman; the start-up manager is a woman; women are the target consumers of the company's products or services. Participation in the project is free, but its participants cover the costs of travel, accommodation and meals. If your application is assessed positively, on September 19, 2018 you will have the chance to present your idea to Business Angels. More: <http://www.parp.gov.pl/crosseuwba>

First in Poland Innovation Box Report

2018-07-10

The Coalition Foundation for Polish Innovation and experts from the Crido company prepared the first report on the Innovation Box mechanism in Poland. They collected case studies of the implementation of the Innovation Box in over a dozen European countries and in Israel. In Poland, entrepreneurs can already benefit from a exemption for research and development. However, there are many other ways to support innovations and one of them is primarily Innovation Box, used in many countries around the world. This is the first study on this issue in Poland. The work group was inspired by the results given by the representatives of many organizations that shared their knowledge and experience - writes in the introduction to the report Dagmara Krześcińska, president of the Coalition Foundation for Polish Innovation. The Innovation Box mechanism (in some countries operates under the name Patent Box, Intellectual Property Box or IP Box) is a tax incentive that allows participants to pay significantly lower income tax by enterprises that earn revenues from commercialization of intellectual property rights resulting from research and development. See the report: https://koalicjadlainnowacji.pl/wp-content/uploads/2018/06/Raport_Innovation_Box_KPI_Crido.pdf

Polish Development Fund launches a mentoring program for start-ups

2018-07-13

The new program of the Polish Development Fund (PFR) is addressed to start-ups and companies seeking support in working on the most important business competences. The initiative under the name PFR Network of Mentors is to provide access to experienced experts from various fields who will share their knowledge and support the startups in working on specific challenges. As emphasized in the communication of the Polish Development Fund, the PFR Network of Mentors will influence the development of the innovation ecosystem in Poland. The group of 30 mentors included carefully selected, experienced entrepreneurs and managers who have already succeeded in their business. The applications for PFR Mentors Network will be accepted until August 5, 2018. During this time, the start-ups must complete the application form, choose a preferred mentor and motivate the need for mentoring. More: <https://www.startup.pfr.pl/pl/siec-mentorow>

KITS Opening Innovations in Krakow

2018-07-17

Foundation Kraków Miastem Startupów, Marshal's Office of the Małopolska Region and the Swiss bank UBS invite participants to the Krakow City Hall on 20 July, where KITS Opening Innovations will take place. This initiative is to help introduce new technologies developed at Kraków's universities into the business world. The meeting is addressed both to large business - enterprises that have the ability to absorb innovative technologies in practice as well as to small and medium-sized companies or start-ups. During the event, lectures, discussion panels and a series of individual meetings will be held to establish new direct business contacts. More: <https://www.facebook.com/events/1844847399150924/>

Warsaw Stock Exchange is a partner of the Institute for Market, Consumption and Business Cycles Research in a scientific project

2018-07-23

The Warsaw Stock Exchange has signed a partnership agreement with the Institute for Market, Consumption and Business Cycles Research - the National Research Institute on the scientific project „Algorithmic system of quantitative and qualitative characteristics evaluation of the issuer of capital market instruments“. The Ministry of Science and Higher Education has allocated almost PLN 1 million under the «DIALOG» program for the project implemented by the Institute for Market, Consumption and Business Cycles Research. Under the agreement, the Warsaw Stock Exchange will disseminate the research results achieved as a result of its educational activities. The aim of the project is to open the science to the labor market, improve the effectiveness of cooperation with the economic environment, support innovation processes and commercialize research results.

Baltic Sea and Space Cluster established

2018-07-23

During the general meeting of the Polish Maritime Cluster, a decision was made to expand the activity and establish the Baltic Sea and Space Cluster (Balt-SeaSpace Cluster). Prof. Edmund Wittbrodt from the mechanical faculty of the Gdańsk University of Technology, chairman of the Space Sciences Commission of the Polish Academy of Sciences becomes the chairman of the Baltic Sea and Space Cluster commission. The cluster consists of several dozen entities – simple companies with supporting and partner members. It also includes Department of ocean engineering and shipbuilding at the Gdańsk University of Technology. The cluster serves to exchange information, undertake joint activities and implement projects. It will carry out its tasks by integrating science, business and administration in the field of maritime economy and space technologies.

University of Technology and Life Sciences in Bydgoszcz to cooperate with ARRK Shapers' Polska

2018-07-31

University of Technology and Life Sciences in Bydgoszcz has signed a cooperation agreement with ARRK Shapers' Polska Ltd. The agreement assumes joint conduct of research, analytical, pro-innovative and implementation works, in particular in the field of consulting, research and scientific, design and construction work, searching for innovative solutions and products as well as designing, coordinating and implementing joint research and projects. ARRK Shapers' Polska Ltd is the largest and most modern tooling in Poland. The company employs over 270 people - mainly UTP graduates. It specializes in the production of high-lot injection molds for the automotive industry for Toyota, Jaguar, Mercedes, BMW or Porsche.

Center for Renewable Energy of the University of Zielona Góra in the Ekostrateg program

2018-07-31

The Renewable Energy Center of the University of Zielona Góra in Sulechów received a nomination in the Ekostrateg 2018 economic program. The program aims to reward companies and institutions that care for the natural environment, looking for innovative solutions for the economy. Ekostrateg is a nationwide image program aimed at companies in the energy sector and public institutions dealing with environmental protection. The originator of the program is the Polish Agency of Entrepreneurship. The basis for the nomination of the Renewable Energy Center are numerous activities in the field of research and development in the energy sector, as well as active cooperation with the scientific community. The awarding ceremony will take place at the Poznań International Fair during the 6th Polish Congress of Entrepreneurship on September 24-25.

Wrocław Technology Park to cooperate with Pardis Technology Park in Iran

2018-08-02

Wrocław Technology Park will cooperate with Pardis Technology Park in Iran. The contract was signed during the innovation and technology exhibition Inotex 2018 - the Smart City Exhibition in Tehran was organized for 6 years by an Iranian partner. Pardis Technology Park is the largest and oldest technology park in Iran. It deals with the fields of nanotechnology, biotechnology, robotics, laboratory and IT / ICT. - Signing the agreement is a positive signal for the development of Pardis relations with Poland, established in 2017 - when the park began talks with the National Center for Research and Development - said the head of the office of the Polish Investment and Trade Agency in Tehran Jarosław Kaczyński. He noted that during the talks and meetings, both sides emphasized the potential and opportunities of cooperation between the parks. The biggest increase in trade between Poland and Iran can take place in the pharmaceutical industry.

Submit your start-up to participate in Polish Tech Night in Berlin

2018-08-07

Until August 25, entrepreneurs can submit their start-ups to participate in Polish Tech Night in Berlin. The event will take place on September 26-27, 2018 at the Silicon Allee Campus. As the Polish Development Fund informs, Polish Tech Night has been attracting leading Polish startups to Berlin to present their ideas to German investors, business support institutions and representatives of the innovation ecosystem and the start-up community. The event is an opportunity to show the potential of Polish companies and establish Polish-German cooperation in supporting innovation. To present the start-up to the Berlin community, participants must complete the form at: <https://docs.google.com/forms/d/e/1FAIpQLSdyr4fgs3A3FRRSrd9cxc8LV8EbzAb9rAn-5uoRmtE6xxvIUg/viewform>

Competitions for scientists at the University of Warsaw

2018-08-07

The University Technology Transfer Center of the University of Warsaw organizes competitions for researchers from the Warsaw university who would like to receive financial support for the commercialization of their ventures. Scientists and PhD students from the University of Warsaw as well as research teams whose members are university employees may take part in the competitions. The first competition concerns pre-implementation work, the second call is the idea for creating a spin-off company. The grants amount up to 40,000. PLN for pre-implementation work, and up to PLN 20,000 PLN for the creation of a spin-off company. The competitions are organized as part of the Innovation Incubator + program financed from the Operational Program of Intelligent Development by the Ministry of Science and Higher Education. More: <http://www.uott.uw.edu.pl/60-000-zl-na-prace-przedwdrozeniowe-i-lub-zalozenia-spolki-spin-off/>

Subassemblies of satellites and spacecraft constructed In Czechowice-Dziedzice

2018-08-07

Components for satellites and space ships will be constructed in Czechowice-Dziedzice. Thales Alenia Space, global leader in space technologies, will cooperate with the Silesian Science and Technology Center of the Aviation Industry, a company belonging to the Upper Silesian Agency of Entrepreneurship and Development. Thales Alenia Space has already made the first order for structural panels for the Spacebus NEO satellite platform. Simultaneously, Thales Alenia Space will transfer their composite technologies to the Center. Both companies will also jointly implement research and development projects commissioned by the European Space Agency. The SpaceBus NEO platform is a large geostationary telecommunications satellite with a mass of 4 to 6 tons. According to Thales Alenia Space company, the first facility with components made in Poland will be launched into orbit in the second half of 2019.

Dardziński: No development of the Polish economy possible without using the achievements of researchers

2018-08-08

Intensifying cooperation between scientists and entrepreneurs is one of the most important postulates of the Ministry of Science and Higher Education. There is no possibility of developing the Polish economy without using the achievements of our researchers - emphasizes Piotr Dardziński, deputy minister of science and higher education, in the interview for the daily newspaper 'Puls Biznesu'. In order to intensify cooperation between researchers and entrepreneurs, the Ministry of Science has allocated over PLN 15 million as part of the TOP100 Innovators of the Economy call. The program allows Polish companies to gain experience in managing research processes. The call for applications will be conducted until October 31, 2020. More: <https://www.nauka.gov.pl/komunikaty/uruchomienie-programu-top100-innowatorzy-gospodarki.html>

University of Gdańsk to cooperate with the Port of Gdansk

2018-08-13

Cooperation in the field of student internships, research and development projects, organizing training and conferences, as well as knowledge transfer and commercialization of research results - these are the main assumptions of the agreement between the University of Gdańsk and the Port of Gdansk - said Beata Czechowska-Derkacz, a spokesman for the university. The agreement will allow to organize the internships for outstanding students, as well as trainings within the expert knowledge and experience of the University's academic staff. The area of joint activities also includes research and development projects as well as support for scientific research relevant to maritime economy. Joint scientific conferences and symposia will also be organized. The agreement is another initiative within the framework of the University's cooperation with public institutions, enterprises and organizations in which the university offers its scientific-research and organizational potential.

Foundation for Polish Science to support the commercialization of research projects

2018-08-17

The Foundation for Polish Science organizes on Tuesday 18 September an information meeting on the commercialization of research projects. The meeting is addressed to the winners of Foundation competitions and members of their research teams who implement their projects under the Intelligent Development Operational Program. The participants will learn about how apply for an additional grant for commercialization of their research results. They will also learn about other support tools, such as the acceleration of business ideas or investment funds available for scholars. The meeting will end with a discussion on the chances and barriers in entrepreneurship of scientists. Experts in the field of combining research and business activities will take part in

the final part of the meeting. Registration for the meeting at: <https://www.fnp.org.pl/formularz-rejestracji/?eid=20&eis=nsbyw73fjg>

InterNanoPoland 2018 conference in September in Katowice

2018-08-21

InterNanoPoland 2018 is the largest scientific and business conference in Poland dedicated exclusively to nanotechnology. It will be held in Katowice on 12-13 September. It is an international forum of scientists, entrepreneurs and institutions from the business environment shaping the future of national and global nanotechnology. The organizers are the Foundation for Nanosciences and Nanotechnologies NANONET and the Silesian Nano Cluster, which form a platform for cooperation of entrepreneurs, scientific institutions, public administration and business support organizations to increase the importance of nanotechnology in shaping the innovative economy in Silesia and Poland. The conference offers the possibility of presenting R & D projects, as well as presenting own achievements and sharing the results of work before the media and invited guests. The Nano Startup Challenge is the only in Poland dedicated nanotechnology dedicated startup competition. More: <https://www.us.edu.pl/konferencja-pt-inter-nano-poland-2018>

Bank Pekao S.A. to become partner of the Big Data Analysis program at the Kozminski University

2018-08-28

Bank Pekao S.A., one of the largest financial institutions in Central and Eastern Europe, has become a partner of the Big Data Analysis program at the Kozminski University in Warsaw. Big Data Analysis is a specialty in the second-cycle studies in the field of Master in Finance & Accounting. Its aim is to provide both graduates with theoretical knowledge and practical skills. Therefore, the students of the Warsaw Academy will have the opportunity to participate in the bank's business projects and

obtain unique mentoring during their studies. Bank Pekao S.A. will also provide lecturers who will teach students about modern technologies operating in financial institutions. In accordance with the agreement signed between Pekao S.A. and the Kozminski University, students of the new course Big Data Analysis will have the opportunity to take up internships at the bank.

Almost PLN 1.5 billion in the „Fast Track” program for entrepreneurs by the end of the year

2018-08-29

The National Center for Research and Development (NCRD) will allocate nearly PLN 1.5 billion by the end of 2018 for entrepreneurs within the „Fast Track” program. - The «Fast Track» provides a specific support and concrete results contributing to the civilization and technological leap of our country. Since the beginning of the year, both large and small companies have submitted to us over 500 innovative projects, applying for a total co-financing of nearly PLN 4 billion. So we can see that the willingness to innovate is really big in Polish enterprises - says deputy director of NCRD Izabela Żmudka. The call for proposals in the competition for micro, small and medium enterprises will last until December 14. In the case of large companies and consortia, the leader of which is a large entrepreneur, applications can be submitted from September 3 to November 30. IUSER program supports Polish electric power industry

2018-08-31

The National Center for Research and Development as part of the IUSER sector program co-finances innovations in the Polish power sector. The main objective of the IUSER program is to increase the international competitiveness of the sector of producers of intelligent devices and systems for generating energy as well as management of systems and elements of distributed energy. The funded projects include, among others: a self-learning system that reduces energy consumption, an intelligent wind farm management system, water turbines in small hydropower plants and solar farms. Bartosz Konopacki from the National Center for Research and Development explained that EU regulations stipulate Poland to implement new energy production technologies that are not based on coal. This year, the National Center for Research and Development has spent PLN 27 million on investments in research and development projects in the field of power engineering.

Poznań Science Park supports the promotion and implementation of circular economy

2018-08-31

The Poznań Science Park with a scientific partner of the AM Trans Progres company, implements the international CIRCE2020 project. It is an attempt to promote and pilot the implementation of solutions allowing the creation of circular economy in European regions. The circular economy process is about the re-use or processing of used products for others or for energy. Thanks to this the society will get a renewable and self-healing system. Circular economy means that nothing is wasted. During design and production, it takes into account the most efficient use of raw materials, with the lowest possible energy consumption, and any waste generated in the process is recycled. CIRCE2020 is a project implemented as part of the INTERREG program by 5 European countries: Austria, Croatia, Poland, Hungary

and Italy. The project runs from July 2017 to June 2020, its total budget is 2.3 million euros.

One hundred thousand PLN offered in the competition Polish Product of the Future

2018-09-06

The grant of 100,000 PLN is the main prize of the XXIth Competition „Polish Product of the Future” organized by the Polish Agency for Enterprise Development and the National Center for Research and Development. The grant may be used for the development, promotion or internationalization of the Polish products. The main goal of the competition is building awareness of Polish brands, promoting and supporting the development of the most innovative products and technologies developed in Poland. Its participants may include scientific entities, entrepreneurs and consortia consisting of scientific units and entrepreneurs operating in Poland. The condition of joining the competition is presenting a new, innovative product or technology in one of three categories: Product of the Future by the scientific unit, Product of the Future by the entrepreneur, Product of the Future by a scientific unit and an entrepreneur. Report „Polish Startups 2018”

2018-09-07

The lack of qualified staff is the biggest problem of technology companies starting their operations in Poland. This is a conclusion of the report „Polish Startups 2018”, presented by the Startup Poland Foundation during the Economic Forum in Krynica. In the introduction to the report, Julia Krzysztofiak-Szopa, the president of the Startup Poland Foundation, writes that the demand for engineers, programmers and application developers is not keeping up with supply. The most innovative startups that develop machine learning technologies, neural networks, artificial intelligence and blockchain often struggle with the lack of qualified personnel - she adds. The report shows that the most startups are located in Warsaw (29 per cent) in Wrocław (12 per cent) and Kraków (10 per cent). However, when it comes to the «number of high investments» (over PLN 10

million involved in the project), most of them were set up in Kraków (40%) and in Wrocław (30%). Also, in those cities there are the most successful startups. See the report: <http://startuppoland.org/knowledge/#raport-polskie-startupy-2018>

New fund to invest PLN 100 million in startups

2018-09-07

PGE Polska Grupa Energetyczna, the Polish Development Fund and the National Center for Research and Development (NCBR) have created the Speed-Up Energy Innovation fund (SEI) to invest PLN 100 million in the most innovative startups. The fund's objective is to invest in startups in the advanced growth phase operating in the area of Industry 4.0, digitization, energy storage, electromobility, digitalization, contact with the customer and big data. - We create an investment fund of great importance for the Polish economy, and in particular for increasing the level of innovation in the Polish energy sector. Funds that the SEI fund will have at its disposal will be allocated to the development of the most innovative technology startups, whose value increase may bring tangible benefits for the entire Polish industry - said Henryk Baranowski, president of the management board of PGE Polska Grupa Energetyczna.

Warsaw School of Economics to launch new post-graduate study Space management in the new economy

2018-09-12

The next postgraduate study is launched at the Warsaw School of Economics: „Space management in the new economy”. Candidates can apply to the Department of Transport of the Warsaw university. The purpose of the one-year post-graduate program is to provide current knowledge and skills that will allow graduates to join in the business development of Space economy. - I consider the course will provide the most valuable knowledge of project management activities, as well as the opportunity to meet many people from the Polish space industry - said Ilona Tobiasz, Development Director at SENER Polska, participant of the first series of postgraduate studies, which took place two years ago.

Cooperation between the Polish Naval Academy in Gdynia and Zakłady Mechaniczne „Tarnów” S.A

2018-09-14

The Naval Academy in Gdynia signed a letter of intent on cooperation with Zakłady Mechaniczne „Tarnów” S. A. The document concerns cooperation in the development and implementation of a new generation of materials for applications in the armaments and shipbuilding industries. As a result of joint research, new effective technologies for the production of composite materials will be developed. It will be accompanied by searching for materials with unique properties, in particular resistant to piercing and with good corrosion resistance. The signatories of the letter have already cooperated within the framework of the Scientific and Industrial Consortium. Together with the Military University of Technology in Warsaw and PIT-RADWAR SA, they created the first Polish autonomous ship's weapon system to combat airborne, surface and shore objectives - OSU 35. The consortium received the prestigious award of the Polish defense industry 2018.

I Congress of Visegrad Clusters in the Education and Congress Center of the Silesian University of Technology

2018-09-17

The first Congress of Visegrad Clusters will take place on 25 and 26 September at the Education and Congress Center of the Silesian University of Technology. The most important topics of the congress will be the aviation-armaments-space sector, ICT, biotechnology and electromobility. The aim of the congress - co-organized by the Silesian technical university is the exchange of information between innovative enterprises and the integration of clusters and cluster initiatives, as well as entities operating in clusters from the Visegrad countries. This is intended by the organizers to help increase competitiveness and equal development opportunities through the exchange of experience. The agenda of the congress includes discussions on innovation in clusters, key clusters, financing clusters in the European Union and the Visegrad countries, as well as on smart specializations, international cooperation, exports, electromobility and motorization. More: <https://visegradclustercongress.klastrypolskie.pl/>

University of Economics in Katowice to support the conference „How to sell Polish products”

2018-09-18

The IndustryStock.pl portal organize the international conference „How to sell Polish products”. The event, scheduled for October 24, is supported by the University of Economics in Katowice. The conference will be a platform for the exchange of knowledge and experience on the principles of functioning on export markets and cooperation with foreign partners. It will be attended by people involved in the internationalization processes of Polish products, know-how and the Polish economy - managers, entrepreneurs and business representatives. The organizers announce discussions on the following

topics: How to effectively build export strategies?; the specificity of export markets; the German market - the first step in exports; international negotiations; effective international marketing and international savoir vivre. More: <http://konferencjaeksport.elamed.pl>.

Cooperation between Gdansk University of Technology and Przechlewski Energy Cluster

2018-09-19

The Faculty of Electrical and Control Engineering of the Gdańsk University of Technology will cooperate with the Przechlewski Energy Cluster, one of three in the Pomeranian Voivodeship. The contract was signed in the Laboratory of Innovative Power Technologies and Integration of Renewable Energy Sources (LINTE ^ 2). Under the agreement signed, the Faculty of Electrical and Control Engineering became a partner of Przechlewski Energy Cluster, which was one of the first in Poland to receive the Pilot Energy Cluster Certificate awarded by the Ministry of Energy in 2018. The agreement provides that the parties will cooperate in solving technical and organizational problems that may occur in the realization of energy projects implemented by cluster participants. The cooperation will utilize the Faculty's technical and scientific potential - in particular, the research and implementation potential of the LINTE Laboratory ^ 2.

International Bioeconomy Congress in Łódź

2018-09-21

The International Bioeconomy Lodz Conference 2018 will be held on Monday - September 24 – in Łódź. The congress will discuss issues related to the fight against smog, closed-circuit digitalisation, modern technologies in the bioeconomy, and high-quality food. As part of the event, the Antismog Forum will be held, organized by the University of Lodz. The organizers invited Prof. Joanna Wibig from the Department of Meteorology and Climatology, University of Lodz; Wiktor Warchałowski, president of the board and co-founder in Airly - a startup that builds a network of air sensors for cities and municipalities, thanks to which it is possible to monitor air status in real time using an online map; Prof. Wojciech Hanke from the Institute of Occupational Medicine and Rafał Czyżewski - president of the board of GreenWay Polska, who is building the first in Poland comprehensive network of publicly available stations for fast charging of electric vehicles to participate in the panel discussion.

Polish-Vietnamese talks on increasing scientific and economic cooperation

2018-09-25

Increasing the level of academic exchange, intensification of joint research activities and promotion of Polish language at Vietnamese universities are the topics of the meeting of Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education with the Vietnam government delegation headed by Truong Hoa Binh, Deputy Prime Minister of Vietnam. During the meeting, the internationalization of studies was discussed. To enhance it, the sides decided to create a Polish language course at the University of Hanoi. The representative of the Vietnamese government expressed a wish to increase the limit of Vietnamese scholarship holders at Polish universities in the future. Deputy Prime Minister Gowin emphasized during the talks that Polish-Vietnamese cooperation could be intensified in the pharmaceutical, agri-food, armaments or tourist sectors. He also stressed that the presence of a large

Vietnamese diaspora in Poland remains important factor of economic cooperation.

Talks about the prospects of Industry 4.0 development held in Gliwice

2018-09-25

The 8th International Conference „Social and Technical Sciences - the scope of cooperation for the development of Industry 4.0” will be held on September 28 at the Center for Innovation and Technology Transfer at the Gliwice University of Technology. The main organizers are the Faculty of Mechanical Engineering, the College of Social Sciences and Foreign Languages, and the Center for Innovation and Technology Transfer. This year's event is devoted to the prospects of Industry 4.0 development in Poland and abroad. The organizers have planned a panel discussion with experts, representatives of industry, business and public institutions. The purpose of the conference «Social and technical sciences - the scope of cooperation» is to integrate a transnational academic environment, create opportunities to present research results, establish interdisciplinary scientific cooperation, exchange ideas of researchers interested in changes taking place in the modern world.

Economics of the future and time in business to be discussed in Wrocław

2018-10-04

The University of Economics in Wrocław and the Lower Silesian Development Fund invite participants to the 365 Timing Economic Congress on October 15-16. The topics of the meeting are the challenges of modern economies, time and business, the global dimension and timing in decision-making processes. 365 Timing Economic Congress is a concept of a holistic approach to time issues in socio-economic processes, taking into account the needs of the individual, business, but also society and the state. Participants of the congress will look for answers to the following questions: What path does our economy follow? How do other economies of our region

look after systemic change? Have we been able to properly use the time that passed since the transformation to build a modern knowledge-based economy? Is the passing time one of the most important, if not the most important factor conditioning the development of business, and thus the economies? More: www.365timing.pl

Rector of the Białystok University of Technology awarded for his activities for the development of cooperation between science and business

2018-10-05

Rector of the Białystok University of Technology Prof. Lech Dzienis was awarded by the Chamber of Commerce and Industry in Białystok. The Chamber appreciated the activity of Prof. Dzienis for the development of cooperation between science and business. - I am glad that my efforts have been appreciated in order to connect the business of Podlasie with our university. Białystok University of Technology is a strategic partner of the national key cluster of Metal Processing. We are also active in the Eastern Construction Cluster. We work effectively with many individual companies. We also co-create study programs with enterprises. The course of furniture engineering has just begun. Soon, we will sign contracts with companies and internships and specially prepared practical classes for electrotechnic students within dual studies will take place - said Prof. Dzienis.

Project of the University of Gdańsk co-financed within the Interreg Region of the Baltic Sea program

2018-10-08

The Monitoring Committee of the Interreg Baltic Sea Program has included the COMBINE project of the University of Gdańsk into the group of 31 most promising transnational projects. The project «COMBINE - Efficient business models and adaptation systems for the strengthening of cargo flows in combined transport in the Baltic Sea Region, taking into account innovative technologies and regional specifics» focuses on combined transport services and improving measures to remove barriers and challenges related to their wider use in the Baltic region. The project manager on behalf of the University of Gdańsk is Dr Aneta Oniszczuk-Jastrząbek, Prof. Associate of Faculty of Economics. The amount of co-financing for the Pomeranian university amounts to nearly PLN 1.3 million.

Eastern eBusiness Forum „EastBiz”

2018-10-09

The Faculty of Management Engineering at the Białystok University of Technology, the Białystok Science and Technology Park and EastCamp Białystok are organizing on 12-13 October 2018 the East eBusiness Forum „EastBiz”. It is the largest event in north-eastern Poland dedicated to running a business online. The EastBiz provides the most interesting case studies, workshops or new knowledge. It is the best opportunity to establish new business contacts and create own networking. Forum participants through the presentations and discussions will try to find the answer to the questions: How to develop effectively online sales on the global market? How to make money by sending SMSs? How to prepare the company for the lead generation campaign? More: <https://east-biz.pl/>

Conference on the role of navigation in securing human activity at sea

2018-10-09

The Naval Academy in Gdynia and the Polish Navigation Forum invite participants to the 21st Nav-Sup Scientific and Technical Conference „The Role of Navigation in Securing Human Activities in the Sea”. The conference has been carried out every two-years for 40 years. The organizers encourage to present the achievements, products and solutions in the field of maritime as well as land, sea and air transport economies, as well as navy and other types of armed forces. The conference on 15-16 November is an excellent opportunity to exchange experiences, knowledge and views on navigation, transport and security. It is also a great place to present achievements and technological solutions supporting navigation and transport. The conference topics include terrestrial, marine and air navigation, new systems and technologies, hydrography, geoinformatics and satellite geodesy. More: <http://www.navsup.pl/>

University of Economics in Wrocław to launch Bioeconomic Laboratory

2018-10-09

The Bioeconomic Laboratory of the University of Economics in Wrocław has received over 6.7 million PLN of EU funding for BioInLab project. Its implementation will contribute to strengthening the position of the Wrocław university as a center conducting high-quality research. The BioInLab bio-economic laboratory will provide research services for entities from the Lower Silesia in the field of physicochemical methods enabling the development of new products or technologies already existing on the bio-waste, bioproducts and high-quality food markets. The investment will require adapting one of the university buildings to the needs of the laboratory and purchasing the necessary equipment. The project will be implemented for two years - starting from January 2019.

Conference „Workshop of cities: Rzeszów”

2018-10-10

Rzeszów University of Technology together with the authorities of Rzeszów and the editors of „Gazeta Wyborcza” are organizing a conference „Workshop of cities: Rzeszów”, which will be held on Thursday, October 11 in the building of the Rzeszów university. The conference will be conducted in the form of panel discussions. The first panel will be devoted to Industry 4.0 and Education 4.0. Participants will discuss the following questions: Will robots replace people in factories? How are companies and cities prepared for it? How should the competences of employees change? Are universities ready for these processes and if and how are the education systems changing? The second panel will concern mobility. The talks will focus on innovative solutions in public transport introduced in cities in Poland and around the world.

Warsaw University of Technology opens the Central Laboratory of Technical Inspection

2018-10-16

Minister of Entrepreneurship and Technology Jadwiga Emilewicz took part in the opening ceremony of the Central Laboratory of Technical Inspection at Warsaw University of Technology. The laboratory was created for the purposes of destructive and non-destructive testing of construction materials used in advanced industrial and utility constructions. As emphasized the rector of the Warsaw University of Technology Prof. Jan Szmidski, this initiative strengthens the position of the university through close cooperation with the Office of Technical Inspection - the key institution for the Polish economy in the area of technical security. The cooperation expands the possibilities of the development of research and didactics carried out at the Institute of Manufacturing Techniques of the Faculty of Production Engineering - added the rector.

Latest book of the University of Lodz Publishing House deals with the functioning of e-business

2018-10-16

The book "Functioning of e-business" by Anna Misztal, a researcher from the University of Lodz, was published by the University of Lodz Publishing House in the series Akademia Zarządzania i Finansów. The publication is a kind of guide to the e-business. The author deals with the current problems, models and strategies used by organizations conducting on-line business. The researcher from the University of Lodz discusses individual segments of e-business taking into account their advantages, disadvantages and key determinants of functioning and development of individual branches of the economy on the example of well-known and successful companies operating in a virtual environment, such as LinkedIn, YouTube, Eobuwie or Filmweb. The latest position of the publishing house of the Łódź university is addressed primarily to students of economic studies and management, as well as to all those interested in the subject of virtual business.

4th University Business Debate held at the University of Economics in Krakow

2018-10-18

At the University of Economics in Krakow, the 4th University Business Debate was held, during which the participants discussed subject of entrepreneurship and academic innovation as well as the model of cooperation between economic universities and employers. - Further development of the economy is possible only through knowledge-based development, which is an element of employees' qualifications and which brings technological and organizational progress through innovation - said Deputy Minister of Science and Higher Education Piotr Dardziński during the debate. The Ministry of Science and Higher Education undertakes legislative and program initiatives, aimed at bringing the world of science and business closer together - he added. During the discussion, the Minister emphasized

that the implemented by the government Strategy for Responsible Development as the basis for the competitiveness of the Polish economy is indicated by the development of innovative companies implementing permanent mechanisms of cooperation with the world of science.

Researchers from the Polish Academy of Sciences conducted a statistical analysis of the bitcoin market

2018-10-22

The Institute of Nuclear Physics of the Polish Academy of Sciences (IFJ PAN) in Krakow carried out a detailed statistical analysis of the bitcoin (BTC) market. Its results have been published in the renowned scientific journal "Chaos: An Interdisciplinary Journal of Nonlinear Science". The analysis puts Bitcoin, and potentially other cryptocurrencies, in a surprisingly positive light. The analysis included changes in bitcoin prices in the period from 2012 to April 2018, recorded in one-minute sequences and variability of return rates. The most important statistical parameters of the bitcoin market clearly indicate that for many months it has met all the important criteria of financial maturity. It seems that in the case of other cryptocurrencies, a similar transformation may be expected - says Prof. Stanisław Drożdż from the IFJ PAN and Krakow University of Technology. More: <https://informacje.pan.pl/index.php/informacje/14-nauki-scisle-i-nauki-o-ziemi/2374-bitcoin-lepszy-od-dolara-analzy-statystyczne-instytutu-fizyki-jadrowej-pan>

Competition for the best diploma thesis on Polish-Chinese economic cooperation

2018-10-23

The Polish-Chinese Business Council has announced the third competition for the best diploma thesis on contemporary economic cooperation between Poland and China. The participants can apply until November 30. As in previous years, the organizers invite students and graduates of domestic and foreign universities who have defended their diploma

theses in the period from October 1, 2017 to September 30, 2018. The competition is held under the patronage of the Ministry of Science and Higher Education, the Ministry of Enterprise and Technology and the Embassy of the Peoples Republic of China in Poland. The application is free, and winners can receive attractive prizes: among others, annual scholarships in China funded by the embassy of the Peoples Republic of China and internships in reputable companies. More: http://pchr.pl/konkursy-i-szkolenia/konkurs_pd_2018/

Competition for diploma dissertation with the highest potential of commercialization or implementation

2018-10-24

Until October 31, the University Technology Transfer Center of the University of Warsaw is accepting diploma theses with the highest potential for commercialization or implementation. The winners of that competition will be awarded. The application can be submitted in three categories: bachelors / engineering, masters thesis and PhD theses. The condition of participation is completing PhD thesis from 1 May 2016 to 31 October 2018. The winners of the competition will receive financial prizes funded by the AOMB Patent Attorneys' Chamber for PhD thesis: 5,000. PLN gross; for Masters thesis: 4 thousand PLN gross; and for BA / BA thesis: 3 thousand PLN gross. More: <http://www.uott.uw.edu.pl/kpd/>

Polish-Norwegian seminar on fair economic transformation

2018-10-25

The Institute of Environmental Protection - National Research Institute together with the Norwegian Ministry of Climate and Environment are organizing a Polish-Norwegian seminar on sustainable equitable economic transformation on 25 October in Krakow. The main objective of the project is bilateral cooperation between Poland and Norway, which aims to support and present the concept of a balanced fair economic transformation taking into account social costs and the need to create new jobs. The seminar will present the experience of Poland and Norway related to economic transformation and challenges related to climate change. More http://ios.edu.pl/wp-content/uploads/2018/10/agenda_Just_transition.pdf

Silesian University of Technology begins cooperation with Henkel

2018-10-30

Silesian University of Technology has signed an agreement on cooperation with Henkel Polska Operations Ltd. Its aim is to use the experience and scientific achievements of the University and the potential of Henkel and its position on the market for activities serving the good of the parties and the development of the region. The agreement was concluded for an indefinite period and it assumes dealing with topics of research and development works, presenting and promoting achievements, providing cooperation with employing graduates, exchange of experience in knowledge management, as well as appointing a team of specialists for strategic technical and organizational solutions and cooperation in improving educational programs. Henkel has undertaken to present a list of proposed master's thesis topics to be used by students of the University of Technology and it is to enable students to take up a diploma thesis on the topics indicated by the employer.

Poznan University of Technology is a co-founder of the Poznań Energy Cluster

2018-10-30

Poznan University of Technology signed a letter of intent with the City Hall regarding the creation of the Poznań Energy Cluster. Among the signatories of the agreement are also companies: Veolia, SUEZ Zielona Energia and municipal companies. The agreement concerns the generation, distribution and trading of energy from renewable sources within the distribution network. In short, the cluster's task is to create self-sufficient energy circuits. Thanks to the cluster, Poznań will become an energetic model for other Polish metropolises. Establishment of the Poznań Energy Cluster is the next big step in the direction of creating Smart City. The cluster is a very big challenge for Poznań local government officials as well as municipal enterprises. The implementation of the goals set will benefit all partners, but the Poznan inhabitants will benefit the most from it.

Gowin: Social and humanistic sciences as the driving force of socio-economic development

2018-10-31

Socio-human sciences in most developed western countries are treated as a social and economic development flywheel, said Deputy Prime Minister Jarosław Gowin during a conference within the project „Humanities has a future” organized by the Ignatianum Academy in Krakow. Prime Minister and Minister of Science and Higher Education emphasized that many visionary presidents of large international companies are graduates of these majors. -Humanists are the creators of ideas transformed into specific products that change the world, precursors of beneficial social changes, thinkers, inventors and creators. We want the humanities to play a similar role in our country - added Jarosław Gowin. During the conference, Deputy Prime Minister Gowin also informed that within the framework of competitions of the National Program for the Development of the Humanities, he allocated budget

of PLN 35 million for further research in the field of humanities.

University of Silesia invites participants to the Business - Science Forum. Nano-POWER

2018-10-31

University of Silesia in Katowice, NANONET Foundation, Institute of Non-Ferrous Metals in Gliwice and the Center of Polymer and Carbon Materials of the Polish Academy of Sciences invite participants to the Forum Biznes - Nauka. Nano-POWER - inspiration in the energy industry. During the Forum - November 7, the scholars will present good practices of implementing nanotechnology and nanomaterials in power industry, construction and heating. The main topics will include: the use of nanotechnology in optoelectronics, thermal insulation products, batteries and accumulators as well as catalysts for energy and renewable energy sources. As part of the Forum, the Silesian Inter-University Center for Education and Interdisciplinary Research in Chorzów will hold the «Materials Research for Industry» workshops. During the workshop, visitors will be able to use devices for determining the physico-chemical parameters of the nanoscale materials. More: http://www.imn.gliwice.pl/articles/926/zapraszamy_na_forum_biznes_%E2%80%93_nauka._nano-power_%E2%80%93_inspiracje_w_branzy_energetycznej

Fashion Economy Moda 4.0 conference

2018-11-08

The Lazarski Academy of Business and Fashion Academy in Warsaw invites participants on 13 November to the Fashion Economy 4.0 conference, during which discussion panels will be organized concerning new technologies in the general fashion, men's fashion and fashion marketing. Also, the main conclusions from the KPMG report on the fashion industry in Poland will be presented. The conclusions of the latest KPMG report in Poland will concern consumer behavior and development perspectives of the fashion sector. The report characterizes the condition of the Polish clothing and textile industry, presents shopping habits and decision-making factors of consumers as well as observations of enterprises operating on the market. More: <https://fe.cbp.lazarski.pl/>

Startup Weekend in Podkarpackie Science and Technology Park- Aeropolis

2018-11-08

From 16 to 18 November, the Startup Weekend will take place at Podkarpackie Science and Technology Park Aeropolis in Jasionka. It is the largest startup event in the Podkarpacie region, supported by the Rzeszów University of Technology. During the three-day event, participants are combined into teams that prepare a startup within 54 hours. The main assumption of the event is the joint work of spontaneously created teams consisting of programmers, graphic designers, UX/UI designers and marketers to create new solutions, products, services and companies. The implementation of projects is supported by mentors who are specialists in various fields of science. More: <https://www.facebook.com/events/1346181608851451/>

9th European Forum of Marketing of Scientific and Research Institutions in Warsaw

2018-11-14

The Institute of Aviation invites participants in marketing science to participate in the 9th European Forum of Marketing of Scientific and Research Institutions, which will be held on November 15-16, 2018. The aim of the Forum is to present the latest research results and practical solutions used by scientific and research institutions, institutes, universities and technology parks from all over Europe. The forum will be an opportunity to show visitors from Europe the achievements of Polish scientists, marketing specialists and practitioners in the field of promoting science and innovation. The event will be held under the patronage of the Ministry of Science and Higher Education, and will take place in the Institute of Aviation in Warsaw at al. Krakowska 110/114. University of Silesia Conference to hold conference „Business Constitution - new experience”

2018-11-21

The Scientific Circle of Competition Law and Regulations IUS PUBLICUM of the University of Silesia together with the Polish Economic Society, the Institute of Economic Law and the Polish Foundation for Competition Law IUS PUBLICUM are inviting participants to the national scientific conference „Business Constitution - a new experience”. The conference will be an opportunity to analyze new regulations in the field of undertaking and conducting economic activities - so-called Business Constitution, which in the opinion of its creators is supposed to be appreciated by entrepreneurs. It should facilitate to start a business and change the attitude of public administration bodies toward entrepreneurs. The conference will take place on November 27 at the Faculty of Law and Administration of the University of Silesia in Katowice, at ul. Bankowa 11B. More: <http://konferencja.iptg.pl/>

Summit on sustainable development of economy and economy based on values in Krakow

2018-11-22

Representatives of administration, science, business and art from over 20 countries met in Krakow at the third Open Eyes Economy Summit. Participants discussed sustainable development of economy and value-based economy. As Deputy Prime Minister Jarosław Gowin said in the opening speech of the congress, «the conviction that the market economy can only be developed within the ecosystem of values is guided by all my actions. This synergy between the open market and values is also guided by the Open Eyes Economy Summit.» Environmental protection is an example of values that should be particularly protected. The key to this is the statement of the common good, of which the environ-

ment is an example. As regards the responsibility for them, free market must recognize the supremacy of superior values – pointed out the Deputy Prime Minister.

Project „Innovation in technology transfer procedures: Science - Industry”

2018-11-23

As part of the Dialog program financed by the Ministry of Science, four Polish research centers: AGH University of Science and Technology in Kraków; Polish Academy of Sciences; Częstochowa University of Technology and Warsaw University of Technology carry out the project „Innovations in technology transfer procedures: Science - Industry”. Prof. Eng. Zbigniew Kąkol from the AGH University of Science and Technology emphasizes, that it is necessary to remodel the view of modern universities to pursue education, research, and the practical use of know-how, where cooperation between science and business becomes one of the most important factors of innovation processes. - Industry expects knowledge transfer from science. We do not expect scientists to come up with something and open a factory. We do not know this and we do not have to deal with this. The initiator of such activities must be the industry - added Prof. Kakol.

Cooperation agreement between the University of Gdańsk and the STARTER Business Incubator

2018-11-29

The University of Gdańsk will cooperate with the STARTER Business Incubator. The agreement signed by both institutions is the beginning of long-term cooperation on many levels. STARTER organizes industry conferences where specialists meet the representatives of the business, education, start-ups and the port and logistics industry - Signing a contract is a crucial step in the life of our university - says its head Dr Jerzy Piotr Gwizdała. Thanks to it, students will be able to take part in many interesting pro-

jects, gain experience and practical skills, and lecturers will receive new development opportunities. The agreement provides for joint organization of scientific conferences, symposia, as well as various forms of knowledge transfer and mutual inspiration in the implementation of relevant research, technology transfer and commercialization of research results.

„Financial Times” publishes ranking of European business schools

2018-12-05

The daily newspaper Financial Times published a ranking of European business schools. The Kozminski University from Warsaw was placed on the 43rd position of all universities in Central and Eastern Europe. The Warsaw School of Commerce was ranked 71th. The ranking top- universities are from Western Europe: London Business School, HEC Paris and Insead. The best ones are focused on MA special studies and on MBA programs. The Universities in Central and Eastern Europe are catching up to universities from the west of the European Union, however their representation is still small. Russia, the Czech Republic, Hungary, Slovenia have only one such university each, and Poland – two universities in this prestigious group. See ranking: <http://rankings.ft.com/businessschoolrankings/european-business-school-rankings-2018>

Laureate of the Foundation for Polish Science program becomes also Entrepreneur of the Year

2018-12-05

Dr Filip Granek, the winner of the HOMING PLUS program, as well as the founder and president of the XTPL nanotechnology company, was awarded the Entrepreneur of the Year prize in the 16th competition organized by Ernst & Young. Dr. Granek is one of the world's best specialists in modern solar cell manufacturing and nanomaterial-based technologies. The jury honored him with the title Entrepreneur of the Year 2018 for «working on breakthrough technology that has a serious chance to change the world for the better.» Dr Granek will represent Poland during the international final of the EY World Entrepreneur of the Year 2019 competition, which will take place in June next year in Monaco. More: <https://przedsiębiorcaroku.pl/news/filip-granek-prezes-xtpl-s-a-zostal-przedsiębiorca-roku-2018/>

Cardinal Stefan Wyszyński University focuses on cooperation with business

2018-12-07

Cardinal Stefan Wyszyński University (UKSW) in Warsaw, through the „Direction Innovations” project has opened the cooperation with entrepreneurs. - We are presenting a new project of our University, which is focused on innovation and new technologies. In the development project, we have planned the construction of the third campus - the Multidisciplinary Research Center. The project of Digital Science Center is the result of the dynamic development of the university - says the Rector of UKSW, Prof. Stanisław Dziekoński. «Direction Innovations» is a practical meeting of science and business. Both scientists and entrepreneurs can meet and implement joint ideas in the Multidisciplinary Research Center. The first teams of scientists and entrepreneurs will start cooperation on the third campus of UKSW in Dziekanów Leśny as soon as in July 2020.

Researchers of the University of Economics in Poznan awarded at the Capital Market Congress

2018-12-14

Researchers at the University of Economics in Poznan (UEP) took first place (ex aequo with researchers from the University of Szczecin) in a competition for a scientific paper during the 7th Capital Market Congress. The jury of the competition also awarded two distinctions - both for researchers from the Poznań university. The authors of the award-winning paper «Using the market width to predict rates of return from domestic and industry stock indices» are: Prof. Andreas Karathanasopoulos (University of Dubai), Dr. Przemysław Grobelny, Mateusz Mikutowski and Dr Adam Zaremba from UEP. The competition awards were also received by Dr Paweł Śliwiński, Prof. Associate of UEP and Maciej Łobza MA for the article «Can socially responsible investing be financially sound» and Dr Paweł Śliwiński, and Dr Piotr Zygmantowski for «Indicators for measuring the development level of companies qualified for the NewConnect Focus segment».

Professor Janusz Janeczek from the University of Silesia becomes the laureate of the Honorary Pearl of the Polish Economy

2018-12-14

Professor Janusz Janeczek from the University of Silesia received the Honorary Pearl of the Polish Economy - the distinction of the English-language economic monthly „Polish Market” during the event at the Royal Castle in Warsaw. Professor Janusz Janeczek, head of the Department of Geochemistry, Mineralogy and Petrography of the University of Silesia, is a geologist, a specialist in the field of geological aspects of radioactive waste disposal, atmospheric dust mineralization and pegmatites. He is the chairman of the Council for Nuclear Safety and Radiological Protection and the Council of the National Science Center. Honorary Pearls are award-

ed to outstanding personalities and institutions recognized as authorities in the fields of economy, science, culture and propagation of patriotic and social values. The event is organized by the English-language economic monthly „Polish Market” - a magazine promoting the Polish economy, as well as science and culture in the country and abroad.

Poznań holds a conference on international business in a changing world

2018-12-18

Over 450 scientists from all over the world participated in the international scientific conference „International Business in a Transforming World - the Changing Role of States and Firms” organized at the University of Economics in Poznań. The conference was organized jointly by the European International Business Academy and the University of Economics in Poznań. Discussions focused on the role of the state and the market in the context of strengthening the position of enterprises from post-transformation economies, increasing the intensity of international transactions using new technological solutions, continuing changes in global value chains, and developing international cooperation in investments and trade. Plenary sessions, with the participation of researchers from the field of international business and international economics and representatives of the business world, were accompanied by panel sessions, PhD seminars and workshops on writing articles for prestigious scientific journals.

Consortium with the participation of Krakow universities to develop a model of a welfare farm

2018-12-19

Consortium of the Ministry of Agriculture and Rural Development (leader), Agricultural Advisory Center (CDR) in Brwinów, Jagiellonian University and Agricultural University in Krakow, signed a contract with the National Center for Research and Development to fund the GROWID project „Welfare farms in rural development against demographic challenges”. The project will be implemented as part of the strategic program of scientific research and development work «Social and economic development of Poland in the conditions of globalizing markets» GOSPOSTRATEG. The main objective of the project is to develop a welfare farm model and to prepare a system of implementation in the form of a development strategy of the care farms. It is to eliminate development barriers in Poland: inequalities between cities and rural areas in access to social services, insufficient coordination of public services at the local level and low quality of social capital.

Katowice conference discusses the legal and economic aspects of cooperation with China

2018-12-19

The Interfaculty Scientific Circle of Chinese Culture and Law invites participants to the conference „Legal and economic aspects of cooperation with the People’s Republic of China”, which will take place on February 15 at the Faculty of Law and Administration of the University of Silesia. This is the first conference on the subject of law and business in Silesia in relations with the People’s Republic of China. The goal of the event is to interest the academic community of China. The conference is addressed to students, scholars and business representatives, including small and medium-sized enterprises. Passive participation is free and does not require registration. The deadline for sending abstracts is January 7, 2019. Detailed information: <https://konferencjeiny.wixsite.com/info>

Wrocław University of Environmental and Life Sciences to participate in the international project RUBIZMO

2018-12-19

University of Environmental and Life Sciences in Wrocław, together with 15 partners from 10 European countries will implement the RUBIZMO rural development project. Project participants are to identify and select 50 successful business cases and 20 new business models to analyze replication conditions and develop tools: a virtual business case library; guidance on creating favorable conditions for the implementation of innovative business models; a set of tools for creating clusters and development of networks in rural areas and tools for support for transformation. The aim of the project is to contribute to the creation of new jobs and development in very diversified rural areas by stimulating and implementing innovative business models based on the value chains biology, environmental protection and the idea of sustainable development. More: http://www.glos.upwr.edu.pl/aktualnosci/48758/rubizmo_nowoczesna_gospodarka_wiejska

Stock Exchange School of the Warsaw Stock Exchange is launched at the Silesian University of Technology

2018-12-20

The Faculty of Organization and Management at the Silesian University of Technology is launching the Exchange School courses - the program of the Warsaw Stock Exchange Foundation (WSE) in cooperation with Polish universities. The aim of the initiative is to provide universal education in the field of trading in securities and other financial instruments. During the course the students will be able to learn how the WSE works, how to evaluate the effectiveness and investment risk, what instruments to choose and how to create an investment portfolio, how to conduct a technical and fundamental analysis and how the economic environment affects the financial

market. As part of the Stock Exchange School, two courses are organized: «Basis for investing on the stock exchange» and «Exchange for intermediates». Classes are conducted in the weekends. Participants receive professional information materials prepared by the Warsaw Stock Exchange Foundation and a certificate of completion of the course.

President of the Polish company is usually a graduate of the Warsaw School of Economics

2018-12-24

The daily Rzeczpospolita has analyzed the profiles of 570 presidents of the largest Polish companies. The list prepared by the newspaper shows that most of them studied at the Warsaw School of Economics. In the ranking the second place was taken by the Warsaw University of Technology and the third position by the AGH University of Science and Technology in Kraków. In total, almost one of five presidents of the largest companies in Poland has a diploma of one of these three universities. And here are the top ten ranking: 1. Warsaw School of Economics 2. Warsaw University of Technology 3. AGH University of Science and Technology in Krakow 4. University of Warsaw 5. Silesian University of Technology in Gliwice 6. Wrocław University of Technology 7. University of Economics in Poznan 8. Cracow University of Economics 9. University of Economics in Katowice 10. Lodz University of Technology

Modern Management Conference 2019 to be held at the University of Economics in Katowice

2019-01-07

Student Scientific Circle of Human Resources Development at the Department of Human Resources Management of the University of Economics in Katowice invites participants to the conference Modern Management 2019 on January 15. The event aims to develop students' competences and skills through participation in lectures and workshops conducted by specialists and business practitioners. The conference gives an excellent opportunity to develop modern competences and skills as well as integration of academic environments with business environments - students will have the opportunity to consult, consult their ideas or take part in recruitment processes prepared by business partners especially for the academic community. The event will benefit both students and entrepreneurs looking for educated, young and ambitious people to work in their teams.

Law on the Łukasiewicz Research Network delivered to the Sejm

2019-01-08

A new draft Law on the Łukasiewicz Research Network has been delivered to the parliament. The first version of the proposal was delivered to the Sejm a year ago. At that time, however, it did not pass the legislative procedures. The new project assumes that a network of research institutions will be created in Poland, which will be subject to one central organization. As emphasized the Ministry of Science and Higher Education, the Łukasiewicz Center will be the coordinator of scientific and educational efforts. It will also develop a «procedure for providing specialist tools to external entities», including enterprises, which will allow to build a bridge between science and business. The point is to change discoveries and scientific work into economic success. The Łukasiewicz Research Network will cost PLN 25 million in the first year of operation and PLN 17.5 million per year in the next 10 years.

Researchers of the University of Life Sciences in Wrocław to participate in the Mozart program

2019-01-09

Two scientists from the University of Life Sciences in Wrocław - Prof. Agnieszka Noszczyk-Nowak and Prof. Michał Dziecioł - will carry out projects within the Mozart project together with Wrocław companies. Professor Noszczyk-Nowak together with a veterinary clinic Neovet will deal with the development and implementation of cardiological examination schemes in dogs and cats undergoing chemotherapy. Professor Dziecioł and the company Inter Technologie will conduct joint research on the possibility of using chemical and semiochemical volatile substances in modulation of human behavior. The Municipal Program of Supporting the Partnership for Higher Education and Science and the Business Activity Sector «Mozart» connects Wrocław scientists and the companies. The company gets the opportunity to benefit from the intellectual potential of

the researcher and use its specialist knowledge for the development of the company, and the scientist gets the opportunity to work in a business environment and use knowledge in practice. More: http://www.glos.upwr.edu.pl/aktualnosci/48837/mozart_wspolpraca_naukowcow_z_wroclawskimi_firmami.html

Students of the Silesian University of Technology advanced to the second stage of the Global Management Challenge

2019-01-09

The team of students of the Silesian University of Technology „Golden Eye” advanced to the second stage of the 19th largest business simulation in the world - Global Management Challenge 2018/2019 (GMC). In GMC, teams of three to five people run companies competing on the virtual market. In the first stage of the simulation, 155 teams took part. They competed for five weeks for the highest investment result of their companies. 60 teams qualified for the next stage. In the advanced training program GMC uses gamification- the use of mechanisms from computer games in business. The simulation gives the opportunity to take on the role of the board of directors and conduct the company for the next quarters in the virtual market. GMC is the only competition in Poland in which students compete with employees of companies in management. It has been organized since 1980 in the form of nationwide on-line competitions. The initiative has already gathered over half a million participants worldwide.

Center of Information Technology to offer new opportunities for talented IT specialists

2019-01-10

The Center of IT is starting a grant program financed by the Digital Poland Project Center, under which IT classes will be created for over 12,000, especially gifted primary and secondary school students. As part of the Information Science Center, 1,500 mentors, teachers, medallists of school competitions and finalists of IT competitions will create curricula and implement them during the activities of IT circles. The Center of Information Technology will facilitate the economic development and the creation of innovative solutions for the economy. The goal of the project is to build a permanent system of identifying IT talents. This will be served by creation of an advanced program for raising the knowledge and competences of people conducting classes. The project is supported by the Technical University of Lodz (Lead Partner of the Project), Wrocław, Gdańsk, and Warsaw Universities as well as the Krakow AGH University of Science and Technology.

Dr Henryka Bochniarz to hold a lecture at the University of Lodz on economic challenges in 2019

2019-01-15

On January 17, 2019, Dr Henryka Bochniarz will conduct a lecture entitled „A new global order or a new global mess?” at the Faculty of Economics and Sociology at the University of Lodz (UŁ). Dr Bochniarz will try to answer the following questions: What challenges await us in 2019? After years of economic growth, in 2019 the world is waiting to slow down. How will it affect the economic condition of the European Union and Poland? European economy: how to find a place in the new global economic order? Relative economic stability and peace in Europe are not enough for the European Union to gain a secure position in global disorder. Henryka Bochniarz completed her PhD in economics. She is the founder and the president of the Confedera-

tion Lewiatan and the vice-president of BUSINESS-EUROPE, the largest employer organization in the European Union.

Lower Silesian Cluster of Cybersecurity launched

2019-01-18

The Lower Silesian Cybersecurity Cluster inaugurated its activity. During the first meeting a cluster council was established and the plan of the most important actions in 2019 was also specified. The main areas of cooperation of the cluster members are: cyber defense - protection and security of the most important IT resources of institutions, business systems and control in industry; management, law and auditing - managing the safety team and techniques of risk analysis and conducting technical audits of the most important IT systems. The other topics of the cluster's activities are forensics - acquisition and analysis of evidence from digital systems in order to find traces and obtain evidence relevant to the security of information and information systems; electromagnetic safety; application security and penetration testing - identification and evaluation of potential attacks. More: <http://pwr.edu.pl/uczelnia/aktualnosci/dolnoslaski-klaster-cyberbezpieczenstwa-zainaugurowal-dzialalnosc-11079.html>

Wrocław University of Science and Technology to implement the project „Cybersecurity for the economy of the future”

2019-01-21

Wrocław University of Science and Technology received almost PLN 22 million from the National Center for Research and Development for the project „Cybersecurity for the economy of the future”. The Lower Silesian Security Cluster will be involved in its implementation. The goal of the project is m.in. improving the quality of cyber security education, which is to cover not only students but also research and teaching staff and management. The plans are to launch new and modernize already existing education programs, as well as to purchase tools and software. - High-quality semi-annual internships for

students will also be of key importance. As a university, we have financial resources to implement them, we must now find companies where they could acquire knowledge. In this respect, we count on cooperation with cluster members - says Prof. Tadeusz Więckowski, head of the Department of Telecommunications and Teleinformatics at the electronics department quoted on the university website.

Strategic partnership between the Wrocław University of Science and Technology and the Lower Silesia Voivodship

2019-01-21

Wrocław University of Science and Technology has signed a strategic agreement on cooperation with the local government of the province Lower Silesia. The document was signed by Prof. Cezary Madryas, rector of the Wrocław University of Science and Technology and Cezary Przybylski, marshal of the province Lower Silesia. The contract assumes cooperation in the area of self-government-science-innovation-business, joint activities for the sustainable development of the voivodship and universities, supporting the development of local government by transferring knowledge, improving the skills of local government officers and local and regional leaders, and initiating joint meetings and conferences for the development of Lower Silesia. - We are a voivodship with the wealth second rank in the country, just behind the Mazovian voivodship. We would not be able to achieve such success without the cooperation with universities, including the Wrocław University of Science and Technology - says the Marshal of the province. Lower Silesia. More: <http://pwr.edu.pl/uczelnia/aktualnosci/wspieramy-nauke-i-biznes-na-dolnym-slasku-11080.html>

Białystok high schools to run the Innovation + Incubator project

2019-01-22

Białystok University of Technology, Medical University of Białystok and the University of Białystok have conducted joint achievements in supporting the transfer of research and the results of scientific work to industry. The three largest universities in the Podlasie region have been implementing the Innovation + project for the past two years. The project allowed to finance 26 pre-implementation works, 4 new companies and 14 patent applications. The Institute of Innovation and Technology at the Białystok University of Technology (IIiT PB) was the leader of the project Incubator of Innovation+. Tomasz Stypulkowski, the president of the board of the Incubator of Innovation + as a tool, emphasized that it is indispensable in the commercializing of scientific projects. - We have proven, above all to ourselves, but also to the business and scientific society that it makes sense - he said.

Agreement on cooperation between the Lodz University of Technology and the Apator group

2019-01-22

Joint education of students, effective preparation of graduates to the requirements of the changing market, mutual exchange of knowledge, implementation PhD theses and joint research and development projects are the most important elements of the cooperation agreement signed between Lodz University of Technology and the Apator group Ltd. The contract is a part of the development strategy of the Lodz University of Technology, providing the cooperation of the university with the economic environment. This is a very important element of the evaluation of the university's activity under the new Higher Education Act, which can be translated into specific financial subsidies - emphasizes Prof. Sławomir Wiak, rector of the Lodz University of Technology. The Apator Group consists of 16 domestic and foreign entities. The organization implements

technologically advanced smart-class products and services on the market and systems for active management of energy media distribution networks.

Adam Mickiewicz University in Poznań signed a contract with Sonalake company

2019-01-22

The Adam Mickiewicz University in Poznan will cooperate with the Polish-Irish company Sonalake. The cooperation agreement was signed by the Vice-Rector for informatization and cooperation with the socio-economic environment, Prof. Marek Nawrocki and board member Sonalake, Sławomir Dębczyński. - Adam Mickiewicz University is the largest university in the region, and we are looking for new solutions due to the dynamic growth of employment and problems with finding IT specialists. Since we cannot hire trained employees with extensive experience, we have decided to invest in young people who are just entering the market. Our plans are to show them what and how we do and our transfer technological knowledge in a practical way - says Sławomir Dębczyński. The Sonalake is a Polish-Irish company offering advanced IT systems for telecommunications and software development services.

SENER Group to cooperate with the Warsaw University of Technology

2019-01-23

Warsaw University of Technology (PW) has signed a cooperation agreement with the SENER group. The agreement is part of the implementation of the Polish space strategy. It assumes enhancing the competences of specialists in the space sector and joint scientific and research work. - SENER Group has over 50 years of experience in the space industry. At the time our engineers designed over 275 devices for space. We are happy that we will be able to share our knowledge with students of Warsaw University of Technology and facilitate young people's career in this unique industry - said Sergio Reguero, CEO of SENER Polska. The assumptions of the contract concluded between PW and SENER include

consultation of curricula and studies to prepare students in the best possible way to start working in the space sector. Both parties will also jointly carry out scientific and research activities.

Kozminski Academy to hold a conference „In search of a better world”

2019-01-23

The Kozminski Academy in Warsaw, the Economic Sciences Committee of the Polish Academy of Sciences and the Polish Economic Society are organizing on January 28-29, 2019 a scientific conference „In search of a better world - economy and politics”. The first day of the event includes debates that will focus on the conditions and strategies for economic development, the future of globalization, fiscal and monetary policy, the methodology of modern economics and the Chinese development model. The main lecture will be given by Prof. Justin Yifu Lin, vice president of the World Bank in 2008-2012. The second day will include a discussion among leading Polish economists, co-authors of the book «Economics and Politics, Around Grzegorz W. Kolodko's Economic Theory» published by the PWN Scientific Publishers, edited by Prof. Elżbieta Mączyńska. The debate is to address the most important challenges of contemporary economics and politics, the condition and evolution of the European Union as well as the opportunities and threats facing the Polish economy.

Dual studies at the University of Warmia and Mazury with the Citi Handlowy bank

2019-01-24

The Faculty of Economic Sciences of the University of Warmia and Mazury (UWM) in Olsztyn launches dual studies in cooperation with the Citi Handlowy bank. Applications will be accepted until February 1, 2019. The cooperation of the Olsztyn university with the Citi Handlowy bank is not limited to this proposal. For several years, the bank with the Faculty of Economic Sciences have been conducting post-graduate studies, «Akademia na bank» and many joint workshops. Soon it will start accept applications for summer internships. At present, the University of Olsztyn conducts dual studies at three faculties: the Faculty of Food Sciences with the company Ogram and the faculties of Economic Sciences and Technical Sciences with the Michelin group.

Polish startups to cooperate with corporations

2019-01-28

According to the study of the Startup Poland Foundation over 80 percent Polish startups want to cooperate with corporations, and almost every third startup has already run such cooperation. Cooperation with startups allows corporations to obtain innovations necessary to achieve business goals or find solutions to technological problems. Poland has been launched government acceleration programs: ScaleUp, corporate accelerators, hub:raum T-Mobile, Orange Fab, which greatly influenced the development of this cooperation - says Katarzyna Wszola from the Campus of New Technology, vice-secretary of Global Shapers in Poland. The report of the Startup Poland Foundation says that as much as 24 percent startups gained financing from Polish startup accelerators. This is twice as much as in 2017. Warsaw University of Technology participates in a tripartite agreement for an energy-efficient economy

2019-01-28

Warsaw University of Technology has concluded a tripartite agreement with the city of Piastów and the Teraz Energia company for the development and commercialization of technological solutions supporting the building of an energy-efficient and environmentally friendly economy. The parties will jointly implement projects in the areas of energy efficiency, dispersed generation of RES (renewable energy sources) and electromobility. The intellectual, technological and capital potential of the signatories of the agreement will be used for achieving the goals of the initiative. The university will involve scientists and students to co-create innovative technologies ready for commercialization. Company Teraz Energia which is a part of the Innovation Incubator of the Warsaw University of Technology, develops technologies in the field of Intelligent Energy Networks, the Internet of Things and Virtual Power Plants.

Deputy Minister of Science Piotr Dardziński on the Łukasiewicz Research Network

2019-01-29

- We wanted the Łukasiewicz Network Research Institutes to focus on tasks that are not assigned to universities. To provide knowledge and technology to entrepreneurs, and not to do didactics and awarding degrees - said Piotr Dardziński, deputy minister of science and higher education. However, the Deputy Minister stressed that this does not mean that there will be no PhD students in Łukasiewicz Network or that there will be no academic career there. This will be possible in cooperation with universities or institutes of the Polish Academy of Sciences. The main tasks of the Network are independent implementation of research projects of great importance for the country's economic policy, supporting the commercialization of the results of

research and development works and coordinating the implementation of such projects by institutes focused in the Network.

Professor Piotr Dominiak becomes the laureate of the Jan Heweliusz Science Award

2019-01-31

Professor Piotr Dominiak, vice-rector of the Gdańsk University of Technology for internationalization and innovation, received the Scientific Award of the City of Gdańsk Jan Heweliusz in the category of humanities and social sciences. The award committee appreciated the outstanding scientific achievements of Prof. Dominiak in the field of economics of the small and medium enterprise sector and activities that led to the creation in Gdańsk of a thriving center of economic research. - Professor Piotr Dominiak, through the implementation of valuable and internationally-valued scientific research, as well as training of scientific staff and popularization of economic knowledge, significantly contributed to the increase in the importance and building prestige of the Gdańsk scientific center in the field of social sciences - said Prof. Jerzy Błazejowski in laudation in honor of the laureate during the awards ceremony.

Conference on industry 4.0 and the future of the manufacturing industry to be held in Szczecin

2019-01-31

Regional Center for Innovation and Technology Transfer of the West Pomeranian University of Technology in Szczecin invites participants on February 12 for the first in Szczecin seminar for small and medium-sized companies on industry 4.0 and the future of the manufacturing industry. The meeting is intended for owners, managers and managers of companies from the sector of small and medium-sized enterprises in the manufacturing and logistics industries and related industries. Its aim is to familiarize entrepreneurs with the possibilities of introducing solutions in the field of digitization, IT, robotics and automation in companies - that is entering the era of industry 4.0. The program of the event includes speeches of managerial staff from Poland and Germany as well as a discussion panel that will be conducted by specialists in the field of industry implementation 4.0. It will be a great opportunity to exchange experiences and talk with potential partners who have already implemented technology 4.0 in their companies.

Competition for the best PhD dissertation from Polish universities included in the Progress 3 Consortium

2019-02-05

The Progress 3 Consortium, which includes universities from Poland, the Czech Republic and Slovakia, organizes for the seventh competition for the best PhD thesis in member universities. The thematic categories of the competition include Economics, finance and management; Raw materials, energy and environmental protection; Health and applications in health care; Information technologies and Electrical Engineering and Competitiveness of the machine industry. In the current competition, PhD theses delivered from 1 January to 31 December 2018 or exceptionally in December 2017 can be presented. The Progress 3 consortium was estab-

lished to create links between universities located in the Czech regions: Moravian-Silesian and Žilina; in the Trenčín region and the Banská Bystrica region in Slovakia and in the Polish Silesia and Opolskie regions.

SUNRISE receives one million euros for research converting solar energy into fuel

2019-02-06

The SUNRISE consortium, including the University of Warsaw, Leiden University, University of Uppsala, the French Alternative Energies and Atomic Energy Commission, the Italian National Research Council, the European Energy Research Association, and Siemens AG, has received a grant from the European Commission for a project on the use of solar energy in circular economy. Researchers are to create a roadmap for research aimed at converting solar energy into fuel and other high-value chemical products. The researchers intend to be an alternative to energy based on fossil raw materials. The project is financed under the Horizon 2020 program. The consortium received an annual grant of EUR 1 million within the Future and Emerging Technologies-Coordination and Support Action call.

Poland joined the European Commission cluster of space robotics

2019-02-07

Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education visited the Kielce University of Technology in Kielce, where he was informed about Poland's accession to the European Space Industry Cluster - PERASPER. - Poland in the robotics is getting stronger and stronger. We also have an increasing demand for personnel in the space industry, as the result of growing potential of Polish companies and institutions and their participation in an increasing number of missions and space projects - said Deputy Prime Minister Jarosław Gowin. The task of the PERASPERA cluster is to develop a road map for the development of robotic technologies in Europe and to support the European

Commission in the organization of tenders for solutions in the field of robotics under the Horizon 2020 program and its next edition, Horizon Europe.

Samsung opens an incubator for startups at the Lublin University of Technology

2019-02-11

The official opening of the Samsung Incubator Laboratory took place at the Faculty of Electrical Engineering and Computer Science of the Lublin University of Technology on February 6, 2019. The ceremony was attended by Jadwiga Emilewicz, Minister of Entrepreneurship and Technology. The Lublin-based Samsung Incubator will specialize in cybersecurity and the Internet of Things projects. Individuals or teams who already have a business concept of their product or start-up can apply to the Incubator. They will be provided with work space, electronic equipment, substantive and technical assistance, financial support, training and workshops. The Samsung Incubator is located on the campus of the Lublin University of Technology. The entrepreneurs qualified for the program may use the laboratories equipped by Samsung.

Special-purpose company of the Gdańsk University of Technology started cooperation with Komputronik Biznes

2019-02-15

Excento Ltd - a special-purpose company of the Gdańsk University of Technology dealing with the commercialization of research results and supporting start-ups in building business relations - started cooperation with Komputronik Biznes, an integrator of IT solutions. As part of the e-Pionier project, partners will select and help solve several socio-economic problems, which will lead to the creation of start-ups from areas related to the IT industry. The task of Komputronik Biznes will be to give opinions and select the most interesting teams solving problems in areas such as information and communication technologies in security and medicine, digital communication, image processing and processing using neural networks, cloud solutions and the Internet of Things. The company provides selected support teams - from project creation to its implementation, commercialization and implementation of products based on MVP (Minimum Viable Product, i.e. initially ready to be marketed).

Polskie Gornictwo Naftowe i Gazownictwo invites participants to cooperate with startups from around the world

2019-02-22

Polskie Gornictwo Naftowe i Gazownictwo (PGNiG) has launched a program with the Startup Hub Poland Foundation, which has invited startups from around the world. The company offers financial help to innovators, and in return expects innovative solutions that will help it improve its operations. The event was attended by the Minister of Entrepreneurship and Technology Jadwiga Emilewicz. - We offer startups access to qualified personnel. It will be an innovative cooperation platform. PGNiG is a global company and needs innovative solutions, which

is why we invite startups from abroad. We offer a 50,000 euro award for the best startups. We also expect that solutions will bring us profits. We want to implement innovations primarily in the mining sector - said PGNiG president Piotr Woźniak.

EDUAL Conference - Dual studies in response to the needs of Industry 4.0

2019-02-26

The Silesian University of Technology and the Katowice Special Economic Zone invite participants to the 3rd EDUAL Conference on 4th March - Dual Studies in response to the needs of Industry 4.0. Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin confirmed his participation in the event at the Education and Congress Center of the Silesian University of Technology in Gliwice. The first conference was devoted to the concept of dual education and a comparison of several models existing at that time. The second meeting was attended by the rectors of all Polish technical universities. During that conference, the creation of the first Silesian Center of Industry Competence 4.0 was announced in Poland. This year's conference takes place at the beginning of the implementation of a large program devoted to dual education, announced for the first time by the National Center for Research and Development. The event is combined with the Engineering Job and Entrepreneurship Fair and will be an opportunity to exchange experiences and ideas regarding dual education.

Wroclaw University of Economics to cooperate with the Rawlplug SA company

2019-03-01

Wroclaw University of Economics has signed an agreement to cooperate with Rawlplug S.A. - a global leader in the development of innovative solutions in the field of fastening techniques, their design, production and distribution. Cooperation will be directed at the development of education programs, innovative and practical implementation of diploma theses, research and development activities, transfer of innovations and technologies as well as consolidation and strengthening of relations between the academic environment and the business environment - with particular emphasis on Lower Silesia. The company Rawlplug S.A. is the dominant company in the Rawlplug Capital Group, which has almost a century of tradition and an undisputed reputation in the fastening industry. The character of the brand is expressed by the slogan Trust & Innovation, meaning the search for the best technical solutions, supported by knowledge and many years of experience of its employees.

Engineers of the Cardinal Stefan Wyszyński University to work for industry

2019-03-05

The research team of the Department of Environmental and Bioeconomy Biotechnology of the University of Cardinal Stefan Wyszyński (UKSW) in Warsaw created a project for Jastrzębska Spółka Węglowa (JSW) as part of the implementation of the UKSW strategy for cooperation between universities and industry. Project under the name «Study on water and sewage analysis for JSW S.A. The «Knurów-Szczygłowice» Coal Mine in the aspect of EU directives in force and the provisions of the new Water Law Act» has been implemented under an agreement concluded by the Rector of UKSW and the JSW Management Board. The implementation of the research service included the development of the formal and legal status of the water and sewage management of the «Knurów-Szczygłowice» mine

in the aspect of adapting to the requirements of the new «Water Law» and the provisions of European Union directives.

Industrial Development Agency to implement the business incubation center of the European Space Agency

2019-03-06

The Industrial Development Agency (ARP) has signed a contract for the implementation of the European Space Agency Business Incubation Centers (ESA BIC). ARP acts as a project leader that joins three regional consortia. ESA BIC is a network of business incubation centers coordinated and co-financed by the European Space Agency. The purpose of creating incubators is to support startups that are at an early stage of development, whose operation is related to the use of space technologies. The consortium, led by ARP, also includes three institutions: Blue Dot Solutions Sp. z o.o. - leader of the Regional Consortium Gdańsk - Krakow, Fundacja Przedsiębiorczości Technologicznej - leader of the Regional Consortium Warsaw - Łódź - Wrocław and the Podkarpackie Voivodeship - leader of the Regional Consortium Rzeszów.

Deputy Prime Minister Gowin: The Łukasiewicz research network to boost innovation

2019-03-08

The Łukasiewicz research network will allow the research institutes to cooperate instead of competing with each other, – said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. Gowin emphasized that such a network of research institutes will give a real scientific basis for the development of the Polish economy and ensures a more innovative character. In his opinion, Poland is successful in terms of traditional industries, but it does worse in terms of innovative, cutting edge products. There are 111 research institutes in Poland. The Łukasiewicz's network include 37 of them. - We did not merge all the institutes. In fact, they are subjected to sixteen different ministries, and

most ministries believed that they should be under the control of those institutes that perform industry functions. We respect these decisions - stated the head of the Ministry of Science.

Startup Games conference to be held in Warsaw

2019-03-12

Until March 12, in Warsaw, the Startup Games conference is organized in the Google Campus Warsaw by the Polish Agency for Enterprise Development, the Ministry of Entrepreneurship and Technology and the Embassy of Great Britain in Warsaw. The main goal of the event is to develop the skills of the creators of start-ups in the field of presentation techniques. One of the elements of the conference is developing a game that simulates real market conditions. The 70 start-up creators and 25 investors are invited to take part in the conference. A special virtual game application should convince investors to invest as much as possible money in the presented idea. The start-up with the highest value at the end of the game wins the main prize, which is a weekly participation in London Tech Week.

Wrocław University of Technology holds the conference: Industry 4.0 is the future

2019-03-20

Scientists, entrepreneurs and representatives of public administration participated in the II Congress of Innovation at the Wrocław University of Science and Technology. The main topic of the discussion was industry 4.0. Industry 4.0 is the concept of integrating intelligent machines, systems and introducing changes in production processes to increase efficiency and flexibility. It applies not only to technology, but also to the new role of people in the industrial system. During the congress, four key conditions for effective implementation of Industry 4.0 in Poland were discussed: the environment, people, technology and the market. Understanding the relationship between them and their implementation is to build the competitive advantage of domestic enterprises. The Congress was organized by Wrocław University of Science and Technology; Legnica Special Economic Zone; Wałbrzych Special Economic Zone «INVEST-PARK» together with Key Novelty sp. z o.o. The Ministry of Entrepreneurship and Technology took the honorary patronage over the event.

University of Technology and Life Sciences in Bydgoszcz supports the tool industry

2019-03-20

The University of Technology and Life Sciences in Bydgoszcz (UTP) has started the implementation of the Instrument Valley's project. Its aim is to support entrepreneurs, promote industry education as well as promote the region as a strong center of the tool industry. The agreement on this matter was signed during the Innoform fair in Bydgoszcz by the UTP Rector, voivodship marshal, the mayor of Bydgoszcz, the head of the Bydgoszcz powiat, the rector of the University, the chairman of the board of the Bydgoszcz Industrial Cluster and the Kujawsko-Pomorski Curator of Education. The aim of the project is to care for the development of the tool and plastics processing industry, to support industry education

at all stages of education and to promote the Instrument Valley's brand and the Innoform fair. In Bydgoszcz, there are over 190 enterprises dealing in plastics processing and about 30 tool centers. They employ a total of over 4,000 people.

InnovFin agreement PKO Leasing increases the innovative potential of the Polish economy

2019-03-22

The InnovFin PKO Leasing will provide innovative entrepreneurs with nearly PLN 257 million in preferential leasing and loans within 2 years. The InnovFin is a new guarantee contract, concluded under the Horizon 2020 program, by the European Investment Fund and PKO Leasing S.A. Polish financial institutions have been successful in implementing EU financial instruments. One of examples is the PKO Leasing agreement launched in 2018, regarding the COSME program, constituting the largest guarantee transaction concluded by the European Investment Fund in Poland. The new PKO Leasing agreement regarding the InnovFin guarantee, implemented under the European Fund for Strategic Investments, is of particular importance. It increases the innovative potential of the Polish economy and is a response to one of the most important challenges of economic growth, being part of the government's Responsible Development Strategy - commented Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education.

Vocational colleges and the Industrial Development Agency signs cooperation agreement

2019-03-26

During the first Conference of Rectors of Public Vocational Schools in Płock the school representatives signed a contract, which completely changes the relations between vocational schools and industry. Thanks to the agreement, vocational schools will be able to establish close cooperation with the Industrial Development Agency (ARP). In accord-

ance with the provisions of the contract, the ARP will present the enterprises' demand for graduates of specific majors and on this basis, vocational schools will be able to better shape their scientific offer. - From now on, vocational schools will develop their educational program in close cooperation with companies, the industry included in the Industrial Development Agency, but I am convinced that this agreement will expand to other areas of the Polish economy - said Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin.

Startup Art program is launched

2019-03-27

Students can apply for the 6th Startup Art program. It gives the opportunity to test various ideas to students and graduates of art academies. Applications will be accepted until April 2. The organizers of the Startup Art program are the city of Warsaw and Startup Academy. The event will include substantive lectures, as well as two debates - on the subject of various business calculations in the world of artists and whether it is worth building a personal brand or a company's brand first. The next part of the program is the weekend Startup Shaker, which will take place on 5-7 April. The event is created in the form of a hackathon, when participants work on their ideas for creative startups. Next, the jury will select the top 10 teams for further acceleration. More: <https://startupart.pl/startup-shaker/>

VIII Krakow Conference on Financial Mathematics

2019-04-01

On 5-7 April 2019, the AGH University of Science and Technology in Krakow is holding the VIII Krakow Conference on Financial Mathematics. The event is organized by the Scientific Modeling of Finance Scientific Group operating at the Faculty of Applied Mathematics. The main goal of the conference is to expand knowledge in the field of the latest methods and mathematical models used on the financial market. The topics related to investments, the valuation of financial instruments and the implementation of mathematical models will be discussed. The conference is held mainly for students, which is why the organizers stressed the practical application of theoretical scientific issues in the finances. It will include workshops to see how to implement mathematical models in practice.

Gowin: It's time to focus on investments

2019-04-02

- We need huge investments in infrastructure, in energy, in education, in science, in higher education. In order to make these investments possible, we must really simplify economic law, remove barriers, invest in modern technologies - said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. The head of the Ministry of Science pointed out that Poland as a state and society should concentrate on the second development engine. In his opinion, apart from consumption, Poland needs investments and therefore there is an urgent to create conditions for much faster investments than in recent years. In this context, Deputy Prime Minister Gowin mentioned the Łukasiewicz Network. - I'm glad that this network is launched, because it will be the third largest group of research centres in Europe. And the largest group of scientists. These institutes rather start cooperating e.g. on the commercialization of graphene, instead of senselessly compete with each other and duplicate their programs, - added Gowin.

Cooperation agreement between Gdansk University of Technology and Grupa LOTOS

2019-04-02

Grupa LOTOS and Gdańsk University of Technology have signed a cooperation agreement. The signatories will work together on research and development projects in the area of low-emission transport and energy storage. The plan is to build devices that will be able to be implemented in the industry of lithium-ion and hydrogen batteries. Scientists from the university will prepare transducers, batteries and energy storage. The university will provide laboratories and qualified staff, LOTOS will guarantee the purchase of equipment and it will deal with issues related to technology and license. The University and Grupa LOTOS have been cooperating for many years - employees of the company conduct lectures and exercises at the university, and students participate in classes at the refinery. The new LOTOS Lab company will coordinate projects related to new methods of energy balancing, new batteries and cells as well as modern methods of energy storage and transport. More: https://pg.edu.pl/aktualnosci/-/asset_publisher/hWGncmoQv7K0/content/politechnika-gdanska-i-lotos-czyli-naukowo-biznesowa-wspolpraca

Prime Minister Morawiecki: Polish science to be the driving force of economy development in Poland

2019-04-04

- I believe that Polish science can be the most powerful driving force for the development of the Polish economy. I believe that as an old Polish proverb says „science and work make people rich”, but I strongly believe that thanks to the latest technological solutions we will be able to achieve what we have assumed in the plan for responsible development, i.e. industry will be saturated with the results of our scientists - said Prime Minister Mateusz Morawiecki during the inauguration of the Łukasiewicz Research Network. Drawing attention to the Network, the Prime Minister added that «Polish science is

reaching the global level and it also shows Polish productivity, which is an invisible and extremely important parameter, is growing more and more.» The Łukasiewicz Research Network was launched on April 1, 2019. 38 research institutes were incorporated into the network.

Researcher of the University of Economics in Poznan joins the Council of the Foundation Platform for the Future of Industry

2019-04-05

Professor Witold Abramowicz, a scientist at the University of Economics in Poznan, was appointed to the Council of the Foundation Platform for the Future of Industry set up by the Ministry of Entrepreneurship and Technology. The Council is to help Polish entrepreneurs adapt to the requirements of the industrial era 4.0. It aims to support their digital transformation in terms of processes, products and business models, using the latest developments in the field of automation, artificial intelligence, ICT and human-machine communication. Witold Abramowicz is a professor of economics, a habilitated doctor of mathematical sciences and an automation engineer. He worked for over a dozen years at Swiss and German universities. He has experience of working not only at universities, but also in consulting companies and industry. He is the head of the Department of Economic Informatics at the University of Economics in Poznan.

Researcher of the University of Economics in Katowice receives Beta 2019 award for a scientific monograph

2019-04-05

Dr Monika Foltyn-Zarychta from the Department of Investment and Real Estate of the University of Economics in Katowice received the Beta 2019 Award for achievements in the field of financial management, for the book „Evaluation of intergenerational investments - ethical criteria in economic evaluation of investment projects' effectiveness”. The publication discusses the issue of assessing the effectiveness of intergenerational investments. Investment projects are increasingly reaching the distant future, and often, as in the case of investments counteracting climate change, their period of impact is hundreds of years. Then the effects of today's activities will mainly concern unborn people yet. The book proposes a set of answers to the numerous shortcomings of the instruments used to assess the effectiveness of such investments. The Beta is an honorary prize awarded during the Conference on Financial Management organized by Prof. Dariusz Zarzecki from the University of Szczecin. More: https://www.ue.katowice.pl/no_cache/pracownicy/nauka-i-biznes/article/nagroda-beta-2019-za-monografie-naukowa.html

Piotr Dardziński: We want to provide technology to entrepreneurs

2019-04-08

- Without technologies that create a competitive advantage in the global economy, entrepreneurs will lose. And we want to provide these technologies – said Piotr Dardziński, President of the Łukasiewicz Research Network. Piotr Dardziński explained that the Łukasiewicz Network was created to provide entrepreneurs with easier access to Polish scientists. He added that scientists in research institutes do not teach, do not work at universities, but only conduct research. In the case of the Network's institutes, they should help entrepreneurs. Dardziński noted that the Network includes various entities dealing,

for example, with the leather, wood and cosmic industries. He explained that although some centers have traditional names, such as the Foundry Institute, but they deal with modern technologies.

Gdańsk universities receive over PLN 1 million for implementations under the Innovation Incubator 2.0 program

2019-04-12

Consortium composed of Gdańsk University of Technology (PG), University of Gdańsk, Medical University of Gdańsk and special purpose company PG Excento obtained PLN 1.1 million within the competition under the Innovation Incubator 2.0 program. The consortium will conduct pre-implementation projects, promote scientific achievements of Pomeranian scientists and strengthen cooperation between the scientific environment and the business environment. Three Pomeranian universities have planned meetings with business representatives in order to present the technological offer, results of scientific research or research services, and participate in science and business exhibitions and exhibitions. The consortium is one of the 24 applicants for this year's competition and it received the highest ratings of the recommending team. First startups in the Samsung Incubator in Lublin

2019-04-15

The Samsung Incubator in Lublin has finished the application period. The Incubator for young entrepreneurs from Eastern Poland was launched in February 2019 and it is aimed at supporting innovative startups operating in digital security. The partners of the Lublin investment are NASK, Lublin University of Technology and the City of Lublin. In the Lublin Incubator, four startups will develop their ideas in the closest future. All new concepts refer to the subject of cybersecurity and provide solutions that have a real impact on improving the functioning of

society in digital reality. Startup RAW will work on a secure smartphone constructed on the basis of the Samsung KNOX platform along with a dedicated communicator. Billy Plus is a startup operating in the field of safe education. The founders have created an application for learning foreign languages by children and parents. Another startup is CyberStudio. The company offers a service created for companies that do not have IT security management specialists. To provide more security cybersecurity for kids, Real Buddy will prepare a new generation application that monitors communication in search of sensitive content.

School for Industry Leaders 4.0 and the Science and Research Center to be launched in Radom

2019-04-17

- Another bridge joining business and science was set up in Radom,- said Deputy Prime Minister Jarosław Gowin, during the ceremony of signing a letter of intent between the University of Technology and Humanities (UTH) in Radom and the Foundation of the Platform for Future Industry. Two modern facilities will be created for the purposes of UTH: School for Industry Leaders 4.0 and the Science and Research Center. School of Industry Leaders 4.0 will start operating this year. This is the project of the Ministry of Enterprise and Technology, and it aims to support Polish companies in adapting to the requirements of the industrial era 4.0. The Science and Research Center for the UTH medical faculty will be created in the premises of an old sports hall in Radom. The investment costs over PLN 32 million. The facility will include magnetic resonance, computed tomography, EOS, ultrasonography and educational rooms.

Rzeszów University of Technology joins Stalowa Wola Agreement

2019-04-18

In the hall of the Faculty of Mechanics and Technology of the Rzeszów University of Technology in Stalowa Wola, representatives of the Rzeszów university, self-government of the Podkarpackie Voivodeship and Huta Stalowa Wola (HSW) SA, local governments of the city and Stalowa Wola County signed the Stalowa Wola Agreement. The essence of the agreement is «support for the process of ensuring long-term conditions for the stable development of the Stalowa Wola economic area, including HSW SA and all companies and enterprises located in the region of Stalowa Wola, Tarnobrzeg, Mielec, Nowa Dęba, Niska, Gorzyce and Leżajsk». The aim of this initiative is «to create the best conditions for stable social and economic development of cities and regions from the area of the historic Central Industrial District». Signatories of the agreement are planning extension of the didactic base, scientific and research infrastructure, teleinformatics and laboratory scientific and research base of Rzeszów University of Technology in Stalowa Wola.

State Higher Vocational School in Tarnów to organize a conference on entrepreneurship in the 21st century

2019-04-23

The Institute of Administration and Economics of the State Higher Vocational School (PWSZ) in Tarnów and the Student Science Club (SKN) The Manager invite participants to the 8th SKN scientific conference. The motto of this year's event is Entrepreneurship in the 21st Century. The conference will take place on April 24, 2019. The purpose of the meeting is to exchange views, present experiences and spread knowledge about the development of the sector of small and medium enterprises. - The conference is addressed to academic teachers, representatives of local government and government administration cooperating with vocational colleges,

practitioners, and above all to students associated in scientific clubs and all persons interested in the development of the sector of small and medium enterprises - announces Barbara Partyńska-Brzegowy, coordinator for academic entrepreneurship.

8th „Mozart” program to start in Wrocław

2019-04-24

The Wrocław Academic Center invites participants to the 8th Municipal Program for Supporting the Partnership of Higher Education and Science and the Business Activity Sector „Mozart”. The deadline for sending applications to the program is 1 July. The program invites scientists with at least a PhD degree employed at a university or at an institute as a researcher or a teacher or an entrepreneur operating in Wrocław and employing workers in this city. The City of Wrocław offers this program to active scientists and entrepreneurs who have an idea for a joint project. Thanks to this cooperation, the entrepreneur uses the extensive and specialist knowledge of the researcher for the development of the company, and the scientist acquired the business knowledge he uses in education, research and development. More: <https://wca.wroc.pl/mozart>

Gowin: We have to spend much more on learning to make profits

2019-04-25

- Several conditions must be met to gain from scientific research and to translate it into modern technologies. First of all, it is necessary to have high expenditure on learning. Secondly, there must be a demand on innovation from the economy - said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. Deputy Prime Minister Gowin emphasized, that the government introduced all solutions that favor an innovative economy. He mentioned about two innovation laws, prepared by the Ministry of Science in close cooperation with the Ministry of Entrepreneurship and Finance, and the Act on implementation doctrines, which opened a new economy way focused on close cooperation with business. Jarosław Gowin

also reminded that huge funds were mobilized for co-financing startups, at the very beginning of the term by the then deputy prime minister Morawiecki. He added to this the creation of the Łukasiewicz research network, which is focused on the commercialization of the research results of several dozens of scientific institutes. More: <https://opinie.wp.pl/jaroslaw-gowin-panstwo-ktore-nie-inwestuje-w-swój-elity-intelektualne-bedzie-panstwem-teoretycznym-wywiad-6373161635583617a>

Graduates of the University of Lodz awarded for the best macroeconomic analyzes

2019-04-26

Tomasz Kośka, Karol Rybaczuk and Michał Zygmunt, graduates of the University of Lodz (UŁ) creating the Prognozy-gospodarki.pl team, won in the 11th competition for the best macroeconomic analytics organized by the journals Parkiet and Rzeczpospolita. - We have participated in this competition since 2012, as a member of the Student Scientific Society for Economic Analysis and Forecasting «4Future» at the Faculty of Economics and Sociology of the University of Lodz.- explains Karol Rybaczuk.-In 2016, after completing studies we decided to continue our participation. The competition for the best macroeconomic analytics has been organized since 2007. The competition is open to all who want to test their analytical skills: economists from financial institutions and research centers, independent experts, as well as scholars and students.

Warsaw University of Technology becomes the leader of the Baltic Large-Scale Computing consortium

2019-04-26

Researchers, business representatives and technology parks from eight countries of the Baltic Sea Region are implementing the BalticLSC (Baltic Large-Scale Computing) project, which aims to improve the efficiency of using large computing powers. - Our goal is to support innovative activities, mainly of small and medium enterprises, but also of large companies to use the computing surpluses - says Dr Eng. Michał Śmiałek from the Faculty of Electrical Engineering, coordinator of the BalticLSC consortium. According to the PRACE (Partnership for Advanced Computing in Europe) association report, the European Union loses 2-3% of GDP annually due to delays in the application of modern computational methods. In the Baltic States, these indicators are even worse. Thanks to BalticLSC, the situation is to improve.

University of Economics in Wrocław to hold a conference „Shaping competences in the digital economy”

2019-04-26

The University of Economics in Wrocław invites participants on May 8 to the conference „Shaping competencies in the digital economy” implemented under the Open Eyes Economy on Tour 2019 program. The university is a co-organizer of the event. The conference will be devoted to the shaping of competences in the digital economy and the challenges posed by the current situation on the labor market. Digital transformation of enterprises brings enormous challenges for enterprises, transforming their business models, eliminating old professions and shaping new ones, as well as for universities, leading to building new competence profiles for future employees. The conference is addressed to research and teaching staff, students, representatives of labor market institutions and entities dealing with education, as well as to all people interested in how to adapt to the changes.

State Higher Vocational School in Nysa to cooperate with the Opole Center for Economic Development

2019-04-29

The State Higher Vocational School in Nysa (PWSZ) and Opole Center for Economic Development signed an agreement on supporting entrepreneurship, innovation and cooperation in defining strategic research programs. The signatories of the agreement will cooperate in defining strategic development programs recognized as priorities for the development of the Opolskie Voivodeship and supporting and coordinating activities aimed at facilitating the transfer of research results and development works to the economy. The agreement also assumes the use of expert potential and joint support of entrepreneurship and innovation by strengthening regional business environment institutions, scientific-research units and supporting entrepreneurs in developing the ability to create and use solutions based on research results.

Medical University of Białystok launched the Research Potential Map

2019-05-02

Research Potential Map is one of the first university portal in the country where scientists, experts, interesting ideas for commercialization, modern equipment and research equipment on individual facilities can be found in one place. The UMB Research Potential Map contains: research offer (scientific cooperation), expert database (scientific cooperation or cooperation with entrepreneurs), services (commercial offer that could be used to cooperate with entrepreneurs), research centers and their potential, inventory of equipment, information on patents and licenses, forum information exchange. The portal was created as part of the Incubator of Innovation + project. More: <https://www.umb.edu.pl/mpb>

Engineers to become leaders of change

2019-05-13

According to the survey of Smart Industry Poland 2019, commissioned by Siemens and the Ministry of Enterprise and Technology in April this year the vast majority of Polish engineers are of the opinion that the technical staff should assume responsibility of the leader of changes in manufacturing enterprises. According to the engineers of small and medium-sized industrial enterprises, it is their profession that will gain in importance and provides a change supporting the competitiveness of their company on the market. Most of the engineers employed in the surveyed manufacturing companies in the sector of small and medium-sized enterprises can boast a masters degree, about 30% have completed regular studies. Over 50% of engineers consider the current education system to be unadapted to the requirements of innovative industry. Engineers are aware of the changes taking place within their profession and are heading towards the role of the leader of changes in the organization.

Kozminski Academy to hold Open days for postgraduate Chinese Business studies

2019-05-16

On May 18, 2019, the Kozminski Academy in Warsaw invites participants to Open Days for postgraduate studies in Chinese Business. The meeting include three debates on the role of Poland on the New Silk Road and possible scenarios from perspectives of business, railways and experts. It will also be an opportunity for the participants of the event to learn more about the studies, meet lecturers and participants of the current postgraduate studies in Chinese Business as well as graduates. The event will start at 12.30 at the Kozminski Academy in Warsaw at ul. Jagiellońska 57.

Young scientists to present Innovative ideas at the conference Science -Startup -Industry

2019-05-20

On 22-23 May 2019 years at the Academy of Mining and Metallurgy in Krakow will host the fifth conference „Innovative ideas of young researchers: -Startup - Science- Industry „ organized by the Institute „Highway of Technology and Innovation“. The event will take place as part of the Impact'19 congress. The conference is addressed to young researchers, graduate students, students and representatives of startups. Participants will be able to present papers on innovative product, process, social, organizational, and institutional marketing. The aim of the conference is to promote innovative solutions, which are created largely by young scientists and students. Organizers hope that the presentation of innovative solutions and promoting them among the partners of the Institute of Highway Technology and Innovation and industry will allow their faster implementation.

University of Warsaw to launch a new spin-off company

2019-05-22

A new spin-off company Project42 was launched at the University of Warsaw (UW) to deal with the creation of advanced analytical tools. Its founders are PhD students: Maciej Ciemny from the Faculty of Physics of the University of Warsaw and Kamil Mieszkowski from the Faculty of Management at the University of Warsaw. Together with their team, they are working on solutions that can improve the functioning of enterprises and institutions. The main operation of the new UW spin-off company is analyzing large amounts of data. Project42 creates algorithms, software and analytical services that enable enterprises to better use their information and data bases. Solutions created by Project42 use data science technology and machine learning.

Silesian Voivodeship self-government to hold congress „Silesian Academy 2020+. Science and the challenges of the region“

2019-05-23

Indication of key challenges in the development of the region in the next years is the main topic of the congress organized by the Silesian Voivodeship self-government. The meeting, which will be attended by representatives of scientific communities and business, will be held on May 24 in Katowice. The organizers of the Congress are to define the role and activity of scientific units in building an innovative and competitive economy and improving the quality of life of the region's inhabitants. Two panel discussions are included in the agenda of the meeting. The first one will be devoted to medicine, the second to solutions related to the so-called green economy. In addition to thematic panels, a presentation of best practices is also provided. The results will be used in the work on updating the Silesian Voivodeship Development Strategy «Silesian 2020 +».

Polish science and innovation to receive over PLN 21 billion from European

2019-05-24

The Ministry of Science and Higher Education and its executive agencies: National Center for Research and Development, National Academic Exchange Agency, Information Processing Center - National Research Institute and National Contact Point for European Union Research Programs in the current perspective (2014-2020) will allocate in total over PLN 21 billion from European funds to support the transfer of knowledge from science to the economy. - While creating a strategy for Polish science, we accepted as the basic assumption that innovations are for people. Inventions are created to improve not only GDP level, but above all the everyday life of Poles, especially in such areas as health, safety or education. In order to achieve such goals, we must invest in brave people and their visionary projects - said Jarosław Gowin, deputy prime minister, minister of science and higher education.

Research Network Łukasiewicz to develop the Polish economy

2019-05-27

The Łukasiewicz Research Network is to ensure a more effective cooperation of research institutions-emphasized Jadwiga Emilewicz, the Minister of Entrepreneurship and Technology- Science is to be an important factor of the development of the Polish economy. - The Polish Research Network Łukasiewicz is the third in Europe in terms of potential, after German and French networks. With regard to European networks, the best model is not competing but cooperation. The French, Germans, Finns are really great at using European funds. And if someone wonders why we need such a research network, the third largest in Europe, it is worth remembering that in the next EU perspective, the European Commission will spend EUR 100 billion on research and development - reminded Piotr Dardziński, president of the Łukasiewicz Research Network.

University of Wrocław joins the consortium of the Ruralization project

2019-05-28

Scientists of the University of Wrocław Dr Sylwia Dołzbłasz, Dr Krzysztof Janc and Dr Andrzej Raczyk received funding under the Horizon 2020 grant for the project „RURALIZATION The opening of rural areas to renew rural generations, jobs and farms“. The aim of the project, entirely funded by the European Union, is to broaden knowledge and support policy-making in response to the challenges that rural areas face today in Europe in the context of economic, social and territorial cohesion. The project's budget is 6 million euros. The research is to support rural renewal processes - especially in the field of identification of innovative instruments and strategies facilitating generational renewal in agriculture and rural development, as well as access to land. The consortium implementing the project includes universities, research institutes, non-governmental organizations and small and medium-sized enterprises from 12 European countries. More: <https://uni.wroc.pl/dofinansowanie-projektu-ruralization/>

Support for the best video game projects

2019-05-29

ARP Games, a company founded by the Industrial Development Agency and SPIN US- a special purpose company of the University of Silesia and the Powiat Cieszyński offer financial and substantive support of the best original projects in the video game industry. The support will continue until June 16. ARP Games does not only look for young talents, but above all it helps them creatively develop ideas. So far, four acceleration programs have been implemented, in which half of the qualified projects were accepted into the investment phase. Six new companies working on computer games were created, and more than 1.3 million PLN was allocated to supporting the teams. The ARP Games accelerator operates in Cieszyn. Its location was determined by the neighbourhood of the Artistic Department of the University of Silesia, which has qualified staff and the necessary technological infrastructure. More: <https://arpgames.pl/pl/competition/konkurs-20162017/>

BNP Paribas Bank to launch competition for the best master's thesis on agricultural development

2019-05-30

On the occasion of the 100th anniversary, the BNP Paribas Bank prepared the Jubilee Competition for the best master's or BA theses on the development of agriculture and agro-food processing. The graduates of all universities from 2018 or in 2019 may submit their works to the Competition. The issues must be related to the development of agribusiness, i.e. progress, innovation and development of farms, rural areas and other activities that bring added value to rural society, the natural environment, farms and agro-food industry. Competition works should be submitted by 20 September 2019. The Competition will be settled by October 15, 2019. Three winners of the Competition will receive financial prizes with a total value of PLN 10,000. More: https://bnpparibas.pl/100lattradycji/utills/pdf/REGULAMIN_KONKURS_PRACA_MGR.pdf

Researchers of the Nicolaus Copernicus University in Torun joins a consortium for the economy of tomorrow

2019-05-31

A group of scientists from the Faculty of Chemistry at the Nicolaus Copernicus University in Toruń (UMK) joined the consortium implementing the project: „Advanced biocomposites for tomorrow's BIOG-NET economy”. The subject of the research is the use of microorganisms to search for innovative solutions in the design and manufacture of new, mixed nanocomposite, porous inorganic materials (metal-protein type). The results will allow for a better understanding of the mechanisms of biological synthesis of inorganic matter by selected microorganisms and the development of biosynthesis methods for nanocomposite materials. The consortium consists of UMK, University of Warmia and Mazury in Olsztyn, Warsaw University of Technology, Białystok University of Technology, University of Adam Mickiewicz University in Poznan and the University of Szczecin. Industrial partners are business entities: Toruń Zakłady Materiałów Opatrunkowych S.A., Sygnis sp. Z o.o. and AdvaChemLab sp. o.o. More: <https://www.umk.pl/wiadomosci/?id=26154>

Researcher of the University of Economics in Poznan receives the Award of the President of the Bank Guarantee Fund

2019-06-03

Dr Marcin Flotyński from the Department of Monetary Policy and Financial Markets of the University of Economics in Poznań received the Award of the President of the Management Board of the Bank Guarantee Fund for the best doctoral thesis. The jury emphasized the high level of the laureate's dissertation «The impact of macro-prudential regulation of long-term liquidity on the stability of commercial banks in Poland». The aim of the competition was to select the best doctoral dissertations in the field of deposit guarantee schemes, restructuring, orderly

liquidation of financial institutions, regulatory infrastructure of the financial system, issues related to financial security of banks and financial stability.

Kozminski Academy in Warsaw to organize the conference on electromobility

2019-06-07

Mercedes-Benz Poland and Kozminski Academy (ALK) in Warsaw in cooperation with the Polish Alternative Fuels Association are inviting participants to a conference dedicated to electromobility, which will take place on June 11, 2019 in the Main Auditorium of ALK. The conference is addressed to people who want to update their knowledge about the ongoing electrification processes. The program includes speeches of representatives of the Ministry of Enterprise and Technology, Ministry of Energy, Mercedes-Benz Poland, Polish Alternative Fuels Association, VSB Energie Renewable Poland, Tauron Magenta, Panek Carsharing. During the conference, the issues of the electromobile future and the development of smart cities will be presented. More: <https://www.kozminski.edu.pl/mercedes-benz/>

Poznan scientist scientific becomes the director of AIELF

2019-06-10

Professor Krzysztof Malaga from the University of Economics in Poznań UEP was elected new scientific director of the L'Association Internationale des Economistes de Langue Française (AIELF). For the first time in the 94-year history of the association, this position was offered to a Pole. The elections took place during the AIELF congress in Santiago de Chile. The duties of the new scientific director will include performing the function of editor-in-chief, issued since 2016, Revue Internationale des Economistes de Langue Française. AIELF is an association founded in the interwar period. It creates, extends and strengthens academic and cultural ties to promote economics in its human, institutional and formal aspects. It contributes to promoting research and raising the level of education, and encouraging young people to invest.

Project of the University of Gdańsk co-financed from the Interreg South Baltic Program

2019-06-10

The project „AquaVIP - a career development platform in aquaculture in the South Baltic region” implemented by a consortium of the University of Gdańsk, the University of Rostock and the University and Science and Technology Park in Klaipeda received over one million euros from the Interreg South Baltic Program. The main objective of the project is to strengthen the labor market in the aquaculture sector by developing cross-border training, building a network of contacts and strengthening business skills. The result will be a career development offer for students and young professionals, a vocational training network for professionals and a virtual platform with e-learning modules. The consortium's activities include dissemination of the image of modern aquaculture as a currently available source of protein production, creating a market for both farm products and modern technologies as well as professional education in the countries of the South Baltic region.

Norwegian Funds to offer over 129 million euros for the support of scientific research

2019-06-11

Minister of Investment and Development Jerzy Kwieciński and Olav Myklebust, Ambassador of the Kingdom of Norway in Poland signed an agreement on the implementation of the „Research” program under the 3rd Norwegian and EEA Funds. The «Research» program is an opportunity to strengthen the transfer of research results to the economy, and thus to make it more competitive and dynamic - said Minister Jerzy Kwieciński. The program aims to improve the results of Polish scientific research. It will be implemented within 2 areas: support of basic research (40% of program allocation), which will be managed by the National Science Center and support of application research (60% of program allocation), which will be managed by the National Center for Research and Development. Over EUR

129 million will be allocated for the support of scientific research under the 3rd Norwegian and EEA Funds.

Researcher of the University of Wrocław becomes a laureate of the Polish Intellectual Development Award

2019-06-11

Dr Joanna Błaszczak, head of the Experimental Studies Laboratory of the University of Wrocław, became the laureate of the Polish Intelligent Development Award 2019 in the category - Future Scientist. The initiator and organizer of the prize is the Intelligent Development Center. The media partners are journal «Rzecz o Innowacji i Inwestycjach» and the «goPL» program. The main partner is the Silesian Center for Business Ethics and Sustainable Development at the Silesian University of Technology. The honorary patron is the President of the Patent Office of the Republic of Poland, Dr Alicja Adamczak. From 2016, the winners are organizations and people who are oriented towards the future in their activities. All projects and investments implemented by the winners that are characterized by innovation and are the best examples of sustainable and intelligent development.

State High School of Applied Sciences in Tarnów to hold 1st Science-Economy-Business Forum

2019-06-12

About 250 people, including students, scientists and representatives of business and the economy took part in the 1st Science-Economy-Business Forum organized by the State Higher Vocational School (PWSZ) in Tarnów. -Only through cooperation, we are able to create synergy for the economically needs of our region. I believe that the invitation we have issued to our current and future partners will result in specific solutions beneficial for students and their future employers - said the opening of the

forum, the Rector of the PWSZ, Prof. Eng. Jadwiga Laska. The discussions, which took place on June 6-7, were divided in three panel groups: Students «competences and employers» expectations, Synergy of science and business - development perspectives and Practical education.

Industrial Development Agency involved in space robotics

2019-06-17

The Industrial Development Agency is engaging its capital in PIAP Space. According to the signed agreement, the IDA will subscribe a new issue of shares in the PIAP Space capital for over PLN 3 million. The Industrial Research Institute of Automation and Measurements PIAP belonging to the Łukasiewicz Research Network remains the majority shareholder. The PIAP Institute is one of the market leaders in the field of robotics for the defense sector in Europe. The involvement of ARP is a model example of cooperation between state institutions for the development of Polish technological solutions. The creation of PIAP Space allowed to develop a more active and commercial approach to the implemented projects. Space robotics is one of the Polish technological niches and specializations on the space market - said Dariusz Śliwowski, vice president of the Industrial Development Agency.

Professor Moncarz from Stanford University delivers lecture at the Krakow University of Technology

2019-06-17

On Friday, 14 June 2019, the guest of the Krakow University of Technology (PK) was Prof. Piotr Moncarz from Stanford University, specialist in the field of materials engineering, new technologies and international industry. Professor Moncarz gave a lecture entitled „Engineer and the Digital Revolution. Innovation = Science & Technology + Business „. Professor Moncarz is the director of the Top 500 Innovators program, as well as a co-founder and chairman of the US-Polish Trade Council, an organization supporting cooperation between the United States and Poland. He sits in the council of the National Center for Research and Development, he is a member of the Polish Academy of Sciences, the Russian Academy of Technical Sciences, in 2017 he was elected a member of the American National Academy of Engineering (NAE). In his lecture, Prof. Moncarz raised the subject of educating future engineers and commercializing research results.

Polish Development Fund establishes Central House of Technology

2019-06-17

The Polish Development Fund (PFR) has created its own educational center. The Central House of Technology was created on the area of approximately 1000 sq m in the former Smyk department store in Warsaw. The center is managed by the Foundation for the Polish Development Fund in partnership with Daftcode, Skriware, Kids Code Fun, and the Coding Masters Association. Paweł Borys, PFR president said that Central House of Technology will be a space where in the interactive and interdisciplinary way everybody will be able to gain knowledge to develop the competencies needed to build the future economy. Research shows that representatives of generations «Y» and «Z» up to 40 years of age can even change workplace tenfold. Many professions

are disappearing and new ones are appearing. This requires a change in approach to education.

Białystok Science and Technology Park to launch „Hub of Talents 2”

2019-06-18

Białystok Science and Technology Park is launching a special platform for start ups „Hub of Talents 2”. The platform is a program to support people with innovative business ideas. It offers specialized services, comprehensive mentoring and accounting, tax and legal services for a new company. The startup will be incubated in accordance with an individually tailored development path by a dedicated incubation manager. After the positive completion of the incubation process and obtaining the recommendation, start ups can apply for 800 thousand PLN of co-financing for business development as part of the Start-up Development in Eastern Poland competition. The project's partner is the Białystok University of Technology.

Naval Academy in Gdynia hosts the 2nd Forum Vision of Development

2019-06-27

The Naval Academy in Gdynia will host the 2nd Forum Vision of Development. 24 and 25 June the forum will include one hundred debates commemorating the century of regaining independence. 5,000 participants and 500 authorities in over a dozen thematic blocks will visit the forum. The Forum is organized under the honorary patronage of the Prime Minister Mateusz Morawiecki, focuses on the most important challenges and issues currently facing the domestic economy: innovation, eco-mobility, energy, automation of enterprises, corporate social responsibility. The debates will concern investment, defense, research and development, health, culture and art and future technologies and marine economy and topics from the last Forum including so-called silver economy, or the use of seniors' knowledge, experience and professional potential.

Dr Iwona Jelonek from the University of Silesia becomes the new president of the board of the Polish Pellet Council

2019-06-27

Dr Iwona Jelonek from the Faculty of Earth Sciences at the University of Silesia became the president of the board of the Polish Pellet Council. The organization's tasks include representation and support of entities operating on the pellet market and conducting research and development, promotional and educational activities. The Polish Pellet Council is an association operating since 2017, whose members include companies involved in the production, trade and distribution of wood pellets, heating equipment manufacturers, installers and business entities, institutions and organizations operating in this industry and involved in its development. Dr Iwona Jelonek is a research worker at the Department of Geochemistry, Mineralogy and Petrography at the Faculty of Earth Sciences and a long-time member of the Polish Pellet Council. As a certified specialist, she is also accredited by the International Committee for Coal and Organic Petrology in the field of applied petrographic methods.

Dardziński: We convince entrepreneurs to do business with science

2019-07-01

- By means of factual arguments, we want to convince entrepreneurs to do business with science. Let companies think what is their future in 10, 20 years and what technology they will need there. We will take care of the rest - said Piotr Dardziński, president of the Łukasiewicz Research Network. Łukasiewicz Research Network is to support research, which to be commercialized sooner or later, and the distinction between basic and applied research seems theoretical. If we want to develop photonics, we must also conduct basic research, and if we deal with big data we need to employ good mathematics theorists - explains Dardziński. The recipients of the Łukasiewicz Network offer are primarily Polish companies, but there have recently been meetings with the American biotechnology company Amgen and such potentates as Volkswagen, Ikea or Google.

National Center for Research and Development to co-finance the construction of a new Trading Platform for the Warsaw Stock Exchange

2019-07-05

The National Center for Research and Development (NCBR) and the Warsaw Stock Exchange (GPW) have signed a contract for co-financing EU research and development to support the construction of the new WSE Trading Platform. - Poland is one of the leaders of changes in the development of innovation in the financial and capital markets. We also have funds that allow financing innovative projects - said Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin during signing the agreement between the NCBR and the WSE. The estimated cost of the project will amount to about PLN 90 million. The grant from the NCRR's «Fast Track» competition reaches PLN 30.27 million. The creation of the proprietary trading system will meet the needs of the market and the implemented Capital Market Development Strategy. The new platform

means the possibility of reducing transaction costs and introducing new functionalities for exchange members, issuers and investors - said Marek Dietl, President of the WSE Management Board.

Soon National Center for Research and Development to launch new calls

2019-07-12

The National Center for Research and Development (NCBR) will announce 6 new calls under the Intelligent Development Operational Program (SG OP). This is an additional opportunity for companies and scientific and industrial consortia, which in 2019 want to apply for co-financing research and development. This year NCBR will spend PLN 3.93 billion for all calls under the SG OP. As part of the «Fast Path» program, entrepreneurs will be able to apply for funding in two thematic calls: one will be dedicated to projects in the field of space technologies (with a budget of PLN 300 million) and the other call is for technology of plastics (with a budget of PLN 180 million). The NCBR will also announce another call as part of the 4th GameINN. PLN 100 million will be allocated for co-financing the gaming sector. As part of the so-called Joint ventures with local governments NCBR will launch a call with the Śląskie Voivodeship (budget PLN 43 million) and the Lubelskie Voivodeship (budget PLN 17 million).

Warsaw University of Life Sciences joins international project strengthening green economy in Asia

2019-07-16

The Faculty of Forestry of the Warsaw University of Life Sciences (SGGW) together with the Faculty of Economic Sciences and the Faculty of Civil and Environmental Engineering are participating in the international project EGEA, Enhancing Green Economy in 3 countries of Asia under the Erasmus + program. The project is implemented in 2019-2021 and includes support for the Kyrgyz Republic, Nepal and India. Currently the socio-economic development of these countries is largely based on the consumption

of natural resources. Therefore, they face challenges that threaten their future sustainable development including depletion of natural resources, loss of basic natural ecosystems and stagnation of human capital. The aim of the project is to «identify and then define the possibilities of supporting the skills necessary to implement the green economy in various target groups (students, teachers, specialists, young generation) and for various thematic areas».

Lodz creates Cluster Fala Energii

2019-07-22

Veolia Energia Łódź, Aqua Park Łódź, Technical University of Lodz, the Institute of Economy of Mineral Resources and Energy of the Polish Academy of Sciences launched the Łódź Cluster Fala Energii (Wave of Energy). The Łódź Energy Fala Energii was initiated to ensure local energy security, improve the natural environment and increase the competitiveness and economic efficiency of the local economy. The main goal of the undertaking is close cooperation of cluster members in the area of renewable energy development. The cluster is to develop geothermal sources, photovoltaic and cogeneration sources as well as effective distribution of generated energy through existing systems. Cooperation with scientific and research and development institutions is to foster the stimulation of innovation in the field of generation, distribution, balancing and energy storage.

Alior Bank and PZU cooperates with 11 startups

2019-07-23

The Alior Bank has started the second RBL_START project. This time the bank was looking for potential partners operating in the field of advanced data analysis, new channels of reaching customers and enhancing their commitment, as well as security. A team of mentors from Alior Bank and Powszechny Zakład Ubezpieczeń (PZU) selected finally 11 companies to the accelerator from among 200 applications sent from around the world: Bags Off, BillTech, Bonusway, Domove, Enable: Banking, LogicAI, Luna, Mobiltek, Trustisto, Upswot, Zappy AI. All participants will take part in the 15-week program under which they will participate in the workshops and consultations conducted by the mentors of Alior Bank and RBL_START partners: PZU, IBM, Linklaters, Mastercard and Microsoft. As a result, selected project participants will be given the opportunity to implement their solutions.

University of Silesia in Katowice to hold a seminar about the government public procurement market in the USA

2019-07-24

The University of Silesia in Katowice together with the Polish American Chamber of Commerce North East is inviting participants to the meeting inaugurating the series of seminars devoted to promoting knowledge about the Polish and American public procurement market. The aim of the seminars is to disseminate knowledge about public procurement markets in Poland and the USA and to present the opportunities for entrepreneurs from both countries to participate in these markets. As part of the inaugural meeting, basic information about the government's public procurement market in the USA will be presented. The event was sponsored by the Polish-American Fulbright Commission. Seminars are addressed to people interested in legal regulations and the practice of public procurement and public-private partnership in the US and in Poland, in-

cluding: entrepreneurs, representatives of chambers of commerce and economists, economists, lawyers, as well as students of legal and economic studies.

Poznań Science and Technology Park implementing the Urbiofuture project

2019-07-29

The Poznań Science and Technology Park (PPNT) is implementing the Urbiofuture project, which aims to increase the competitiveness of the bio-tech industry. The project involves creating new educational programs and increasing research initiatives and projects. Agriculture, forestry, fisheries, chemical and energy industry need specialists with knowledge and skills. Therefore, changes in educational programs are needed to meet the market requirements and provide educated personnel. For this purpose, cooperation between educational institutions, research institutions and industry is necessary. The coordinator of the project is Universitat Autònoma de Barcelona (Spain), PPNT, Consiglio Nazionale delle Ricerche (Italy), VTT Technical Research Center of Finland Ltd (Finland) Agro Business Park (Denmark), Fundación Corporación Tecnológica de Andalucía and Sustainable Innovations Europe (Hiszpania), VITO (Belgium) and IHE Delft Institute (the Netherlands). More: <https://ppnt.poznan.pl/realizujemy-urbiofuture/>

„Lower Silesia. Green Valley of Food and Health” included in the list of government strategic projects

2019-08-01

Project of the University of Life Sciences in Wrocław (UP) „Lower Silesia. Green Valley of Food and Health” was included in the list of government strategic projects. The decision was made by the Monitoring Board of Strategic Projects Portfolio of the Ministry of Investment and Development. The project assumes the creation of the Green Valley, a region in which the BIO-economy is developed in a sustainable manner, using innovative knowledge

and socially responsible, positively affecting the quality of people's lives. - Production and processing of food should base on regional resources, but our knowledge and huge native scientific potential are a chance not only to meet our own needs, but also to build competitive advantage in global markets - said the rector of the UP Prof. Tadeusz Trziszka, the author of the Green Valley. More: http://www.glos.upwr.edu.pl/aktualnosci/49743/zielona_dolina_na_liscie_rzadowych_projektow.html

PLN 30 million to support entities of industry 4.0

2019-08-02

The Ministry of Enterprise and Technology will allocate PLN 30 million to support entrepreneurs, scientific units, innovation clusters and non-governmental organizations operating in the industry 4.0. The Strategy for Responsible Development indicates intelligent reindustrialisation as one of the pillars of the new economic model for Poland. This includes implementation of new digital technical-technological-organizational solutions. -We consistently conduct activities that show Polish entrepreneurs the way to industry 4.0. - said Marcin Ociepa, secretary of state in the Ministry of Enterprise and Technology. We support Polish companies but finally entrepreneurs themselves must take actions that will include them in the course of digital transformation - added the deputy head of the department, who is responsible for innovation. Eligible to receive financial assistance will be Digital Innovation Hubs, i.e. unions / consortia concluded between entities such as: enterprises, scientific units, innovation clusters and non-governmental organizations.

Białystok Science and Technology Park to implement project Hub of Talents 2

2019-08-08

Companies can still apply for the program implemented by the Białystok Science and Technology Park, which will allow 34 companies selected in the Hub of Talents 2 project to develop their activity and transform it into a profitable business. Hub of Talents 2 is a program of Startup platforms for new ideas from Eastern Poland. It is a program supporting people whose idea for an innovative business has a chance to succeed on the market. Support can be granted to any originator who sets up a business in one of the voivodships of Eastern Poland: Lubelskie, Podkarpackie, Podlasie, Świętokrzyskie and Warmian-Masurian. To participate in the Hub of Talents 2, companies should apply for one of 8 incubation cycles, of which the first one has already been completed. 64 applications were submitted in the first application process and after expert assessment, more than half successfully were accepted for the incubation process. More: <https://bpnt.bialystok.pl/PL/bpn-t/Projekty/hub-of-talents>

Dr Eng. Wojciech Kamieniecki: Wider opening to innovations is needed

2019-08-23

Implementing the economy of the future in Poland needs even greater openness to innovation and greater courage of entrepreneurs to co-create the entire development support ecosystem - writes Dr Wojciech Kamieniecki, President of the National Center for Research and Development (NCBR). The President of NCBR is convinced that research and development are an important part of the modern economy. In his opinion, behind the dry numbers the recipe for long-term prosperity is hidden, set on very solid foundations. The conviction about this comes from many studies and analyzes - it's enough to say that Paul Romer, the 2018 Nobel Prize laureate in economics, received this award for proving that R&D has become a key component of the success of individual economies. Dr Eng. Kamieniecki

believes that Polish business, by using prosperity and available tools, should enhance the investment for research and development, ultimately facing the challenge of Western companies. Otherwise, we will remember the missed opportunities instead of becoming a European economic tiger.

Łukasiewicz Research Network selected the first business projects

2019-08-26

The Łukasiewicz Research Network bringing together research institutes in Poland has selected 350 projects to further implementation for last 4 months. It aims to effectively receive benefits for business from science. - So far we have looked through 67 projects thoroughly, each of them was evaluated by 500 people, and we selected the 10 best projects. And it's really a lot - said Piotr Dardziński, president of the Łukasiewicz Research Network in «RDC Morning». They will be presented to entrepreneurs at the beginning of October in Poznań. - Speaking the business language, we want to check if we can sell these projects, whether we can find a partner who will submit an application to the National Center for Research and Development to make the first step in the development of a technology - explained Piotr Dardziński.

Kielce University of Technology to help business implement digital technologies

2019-08-30

Kielce University of Technology has joined the partnership of the Kielce Technology Park (KPT) to help entrepreneurs to increase competitiveness by using modern digital technologies in their companies. The university will organize specialized training using its laboratories. The agreement in this matter was signed in Kielce by the rector of the University of Technology, Prof. Wiesław Trąmpczyński and director of KPT Justyna Lichosik. The goal of the project implemented by the Kielce Technology Park «KPT StartUp Digital Innovation Hub» is to

increase the dynamics of digital transformation of the Świętokrzyskie region. Digital Innovation Hub (DIH) are partnerships that will help enterprises to increase market competitiveness through the use of innovative solutions in the field of broadly understood digital technologies.

PhD students of the University of Szczecin to participate in a conference at the Harvard Faculty Club in Boston

2019-09-02

PhD students of the Faculty of Economics and Management of the University of Szczecin presented their scientific achievements during the International Scientific Conference „WEI International Academic Conference on Business, Economics, Management and Finance” at the Harvard Faculty Club in Boston. Martyna Kostrzewska prepared the presentation «Customer satisfaction in the e-service market», in which she assessed the level of e-service customer satisfaction by identifying gaps between customer expectations and their fulfillment by online service companies. Daria Wrukowska in her presentation „Educating the elderly people on the use of information and communications technologies in the field of e-health” analysed the global aging process. Their participation in the conference was possible thanks to the international program of scholarship exchange of PhD students and academic staff of the PROM National Agency for Academic Exchange.

Poznań Science and Technology Park becomes the coordinator of projects under Horizon 2020

2019-09-03

Poznan Science and Technology Park will be the coordinator of three projects under the Horizon 2020 program. Their implementation will begin immediately in September. The first, largest project is focused on supporting «deep tech digital startups» in entering international markets, establishing cooperation with corporations and scaling their activities. It will take 24 months and its budget is almost 1.5 million euros. The second project is the exchange of experience and knowledge in the field of communication and marketing activities with foreign innovation centers from Tallinn, Kaunas and Malaga. As a result, new solutions will be created to support Park tenants and to reach potential customers. The third project, Create4value, will allow participants to test an innovative methodology of working with enterprises from the Wielkopolska Region. It assumes cooperation with companies through co-creation in order to release their innovative potential and clarify the needs in the area of implementing new products. University of Economics in Katowice to become a partner of Impact mobility rEvolution'19

2019-09-04

The University of Economics in Katowice becomes a partner of Impact mobility rEvolution'19 - the largest event in Poland dedicated to mobility, transport industry and advanced technologies. The meeting will be held on October 9 and 10 in Katowice and will bring together key players from the world of automotive, transport, smart city and state administration sectors. Participants will discuss new ways of thinking about transport, how to use technology and data to connect people and places, as well as how to increase transport efficiency without harming the environment, maintaining safety. Business,

science, administration and startup leaders, who are changing current business and social models will participate in the program. Discussions will take place under 5 thematic panels: e-mobility, financing and investment (including public-private partnership), urban mobility, mobility as a service, and clean and sustainable transport. More: <https://impactcee.com/mobilityrevolution/2019/>

Wrocław University of Economics in the project „INTEREST - INTEgrated REporting for SMEs Transparency”

2019-09-04

The University of Economics in Wrocław together with partners from Hungary, Great Britain, Italy, Germany, Belgium and Romania will implement a project aimed at developing good integrated reporting practices in small and medium-sized enterprises. The participants of «INTEREST - INTEgrated REporting for SMEs Transparency» project will develop a model integrated reporting framework, a practical guide to support integrated thinking about business and reporting achievements in the context of creating value for stakeholders, as well as training materials in the form of blended learning on identifying six capitals within integrated reporting. Project partners are Budapest Business School (Hungary), Leeds Beckett University (United Kingdom), Rhine-Waal University of Applied Sciences (Germany), The University of Udine (Italy) and Babeş-Bolyai University (Romania) and MAC-Team (Belgium), EFA for SMEs (Belgium) and BUSINESSHUNGARY (Hungary).

European Commissioner for Budget and Human Resources visits Poland

2019-09-05

Günther Oettinger- the European Commissioner talked Directions of support for the area of research and science in the years 2021–2027, Multiannual Financial Framework, increasing Europe's competitiveness on the global market and strengthening

the innovation of the economy. Jarosław Gowin, Minister of Science and Higher Education, Minister of Entrepreneurship and Technology Jadwiga Emilewicz, Undersecretary of State at the Ministry of Science and Higher Education Wojciech Maksymowicz, President of the Research Network Łukasiewicz Piotr Dardziński and Ambassador Andrzej Sadoś participated in the meetings with the EU Commissioner for Budget and Human Resources.

President Duda: We want the links between science and industry to become stronger in Poland

2019-09-12

- We are proud that this Congress is a proof of the bonds connecting the international community of scientists and engineers - specialists in mechanics, guided by a common research passion and jointly concerned about the future of civilization - said Polish President Andrzej Duda to participants of the 4th Polish Congress of Joint Mechanics taking place in Krakow with the 23rd International Conference on Computer Methods in Mechanics. - It is very important to us that the links between science and industry in our country are getting stronger and deeper to increase Polish innovation and competitiveness and contribute to the success of our native companies and their expansion into global markets, - said the president. Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin emphasized that no country is able to ensure the prosperity of its citizens and the economic security without a strong industry. He highlighted that the challenge is to reconcile respect for the natural environment with the rapid and dynamic development of the economy.

Poles to apply for Santander Universidades scholarships

2019-09-13

By September 30, 2019, Santander Universidades Group invites students and graduates of Polish universities to apply for the next scholarship project. As part of the Digital Skills program, 100 people from Argentina, Brazil, Chile, China, Spain, Colombia, Mexico, Germany, Peru, Poland, Portugal, Puerto Rico, the United States, Uruguay and the United Kingdom will receive a Santander IE - Digital DNA Scholarship. On-line training will be conducted in English and Spanish by professors of the IE School of Human Sciences and Technology, one of the schools of the Spanish IE University. The program is intended for students of the last 2 years of bachelors and masters studies and graduates who received the diploma not earlier than in 2014. Scholarship holders will take part in two courses. The «New Technologies in Innovation» course aims to show the path of technological development from the point of view of companies and how companies use technologies to create a competitive advantage. Course «Data Science and Visualization in Business» provides primarily practical classes in the development of competence to work with data and their visualization and the use of data science in the development of the company. More: https://www.becas-santander.com/es/program/santander-ie-digital-dna?fbclid=IwAR1Zt2YRTPoVgN07Y0tN5Brxt8PPPzNL89N_Ghlt6JfZJmh-v1vFWsHlvt4

Poland to receive EUR 100 million for „Enterprise Development and Innovation” under Norwegian and EEA funds

2019-09-17

During the conference inaugurating the third program of Norwegian and EEA funds, the Minister of Investment and Development Jerzy Kwieciński announced that PLN 3.5 billion from these funds for Poland will be allocated to projects related to culture, health, innovation and entrepreneurship development. The first three programs were launched

under Norwegian and EEA Funds: «Education», «Research» and «Local Development». Soon four more programs will be implemented, such as: «Culture», «Home Affairs», «Health», «Entrepreneurship Development and Innovation». The largest amount of funds under the third program (EUR 100 million) was allocated to the «Enterprise Development and Innovation» program, which will be managed by the Polish Agency for Enterprise Development. Micro, small and medium enterprises can apply for this support in the successively announced calls.

Deputy Prime Minister Gowin visiting the Institute of New Chemical Syntheses in Puławy

2019-09-20

- Two innovation laws, an IP box, and a reform of research institutes crowned by the establishment of the Łukasiewicz Network are our successes in this term. They are helping build a bridge between science and the economy - said Jarosław Gowin, deputy prime minister, minister of science and higher education at a meeting at the Institute of New Chemical Syntheses in Puławy. Deputy Prime Minister Gowin visited one of the largest institutes of the Łukasiewicz Network, the Institute of New Chemical Syntheses in Puławy, which is working on innovative solutions in the chemical industry, especially fertilizers. During the visit, Deputy Prime Minister Gowin highlighted that cooperation between universities and institutes should develop more intensively. - In this context, I welcome the initiative to establish cooperation between the University of Economics and Innovation in Lublin and the Institute of New Chemical Syntheses in Puławy.

Industrial Technology Forum in the Science and Technology Park of the University of Zielona Góra

2019-09-20

Science and Technology Park of the University of Zielona Góra, Western Chamber of Commerce and Industry, Nestle and Kostrzyńsko-Słubicka Special Economic Zone are inviting companies to participate

in the second Lubuskie Forum of Industrial Technologies. During the Forum, on October 29 and 30 at the Science and Technology Park in Nowy Kisielin, representatives of participating companies will try to answer how to reduce production costs, what investments will help generate greater profit, where to raise funds for the development of the company, how to increase efficiency and work safety of employees, how to increase their competitiveness in the market and what benefits will bring investment in new technologies. The forum is addressed to both managers and technical employees. Participation in the event was announced by representatives of the following companies: KUKA, Siemens, Schunk, MPLAB, Oberon 3D, Kyocera, 3M, Mercury Tools, DMG MORI and TTPSC.

InnoSHARE UNiversity to take place in Warsaw

2019-09-23

On October 10, 2019, the Copernicus Science Center (Copernicus Science Center) will host innoSHARE UNiversity participants. It is an international event organized for innovators, enterprising scientists, PhD students and students, deep tech startups, employees of research and development companies, investors and representatives of innovation ecosystems from various parts of the world. The event will be attended by 450 participants, and the discussions will be led by over 40 speakers from Poland and abroad, who will present following topics: universities of the future, new fuels and energy, drones, city of the future, new food, healthcare, biotechnology, chemistry and new materials, photonics and Human Tech. One of the special guests will be Arno Meerman - co-founder and General Director of the global University Industry Innovation Network (www.uiin.org), who will tell guests about the universities of the future and cooperation between science and business.

President of the Łukasiewicz Research Network talks on cooperation between science and business

2019-09-25

- Naturally, some institutes have had good experience of working with business, and we also use these relationships. Our task is to preserve what is and at the same time find new partners and create more connections with business within our organization. In recent months, we have managed to do it - said Piotr Dardziński, president of the Łukasiewicz Research Network. As President Dardziński emphasizes in an interview, networked institutes are already working with Elemental Holding and Eneris. Soon they will start cooperation with the Polish State Railways (PKP), Copper Mining and Metallurgy Combine (KGHM) and Azoty. - The point is that projects should be implemented by a consortium of institutes ready to respond to business needs. It may be a project not necessarily financed by business from own resources. It can be financed from calls of the National Center for Research and Development or from European grants - explains the president of the Network.

Consortium of the University of Technology and Life Sciences in Bydgoszcz to implement the Dialog 2.0 project

2019-09-27

The University of Technology and Life Sciences in Bydgoszcz in consortium with the Bydgoszcz Industrial Cluster and the „Employers of Pomerania and Kujawy” - the Employers’ Union will implement the „Dialog 2.0” project. The goal is to design, implement and disseminate a relational model of dialogue and cooperation between the university and its external environment. The new formula of the designed model is a combination of autonomous dialogue (conducted individually with entrepreneurs) with institutional dialogue (conducted as part of social dialogue institutions through representative

dialogue partners). Activities planned in the project include potential audit, building a cooperation network of regional companies and business environment institutions with university research teams and conducting a series of Smart Lab workshops as the part of the 2.0 environment, contributing to the use of modern technologies and combining them with human commitment to the development of innovation.

President of the Industrial Development Agency awards graduates of vocational schools

2019-09-30

The president of the Industrial Development Agency (ARP) S.A. granted prizes to the authors of the best master’s, bachelor’s and engineering theses related to the subject of enterprise management, restructuring and innovation. The awards ceremony was attended by Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin and chairman of the Conference of Rectors of Public Vocational Universities professor Witold Stankowski. - One of the priorities of the reform of science and higher education under the Constitution for Science is to adapt the educational offer of vocational schools to the expectations of employers and, consequently, to increase the chances of graduates on the labor market. The reform strengthens those legal instruments that will allow universities to respond adequately to the changing needs of the modern economy and labor market - said Jarosław Gowin. List of laureates of the competition for the award of the President of ARP S.A. : Master theses: 1. Ewa Wnuk, State University of Information Technology and Entrepreneurship in Łomża for the work „Design and study of intelligent clothing with the functionality of registering selected vital parameters of an industrial plant employee”. Bachelor theses: 1. Kamila Oklejewicz, State Higher Vocational School in Sanok; for the work „Application of the competency model in human resource management on the example of the XYZ company”. 2. Barbara Rudnicka, State Higher Vocational School Capt. Witold Pilecki in Oświęcim; for the work „Quality management in

the process of water treatment for consumption”. 3. Julian Skowroński, State University of Information Technology and Entrepreneurship in Łomża, for the work: „A prototype of an autonomous robot handling the movement of pallets between the warehouse and the loading / unloading zone.”

Olštyn Inter-Faculty School of Entrepreneurship to launch application process

2019-10-03

Until October 16, 2019, the Business Academy of the University of Warmia and Mazury (UWM) in Olštyn will launch the first part of application process for the third „Inter-Faculty School of Entrepreneurship” program. The Business Academy is a unique school in the country for students and PhD students from all university faculties. It prepares its students for business cost- free. The teachers tell students how to set up a start-up company, how to prepare a business plan professionally. All the trainings are led under the guidance of professionals who run their own business and who will be mentors for listeners in the preparation of all documentation and a business model that they will eventually want to introduce to the market. - The Business Academy is intended for those students and doctoral students from our University who are interested in business or already have an idea for some business. We will also take care of students conducting research projects who would like to commercialize them - says Dr Bogdan Włodarczyk, director of the Academy.

Researchers of the University of Warsaw investigated legal problems of small and medium enterprises

2019-10-03

Researchers from the Faculty of Law and Administration of the University of Warsaw (UW) have created a report showing how small and medium-sized enterprises (SMEs) in Poland use the law. On October 7, 2019, a conference promoting the results of their work will be held at Collegium Iuridicum II. Research project «Access to law for small and medium entrepreneurs» has been implemented at the University of Warsaw for two years by Dr Jan Winczorek (project manager) and Dr Karol Muszyński from the Institute of State and Law Sciences. Scientists have received a grant from the National Science Center. This is the largest empirical research in Poland about the use of legal services and legal institutions by Polish SMEs. The purpose of the report was to determine: what legal problems SMEs face; in what situations do SMEs use law, legal institutions and legal services to solve their business problems; what barriers make it difficult for entrepreneurs to solve problems in business using legal tools and institutions.

Naval Academy in Gdynia signs an agreement with Energa S.A.

2019-10-04

Naval Academy in Gdynia signed an agreement with Energa S.A. The goal is educational, scientific, cultural and environmental cooperation in the field of teaching and research and development in the security sciences, organization and management. The cooperation will be implemented through the preparation of an educational offer by the Academy based on the analysis of the needs of the Energa Group and the expectations of the labor market. The signatories want to organize joint training, conferences, seminars and workshops. Both parties expect efficient and effective implementation of tasks to stimulate the development of the Energa Group, strengthen human potential and activate employ-

ees. The signed agreement is to increase the quality of education of Energa Group employees, as well as shape awareness and responsibility for national security, the company's environment and employees' own security.

Pomeranian Science and Technology Park Gdynia joins the Digital Hansa project

2019-10-08

The Pomeranian Science and Technology Park Gdynia and the City of Gdynia joined the international Digital Hansa initiative, implemented in cooperation with the Swedish Karlskrona and Lithuanian Klaipeda. The venture is financed by the Swedish Institute. The project's aim is to build partnerships between municipalities and science and technology parks operating in them, universities and ICT clusters to strengthen the innovation and competitiveness of local ICT companies in the entire Baltic Sea region. As part of three workshop sessions, project partners will try to define development problems of ICT companies and also identify tools that can increase the dynamics of development of this industry in the Baltic Sea Region. The ultimate goal of the partnership is to develop an implementation project and prepare an application for EU funding.

Graduate of the State Higher Vocational School in Głogów wins the Industrial Development Agency competition

2019-10-09

Grzegorz Kocór, a graduate of the State Higher Vocational School in Głogów, has won the prestigious competition for the Award of the President of the Industrial Development Agency S.A. for the best master's, bachelor's and engineering thesis under the honorary patronage of the Chancellery of the Prime Minister and the Ministry of Science and Higher Education. The work «Analysis of the operation of winding machines powered by a converter» won the second prize in the category of engineering work. The aim of the competition was to increase

the interest of the academic community in key issues for the development of the Polish economy and to select the best works in the areas of: innovation in industry, restructuring and effective management of the enterprise. The ceremonial gala of the winners and the distribution of awards took place in Warsaw with the participation of the Minister of Science and Higher Education Jarosław Gowin.

Universities Kuyavian-Pomeranian Voivodeship join the Implement Hub 2019 project

2019-10-10

The universities of Bydgoszcz and Toruń will take part in the project „Implement HUB - acceleration program of scientific solutions and patents at universities in the Kuyavian-Pomeranian Voivodeship”. Money for activities comes from the „DIALOG” program of the Ministry of Science and Higher Education. The University of Technology and Life Sciences and the University of Kazimierz Wielki from Bydgoszcz as well as the Nicolaus Copernicus University, University of Banking and the State Vocational University of Toruń will take part in the project. The project is to support activities aimed at implementing solutions leading to increasing the quality and competitiveness of scientific research related to internationalization, effective evaluation of undertaken activities and strengthening of the scientific and teaching staff. It is also to stimulate innovation and create mechanisms for cooperation between science and the economy.

Opole company to provide shoes for Polish ski jumpers

2019-10-15

The Nagaba company from Krapkowice in the Opole region will equip Polish ski jumpers with specialized footwear. To refine this product, the company has obtained EU funding in the Opolskie Voivodeship Economic Development Center. The money was allocated to the services of a patent attorney and technological consultancy regarding the selection of material for the production of our jumper shoes. Jumper shoes - for technical and technological reasons - were made largely of vegan materials that have all the properties of the skin, but are made in laboratories. - Jumping shoes are really a bit of handicraft. Of course, the machine park counts, but many elements have to be done manually. So we also benefited from the fact that we work like a small manufacture and are able to make a product tailored to truly individual needs. In this case, very specific ones - explains the owner of the brand, Ewa Nagaba.

Grupa Azoty ZAK S.A. to create a Research and Development Center

2019-10-21

Grupa Azoty ZAK S.A. is creating a Research and Development Center supporting innovations in the OXO segment and plastics processing. The Kędzierzyn company from Grupa Azoty has obtained the corporate approvals necessary to implement the strategic investment. The Research and Development Center is another step towards the expansion of the company's research infrastructure, strengthening the staff potential in creating innovative solutions and safeguarding intellectual property. The project is a continuation of the Application and Development Research Laboratory launched in 2018, which gave Grupa Azoty ZAK S.A. the possibility of reproducing production processes on a laboratory scale and conducting comprehensive tests of obtained samples. The investment is part of the updated Strategy of the Azoty Group. It will contribute to expanding the Company's product offer with additional special esters and extending the product chain and processing of aldehydes into special products.

Bank Gospodarstwa Krajowego to offer millions for innovations within Call for applications for the technological bonus

2019-10-22

Bank Gospodarstwa Krajowego has launched the sixth technological bonus competition under the EU Intelligent Development program. Micro, small and medium-sized enterprises can apply for funding for innovation, and a single grant may be up to PLN 6 million. To apply for support, the entrepreneurs must present the technology that they developed alone or in cooperation with an external entity. Entrepreneurs who want to buy a license for a specific technology may also apply for funding. The most important thing is that as a result of its application must bring a new or significantly improved product or service. Companies from all industries can take advantage of the technology innovation loan. Most often, applications for funding are submitted by entrepreneurs from the food, furniture, printing, automotive and construction industries, but the aerospace and even space industries are also represented in the program.

University of Warmia and Mazury to hold VII Polish Congress of Entrepreneurship

2019-10-23

On October 24-25, the 7th Polish Congress of Entrepreneurship will take place at the University of Warmia and Mazury (UWM) in Olsztyn. The event is organized by the Polish Agency for Enterprise and the European Enterprise Development Fund. The program of the Polish Congress of Entrepreneurship includes almost 30 discussion panels on the most important issues of the Polish and European economy. The issues include innovation, development of regional and local governments, modern business services, foreign expansion, higher education, energy, medicine and industry 4.0. The participants can attend the B2B meetings to establish relationships with representatives of France, Lithuania, Ukraine, the United States, the Czech Republic and Slovakia,

who declared their participation in the event.

University of Economics in Wrocław to launch Technology Learning Factory for the Future Industry

2019-10-28

The consortium with the participation of the Wrocław University of Economics will implement the project „Technological Learning Factory for the Industry of the Future” financed by the Ministry of Entrepreneurship and Technology as part of the competition „Standardization of services of Digital Innovation Hubs to support digital transformation of enterprises”. The project provides for the establishment of an expert center, consulting and implementation services in the field of innovative technologies, business solutions and competences necessary to develop and compete in the fourth industrial revolution. The main goal will be to transfer knowledge and spread the idea of Industry 4.0 among local enterprises, business environment units, research groups, government and educational institutions.

Wrocław University of Science and Technology becomes one of the leaders of Digital Innovation Hubs

2019-11-05

Wrocław University of Science and Technology has become one of the leaders of Digital Innovation Hubs appointed by the Ministry of Entrepreneurship and Technology. The main task of new research units is to support entrepreneurs in digital transformation. Technological solutions that will be the main areas of hub activity are connectivity in 5G technology, learning algorithms (Artificial Intelligence), including autonomous systems, Internet of Things, Building Information Modeling, cloud computing, augmented and virtual reality, automation and robotics, computer integrated production, cybersecurity and additive technologies of 3D printing. Over the next two years, the hubs will carry out information and demonstration, training and consulting activities, which will allow to develop high standards of service provision by such centers. In this process, hubs will also build in-depth cooperation with the Future Industry Platform. More: <https://pwr.edu.pl/uczelnia/aktualnosci/powstana-huby-innowacji-cyfrowych-pwr-jednym-z-liderow-11379.html>

Dardziński: Potential of fragmented institutes should be effectively made available to entrepreneurs

2019-11-08

-We want to work with those entrepreneurs who have a creative approach to business and life. The Łukasiewicz Research Network scientific was created in order to make the potential of fragmented institutes available to entrepreneurs. However, they must be ready for financial commitment to the projects - says Piotr Dardziński, president of the Łukasiewicz Research Network. The President of the Łukasiewicz Network said that there are areas in the field of innovation in which Polish solutions and technologies can be unique. -It seems to me that we can build large international advantages thanks to gallium nitride. Polish technology can be used in microelectronics.

It replaces silicon and creates perspectives to revolutionize transistor designs and radar operations. It is very promising in the context of defense - noted Dardziński. In his opinion, Poland also has potential in terms of digitization, processing of large databases and the use of artificial intelligence.

Poznań University of Economics scientist to write on the impact of creative sectors on sustainable development

2019-11-08

A publication of scientists from the Poznań University of Economics, „Measuring sustainable development - the creative economy perspective” is published in the International Journal of Sustainable Development and World Ecology. The article by Prof. Jan Fazlagić and Dr Robert Skikiewicz concern sustainable development, i.e. ensuring economic growth while maintaining social, ecological and economic balance. The authors undertook to analyze the issue of explaining the impact of creative sectors on sustainable development. They studied a population of over 80 percent municipalities, asking respondents questions about the impact of attitudes and local policies on the investment climate. The results indicate that Polish local government officials still trust investment in hard infrastructure and attracting productive investments. The publication indicates new areas of intervention on the part of the local government in the area of creating public policies. More: <https://ue.poznan.pl/pl/aktualnosci,c16/aktualnosci,c15/wplyw-sektorow-kysznennych-na-zrownowazony-rozwoj,a90754.html>

University of Wrocław joins the international project of atmospheric processes research

2019-11-08

Institute of Geography and Regional Development - Department of Climatology and Atmospheric Protection of the University of Wrocław began the im-

plementation of the project „Sources and Chemical Composition of Particulate Matter in Poland and their Control Strategies (PM COST).” The project's implementation is to contribute to strengthening the university's cooperation with research centers - European leaders in researching the atmosphere and its impact on humans, expanding the knowledge and skills of employees in the field of modeling atmospheric processes and assessing the impact of these processes on human health and life using modern research tools. Activities financed from the H2020-WIDESPREAD-2018-03-Twinning program will also contribute to strengthening the scientific position of the university in the field of atmospheric processes research and increasing cooperation between the University and state administration units related to the assessment of atmospheric air quality. More: <https://uni.wroc.pl/nowy-projekt-naukowy-na-igirr-w-zakladzie-klimatologii-i-ochrony-atmosfery/>

University of Silesia receives over PLN 25 million for the to create a creativity and coworking center

2019-11-14

Strengthening cooperation between the University of Silesia and the business environment is one of the main goals of the university's development strategy. The creation of the regional and intercollegiate creativity and co-working center SPINplace is to serve this purpose. SPINplace was designed for people who want to start or develop their business activity, have an idea for a new product or service and look for establishing contacts between the academic community representing various technological areas and the business world. The project involves creating a multi-functional space for people interested in developing innovative entrepreneurship. The center will serve to broaden their competences, exchange experiences and establish cooperation with representatives of the academic and business community. For the implementation of the project, the University of Silesia will receive over PLN 25 million under the Regional Operational Program of the Silesian Voivodeship. More: <https://www.us.edu.pl/ponad-25-mln-zl-na-utworzenie-centrum-kreatywnosci-i-coworkingu-spinplace>

University of Economics to hold „Polish Economic Development Forum” - a scientific conference in Krakow

2019-11-19

On November 21-22, 2019, the Student Institute of Economic Analysis of the Krakow University of Economics (UEK) is organizing the 2nd National Scientific Conference „Polish Economic Development Forum” addressed to students, PhD students and doctors. The aim of the conference is to exchange views on the economic situation in Poland and to expand knowledge of economic sciences. The conference will provide time for discussion and integration. The thematic scope of the conference includes such issues as: social inequalities; entrepreneurship and innovation; climate and green economy; international relations; demography; finances, tax system and fiscal and monetary policy.

Polish President supports business cooperation with universities

2019-11-20

One of the priorities of the presidency of Andrzej Duda is to support development of cooperation between business and Polish science and Polish universities - said Błażej Sychalski, spokesman of the President of Poland, at the celebrations of the 20th anniversary of the Foundation for the Support of Radiocommunication Development and Multimedia Techniques. The Foundation implements the mission of integrating the world of science and the economy. On the occasion of its anniversary, President Andrzej Duda gifted the Foundation a Polish flag with his dedication. The spokesperson of the president emphasized, that the Foundation realizes the president's economic priorities. He said that in the president's opinion, cooperation between business, universities and the Foundation is very important. -These are very important things from the point of view of the Polish economy - said Błażej Sychalski. He added that „the president really cares about developing cooperation between business and univer-

sities as well as possible, and the Foundation shows that it is possible.”

National Center for Research and Development to launch the largest gaming industry in Poland

2019-11-22

The National Center for Research and Development (NCBR) has announced the fourth GameINN sector program. PLN 100 million will be allocated to support the best projects. The value of the Polish video game market in 2016 was PLN 1.85 billion. The forecast for 2019 is approx. 2.23 billion. The goal of the GameINN sector program is to increase the competitiveness of the Polish video game producers sector on the global market by 2023. -The video game producers sector is our showcase in the world. However, the success of Polish technologies and products from the creative industry on the global market is not just a matter of pride. They mean real benefits for our economy and society - said Jarosław Gowin, Minister of Science and Higher Education.

University of Humanities and Sciences in Częstochowa cooperates with the Ombudsman for Small and Medium-sized Enterprises

2019-11-22

Faculty of Law and Economics of the University of Humanities and Natural Sciences in Częstochowa officially began cooperation with the Ombudsman for Small and Medium-sized Enterprises. A letter of intent in this matter was signed by the deputy spokesman for small and medium-sized enterprises Jacek Cieplak and the university rector Prof. Anna Wypych-Gawrońska. The purpose of the cooperation is to identify legal issues that raise doubts in its activities, the Ombudsman's Office, the University's scientific research in this area and familiarizing the Ombudsman with their results. The Ombudsman for Small and Medium-sized Enterprises deals with the protection of the interests of micro, small and me-

dium-sized enterprises. His goal is giving opinions on draft legal acts regarding the interests of entrepreneurs and the principles of conducting business activity, and assistance in organizing mediation between entrepreneurs and administration.

Lodz University of Technology joins the hubs of digital innovation

2019-11-25

The Ministry of Entrepreneurship and Technology has selected five Digital Innovation Hubs whose task is to support transformation into industry 4.0. Lodz University of Technology becomes one of them. The Hub of Digital Innovation consortium established this month consists of four partners: the Institute of Communications - National Research Institute, as a leader and Łódź University of Technology, Ericsson Sp. z o.o. and Fundingbox Accelerator Sp. z o.o. -The established consortium creating the Hub of Digital Innovation significantly brings us closer to the implementation of the ambitious project to build a pilot 5G network on the campus of the Lodz University of Technology - says Prof. Sławomir Wiak, rector of the Lodz University of Technology. It must be clearly stated that regardless of the funding obtained from the Ministry of Entrepreneurship and Technology, the Lodz University of Technology is already implementing a project related to the establishment of the 5G Competence Center and the 5G Knowledge Portal co-financed by the Marshal's Office in the university - specifies the rector.

Best master's theses in the field of economic sciences selected

2019-11-26

The 12th Competition for the Award of the President of the National Bank of Poland for the best master's thesis in economic sciences under the honorary patronage of the Minister of Science and Higher Education and the president of the Polish Academy of Sciences has been completed. The goal of the competition is to develop Polish economic thought and increase the interest of the academic community in macroeconomics and finance, in particular monetary policy and financial markets. In this year's competition, the first prize of PLN 15,000 was awarded to Wojciech Jędruszczak from the University of Warsaw for his work entitled Stochastic convergence pattern of unemployment - Poland 2004-2016. The second prize of PLN 10,000 was received by Jakub Klimaszewski from the Warsaw School of Economics for his work entitled Resistance of the Australian real estate market to the global crisis of 2007-2010. Conditions, course, causes. Justyna Janiec from the University of Lodz received the third prize of PLN 7,000 for her work entitled Impact of new capital and liquidity regulations on the banking sector in Poland.

Łukasiewicz - Institute of Aviation to become a leader in innovation on the unmanned aerial vehicle market

2019-11-28

Unmanned aerial vehicles will deliver parcels, control energy networks, industrial installations and protect borders. Polish industry and engineers from Łukasiewicz Network want to have a considerable share in it. The Łukasiewicz Research Network and its Warsaw Institute of Aviation want to be leaders in supporting business in implementing innovations for the unmanned aerial vehicle market. -Our partner is even the Nevada Institute for Autonomous Systems (NIAS). Together with the American institute, we are creating the Joint Competence Center

in the field of autonomous unmanned systems. As part of this project, we are organizing BSL tests with the participation of leading American scientific and industrial organizations, including NASA. The Łukasiewicz Institute of Aviation is the only Polish institution participating in this unique BSL testing program in the urban area - emphasizes Sylwester Wyka, deputy director of Łukasiewicz - Institute of Aviation and adds that this project is one of the largest and most dynamically developing projects in the area R&D between Poland and the USA.

Faculty of exact and technical sciences of the University of Silesia receives Symbol of Synergy of Science and Business

2019-11-29

The Faculty of exact and technical sciences of the University of Silesia received the Symbol 2019 in the category of synergy of science and business. The award was granted in the promotional program of the „Market Monitor”, „Dziennik Gazeta Prawna” and the „Business Monitor” distributed with „Rzeczpospolita”. The Symbols are awarded to companies and institutions that are characterized by the highest quality of management and initiatives. The program strengthens the positive image of the awarded entities and gives the opportunity to establish new business contacts. The jury appreciated the commitment of university scientists in implementing projects important not only for scientific knowledge, but also those undertaking important social issues and offering innovative solutions for the business sector. The university listens carefully to the needs of the region, serving knowledge, apparatus, information, library and housing resources, as well as its achievements and discoveries.

Cardinal Stefan Wyszyński University to hold a conference on digital technologies

2019-12-05

The Center for Digital Science and Technology of the Cardinal Stefan Wyszyński University (CNT UKSW) in Warsaw is inviting participants to the conference „Direction Innovations. Science for the digital economy of the future” which will take place on December 5. This year's conference will be devoted to the development and implementation of digital technologies. The employees of the Digital Science and Technology Center will present the progress of the UKSW «Multidisciplinary Research Center» project, as well as the strategy and achievements of the UKSW CNT. In addition, conference participants will learn about the artificial intelligence, Big Data issues, or digital solutions for anthropology. The speakers will show what is visual analysis in medicine, explain modeling, visualization and advanced data analytics, design materials for 3D printing and work in extreme conditions, and also present how intelligent diagnostic systems for urban infrastructure work.

Faculty of Agriculture and Bioengineering of the University of Life Sciences in Poznań awarded the Symbol of 2019

2019-12-09

The Faculty of Agriculture and Bioengineering at the University of Life Sciences in Poznań received the title of Symbol 2019 in the category: synergy of science and business. The program has been run for 9 years by two independent newspaper supplements - 'Market Monitor' distributed with 'Dziennik Gazeta Prawna' and 'Business Monitor' distributed with newspaper 'Rzeczpospolita'. The awarded Symbols are an expression of appreciation of previous activities and achievements of companies and institutions that are characterized by the highest quality of management and initiatives. The award also serves to distinguish entities characterized by innovation, a strong position on the market and transforming their environment through intelligent mechanisms based on knowledge and competence.

Association of Business Service Leaders recognises the University of Silesia in Katowice

2019-12-10

The University of Silesia in Katowice has been recognized by the Association of Business Service Leaders in Poland - the Association of Business Service Leaders (ABSL) for its contribution to the development of the modern business services sector in the last two years. ABSL is a leading organization representing modern business services in Poland. It cooperates with national and local government agencies and universities to improve the qualifications of people entering the labor market, and also to increase the investment attractiveness of Poland. As part of its activities, it awards distinctions to entities that contribute to the development of the potential of the modern business services sector. Awards in ten categories were granted during a meeting of the management of member companies. The university

in Katowice has been recognized in the category of education leaders for cooperation with the modern business services sector, striving to develop the best education programs.

University of Lodz to launch EkSoc Start UP!

2019-12-11

The Faculty of Economics and Sociology of the University of Lodz (UŁ) together with the Business Council are organizing the second EkSoc Start UP competition! Participants can get up to PLN 20,000 for implementing their business idea. The competition is addressed to students from the Łódź Province, and applications will be accepted until January 31, 2020. The competition is divided into two stages. In the first, students (individually or in groups of max. 5 people) send their business ideas by completing the online form. The competition jury selects the 10 best ideas. The finalists selected in this way move to the second stage. They receive care from mentors - business leaders and a package of professional business trainings that will allow them to refine the project and then present it to the Jury and the audience during the final gala. Koszalin University of Technology becomes the leader of the Central Pomeranian development project

2019-12-11

Koszalin University of Technology will implement the project „Smart development of Central Pomerania - an innovative approach to creating a competitive advantage of the region”. The partners in the activities are the Koszalin Chamber of Commerce and Industry, the Northern Chamber of Commerce and the Science for the Environment Foundation. The project implementation will allow to prepare a diagnosis and analysis of the region's innovation potential in the context of building competitive advantage. It regards identification and assessment of economic potential in the context of innovation and competitiveness networks, identification and assessment of the impact of logistic infrastructure elements on socio-economic development, as well as assessment of the level and quality of social and human capital. The most important result of the project will be the selection of smart specializations for the areas forming the region of Central Pomerania and the identification of potential sources of innovation. The project is accepted for financing by the Minister of Science and Higher Education under the «Dialogue» program.

Silesian University of Technology awarded for the best educational programs

2019-12-11

The Silesian University of Technology was awarded by the Association of Business Service Leaders, an organization of employers and entrepreneurs. The award was granted in the 'Education leaders' category for providing best-in-class educational programs enabling further development of the sector. The Association of Business Service Leaders (ABSL) is an organization that sets standards and directions for the development of the industry, which already gives a job of around 300,000 people in Poland and taking into account a number of economic conditions that can become the largest source of employment in the private sector. The Association's mission is to develop the potential of the modern business services sector and continuous work, together with government agencies, local governments and universities to improve the qualifications of people entering the labor market and to ensure that Poland's investment attractiveness increases.

Bielsko-Biala Academy to hold a conference 'Science-Innovations-Business'

2019-12-16

The Academy of Technology and Humanities in Bielsko-Biala is organizing the "Science-Innovations-Business" conference for the fourth time. It will take place on Monday, December 16. The event organizers emphasize, that this is a unique conference nationwide, because «on the one hand, it is a place to listen to lectures delivered by specialists, but also a place to exchange views and ideas between scientists and the business world.» One of the goals of the conference is to inspire local entrepreneurs and scientists to think about the development of innovation and increase the efficiency of implementing new technologies. One of the main points in the agenda will be speeches on research network activities and research funding on an international scale.

Silesian University of Technology to cooperate with the Mokate Group

2019-12-17

The Silesian University of Technology has signed a cooperation agreement with the Mokate Group. This is an example of the constant development of a network of contacts with the socio-economic environment. The company will use the expert knowledge of scientists - including expanding production activities. It will also be involved in educational and internship programs for university students. Effective cooperation with the economic environment includes organizing student apprenticeships and internships, job search assistance, as well as mediation in identifying university experts who can respond to outsourced research and consultancy assignments for companies. Cooperation agreements are also the basis for the activation of students who receive the unique opportunity to participate in joint ventures. Thus employers have better perspectives to engage them in practical aspects of educating potential future employees. Researcher of the Poznań University of Economics receives Polish Smart Development Award

2019-12-17

Dr Ewa Sikorska, Prof. of the Poznań University of Economics received the Polish Smart Development Award 2019 in the 'Scientist of the Future' category for the implementation of the "Spectral fingerprints as a tool for testing the quality of fruit juices" funded by the National Science Center. Scientists of the Department of Technology and Instrumental Analysis of the Institute of Quality Sciences of the Poznań University of Economics, under the direction of the laureate, studied fruit, apple and berry juices as well as their mixtures. In their research, scientists used optical spectroscopy methods. The winners of the

Polish Intelligent Development Award are entities and persons who demonstrate a future-oriented approach in their work, and their activities constitute the basis for sustainable economic development of Poland. The partner of the award is the Silesian Center for Business Ethics and Sustainable Development at the Silesian University of Technology, and the organizer is the Center for Smart Development.

Awards of the Association of Business Service Leaders

2019-12-20

The Kozminski University (ALK) in Warsaw received the Award of the Association of Business Service Leaders (ABSL) for its contribution to the dynamic development of the business services sector in the Education Leaders category by providing the highest class of higher education programs enabling further development of students. ABSL Special Awards were given to Georgette Mosbacher, US Ambassador in Poland, for significant contribution to supporting investors of the modern business services sector, and Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education, for significant contribution to the dialogue between the government and employers, supporting the development of an innovative economy. ABSL emphasizes, that the modern business services sector employs over 300,000 employees, creates 3% of Polish GDP, consistently increases the competitive advantages and attractiveness of the Polish economy worldwide.

Kielce University of Technology to complete construction of the Scientific and Implementation Center for Intelligent Specializations of the Region in Kielce

2019-12-24

Kielce University of Technology is developing a modern base for scientists and entrepreneurs. The works inside the Center for Science and Implementation of the Intelligent Specializations of the Region are to be completed. The new facility is to give impetus to the development of entrepreneurship and innova-

tive economy. The project will create six new laboratories, and six others will be equipped with modern equipment. Scientists will conduct research on artificial intelligence, innovative 3D modeling, process automation in industry and nanotechnology. - This is supposed to be a bridge connecting science and business. The research from the laboratories should be used by the industry - says professor Wiesław Trąmpczyński, rector of the Kielce University of Technology.

Silesian University of Technology launches Silesian IoT Cluster SINOTAIC Silesian Cluster of Internet of Things

2019-12-24

The Silesian University of Technology is one of founders of the Silesian IoT Cluster SINOTAIC Cluster. The initiators are the Silesian Voivodeship and Smart Secure Networks. This is the first such entity in Poland. One of the main tasks of the Cluster is to develop lasting cooperation between companies and scientific institutions as well as public administration and business support organizations of the Silesian Voivodeship. The main purpose of his establishment is to create products and solutions for the Internet of Things, with particular emphasis on cybersecurity. Within the Cluster, joint research and implementation projects will be implemented as well as effective transfer and commercialization of their results as part of business operations. The cluster will also be responsible for creating an implementation center in Silesia in the field of the Internet of Things by integrating native solutions. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListaWiadomosci&Page=1&WebPartTitle2=Wiadomosc&Filter1Field2=Identifier&Filter1Value2=2991>

Scientists of the University of Szczecin receive Minister's Award

2019-12-30

Scientists from the University of Szczecin received the award of the Minister of Science and Higher Ed-

ucation for conducting international research and a scientific monograph entitled „The Sustainable Marketing Concept in European SMEs: Insights from the Food & Drink Industry”. The monograph published in Great Britain was recognized as an outstanding and innovative scientific achievement. It is the result of a research project implemented thanks to winning the «Harmony» competition, organized and financed by the National Science Center. The research concerned the concept of sustainable marketing and its application on selected European markets, diversified in terms of socio-economic development. They were implemented jointly with Leeds Beckett University (United Kingdom), University of Zagreb (Croatia), Ural Federal University (Russia), Eberswalde University for Sustainable Development (Germany) and University of Leon (Spain).

HIGHER EDUCATION IN POLISH SCIENCE

2018-2019

Scholarships offered for PhD students

2018-02-01

If you have your doctoral thesis reviewed and you carry out research in technology combined with medical sciences, you can receive the scholarship from Czesław M. Rodkiewicz Scholarship Foundation.

Polish citizens, permanently living and obtaining the engineer diploma from Polish universities can apply for the scholarship competition. During the qualification procedures the jury will take into consideration the subject of the doctoral thesis and its impact on the science, academic achievements and the opinions of their tutors with two independent researchers. Ultimately, two doctoral students will receive a scholarship of 4,000 Canadian dollars. The application and required documents should be sent to the following address: Janusz Wójcik, President 622 Wahstao Rd Edmonton, Alberta, T5T 2Y4 Canada, until April 30, 2018. You can find more information on the Foundation's website

First „Star of Internationalization”

2018-02-01

Emilia Wojtczak from the Department of Lifelong Education and the International Poznań University of Technology won the „Rising Star” title at the first Academic Awards ceremony of „Stars of Internationalization”.

The prize is awarded for supporting the internationalization of Polish higher education and science, under the honorary patronage of Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. Emilia Wojtczak is the author of the project „PP around the world - intercultural cafe”. She actively develops new inter-university initiatives in India and China. She also initiated the „PUT Buddy” program to support foreign students in Poland. More: <https://www.put.poznan.pl/pl/aktualnosc/gwiazda-internacjonalizacji-na-pp>

Agreement on cooperation between NCBR and NCN

2018-02-02

The National Center for Research and Development and the National Science Center have signed a cooperation agreement that aims to release the potential of Polish science. The cooperation between NCBR and NCN offers better development opportunities for Polish scientists, also in terms of TANGO program, financed by NCRD with PLN 40 million. The aim of the TANGO program is to join basic, applied and industrial research, which will create new opportunities to use the effects of researchers' work in practice. There are no thematic restrictions and that allows to implement projects from various fields. - We use all available means to ensure the best possible conditions for conducting, both basic and applied research. The agreement signed today by the NCRD and the NCN is another step in the improvement of support mechanisms that Polish science and the economy will benefit from - said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. Polish student app will help blind people

2018-02-02

Polish students developed an application that will help blind people to move in the university.

24 hours, 14 teams, over 20 thousand lines of code and the result is an application for people with visual disabilities. It can be controlled only by simple gestures and an intuitive interface, which allows to pass to various lecture halls. The innovative idea of students from Warsaw and Krakow was awarded by the hackathon jurors at the Campus App Challenge. Now, the winners are developing the software under the guidance of professionals, and they target more than 40 its implementations at Polish universities and schools abroad.

See the report from the event:

Software programmers are the sign of the technological revolution in Poland

2018-02-05

250 thousand programmers working in Poland are one fourth of all IT developers employed in Central and Eastern Europe.

They are among the best professionals in the world - emphasize the authors of the latest Stack Overflow report „Central & Eastern Europe Developer Landscape 2017”. Polish universities educate over one million students. There are 69 higher education institutions in Warsaw, 27 in Wrocław, and 21 in Poznań and Kraków. Reputable universities are also in Katowice, Łódź and Gdańsk and Gdynia. And it results in the largest number of technology companies and start-ups created there.

Rare earth elements are the topic of the victorious Diamond Grant

2018-02-05

Karolina Górnicka, a PhD candidate at the Faculty of Technical Physics and Applied Mathematics of the Gdańsk University of Technology, won the 6th „Diamond Grant” competition. Her project titled „Superconductivity and magnetism in the new double compounds R-Rh and R-Ir (R-rare earth)” received funding in the amount of PLN 219 350.

Every year bachelor graduates or students after the third year of their master's program may apply for the Diamond Grant to carry out their own research. The program is organized by the Ministry of Science and Higher Education.

Cheap and comfortable homes for families

2018-02-06

Students will design single-family houses (2 + 3) for small and medium-sized municipalities within the program Mieszkanie Plus (Flat Plus). The competition was inaugurated in Warsaw with the participation of Jarosław Gowin, deputy Prime Minister, Minister of Science and Higher Education. Previously, students presented proposals for urban multi-family houses. The Mieszkanie plus program will increase the availability of cheap apartments for rent with the option of gradual purchasing the property. It is addressed to the less-wealthy people. The pilot constructions of 1,700 first «flats plus» have begun in Biała Podlaska, Wałbrzych, Gdynia, Warsaw, Kęпно and Katowice.

Research centers for cancer and quantum technologies planned in Gdańsk and Warsaw

2018-02-07

The Foundation for Polish Science has transferred over PLN 109 million for research in three international science centers planned in Gdańsk and Warsaw. The International Center for the Theory of Quantum Technologies will be established at the University of Gdańsk. Research will include the use of quantum technologies in computers. Its foreign partner is the Institute of Quantum Optics and Quantum Informatics (IQOQI) of the Austrian Academy of Sciences. Scientists from Prof. Konrad Banaszek's Center in Warsaw will develop quantum optical technologies. They cooperate with the Oxford University. The Cancer Research Center will be set up in Gdańsk and it will be run by Prof. Jan Dumański from the University of Uppsala (Sweden) and Dr Arkadiusz Piotrowski from the Medical University of Gdańsk. (Kp)

Smartphones help the disabled to learn Eastern languages

2018-02-09

The Eastern Languages School of the Faculty of Oriental Studies of the University of Warsaw has created an application for smartphones, facilitating the learning of Chinese, Japanese and Arabic for blind students or for those who suffer from manual dysfunction. Learning is performed „without signs”, by listening and speaking. For a year, students aim to achieve language proficiency at A2 level. - I am sending the students a file, and their smartphones articulate it - explained Olgierd Uziembło, a lecturer who conducts classes in Chinese «without signs» at school. The School of Eastern Languages runs classes in the languages of the former socialist countries, as well as from Middle East, Far East and African countries. The course lasts 2 years. Learning is provided according to the rules of the University Foreign Language Teaching System and exams are provided at A2, B1 or B2 level in accordance with the criteria of the Council of Europe. Film promoting the Poznan University

2018-02-12

Professional actors from Poznan theaters, dozens of extras - students of the university (among them a Turkish student staying in Poznan as part of the European Erasmus program) appeared in a new promotional film of the University of Adam Mickiewicz in Poznan.

The film shows a Poznań university as a place to pursue scientific passions. It used scenes from well-known hits of world cinema. Guessing the titles of the films from which they were borrowed can also be interesting for the viewers. The photos lasted two months, from June to August 2017. They were shot in the university buildings, in the areas of Poznań Ławica Airport, and even in Venice. See the video <http://uam.platontv.pl/adv?page=1&title=film&lang=-1&order=1&main=False&...> (kp)

Competition Integrated University Programs

2018-02-12

PLN 248 million was granted to 28 colleges as a result of a competition supporting the development of small and medium-sized high schools. The organizer of the „Integrated School Programs” competition is the National Center for Research and Development. The aim of the competition is to adapt and implement university education programs to socio-economic needs by improving the competences of students and university staff. Announcing the results of the competition held at the Cardinal Stefan Wyszyński University in Warsaw, the Deputy Prime Minister - Minister of Science and Higher Education Jarosław Gowin drew attention to the need to provide courses in English. He emphasized that this is important in the context of opportunities for international cooperation of universities. Co-financing received by universities as a result of the «Integrated University Programs» competition is to be devoted to the improvement of scientific staff, internships and internships for students as well as the internationalization and informatization of higher education institutions.

A heart in three dimensions - an innovative application at the University of Opole

2018-02-13

Medical students at the University of Opole as the first in Poland will learn the secrets of the human heart in a three-dimensional virtual reality. They received Virtual Heart, a newest didactic application. A realistic picture of the heart is viewed using goggles. It can be rotated, enlarged; simulate different body conditions: its healthy, uninterrupted work or changes in different situations, as a result of damage, disease progression or the action of stimuli or chemicals. This is useful for precise planning of operations. Opole Virtual Heart will enable better education of future doctors in clinical subjects, anatomy and physiology. It was created as a result of cooperation with the Foundation for the Development of Cardiac Surgery (Kp) <http://www.uni.opole.pl/page/2100/wirtualne-serce-na-uo-mowi-o-nim-cala-polska>

Laureates of the 13th Academic Forum Competition

2018-02-13

Katarzyna Pańczyk, PhD student at the Pomeranian Academy in Słupsk, won the 13th Academic Forum Competition for a popular science article entitled «Complicated and simple. Young scholars about their research». The honorary patron of the competition is Jarosław Gowin, Deputy PM and Minister of Science and Higher Education. The second prize was won by Magdalena Kłodowska (Institute of Nuclear Physics, Polish Academy of Sciences), and the third - Dominik Szulc (Institute of History of the Polish Academy of Sciences). Also Edyta Charzyńska (University of Silesia), Olga Kielak and Aksela Kobiałka (both from the Maria Curie-Skłodowska University in Lublin) and Tomasz Skawiński (University of Wrocław) were awarded. Congratulating the winners, Sebastian Skuza, deputy minister of science and higher education, expressed his hope that they would also be included for scholarships as outstanding young researchers. The ceremony was attended by Prof. Zbigniew Marciniak, the chairman of the Main Council of Science and Higher

Education. The prize founders and contest partners were Foundation for Polish Science and the Wydawnictwo Naukowe (Science Publishing House). (Kp) More: <https://www.apsl.edu.pl/Aktualnosci-Serwisu/1-Nagroda-w-konkursie-Forum-...>

A student from Kazakhstan won the Interstudent 2018 competition

2018-02-13

Aigerim Balkhashbayeva, a second year student of psychology taught in English at SWPS University in Warsaw, won a nationwide Interstudent 2018 contest in the Bachelor category. 100 people from the Middle East and Far East, Asia, Africa, Europe, the Americas, studying at 30 universities in Poland participated in this contest. Aigerim came from Kazakhstan. He is the head of the International Integration Group, which is responsible for volunteering, charity, talent presentation and integration meetings of the university community. She organized the 9th European Congress of IACCP 9 (International Association for Cross-Cultural Psychology). The Interstudent competition is organized by the Perspektywy Educational Foundation. It is addressed to foreign students studying at Polish universities on undergraduate, graduate and doctoral studies, whose activities enrich the local academic environment and build bridges between cultures. (Kp)

Additional money to develop University of Bydgoszcz

2018-02-13

The four-year project „Modern University” will be implemented at the Bydgoszcz University. For over PLN 5.2 million changes in university management as well as trainings and internships, also for university staff are planned. The «Modern University» project will be financed by the National Center for Research and Development. Over 400 students will exercise the use of advanced IT tools in their studies. They will also take part in classes with potential employers. The program of improvements in the functioning of the university is targeted to increase the professional competence for 200 people from

teaching and administrative staff. The academic staff number of the University amount to 600 academic teachers, including 160 professors and almost 10,000 students. (kp)

Biostatistics at the Medical University of Bialystok

2018-02-14

Bachelor studies of biostatistics are launched at the Medical University of Bialystok. This is the first such field of study in Poland. The studies are to combine mathematics, computer science and medicine. Biostatistics include statistical methods used in medicine and biology as well as other natural sciences (e.g. veterinary medicine). The studies refer to: mathematical knowledge in the scope of understanding the essence and the use of biostatistic models, IT knowledge in various types of statistical packages and medical knowledge in the scope of substantive understanding of the analyzed phenomenon and its medical character. The Medical University of Bialystok has already conducted postgraduate studies in biostatistics in the previous years and currently it may use that experience and staff for launching the course for undergraduate studies. More: https://www.umb.edu.pl/aktualnosci/16978,Biostatystyka-_nowy_unikatowy_k...!

University of Economics in Katowice received PLN 5 million for sustainable development

2018-02-14

The National Center for Research and Development awarded the University of Economics in Katowice with a subsidy of almost PLN 5 million for the implementation of the project entitled „Near - International - Throughout my life”. Students will benefit from a series of trainings, workshops and project tasks as well as three paid internships. Teaching staff will take part in national and international internships, and the administrative staff will increase their competences through training and postgraduate studies. The project will also facilitate the use of the website and platforms that will be translated into English. The project also provides for restructuring activities in the area of university management. More than 1,000 students and nearly 300 university employees will be supported within the project.

Competitions at the University of Natural Sciences and Humanities in Siedlce

2018-02-14

Association of Friends of the University of Natural Sciences and Humanities in Siedlce has announced a competition for the best student and an outstanding young university scientist. This Lesław Szczerba Award commemorates Prof. Lesław Szczerba, a long-term rector of the Siedlce university, deceased 8 years ago. Applications should be submitted until April 10, 2018. The award ceremony will take place on May 16 during the University Holiday. The detailed rules of the competition, along with the official forms, can be found at www.nagroda.uph.edu.pl. On March 16, the deadline for submitting works for the photography competition of the University of Natural Sciences and Humanities in Siedlce will be released. „Nature from near and far away”. Dozens of the best works will be presented at the occasional exhibition. (Kp)

Additional funds for the development of the Pedagogical University in Krakow

2018-02-14

Cracow Pedagogical University National Education Commission received 13 million PLN for the implementation of the project „The highest quality university - UP to the TOP”. This is an award in the competition for initiatives that aim to improve management in higher education institutions. The money will be used, among others for the purchase of information systems and improving the exchange of information. Students will benefit from professional skills development programs, learn entrepreneurship principles, improve communication skills and use foreign languages. Also scientific and didactic staff as well as administrative employees will participate in the trainings. The project will be implemented in the period from October 1, 2018 to September 30, 2022. (kp)

Medical Simulation Center opens in Koszalin

2018-02-14

A new Center for Medical Simulation for the needs of nurses' education will be opened in Koszalin. The project will be implemented by the State Higher Vocational School in Koszalin in cooperation with the Specialist Team of Tuberculosis and Lung Diseases from Koszalin. The center will be created thanks to the EU program implemented by the Ministry of Health and subsidies from the Zachodniopomorskie Region and the Koszalin local government. It is the only such center in northern Poland and one of the 30 currently being created in Poland. The State Higher Vocational School in Koszalin will educate nurses at the highest European level, in a facility equipped with technologically advanced patient simulators. Simulation rooms will be equipped with the necessary audio-video systems for recording simulation sessions, which will allow students to gain practical skills.

Former director of NASA Ames Research Center visits Toruń

2018-02-15

Former director of NASA Ames Research Center in Silicon Valley, General Simon Peter Worden visited the Torun University. General Worden met the Vice-Rector for Research Prof. Jacek Kubica, director of the Astronomy Center Prof. Michał Hanasz and vice-dean of the Faculty of Physics, Astronomy and Applied Computer Science, Dr. Winicjusz Drozdowski, Prof. NCU. The meeting was also attended by Mateusz Józefowicz from the ABM Space company in Toruń. The topics included the development opportunities for the space industry in Toruń, plans to create a selection committee for candidates for the scientific award granted by Simon Worden's foundation and research projects regarding the search for planets carried out at the Astronomy Center of the Torun University.

Recruitment for Fulbright scholarships

2018-02-15

The Ministry of Science and Higher Education reports that recruitment has begun for scholarship programs of the Polish-American Fulbright Commission for Polish citizens. Recruitment refers to an opportunity to visit the US in the academic year 2019/2020. The Fulbright Graduate Student Award program is a scholarship for graduates of Polish universities who want to continue their studies in the USA. In turn, the Fulbright Junior Award is a scholarship for PhD students, which enables the implementation of a research project at an American university, research institute or non-governmental organization. The third Fulbright Senior Award program is a scholarship for scientists, researchers and teachers. It provides the opportunity for implementation of their own research projects at American universities, non-profit research institutes and some government institutions. More: <http://www.fulbright.edu.pl/>

City scholarship for PhD student at the University of Life Sciences in Lublin

2018-02-15

MSc. Agnieszka Wawryniuk received a scholarship of the mayor of Lublin granted within the „Municipal scholarship program for students and doctoral students“. The scholarship holder is a PhD student at the Department of Commodity Science and Animal Processing at the Faculty of Biology, Animal Sciences and Bioeconomy, where under the supervision of Dr. Jolanta Król she prepares her doctoral thesis «The influence of selected factors on the quality of milk and curd produced on the basis of this raw material, with particular emphasis on the content of lipophilic vitamins». University of Life Sciences in Lublin (formerly Agricultural University) is a public university of science. Since 1955, it exists as an independent didactic and scientific-research facility. It has a multi-profile character, integrates agricultural, biological, veterinary, technical and socio-economic sciences. (Kp)

Change of the Maritime University of Gdynia into the Maritime University

2018-02-15

- This is matter of prestige for us - says the Rector of the Maritime University Prof. Janusz Zarębski. - In Poland and worldwide it is a signal that we will be a real university, a university on a slightly higher level. This is also a signal that the Polish maritime economy is developing and that the government is interested in it - he adds. The university authorities believe that the change of name will increase the university's capabilities, that it allows to distinguish it from military universities. In international contacts, the Maritime University uses the name «Gdynia Maritime University», which has more prestige and a higher position than «Maritime Academy». On November 15, 2017, during an extraordinary meeting, the Senate of the Maritime University of Gdynia adopted a resolution on changing the name of the high school to the Maritime University. On February 10, 2018, on behalf of Minister Marek Gróbarczyk

the decision was announced by the Deputy Minister of Maritime Economy and Inland Waterway Transport, Anna Moskwa, during the Great Sea Ball.

University from Nowy Targ signed an agreement with Podhale Rifles

2018-02-15

The State Higher Vocational School in Nowy Targ has signed the first in its history agreement on cooperation with the military formation - the 21st Brigade of Podhale Rifles. The State Higher Vocational School in Nowy Targ is involved in the pilot program of the Academic League (Legia Akademicka), and for its performing, the alliance with the military formation will be very valuable. Academic League, providing military education of volunteer students, is a joint project of the Ministries of National Defense and Science and Higher Education. The agreement obliges both parties to disseminate volunteering activities for state defense, patriotic education, pro-defense education of students of the Podhale high school and integrating military milieu and academic youth. According to the agreement, the 21st Brigade will accept students who have applied to the Academic League. In July and August 2018, 1000 new members are expected.

Professor Giulianotti and Dr Armstrong visit the Warsaw Institute of Political Sciences

2018-02-16

Two prominent European sport sociologists will visit the Institute of Political Sciences of the University of Warsaw in March. Professor Richard Giulianotti and Dr. Gary Armstrong on 9-10 March 2018 will give a lecture and conduct a methodological seminar. March 9, 2018, at 3 PM, Prof. Giulianotti and Dr. Armstrong will give a lecture entitled «Key contemporary issues in the sociology and anthropology of football». The lecture will take place in the Collegium Politicum (Auditorium Building) as part of the course on the monographic subject «Football in Europe: Case Studies» led by Dr Seweryn Dmowski. The lecture will be open and will be conducted in

English. On March 10, 2018, from 10:30 AM, scientists will conduct a methodological seminar for Polish PhD students and students. The seminar will take place in room 303 in the Collegium Politicum (Auditorium Building). The guests of the Institute of Political Sciences will cover the following topics: theory and methodology of contemporary social sciences (with particular emphasis on research on sport / football), experience in writing and publishing scientific articles in renowned journals and publications and international scientific networking. For further information, please contact Dr Seweryn Dmowski (seweryn.dmowski@uw.edu.pl).

Minister's awards for academic teachers

2018-02-16

Polish colleges may apply for the awards of the Minister of Science and Higher Education for academic teachers. They can be acquired by Polish scientists, including those working abroad and foreigners who, during their stay in Poland, obtained a unique achievement in scientific or didactic work. The Ministry awards scientific achievements that became the basis for the PhD degrees last year. Individual and team prizes for distinguishing results in didactic work can be obtained by the authors of outstanding academic textbooks, innovative research and modern teaching methods and didactic materials. The deadline for submitting applications is March 31, 2018. The detailed rules and procedures are regulated by the Regulation of the Minister of Science and Higher Education of September 6, 2016. (Kp) See the regulation: <http://dziennikus-taw.gov.pl/du/2016/1462> <http://prawo.sejm.gov.pl/isap.nsf/download.xsp/WDU20160001462/O/D20161462.pdf>

Leading economists will meet in Warsaw

2018-02-19

From September 13 to September 15, 2018, the Warsaw School of Economics, a leading Polish business university, will host the European Trade Study Group, the most prestigious scientific conference on economics and international trade in Europe. About 350 economists from universities and research centers take part in it each year. The world's leading economists will come to Warsaw from Harvard, Princeton, the London School of Economics, the World Bank and the World Trade Organization. The European Trade Study Group is a non-profit academic association. It is involved in the study of international economic cooperation. The scientific committee is headed by Prof. Elżbieta Czarny from the Warsaw School of Economics. The chairman of the organizing committee is Dr Andżelika Kuźnar. (Kp) More about the European Trade Study Group: <http://www.etsg.org>

Event management - a new field of study in Silesia

2018-02-19

The Silesian University of Technology in Gliwice launches a new two-semester post-graduate program. Event management will allow graduates to acquire the knowledge, skills and competences needed to manage mass events. According to the assumptions of the studies, their graduate will have a formal basis for undertaking activities related to the management and organization of events, i.e. will acquire the right to be an Event Manager. This type of knowledge and qualifications are valuable for sports facilities managers, employees of organizational units, people responsible for public safety, non-governmental organizations activists or employees of educational organizations. The students will learn how to manage, plan, organize and conduct a mass event, how to manage teams responsible for preparing and conducting the event, what legal provisions must be included in the organization of mass events and how to plan their safety. The studies begin in March 2018 and the entries are accepted by the Faculty of Organization and Management at the Silesian University of Technology.

Kielce University of Technology launches four new specialties

2018-02-19

Kielce University of Technology is to become a modern university, educating highly qualified staff for the needs of the innovative labor market. The university has received over PLN 7 million to improve the offer and quality of education from the National Center for Research and Development. This money allows to create four new specialties: building information modeling, proecological engineering, ICT with computer control and measurement systems. Students will also benefit from additional training and workshops to help them create and run their own businesses. The university will also expand the offer of internships in the region's leading enterprises. Funds from the National Center for Research and Development were directed by the Ministry of Science and Higher Education as part of a program supporting the development of smaller regional universities. In total, almost PLN 250 million was allocated. Support for smaller research centers is crucial in terms of the development of the regional economy.

Postgraduate studies - Data Protection in the Church

2018-02-20

The Faculty of Law and Administration of the Warsaw Cardinal Wyszyński University began recruitment for postgraduate studies on „Personal Data Protection in the Church.” The studies were launched under the patronage of the Secretary General of the Polish Bishops' Conference and the Inspector General for Personal Data Protection. The study program is agreed with the Inspector General for Personal Data Protection and includes material concerning general issues of personal data protection, rights and obligations of church legal persons in the scope of personal data processing according to the RODO (Regulations on the Protection of Personal Data) and the specificity of personal data protection in the Church. The studies will last two semesters and will start at the beginning of April 2018. A detailed study program can be obtained after applying the

letter of interest to the email address: odok@uksw.edu.pl Registration of candidates will take place via the website

5th Conference for Rectors of Universities under the Baltic University Program

2018-02-20

In February 2018 Turku (Finland) hosted the 5th Conference of Rectors of higher education institutions cooperating in the Baltic University Program. The University of Turku invited more than 150 representatives from 74 universities and colleges from the Baltic Sea region. Poland was represented by 35 representatives from 24 universities. The program center for Poland is located at the Lodz University of Technology and has been operating for 18 years. The Baltic University program focuses on the issues of sustainable development, environmental protection and democracy in the Baltic Sea region. The participants of the Baltic University Program are universities located in the countries of the Baltic region. Apart from countries directly located on the Baltic Sea, the network includes: Belarus, Ukraine, the Czech Republic and Norway. The program includes all types of universities – humanities, technical, higher pedagogical and economic schools, agricultural and medical academies as well as other higher education institutions and research and scientific organizations. In July 2018, Poland starts a six-month rotating presidency in the Baltic University Program.

Scientific conference on the development of Eastern Poland

2018-02-20

The sector of small and medium enterprises and the competitiveness of the peripheral region is the title of the conference that will be held on May 24-26, 2018 in Kazimierz Dolny. The organizer of the tenth international scientific conference is the University of Economics and Innovation in Lublin. For years, the conferences focused on the development of Eastern Poland and they formed a research initiative group called «Lublin Project». This year three plenary sessions are planned. They analyze the impact of the small and medium-sized enterprises sector on regional and local development as well as support instruments for the small and medium enterprises sector provided by the local government. The third topic are start-ups and their participation in the process of stimulating economic growth. The President of Lublin is the honorary patron of the conference. Applications for participation in the conference should be sent by May 5, 2018, to the e-mail address: sylwia.skrzypek-ahmed@wsei.lublin.pl

Deputy Prime Minister Jarosław Gowin at the celebration of the Torun University

2018-02-21

On February 19, 2018, the Torun University celebrated its feast - the 545th anniversary of the patron Nicolaus Copernicus' birth. Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education was the special guest of the celebrations. During the ceremony the university staff was awarded with state and university prizes and titles: Doctor Honoris Causa, Honorary Professor and Ambassador of the Nicolaus Copernicus' University. New habilitated doctors and doctors received diplomas. - Nicolaus Copernicus University is one of the best-growing Polish universities and has a chance to be in the group of so-called research universities - said Deputy Prime Minister Jarosław Gowin. We need to let Polish universities differ from each other. The mission of a research

university differs from a good vocational school - he added. The Minister of Science and Higher Education reminded that the government continues to work on the so-called constitution for science. Jarosław Gowin emphasized that he would strive to implement the law in its current form. According to the assumptions of the Act, a group of research universities will be organized. The presence of the University of Nicolaus Copernicus in this cluster is a chance for even greater development of the university. During the ceremony, Deputy Prime Minister Jarosław Gowin proposed the initiative to celebrate the Day of the Scientist on February 19 - the day of Nicolaus Copernicus' birth.

Fair Academy 2018

2018-02-21

The 24th educational fair Akademia 2018 will take place at the University of Gdańsk on March 19- 20, 2018. It is the largest educational event in the Pomeranian Region and it is also a great opportunity for future students to get acquainted with the educational offer of Polish universities. During those two days, dozens of universities from around the country will be presented. Visitors will also have the opportunity to participate in the Open Days of the University of Gdańsk, which will be held at all faculties and at the university library. It is a perfect way to see the infrastructure, to talk to students and lecturers, or to take part in numerous events, such as exhibitions, experiments, workshops. The Akademia Fair is a part of the anniversary of the University of Gdańsk, which was established on March 20, 1970 and is included in the program of University Day celebration. Organized for over twenty years, the Fair is the largest and oldest educational event in Pomerania Region.

Candidates start to apply to the Scientific Policy Committee

2018-02-22

Until 6 April 2018, scientific organizations may nominate candidates for the members of the Scientific Policy Committee. According to the regulation of the Minister of Science and Higher Education, scientific organizations with the scientific category

A + or A can submit one candidate representing the field of science appropriate for a given scientific body. The candidate as a member of the Committee must have at least the academic postdoctoral degree. The application must contain a description of the candidate's qualifications and professional experience as well as a justification containing information about good repute and candidate's compliance with the rules of scientific ethics. The list of candidates for the members of the Scientific Policy Committee whose applications meet the formal requirements will be posted on the website of the Ministry of Science in the Public Information Bulletin and in the headquarters of the Ministry of Science and Higher Education, immediately after the evaluation of applications. In March, Gliwice hosts Deputy PM Gowin at conference on dual education

2018-02-22

On March 5, 2018 the Education and Congress Center of the Silesian University of Technology in Gliwice organizes the second conference on the Dual Education - EDUAL. Deputy Prime Minister and Minister of Science and Higher Education Jarosław Gowin took his patronage over the event. The conference «Dual studies in response to the needs of Industry 4.0» will also be attended by representatives of science and economy, who will discuss the best tailored forms of student education for the needs of science and industry. During the conference, examples of dual education and various activities related to this type of education at Polish universities will be presented. One of the sessions is devoted to best practices, implemented by foreign partners of the Silesian University of Technology. Simultaneously, the Conference of Rectors of Polish Technical Universities will be held in Gliwice with the participation of Deputy Prime Minister Jarosław Gowin. More about the conference: <http://www.edual.polsl.pl/>

EQUIS accreditation for the Faculty of Management at the University of Warsaw

2018-02-22

The European Foundation for Management Development (EFMD) has granted the EQUIS accreditation to the Management Faculty of the University of Warsaw. EQUIS is one of the most acclaimed accreditations for business universities. Thus, the Faculty of Management at the University of Warsaw found itself in a prestigious group of 174 universities in the world that have this accreditation. The purpose of the EQUIS accreditation is to assess the quality of study programs offered by a given institution, as well as to ensure and improve the quality of education in terms of management. Accreditation puts emphasis on the development of entrepreneurial behavior among students and the implementation of didactic innovations. The Faculty of Management at the University of Warsaw is the first public university and the second center in Poland to which the EQUIS accreditation has been granted. It enables to participate in the most prestigious rankings of business schools, including Financial Times ranking. More about EQUIS accreditation: <http://www.efmd.org/accreditation-main/equis>

Wrocław inhabitants need a planetarium

2018-02-22

Construction of a planetarium equipped with the most modern projection and sounding devices and with a multimedia educational center will be an ideal space for popularizing knowledge and organizing cultural events- plans the Astronomical Institute of the University of Wrocław. The authorities of the Wrocław university have already handed over the initial estimates of investment costs to the authorities of the Provincial Parliament. University of Wrocław will provide the area as its own contribution. The cost of building a planetarium amounts to several million PLN (with a large astronomical education center it can amount to PLN 8 million). The idea of creating a modern, large planetarium in Wrocław promoting not only astronomy, appeared already in the 1970s. In 2004, the mayor of Wrocław signed

the letter of intent, but no funds were found for the implementation of the project. In December last year, the main assumptions of the planetarium construction project were presented during the meeting of the Culture, Science and Education Committee of the Provincial Parliament and will be soon discussed by whole Provincial Parliament.

Early contact with a university means the right choice of the field of study

2018-02-22

Military University of Technology in Warsaw took the scientific patronage over students of the First School Complex named after Stanisław Staszic in Wschowa in the Lubuskie Region. The school will receive substantive educational support. Academic teachers will conduct classes in Wschowa and students will take part in the academic activities and competitions conducted by the Warsaw university. - We need good candidates for our studies - said Col. Dr. Eng. Tadeusz Szczurek - Rector-Commandant of the Military University of Technology. We want them to have knowledge about military directions, but also we will educate future engineers of civilian studies in many interesting, unique specialties. - We use all available forms to enrich our educational offer - said Wojciech Kuryłło, vice-mayor of the Wschowa municipality - the sooner the students will contact with the university, the more aptly they will choose the fields of study (kp) <http://www.wat.edu.pl/?p=15256> <http://www.wat.edu.pl/?p=15256>

Scholar from Warsaw will study the most famous syndrome in psychology

2018-02-22

Professor Magdalena Żemojtel-Piotrowska from the Department of Christian Philosophy at the Cardinal Stefan Wyszyński University in Warsaw won the National Science Center competition and received over PLN 1.7 million to create a team and research one of the most famous syndromes in psychology - narcissism. - We are trying to explain the social functioning of different types of narcissism - said

Professor Żemojtel-Piotrowska in a brief description of the project, available on the website of the Cardinal Stefan Wyszyński University - the state of knowledge about this phenomenon needs a solid, theoretical and well ordered research. Research will include observational and objectivized data, such as the analysis of the functioning of narcissistic people in social networks or in romantic relationships. The whole research is complemented by intercultural research; it verifies the assumption of the existence of four forms of narcissism in various contexts and cultural conditions. (kp) More: <http://www.uksw.edu.pl/pl/universytet/uczelnia-dzis/aktualnosci/1265-wys...>

Students from Poznań designed food products for Żabka Polska chain of convenience stores

2018-02-22

Five groups of students from the Department of Commodity Science at the University of Economics in Poznań prepared innovative food products in the Quick Meal Solutions category for the Żabka Polska SA retail chain of convenience stores. Presentation of the effects of their 4-month work was very successful. One of the proposals was immediately accepted and it will be soon directed to the stores. Management and control services representatives realized that also other solutions meet the needs of selected consumer groups, market trends and company requirements. The chain is interested in their commercialization. The project was implemented as part of the classes «Designing food products», conducted at the Department of Food Science at the University of Economics in Poznań. (Kp) More: <http://ue.poznan.pl/pl/aktualnosci,c16/aktualnosci,c15/studenci-zaprojek...>

Constitution for Science addressed the Standing Committee of the Council of Ministers

2018-02-23

Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin directed the draft of the new law on higher education and science to the Standing Committee of the Council of Ministers on February 22, 2018. - I would like the Constitution for Science to enter into force on 1 October 2018 - Deputy Prime Minister Gowin announced a few days ago. On this day, we will begin to implement a groundbreaking reform of science and higher education. I know that not everyone likes it. What do we like the most? The fact that it was formed in our group, in a dialogue with honesty and respect. I believe that it is precisely because it was created in such a dialogue, it will enter into force. Thanks to this reform, we will unlock the potential of our students and scientists. We will free the potential of lecturers and researchers, doctors and professors - emphasized the deputy prime minister.

Professor Udalski is the winner of the European Astronomical Society prize

2018-02-23

Professor Andrzej Udalski from the Astronomical Observatory of the University of Warsaw has been awarded with the European Society of Astronomical Society (EAS) - Tycho Brahe Prize 2018. Professor Udalski received the award in recognition of his main role in the OGLE (Optical Gravitational Lensing Experiment) project - one of the most successful and longest-running photometric sky variability surveys. The results of the OGLE project have had a significant impact on the development of modern astrophysics - says the press release of the European Astronomical Society. The Tycho Brahe prize is awarded for outstanding achievements in the construction and operation of European astronomy instruments, as well as significant discoveries made using such instruments. Professor Andrzej Udalski is a member of the Polish Academy of Sciences, the

Polish Academy of Learning, the National Academy of Sciences of the USA and the International Astronomical Union. In the years 2008-2016 he was the director of the UW Astronomical Observatory. more: http://eas.unige.ch/tycho_brahe_prize.jsp EAS press release: http://eas.unige.ch/documents/eas_prizes_2018.pdf

Poland in the top ten countries in Europe as the most attractive for foreign students

2018-02-23

The study.eu website has once again prepared the ranking of the most attractive European countries for foreign students. The study covered 30 countries. For the first time Poland reached the 10th place. Over the last ten years, the number of international students has grown from 12,000 to 65,000 in our country. A year ago Poland was 16th in Europe. As it results from the research, foreign students more often choose Poland mainly for two reasons. Firstly, because Polish universities launch more and more courses, where education is provided in English, and secondly, Poland is still relatively cheap for foreigners. It matters a lot. The average costs of living and tuition fees in Poland were estimated at 7,000 euros annually. In this category, it is the cheapest place to study among the thirty countries studied. Poland is ahead of Serbia, Hungary and Romania. The first three of the most attractive European countries for foreign students are Germany, Great Britain and France. More: <https://www.study.eu/article/the-study-eu-country-ranking-2018-for-inter...>

Medical University of Lodz invites high school graduates who want to become military doctors

2018-02-23

Until May 15, 2018, the Military and Medical Faculty at the Medical University of Lodz waits for applications from high school graduates who want to become military doctors. There are still around 120 places. After studies, each graduate will be provided

with a job as a medical officer in the military health service. In addition to learning subjects typical for the medicine studies, cadets will also participate in military activities. They will gain knowledge about marine, tropical medicine or bioterrorism and defense education. Students are also required to practice in military hospitals and clinics throughout the country. In the military education system, there are currently two models for acquiring future military doctors. The first is recruitment of civilian, already educated medics for a three-month officer study. It takes place at the Land Forces Academy. The army also educates its doctors - during six-year stationary medical studies at the Military and Medical Faculty of the Medical University of Lodz. At present, there are 367 cadets there, including 165 women. More: <http://rekrutacja.umed.lodz.pl/studia-w-jezyku-polskim/lekarski-mon/>

Students support the Constitution for Science

2018-02-26

The works on the reform of higher education that lasted for nearly two years and included consultations with academic and scientific communities, entered the stage of government and parliamentary works. Despite the reservations made by some politicians, the new solutions were supported by students of the Students' Parliament of Poland and the Independent Students' Association (NZZ). According to NZZ, the reform will prepare national universities for the challenges posed by the modern state. - It is undeniable that the dynamically changing labor market, the needs of society or the growing economy require modern solutions also in higher education. According to the Independent Students' Association, the Constitution for Science responds in general to the challenges of the modern socio-economic system - wrote the chairwoman of the National Board of the Independent Students Association Maria Cholewińska in a letter addressed to Minister of Science and Higher Education, Deputy Prime Minister Jarosław Gowin. More: <http://www.nauka.gov.pl/aktualnosci-ministerstwo/studenci-poparli-konst...>

Scientific consortium Pol-Stor-En was established

2018-02-26

The Pol-Stor-En research consortium was founded under the patronage of the Ministry of Energy. Its members included the AGH University of Science and Technology, the Institute of Non-Ferrous Metals, the Gdańsk University of Technology, the Poznan University of Technology, Warsaw University of Technology, the Jagiellonian University and the University of Warsaw. The main goal of the consortium is to increase the scientific potential for the development of energy storage and cooperation with the industry. It highlights the combining the strength of scientific and research centers in order to develop a comprehensive product that can be used by industry. Pol-Stor-En is part of strategic programs developed in the Ministry of Energy, such as the Electromobility Development Plan and the Directions for the Development of Energy Innovation. It is also a complementary activity with EU projects.

Wroclaw University of Environmental and Life Sciences investigates colorful potatoes

2018-02-26

Department of Potato Processing Technology of the Department of Agricultural Technology and Storage of the University of Life Sciences in Wrocław has conducted research on colorful potato varieties as a potential raw material for nutrition and processing. Wrocław scientists study the chemical composition, in particular the content of polyphenolic compounds with particular emphasis on anthocyanins. Compared to varieties with white or yellow flesh, potatoes of colorful varieties contain twice as many polyphenolic compounds, including anthocyanins. The latter, contained in a potato skin with a colored flesh can be used as food additives, e.g. for oils due to their antioxidant properties. More about the Department of Agricultural Technology and Storage at the University of Life Sciences in Wrocław https://www.binoz.upwr.edu.pl/wnoznew/?page_id=33

New research center at the Wrocław University of Technology

2018-02-26

In October 2018, the new research center „GEO-3EM Energy, Ecology, Education” of the Wrocław University of Technology will be opened. All 12 laboratories are located on 4,500 square meters. The total value of the investment is approximately PLN 100 million. The aim of the project prepared by the Wrocław University is to create a unique center of research and technology transfer in the aspect of sustainable use of raw materials and energy from various sources. Research conducted in this center e.g. spatial mobility, natural and secondary raw materials, machinery and equipment as well as materials processing, are to be used by the Lower Silesian industry. The authors of the project assume that ideas developed here will be commercialized.

Students of Forest Departments learned inventory of wolves in the Bieszczady Mountains

2018-02-26

Students of the three largest Polish Forest Science centers: Faculty of Forestry at Warsaw University of Life Sciences, Warsaw University of Agriculture and University of Life Sciences in Poznan took part in the 15th Wolf Expedition. The Wolf Expedition participants will for seven days acquire knowledge of the wolf *Canis lupus* ecology and biology, learning the methods of inventorying this species and acquire knowledge to recognize the presence of wolves in Baligród, Cisna, Komańcza, Lutowska and Stuposiany located in the Krosno Regional Directorate of State Forests. Participants of the scientific camp use the application of Taxus IT company, which enables to aggregate quickly data collected during wolves inventories.

University of Applied Sciences in Nysa helps to acquire skills in the preservation of monuments

2018-02-26

The Research and Education Center for the Preservation of Monuments of the State Higher Vocational School in Nysa has started recruitment for volunteers to participate in the project „Preservation of cultural and historical heritage by revalorizing historic buildings in Pokoj and educational and informational activities in the Opole Region”. The project will provide free training in maintenance and care of monuments. Practical training will involve the implementation of conservation procedures, including monuments from the Silesian municipality Pokoj. All classes will be conducted by certified conservators and experts. After completing the training, participants will receive certificates confirming their acquisition of auxiliary skills in the preservation of monuments. More: <http://www.pwsz.nysa.pl/index.php?p=26,1176,0,0,-1,635>

Polish seminar in Cambridge

2018-02-27

The Polonium Foundation together with the Federation of Polish Student Societies in Great Britain and the Polish Cambridge University Association, with the financial support of the Ministry of Science and Higher Education invite to the „Quantum Physics & Cryptography” scientific event, which will take place on March 7, 2018 at the Cambridge Union Society. It will be an evening scientific seminar, which takes place as part of a series of meetings in Great Britain - From Poland with Science. During the seminar, Prof. Stefan Dziembowski from the Institute of Computer Science at the University of Warsaw will give a lecture on «Basic research in cryptography», and Dr. Radek Łapkiewicz from the Faculty of Physics at the University of Warsaw will deal with the issue of «Correlation of photons: imaging tool». More: <https://www.eventbrite.co.uk/e/quantum-physics-and-cryptography-from-pol...>

Constitution for Science addressed to the Sejm in April

2018-02-27

The law on higher education in April will be addressed to the Sejm. It will take effect from October 1, 2018 - such information was broadcast by Radio Dla Ciebie, Piotr Dardziński, deputy minister of science and higher education. Deputy Minister Dardziński highlighted that the parliament will need about 2 months to work on this law due to the fact that it is a large legislation and it regulates all areas of science and higher education. - The whole reform is to improve the quality of education of students and doctoral students. The last provisions of the Act are to enter into force in 2026. If we want students to be well-educated, then we should build hierarchies that are not based on degrees and titles, but on the quality of research - added Deputy Minister Dardziński.

Wielkopolska Union of Public Vocational Colleges launched

2018-02-27

Rectors of the State Higher Vocational Schools from Kalisz, Leszno, Gniezno, Konin and Piła decided to establish a Union of Wielkopolska Public Vocational Schools. The Act on Higher Education assumes the cooperation of universities, which may cover many areas in the scope of organization, competence, personnel policy, financial economy, conducting scientific research, publishing activities or administrative services. Importantly, establishing a university relationship does not deprive them of their autonomy. Currently, there are three unions of universities in Poland two of which were established in the last quarter of 2017. The rectors of the Wielkopolska vocational universities will present the union idea to Jarosław Gowin - the deputy prime minister, minister of science and higher education.

Competition of the Cracow University of Technology entitled Tadeusz Kościuszko - engineer and soldier.

2018-02-27

Only until March 9, 2018 high school students from all over Poland can register online to participate in the 7th the contest „Tadeusz Kościuszko - Engineer and Soldier”. The competition is organized by the Cracow University of Technology. The competition winners will receive additional points in recruitment for the chosen fields of study at the Cracow University of Technology as well as attractive financial and material rewards. Students of the history and finalists of previous competitions cannot take part in it. The honorary patron of the event is the rector of the Cracow University of Technology, Prof. Jan Kazior. The final part will take place on April 20 in Krakow. Details (including list of literature) on the website: Szczegóły (w tym wykaz literatury) na stronie internetowej: www.kosciuszko.pk.edu.pl.

FameLab Poland 2018 contest

2018-02-28

On May 19, 2018, the finalists of the nationwide FameLab competition Marta Brocka (Leibniz's Institute of Neurobiology in Magdeburg), Ruth Dudek-Wicher (Wrocław Medical University), Ewa Dyk (Wrocław University of Technology), Nicholas Fedorowicz (Institute of Biochemistry and Biophysics PAS), Paulina Jędrak (University of Gdańsk), Katarzyna Kajukała (University of Poznan), Małgorzata Krystek (Silesian University of Technology), Zuzanna Łukasik (Medical University of Lodz) Paulina Rowińska (Imperial College London) and Jarosław Sowizdraniuk (Wrocław Medical University) will start the final Polish contest. FameLab is a competition for science popularizers. It takes place in over 30 countries. Over 500 scientists already participated in it in Poland. It is organized by the Copernicus Science Center and the British Council Poland. Official partners are the Ministry of Science and Higher Education, the Foundation for Polish Science and the Kosciuszko Foundation Poland. The world FameLab semi-finals and finals will take place in Cheltenham (Great Britain) on June

5-10, 2018 (kp) http://www.famelab.org.pl/index.php?strona=konkurshttps://www.facebook.com/pg/CentrumNaukiKopernik/photos/?tab=album&album_id=10155116959930178

Deputy PM Gowin: Some scholars remain unconvinced about the reform

2018-02-28

- The Act on Higher Education was discussed with the academic community. It is targeted for 7 years to be implemented. The last part will come into force only in 2025. Universities will have enough time - said Jarosław Gowin - Deputy Prime Minister and Minister of Science and Higher Education in an interview with Radio Krakow. - There will be no consensus, because they will be unconvinced about this reform. However, I am convinced that we will find such solutions, for which the majority of the party PiS will vote in favor- he added. Deputy Prime Minister Jarosław Gowin also referred to the fears of the Ministry of Finance regarding the costs of introducing a new law. According to the head of the Ministry of Science, it is normal that the Ministry of Finance says that the budget is limited. - In the expenditures, planned for the next year, there are funds for all purposes of our reform. But there is no money to offer pay rises for professors, who earn on average over PLN 10,000. The national drama are PhD salaries. The doctors earn 3,500 - 3,800 PLN gross. Many of them will leave education or emigrate. In this matter, I am not able to make decisions. The Ministry of Finance is also not. There must be a government discussion on this subject – explained Deputy Prime Minister.

National Science Center summarized the results of MINIATURA

2018-02-28

The MINIATURA competition gathered 828 scientists, who received support for their basic research, and the total amount of funding reached almost PLN 30 million. The MINIATURA competition is addressed to persons with a doctoral degree obtained up to 12 years prior to the application, who did not manage the implementation of the research project at the time of submitting the application, nor were awarded with doctoral scholarships or internships financed from the funds of the National Science Center. The MINIATURA competition financed only implementing basic research, such as pilot or initial research, conference trips, queries, internships or scientific consultations. The greatest number of grants were received by scientists from the Jagiellonian University, the University of Lodz and the University of Warmia and Mazury. The opening of the second the MINIATURA competition is planned for April 2018.

State Higher Vocational School in Legnica plans to launch new studies

2018-02-28

The Faculty of Technical and Economic Sciences of the State Higher Vocational School in Legnica plans to launch new studies Logistics and Transportation and Engineering of Production Processes in the academic year 2018/2019. Those studies will be launched after obtaining the consent of the Ministry of Science and Higher Education. Graduates of Logistics and Transport will be able to design logistic and transport systems and processes, manage these processes and design warehouse space and its infrastructure. The faculty of Engineering of Production Processes at the Legnica University of Technology offers specializations of automation and industrial mechatronics, industrial research and measurements, industrial technological processes and energy management in industry. Two clusters of companies are the University's partners: Enterprises of the Legnica Special Economic Zone and Legnica Special Economic Zone.

Data Science - a new direction at the Polish-Japanese Academy of Information Technology

2018-03-01

The Faculty of Computer Science of the Polish-Japanese Academy of Information Technology in Warsaw has been running the Data Science specialization since March 2018 as Polish full-time studies. The term «Data Science» means more than just «data analysis». It is an innovative and interdisciplinary combination of IT with statistics and mathematics as well as humanities and analytical skills. Graduates will be able to find employment in business as well as in governmental and EU institutions and agencies. According to analyzes carried out in the Harvard Business Review, the profession «data scientist» will be most probably one of the most attractive professions of the 21st century. More: <http://www.pja.edu.pl/informatyka/magisterskie/studia-stacjonarne/specjalizacje/data-science> See the Harvard Business Review article <https://hbr.org/2012/10/data-scientist-the-sexiest-job-of-the-21st-century>

French scholarships for students, PhD students and researchers

2018-03-01

Only until March 7, 2018, students can apply for French government scholarships for studies in France, completing doctorate or monthly study stays. Regarding the studies, the scholarship lasts up to 10 months and the scholarship holder receives about 770 Euro monthly. In addition, the scholarship covers registration costs (up to EUR 5,000), insurance costs and priority in booking dorms. PhD scholarship covers the cost of three stays in France in three years, from one to a maximum of five months in each academic year. The maximum duration of the scholarship is 15 months. The scholarship holder will receive approx. EUR 1060 for each month of stay in France. Scholarships for research stay are intended for Polish scientists under 45, hold a professor or doctoral degree, and plan to conduct a part of re-

search in France. The study stay, up to 3 months, must take place between July 15 and December 31, 2018 and the scholarship holder will receive 1375 euro a month. More: <https://www.institutfrancais.pl/pl/prezentacja>

National Program for the Development of Humanities invited for competitions

2018-03-01

Two contests National Heritage and Universalia 2.2. were settled as part of the National Program for the Development of Humanities. The Minister of Science and Higher Education in the National Heritage competition qualified for funding 28 best projects for the total amount of nearly 32.5 million PLN. Within the Universalia 2.2. 11 projects will be financed for the amount of nearly 2.5 million PLN. Among the financed projects were, among others: «Alma Mater Leopoliensis. History of Lwow humanities 1661-1946.» By the team led by Prof. Anna Janina Dąbrowska from the Faculty of Philology of the University of Wrocław, «Encyclopedia of the Warsaw Ghetto», by Prof. Andrzej Żbikowski from the Emanuel Ringelblum Jewish Historical Institute and «Translation, critical edition and analysis of the content of the Plock Pontifical from the 12th century» by the Professor Henryk Seweryniak from the Cardinal Stefan Wyszyński University in Warsaw. Over PLN 600 million already directed to universities as part of the University Integrated Programs project

2018-03-01

The Ministry of Science and Higher Education in cooperation with the National Center for Research and Development since 2017 runs one of the largest projects on higher education „University Integrated Programs”. A PLN billion was allocated for this purpose. The competition is implemented as part of three paths adapted to the size and potential of

the university. As part of the «Integrated University Programs» Deputy Prime Minister - Minister of Science and Higher Education Jarosław Gowin handed symbolic checks to the Rectors of seven public universities in Krakow: Akademia Górniczo-Hutnicza, Academy of Physical Education, Academy of Fine Arts, Jagiellonian University, Pedagogical University, University of Agriculture and Cracow University of Technology. In total, they received over PLN 121 million. The two paths of the program are addressed to the largest universities and public and non-public high schools and PLN 605 million were distributed within these paths. In March 2018, a competition under the first program path will be settled, where public and non-public institutions could participate if they educate at least 200 people and obtain a positive evaluation of the education of the State Accreditation Committee. The aim of the «Integrated University Programs» project is to increase teaching excellence, improve cooperation between science and business, increase internationalization and change the organizational structure. - These goals may result from specific developmental needs, may be a response to deficits that have been exposed by the new algorithm, may also help individual universities to position themselves in the context of the Act on Science and Higher Education, - emphasized Deputy Prime Minister Jarosław Gowin in May 2017, when he announced the start of the program.

Professor Borysiewicz with the honorary doctorate of the University of Bialystok

2018-03-01

Professor Leszek Borysiewicz became an honorary doctor of the University of Bialystok. He is the fifteenth person dignified by the Senate of the Bialystok with the doctorate. During the laudation, the dean of the Faculty of Law at the University of Bialystok, Professor Emil Pływaczewski reminded pioneer research on vaccines (especially the vaccine against human papillomavirus), for which Professor Borysiewicz received the title of nobility in 2001 from the Queen of Great Britain Elizabeth II. Professor Borysiewicz's parents come from the Podlasie region. He himself was born on April 13, 1951 in Cardiff, in Great Britain. His scientific career is related to British universities and scientific institutions. In the years 2010 - 2017 he was the rector of the University of Cambridge in the United Kingdom.

Deputy Minister Müller focuses on quality in science

2018-03-02

Researchers will be able to focus on studies, not on collecting points for contributing research. We want them to work on important research and have personal satisfaction. That is why we have already increased this year to research for nearly a billion zlotys, „said Deputy Minister of Science and Higher Education Piotr Müller in an interview with the Polish Press Agency. In the interview, he also informed that the Ministry of Science is developing evaluation regulations. -We assume that an academic teacher employed on a research or teaching position will be required to submit within 4 years a maximum 4 his most important scientific achievements. We focus on quality. We prefer 4 good articles than 20 weak ones - explained Deputy Minister Müller. More: <http://naukawpolsce.pap.pl/aktualnosci/news%2C28468%2Cmuller-od-naukowcow-be-da-wymagane-4-dobre-osiagniecia-na-4-lata.html>

Deputy PM Gowin claims Polish science should compete with the best in the world

2018-03-02

- I worked on this law together with the scientific community for almost two years. It was a unique work model. Not only in Poland but also in Europe. The European Commission puts this model as a pattern for other countries - said Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin in the program „Please explain it“ on television wpolsce.pl. According to the head of the Ministry of Science, «every large reform is controversial». - I understand this but I will try to push my project through. The Constitution for Science aims to stop the professor caste to block the careers of young and talented scientists - added Gowin. The Deputy Prime Minister also pointed the need to improve the achievements of Polish science on the international level. - I believe that Polish science should face the best in the world. Polish humanists should not be content only with publications in Polish scientific journals. We all should care about Polish humanists writing in international journals, „- said Minister Gowin. See the whole interview with Deputy Prime Minister Jarosław Gowin: https://youtu.be/kt9D00Fj_8Y

Secondary School cooperating with the University launched in Słubice

2018-03-02

Adam Mickiewicz University in Poznań launches the Secondary School since September 2018 in Słubice. Poznań scientists want the Adam Mickiewicz University to become even more recognizable in the secondary school pupils' minds in the west of Poland and simultaneously to strengthen its position on the universities market. On the other hand, they want to create an exceptional school. They offer the entire academic and didactic base of the university, ie laboratories, lecture halls and a library to the pupils. They will also receive individual academic care. The school in Słubice provides English and German language classes as well as three profiles: humanities, mathematics and IT, and physics and chemistry. The

core curriculum is to be enriched with elements of academic teaching. The school will function in one of the buildings of the Collegium Polonicum in Słubice.

Business Law at the Bydgoszcz University

2018-03-02

Business Law is a new faculty offered by the Bydgoszcz University in the academic year 2018/2019. Business Law is a proposal for people who want to gain knowledge and skills that allow them to be employed in companies and the business environment. Also, the new faculty is to prepare graduates to run their own business. In addition to legal subjects, the study program also includes economic courses, several-month internships conducted in cooperation with large companies with legal service units, law offices, legal and tax advisory offices. The authorities of the Bydgoszcz University assume that this innovative and interdisciplinary course will give graduates real career prospects and the opportunity to work in both the economy and the legal business environment.

10th International neuroscience conference at the Jagiellonian University in April

2018-03-05

Neuronus IBRO Neuroscience Forum is one of the largest conferences in the field of neuroscience in Europe. It will take place in April 2018 at the Jagiellonian University in Krakow. During this year's conference, 6 plenary lectures will be presented. They will be delivered by: prof. Amir Amedi (Hebrew University, Israel), prof. Ole Jensen (University of Birmingham, Great Britain), prof. Markus Ullsperger (University of Magdeburg, Germany), prof. Yves De Koninck (Laval University, Canada), prof. Thomas Kuner (University of Heidelberg, Germany) and prof. Emma Robinson (University of Bristol, Great Britain). Conference guests will see 25 presentations and participate in several scientific sessions and symposia. The event will take place on April 20-22, 2018 at the Auditorium Maximum at the Jagiellonian University in Krakow. More: <http://neuronusforum.pl/>

Celebration of March '68 at the University of Warsaw

2018-03-05

Next Thursday, March 8, 2018, is the 50th anniversary of the March events at the University of Warsaw. Student protests in 1968 were brutally pacified by the communist security service. Debates, conferences and exhibitions will take place at the University of Warsaw to commemorate these tragic days and to honor their participants. The celebrations will begin on March 8 at 12.00 with placing flowers at the plaque commemorating March '68, located at Krakowskie Przedmieście, next to the main gate of the University of Warsaw. At 13.00 in the former University Library Professor Jerzy Eisler will give a speech «March '68 after half a century: assessments, interpretations and manipulations». At 5 pm, a meeting with Adam Michnik- one of the participants of the March 1968 events- will take place in the Column Hall of the Historical Institute,. The interview will be led by Dr Joanna Wawrzyniak from the Institute of Sociology at the University of Warsaw and Professor Dariusz Stola, director of the POLIN Museum of the History of Polish Jews. Polish Airlines LOT cooperate with the university in Chełm

2018-03-05

The State Higher Vocational School in Chełm has signed an agreement on cooperation with Polish Airlines LOT. According to the agreement, students of the Pilot of the Mechanics and Machine Design specialties might take apprenticeships in Polish Airlines LOT. In addition to the theoretical part and learning about the specifics of the work, the young pilots will participate in the flights of passenger planes belonging to the LOT fleet. The Polish LOT wants to provide the initial recruitment process for the pilot position at the State Higher Vocational School in Chełm. As part of the agreement, both the University of Chełm and LOT will carry out joint projects, events, conferences and campaigns to promote civil aviation.

Competition for the educational board games creators at the Warsaw University of Technology

2018-03-05

The Center for Innovation Management and Technology Transfers of the Warsaw University of Technology organizes Science Game Jam on March 10, 2018. Science Game Jam is a marathon of creating board games about science. The event will start at 10:00 at the building at 4 Rektorska Street in Warsaw. Teams have a task to develop a game prototype within a few hours. Then, the jury will select the best solutions that will be further developed. They will also be presented in October 2018 at the «Planszówki na Narodowym» event, which will take place at the National Stadium in Warsaw. Registration for the event: <https://docs.google.com/forms/d/e/1FAIpQLScWlidSj-uNAh2Dlv59ulkJIPOL-VuvMIN81k3qKgRPqiKLOWg/viewform>

Conference on literature and culture of the 1860s at the University of Warsaw

2018-03-05

The Department of Literature and Culture of the Second Half of the XIX Century of the Institute of Polish Studies at the University of Warsaw invites to the conference „Dislocations. Literature and culture of the 1860s between politics and privacy.” From 5 to 7 March 2018, scientists from all over Poland will present presentations with issues elaborating on the conference topics . Professor Grażyna Borkowska from the Institute of Literary Research of the Polish Academy of Sciences will read on «Reading the map: Lithuania. Orzeszkowa and her cycle Znad Niemna », Dr Iwona Węgrzyn from the Jagiellonian University will reflect on the topic «Galician Lesson of 1863» and Professor Tomasz Sobieraj will give a speech «Between the private and the public. Models of novels in Polish literary criticism of the 1860s. « The conference will take place in the Ballroom of the Tyszkiewicz-Potocki Palace in Warsaw at ul. Krakowskie Przedmieście 32. Funds for university foreign promotion from the National Academic Exchange Agency

2018-03-06

The National Academic Exchange Agency since 1 March 2018 invites participants to apply for the Modern Foreign Promotion program. The program is addressed to universities located in Poland, scientific organizations of the Polish Academy of Sciences, Polish research institutes and international scientific institutes operating on the territory of Poland. It gives the opportunity to receive financial support for the implementation of international promotion projects, characterized by innovation and a high degree of matching to the needs of the target group as well as for the purposes of the university or scientific bodies. The proposed projects may cover a wide range of activities, from with integrated information campaigns and promotional activity in selected communication channels (for example social media), to direct contacts implemented in various ways both at home and abroad. Scholarships from the International Visegrad Fund

2018-03-06

Until 15 March 2018, the International Visegrad Fund invites Polish students to apply for scholarships for master's and doctoral studies. Scholarships are offered in all scientific disciplines, in every Central Europe's language and include a stay at the university for 1 to 4 semesters. The program does not impose any age limit for candidates. Scholarship holders may continue the studies or conduct research at universities and other research centres in Central and Eastern Europe. Accepted candidates receive a scholarship in the amount of 2,300 euro per semester while the accepting scientific institution receives a grant of 1,500 euro per semester. The International Visegrad Fund was established under the agreement signed in 2000 and is the only institutionalized form of cooperation within the Visegrad countries (Poland, Hungary, the Czech Republic and Slovakia). The main tasks of the Fund include supporting cultural, scientific, educational, artistic and

tourist cooperation. All details and access to the on-line application system: <https://www.visegradfund.org/news/2018-2019-visegrad-scholarships/>

International doctoral studies at the Medical University of Bialystok

2018-03-06

From the end of May 2018, young scientists from Europe can apply for international doctoral studies in medical biology and biostatistics at the Medical University of Bialystok. The studies are intended for graduates of such majors as: biology, biotechnology, medical analytics, pharmacy, medical and related sciences, who do not have a PhD and have stayed in Poland for no longer than a year in the last 3 years. Polish researchers who have been living and working abroad for the last three years, and in Poland for no more than a year, can also apply for admission. The studies are free. Each PhD student will receive a scholarship of EUR 2,600 per month for 4 years. They will be run as part of the ImPRESS project, co-financed by the European Commission and the Ministry of Science and Higher Education. More: <https://www.umb.edu.pl/en/impress>

Series of social conferences „Polonia Restituta. Decalogue for Poland on the 100th anniversary of independence"

2018-03-06

On the occasion of the 100th anniversary of regaining independence by Poland, the Ministry of Science and Higher Education together with the Council for Social Affairs of the Polish Episcopate Conference is organizing a series of ten scientific thematic conferences in the most important Polish academic centers. The project «Polonia Restituta. Decalogue for Poland on the 100th anniversary of independence» will begin on March 12, 2018 with a conference dedicated to the family, which will be held at the Cardinal Stefan Wyszyński University in Warsaw. A series of 10 nationwide scientific thematic conferences takes up issues in broadly considered socio-political, economic and cultural life.

The conferences will be devoted to: family; work, entrepreneurship and the social market economy, citizenship and patriotism; freedom, sovereignty and the rule of law, culture and identity, dignity and social justice, ecology, social solidarity and sustainable development, the state in its relations with the church; Europe and the human person and its rights. The culmination of the cycle will be the international congress in Krakow, which will take up the problem of conscience and responsibility in public life. More: <https://polonia-restituta.pl/>

Conference „Energy and defense in the Nordic-Baltic region”

2018-03-06

The Polish Institute of International Affairs, the Norwegian Institute of International Affairs, the Center of Eastern Europe of the Maria Curie Skłodowska University in Lublin and the Faculty of Political Science of the Maria Curie Skłodowska University in Lublin invite the participants to the conference „Energy and Defense in the Nordic-Baltic Region” on March 9, 2018. The conference will be held at the Lublin Conference Center. During the event, the results of the project «Nordic-Baltic Security in Times of Uncertainty: The Defense-Energy Nexus» will be presented, and the scientists will focus on two thematic areas. The first is «Russia's neo-imperial ambitions: the implications for defense in the region.» The second one is an attempt to answer the question whether energy is the key to the security of the region. The conference registration is open and registration is online until March 8, 2018 at: https://www.pism.pl/rejestracja/?lang_id=1&id_event=175&f_rodzaj=1

Internationalization of the Lodz University of Technology

2018-03-06

The coordinators and faculty coordinators for of the program Erasmus+ outlined the long-term internationalization strategy of the Lodz University of Technology. The strategy was developed in 2017 by the International Cooperation Center of the Lodz University of Technology, which is the unit respon-

sible for the integration of all processes related to the cooperation of the Łódź university with foreign partners. According to the assumptions in 2020, the Lodz University of Technology is to be «one of the best innovative research university with a technical profile in Poland» with an established international position. The university, will start implementation of the new strategy assumptions with the organization of the conference «Double diplomas as a pillar of international strategic partnerships». It will take place in June 2018 at the International Cooperation Center under the patronage of the Minister of Science and Higher Education and the National Academic Exchange Agency.

Management in sport - a new field of study at the Rzeszów University of Technology

2018-03-06

Management in sport is a new direction, launched from October 1, 2018 at the Faculty of Management in cooperation with the Center of Physiotherapy and Sport at the Rzeszów University of Technology. It is supposed to be practice-oriented, to educate experts in management and the use of IT resources in sport. Graduates will be able to be sport managers, coach consultants, employees of the image agency and sports enterprises. They will have knowledge of management, use of information and communication technologies, management of human potential, and preparation of sports contracts. Rzeszów University of Technology conducts 28 fields of study. The most popular directions are aviation and cosmonautics.

University in Bydgoszcz launches e-learning

2018-03-06

The University in Bydgoszcz plans to join the group of universities conducting on-line classes. Online teaching will be facilitated by the e-learning platform. The funds for the purchase come from the funding granted to the university by the Ministry of Science under the „Modern University” program. The University of Bydgoszcz intends to buy a disk array to support distance education and an e-learning application to cover 38 fields of study at the university with remote teaching. In addition to the online learning platform, the money will be spent on improving language competences and obtaining certificates by both students and academic staff.

University of Warsaw holds workshop on the Constitution for Science

2018-03-07

The authorities of the University of Warsaw invite members of the academic community - employees, doctoral students, students and graduates - to workshops on the new Law on Higher Education and Science. During the workshops, which take place between March 5 and 19, their participants will talk about the most important areas of the university's functioning: education, research and development and staff. Together, they will reflect on what currently hinders them from studying, working and planning their careers, what barriers should be removed and how to use the provisions of the new law to achieve the University's goals. More: <https://come.uw.edu.pl/nowaustawa/>

Rzeczpospolita runs the conference on Polish science Edukator 2018

2018-03-07

Polish daily newspaper Rzeczpospolita holds conference on Polish science with the participation of Deputy Prime Minister Gowin and Minister Zalewska. The year 2017 was the time of changes in the

educational system of Poland. In September, the reform of primary and secondary education entered into force, and the Ministry of Science and Higher Education presented the assumptions of changes in the higher education system. Regarding to the reforms, the Rzeczpospolita organizes the conference „Edukator 2018” on March 15, 2018 with the participation of Deputy Prime Minister Jarosław Gowin, Minister of Science and Higher Education and Anna Zalewska, Minister of National Education. The conference is to summarize the state of reforms, make first analyses of their effectiveness and discuss the necessary adjustments. The organizers target to contrast the reformers' perspective with the business and prepare appropriate recommendations. The registration for the conference is open and the event will take place in the Library of the University of Warsaw at ul. Dobra 56/66. More: <https://konferencje.rp.pl/wydarzenia/7/1020-edukator-2018/program>

Dual studies are effective combination of learning and work

2018-03-07

Our goal is to more precisely adapt curricula to the needs of the market. Dual studies allow students to combine learning with work effectively through simultaneous participation in teaching at the university and working at the workplace. This way, students acquire new skills faster and more effectively - said Deputy Prime Minister Jarosław Gowin, Minister of Science and Higher Education during the Second Conference on Dual Education - EDUAL in Gliwice. In December 2017, the National Center for Research and Development, the executive agency of the Ministry of Science, announced a competition aimed at adapting curricula to the expectations of future employees and their employers. The recipe for success is to run an effective combination of learning and work, in terms of implementation of the Edual education programs. The contest's budget is PLN 100 million. The EDUAL conference was organized by the Silesian University of Technology and the Katowice Special Economic Zone and the city of Gliwice.

Vice PM Gowin: Expenditure on learning must increase

2018-03-07

On Thursday March 8, 2018 the Committee of the Council of Ministers will analyze a draft version of the Constitution for Science to prepare it for government session next week- informed Jarosław Gowin Deputy Prime Minister, Minister of Science and Higher Education, in the broadcast of „Political Salon of the Program Three” in Polish Radio. Deputy Prime Minister Gowin emphasized that expenditures on learning must increase if we want to have a truly modern economy and implement the Strategy of Responsible Development. In his opinion, the Constitution for Science will improve the situation at Polish universities, regardless of the amount of funds allocated for science and higher education.

Students from China at the University of Białystok

2018-03-08

39 students from Luoyang Normal University in China will spend a semester at the University of Białystok. University authorities expect that students from this country will come to Białystok next year. Chinese students will study in English. They have nearly 40 subjects to choose at six faculties: pedagogy and psychology, economics and management, law, historical-sociological, mathematics and computer science, and physics. They will not pay for participation in classes but they will cover the costs of their accommodation in dormitory. The Białystok University plans to launch paid MA studies in English for Chinese students, including such fields as international relations, computer science, pedagogy or English philology. Internationalization of studies is one of the priorities for the authorities of the University of Białystok. Currently, 458 foreigners are studying at the University, among which the most numerous groups are Lithuanians, Belarussians and Ukrainians.

Professor Górniak responds to the critics of education reform

2018-03-08

Higher education and scientific research in Poland require a very serious reform that will push it to a significantly higher level. Currently, it is an important civilization challenge for Poland. The defeat of this reform, on behalf of particular interests, weakens our homeland - replies Prof. Jarosław Górniak, chairman of the National Council of the Congress of Science, to the authors of the «Appeal for changes in the plan of the reform of science of Minister Gowin». On February 26, 2018, the appeal for changes in the reform of science and higher education was signed by about 150 scientists. Professor Górniak referred to their demands and he explained the origins of the particular solutions and how they contribute to the Constitution for Science. More: <http://www.nauka.gov.pl/aktualnosci-ministerstwo/j-gorniak-odpowiedz-na-tezy-apelu-o-zmiany-w-planie-reformy-nauki-ministra-gowina.html>

New obstetrics and gynecology laboratory at the State Higher Vocational School in Płock

2018-03-08

Mayor of Płock Andrzej Nowakowski and Prof. Maciej Słodki, rector of the State Higher Vocational School in Płock, opened a new obstetrics and gynecology lab. It will be part of the Medical Simulation Center, which is being created at the Płock University as part of a project financed by the European Union. The studio also received support from the city in the amount of PLN 200,000 to equip the laboratory. The center is to provide the education for nursing and midwifery students using the latest global technologies. The Płock contribution was targeted to adapt and extend the simulation center. This allowed to purchase the training simulators of body organs and areas, phantoms and simulators of artificial patients with functioning systems and organs. The equipment will enable students to master technical qualifications and will support learning how to communicate with the patient correctly.

Deputy Minister Müller believes that the Constitution for Science is an opportunity for young scientists

2018-03-08

There are scholars who have got used to the fact that after receiving the professor title or postdoctoral degree they have nothing to do. We want to change it because we believe that every Polish professor might bring a lot to the Polish science - emphasized Piotr Müller, Deputy Minister of Science and Higher Education in the program „Radio Morning for You”. Müller stressed that the Constitution for Science brings radical changes for young scientists. The career path will be improved, the habilitation duty will be abolished, doctoral schools will be created, and a scholarship system will be created for each PhD student. Referring to the allegations that the Constitution for Science will promote only large universities, Deputy Minister Müller said: Universities that want to change will receive funds. And the size of the university does not matter. We simply want to introduce the pro-quality mechanisms by this law.

Fair of Academic Education Offers will be held in Toruń

2018-03-08

On March 13, 2018 the Nicolaus Copernicus University of Toruń, the XXV National Fair of Educational Offerings „Educational Promotion 2018” will be held. Candidates for studies will be able to get acquainted with the full didactic offer of higher education institutions, study programs, and admission policy for particular faculties in the academic year 2018/2019. Almost 20 universities from all over Poland will present their educational offers, including: the Nicolaus Copernicus University, the Collegium Medicum in Bydgoszcz; Universities from: Gdańsk, Łódź, Olsztyn, Warsaw, Bydgoszcz, and Zielona Góra; Naval Academy in Gdynia, Gdynia Maritime University, Pomeranian Academy in Słupsk, as well as Universities of technology from Gdańsk, Koszalin, Poznań and Warsaw as well as the State Higher Vocational School in Włocławek and the Gdańsk Med-

ical University. There will be also military schools presented: the Higher School of Air Force of Dęblin and the Military University of Technology in Warsaw. The „Educational Promotion 2018” fair will take place in the Auditorium of the Nicolaus Copernicus University at ul. Gagarina 11 in Toruń. More: <http://www.umk.pl/kandydaci/targi/>

Poznan Fair to launch Scientific Book Review in March

2018-03-09

The 23rd Poznań Scientific Book Review will begin on Monday, March 12, at the University Library in Poznań. Scientific books of Poznań publishers will be available until April 26. Next fair “Meeting with the book” is planned for 23-25 March, when the 22nd Poznań Science and Popular Science Book Fair will take place at the Poznań International Fair. The Poznań Science and Popular Science Book Fair, organized by the Adam Mickiewicz University Publisher in Poznań, is a presentation of the academic, scientific and popular science offers. During the weekend, meetings with authors, discussion panels and workshops will be provided for the participants and visitors of the Fair. The Scientific Book Review presents the academic output of Poznań and it is organized under the honorary patronage of the Rector of the Poznań University. Last year, 22 exhibitors presented over 340 books and scientific journals. <http://radiopoznan.fm/patronaty/23-25-marca-22-poznan-skie-targi-ksiazki-naukowej-i-popularnonaukowej>

Krakow University launched first postgraduate program of practical coloproctology in Europe

2018-03-09

The Medical Center for Postgraduate Education of the Jagiellonian University together with the Faculty of Medicine of Collegium Medicum of the Jagiellonian University inaugurated a two-semester post-graduate program „Practical Coloproctology”. This is the only university postgraduate program in the European market that takes into account the problems of coloproctology in theory and practice. The studies were created in cooperation with the Polish Club of Coloproctology, which deals with the problems of colon diseases. The most distinguished specialists from all over Poland were invited to conduct the classes. 30 surgeons participate in the first edition of the course.

Meeting with intelligence officers at the University of Lodz

2018-03-09

The Faculty of Philosophy and History of the University of Lodz invites participants on 14 March 2018 to meet with ... officers of the Foreign Intelligence Agency. They will give a lecture, in which they are to show the specifics and goals of FIA work, as well as present the methods they use. After the lecture, the participants are given possibility to ask questions. The meeting will take place on March 14, 2018 at 12:00, room 47 at the Institute of History of the University of Lodz, at 27a Kamiński Street.

National Academic Exchange Agency launched the „Return to Poland” program

2018-03-09

The National Academic Exchange Agency launched „Return to Poland” program to enable Polish scientists to return to the country and take up employment in Polish universities or scientific organizations. It offers the scholars a competitive salary

and the opportunity to run project teams. Over the last few decades, several thousand scientists left Poland – they were talented, young people who were looking for conditions for scientific work and the exchange of ideas out of Poland. Today we have the conditions to accept them back in Poland. Recently, we observed tremendous changes in Polish science: with full responsibility, I state that it is possible to run world class research in Poland today – emphasized Deputy Prime Minister Jarosław Gowin during the conference opening the Program. Cooperation agreement between the University of Szczecin and Hoya Lens Poland

2018-03-12

The Faculty of Mathematics and Physics of the University of Szczecin has signed a cooperation agreement with Hoya Lens Poland. Hoya is one of the world's largest manufacturers of spectacle lenses and other optical products. The agreement concerns cooperation through practitioners - employees of Hoya Lens Poland - as well as consultancy for creating and modifying study plans related to ocular optics. It also establishes apprenticeships and internships for students of spectacle optics faculty at Hoya. University of Szczecin attaches great importance to the practical skills of students of the optics faculty. Previously, it has already signed cooperation agreements with both local optical entrepreneurs: Rako Optyk Serwis and Optyk Trendy, as well as the Polish Blind Association West Pomeranian District and with Essilor JZO Soczewki Okularowe.

Open day of the MOST Wiedzy project at the Gdańsk University of Technology

2018-03-12

On March 14, 2018, the Open Day of the MOST (Bridge of Knowledge) project will take place at the Faculty of Management and Economics of the Gdańsk University of Technology. MOST Wiedzy is a

portal for a multidisciplinary, open system of knowledge transfer allowing scientists to present their scientific achievements. The Open Access (OA) enables free and unlimited access to scientific works in digital version. The goal of the project is to increase the availability, coherence and re-use of learning resources. These resources are made available to representatives of the world of science, entrepreneurs and the public in an open, simple and transparent form via the portal. More: <https://mostwiedzy.pl/>

Pedagogical University of Krakow talks on social security

2018-03-12

The Krakow University together with the ZUS (National Social Insurance Institution) organized a conference with the participation of students, teachers and directors of local high schools. For two days (7-8 March 2018) they talked about how to conduct education on social security -The work of ZUS includes not only pensions, but the whole system of benefits. Throughout our life, from birth to death, we are affected by the issues related to social insurance - said Paweł Jaroszek, vice-president of ZUS in the program of the Polish Television in Krakow. In turn, professor Kazimierz Karolczak, the rector of the Pedagogical University in Krakow, emphasized the importance of education in this area. - Our graduates go into schools and will educate. Therefore, the teachers themselves must be perfectly educated in the field of social security, in order to transfer knowledge to their students fairly – added Professor Karolczak.

Changes in teacher education

2018-03-12

When the new act (Constitution of Science) comes into force, only those universities that conduct research and use the latest scientific achievements in the field of teacher education and student education will have the right to educate teachers - said Piotr Müller, deputy minister of science and higher education, in an interview for the daily newspaper Rzeczpospolita. Universities that undertake education of the teaching profession are obliged to achieve at least the scientific category B in the discipline of the study. Deputy Minister Müller also announced that pre-school and early-school education as well as special pedagogy will be conducted as a unified master's program. All changes are to be introduced gradually from the next academic year.

Main Council of Science and Higher Education supports the Constitution for Science

2018-03-12

The basic objectives of the Act, which are strengthening the role of science and higher education in the development of Poland and increasing the contribution of Polish scientists to global science, are fully in line with the proposals formulated by the Polish academic community for a long time - said Professor Zbigniew Marciniak, chairman of the Main Council of Science and Higher Education. On March 8, 2018, the Main Council of Science and Higher Education adopted a resolution in which it expressed unequivocal support for solutions contained in the draft law on higher education and science. As emphasized in the document, particular attention should be paid to the fact of extensive consultations undertaken in the academic environment and including a lot of their remarks by the Ministry of Science into the draft Constitution for Science.

Krakov University launches new intellectual property and new technologies studies

2018-03-12

The Jagiellonian University has established cooperation with the World Intellectual Property Organization (WIPO), which is an agency of the United Nations and the Polish Patent Office. Vice-rector of the University responsible for research and structural funds, Prof. Stanisław Kistryn, director of the World Intellectual Property Organization Academy based in Geneva Sherif Saadallah, and the President of the Patent Office, Dr. Alicja Adamczak, signed a letter of intent. The document provides for the launch of the second Master's program «Intellectual Property and New Technologies» in English at the Faculty of Law and Administration of the Jagiellonian University. The new direction is addressed to both Polish and foreign students. It will increase the attractiveness of the teaching offer and will increase the internationalization level of the Kraków university.

Sergey Kovalev to receive an honorary doctor of the University of Warsaw

2018-03-13

Dr Sergey Kovalev, biophysicist, defender of human rights and political activist, will receive the title of doctor honoris causa of the University of Warsaw. Sergey Kovalov participated in the creation of the first group in the Soviet Union, which protested against the violation of freedom. In the 1970s, he was sentenced to seven years of prison and three years of exile for activities against the communist authorities of the Soviet Union. He was the chairman of the Human Rights Committee in Russia in the early 1990s. In 2009, President Lech Kaczyński awarded Sergey Kovalev the Great Cross of the Order of Merit of the Republic of Poland. The ceremony of awarding the title for Kovalev will take place on March 14 at 12 in the Senate Hall of the Kazimierzowski Palace in Warsaw at Krakowskie Przedmieście 26/28.

Researchers from the Adam Mickiewicz University determined the composition of the water shrew venom

2018-03-13

Researchers from the Department of Systematic Zoology of the Institute of Environmental Biology, Faculty of Biology, at the Poznan University, professor Leszek Rychlik and Krzysztof Kowalewski, described the composition and role of water shrew venom as the first in the world. The results of their research have been published in the Journal of Mammalogy. The water shrew is one of the few species of shrew mammals that are poisonous. To determine the usefulness of the venom of this species, a series of experiments was carried out, to observe water shrews hunting victims of various sizes. As it turned out, in contrast to other representatives of this species, water shrew is able to defeat their victims more efficiently. Comprehensive development program of the Technical-Humanistic Academy in Bielsko-Biała

2018-03-13

In April 2018, the project „Academy of the Future - Comprehensive Development Program of the Academy of Technology and Humanities in Bielsko-Biała” will begin. The project was qualified for co-financing by the National Center for Research and Development under the POWER program (Operational Program Knowledge Education Development). Its main goal is to increase the efficiency of education at the University of Technology and Humanities in Bielsko-Biała and to improve the quality of university management. This objective is to be achieved by expanding the educational offer allowing to acquire competences and qualifications expected by employers, increasing educational competences, integrating internal and external systems related to university management and improving the competences and qualifications of the management

and administrative staff. In addition, the academy in Bielsko-Biała intends to introduce an integrated university management system.

„Polish universities - Horizon 2020 strategy”

2018-03-13

The National Contact Point for Research Programs of the European Union in cooperation with the Confederation of Rectors of Academic Schools in Poland invites participants to Olsztyn for an informative meeting „Polish universities - the strategy for Horizon 2020. The European Union Framework Program for research and innovation as an instrument of internationalization of scientific organizations”. It will be devoted to increasing the participation of Polish universities and industry in the Horizon 2020 program, in particular, in grants of the European Council for Scientific Research, and in competitions for Spreading excellence and widening participation (Teaming, Twinning, ERA-Chairs). The event will take place on March 21, 2018 (Wednesday) at 11.00 - 15.00 in Olsztyn, building of the Old Boiler Room, ul. R. Prawocheński 9. Registration for the event: <http://www.uwm.edu.pl/rpk/szkolenia/rejestracja?training=520>

Students will become ambassadors of Grupa Azoty

2018-03-13

The pilot of the program „Grupa Azoty Group Ambassador” is launched. Its aim is to interest university students in building a professional career in this one of the largest capital groups of the chemical and fertilizer industry in Europe. The pilot program starts in March 2018 and is addressed to second and third year students of selected universities. «Ambassadors» this year will become students of the Jagiellonian University in Krakow, Silesian University of Technology, Warsaw University of Technology and West Pomeranian University of Technology in Szczecin. The aim of the program is to promote the brand in academic communities. Dynamic, creative ambassadors who are representatives of the group at the university will raise interest in Grupa Azoty's activities and build its positive image as a

desirable employer. Applications can be submitted until March 16, 2018 at: <http://grupazoty.com/ambasadorsmarki/>

About cryptocurrencies at the Warsaw School of Economics

2018-03-13

On March 19, 2018 the Banking Institute of the Warsaw School of Economics invites participants to the conference „Blockchain - a breakthrough innovation or media gadget?” Bitcoin, along with other virtual currencies, has entered common consciousness as an alternative to traditional forms of money and investment. However, due to the controversy related to speculation on Bitcoin and the emerging information about its use for criminal purposes, there is a real risk of missing the amazing potential of Blockchain, which is the technological foundation of the cryptocurrency market. The conference is to start a scientific discussion on the perception of Blockchain technology and its potential for use in the financial system. Representatives of the authorities of the National Bank of Poland, the Polish Financial Supervision Authority, commercial banks and companies dealing with innovative technologies will take part in it. More: http://kolegia.sgh.waw.pl/pl/KES/struktura/IB/konferencje/Strony/blockchain_przelomowa_innowacja_czy_medialny_gadzet.aspx

Rector of the School of Tourism and Recreation nominated in the event industry competition

2018-03-14

Professor Jolanta Żyśko, rector of the School of Tourism and Recreation in Warsaw, was nominated by the MP Power Awards jury for the award in the „Association” category. MP Power Awards is the first nationwide competition in the event industry. Therefore, the contribution of the Warsaw School of Tourism and Recreation to the development of event management was appreciated. The School belongs to the Vistula High Schools Group. Since 2017, the new international education program on Tourism and Recreation has been introduced at the Warsaw School, with classes held in English. One of the management specializations conducted in this field is event management. The final of the MP Power Awards will take place on March 23, 2018, at the Służewiec Horse Race Track in Warsaw.

Review of Jewish films at the University of Gdańsk

2018-03-14

From March 15 to 18 at the University of Gdańsk the 5th Gdańsk Review of Jewish films „Shalom Polin” will be held. The event is organized by the Film Discussion Club of the University of Gdańsk and the Academic Culture Center Alternator in cooperation with the Polish-Israeli Community Common Heritage Moreshet Meshutefet. In addition to film reviews, there will be language, culinary and dance workshops and lectures introducing Jewish culture at the University of Gdańsk. The Gdansk review of «Shalom Polin» will start with a lecture on the impact of the events of the March '68 on Polish cinematography and the screening of the documentary film by Michał Jaskulski and Lawrence Loewinger «At Planty 7/9». Films will be presented in Hall 1.43 of the Faculty of Philology at the University of Gdańsk, ul. Wita Stwosza 55 in Gdańsk. More: <http://shalompolin.ug.edu.pl/>

Polish scholarship program for foreigners from Eastern Partnership countries and Central Asia

2018-03-14

The call for proposals for the Stefan Banach Scholarship Program has begun. It is a joint scholarship initiative provided by the Ministry of Foreign Affairs and the National Academic Exchange Agency, implemented as part of Polish development assistance. The program allows students to undertake postgraduate studies at universities supervised by the Minister of Science and Higher Education in the field of exact sciences, natural sciences, technical, agricultural, forestry and veterinary sciences. It is addressed to foreigners from Eastern Partnership countries (Armenia, Azerbaijan, Belarus, Georgia, Moldova and Ukraine) and Central Asian countries (Kazakhstan, Uzbekistan, Turkmenistan, Kyrgyzstan and Tajikistan). Future scholarship holders should be students of the final year of regular studies of exact sciences, natural sciences, technical, agricultural, forestry and veterinary sciences or they, who have completed regular studies in these areas, but not before the academic year 2015/16. An additional condition is the knowledge of the Polish language at least at level B1. The call for applications will run until 30 April 2018. See the regulations of the Scholarship Program. Stefan Banach: https://nawa.gov.pl/images/Banach/REGULAMIN_Banach.pdf

Lecture of Professor Pineau at the University of Lower Silesia

2018-03-14

The Faculty of Pedagogical Sciences of the Lower Silesian University in Wrocław invites participants to an open lecture by Professor Gaston Pineau entitled „Current trends and new perspectives in applying the biographical method as a research and practical approach”. Professor Pineau will also lead the methodological workshop «How to conduct biographical research? Research experience and methodological solutions applied in the francophone countries». These events will take place as part of the International Scientific Conference titled «In the space of

biography. Identification of experiences, processes and changes on the occasion of the 100th anniversary of the publication of the «Polish Peasant in Europe and America» by Florian Znaniecki and William Thomas. The work of William Thomas and Florian Znaniecki is still a source of inspiration for scientists, due to the pioneering way of analyzing and interpreting authentic documents that emphasizes the importance of the biographical dimension of human life. The lecture of Professor Pineau will take place on May 9, 2018 at the Faculty of Educational Sciences, Lower Silesian University in Wrocław, ul. Strzegomska 55, at 9:30 am, room 111.

Professor Bobko: New law creates opportunities for Polish science and higher education

2018-03-15

Professor Aleksander Bobko, a former deputy minister of science and higher education stated on the radio RMF FM that there are huge opportunities to develop the potential existing in Polish science. In his opinion - the Constitution for Science creates such development opportunities Professor Bobko explained that the new law naturally raises doubts, as it is a large undertaking that regulates the entire area of science and higher education. He also stated that the Ministry of Science, through extensive consultations with the scientific and academic community, tried to elaborate on the solutions of the Act so that they would be clear and understandable for everyone. Despite this - according to the former deputy minister of science - there is some resistance, there are many remarks, doubts also in the academic environment. The ministry is determined to deliver the project in the best shape possible. - I think that next week the project will be sent to the Council of Ministers - added Professor Bobko.

University of Zielona Góra in the World Catalog of Medical Schools

2018-03-15

The Faculty of Medicine and Health Sciences of the University in Zielona Góra was registered in the World Directory of Medical Schools. -This is very important information for our students, because in the future it will enable them to recognize a doctor's diploma outside the European Union, especially in the USA and Canada - highlights Professor Agnieszka Zembron-Łacny, dean of the Faculty of Medicine and Health Sciences of the University in Zielona Góra. World Directory of Medical Schools combines information previously contained in the WHO World Catalog, the International Medical Directory Catalog (IMED) and the Avicenna Catalogs. It contains information on 2,900 universities from all over the world (including 19 Polish medical schools and departments running a medical faculty), recruitment conditions and duration of medical studies.

World Pi Day at the Kraków University of Science and Technology

2018-03-15

The AGH University of Science and Technology in Krakow invites participants on March 16, 2018 for the Friday Science Evening, organized on the occasion of the World Pi Day. The event is addressed to children and adolescents aged 11-15. After the inaugural lecture, participants divided into smaller groups will take part in workshops, experiments and logic games. The event will be held under the patronage of the Rector of the Krakow Academy Professor Tadeusz Słomka. All attractions are prepared by employees and students of faculties of Applied Mathematics, Materials Science and Ceramics, Power Engineering and Fuels, Physics and Applied Computer Science. Events promoting mathematics and science are inextricably linked to the International Day of Pi Number (3,14), which is celebrated on March 14. The date is not a coincidence - in the American record (first month, then day) March 14 we read as 3.14, which corresponds to the Pi value. The Friday Evening of Ex-

act Sciences will be held at the Faculty of Physics and Applied Computer Science of the AGH University of Science and Technology in Krakow at ul. Reymonta 19, building D-10 from 17.00 p.m.

Lodz University of Technology to cooperate with the State Higher Vocational School in Włocławek

2018-03-16

Positive experience of the cooperation between the State Higher Vocational School in Włocławek with the Faculty of Technical Physics, Informatics and Applied Mathematics of the Lodz University of Technology prompted the university authorities to develop their collaboration. University's Rector, Prof. Sławomir Wiak and the Rector of the High School, Dr Małgorzata Łągiędź-Gałuszka, have signed an agreement whose main objective is to support the Włocławek school in the implementation of practical education programs. The Lodz University of Technology will thus become a more attractive destination to continue education for Włocławek students. Both high schools declare the cooperation in education, science, research and in the contacts with the social and economic environment.

Sergey Kovalev: Revolution of the 1980s was organized by the Gdańsk Shipyard and the University of Warsaw

2018-03-16

- Years later, we can finally tell the world that the revolution in Poland in 1980-81 was organized by the Gdańsk Shipyard and the University of Warsaw - highlighted Dr Sergey Kovalev, receiving the title of doctor honoris causa of the University of Warsaw. One of the reviewers presented a summary of Sergey Kovalev's achievements and called him «the conscience of Russian society and the conscience of the world.» Dr Kovalev's achievements were also presented by Dr Wojciech Pawlik. He pointed out that the Faculty of Applied Social Sciences and Resocialization applied for the award for him. «The title is awarded on behalf of all faculties of the University of Warsaw,

because human rights are important for representatives of all disciplines» - explained Pawlik.

PLN 19 million for the Vilnius branch of the University of Białystok

2018-03-16

Almost PLN 19 million will be allocated by the Ministry of Science to co-finance the Vilnius branch of the University of Białystok. Deputy Prime Minister Jarosław Gowin signed an agreement between the Ministry of Science and Higher Education and the University of Białystok regarding co-financing the reconstruction and extension of the building of the Faculty of Economics and Information at the Białystok branch of the university in Vilnius. Since October 2007, the Faculty of Economics and Information Technology in Vilnius has enabled the Polish to study in Vilnius at the academic level, in Polish. Over 600 graduates have already graduated from the Faculty, currently, 293 students are studying there. At the beginning of its activity, the University educated at two bachelor's degrees: economics and informatics, in the academic year 2014/2015, second-degree studies were also launched. For the last few years there are also first-degree studies available in European studies.

Müller: Scholarship system to cover all PhD students

2018-03-16

- We are liquidating part-time PhD studies. It is often drawing money from PhD students. We leave PhD schools run on a daily basis with the possibility of studying for free - said Piotr Müller, Deputy Minister of Science and Higher education, in the „ControlledTalk” program on the air of Radio Gdańsk. Deputy Minister Müller explained the assumptions of the Constitution for Science to the listeners and announced that the reform would cover all PhD students with scholarship system and would abolish the habilitation duty. He also added that for the first time after 1989, the law makes provision for the additional financing for regional universities. «We allow universities to be financed by local governments. We do not reduce funds for universities, «- added Deputy Minister.

PLN 1.3 billion for Integrated University Programs

2018-03-16

The National Center for Research and Development has announced the results of the Integrated University Programs competition. Due to the high quality of the projects, the competition budget has been increased - from 500 to almost 700 million PLN. The beneficiaries of the competition of the National Center for Research and Development are public and non-public Polish high schools. The assumption of the project is to adapt educational programs to current socio-economic needs. «It is very important that the Polish economy today focuses on modern technologies using the latest scientific discoveries,» said Deputy Prime Minister and Minister of Science and Higher Education, Jarosław Gowin. In total, the Ministry of Science awarded 138 projects in Integrated University Programs with PLN 1.3 billion of support.

Professor Okamoto visits Wrocław University of Technology

2018-03-19

Prof. Masami Okamoto from the Toyota Technological Institute in Nagoya will come to the Wrocław University of Technology. The world-famous Japanese chemist is named among the Nobel Prize candidates. He will visit a Wrocław University as part of the Visiting Professors program. Professor Okamoto will give series of specialist lectures on «Nanocomposites for Application in Tissue Engineering» (March 19-23) and will be a guest of the open Interdisciplinary Scientific Seminar (March 20). The Japanese guest's scientific interests include: obtaining biocomposites and polymer nanocomposites, bone tissue engineering, regenerative medicine, cancer cell metastases and cancer stem cells.

Deputy Minister of Science Piotr Muller announces the consolidation of scientific research

2018-03-19

In October this year, the new law on science and higher education will enter into force. I have no doubt about it - said Piotr Muller, Deputy Minister of Science and Higher Education, on Polish Radio 24. Referring to the fears that the new law prefers large universities in terms of allocating the major parts of funding transfers to them, Minister Muller said that the government has two options for sharing money. «To treat all equally, or we will try to create a system promoting more successful organizations. We will choose the latter solution. «- he explained. He also announced the consolidation of scientific research. «We have limited expenditures on research. We should decide on ambitious and useful research for the Polish society and economy, «- said Muller.

Deputy Prime Minister Gowin at the International Conference of Students of Medical Universities in Szczecin

2018-03-19

In new scientific system the titles will not matter, but real scientific achievements will - said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education, while opening the 3rd International Conference of Students of Medical Universities in Szczecin. It was his reference to the reform of education. The conference was addressed to students and young doctors and was organized by the Student Scientific Society of the Pomeranian Medical University in Szczecin. The participants got acquainted with the research results and the latest trends in medicine. They also had the opportunity to meet other young scientists, exchange experiences, ideas or inspiration. During the conference, there were also health, dental and PhD sessions.

New fields of study in English to launch at the Warsaw University of Life Sciences

2018-03-19

The Warsaw University of Life Sciences in Warsaw received PLN 28 million from the National Center for Research and Development for adjusting and implementing academic education programs in line with socio-economic needs as part of the POWER (Knowledge and Education Development Operational Program). The main objective of the project «Success by nature - a comprehensive program to improve the quality of management of the education process and the quality of teaching at the Warsaw University of Life Sciences» is to implement changes in the management of the education process and to improve the quality of teaching at the Warsaw university. Particular emphasis will be placed on increasing the level of internationalization of new majors and specialties taught in English including Organic Agriculture and Food Processing, nutritional business manager, Civil Engineering, and Computer Science and Econometrics - Big Data Analytics.

General Andrzejczak to hold a lecture at the University of Szczecin

2018-03-19

As part of the series of lectures „Szczecin Humanistic”, the dean of the Faculty of Humanities of the University of Szczecin invites participants to a lecture of Maj. Gen. Rajmund Andrzejczak „Leadership - passion and vision. Modern leadership in a comprehensive security environment”. General Andrzejczak is the commander of the 12th Szczecin Mechanized Division. In 1991 he graduated from the Higher Officers School of Panzer Armies in Poznan and later the Military Academy of Defense of the Czech Republic. He was a participant in many foreign missions. He was decorated with the Star of Iraq and the Star of Afghanistan. The lecture will take place on Thursday, 22 March at 12.00 at the Faculty of Humanities. This will be a summary of the Legia Akademicka program - a pilot program of military student training launched in 2017 by the Ministry of National Defense.

Successful year for the University of Gdańsk

2018-03-20

The last year was very successful time for the University of Gdańsk. Our scholars achieved many prizes. Prof. Cezary Obracht-Prondzyński won the Hevelius Prize for his humanities research. Dr Agnieszka Gajewicz, in turn, received a very prestigious international award International Rising Talents and Piotr Zieliński awarded the Prize of Jan Uphagen - said the rector of the University of Gdańsk, Professor Jerzy Gwizdała in conversation with the university radio station „Mors”. The Rector highlighted the cooperation with other universities, and a merger with the Medical University of Gdańsk in the fields of science, research, didactics, and the implementation of research results into the economy. «The best demonstration of the fact that such cooperation is very effective is the highest possible assessment that the Intercollegiate Faculty of Biotechnology and its International Research Agenda received in the field of research on anticancer vaccines,» he added.

Days of Chinese Culture at the University of Lodz

2018-03-20

Until March 23, 2018, the Days of Chinese Culture will take place at the University of Lodz. The event was organized by the Faculty of Economics and Sociology at the University of Lodz where are over two thousand students from 95 different nationalities, including about 100 Chinese students. As part of the event, the students can see tai-chi shows, take part in Chinese language and calligraphy workshops, compete in a games competition or listen to a gong concert. The main goal of the event is to promote Chinese culture among students of the University of Lodz and to popularize knowledge about its cooperation with many Chinese universities. More: <http://www.eksoc.uni.lodz.pl/dni-kultury-chinskiej-2018/>

Warsaw University of Technology organizes courses improving the competences of lecturers

2018-03-20

The Center for Innovation Management and Technology Transfer of the Warsaw University of Technology invites participants to take part in courses implemented as part of the project „Competent lecturers - a high level of teaching”. The following types of courses are provided: enhancing competences in the field of IT skills used in didactics; improving competence in conducting didactics in English; improving competence in information management implemented in the form of workshops; enhancing competences in the field of innovative teaching skills and Design Thinking in didactics. Applications for the course are accepted until March 21, 2018. Application form: https://docs.google.com/forms/d/e/1FAIpQLSeHz967qHTIY6pPYPZxDhP_7im7uT4pQHB8tT0nCkhORpYzCA/viewform

Wrocław University of Technology digitizes the film archives

2018-03-20

Employees of the Wrocław University of Technology digitize archival film materials that can be viewed on the AZON platform (Atlas of Open Science Resources). Analog materials including films from students feasts, awarding honorary doctorates, lectures will be rerecorded into a digital version. The digital archive will also include academic news, concerts, student debates, rector's elections, theaters, reports from science and sports festivals. After digitalization, color and exposure correction, noise reduction and sound level correction materials will be stored at the AZON platform, which collects, processes and provides university resources in an open digital form to all interested persons. The coordinator of the project is Wrocław University of Technology together with partners: Academy of Physical Education in Wrocław, Wrocław University of Environmental and Life Sciences, Medical University of Wrocław and Institute of Systems Research of the Polish Academy of Sciences in Warsaw.

Wrocław University of Economics to switch to renewable electricity by 2030

2018-03-20

Wrocław University of Economics is the first university in Poland, which declared its willingness to use only renewable sources of electricity. Rector of the University, Prof. Andrzej Kaleta, signed the plan „100% Committed”. of the Climate Reality Project team. Professor Kaleta declared that by 2030, the energy used at the university campus will come exclusively from renewable sources, which will contribute to reducing carbon emissions, mitigating climate change and increasing air quality. The University wants to be part of this process both theoretically – through scientific and didactic work - and practically, creating a green campus. The Climate Reality Project is a venture set by the Nobel Peace Prize laureate and the former US vice president Al Gore to accelerate the transition to clean energy and solve the climate crisis.

Ambassador of Pakistan visited the Jagiellonian University in Krakow

2018-03-21

Scientific and educational cooperation of the Jagiellonian University with university centers in Pakistan was the goal of the visit of Shafquat Ali Khan, the ambassador of Pakistan at the Krakow university. The Ambassador was received by Professor Wojciech Nowak, Rector of the Jagiellonian University. He visited the Institute of Middle and Far East, where he gave a lecture entitled «Foreign Policy of Pakistan. New Challenges and New Directions».

Visegrad Summer School

2018-03-21

Until the end of March 2018 the students can apply for the next Visegrad Summer School. The School is a series of training sessions for young people from the Visegrad Group countries and Eastern Europe, implemented since 2002 by the Villa Decius Association in Krakow. Lectures, workshops and debates at the Visegrad Summer School are conducted by outstanding experts representing various fields of knowledge and public activity. Apart from experts and intellectuals, the Summer School lecturers include also ambassadors, ministers and representatives of the European Union. The program is addressed to students, PhD students, young teachers, entrepreneurs and journalists. This year's School will be held from 1-14 July 2018. More about the project: www.visegradsummerschool.org

Rectors from universities of southern Poland visit Brussels

2018-03-21

Rectors of fourteen universities from southern Poland visited Brussels on 19 and 20 March. They took part in meetings with representatives of the European Union institutions and discussed European programs related to higher education as well as scientific research. Their visit was an opportunity to talk about higher education with Tibor Navracsics, who will be the EU commissioner for education, culture, youth and sport from 2020. During the meeting, they discussed the issues related to higher education and scientific research after 2020 from the perspective of the European Union, including the new EU initiative called the European Education Space.

Constitution for Science adopted by the government

2018-03-21

"The government adopted the Constitution for Science. I would like to thank the entire academic community (including the critics of the Act) for 2,5 years of creative cooperation" - wrote Jarosław Gowin on Twitter. The Act, as proposed by the Ministry of Science, is to be operational from October 1,

2018. It has been the first comprehensive reform of science and higher education for over 12 years. All the work on the bill was not typical. The Ministry of Science organized a competition in May 2016. The three winning research teams prepared the draft reform assumptions. These documents then became the starting point for discussion in the academic environment. Currently, after the adoption of the Constitution for Science by the government, Deputy Prime Minister Jarosław Gowin is planning to organize a public hearing of the bill.

Silesian University of Technology receives nearly PLN 29 million for modernizing education

2018-03-21

Nearly PLN 29 million was obtained by the Silesian University of Technology for the implementation of an educational project within the first part of the Integrated Programs of the University program, organized by the National Center for Research and Development. This is the second largest funding among all Polish universities. Under the first part, universities will receive funds intended primarily for new education programs, PhD studies, training sessions for teaching staff and improving students' competences through high-quality internship programs and additional courses, including courses in foreign languages. The goal of the Integrated University Programs program is to develop higher education to meet current social and economic needs of Poland. This year - under the first program part - NCBiR subsidies amount to nearly PLN 700 million. About one hundred universities in Poland received money for educational projects.

Academic Legion starts at the Opole University of Technology

2018-03-21

34 students - volunteers from the Opole University of Technology began their military training as part of the Academic Legion - a pilot program launched by the Ministry of Defense and the Ministry of Science

and Higher Education. The program enables students to become soldiers during their studies. The training consists of a theoretical part, lasting from 30 to 60 hours and exercises in a military unit, which will take place during the summer break and will last for 22 or 44 days. Depending on the chosen program the volunteers will obtain a rank of reserve soldiers, or become non-commissioned officers with the rank of corporal. Lectures at the Opole University of Technology will be conducted by specialists from the Land Forces Academy in Wrocław. The program includes basic information about the army, national security, first aid, firearms, rules of tactics and behavior on the battlefield.

The 70th anniversary of Silesian Medical University

2018-03-21

The Medical University of Silesia (SUM) celebrates its 70th anniversary. The Regulation establishing the Medical Academy with the Faculty of Medicine and the Dental Department in Bytom was issued by the Council of Ministers on March 20, 1948. It was then the eighth medical school in Poland. In 1949, the university was renamed the Silesian Medical Academy. Since 2007, it has been operating under the name of the Silesian Medical University in Katowice. The beginnings - in the opinion of the Rector of SUM Prof. Przemysław Jałowiecki - were not easy. «Among medical schools with long tradition, we were named with the sarcasm as the» nursery school», but future showed that the pejorative term turned out to be completely groundless» - recalled the rector. SUM conducts studies in 25 fields - including 9 in English. It educates over 10,000 students, including 500 foreigners from 48 countries. For 70 years, over 40,000 students graduated from the SUM - also from the USA, Canada, India, Nigeria and Pakistan.

PLN 3.7 billion for Polish science in 2019

2018-03-22

The expenditure on Polish science and higher education will increase by PLN 3.7 billion in 2019 – said Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education. He underlined in the interview for Polish Television news program that the new Act on Science and Higher Education replaces the four existing ones. It definitely increases the autonomy of the university, opens the promotion opportunities for young scientists and increases the level of internationalization of Polish universities and science. - We have assumed that we will implement an algorithm to increase the expenditure on Polish science systematically next 10 years in relation to the level of GDP - said the Deputy Prime Minister. If the economy grows by, for example, 4 percent, the level of growth in expenditure on science in a given year will be slightly higher than 4 percent, always slightly above the GDP growth rate.

Students of the Warsaw University of Technology construct a motorcycle prototype for competitions in Spain

2018-03-22

Students of Mechanics and Mechanical Engineering at the Faculty of Automobiles and Working Machines of the Warsaw University of Technology are working on a prototype of the preMoto3 class motorcycle. They are preparing it for the MotoStudent competition, which will take place in October in Spain. According to the schedule, the construction of the motorcycle is expected to be completed at the end of July to allow the team to test their machine. The prototype of Warsaw students will be presented in two categories: static and dynamic ones. Static category includes presentations of the project and its business assumptions – whether motorcycles can be introduced into series production. Dynamic category tests braking, acceleration, top speed as well as steering features. However, the greatest emotions will be aroused by a 40-kilometer race on the

full stretch of the MotorLand Aragon track, where the registered motorcycles are tested by professionals. This year MotoStudent will be held for the fifth time. 74 teams from 17 countries will take part in it. This is the first start of the Warsaw University of technology in this event. More: <http://www.moto-student.com/>

Mechatronics - a new course at the State Higher Vocational School in Tarnów

2018-03-22

The Polish Accreditation Committee positively assessed the application of the State Higher Vocational School in Tarnów for the authorization to run the „Mechatronics” course at the first- level studies with a practical profile. It will be the 20th course of study at the Tarnów school. Mechatronics is one of the fastest growing fields of science and technology. It uses mechanics, construction and operation of machines, electronics, IT, automation and control, modeling, design and operation of products and production processes. The new course is complemented by a wide range of education opportunities at the Tarnów Technical Institute. Tarnów High School graduates can already study automation and robotics, electronics and telecommunications, electrical engineering, computer science and materials engineering.

Days of Francophonie at the University of Silesia

2018-03-22

On Wednesday, 28 March the celebration of the Francophony Days, organized by the Institute of Romance Languages and Translatory will take place at the University of Silesia. The motto of this year's event is „Francophonie 2018: Entre tradition et modernité (Francophony 2018: between tradition and modernity). The program includes language and translation workshops for high school and junior high school students combined with a translation competition and a presentation of the Institute of Romance Languages' offer and the career prospects for multilingual people. During the Days of Francophonie, participants of the competition «Francopho-

nie: entre tradition et modernité» will be awarded prizes. In the artistic part, a concert of French music will be performed by Edyta Poznańska. Also the presentations «Entre ciel et mer: fin de la terre. A propos de voyages bretons et autres « and « Entre homme et machine: les langues à l'ère numérique « will be organized.

Fraunhofer Project Center to be built at the Opole University of Technology

2018-03-22

The branch of the German Fraunhofer Institute - one of the largest research organizations in the world and the inventor of the MP3 format - will be created at the Opole University of Technology. The work on the details of the agreement, business plan, budget and program assumptions of the Fraunhofer Project Center is expected to be completed soon. The Project partners are the Opole Science and Technology Park and the Technical University in Chemnitz. The Opole branch of the Institute is to deal with „slimming” of cars - research on the use of lightweight constructions in their production. Lighter cars will burn less fuel and emit less carbon dioxide so they will become more ecological. The Fraunhofer Institute is one of the largest, most innovative and important scientific organizations supporting industry in Europe. Founded in 1949, the Fraunhofer Society brings together nearly 70 German scientific organizations, with 30,000 scientists and with the research budget of billions of euros per year.

Scholarships for young archaeologists and conservators from the Middle East

2018-03-22

The Center of Mediterranean Archeology of the University of Warsaw is a partner in the scholarship program of the Polish Committee for UNESCO and the Ministry of Science and Higher Education. Young scholars from Middle Eastern countries, especially from post-conflict areas, may apply for archaeological scholarships by April 30, 2018. Scholars will hold their internships training sessions in Polish institutions related to archeology, protection and management of heritage and conservation of monuments in Poland for 8 months. The substantive program of the training internship is developed by the Center of Mediterranean Archeology of the University of Warsaw in cooperation with the Institute of Archeology of the Warsaw university and the Academy of Fine Arts in Warsaw. More: <http://www.unesco.org/new/en/fellowships/programmes/unesco-poland-co-sponsored-fellowships-programme-in-archaeology-and-conservation/>

Education system develops in the Słupsk Academic Center

2018-03-23

Pomeranian Academy in Słupsk in partnership with Słupsk Chamber of Industry and Commerce and Pomeranian Agency for Regional Development S.A. implements the project: Development of a practical education system within the framework of the Słupsk Academic Center. The aim of the program is to adapt the educational offer of the Słupsk high school to the requirements of practical education for the needs of the economy and the regional labor market. The specific objectives of the project include enhancing the quality of the didactic base necessary to implement practical education as well as enhancing the practical professional qualifications of the teaching staff in cooperation with entrepreneurs. As part of this objective, 28 lecturers will take part in sixteen specialist trainings. Another goal is to increase the efficiency of cooperation between

the High School and entrepreneurs through their involvement in modifying educational programs and directly in the didactic proces.

Didactic cooperation of the Warsaw School of Economics with the universities from Vienna and Bratislava

2018-03-23

The Central Europe Connect Joint Certificate Program is a new program of tripartite didactic cooperation between the Warsaw School of Economics, the Vienna University of Economics and Business, and the University of Economics of Bratislava. As part of the program, 60 undergraduate students of these three universities will participate in classes devoted to the specificity of business in Central Europe. The classes will be conducted in the form of three one-week blocks, carried out successively at partner universities. Program participants will gain experience in international cooperation and establish mutual contacts during the project work. The first program will be launched in the summer semester of 2019. Recruitment will start in October 2018.

Academy from Gorzów Wielkopolski organizes a conference on national security

2018-03-23

„National Security of Poland: Threats and determinants of change” is the topic of the conference, which will take place this Friday, March 23, 2018 at the Academy in Gorzów Wielkopolski. The inaugural lecture entitled «New Fields of State Security» will be delivered by Prof. Andrzej Zybortowicz, adviser to the President of Poland. Then the conference participants will discuss the following panels: Germany - European Union - Poland. Challenges for security policy in a changing Europe; Theoretical and practical dimensions of European security. The aim of the conference, which will be held under the patronage of the voivode of the Lubuskie Region and the National Security Bureau, is identification of factors determining the contemporary security environment

for the evaluation and validation of security policy of entities operating in this environment on a global, regional, subregional and state scale.

Polish Radio in Katowice launched AS- radio for students of Silesian universities

2018-03-23

On the first day of the spring, Radio Katowice and the University of Economics in Katowice launched a new project. Students of the Journalism and Social Communication create a two-hour program on 101.2 FM. The editorial team of the program for students of Silesian universities is created by students of journalism and social communication of the University of Economics of Katowice. The program mentors are Dr Anna Musialik-Chmiel - editor of Polish Radio of Katowice and Andrzej Prugar - deputy technical director of Polish Radio Katowice, a respected record producer. The Wednesday AS Radio program is broadcasted on 101.2 FM AS and it tackles topics related to student life. It will inform about culture, art, sports, cuisine, motoring, fashion, music, travel, ecology and psychology, about career and personal development and music - the authors convince and assure that they will avoid politics.

European universities call for double funding for research and innovation in EU

2018-03-26

Thirteen European university networks have called for a doubling the budget for research, innovation and education in the next EU financial perspective. This common position was expressed by the European University Association (EUA) and the Network of Universities from the Capitals of Europe (UNICA), with the University of Warsaw as a member. As part of the current financial perspective, 80 billion euros have been allocated to scientific research and innovation. It is the budget of the Horizon 2020 Framework Program. Universities plan to convince decision-makers to double these funds in the next financial perspective, so that the budget of the 9th Framework Program is 160 billion euros.

Warsaw Medical University to establish Academy of Innovative Didactics

2018-03-26

One of the beneficiaries of the competition for Integrated University Programs organized by the National Center for Research and Development has been the Warsaw Medical University. The winner plans to allocate over PLN 11 million to the Academy of Innovative Didactics. One of the objectives is to strengthen the rank and international position of didactics at the Warsaw university. In addition, the university plans to develop the didactic competence of the academic staff, increase innovation programs and methods of education, and provide better tailored offer, programs and learning outcomes to the needs of the labor market. As part of the project, the Warsaw Medical University plans to organize Summer Public Health Schools, develop and implement methodology and interactive materials for classes of Biostatistics in clinical practice and Clinical Informatics and Telemedicine and introduce a new field of study «Toxicology with elements of forensics».

Professor Bronic-Czerechowski visits Wrocław University of Technology

2018-03-26

On Monday, March 27, Prof. Włodzimierz Bronic-Czerechowski from the Polish University in Abroad (PUNO) in London will start his two-day visit to Wrocław. The architect and soldier of the Armia Krajowa will visit the Wrocław University of Technology. During his visit to the alma mater (Włodzimierz Bronic-Czerechowski is a graduate of the Wrocław University of Technology from 1952) he will give an open lecture on «Architectural conditions for a sustainable environment built on the assumptions of a new type of housing estate in the Smart Cities project» and will lead two seminars on modern architectural solutions and urban planning. Professor Bronic-Czerechowski is an architect, lecturer and architecture theoretician. He is a co-creator of the post-war reconstruction of the Wrocław center. He conducts research in the field of smart, self-sufficient residential units. He has lived and worked in London since leaving Poland. He is an active member of the Royal Institute of British Architects.

Wrocław University of Economics strengthens the didactic potential

2018-03-26

PORTAL - Integrated Development Program of the Wrocław University of Economics - received almost PLN 11.5 million of funding from the National Center for Research and Development. The main goal of the project is to strengthen the didactic potential of the university. The money raised in the competition will be used to create a Business Process Simulation Center - an interactive laboratory for visualizing business processes using the latest technologies and implementing modern models of university management through the integration of IT systems. Co-financing will allow the launch of new courses, the creation of an additional offer to develop students and their competences and a high-quality internship program to acquire practical skills and better preparation. Subsidized internships

and trainings will allow to develop teaching, managerial and administrative skills.

LabDay 2018 – applied chemistry at the Wrocław University of Technology

2018-03-26

During the LabDay at the Wrocław University of Technology participants were able to learn about the applied chemistry. One of the attractions was a lecture with elements of the show „Molecular Gastronomy, or Chemistry in the Kitchen”. LabDay is a project of the Students' Self-Government of the Faculty of Chemistry. During one day, scientists and students from scientific circles presented atypical applications of chemistry and revealed the secrets of their laboratories. They presented the Nuclear Chemistry Laboratory, and in the Biotechnology Laboratory, where everyone could isolate their own DNA from a sample of saliva with the use of reagents available at home. The Marathon of laboratory experiments and the Panel of Opportunities, i.e. meetings with representatives of industry companies and graduates working in the profession and with the most talented students and doctoral students, were also popular. In total, over 60 lecturers attended the lectures on the LabDay.

New workshop at the Faculty of Environmental Engineering of the Wrocław University of Technology

2018-03-26

The new didactic and research laboratory was opened at the Faculty of Environmental Engineering at the Wrocław University of Technology. It enables to conduct classes in the field of heating and heating technologies. The lab will be used by full-time and part-time students of Environmental Engineering. They can run simulations of the heating installation, including floor heating with a heat pump as a source of energy. Thanks to the laboratory, students will be able to use theoretical knowledge in practice, because, as emphasized Dr Marcin Klimczak from the Department of Conditioning, Heating, Gas and Air Protection, students are usually able to design a heating installation, but they do not know how these systems look in fact. The laboratory was established thanks to the cooperation of the Environmental Engineering Department with the TECE company, a global producer of sanitary and heating systems.

Exhibition of students of the Silesian University of Technology at the Italian University

2018-03-26

At the University of Cassino (Italy) the exhibition of students of the Silesian University of Technology has been presented. Their works were created as part of the project „San Pietro Infine: il luogo e la memoria - place and memory”. The exhibition is the result of a competition organized by the Faculty of Architecture of the Silesian University of Technology together with the Department of Civil Engineering and Mechanics of the University of Cassino and the city of San Pietro Infine - a city completely destroyed during the Second World War. From 1943, the town is abandoned and remains in ruins. This area is very valuable historically, architecturally and culturally and it has become the subject of research, conservation and design studies. The aim of the project

is to research and evaluate the heritage, develop a strategy for its protection and promotion, carry out architectural and conservation projects, make the area accessible to visitors, and build awareness of its value, and significance also in the history of World War II.

Polish innovative application for farmers conquers Europe

2018-03-26

SatAgro - a company founded by Przemysław Żelazowski, a researcher at the University of Warsaw and a graduate from Oxford - is already famous due to his application for monitoring arable fields on six European markets. SatAgro has been the winner of the POLAGRA-PREMIERY International Agricultural Fair in Poznań. The company's application for monitoring the agricultural land received positive feedback, bringing significant savings to farmers through enabling the current preview of the productivity of the cultivated land, as well as the analysis of historical aspect, including meteorological data. Currently, it is used in over 10,000 farms. The application was created and developed thanks to subsidies from the European Regional Development Fund, More: <https://satagro.pl/>

Ministry of Science supports research projects devoted to the Polish way to freedom

2018-03-27

Ten projects selected in the competition „Routes of Independent Poland” will receive almost PLN 10 million. The program of the Ministry of Science and Higher Education is implemented as part of the celebration of the 100th anniversary of Poland's independence. The project is to support scientific and artistic initiatives devoted to issues related to the Polish heritage of independence. It is also to present the Polish independence idea of the 19th and 20th centuries. Among the awarded ten projects were «Shaping the borders of independent Poland in the light of cartographic documents» and «Interactive Historical Atlas - Routes of Independent Poland 1914-1922» submitted by the University of Maria Curie Skłodowska in Lublin. University of Szczecin

will receive funding for the implementation of the project «Cemeteries in the suburbs of Lwow. Polish national heritage» and the University of Lodz for the work «Education and upbringing for forming Polish modernity and independence in the years 1915-1918 «.

Norman Davies to hold a lecture at the Jagiellonian University

2018-03-27

The Interdisciplinary Research Center, the Jagiellonian University and the City of Krakow invite participants to the lecture „Events in History”, which will be presented on April 5, 2018 by the world-renowned historian Prof. Norman Davies. Is there a logic of history? What was the role of unpredictable events in the past? Is the history written by events, not by winners? How can you deal with the event problem in historical studies? Do historians try to be too rational looking for justifications for events that were mainly decided by the accident? - these are some questions about the role of incidents in the history of Poland and the whole world. The lecture will take place on April 5, 2018 at 18.00 in the auditorium of the didactic building of the Faculty of Law and Administration of the Jagiellonian University in Kraków, ul. Krupnicza 33a.

Chocolate for participation in the study of olfactory memory

2018-03-27

Agnieszka Sabiniewicz, PhD candidate in the fourth year of psychology at the University of Wrocław, conducts research on olfactory memory as part of her doctoral thesis. The survey in which everyone can participate is anonymous, takes about 40 minutes and is memorizing and naming smells, presented in the form of «fragrants markers». The aim of the project is to determine the cognitive and personality correlates of the olfactory memory. Because so far very little has been known about the olfactory memory, the author counts on the current study to understand its connections with other parts of the human psyche. Each participant will receive information about the level of their olfactory memory, profile of personality traits and the level of working and spatial memory. And in addition - chocolate. You can make an appointment for an examination by email: a.sabiniewicz@gmail.com

First anniversary of the Silesian Center for Popularization of Science

2018-03-27

The Center for Popularization of Science of the Silesian University of Technology celebrated its first year of activity. Researchers decided to celebrate the anniversary by popularizing science at the Gliwice shopping center. Among the attractions were m.in. 3D printing and laser engraving. As part of the celebration, science popularizers realized a number of spectacular shows and presentations during which they explained the intricacies of science and technology in a simple and interesting way. The participants were able to fly on the drone simulator, print a birthday souvenir in 3D and also taste the molecular cuisine. There was also a birthday cake. Visitors could learn about the «matrix of careers» - on-line tools for measuring and diagnosing soft and professional competences as well as drawing up competency and qualification balances necessary to determine the direction of professional development. At

the stand of the Student Careers Office, the visitors could consult their CVs.

Double diploma agreement between the Gdańsk University of Technology and the University of Florence

2018-03-27

University of Florence (UNIFI) and Gdansk University of Technology have signed a double diploma agreement. Students will be able to spend one academic year at the partner university, and ultimately obtain a master's diploma from both universities. The agreement covers the master's program «International Relations and European Studies» (Laurea Magistrale in Relazioni Internazionali e Studi Europei) realized at the University of Florence and the course „Global Studies” in the field of Economic Analytics, run by the Faculty of Management and Economics of the Gdańsk University of Technology. The recruitment of volunteers to participate in the Polish-Italian master's program will start in April, and the first students will go to exchange in autumn 2018.

PLN 200 million for universities educating future teachers

2018-03-28

The National Center for Research and Development has announced a competition for „Teacher training programs”. The project is financed from the Operational Program Knowledge Education Development and aims to raise the competence of students who intend to become teachers. Improving the quality of education at all levels of education is one of the conditions for the expansion of our economy. We want the knowledge acquired from kindergarten to the University studies to be practical and useful. That is why we need highly qualified staff - said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. Public and non-public higher education institutions can apply for co-financing. Projects should last from 24 to 60 months. The maximum value of the project

depends on the size of the university and it starts from PLN 4 million for high schools educating less than 4 thousand students, up to 12 million for the largest universities, educating over 12,000 students. In total, PLN 200 million was allocated to the competition. The call for applications starts on April 23 and will last until June 6, 2018. More: <http://www.ncbr.gov.pl/fundusze-europejskie/power/aktualnosci/art,6058,konkurs-nr-powr-03-01-00-ip-08-00-pkn18-na-programy-kształcenia-nauczycieli-dotyczący-opracowania-i-wdrożenia-programow-kształce.html>

Researchers of the Medical University of Wrocław educate children

2018-03-28

The harmfulness of smog, the benefits of a vegetarian diet, the prevention of addictions through sport and the prevention of tooth decay - these are the themes of the meeting as part of the Wrocław Medical University's „Uruchamiamy Dzieciaki” campaign. Dr. Tomasz Zatoński presented studies on his thesis that Wrocław is the second (after Krakow) most polluted city in Poland, and Dr. Katarzyna Neubauer tried to convince the audience that a well-balanced vegetarian diet is appropriate at every stage of life. The researchers encouraged the young participants of the meeting to physical activity, explaining that sport is one of the forms of preventing addiction - it directs activity on other tracks, teaches how to function in the group, increases self-esteem and reduces the level of anxiety. Finally, the issue of ... frequent teeth cleaning was presented. The teeth should be cleaned at least twice a day - after breakfast and supper.

Students of the Land Forces Academy at the training ground in Wędrzyn

2018-03-28

Cadets of the Academy of Land Forces in Wrocław improved their skills at the Training Center of the Ground Forces in Wędrzyn. The practice on the training ground is a chance to check the acquired theoretical knowledge in real conditions. Officers of mechanized, reconnaissance and aeromobile specialties practiced techniques and ways of operating in the urban area using the Laser Shooting Simulator. Future tank commanders improved their skills in commanding a platoon of tanks in tactical operations. In turn, artillerymen - as part of the shooting and fire control classes - carried out firing tasks from DANA self-propelled gun howitzer. The culmination of the training were integrated activities carried out in the Central Urbanization Center, during which general military units cooperated with sub-units of various types of troops.

Cardinal Stefan Wyszyński's university established cooperation with the Studium Biblicum Franciscanum in Jerusalem

2018-03-28

Cardinal Stefan Wyszyński University in Warsaw signed a cooperation agreement with Studium Biblicum Franciscanum in Jerusalem. It will include the promotion and implementation of joint scientific research, teaching programs and cooperation in the field of international volunteering. The contract was concluded in Jerusalem. It was signed by the rector of the Cardinal Stefan Wyszyński University, priest Prof. Stanisław Dziekoński and the rector of Studium Biblicum Franciscanum, priest Prof. Rosario Pierr. The University of Jerusalem is a famous scientific unit of biblical research and archeology. Representatives of both universities are convinced that joint research and educational projects will contribute to the development of academic, cultural and scientific relations as well as to the implementation of activities related to archaeological and historical-artistic

researches.

Wrocław received PLN 11.5 million for the project „Lower Silesian Medical Leaders”

2018-03-28

The University of Medical Sciences in Wrocław received PLN 11.5 million to implement a program to improve the competence of students, PhD students, teaching staff and administrators. Over 1,000 people will benefit from the training sessions. Thanks to the subsidy, the university is starting a comprehensive development program based on the implementation of certified training sessions, courses, scholarships and internships. The plans include the creation of a Training and Conference Center with a modern IT infrastructure and an e-learning system. As part of the project, students will be able to participate in the free, certified training sessions, prepared in packages tailored to their needs. PhD students will get the chance to receive training scholarships, enabling them to acquire knowledge in foreign research centers. Teaching staff, as part of scholarships, will visit leading research centers, where they will improve their competences and acquire the latest knowledge while administrative employees will increase their management and IT skills.

Salary increase for academic teachers since 2019

2018-03-29

Almost half of university teachers in public universities will receive pay rises. The Ordinance of the Minister of Science and Higher Education regulating this remuneration increase enters into force on 1 January 2019- informs the Ministry of Science and Higher Education. The regulation is the part of the Constitution for Science. The basic salary of PhD tutors will increase by PLN 860. The assistants, lecturers, teachers and instructors will notice the difference. So far, their minimum salary was around PLN 2,400. After the changes, it will be over PLN 3200 - about PLN 800 more than at present. Since the economy is growing rapidly and it is also developing thanks to scientists, they must earn more. Their salaries should reflect their role in the process of building strong Po-

land. - emphasized Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education.

Jan Długosz Academy receives a grant for university development

2018-03-29

Jan Długosz Academy in Częstochowa received almost PLN .5 million for the development program. It is foreseen that over 700 students, 130 teachers and approximately 70 people from the management and administrative staff will be covered with that support. The aim of the project is to raise the competence of students of the Academy Jan Długosz in Częstochowa, support organizational changes and increase the competences of the didactic, managerial and administrative staff of the university through the implementation of a comprehensive program to improve the quality of its functioning. The program includes trainings, internships, study visits and additional classes. Under the program over 700 students will gain new professional qualifications and competences - including IT, group work and language. The support will also cover 130 teachers and about 70 people from the management and administrative staff who will develop their competences in the university management, IT technologies and languages.

Campaign „Girls go to the technical universities!” to launch in Poland

2018-03-30

April „Girls go to the technical universities!” Campaign is the largest project promoting technical, engineering and exact majors among young women in Poland and in Central and Eastern Europe. The project started in 2006 and this year technical universities in Poland invite girls for an open day on 19th of April. The initiators of the action are the Conference of Rectors of Polish Technical Universities and the Perspektywy Educational Foundation. The most important goal is to overcome stereotypes and encourage upper secondary school female students to start technical and exact studies. The culminating point of the campaign is the National Open Day for Girls. Women working at universities, lecturers, but also female students and graduates meet with students to tell them about their

career path and professional fascinations. They invite girls to visit the laboratories and organize special workshops, lectures and demonstrations for them. More: <http://www.dziewczynynapolitechniki.pl/>

2th Hispanic Congress at the Catholic University of Lublin

2018-03-30

The Department of the Spanish World, Politics and International Relations of the Catholic University of Lublin and the Regional Center for International Debate in Lublin organize on April 5-6 the Second Hispanic Congress „Between East and West”, which will focus on „Polish missionaries in the Spanish language countries. History, presence, perspectives. „ According to the organizers, the Congress is to undertake «an intellectual reflection on the history, the present and the perspectives for the participation of Polish clergy and laity, in the work of evangelization in the geographically distant and very diverse regions in the cultural sense». The Lublin event was attended by Alberto Salas Barahona, Ambassador of Peru and Francisco Javier Sanabria Valderrama, Ambassador of Spain.

Conference on neuroscience at the Jagiellonian University

2018-03-30

The Jagiellonian University in Krakow organizes on 20-22 April 2018 an international conference NEURONUS 2018 IBRO Neuroscience Forum. Neuronus IBRO Neuroscience Forum is an important scientific conference in Central and Eastern Europe, devoted to dynamically developing neuroscience. Last year's conference gathered 500 participants, representing 61 research institutes and universities from 18 countries. This year's scientific program was divided into four thematic blocks: Drugs that heal, cognitive session, biological session and medical session. The program will be complemented by the lectures of the renowned scientists: Amir Amedi from the Hebrew University in Jerusalem, Ole Jensen from the University of Birmingham, Markus Ullsperger from the University of Otton von Guericke in Magdeburg, Emma Robinson from the University of Bristol, Yves de Koninck from Laval University and Tomas Kuner from the University of Heidelberg . Chinese students of landscape architecture in Dzierżoniów

2018-03-30

Polish-Chinese landscape architecture students at the University of Environmental and Life Sciences in Wrocław visited Piława Dolna to prepare an analysis of the village landscape and design concepts of two parks. Thanks to the agreement concluded with the commune of Dzierżoniów, students of Polish-Chinese specialty in landscape architecture prepare the concept of land development in one of the villages every year. In 2016, it was the development of Gnejsów, and in 2017 the pond area in Mościsko. This year, Chinese students dealt with the areas in Piława Dolna. In mid-March, they got acquainted with the landscape and the advantages of the village. After the visit - within the framework of the subject of Shaping of the rural areas in Europe - they made landscape analysis, and later presented the design concepts of two parks - at Spacerowa and Blotna.

More partners of the Silesian „Observatory of Urban and Metropolitan Processes”

2018-03-30

Six Silesian universities are operating in the scientific and expert network of the „Observatory of Urban and Metropolitan Processes”. Its aim is to disseminate scientific achievements in the urban studies, increase the potential of research and expertise for local government, and prepare programs and projects related to urban and metropolitan processes. The observatory was established at the University of Silesia. It was joint project of 6 Silesian universities: Silesian University of Technology, University of Economics and Academy of Fine Arts in Katowice, University of Business in Dąbrowa Górnicza and Academy of Technology and Humanities from Bielsko-Biała. The Observatory is to provide expert services at the request of local government, carry out research and expertise, create a platform for the exchange of information and experience between individuals and institutions, and support the dynamic and sustainable development of the Upper Silesian metropolitan area.

Constitution for Science - step closer

2018-03-30

- Polish science is an extremely important matter, and I support the Constitution for Science and I will do everything to put it into effect in its current form. Thanks to Deputy Prime Minister Jarosław Gowin, we are taking a step in the right direction - said Jarosław Kaczyński, president of the Law and Justice party forming the Polish government. Thanking for his support, Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education, emphasized that the new law was widely discussed and then accepted by the academic community. - The purpose of the reform is to make Polish universities competitive in Europe and in the world. The Act is in line with the goals of our government, the strategy of Prime Minister Morawiecki - added Gowin. In his opinion the Constitution for Science steadfastly follows the principle of sustainable development of both large and smaller universities. The Minister underlined that everyone should care about the high positions of Polish universities in the rankings.

Open Day to invite future students at the Wrocław University of Environmental and Life Sciences

2018-04-03

The natural university invites its future students. During the open day - April 6 - all faculties of the university prepared thematic workshops for high school students and university candidates. On this day at the University the future students will be able to visit veterinary clinics, learn about the secrets of brewing beer and taste molecular cuisine. The university staff will explain why autumn is so colorful, they will help explore the skulls of people from around the world and research the world of plants in the jar. At the Faculty of Natural Sciences and Technology, the guests will be able to learn the secrets of hydroponic cultivation of plants, and see the exotic animals. The Faculty of Environmental Engineering and Geodesy invites participants to check

out the hazards modeling and test the strength of building materials. At the Faculty of Biotechnology and Food Sciences, future students can smell the vapors of liquid nitrogen or in the female world of science together with Maria Curie-Skłodowska.

Wrocław University of Economics takes care of Liceum in Dzierżoniów

2018-04-03

Wrocław University of Economics accepted the patronage over the Secondary School in Dzierżoniów. This is the second school from Dzierżoniów, which joins the project „Leaders of knowledge - Leaders of success”. «Knowledge leaders - Leaders of success» is a proposal of the University of Economics for high school students. Before graduation, the young students can get acquainted not only with the educational offer of the university, but also with the methods of education, career prospects and student life. The cooperation agreement is signed by the head of the school Grażyna Bojarska and the vice-rector of the University of Science, prof. Jerzy Niemczyk, who was a graduate of the Secondary School No. 1 in Dzierżoniów. During the program students will have the opportunity to participate in specially prepared lectures and exercises as well as meetings with representatives of the business world and active students of the university.

Second program „Implementing PhDs” begins

2018-04-03

The Ministry of Science and Higher Education announced a program addressed to PhD students recommended by the universities or research institutes. The main assumption of «Implementing PhDs» is to prepare PhD dissertations that will improve the operation of the companies. A PhD student, working under the care of two scientific and industrial supervisors is tasked with solving the technological problem that its company is facing - informs the Ministry of Science. Universities, scientific organizations of the Polish Academy of Sciences, research institutes as well as international research institutes can join the competition. However, they must meet

the following conditions: have a scientific category A + or A; conduct doctoral studies and carry out documented and systematic cooperation with entrepreneurs or other entities in the field of research and development. More: <http://www.nauka.gov.pl/komunikaty/ogloszenie-konkursu-w-ramach-ii-edycji-programu-doktorat-wdrozeniowy.html>

Professor Knottenbelt to hold a lecture on cryptocurrencies at the Lodz University of Technology

2018-04-03

„The cryptocurrency revolution: what's this all about?” - Professor William Knottenbelt from Imperial College London will hold this lecture at the Technical University of Lodz on Thursday, 5 April 2018. Those, who plan to learn something about the phenomenon of Bitcoin and cryptocurrency, dig the first Bitcoin, or invest in other cryptocurrencies are invited to a unique opportunity in Poland to meet Prof. William Knottenbelt. The lecture will take place in the auditorium of the Faculty of Management and Production Engineering (Building of Three Faculties, 3rd floor), ul. Wólczańska 215 in Łódź, at 12.00.

Academy of Humanities and Economics in Lodz signs a cooperation agreement with Freie Hochschule Stuttgart

2018-04-03

As part of the partnership agreement, the students of the Łódź University, who plan to be teachers in future, will be able to attend the Freie Hochschule Stuttgart for five months during the academic year. The contract also includes the arrival of students from Stuttgart to Łódź. Scholars from the Freie Hochschule Stuttgart will also come to the Academy of Humanities and Economics in Łódź to introduce Polish students to the concept of the Waldorf education and familiarize them with such elements of their work as using drama in language classes or original excerpts, including original foreign language literature. The Waldorf education aims to support the child's comprehensive development. Great attention is paid to artistic activities (painting, singing, playing instruments), as well as learning through practical activities such as: manual work, clay workshops, wood, carpentry, gardening.

Rector of the Poznan University of Technology visits the Peruvian universities

2018-04-04

The Rector of the Poznan University of Technology Prof. Eng. Tomasz Łodygowski with his colleagues visited in March eight best Peruvian universities and Salesian high school and technical education centers. The Rector of Poznan University of Technology represented a consortium of Poznan universities for cooperation with Peru. The consortium includes the University of Technology, the Adam Mickiewicz University and the University of Life Sciences. The objective of the consortium is signing a cooperation agreement with PRONABEC (Program Nacional de Becas y Credito Educativo). It is a government agency that grants the scholarships on behalf of the President of the Republic of Peru, covering the total cost of studies (master's or doctoral) along with transport and maintenance costs. During the meeting with the authorities of this institution, further

steps were established to begin the cooperation between PRONABEC and the consortium of Poznan universities.

Częstochowa Academy in the CEEPUS program with universities from Croatia, the Czech Republic and Slovakia

2018-04-04

Jan Długosz Academy in Częstochowa became the coordinator of the network of the universities „Art without borders” under the CEEPUS program. The network included: the Catholic University of Ružomberok in Slovakia, the University of Ostrava (Czech Republic) and two Croatian Academy of Fine Arts - in Zagreb and Rijeka. CEEPUS (Central European Exchange Program for University Studies) is a program of academic exchange in the field of education and professional development of students and academic teachers. This is the second most important program of academic exchange after the Erasmus + program. The program is intended to strengthen contacts between universities of signatory countries through enhancing the academic mobility. The signatories of the program are: Albania, Austria, Bosnia and Herzegovina, Bulgaria, Montenegro, Croatia, Czech Republic, Macedonia, Moldova, Poland, Romania, Serbia, Slovakia, Slovenia, Hungary and Kosovo - University of Pristina. CEEPUS scholarships are provided to students for studies / internships and apprenticeships, and to academic teachers for activities that strengthen the Central European character of university curricula.

Offer of Gdańsk universities for startups

2018-04-04

The Medical University of Gdańsk with the University of Gdańsk and the Medical Innovation Center plan to become the regional coordination center for the Regional Innovation Scheme (RIS) as part of the EIT Health Hub program. The EIT Health Hub program supports innovation in healthy living and active aging. Gdańsk universities offer their support to startups (operating in the field of life science)

as part of InnoStars Award acceleration programs (for beginner startups having a ready-made prototype) and European Health Catapult (for startups and small enterprises with a product ready to the successful production). Interested startups are invited to contact the Technology Transfer Center of the Medical University of Gdańsk by email: naukaibiznes@gumed.edu.pl

University of Opole - new majors and online registration

2018-04-04

The University of Opole announces eleven new majors and twenty specializations in the new academic year. Also, a future student will be able to log in to the online registration system for university candidates from 18th of April. Among the new majors are pharmacy with elements of chemical sciences, forest management, applied linguistics, as well as design, social communication and public relations. Specialties include Christian spirituality and culture, internet sociology, Balkan cultural tourism, foreign languages in the public service, as well as cultural anthropology, pop culture and new media. The detailed description of new courses will be available after April 18 on the university website. Information on the education program, competences to be obtained by a graduate in a given field or employment opportunities after graduation will also be available there.

University of Silesia will train on the principles of good behavior

2018-04-04

The best students from schools cooperating with the University of Silesia will take part in a *savoir-vivre* course, organized for them by the Silesian university. The lecture and training will take place on Monday, 9 April in the rectorate building of the University of Katowice, ul. Bankowa 12. The workshops will cover the classic principles of *savoir-vivre* (including greetings and farewells, presentation, styling, inappropriate behaviors) and issues related to interpersonal communication (including non-verbal forms of communication). The lecturer will also talk about the basic principles of the culinary etiquette or a proper dress code. The classes will be led by Dr Andrzej Szteliga, specialist in the field of economic diplomacy. He is also a lecturer of the diplomatic protocol and etiquette at the Academy of Diplomacy of the University of Silesia.

Silesian University of Technology to cooperate with the high school in Jastrzębie Zdrój

2018-04-04

Silesian University of Technology signed the agreement on scientific and didactic cooperation with the School No. 1 and Secondary School No. 1 with Bilingual Departments in Jastrzębie Zdrój. The agreement was signed by the rector of the university, Prof. Arkadiusz Mężyk and director of the school Patryk Mochnacz. The Rector emphasized that maintaining a close relationship with secondary schools is very important for the university. «I think we have a very interesting teaching offer that can interest every student. Every year, we modify it a bit, to keep up with the expectations of young people and trends on the labor market,» he said. Under the agreement, the university will provide scientific supervision to the experimental class, implementing the extended mathematics program with elements of the academic curriculum. The pupils will take part in classes at the university - in lectures, laboratory

and science clubs. The students, on the other hand, will practice subject-methodical and pedagogical practices at school.

Students of the University of Silesia to organize the Węgiel Film Festival

2018-04-05

Short films and animations from the entire world will be presented on April 12 and 13 during the 15th Węgiel Film Festival organized by the students of the Radio and Television Department at the University of Silesia. The aim of the festival is to present student works from the world universities, as well as exchange the experience and enhance the integration of the high schools. This year's festival will take place on April 12 and 13 in the new headquarters of the Radio and Television Department of the University of Silesia in Katowice, at ul. Sw. Pawła. The student contest will be a great opportunity to observe the techniques and skills of their colleagues and discuss about the films qualified for the competition. The list of films qualified for the festival is available at: www.wegielfestival.us.edu.pl

Center for Medical Simulations at the University of Bydgoszcz

2018-04-05

The Collegium Medicum of the University in Bydgoszcz officially opened the new Medical Simulation Center. This completely renovated and equipped facility cost PLN 17 million. Almost 11 million is an EU subsidy, whereas the Ministry of Health offered PLN 6 million. The Center has well-equipped simulation rooms of high-fidelity with advanced simulators - an intensive care unit, a hospital emergency department, a delivery room, an operating room, an ambulance room and a nursing room. Low-fidelity simulation rooms use different simulators and models. There are special rooms for teaching technical and surgical skills, for laboratory teaching of clinical skills. There is also a room with a simulated patient to form interpersonal skills between the patient and the medical team, and a computer-teaching spot with virtual patients.

Nobel Prize winner Prof. Klaus von Klitzing to hold a lecture at the Wrocław University of Technology

2018-04-05

The winner of the Nobel Prize in physics Prof. Klaus von Klitzing will be a guest of the Wrocław University of Technology. On Tuesday, April 17, the Nobel Prize winner will hold a lecture on „The New Kilogram Pattern in 2019: The Greatest Revolution in Metrology After the French Revolution”. The lecture concerns the changes in the International System of Units (SI system). Currently, only a basic unit of kilogram is defined on the basis of a specific object (platinum-iridium roller stored in Sevres). After the change, all 7 units will be based on universal physical constants, that is, phenomena, not objects. This will be possible thanks to the von Klitzing's discovery of the «quantum Hall phenomenon» for which the scientist received the Nobel Prize. Professor von Klitzing was born in 1943 in Sroda Wielkopolska in Poland. He is one of the most-cited scientists in the world, he is a doctor or professor of honor from 22 universities around the world.

Students start to apply for University of Wrocław

2018-04-05

The University of Wrocław invites new students. It offers over 70 majors and about 230 specialties and specialties. The offer of studies in Polish includes more than 60 Bachelor's majors and more than 50 Master's degree studies. The University also offers almost 30 programs (majors and specialties) in English, nearly 30 doctoral programs and about 60 postgraduate studies. Descriptions of courses, application schedules, fees for part-time studies, limits of places for specific majors can be found in the University's recruitment service. The university staff will answer questions about recruitment via social media: fb / uniwroc, snapchat / uniwroc. Students can register in the Internet Registration of Candidates system through the website www.rekrutacja.uni.wroc.pl, or directly on the website www.irka.uni.wroc.pl.

Conference „Languages & Emotions” at the University of Silesia

2018-04-05

University of Silesia, SWPS University and the City of Katowice jointly organize the third international conference „Languages & Emotions”. From 13 to 15 April, various lectures and workshops are planned in three thematic headings: bilingual children; selective mutation and stuttering, peace of mind and balanced planner. On the first day of the conference, specialists will show how to help the child to learn a non- native language - how to support a child in the process, how to start and what to avoid. The second day will be devoted to the challenges of the work with a child with a mutism and how to deal with anxiety disorders and expectations during therapy for teenagers and adults. On the last day, scientists will tell the participants how to have more spared time, how to manage the time to gain up to three hours a day, to improve the happiness level, regain health and control home finances. Detailed information and registration form are available at: www.jezykiemocje.eu.

„Terrorism and Medicine” at the Collegium Civitas in Warsaw

2018-04-05

The Center for Research on Terrorism of Collegium Civitas organizes a scientific conference „Terrorism and Medicine”, which aims to present the threats and exchange views and practical experience on the medical aspects of terrorism. During the conference, the specialists in the field of terrorism and medicine will hold lectures on the medical aspect of terrorism. The Warsaw University emphasizes that terrorist attacks become a new challenge for medical services. Issues related to the medical aspects of terrorism create a vast, multidisciplinary branch of knowledge, combining elements of disaster medicine (mass events), organization of emergency medical systems, clinical disciplines (specificity of injuries), forensic medicine, organization of the victim identification process as well as clinical psychology.

The area of health threats is extremely wide and includes chemical, biological, radiation threats. The conference will start on April 25, 2018 at 8.00, in the Aula Collegium Civitas (XII floor of the Palace of Culture and Science in Warsaw).

Harvard- the first worldwide, Krakow University- in Poland

2018-04-05

In the latest world ranking of universities - University Ranking by Academic Performance (URAP) - among 2,500 assessed high schools there were 51 educational units from Poland. The URAP ranking is based on objective data obtained from reliable bibliometric sources. The authors of the list are guided primarily by such criteria as the quality and quantity of publications as well as international cooperation. The Harvard University opens a list of world rankings before the University of Toronto and the University of Oxford. The Jagiellonian University in Kraków gains the highest position among the Polish universities (323 in the world) and it comes before the University of Warsaw (342 in the world) and the AGH University of Science and Technology in Kraków (499 in the world). More: <http://www.urapcenter.org/2017/world.php?q=MS0yNTAw>

Ministry of Science offers PLN 21 million for the construction of a new runway for the Center of Aviation in Chełm

2018-04-05

Under the decision of Deputy Prime Minister Jarosław Gowin, over PLN 21 million was allocated from the Ministry of Science and Higher Education for the construction of a concrete runway at the Aviation Center of the State Higher Vocational School in Chełm. The concrete runway is necessary for the full functioning of the University Center of Aeronautics and the airport used by it in Deputycze Krolewskie. First of all, it will allow pilots to perform all air operations, even in bad weather conditions. - The runway is also necessary aeronautical infrastructure to increase the attractiveness of our Aviation Center and it opens new development opportunities. It is

also an impulse that will stimulate the development of Chełm and the entire region. We know that the city's transport accessibility is one of the important aspects that investors consider when choosing the location of new projects. Thanks to our investment, we will be able to meet the expectations for the convenient communication even for the most demanding clients- said Prof. Eng. Arkadiusz Tofil, the rector of the State Higher Vocational School in Chełm.

Scientific conference on Euro-integration at the University of Economics in Białystok

2018-04-05

The University of Economics in Białystok, together with the Ukrainian Tarnopol Institute of Social and Information Technologies, organizes on 25-26 April 2018 the scientific conference „Euro-integration processes in education, science and economy”. The aim of the conference is to exchange knowledge and good practices in the area of current problems and needs of Euro- integration in the educational, scientific and economic areas. The participants of the event will deal with problems in four thematic headlines: Innovation and investment development of cities and regions; Social institutions in the conditions of European integration; The integration process in the global scientific and educational space; Innovative and information systems for the transfer of knowledge and technology. The conference will start on April 25, 2018 at 9.00 at the University of Economics in Białystok, ul. Zwyciestwa 14.

Government allocates PLN 70 million for the campus at the University in Lublin

2018-04-06

The government allocated PLN 70 million from the state budget for the construction of a new, western campus at the Maria Curie-Skłodowska University in Lublin. April 3, 2018 Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin and Rector of the Lublin University Prof. Stanisław Michałowski signed agreements on financing new University investments. The new headquarters of the Faculty of Political Science, Institute of Psychology, Institute of Pedagogy, as well as the Academic Sports Center will be constructed in the western Campus. As part of the government's support, the modernization of the Academic Culture Center «Chatka Żaka» will also be completed. Deputy Prime Minister Jarosław Gowin emphasized, that this investment is a great opportunity to develop not only the Lublin university, but also the region. Today Lublin is one of the most important academic cities in Poland. Thus, this investment enables the University of Maria Curie-Skłodowska to become one of the leading universities in Poland providing the high quality and comfort of studies.

Ministry of Science launches project to support extremely gifted students

2018-04-06

The Ministry of Science and Higher Education supports exceptionally gifted students and announces a recruitment for the new „Best of the best 3.0” project to receive the funding to cover participation in international competitions and conferences. Student projects can last a maximum of 12 months and must end by May 31, 2019. The cost of one project cannot exceed: - PLN 80,000 - in the case of a project carried out by one student; - PLN 320,000 - for a project implemented by a team of students. The condition is a mandatory element of competition and the international nature of the planned event. The project is implemented under the Operational Program Knowledge Education Develop-

ment co-financed from the European Social Fund. Detailed information can be found at: <http://www.nauka.gov.pl/komunikaty/zaproszenie-do-skladania-ofert-w-ramach-projektu-najlepsi-z-najlepszych-3-0.html>.

17 million for PhD studies at the Poznan university

2018-04-06

Adam Mickiewicz University in Poznań received PLN 17 million for Interdisciplinary PhD Studies programs at the faculties of English, biology and chemistry, as well as geographic and geological sciences. The funds were granted by the National Center for Research and Development. Co-financed programs are: Passport to the future - Interdisciplinary PhD studies at the Faculty of Biology of Poznan University; Innovative language research in interdisciplinary perspective: psychology, sociology and technology; GEO-INTER-APPLICATIONS - high-quality PhD program implemented at the Faculty of Geographical and Geological Sciences of the Poznan University; INNChem - development of key competences for PhD students in research and development work and HighChem - interdisciplinary and international PhD studies with elements of intersectoral cooperation support.

University of Gdańsk to cooperate with the University of Grodno

2018-04-06

The University of Gdańsk strengthens its cooperation with the Belarusian Grodno State University. The first agreement between the universities was signed in 2016 and assumed joint publications, teaching internships of the staff and exchange of students. This year the authorities of both universities agreed to extend the agreement on exchange of visiting professors, joint research, development projects, summer schools and hackathons for young IT specialists and implementation of elements of Pedagogy of Innovation based on orders from the business environment of the university. Belarussian guests visited the Baltic Campus of the University of Gdańsk-Oliwa. After getting acquainted with the

possibilities of the laboratories at the Institute of Experimental Physics, they expressed new ideas for the development of young scientists in both countries.

Congress of the oil and gas industry at the AGH University of Science and Technology

2018-04-09

On April 10-12, 2018, the AGH UST SPE Student Chapter (AGH University of Science and Technology Society of Petroleum Engineers) will host the 9th Congress of the oil and gas industry „East meets West” organized by the AGH University of Science and Technology. As part of the event, a competition of papers, posters and European and the quiz competition «PetroBowl» are planned. «East meets West» is the largest student conference in Europe and it gathers hundreds of delegates representing the universities and the companies from around the world. The main idea of the event is to match industry companies with talented students. AGH UST SPE Student Chapter (the Student Section of the Society of Petroleum Engineers) is operating at the AGH University of Science and Technology and it is the only organization of this type in Poland. The Society of Petroleum Engineers (SPE) is an international organization associated over 100,000 engineers and students associated with the oil industry. More: <http://emwcongress.org/>

Father Adam Boniecki to receive honorary doctorate from Lodz University

2018-04-09

The Senate of the University of Lodz has decided to award the title of doctor honoris causa to Father Adam Boniecki. The ceremony will take place on April 12, 2018 at the Faculty of Philology at the Łódź University. The resolution has been adopted by the reviewers - lecturers of the Cardinal Stefan Wyszyński University, the University of Warsaw and the University of Lodz. Father Adam Edward Fredro-Boniecki was born on July 25, 1934 in Warsaw. He studied philosophy at the Catholic University of Lublin and at the Paris Catholic Institute. He is a publicist and the former editor-in-chief of the *Tygodnik Powszechny*. He worked for it since 1964 when the Polish bishop Karol Wojtyła asked him to cooperate. Wojtyła, as Pope John Paul II, again invited Father Boniecki to write in another magazine - *L'Osservatore Romano*. Father Adam Boniecki is also a laureate of many awards and distinctions, including the Kisiel Award, the Ecce Homo Order, the Gold Medal «Gloria Artis» and the Dariusz Fikus Award for publishers. The promoter of his honorary doctorate is Professor Barbara Bogolebska from the Faculty of Philology of the University of Lodz.

Jagiellonian University Medical College wins Polish Intelligent Development Award in 2018

2018-04-09

The Jagiellonian University Collegium Medicum won the Polish Intelligent Development Award 2018 in the category „Future innovative solutions at the university” for the project „Didactics, Innovation, Development. Improving the quality of education through the development of innovative education”. The goal of the project is to develop and implement a university development program that includes various complementary forms of medical simulation. Besides, it develops the skills of teachers, provides developed teaching materials and well- equipped classrooms. The project will be

carried out for two years. The project « Didactics, Innovation, Development. Improving the quality of education through the development of innovative education» is co-financed from European funds. It is headed by Dr Michał Nowakowski from the Department of Medical Didactics of Collegium Medicum.

University of Silesia invites high school graduates to the night matriculation repetitions

2018-04-09

The University of Silesian Graduates organizes Quick Night Repetitions. During three-hour lectures, secondary school graduates will repeat the most difficult or most common final exam issues appearing in the tests. Repetitions are scheduled for the last week of April. There will be organized Polish repetition (with classes devoted to the preparation for the oral exam); English language; mathematics at the basic and extended level; chemistry (with the participation of the Experimentalists Association); biology; history. The meetings will be run as part of the University of Silesian Graduates by university lecturers and teachers, and during the course participants will be able to use modern digital tools and multimedia materials. Detailed information and application forms: www.facebook.com/events/1801140206610889 and maturzysta.us.edu.pl.

Almost PLN 100 million for the expansion of the Lodz University of Technology

2018-04-10

Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education and Prof. Sławomir Wiak, Rector of the Lodz University of Technology, signed an agreement under which the Ministry of Science will allocate PLN 97.5 million for the development of the infrastructure at the Łódź University. As part of this targeted subsidy, a modern conference and teaching center, as well as a laboratory and didactic building of the Faculty of Chemistry of the Lodz University of Technology will be financed. Lodz

University of Technology is one of the best technical universities in Poland - said Deputy Prime Minister Jarosław Gowin. - The Chemical Faculty is a strong scientific center of the University of Technology, which needs an adequate infrastructure for further development if we want Łódź to be a city, whose development is based, among others, on modern industry. In this way, we implement a strategy of responsible development, which should turn Poland towards the innovative economy, towards the revolution 4.0 - added the Deputy Prime Minister.

16th Tourism Days at the University of Poznan

2018-04-10

The Faculty of Geographical and Geological Sciences at the Adam Mickiewicz University in Poznań invites participants for the Tourism Days. The organizers announce unusual attractions including games, gifts, workshops, competitions and meetings with famous travelers. The program of the event includes a Japanese evening with a demonstration how to eat with chopsticks, a survival workshop on the trip «Survive at any cost» and meetings with interesting guests: a traveler Aleksander Doba; a climber Adam Bielecki and a journalist Szymon Hołownia. The Tourism Days are organized for the 16th time and the event is scheduled for Monday and Tuesday, 16 and 17 April. It is a travel festival organized by students of Tourism and Recreation Faculty of the Poznań University. It aims to familiarize students with the culture and geography of various corners of the world. More information on the website www.dniturestyki.pl and the official fanpage <https://www.facebook.com/dni.turystyki/>

Almost PLN 70 million for the development of Silesian universities

2018-04-10

Rectors of Silesian universities received checks with subsidies for modernizing education system from the Deputy Prime Minister, Minister of Science and Higher Education, Jaroslaw Gowin as part of the „Integrated University Programs”. «I want to ensure that these symbolic checks will be cashed as soon as possible. It is very important for us to start the internal reforms as soon as possible, and that money should start working as soon as possible to improve the teaching offer of Silesian universities and raise the level of scientific research, « said the Deputy Prime Minister. The checks were received by representatives of seven universities - Rector of the Silesian University of Technology Prof. Arkadiusz Mężyk, Rector of the University of Economics Prof. Robert Tomanek, Vice-Rector for Finance and Development of the University of Silesia Prof. Michał Daszykowski, Vice-Rector for Studies and Students of the Medical University of Silesia Prof. Joanna Lewin-Kowalik, Rector of the Academy of Fine Arts Prof. Antoni Cygan, Rector of the University of Technology and Humanities in Bielsko-Biała Prof. Jarosław Janicki and the Rector of the Academy of Jan Długosz in Częstochowa, Prof. Anna Wypych-Gawrońska.

Researcher of the Wrocław University of Technology wins a prestigious mathematical prize

2018-04-10

Professor Rafał Weron from the Faculty of Computer Science and Management at the Wrocław University of Technology received the prize of Hugo Steinhaus, awarded annually by the Polish Mathematical Society. The researcher was honored for his lifetime achievements, with particular emphasis on modeling and price forecasting on the wholesale energy market. According to Rob J. Hyndman, an outstanding specialist in the field of forecasting, reviewing the work of Prof. Weron will be the ABC manual in the literature on electricity price forecasting. It is

published in the «International Journal of Forecasting». Professor Rafał Weron specializes in risk management, computer simulations, forecasting energy prices on the electricity market and the application of statistics tools to finance and insurance issues. At the Wrocław University of Technology, he manages the Economic Modeling Team at the Department of Operational Research, Finance and Information Technology Applications.

Pharmaceutical Department of the Jagiellonian University Collegium Medicum to launch new field of study

2018-04-10

Drug Discovery & Development (DD & D) is the only such study course in Poland and in Central Europe. From the next academic year, it will be included in the educational offer of the Pharmaceutical Faculty of Collegium Medicum in Krakow. The new course is a proposal for the graduates in the field of chemical, biological, pharmaceutical and medical sciences to continue their education, focusing on aspects of identification and development of new medicines - informed the Krakow University. The aim of the studies will be to prepare high-class specialists combining advanced theoretical knowledge in the field of drugs with practical skills. The study program was developed in cooperation with pharmaceutical companies. Classes will be taught in English. Studies are free for citizens of the European Union. Detailed information is available at www.ddd.farmacja.cm.uj.edu.pl

University of Silesia to cooperate with the Copernicus Science Center

2018-04-11

The University of Silesia and the Copernicus Science Center will cooperate in implementing projects under the Young Explorer Program (KMO). The university will become a regional partner of the program and their cooperation will be inaugurated on 18 April with a scientific conference on the activities of the KMO. The conference program includes lec-

tures and workshops on teaching methodologies through inquiry, research projects, opportunities for cooperation within the framework of the ESE-RO program (European Space Education Office) and visiting laboratories of the Silesian Inter-University Center for Education and Interdisciplinary Research. The aim of the KMO project is to involve children and young people in the process of learning through personal, shared experience, inspiring their curiosity and learning skills. As part of the program, over 700 clubs were established to support the development of physical, mathematical, natural and socio-civic competences in children and adolescents.

University of Silesia joined the International Entrepreneurship Incubator

2018-04-11

The University of Silesia will be a participant of the International Entrepreneurship Incubator - a network connecting universities, local government units, chambers of commerce and employers' associations from five cities around the world. The incubator opens up wide opportunities for academic companies, which will be able to promote their offer abroad and to appear on the international market. The network agreement was signed during International Entrepreneurship Forum organized in Sierre in Switzerland and in Saint-Étienne in France. The Forum members talked academic entrepreneurship and startups and it was an opportunity to discuss and exchange experiences of delegations representing five cities: Monastyr (Tunisia); Tamatave (Madagascar); Saint-Étienne (France); Sierre (Switzerland) and Katowice (Poland).

Poznan Science and Art Festival

2018-04-11

Poznań universities - together with the science and technology park and the local branch of the Polish Academy of Sciences (PAN) - organize the 21st Poznań Science and Art Festival. The event program consists of workshops, presentations, experiments and lectures. During the event - from April 22 to 26 – the participants will be able to learn how Piłsudski's legend was developed and why he became the head of the state. They will also be able to see practical ways to prepare healthy meals and learn how to read information from food labels. Students of the University of Economics will assess the economic efficiency of the Olympic Games in Athens in 2004 and London in 2012, and the scientists from the Polish Academy of Sciences will show how television in virtual reality looks like. Certain events require to register (via the Internet), others are available without registration. Program, details of events and registration: <http://festiwal.amu.edu.pl>

Professor Kacprzyk to be a member of the oldest scientific society in Finland

2018-04-11

Professor Eng. Janusz Kacprzyk from the University of Applied Computer Science and Management in Warsaw, was elected a foreign member of the oldest Finnish Academy of Corporate Science - Finnish Society of Sciences (Societas Scientiarum Fennica). Professor Kacprzyk is the only Pole among the 124 foreign members of The Finnish Society of Sciences (Societas Scientiarum Fennica). It is the oldest Finnish scientific society, founded in 1838. The main interests of Professor Kacprzyk in scientific activity are: fuzzy logic and its application in databases, decision support systems, fuzzy methods of representation and information processing, control and decision making in conditions of uncertainty and lack of precision, evolutionary programming and neural networks.

PLN 10 million grant for the expansion of the University of Warmia and Mazury

2018-04-11

PLN 10 million will be provided by the Ministry of Science and Higher Education to the University of Warmia and Mazury for the construction of two facilities - Law and Administration and Social Sciences centres in Olsztyn. The documents were signed on 9 April by Prof. Ryszard Górecki, the rector of the Olsztyn university, and Dr Sebastian Skuza, Undersecretary of State in the Ministry of Science and Higher Education. This year in September, the University will receive PLN 2 million. The remaining funds will be transferred to Olsztyn next year. The rector had tried to receive the ministerial support for six years. The decision of the minister shows the positive character of the reform of higher education. - We want to strengthen regional universities. The provisions of the new act confirm it - said Deputy Minister Skuza.

Bishop Pieronek to hold lecture at the University of Warsaw

2018-04-12

Bishop, Prof. Tadeusz Pieronek will hold a lecture under the title „State and the Church” on the 17th of April at the University of Warsaw. The meeting will be organized in the series „8 lectures for the New Millennium”. Tadeusz Pieronek is a professor of legal sciences, a Roman Catholic priest, he was the auxiliary bishop of the Sosnowiec diocese and the secretary general of the Polish Episcopate Conference. In the years 1998-2004 he was the rector of the Pontifical Academy of Theology in Krakow. He is the laureate of many decorations, including Cross of the Great Order of Polonia Restituta. A few years ago, in one of the interviews, bishop Pieronek said: „The church is not a national institution. Politicians use it for their needs, some defend it, others attack it, because they have chosen it as their goal. They should first know what the Church is for, and do not invent it for their own use.” The lecture will take place on April 17 at 17.00 in the hall of the former University Library.

11th Krakow Days of Integration

2018-04-12

On April 16-20, 2018, the 11th Krakow Days of Integration will be held. It is an initiative of the Kraków university aimed at extending the educational offer for students with a disability and people acting for this environment. The opening event is a conference «Responsible Support and Sustainable Development». The aim is to outline jointly the strategic priorities of reducing social exclusion in Poland based on the highest standards of educational support and cooperation of science and business. This is to be achieved through their employment in large companies, own entrepreneurship and creating new services and products tailored to their needs. - Disability is not a problem, it is an undiscovered potential in the development of Poland's civilization and economic development. There is no sustainable development without using this capital – emphasized conference organizers. More: <http://bon.uek.krakow.pl/index.php?p=m&idg=mg,253>

Italian scholarships for Polish students

2018-04-12

The National Academic Exchange Agency informs that the Italian Ministry of Foreign Affairs and International Cooperation invites people interested in the language, culture, economy and technologies of Italy to carry out studies and academic programs at Italian state institutes. 36 months of scholarships are provided for Polish citizens. Italians offer scholarships for foreign students and students - Italian citizens living abroad for the academic year 2018/2019. The deadline for submission of applications is 30 April 2018 at 14:00. The applications are operated by the on-line system. Before sending the application, the organizers invite participants to read the detailed scholarship conditions and information about the Italian higher education system: <http://www.studiare-in-italia.it/studentistranieri> <https://www.esteri.it/mae/it>

University of Life Sciences in Lublin at an education fair in Kazakhstan

2018-04-12

April 5 to 7, the delegation of the University of Life Sciences in Lublin participated in the International Education Fair „Education and Career” in Almaty, Kazakhstan. The main purpose of the trip was to promote the educational offer of the University of Life Sciences in Lublin, increase the number of foreigners studying at the Lublin university, promote new fields of study (plant medicine, bio- cosmetology, physical activity, qualified tourism and gardening in Russian). In addition, the program included establishing cooperation with the Narxoz University, Polish organizations, cultural and educational centers of cooperation with Poland in Kazakhstan and promoting Lublin as an academic city. During the visit, a meeting was held for people of Polish origin and for candidates interested in studying in Poland. The competitive advantages of the University of Life Sciences in Lublin were presented, and information on the costs of studies and the Erasmus + program was provided. Detailed information on the recruitment process, the possibility of obtaining social and scientific scholarships, the conditions and costs of dormitories, the labor market, and opportunities for personal development both at the university and in Lublin.

Open lecture on cellular communication at the University of Białystok

2018-04-12

Prof. Ewa Łucja Stępień of Jagiellonian University will talk about the Nobel prize-winning researchers of cell communication this Saturday (14 April 2018) in Białystok. During the lecture, she describes the history of research on cell ultrastructure and regulation of cellular processes through vesicular transport. These studies recently enabled explaining the mechanisms of intra and extracellular communication as well as the regulation of the genome's function. The cell communication scientists were awarded 2 Nobel Prizes in medicine and 1 Nobel Prize in

the field of chemistry. Professor Ewa Stępień is a molecular biologist, a graduate of the Jagiellonian University. She uses nanotechnology for the application of diagnostic medicine to search for new disease biomarkers. The open lecture will start at 11.00 in room 2011 of the Faculty of Physics (campus at Ciołkowskiego Street).

Over PLN 5 million for the education of PhD students at the Silesian University of Technology

2018-04-12

Two projects from the Silesian University of Technology received funding from the National Center for Research and Development. The university has received over PLN 5 million for the implementation of programs increasing the quality and effectiveness of education at the PhD studies. Both projects will be implemented at the Faculty of Automation, Electronics and Computer Science. The first awarded project is «AIDA (Applied Integrative Data Analysis) - interdisciplinary PhD studies in the field of data processing and analysis». It assumes increasing the quality and efficiency of education at PhD studies by creating interdisciplinary studies responding to the growing demand for experts in the analysis of large data sets. The second project is a program of modern PhD studies in the field of cyber-physical systems. Its primary goal is to provide stable support for the development of young, highly qualified scientific staff and promote new leaders of research teams.

Polish Intelligent Development Award 2018 for Gdańsk University of Technology

2018-04-12

Gdańsk University of Technology is the laureate of the Polish Intelligent Development Award 2018 in the category „Innovative solutions of the future at the university” for the project „Multidisciplinary Open Knowledge Transfer System - MOST Knowledge”. The distinction is given to entities that show

a constant focus on the future, creating the basis for the balanced economic development of the country. The prizewinners include Prime Minister Mateusz Morawiecki, the National Center for Research and Development and PGNiG Obrót Detaliczny. The media partner and the initiator of the prize is the editors of the section «Rzecz o Innowacjach» and «Rzecz o Inwestycjach» of the newspapers «Rzeczpospolita» and «Puls Biznesu». The substantive partner is the Silesian Center for Business Ethics and Sustainable Development, operating at the Silesian University of Technology. The awards ceremony will be held during the International Forum of Intelligent Development 3.0 Uniejów 2018, October 18-20 in Uniejów.

Three gold medals for the Poznan University of Technology at SAE Aero Design West 2018

2018-04-12

The team of the Academic Aviation Club of the Poznan University of Technology won three gold medals at the Professionals Competition of the Society of Automotive Engineers SAE Aero Design West 2018 in Los Angeles. Participants build unmanned aircraft in accordance with the restrictions and requirements of the contest. This year, the students' task was to design and build an aircraft that, with the lowest possible own mass, would transport the maximum weight. The rules of the competition defined the material of the plane and the type and power of the drive. Poznań students won in the Regular class, where other 37 teams competed, including USA, Canada, India, Mexico, Egypt and China. SAE Aero Design is an international academic competition organized for over 30 years by the American Society of Automotive Engineers (SAE) in cooperation with SolidWorks, Lockheed Martin or ANSYS.

Center for Literary Research for Children and Youth at the University of Wrocław

2018-04-12

The Center for Literary Research for Children and Youth has been launched at the University of Wrocław. At the inauguration, a seminar „Literary research for children and youth at the University of Wrocław - modern perspectives” was organized. Studies of literature and books for children and youth at the Wrocław University have been conducted since the 1960s. The first scientist to deal with this topic was Prof. Jerzy Cieřlikowski. The idea of the Center appeared in 2015 during the conference «Literary Margins and Digital Media» organized by the University and the Academia Europea Knowledge Hub Wrocław. In 2016, the university organized the international congress «The Child and The Book». The Wrocław part was entitled «Children's Literature and Play» and referred to the heritage of Prof. Cieřlikowski. The event was attended by 150 researchers from around the world. The Center began operating on Tuesday 10 April.

Nysa State Higher Vocational School opens a branch in Brzeg

2018-04-12

The State Higher Vocational School in Nysa (Opole province) will open a branch in Brzeg. The future nurses will study at the Brzeg Medical Center (BCM). The high school signed a cooperation agreement with the Brzeg authorities and BCM. The purpose of the agreement is to meet the needs of the county in the field of nurses' education. The document was signed by Maciej Stefański, head of the Brzeg county, Krzysztof Konik, director of the Brzeg Medical Center and Dr Eng Przemysław Malinowski, - rector of the PWSZ in Nysa. The Nysa high school has many years of experience in educating nurses. The State Higher Vocational School in Nysa provided diplomas to almost 2,000. Graduates on the undergraduate and graduate levels. The agreement signed on April 5 by the Brzeg county, the Brzeg Medical Center and the High School in Nysa aims

to establish a branch of the State Higher Vocational School in Brzeg. The planned activities concern the launch and conduct of education in the field of nursing at the Brzeg Medical Center.

News reading in the disinformation era at the University of Gdańsk

2018-04-13

Theoreticians and practitioners of information - scientists, experts, journalists and students - participated in the debate on reading news in the disinformation era. The meeting was organized by the Polityka Insight analytical center, Facebook and the Faculty of Social Sciences of the University of Gdańsk. The participants of the debate - mostly students of journalism - got acquainted with the short guide to the information intended to mislead the recipient and learned how to try to limit the damage caused by fake news. The debate took place as part of a nationwide project - meetings of experts, representatives of «Polityka Insight», Facebook, journalists and academics with journalism students at universities in Poland. The aim of the meetings and workshops is to familiarize students - future opinion leaders - with the problem of disinformation, false information and the ability to critically analyze the sources.

Prof. Przemysław Czapliński to hold a lecture on freedom without equality

2018-04-13

The Adam Mickiewicz University in Poznań, the UAM Foundation and the Zamek Cultural Center invite participants to a meeting at the „University Lectures in the Castle”. April 17 Prof. Przemysław Czapliński from the Faculty of Polish and Classical Philology will give a lecture on „Freedom without equality? Literature in the face of social conflicts. „ After the change of political power in 2015, the following statement appeared: «Freedom went well, only something did not work out with equality.» Its author of the lecture separated the two basic values of modern society, suggesting that they can exist separately. The story of how the isolation took place,

what role it played and what ideas for re-joining freedom and equality can be found in culture will be presented by Prof. Czapliński. Professor Przemysław Czapliński is a historian of XX and XXI century literature, essayist, translator, literary critic; co-founder of the Department of Anthropology of Poznań University. The subject of his research is literature and the problems of late modernity.

Wrocław University of Environmental and Life Sciences in the international TOPAS project

2018-04-13

Scientists of the University of Life Sciences in Wrocław are actively participating in the TOPAS project (From Theoretical-Oriented To Practical Education in Agrarian Studies), which is to fill the gap in the Soviet higher education system in agricultural sciences in Armenia, Ukraine and Uzbekistan. The basic aim of the program is to introduce and improve student internship programs that will bring students closer to business practice in agribusiness - by supporting partnerships between universities and the agri-food sector, industry organizations as well as interested government institutions. The TOPAS consortium creates 10 universities divided into two groups. The first are universities-partners from Germany, Great Britain and Romania, along with the Wrocław University of Environmental and Life Sciences. The second group includes 6 universities from the former Soviet republics, but now the independent states - Armenia, Ukraine and Uzbekistan.

Board of the National PhD Students Representation meets in Opole

2018-04-13

The PhD students of the Opole University of Technology were the hosts of the Second Open Meeting of the Board of the National PhD Students Representation. PhD students came to Opole from 26 Polish academic centers to discuss the most important environmental problems. Among the most important issues discussed during the meeting was the draft law on higher education. As the secretary of the KRD's board - Anna Kuklińska said, the Constitution for Science will be a «very big revolution» for PhD students. The takeover of education of young scientists by PhD students as assumed in the project will cover over 40,000 students throughout the country. In addition to serious discussions, the meeting at the Opole technical university gave PhD students from different cities an opportunity to get to know each other.

Railway industry funds scholarships at the Cracow University of Technology

2018-04-13

1000 PLN of monthly scholarship, paid internships, apprenticeships and employment guarantees in the leading companies of the railway industry - such incentives are planned for students of the railway construction industry at the Faculty of Civil Engineering of the Cracow University of Technology - informs the university. In the coming years, huge rail investments will be implemented in Poland, and employers from railway companies urgently will need engineering staff with highly specialized qualifications. Such qualifications will be attained by graduates of the Cracow University of Technology studying programs developed jointly by the university and specialists from the railway sector. Declaration of cooperation with the Faculty of Civil Engineering at the Cracow University of Technology has already been submitted by seven companies: Polish State Railways - Polish Railway Lines, Przedsiębiorstwo Napraw i Utrzymywania Infrastruktury Kolejowej w Krakowie Sp. z o.o.,

Kolejowe Zakłady Nawierzchniowe «Bieżanów» Sp. z o.o., Grupa ZUE, Track Tec S.A. , Budimex S.A. and STRABAG Sp. z o.o. They funded 26 scholarships for students of the second and third semester of regular studies on the railways specialty.

Professor Pałys claims new law to reward the quality of the university as one organism

2018-04-13

-While planning the organization of a university, we should remember about the new system of evaluating its activities. According to the new act, the entire university will be assessed as the set of specific disciplines. So if archeology is dealt with by three entities of the university, now they will no longer be assessed individually, only the university archeology will be assessed as a whole. The new Act on Science and Higher Education rewards the quality of the university as an organism, not the federation of autonomous entities - emphasized Prof. Marcin Pałys the rector of the University of Warsaw in an interview for the weekly journal Polityka. Professor Pałys also referred to the alliance of four European universities announced in March: the University of Warsaw, the Charles University in Prague, the Sorbonne and the University of Heidelberg. One of the aims of this alliance is student exchange, especially during PhD studies. The Alliance is one of the most important undertakings to build the University's connections with world universities. - In various scientific projects we already cooperate with universities in Cambridge, Oxford, Göttingen, Bonn and other recognized centers. However, the symbolic dimension of this Alliance is important - it reminds us that academic cooperation across borders is one of Europe dimensions - added the rector of the Warsaw university.

AGH University of Science and Technology explores and promotes copper-based materials

2018-04-16

The Non-Ferrous Metals Division of the AGH University of Science and Technology in Krakow presented a system of balustrades and stair handrails made of an antimicrobial copper alloy. The department is working on the implementation of antimicrobial tactile surfaces made of copper and its alloys in public places and promotes pro-health properties of copper-based metallic materials. During the presentation of the system, a scientific seminar was held. Dr Eng Monika Walkowicz delivered a seminar lecture «Copper and copper alloys in antimicrobial tactile applications». The antimicrobial effectiveness of copper has been used for therapeutic purposes since antiquity. The subject of the lecture was supported by the results of microbiological tests of antibacterial effectiveness of copper and its commercial alloys in contact with pathogenic bacteria such as E. coli, Escherichia coli, or Staphylococcus aureus, Staphylococcus aureus.

Dr Krzysztof Szerenos receives the Medal of a Young Scientist

2018-04-16

Dr Krzysztof Szerenos, a graduate of the Faculty of Physics at the University of Białystok, was awarded the Medal of a Young Scientist awarded by the Warsaw University of Technology. The young scientist received this distinction for his participation in the discovery of a new method of ultrafast photomagnetic recording. A breakthrough discovery was made at the Faculty of Physics of the University of Białystok by a team of researchers led by Prof. Andrzej Stupakiewicz, and the results were published in January 2017 in the prestigious journal «Nature». The Medal of the Young Scientist, established by the Warsaw University of Technology in 2007, is awarded for outstanding and recognized achievements in the field of science and technical innovation and other outstanding creative achievements. The distinction is to promote the achievements of young scientists characterized by the independence of creative concepts and the special dynamics of development. The medal is awarded to persons who have not exceeded 35 years of age.

Employee of the Medical Faculty at the University of Rzeszów wins the grant for cancer therapy

2018-04-16

Optimization of deep-tissue photodynamic therapy by measuring fluorescence lifetime is the title of the project presented by Dr David Aebisher for the grant enabling the purchase of scientific research equipment in 2018-2019 - informs Dr. Maciej Uliata, a spokesman of the University of Rzeszów. The Ministry of Science and Higher Education granted PLN 1,811,000. The scientific research program for the implementation includes the purchase of a spectrometer for measuring the lifetime of fluorescence and the lifetime of singlet oxygen and it refers to innovative methods of photodynamic therapy. Photodynamic therapy is the treatment of cancers that uses photo-generated reactive forms of singlet oxygen (1O_2) to damage target cancer cells. The use

of photodynamic therapy in the treatment of esophageal cancer, prostate cancer and cell lung cancer is becoming more and more popular among physicians around the world.

Courses and specialties at the Maria Curie-Skłodowska University receive „Studies with future” certificates

2018-04-16

During the third Competition and Accreditation Program „Studies with the Future”, five fields of study and specializations at the Maria Curie-Skłodowska University in Lublin received the certificates. Certificates «Studies with the future» were awarded to Information architecture - MA studies at the Faculty of Humanities, Philosophy and ethics - post-graduate studies at the Faculty of Philosophy and Sociology, Chemistry in sculpting and architectural renovation - specialty at MA studies and Photonics and fiber-optic technologies - specialization studies at the Faculty of Chemistry and Spatial Management - engineering studies at the Faculty of Earth Sciences and Spatial Management. The «Studies with the Future» program is a joint accreditation project of the Foundation for the Development of Education and Higher Education and the PRC Agency. It serves to highlight the most innovative and valuable directions of education at Polish universities, characterized by high quality of the implemented program and effectiveness in education aimed at labor market.

Award of the Academic Andragogical Society for outstanding monograph

2018-04-16

Dr Sylwia Słowińska from the Faculty of Pedagogy, Psychology and Sociology of the University of Zielona Góra was honored by the Academic Andragogical Society with an award for an outstanding monograph in 2018. After reading the reviews and the opinion of Prof. Józef Kargul, the head of the award chapter, the Main Board of the Andragogical Academic Society honored Dr Słowińska with the «Award for an outstanding monograph» in 2018 for

«Sense of bottom-up cultural initiatives in the interpretation of their implementers». Dr Sylwia Słowińska is an adjunct at the Department of Animation of Culture and Andragogy, at the Institute of Pedagogy at the Faculty of Pedagogy, Psychology and Sociology of the Zielona Góra University. According to the regulation of the Minister of Science and Higher Education of December 12, 2016 regarding the awards of scientific category to scientific units and universities, the winner of the competition received 50 points in parametric evaluation for a scientific monograph considered an outstanding work.

Cooperation between the Silesian University of Technology and the top supplier of li-ion batteries

2018-04-16

Silesian University of Technology has signed a cooperation agreement with Johnson Matthey Battery Systems - one of the largest suppliers of lithium-ion batteries in Europe. The agreement was signed by the Rector of the Silesian University of Technology, Prof. Arkadiusz Mężyk and HR manager Johnson Matthey Battery Systems Vladyslav Kryvenko. Students of the technical university will be able to take apprenticeships and internships at the company's headquarters and write diploma theses on topics related to the actual technological problems and the company's needs. The deal is also beneficial for graduates who will be able to work for Johnson Matthey Battery Systems. The university and the company will also jointly determine the topics of research and development, improve educational programs and exchange experience in the field of knowledge management, with particular emphasis on the development of competences. A team of specialists for strategic technical and organizational solutions will also be established.

Botanical Garden of the Maria Curie Skłodowska University opens to visitors

2018-04-17

After the winter break, the Botanical Garden of the Maria Curie Skłodowska University in Lublin was opened to the public. In the garden of 21 hectares, almost 7,000 plant species from around the world were collected. Until the end of October, the Lublin University invites visitors for Sunday walks with a guide and for floristic workshops. Juniors are welcomed to the Summer Academy of the Junior Naturalists. Everyone is invited to visit the Kościuszków Palace, situated in the Botanical Garden which has currently a representative character. The University uses the manor house as a place for special events, and from 2013 made it available to visitors - informs the Lublin university. More information, including the calendar of events, can be found at: www.garden.umcs.lublin.pl

AGH University of Science and Technology in Krakow has its own mobile telephony network

2018-04-17

It operates in the same ways as commercial networks. It is fully functional and has a licensed frequency provided by the Office of Electronic Communications. The first mobile student network in Poland was created by the students of the Telecommunications Department of the AGH University of Science and Technology in Krakow together with Nokia. The 4G / LTE network is a scientific-demonstrative model and consists of servers located outside and inside the base station buildings belonging to the Department of Telecommunications and the area adjacent to them. It has received recently a license for the radio frequency. Krzysztof Persona, director of Nokia's Research and Development Center in Krakow, emphasizes that researchers and students received « a complete solution that is as close as possible to the actual cellular network». It allows to conduct experiments and scientific research on the latest solutions in mobile radio technologies (for exam-

ple Mobile Edge Computing) as well as Internet of Things applications.

„A Day with Economics” at the University of Warmia and Mazury in Olsztyn

2018-04-17

The lectures of practitioners, workshops and trainings will constitute „The Day with Economics”, which will take place on April 19, 2018 at the Faculty of Economic Sciences of the University of Warmia and Mazury in Olsztyn. During the event Dr Marek Prawda, director of the European Commission Representation in Poland will lead the debate «Future of Europe - civil dialogue on the future of Europe», representatives of the Social Insurance Institution will discuss the civil-law contracts in social insurance and Ewa Zimnoch - Bank Citi Handlowy credit risk manager- will talk on communication in a team. «A Day with Economics» aims to present the potential of the Faculty of Economic Sciences at the Olsztyn university, to promote the teaching offer among future students and to integrate the scientific and business environment.

Letter of intent regarding the creation of Szczecin Automotive Hub

2018-04-17

The West Pomeranian University of Technology together with BrightONE, the IT leader based in Szczecin, the P3 group - a supplier of solutions for car manufacturers and the city of Szczecin, will build the competence center of Szczecin Automotive Hub. The parties have signed a letter of intent to make the academic offer and the labor market more attractive by launching exchange programs with the participation of students and staff of Szczecin's universities and business in Poland and Germany. The BrightONE specializes in providing software for the automotive industry - from cars and planes to advanced sports equipment. It is used by drivers, pilots of rescue helicopters and even trainers of the best football clubs. The P3 Group is a provider of solutions for automotive information and entertainment

systems, e-mobility, assistance systems for the driver and autonomous driving.

Warsaw students to develop an electric racing car

2018-04-18

Team Proton Dynamic was established in October 2017. It consists of students of the Warsaw University of Technology and the Warsaw School of Economics. Since then they have been building an electric racing car for the Formula Student competition. This fully electric car is one of the first of its kind in Poland. A car weighing 230 kg will be powered by an electric motor generating 80kW. Acceleration to 100 km / h should be reached within less than 4 seconds. Formula Student is an international racing competition for university teams organized since 1979 by the Association of Automotive Engineers (Society of Automotive Engineers). Students from world leading universities design and complete a car to race on the most famous racetracks in the world after the testing phase. Visitors can take a closer look at the car on 18 April in the Parachute Hall of the Warsaw School of Economics.

Rector of the Cardinal Stefan Wyszyński University commented on the necessity of cooperation between science and business

2018-04-18

Until the nineteenth century education was the essence of education. In the next era, due to the concept of Wilhelm Humboldt, scientific research appeared as the second pillar of the university's activity. In the 21st century, universities have been already based on three elements: education, research and the economy - said Professor Stanisław Dziekoński, rector of the Cardinal Stefan Wyszyński University in Warsaw, in an interview for the journal „Science and Business”. The Rector drew attention to the necessity of cooperation between universities and business, as one of the main impulses of productivity growth in developed economies. He also stressed the importance of innovations based on knowledge, education, research and development. In this context, it is important to formulate the goal and role of the 21st century university in the economy and the knowledge society. Without a strong relationship between science and business, it will not be possible to introduce innovative solutions in Polish enterprises - added Prof. Dziekoński.

„Ikar Jakości” for the Academy of Technology and Humanities in Bielsko-Biała

2018-04-18

Kamila Cieszka from the University of Technology and Humanities in Bielsko-Biała received a distinction in the final of the second „Icarus Quality” - a nationwide competition for the best diploma thesis on the management. The awarded work is entitled „Quality of management from the patient's perspective on the example of the Provincial Hospital in Bielsko-Biała”. The aim of the competition is promoting solutions that can significantly affect the practical aspects of companies of different profiles. The competition is organized by the Qualitas Foundation, the European Center for Good Business Practices in Katowice under the honorary patronage

of the Minister of Science and Higher Education. The graduates of state and private universities in Poland can apply for the competition provided with opinions of their academy promoters.

PhD student to develop cosmic sewage treatment at Wrocław University of Technology

2018-04-18

Anna Jurga - PhD student at the Wrocław University of Technology - develops a water treatment system for extraterrestrial colonies. The system is to work in conditions of reduced gravity and provide components necessary for plants in aeroponic cultivation. The PhD student is working on the construction of a biological reactor, in which sewage would be purified using bacteria forming a conditioner used for fertilizing aeroponic crops. The concept assumes the use of «gray water» - previously used by colonists, e.g. for washing. This is the first step towards closing the entire water cycle in the extraterrestrial colony. The wastewater goes to a biological reactor to run the process of oxidation of ammonia and ammonium salts to nitrites and nitrates - they are transformed into the nutrient supplying the plants. Also the scientists from the University of Life Sciences in Poznań jointly develop this project conducting research on aeroponic cultivation of tomatoes and potatoes. More about the project: <http://pwr.edu.pl/uczelnia/aktualnosci/kosmiczna-oczyszczalnia-powstaje-na-pwr-10821.html>

University of Gdańsk to examine the qualifications of Pomeranian teachers

2018-04-18

The University of Gdańsk, together with the Statistical Office in Gdańsk and the Pomeranian Voivodeship Authority, will examine the qualifications of Pomeranian teachers. The project will be implemented by scientists and students from the Faculty of Social Sciences of the Gdańsk University. The detailed goal of the project is to define the preparation of Pomeranian teachers for the challenges of modern

education in the context of ensuring the development of Pomeranian school pupils. The project will include surveys among teachers, pupils and parents in randomly selected Pomeranian schools, as well as individual interviews with teachers, parents and students, and focus studies with teachers. After the analysis of the results, an expert panel is planned to develop recommendations in the field of teachers' support and their professional development. The experts will also attempt to identify areas in which actions are necessary to ensure high quality of education for all Pomeranian pupils.

Oxford debate about immigrants at the Maria Curie-Skłodowska University in Lublin

2018-04-19

The topic of the Oxford debate, which will take place on April 20 at the Faculty of Political Science of the Maria Curie-Skłodowska University in Lublin is “The economic benefits from the inflow of immigrants to Poland are greater than the social and political problems caused by them” Aneta Adamska, spokesman of the Lublin university emphasizes that the debate was prepared by students of international relations and national security of the Faculty of Political Science, participating in the project under the Operational Program Knowledge Education Development, which is co-financed by the European Social Fund. Oxford debates are a kind of debate in which it is absolutely forbidden to insult or ridicule speakers of the opposite party. The all debates are judged by the jury and the public.

Polish-Ukrainian School of Law at the University of Bialystok

2018-04-19

The Polish-Ukrainian School of Law at the University of Bialystok will be continued until Saturday (April 21, 2018). This is the result of cooperation between the Bialystok University and Odessa Regional Institute of Public Administration within the Ukrainian President Academy of Public Administration - informs Katarzyna Dziedzik, spokesperson of the University of Bialystok. Six students from Ukraine take part in classes that take place at the Faculty of Law. They learned the basic elements of Polish constitutional, European, criminal, civil, administrative and labor law. - Ukrainian President Academy of Public Administration is the equivalent of our KSAP, a forge of Ukrainian elite - says Dr. Jaroslaw Matwiejuk, head and supervisor of the University of Bialystok. In the autumn, on the basis of reciprocity, a group of students from the Bialystok University will benefit from activities in Odessa.

Maritime University of Szczecin is a COST member

2018-04-19

The international project „A pan-European Network for Marine Renewable Energy with a focus on Wave Energy” has been approved by the COST program. Among the networking organizations, connecting over 100 participants from 25 countries, is the Maritime University of Szczecin. The aim of the campaign is to create the basis for joint projects and to establish directions for research in the field of offshore renewable energy (in particular marine energy), financed by the European Commission. The activities assume creating working groups, organizing conferences and trainings, and disseminating knowledge. The European Program for Scientific and Technical Cooperation - European Cooperation in Science and Technology (COST) is an institutional structure that is held jointly by 36 European countries and Israel (as a supporting state). Its most important task is to organize scientific and technical cooperation of member countries. More information: <https://www.am.szczecin.pl/aktualnosci/4594-akademia-morska-w-szczecinie-czlonkiem-akcji-cost>

Medical University of Silesia will join the Magna Charta

2018-04-19

The Observatory's Council positively considered the application of the Medical University of Silesia in Katowice to join the Magna Charta Observatory. The solemn signing of Magna Charta Universitatum is planned for September, during the celebration of the 30th anniversary of the association - informs the university on its website. Magna Charta Universitatum contains the principles of academic freedom and institutional autonomy of universities. This is the international university environment sharing the same academic values and goals. Magna Charta Observatory is a non-profit organization founded by the University of Bologna and the European University Association. It collaborates with other national, European and international organizations, setting similar or consistent goals, mainly preserving academic values without any influence or pressure.

L'Oréal Poland competition for female scientists

2018-04-20

The deadline for accepting applications for the L'Oréal Poland For Women and Science program is expiring on 30 April 2018. The competition is addressed to female scientists conducting research in the field of life sciences. Scholarships in the program are awarded in three categories: PhD dissertations, post PhD theses and MA theses. The competition is open to candidates who live in Poland and are under 25 - in the case of graduate students, 32 - in the case of PhD students, and 40 years - in the case of post PhD students. The jury will grant 6 scholarships: three post PhD students, two PhD students and one graduate student. Applications for the competition can be submitted at: <https://www.forwomeninscience.com/pl/manifesto>

Seminar on „Sociology of Terrorism” at the Collegium Civitas in Warsaw

2018-04-20

Are European services able to prevent attacks? Can we forecast trends in the development of terrorism? Can sociological analyses help in the effective fight against terrorism? The following questions will be discussed at the seminar „Sociology of Terrorism”. The seminar is organized by the Center for Research on Terrorism at Collegium Civitas in Warsaw and the House of Encounters with History. The event is scheduled for 20 April in Warsaw at ul. Karowa 20. Dr Anna Matczak from Collegium Civitas, Pawel Cywiński from the portal refugees.pl and Dr Łukasz Jurczyszyn from the Polish Institute of International Affairs will be lecturers of the seminar. The seminar is part of the interdisciplinary cycle «Views on terrorism.» More: <https://www.civitas.edu.pl/uczelnia/kalendarium/socjologia-terroryzmu>

Silesian University of Technology in Poland top of the Engineering Studies Ranking Perspektywy 2018

2018-04-20

Two fields of study at the Silesian University of Technology - environmental engineering at the Faculty of Environmental and Energy Engineering and logistics at the Faculty of Organization and Management were assessed as the best in Poland in the Engineering Studies Ranking Perspektywy 2018. The top of the ranking included 5 courses in its categories - which makes the university as the top fourth of the technical high schools, and it gives the third position in Poland considering the particular courses. 21 disciplines were evaluated in the ranking. The rules were prepared by the Chapter, which was chaired by Prof. Michał Kleiber. Its members included experts in the field of higher education and representatives of various branches of industry. The studies were evaluated according to six criteria - prestige, graduates in the labor market, academic potential, scientific effectiveness, didactic potential and innovation.

New educational building for the University of Technology and Life Sciences in Bydgoszcz

2018-04-20

The University of Technology and Life Sciences in Bydgoszcz received PLN 30 million for the construction of a new didactic building. A letter of intent was signed on co-financing the investment by the regional self-government. The agreement on the transfer of subsidies by the Ministry was signed by Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education and Prof. Tomasz Topoliński, the Rector of the University. A new educational building will be erected on the campus at Kaliska Street. All faculties of the university will be located in one place. This will improve the functioning of the university, allow to optimize the organization of classes and improve the quality of education by creating common, modern educational laboratories. The new building will be accessible to the disabled persons and it is to be ready by the end of 2020.

Scientific conference on intelligent development in territorial systems in Biała Podlaska

2018-04-23

Department of Economics and Management at the Faculty of Economic and Technical Sciences of the National High School in Biała Podlaska organizes on June 28-29 the 1st International Scientific Conference „Intelligent development in territorial systems (Intelligent Cities, Villages and Regions)” - informs Dr Danuta Guzal-Dec, head of the University of Economics in Biała Podlaska. The conference was divided into three thematic sessions. The first part will concern the theoretical aspects of implementing the smart development concept, the second will be related to its determinants and the third covers the experience of Polish and European local governments in implementing the concept of smart development. The patrons of the event were the Marshal of the Lublin Province, the Mayor of Biała Podlaska and the Rector of the State Higher School in Biała Podlaska.

Ranking of Engineering Studies in Poland- Perspektywy 2018

2018-04-23

The best faculties of Polish universities providing education in 21 technical faculties were honored during the gala of the Ranking of Engineering Studies Perspektywy 2018. 12 indicators were grouped into six criteria to provide the assessment: prestige, graduates in the labor market, academic potential, scientific effectiveness and didactic potential. The ranking principles were developed by the Chapter chaired by Professor Michał Kleiber. The Chapter included experts in the field of higher education as well as representatives of various branches of industry. Among others, in the Architecture category, the Chapter awarded the Architecture Department of the Warsaw University of Technology, in the Automation and Robotics - Faculty of Mechanical Engineering and Robotics of the AGH University of Science and Technology in Kraków, in the Biotechnology - Faculty of Chemistry at the Warsaw Polytechnic, in the Biomedical Engineering - Faculty category Electrical Engineering, Automatics, Computer Science and Biomedical Engineering of the AGH University of Science and Technology in Kraków and in the Computer Science - Electronics and Information Technology Faculty at the Warsaw University of Technology. <http://engineering.perspektywy.pl/2018/ranking>

Platoon commanders develop the leadership competences at the Academy of Land Forces

2018-04-23

Fourteen platoon commanders improved their skills of team building, making decisions under pressure, effective communication and effective cooperation on the course conducted by the Academy of Land Forces in Szklarska Poręba - informs the university on its website. The course of shaping leadership competences was implemented for the first time by the Academy of Land Forces as part of the course training of the Ministry of National Defense. The

young lieutenants spent five days in the «Wysoka Kamień» training center practicing the practical and theoretical skills necessary in the role of a real leader. The participants of the course passed the competency tests, and were thoroughly observed. Based on the results of the test and observation, each of the platoon commanders received information about their strengths and weaknesses. Commanders of the course participants will receive an assessment of young officers potential.

Professor Granqvist receives the Medal for Merit at the Gdańsk University of Technology

2018-04-23

A Swedish scientist - Prof. Claes Goran Granqvist, an outstanding specialist in nanotechnology and material engineering, was awarded the Medal of Merit for the Gdańsk University of Technology. „The award is a pride for me, because I appreciate the cooperation with the University”, says Granqvist, quoted on the university website. Professor Granqvist received a medal from Prof. Jacek Namieśnik, the rector of the Gdańsk University of Technology. The professor noted that he is already retired, but it will not be a reason for interrupting joint projects. The scientist started cooperation with the University in 2001, preparing scientific articles together with Gdańsk researchers. Professor Claes Goran Granqvist is a retired professor at Uppsala University in Sweden. He published over 500 articles indexed in the Web of Science and 40 books cited over 26 thousand times.

Students of the Wrocław University of Technology to look for platinum on the streets

2018-04-23

Students from the ChemiTech Scientific Circle of the Wrocław University of Technology have started a scientific project with aim to recover platinum and rhodium, which car catalysts leave in the street dust - informs the university's website. According to students, the amount of platinum and rhodium from cars is small and their recovery for industrial purposes may be unprofitable. Young chemists, however, pay attention to the ecological aspect of their project. - These are finally heavy metals, just like mercury or lead. Platinum from roads along with rain flows to the side of the road where plants are found. It can react with humic acids, it penetrates into the soil, the roots are eaten by animals and so on - the participants explain. Students emphasize that only the results of their research will show the direction for further research. For now, they want to check how much platinum is accumulated on Wrocław streets and what part of them can be recovered. More about the project: <http://pwr.edu.pl/uczelnia/aktualnosci/nasi-studenci-zamiataja-ulice-w-poszukiwaniu-platyny-10829.html>

Agreement between the Pomeranian Medical University and Bank Zachodni WBK

2018-04-23

The Pomeranian Medical University in Szczecin will cooperate with Bank Zachodni WBK - Santander Universidades. The bank will support academic, technological and scientific initiatives, programs, projects or services. The framework agreement was signed by the Vice-Rector for Science of the University – Prof. Jerzy Samochowiec and manager of Santander Universidades in Poland - Wojciech Leśniewski. Its scope includes projects improving the quality of education, supporting research activities, improving institutional management of academic centers, increasing the availability of training

programs, promoting international exchange and popularizing cooperation programs. Polish universities are to be modern, innovative and to cooperate with the economy and business - says Prof. Samochowiec. The Vice-Rector adds that the possibility of using Santander's contacts around the world is also an opportunity for scientists.

Conference on double diplomas at the Lodz University of Technology

2018-04-24

The Ministry of Science and Higher Education and the National Academic Exchange Agency hold the conference „Double diplomas as a pillar of international strategic partnerships”, which will take place on 14-15 June in Łódź, at the International Cooperation Center of the Lodz University of Technology. Signing double diploma agreements is one of the best tools for establishing advanced partnerships and activities within international university networks. It is also an important pillar for assuring quality of education at universities - emphasizes Prof. Eng. Sławomir Wiak, rector of the Lodz University of Technology. During the event there will be three ordinary sessions devoted to the legal framework for signing double diploma agreements in Poland within the new Act on Higher Education, administrative aspects and rules for the implementation of such agreements and the challenges faced by students in connection with double diploma agreements. The conference will end with the plenary session “Models of double diploma agreements - how to deal with the diversity of higher education models in the world”. More: <https://www.ife.p.lodz.pl/pl/doubledegree>

International conference at the Silesian Medical University

2018-04-24

The International Medical Congress of Silesia is an international conference organized by the Student Scientific Society and the PhD Students Association of the Medical University of Silesia. It will be held

in Katowice from 25 to 26 April. The event is interdisciplinary. Plenary sessions for students and PhD students are planned. Students will present the results of their research carried out as part of the activity in 170 Student Scientific Clubs. PhD students will present the results of their work as part of the clinical and experimental medicine, and the newly created PhD student «General Medicine» sessions. The International Medical Congress of Silesia is a regular event of the academic year. Every year, the Medical University of Silesia is visited over 1,700 participants - students and young doctors. More information on the website of the Student Scientific Society: www.stn.sum.edu.pl

Agreement on cooperation between the University of Economics and the self-government of Lower Silesia

2018-04-24

Wrocław University of Economics and the Lower Silesia Province self-government will cooperate in the implementation of development projects in the economic, social and environmental sphere. The actions are to influence the cohesion of Lower Silesia by stimulating initiatives, developing entrepreneurship and networking. One of the first joint ventures is the School for Local Leaders, whose aim is to strengthen cooperation between the University, its students and Lower Silesian local government authorities at the regional and local level. Through participation in training and leadership lectures under the guidance of tutors students will develop their skills and competences in the field of interpersonal communication, negotiation skills, diagnosis, analysis and problem solving, as well as innovation, preparation and conducting of presentations and change management.

Agreement on cooperation between the Ministry of Finance and the Faculty of Mathematics and Information Sciences of the Warsaw University of Technology

2018-04-25

The Ministry of Finance signed agreement on cooperation with the Faculty of Mathematics and Information Sciences of the Warsaw University of Technology. According to the Ministry of Finance, the agreement concerns cooperation in the field of scientific, research and implementation of joint projects in the analytical area and IT infrastructure. The agreement assumes that students of regular studies PhD studies of the Faculty of Mathematics and Information Sciences of the Warsaw University of Technology will be involved in cooperation on educational, scientific and research projects. The document also describes internships and apprenticeships in the Ministry of Finance for faculty students and paid forms of cooperation. The agreement will apply until August 31, 2020.

Lublin University to hold a conference on archaeological research in Poland, Belarus and Ukraine

2018-04-25

The international conference entitled „Archaeological research in Central and Eastern Poland, Western Belarus and Ukraine in 2017” will take place on April 26-27 at the Maria Curie-Skłodowska University in Lublin – informs Aneta Adamska, a spokesman of the Lublin university. The conference is organized by the Institute of Archeology of the Maria Curie Skłodowska University and the Lublin Museum. It is a forum for the exchange of ideas and experiences of archaeologists and specialists from other fields of science from Poland, Belarus, Moldova, Russia and Ukraine. During the event, the latest results of archaeological research will be presented. This year, 4 lectures and 42 papers in two sections (prehistoric and early-historical) will be delivered in the plenary

session. Participants will discuss prehistoric settlements in Lublin-Zembożyce, flint materials at the cemetery of the Lusatian culture in Radom-Wośni-ki or new discoveries of underwater archeology in Polesie Voivodship. The opening of the meeting will take place on April 26 at 9.30 at the Gallery of Polish Painting of the XVII-XIX centuries of the Lublin Museum. The program of the event: <https://phavi.umcs.pl/at/attachments/2018/0415/174455-programxxxivkonferencji-lublin.pdf>

Student Parliament of Poland to hold National Conference

2018-04-25

The XXIV National Conference of the Students' Parliament of Poland took place in Krynica. One of main topic was the change that the Constitution for Science brings for students. Piotr Müller, Deputy Minister of Science and Higher Education emphasized that the new legislative solutions realize two objectives. It improves the quality of education and research and it treats the university as a subject – reports the Ministry of Science and Higher Education. Deputy Minister Müller presented the detailed provisions of the new law, drawing attention to the mechanisms of protection of students' rights introduced in the Constitution for Science. - Students and graduates decide about the reputation and prestige of the university. This is the largest part of the academic community and they will be the national elite of our country in future. That is why we want to provide them with the best possible education conditions and thus make up for the losses resulting from the massification of their studies. Therefore, we proposed solutions to change in traditional model of studies - said the deputy minister.

Maritime University of Szczecin launches a modern laboratory simulating the logistics processes

2018-04-25

The Maritime University of Szczecin officially opened the laboratory for the automation of logistics and production processes. The ceremony was attend-

ed by Marek Gróbarczyk, the Minister of Maritime Economy and Inland Waterway transport. There are three industrial robots and a production line in the laboratory at the engineering and economic department of transport. The installed equipment demonstrates palletisation of the load, its loading and reloading. This is the first laboratory in the region that simulates the entire logistics processes «in a nutshell». The laboratory was financed from the funds of the Ministry of Maritime Economy and Inland Navigation. It enables students to learn about modern technologies currently used in automation and robotization of industry and logistics processes. Practice in the didactic processes provides the graduates with best possible preparation for work.

English smartphone app for university students in Wrocław

2018-04-25

Students and candidates for English-language studies at the Faculty of Law, Administration and Economics of the University of Wrocław can use a special application for smartphones. We do not want candidates and students from abroad to feel abandoned - says one of the application developers. The application is a compendium of practical knowledge, with descriptions of majors and individual subjects and biographies of lecturers. There is even an option of a virtual walk through the faculty, as well as the «Jungle Book» - a practical guide prepared for students starting their studies at the Wrocław university. The application is constantly updated and expanded. It works on devices with IOS and Android systems. We are teaching more and more foreigners. The new application is a useful source of information about life and studying in Wrocław - emphasizes Łukasz Machaj from the law and administration department.

Winners of competition at the Silesian University of Technology to get a transcript before graduation

2018-04-25

The winners of the „Competition for the gold transcript of the Silesian University of Technology” received transcripts of the Silesian university before the final exam. Awarded students can start studying in the chosen field without having to participate in the qualification procedure - informs the university on its website. High school students checked their knowledge and skills in physics, mathematics, chemistry and computer science. 101 students qualified for the second stage. In the end, the university transcripts were awarded to 32 people who achieved the best result in the test organized in March at the University. The winners include 12 students with the best results in mathematics, 10 students with the best results in chemistry, 9 in physics and 1 in computer science. All of them have free access to the selected technical field of studies.

University of Economics in Wrocław to launch project „Leaders of knowledge - Leaders of success”

2018-04-25

The University of Economics in Wrocław is implementing the project „Leaders of knowledge - Leaders of success”, which aims to bring the specifics of economic studies, University offer, exceptional campus climate and modern infrastructure to the secondary school graduates, and consequently attract the best candidates to the university. For last three months the University signed 8 agreements with secondary schools in Lower Silesia. The university visited 20 graduation classes, whose students participated in special lectures and exercises, conducted by the academic staff of the university, business practitioners, and university graduates. «Learning about the methods and tools of academic education gives the opportunity to taste student life before graduation (hence the motto of the project: Become a student by the final exam). Such presentation of career perspectives allows pupils to assess the quality and value of the offered education»

- emphasized the project's authors on the University website. More information: www.liderzy.pl

Poznan University of Technology to cooperate with the University of Kazakhstan

2018-04-25

Rector of Poznań University of Technology, Prof. Dr. Eng. Tomasz Łodygowski and vice president for academic affairs Al-Farabi Kazakh National University (KazNU), Askara Khikmetov signed a cooperation agreement for both universities - informed Poznań University of Technology on its website. The cooperation will concern the participation of both universities in the ERASMUS + program, student exchange, supervising master's theses and PhD dissertations, the double diploma program and summer internships. The Kazakh university is internationally renowned, and it is the leader of scientific and educational activities in Kazakhstan. In an independent assessment by QS World University Rankings from 2018, KazNU was awarded the «Four Stars of Excellence» in the «QS Stars Development Road Map International Ranking» as the first and only university in Central Asia.

University of Rzeszów to start recruitment for 2018/2019

2018-04-26

The University of Rzeszów is starting recruitment of candidates on 14 May through the recruitment system on its website. Students can apply to departments of Biology and Agriculture, Mathematics and Natural Sciences, Music, Law and Administration, Art, Physical Education and Biotechnology. Studying at the University of Rzeszów is an opportunity to acquire knowledge in over 50 fields of science. The University of Rzeszów is the largest university in south-eastern Poland. Currently, it is teaching over 15.500 students. There are over 5,500 candidates who plan to study in the academic year 2018/2019 - informs Dr Maciej Ulita, a spokesman for the Rzeszów university. Information on courses and the recruitment process can be found at: www.ur.edu.pl. The electronic registration system is available at: rekrutacja.ur.edu.pl

Jagiellonian University Professor to become Secretary of the European Society of Pediatric Urology

2018-04-26

Prof. Rafał Chrzan of the Jagiellonian University became a member of the board and Secretary of the European Society of Pediatric Urology (EBPU), organization subjected to the European Union of Medical Specialists (UEMS) - informs the Krakow university. The main goal of the European Society of Pediatric Urology is to promote this field of medicine, as well as to take care of its development, including the exchange of experiences between doctors dealing with the treatment of genitourinary disorders in children. Dr Rafał Chrzan has been the head of the Children's Urology Clinic of the University Children's Hospital in Krakow-Prokocim since September 1, 2016.

First in Poland subcutaneous arrhythmia recorder communicating with a smartphone

2018-04-26

The Cardiology of the Children's and General Pediatrics Clinic of the Independent Public Children's Clinical Hospital of the Medical University in Warsaw performed the first in Poland implantation of a subcutaneous arrhythmia recorder, which communicates with a smartphone. It was the first implantation of the arrhythmia recorder in a child in Poland and one of the first in Europe. According to the Information and Promotion Office of the Medical University of Warsaw, this historic treatment was performed by: Dr Piotr Wieniawski from the Department of Cardiology of the Childhood and General Pediatrics, Dr Marcin Grabowski from the Clinic of Cardiology, Dr Beata Cała from the Department of Anaesthesiology and Intensive Pediatric Therapy, Katarzyna Gadomska, Dr Piotr Przygodzki from the Abbott company and a team of nurses, and technicians from the Center of the Invasive Cardiovascular System of the Children's and General Pediatrics of the Warsaw Department Medical University.

Educational picnic „From Micro to Macro” at the Warsaw University of Technology

2018-04-26

On Saturday, May 19, Warsaw University of Technology organizes the Educational Picnic „From Micro to Macro”. The event will be a great opportunity to learn the secrets of science, experience the atmosphere of our university and talk to students and the staff. Picnic organizers prepared many attractions for the pupils and kids. They can play with «inflatables», dive into the ball pool or to attend the special workshops and activities, such as the constructing eco-robots and eco-piggy banks, what enables participants to learn how and why it is worth using secondary raw materials. The whole event will be complemented by a show of huge soap bubbles. All these events will take place between 10 am and 4 pm on the campus of the central Warsaw University of Technology at Plac Politechniki in Warsaw.

University of Lodz signs the Charter of Diversity as the first university in Poland

2018-04-26

The University of Lodz was the first state university in Poland to sign the Diversity Charter. It is a commitment, signed by organizations that prohibit discrimination in the workplace and express their readiness to act for the promotion of diversity. The Promotion Center of the University of Lodz announces that the decision to sign the Charter is a natural consequence of the direction adopted by the university, basing on the conscious acceptance of each person in all its complexity. More than 2,000 foreign students from 95 nationalities and almost all continents of the world study at the Łódź University. Its rector makes sure that it supports and integrates foreign students with the city's inhabitants. In this way, it refers to the best traditions of Łódź - a city of many cultures. The University of Lodz is also the originator of the all-year University-Diversity action, integrating students from abroad with Polish students.

Officers from Wrocław at competitions at West Point academy

2018-04-26

Representation of the Wrocław Academy of Land Forces participated in the prestigious SANDHURST combat contest. In the competition at the famous West Point Academy, Polish cadets took 18th place out of 64 teams from around the world - informs the Academy. The competition was held in varied, difficult terrain. Among the assessed tasks were shooting, tactical competitions and tasks requiring physical effort - running, moving tires, boxes with ammunition, canisters and manikins simulating the injured. Participants of the competition also had to overcome the lake on the landing craft, go through the tactical obstacle course, perform an ambush and conduct a night reconnaissance. Each team consisted of 11 soldiers, including one woman and two reserve soldiers. The jury assessed the endurance, precision, speed, commanding skills and behavior of the entire team.

European University Association begins the evaluation of the Gdańsk University of Technology

2018-04-26

Representatives of the European University Association started the evaluation of Gdańsk University of Technology in terms of organization and management of the university. During the visit, they met with the rector of the Gdańsk University, Prof. Jacek Namieśniki - informs the University of Technology on the website. During the first visit to Gdańsk, the delegates of the Association asked first of all about the changes in higher education, in terms of the entry into force of the Constitution for Science and the way the University of Technology implement them. The representatives were also interested in the evaluation of the scientific activity of the university, co-financing for the implementation of the Integrated Program of Development of the Gdańsk University of Technology and the scholarship funds for students. Submission to evaluation by the European University Association is voluntary. The results are presented in the form of

recommendations for the assessed university and guidelines on aspects to be improved. The evaluation results will be known in the summer.

Award for the Wrocław Academy of Fine Arts

2018-04-26

The „Greenhouse” project of the Furniture Department of the Academy of Fine Arts in Wrocław was awarded in the international competition LIT Lighting Design Awards in the „Light Art Project” category. The design team proposed installation based on the archetype of greenhouses. Modification of the geometry, it was given a lofty character. From the very beginning, the designers expressed the need to emphasize small objects - represented in the installation of ceramic forms with germinating plants. The highlighting element is the light illuminating the roots of plants in the shelves and other exhibits. The distinction enables «Greenhouse» to be shown at Tokyo LIT Exhibition, among selected 30 other objects. The exhibition will be held in Tokyo in mid-May. Project on the contest website: <http://litawards.com/winners/winner.php?id=2392&count=1&mode>

Poznan University of Technology at Expo Estudiante in Bogota

2018-04-26

Poznan University of Technology presented its offer at the largest Latin America Expo Estudiante educational fair in Bogota. The educational mission to Colombia was organized by the National Agency for Academic Exchange. All interested students could get acquainted with the study offer at the University of Technology and get information about the scholarship program managed by the Agency for developing countries. The «Poland my best choice» exhibition was very popular among the fair visitors. Emilia Wojtczak from the Department of Continuing Education and International Poznan University of Technology visited the Fundación Universitaria del Área Andina to prepare the agreement on academic exchange. There are 3 students from Colombia at Poznan University of Technology. One of them is a scholarship holder of the Ignacy Łukasiewicz program.

University of Economics in Wrocław implements the „EURHISFIRM” project

2018-04-26

Wrocław University of Economics has started the implementation of a three-year project „EURHISFIRM - Historical high quality companies level data for Europe”. The project is already implemented by universities from France, Germany, the Netherlands, Belgium, Spain and the United Kingdom as part of the Horizon 2000 program - informs the University on its website. The project includes the collection, development and analysis of historical financial data on European enterprises, including companies listed on stock exchanges. The research period covers data after 1815 year. The main coordinator of the project is Paris School of Economics, with other 12 research entities, including the University of Economics in Wrocław. The project is implemented at the Institute of Financial Management at the faculty of management, IT and finance at the Wrocław University of Economics. It is managed by the director of the Institute - Prof. Krzysztof Jajuga.

Researchers from Warsaw University nominated for the European Inventor Award

2018-04-27

Researchers from the Faculty of Physics and the New Technologies Center at the University of Warsaw Dr Joanna Kowalska, Prof. Edward Darzynkiewicz and Prof. Jacek Jemielity were nominated for the European Inventor Award. The European Inventor Award is organized by the European Patent Office. It is attended by inventors contributing to economic or social development from around the world. Researchers from the University of Warsaw have been studying the interactions of proteins and RNA nucleic acid fragments in cellular processes for over 10 years, as well as the chemical synthesis of analogous terminals of mRNA molecules. Through their research, they solved the issues of mRNA instability and increased its productivity. Their discovery provides the development of effective genetic vaccines that in the near future will fight malignancies. The award ceremony will take place on June 7 in Paris.

Conference on economic psychology

2018-04-27

The Kozminski University in Warsaw, together with the Academic Association of Economic Psychology, is organizing the conference „Economic Psychology”, which will take place from 16 to 18 May in Konstancin-Jeziorna. The plenary lecture will be given by Prof. Grzegorz Sędek, who is the vice-rector for the science of SWPS at the Humanities and Social Sciences University. He specializes in experimental, social, clinical and cognitive psychology. He conducts interdisciplinary research on cognitive limitations. The topics of the conference include psychology of economic behavior, decision making, risk perception, experimental economics, psychology of money, and economic socialization.

Polish BLOOM project to launch

2018-04-27

University of Agriculture in Krakow and the Copernicus Science Center coordinate the Polish version of the international BLOOM project (Boosting European Citizens' Knowledge and Awareness of Bio-Economy Research and Innovation). The project is devoted to the dissemination of knowledge about the bioeconomy. It also aims to increase the involvement of various groups in the planning and implementation of scientific research and practical solutions in this area. Bioeconomy deals mainly with such areas as ensuring food security, managing sustainable natural resources, reducing dependence on non-renewable resources, mitigating climate change and adaptation to it.

PLN 8 million grant for the Naval Academy in Gdynia

2018-04-27

The Naval Academy received almost PLN 8 million in subsidies under the Operational Program Knowledge Education Development for 2014-2020. Owing to the grant, students and candidates will be able to develop additional skills, gain valuable certificates and experience, increase their compet-

itiveness in the labor market. The program will be implemented at the Humanities and Social Sciences as well as Command and Maritime Operations faculties. Eight modules have been planned. Five modules are assumed to develop students' competences in the fields of international relations, army in the public service system, education, IT systems in security and national security. As separate modules the Academy will introduce Integrated IT System, program of paid internships for students of international relations, the army in the public services system and educational portal with the system of creating and providing training within e-learning.

Film festival „Made in Poland” at the University of Silesia

2018-04-27

PhD students at the University of Silesia, together with the School of Polish Language and Culture, the International Polish Studies and the Center for Chinese Language and Culture, organize the sixth film festival „Made in Poland”. This year's title is „Made in Poland, Made in Asia”. The Polish, Georgian, Kyrgyz and Chinese films will be presented on May 8 at the university building at ul. Uniwersytecka 4 in Katowice. The aim of the festival is to deepen the scope of cultural competences among Polish and foreign students. The organizers want to achieve their goal by presenting the cultures, traditions and customs appropriate to given countries. The festival is also to introduce Polish foreign culture to students studying at the University of Silesia.

Researcher at the Opole University of Technology receives grant and position in Measurement

2018-04-27

Prof. Grzegorz Królczyk from the Department of Machine Technology and Production Automation of the Faculty of Mechanical Engineering of the Opole University of Technology received a grant from the National Science Center as part of the OPUS competition. The scientist also became a member of the editorial committee of the prestigious magazine "Measurement". Professor Królczyk deals with modeling of dynamic and endurance issues in the process of precise milling. The project will be implemented in 2018-2020. Its budget is over PLN 750,000. OPUS is a competition for research projects, including financing the purchase or manufacture of equipment necessary for their implementation. It is a prestigious competition, in which the academic achievements, including publications in renowned scientific journals, constitute a significant contribution to the scientist's final evaluation. «Measurement» is one of the most prestigious metrological journals in the world. Professor Królczyk accepted the position of Associate Editor.

Prof. Daniel Gianola to hold a lecture at the Wrocław University of Environmental and Life Sciences

2018-04-27

Until Monday 30th of April students can apply for the lecture of Prof. Daniela Gianola at the University of Environmental and Life Sciences in Wrocław. This outstanding specialist in the field of mathematical statistics used in natural sciences will be a guest of the university on 13-14 of April. Modern genetics cannot exist without mathematical statistics, because it is a tool in the analysis of so-called attributes with a complex model of inheritance - says Prof. Joanna Szyda from the Department of Genetics at the Faculty of Biology and Animal Breeding. In her opinion, the application of mathematical statistics and computer science in biology is the basis

of modern data analysis. The competence of Prof. Gianola is the application of mathematical statistics methods in genomics, with particular emphasis on applications to livestock and to the analysis of features with a complex model of inheritance. Professor Gianola began as a World Bank expert and later worked at the Universities of Illinois and Wisconsin-Madison. More information: http://www.glos.upwr.edu.pl/aktualnosci/47738/statystyka_matematyczna_z_prof_gianola.html

Conference „Science of art - the art of science” in Lodz

2018-04-30

The Polish Association of Creative Strategies, the Department of Drama and Theater and the Department of Journalism and Social Communication of the University of Lodz organize on May 14-15 a nationwide scientific conference: „Science of art - the art of science. Strategies and creative processes „. The conference is interdisciplinary. Its organizers plan to focus on topics related to the tradition of analysis and interpretation of art, artistic phenomena and creative processes. By analyzing these processes, conference organizers want to understand aspects of human cognition and learning through art, as well as to shape the cultural environment for creative life. The conference's scientific leaders are Prof. Grażyna Habrajska and Dr Mariusz Bartosiak.

Conference on separatist movements in the modern world

2018-04-30

The Political Movements Department of the Faculty of Political Science at the Maria Curie Skłodowska University in Lublin is organizing a conference „Separatist movements in the modern world” on 9 May. The aim of the conference is to systematize and evaluate the experiences associated with separatist movements and to indicate potential directions of their development, as well as the opportunities and threats created by them - informs the Lublin university. During the conference, participants will be able to listen to the lecture of Professor Grzegorz Piwnicki from the University of Gdańsk presenting

the separatist and disintegrating movements of the turn of the 20th and 21st century in Europe. Dr Roman Szul from the University of Warsaw will hold a lecture about the structure and dynamics of ethno-territorial identity and Dr Wojciech Nowiak from the University of Adam Mickiewicz in Poznań will present «Separation in the Nordic way.» In addition, panel discussions are planned: Separatism - problems and challenges, Separatism in the world, Separatism in Western European countries, Separatism in the countries of the former Soviet Union and Separatism in the countries of Central Europe.

Delegation from Sichuan Province meets the National Academic Exchange Agency

2018-04-30

Representatives of NAWA National Academic Exchange Agency met with a delegation from China representing the Department of Education of the Government of Sichuan Province. The Chinese government delegation from the Sichuan Province came to Poland to participate in the Chinese educational fair. According to NAWA, the Chinese educational fair is aimed at presenting to Polish students and universities the potential of Sichuan universities and colleges, encouraging students to study in Sichuan, as well as getting acquainted with the offer of Polish universities in terms of increasing the number of Chinese students in Poland. At the same time, the activities of the National Academic Exchange Agency and Polish universities at the China Education Expo fair were discussed. The Expo will take place on October 25 in Chengdu.

Center for Research on Latin America and the Caribbean established at Collegium Civitas

2018-04-30

Warsaw Collegium Civitas together with Prof. Andrzej Dembiczy established a new research center. The Center for Research on Latin America and the Caribbean will conduct research and will be a platform for discussions on the economy, politics, culture and contemporary challenges in the region. As we read in the Collegium Civitas information, the main role of the new center will be studies on contemporary political, economic and social processes in Latin America, also taking into account the context of international relations and the place of Latin America in a globalized world. The first project of the new center will be PhD studies "Latin America: business and culture".

Competition for the mascot of the Silesian University of Technology

2018-04-30

An open nationwide competition for the concept and name of the mascot for the Silesian University of Technology has been launched. Works should be submitted until May 31. The mascot is to arouse positive associations and promote the values of the university also it should promote the development of Polish science, technology and culture as well as attitudes of patriotism, civic responsibility, social activity and mutual respect and tolerance. The project must be consistent with the mission and vision of the University to be a prestigious European technical high school that conducts innovative research and development work, educates highly qualified staff for the society and knowledge-based economy, and actively influences the development of the region - explain the competition organizers on the website. The competition jury will take into account the readability of the message, innovativeness, aesthetic values of the project and the promotional potential. The technique of developing a mascot concept is optional. Detailed infor-

mation and rules of the competition: <http://www.polsl.pl/Documents/Regulamin%20konkursu%20-%20Concepcja%20maskotki%20wraz%20z%20jej%20nazw%C4%85%20dla%20P%C5%9A.PDF>

Awards for Poznań students and PhD students

2018-04-30

Paweł Jeżowski received the Poznań mayor's award for his PhD dissertation „Lithium-ion capacitors based on a pre-lithiation of a graphite electrode from a composite positive electrode”. This is the 14th municipal competition for the best master's and PhD theses - informs Poznań University of Technology. In the category of PhD dissertations, Julian Balcerak was awarded for «Human-computer interfaces for supporting automatic hazard recognition»; Przemysław Bartczak was awarded for «Assessment of sorptive abilities of natural materials in the removal of selected inorganic and organic pollutants from water systems» and Rafał Brodziak for «Synthesis of scenarios for operation and control of the process of water recognition using the method of artificial infiltration». In the master's thesis category, Iga Chudaska was awarded for «Methodology of designing and rapid manufacturing of upper limb prosthesis components», and Rafał Krzysztof Nowak for «Visualization of process control in a smart building». More information: <https://www.put.poznan.pl/en/aktualnosc/poznanscy-studenci-i-doktoranci-nagrodzeni>

Lubuski Region to fund scholarships for students

2018-04-30

Local Authority of the Lubuskie Region will grant scholarships to students. The purpose of financial support is to equalize educational opportunities and to inspire to take up studies at the high schools of the Province - informs the University of Zielona Góra on its website. Motivational and entrepreneurial scholarships are also planned. According to the initial assumptions, the motivational scholarship amounts no less than PLN 500 and no more than PLN 1,000 paid for 9 months, the beneficiaries of the entrepreneur's scholarship will receive a one-off

payment of PLN 5,000. The aim is to encourage students to develop and improve the results achieved, as well as to cooperate with entrepreneurs and to stay in the region. The support will be provided primarily to students of technical, exact, economic and natural sciences as labor market surveys show that there is a need for specialists and managers in the region, particularly in areas related to engineering, machine building, mechanics, electrics and IT.

Security of the state and the threats were discussed in Wrocław

2018-04-30

The Medical University and the Academy of Land Forces in Wrocław organized a conference on „Rescue systems in Poland and civil and military security”. Over 300 participants attended the three-day meeting - we read on the University's website. On the first day, the security of the state was discussed, the threats and the role and tasks of specialist rescue and military medical rescue. After the lectures there were three discussion panels: tactical medicine, emergency medical services and specialist rescue. On the second day, army specialists, mountain volunteer service, sea rescue and emergency medical officers practiced resuscitation in the Rosomak medical evacuation vehicle, handling mass events and securing injuries on the battlefield. As part of the conference, the 1st Lower Silesian Meeting with Rescue was held, when over 200 children learned the principles of first aid and obtained the title of a small rescuer.

Polish universities among the best universities of New Europe

2018-05-07

The magazine „Times Higher Education” presented the ranking of the best universities from the countries of New Europe, that is those countries that became members of the European Union in the 21st century. The list includes 53 universities from 12 EU countries. There are 13 Czech and 12 Polish universities in the ranking. The University of Tartu (Estonia) and two universities from Cyprus: the Cyprus University of Technology and the University of Cyprus top the list. The University of Warsaw is the highest-ranked Polish university and it took 6th place. The Jagiellonian University is ranked on the 13th position, the Warsaw University of Technology is 16th and AGH University of Science and Technology in Kraków is 22nd in the ranking. More: <https://www.timeshighereducation.com/news/best-universities-new-europe-ranking-2018>

Dr Jakub Nowak from the Maria Curie Skłodowska University wins the main media prize

2018-05-07

Dr Jakub Nowak from the journalism department at the Faculty of Political Science at the Maria Curie Skłodowska University in Lublin won the first „Media and Democracy Karol Jakubowicz Award”. The competition is organized by the Polish Society of Social Communication. The scientist was awarded for the monograph of „Popculture network policy” - says Katarzyna Kozielowicz from the university’s press office. In the awarded monograph, the author deals with the problems of visibility of online content and political mechanisms of its broadcasting, new patterns of civic activity and the political status of so-called digital intermediaries. In the first competition, Dr Maria Nowina-Konopka from the Jagiellonian University was awarded for the monograph «Infomorphosis: Information management in new media». The celebration of the «Media and Democracy Karol Jakubowicz Award» will take place during

the Congress of the European Media Management Association - June 15 at 11:30 in the University Library in Warsaw.

Prof. Kołodko to present his newest book „Will China save the world?”

2018-05-07

On 15 May, the latest book of Prof. Grzegorz Kołodko „Will China save the world?” will be presented. Professor Grzegorz Kołodko is the most quoted Polish economist in the world. He was the deputy prime minister of the Polish government and the minister of finance four times. Currently, he is the director of the TIGER Transformation, Integration and Globalization Research Center at the Leon Koźmiński Academy in Warsaw. The latest study by Prof. Kołodko is a comprehensive documentation of China’s economic achievements. These considerations, however, are just the background for trying to answer whether China’s economic successes can help solve global problems. Prof. Maciej Bałtowski from the Maria Curie Skłodowska University wrote in his review: «This extremely important and interesting study addresses the key issues (...) and the future of the world. The understanding of the Chinese phenomenon - the causes, conditions and effects of an extraordinary civilizational leap – is superficial in the West, also in Poland. The author successfully overcomes this limitation and the book goes far beyond the standard study of the Chinese economy.”

Researchers from Siberia visit University of Wrocław

2018-05-07

The Paleozoology Department of the University of Wrocław invites students to lectures run by academic researchers from the University of Tomsk on Thursday, May 10 to the Large Lecture Hall of the Institute of Environmental Biology at ul. Sienkiewicz 21. Lectures will be conducted in English - informs the university on its website. During the morning session, guests from Siberia will talk about the extinction of the woolly mammoth in the area of Siberia and northern Eurasia, global climate change, human impact and changes in environmental geochemistry

as well as changes in the natural environment in the Chulym river basin from the Mesozoic to the Cenozoic era. In the afternoon session, a lecture entitled «Land settlements in the southern part of Western Siberia (area, geological structure, paleontological sites, research methods, expeditions)» is scheduled. All participants will also have the opportunity to get acquainted with the scientific and didactic offer of the University of Tomsk. The visit takes place as part of the Erasmus ++ program.

Professor Krystyna Modrzejewska from the University of Opole honored with the Order of the Academic Palms

2018-05-07

Professor Krystyna Modrzejewska from the Department of French Culture and Language at the University of Opole was honored with the Order of Academic Palms - one of the oldest and most prestigious French decorations set up by Napoleon I. Dr. Christophe Paoli, attaché for science and university cooperation of the French Embassy in Poland awarded the order on behalf of the French Ministry of National Education, Science and Higher Education. It is awarded to especially distinguished people in the education, contributing to French intellectual, scientific and artistic development. Krystyna Modrzejewska has been working at the Opole university since 1977. She organized and ran the department of French culture and language at the University of Opole.

Biologists' Spring at the University of Szczecin

2018-05-07

The Faculty of Biology of the University of Szczecin organizes for the seventh time the Biologists' Spring. The organizers invite participants to follow the spring on Friday, 11 May. The program includes interesting shows and attractive workshops, exhibitions and other curiosities. As part of the event, the participants will be able to see «Herbarium Stetinensis» - the first herbarium in the history of Szczecin, which includes collections of vascular plants, lichens, fungi and historical German collections from 1837-1939. In the Herbarium resources there are currently approx. 55 thousand specimens. During the event the scientists will talk about saving species threatened with extinction - for example the noble crayfish. Also, the guests will have a chance to transfer plant explants to various broths visiting in vitro laboratory. Dozens of insects and tropical arachnids with various species of lichens and fungi will be presented at the special exhibition. Detailed information: http://wb.usz.edu.pl/upload/wb/PROGRAM_Wiosny_Biologow_2018_zbior.pdf

Competitions for bilateral exchange of Czech and Slovakian scientists

2018-05-08

Poland already announced competitions for bilateral exchange of researchers with France, Austria and Germany and now it will provide such cooperation with the Czech Republic and Slovakia - informs the National Academic Exchange Agency. The aim of the competitions is to support the mobility of scientists who will carry out projects jointly with the researchers from partner countries. Such personal exchange will be subsidized. Applications for funding may be submitted by universities, scientific organizations of the Polish Academy of Sciences, research institutes and international scientific institutes established under separate regulations, operating in Poland. More: <https://nawa.gov.pl/naukowcy/oferta-wyjazdowa>

Success of Olsztyn landscape architecture students

2018-05-08

Students of the University of Warmia and Mazury in Olsztyn won the competition for the best landscape architecture diploma and master's thesis - informs the e-newspaper of the university in Olsztyn. The competition organized by the Association of Polish Landscape Architects in the category of engineering works was won by Eng Ewelina Pochodyła for her work «The concept of spatial development of a scenic path along a fragment of the shore line of the Morąskie Rozlewiska». In the master's thesis category, the first prize was awarded to Katarzyna Wójcik for her work: «Wind power stations and landscape. Analysis of the impact of the planned Mikołajki Pomorskie wind farm on the landscape». The promoter of both theses was Dr Mariusz Antolak, assistant professor in the landscape architecture department at the Faculty of Environmental and Agricultural Development at the University of Warmia and Mazury.

Open University of Warsaw University celebrates its 10 years anniversary

2018-05-08

On the occasion of the tenth anniversary of its launch, the Warsaw Open University is holding the conference „Opened University to everyone - 10 years of adult education in a new dimension”. As reported by the Warsaw University, the Open University organizes courses for all adults, regardless of education and professional qualifications. More than 1,200 lecturers have cooperated with it since 2008. Last year, students were able to study more than 200 courses in every trimester. 574 new groups were launched and over 8,500 people participated in the lectures. The conference will be divided into four discussion panels: «Why do adults learn? Adult learning and competences of the future» held by Ewa Czerniawska from the Faculty of Psychology, «Lifelong learning, the labor market and its needs» conducted by Agata Wroczyńska from the Office for Quality of Education, «Learners of adults, i.e. the challenge for the university» by Andrzej Wys-

mołek from the Faculty of Physics and «How to teach adults? « – a lecture given by Prof. Radosław Pawelec from the Faculty of Journalism, Information and Bibliology. More: https://www.uo.uw.edu.pl/10lat/konferencja_jubileuszowa

Agreement on cooperation between the University of Rzeszów and the University of Bari

2018-05-08

The University of Rzeszów has signed a scientific cooperation agreement with the Italian Aldo Moro Università Degli Studi di Bari. Both universities were represented by the rectors Prof Sylwester Czopek and Prof. Antonio Felice Uricchio - informs the Rzeszów university. The signed agreement provides joint research and exchange of employees and students. In addition, universities will exchange experiences in the organization of the teaching process and study programs of similar specialties. They will also carry out joint studies and research projects. - Establishing scientific relations with foreign centers is an important aspect of the pro-quality policy pursued by our University. We are glad that the University of Bari joined our partners - said Prof. Sylwester Czopek.

New workshops at the Center for Practical and Continuing Education in Zabrze

2018-05-08

The Center for Practical and Continuing Education in Zabrze launched a new car workshop equipped with a hybrid car. The workshop was opened during the conference „New quality of vocational education”. During the ceremony, the Vice-Rector for cooperation with the socio-economic environment of the University Prof. Janusz Kotowicz gave a lecture on innovative technologies. Later the participants and the Center specialists discussed the need of constant education. The car workshop with a new and fully functional Toyota hybrid car joins the other laboratories operating in the Center for Practical and Continuing Education in Zabrze. In the Hall of New Technologies there are already workshops of numerically controlled machines from American company HAAS, models of renewable energy sources from the Finnish company FORTUM, as well as the ROCA assembly and operation installations.

Gdańsk University of Technology awarded in „Innovations for the Polish Armed Forces”

2018-05-08

The Pomeranian Crisis Management Laboratory at the Gdańsk University of Technology was awarded in the competition „Innovations for the Polish Armed Forces” organized by the Inspectorate of Implementation of Innovative Defense Technologies. The awarded design is a navigational simulator for special operations. The device is used to create and implement advanced scenarios of soldier training for individual and team navigation in special operations. It operates with aim of a full-size cube virtual CAVE system - 6 screens of 3.4 metres with simultaneous stereoscopic back projection. The cave is located in the Laboratory of Immersed Spatial Visualization. The soldiers have the impression of being completely immersed in a virtual world that is generated on an ongoing basis. This enables the implementation of realistic training scenarios prepared in the Pomeranian Crisis Management Laboratory.

Torun University in the Times Higher Education „New Europe” ranking

2018-05-08

The Nicolaus Copernicus University in Toruń is ranked the sixth in Poland in the Times Higher Education universities ranking „New Europe”. Higher schools from 13 new EU member states were assessed in the ranking. In the prestigious ranking there were 12 universities from Poland. The University of Toruń is ranked 6th among all universities in Poland (ex aequo with the Gdańsk University of Technology and the Adam Mickiewicz University in Poznań). In the global ranking, Toruń university was classified on places 31-40. The organizer of the ranking takes into account three elements of the university's mission: education, science and transfer of knowledge. It assessed the universities using the following criteria: teaching, internationalization, scientific research, quotation and cooperation with business. Times Higher Education World University Ranking is one of the three most-rated and most-widely commented rankings of higher education.

Cooperation of the University of Economics in Wrocław and Technische Universität Dresden

2018-05-08

Wrocław University of Economics has signed a cooperation agreement with the German Technische Universität Dresden, IHI Zittau. The aim of the agreement is to ensure cooperation in the field of student mobility and to give them the opportunity to obtain two diplomas from partner universities. The agreement will enter into force in the academic year 2019/2020 - informs the university on its website. The contract signed in Zittau is the result of several years of work. It enables students of the Wrocław University on the English-language specialization Program of Master Studies in International Business and students of the Master's program Internationales Management run by a German university to obtain a master's degree at both universities. To obtain a double title, they will need to study

during the third semester at a partner university and meet the requirements of both universities.

Professor Terry Rockafellar to hold a lecture at the Poznan University of Technology

2018-05-08

Poznan University of Technology invites students to a lecture of Prof. Terry Rockafellar - one of the leading scientists in the field of optimization theory and mathematical analysis and combinatorics. The lecture is scheduled for May 10 and concerns the optimization of decisions under conditions of uncertainty. In case when the uncertainty of future events is described using probabilistic models, we are dealing with stochastic optimization. A frequent criterion for making decisions is to keep the risk below a certain level. To this end, the so-called „Risk measures” including new so called buffered failure probability. This allows for a more intuitive description of the situation and requires less complicated calculations - explain the organizers of the lecture. R. Tyrrell Rockafellar graduated from Harvard University (1963). His scientific interests include stochastic programming, optimal control in economics, finance and engineering applications. More information about the lecturer: <https://sites.math.washington.edu/~rtr/mypage.html>

International scientific center of excellence to be created in Łódź

2018-05-09

The Foundation for Polish Science has granted funding for the creation of a new scientific and research center in Łódź. „The International Center for Research on Innovative Bio-based Materials” (ICRI-BioM) will be constructed in Łódź Bionanopark. This project results from the involvement of the Łódź University scientists and the support of the Max Planck Institute from Mainz. - Establishment of a research institution in Łódź within the International Research Agenda (IRA) means bringing excellent scientific staff, global leaders in unique, interdisciplinary research to our city - emphasized Prof. Stanisław Bielecki - the former rector of the Lodz University of Technology and the initiator of the MAB's application.

Warsaw University Center of Dentistry to construct new facility

2018-05-09

The Medical University of Warsaw will be provided with a new facility in 2019. The construction of the University Center of Dentistry is underway. The celebration of signing and laying the foundation act is scheduled for May 14 at the investment site at the Banach Campus at ul. Żwirki i Wigury 81 in Warsaw. The new facility will have five floors. Its total area will amount to almost 19,000 square meters. The authors are architects of the Archibis Architectural and Executive Office, while its construction will be carried out by Warbud. In close proximity to the emerging Dentistry Center there is already the Center for Pre-Clinical Research and Technology, a complex of the Pediatric Hospital of the Medical University of Warsaw and the Library and Information Center of the Warsaw Medical University.

In Kielce students can study data engineering next academic year

2018-05-09

In the new academic year, Jan Kochanowski University in Kielce is launching the new faculty of the Analysis of Big data and Artificial Intelligence. Data Engineering is a new specialty, which in the world is considered the dominant profession of the 21st century - informs the Kielce University. These studies are currently one of the most popular in Poland. According to the data of the Ministry of Science and Higher Education, in the last recruitment for Engineering and Data Analysis there were over 54 applicants for one place. In this respect, this faculty overtook Engineering Management (19.4 candidate), Chemistry and Forensic Toxicology (18.9) or Medical faculty (16.7). Studies at the Jan Kochanowski University will last 7 semesters. Students can apply for one of two specialties: artificial intelligence methods and data analysis. Graduates will obtain the title of an engineer. There is a possibility to study in English.

Białystok University of Technology students successful at robot competitions in USA

2018-05-09

Student team of the Faculty of Mechanical Engineering of the Białystok University of Technology participated in the largest robotic competition in North America - Robogames 2018 in Pleasanton and won two gold and one bronze medals. The gold medal in the MiniSumo category was won by the Hellfire2 robot, while in the MegaSumo category, among other 24 robots, the Białystok's SumoMasters introduced two robots to the finals. The ACE won the competition, the Masakrator was the third, and Speedster finished as the fourth robot. The Polish team completely dominated the competition in Pleasanton, California. Financial support for the construction, its improvement and for participation in the competition was provided as part of the project of the Ministry of Science and Higher Education «The best of the best! 2.0. «

Students of the AGH University of Science and Technology built a solar lamp in Tajikistan

2018-05-09

Students from the AGH University of Science and Technology in Krakow within the framework of the Tajikistan Project educated their Tajik peers from Tajik Technical University in Dushanbe in the renewable energy. Firstly, they introduced them to the secrets of photovoltaics and then during a visit to Dushanbe, they built a solar lamp together - informs Anna Żmuda-Muszyńska, spokesman for the Krakow university. The solar lamp, together with the attached measuring system, will be a real example of the photovoltaic technology for Tajik students and an innovative tool during laboratory classes. The Tajikistan project is an initiative of four students from the Faculty of Energy and Fuels at the AGH University of Science and Technology: Joanna Maraszek, Anna Ścierańska, Joanna Dubielewska and Hubert Stinia, who decided to share their knowledge of renewable energy sources with their peers in Tajikistan and thus influence the energy shortage situation electricity in central Asia. In Tajikistan as much as 70 percent residents experience electricity cuts. More:<http://projecttajikistan.pl/>

Researcher of the Silesian Medical University honored with Professor's nomination

2018-05-09

A new professor joined the Silesian Medical University staff. President Andrzej Duda granted the Full Professorship's title to Prof. Grażyna Lisowska from the Department and Clinical Department of Otorhinolaryngology and Laryngological Oncology of the Faculty of Medicine. Professor Grażyna Lisowska is a specialist in otorhinolaryngology. Her scientific activity focuses mainly on issues related to the objective assessment of auditory organs. The most important achievements include the innovative method of assessing the olivary system developed in cooperation with HNO (Hals-Nasen-Ohren) Universitätsklinik Kantonsspital Basel. Professor Lisowska deals mainly with modern methods of treatment of sudden hearing loss and tinnitus as well as sinus diseases and the use of modern endoscopic sinus surgery techniques in clinical practice.

Gdańsk University of Technology accepts the declaration of Partnership for accessibility

2018-05-09

Gdańsk University of Technology has accepted the declaration of Partnership for accessibility. This is meant as a commitment to cooperate in implementing the assumptions of the government Accessibility program for 2018-2025. The program implemented by the Ministry of Investment and Development consists of the following areas: architecture, transport, education, health care, digitization, services, competitiveness and coordination. The main purpose is to provide the free access to goods and services and participation in the social and public life for people with special needs. Signatories of the document are representatives of the government, local governments, non-governmental organizations, entrepreneurs, public institutions and the media. They declared to develop the idea of accessibility and equal treatment and cooperation in equalizing opportunities and access to the physical, social and cultural

environment, recreation, leisure, sport, healthcare, education, work, transport, information and means of communication.

Academic debate about Ukrainians in Poland

2018-05-09

University of Economics in Poznan and Adam Mickiewicz University in Poznan invite participants to the 9th Academic Debate under the slogan „Close strangers: Ukrainians in Poland”. The meeting is scheduled for Monday, May 14. In the Collegium Minus Hall scientists will debate on the growing number of Ukrainians coming to Poland. Their influx began after Russia's aggression in 2014. Since then, according to various estimates from 1 to 1.5, million of Ukrainians came to Poland. They arrived initially mainly to Warsaw and the cities of eastern Poland. Now they work and live in almost every region. The participants of the 9th Academic Debate together with the Ukrainians connected with Poznań universities plan to reflect on this new phenomenon and its social, cultural, economic, demographic and political consequences.

XIV International MBA Congress in Krakow

2018-05-10

On May 18-20, the 14th International Congress of the MBA will be held in Krakow. This is the unique initiative integrating the MBA environment in Poland. The event is organized by the Krakow School of Business of the University of Economics in Krakow. This year's motto is «Local business resources and the global operations of companies.» The congress will consist of five discussion panels, conducted by eminent specialists from the world of science and business. There are also business workshops for all participants. The workshop topics include: Using local resources in globally managed HR projects - a case study, Behavioral economics - irrational consumer decisions and global company decisions, Challenges of global companies on local markets - diversity management in practice, Introduction to agile project management. Deputy Prime Minister Gowin explains the provisions of the Constitution for Science

2018-05-10

- It is not true that the implementation of the Act on Science and Higher Education causes some universities to lose the right to use the name „university” – explained Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education in an interview for the newspaper “Rzeczpospolita”. In the further part of the interview, Deputy Prime Minister Jarosław Gowin emphasized that «the draft regulations directly state that even if scientific categories are insufficient under the provisions of the Act to use the name» university «or» technical university «, the current university will have the right to use the existing name». Conditions regarding the use of the name «university» will refer only to situations when the high school wants to change its name to get the status of «university». Deputy Prime Minister Gowin emphasized once again that the solutions adopted in the Act do not break the interests of regional universities. The Act provides specific solutions dedicated to academic regional universities. The example is a special program «Regional Initiative of Excellence» dedicated to strengthening the scientific potential in regional universities disciplines - stated the Minister of Science and Higher Education.

Collegium Civitas conference devoted to economic fraud risk management

2018-05-10

„Managing the risk of economic fraud - requirements in the context of proposed legal regulations” is the title of the conference organized by the Center for Social and Economic Risks Collegium Civitas, which will be held on May 21, 2018 at the Zielna Conference Center in Warsaw. The conference aims at bringing closer the changes of the protection for persons who report violations of EU regulations under the new EU Commission rules. As explained in the Collegium Civitas information, the protection of persons reporting cases of violation of law in the European Union is currently fragmentary and inconsistent. Only 10 EU Member States provide full protection for such reporters. In other countries, the protection is partial and refers to specific economy sectors or employees. During the conference, participants will be able to hear the following lectures: “The role and legal position of the Reporter”; “Reporting cases of using banks' activities to commit crimes” or “Investigative audit - an innovative approach to detecting and preventing abuses in an organization”.

Scientific seminar on transformations on agricultural markets of European Union countries

2018-05-10

Warsaw University of Life Sciences in Warsaw organizes on 14 May 2018 the scientific seminar „Common Agricultural Policy towards European agricultural markets - current status and directions of development of crop production”. It aims at presenting the results of scientific research on changes in agricultural markets in the European Union countries under the Common Agricultural Policy. During the seminar, its participants will diagnose the current situation of selected agricultural markets and reflect on the directions of development of the market for plant and animal products. The program also includes a discussion on changes in the Common

Agricultural Policy in the context of contemporary economic transformations of the European Union, as well as the consumer protection policy in the EU.

Gdansk University of Technology is a member of IREG Observatory on Academic Ranking and Excellence

2018-05-10

Gdańsk University of Technology joined the IREG Observatory on Academic Ranking and Excellence - an international organization whose aim is to improve the quality of international and national rankings of universities. - Once again, we are glad that not only the fact that we are one of the oldest universities in the country has been noticed, but also that we lay great emphasis on maintaining high standards of education - says Prof. Jacek Namieśnik, the rector of the University of Technology. The IREG Group (International Ranking Expert Group) met for the first time in 2002, in 2009 it was transformed into a global non-profit organization. IREG Observatory cooperates with rating organizations, universities and entities interested in raising the quality of university rankings. In addition to the Gdańsk University of Technology, the group also accepted the University of Business and Technology in Jeddah (Saudi Arabia) and the Silesian University of Technology.

XXXV international conference „World economy of the 21st century: Challenges and perspectives”

2018-05-10

The staff of International Economic Relations at the Wrocław University of Economics invite visitors to take part in the XXXV International Scientific Conference „World Economy of the 21st Century: Challenges and Perspectives”. The conference planned for 14 May is closely related to the structural and systemic changes occurring in the global and Polish economy as well as in regions - including Lower

Silesia. The participants of the largest and oldest conference in Poland dealing with the problems of regionalism in the era of globalization will discuss pro-export policy of Poland and foreign investments. Active participation of researchers from all Polish academic centers, as well as representatives of state administration, business and the media has been already the tradition of Silesian conferences. Participation in this year's edition was confirmed by over 50 scientists from Poland and abroad.

University European Center to be created in Lublin

2018-05-11

The mayor of Lublin, Krzysztof Żuk, the mayor of Nancy, Laurent Hénart, the rector of the Maria Curie-Skłodowska University, Prof. Stanisław Michałowski and the rector of the University of Lorraine, Prof. Etienne Criqui signed agreements on the establishment of the University European Center in Lublin, with aim to conduct research and teaching of European integration. The agreement is part of the partnership renewal agreement between Lublin and the French partner city of Nancy - informs Aneta Adamska, spokesperson at the Maria Curie-Skłodowska University in Lublin. The Center is a joint initiative of the partner cities of Lublin and Nancy, the Maria Curie-Skłodowska University, the University of Lorraine and three Ukrainian universities: the Kyiv National Taras Shevchenko University, Chernivtsi Yuri Fedkovich National University and the Subcarpathian National Vasyl Stefanyk University in Ivano-Frankivsk.

Scholarship call for Eastern Partnership and Central Asia students extended to June 5

2018-05-11

Due to the numerous requests of applicants, National Academic Exchange Agency extends recruitment for the Stefan Banach scholarship program until 5 June 2018. The program is a joint scholarship initiative of the Ministry of Foreign Affairs and the National Academic Exchange Agency, implemented as part of Polish development assistance. The aim is to support the socio-economic development of the Eastern Partnership countries (Armenia, Azerbaijan, Belarus, Georgia, Moldova and Ukraine) and the Central Asian countries (Kazakhstan, Uzbekistan, Turkmenistan, Kyrgyzstan and Tajikistan) by raising the level of education and professional qualifications of citizens in these countries. The program allows to undertake full studies at national universities in fields of exact sciences, natural, technical, agricultural, forestry and veterinary sciences. For the implementation of the program in the academic year 2018/2019, the Polish partners allocated PLN 1.4 million. Detailed rules of recruitment and templates of documents are available at: <https://nawa.gov.pl/studenci/studenci-zagraniczn/program-stypendialny-im-stefana-banacha>

One PLN billion for the Integrated University Programs

2018-05-11

On June 11, the call for proposals for Integrated University Programs will be launched. This time, the National Center for Research and Development, the executive agency of the Minister of Science and Higher Education, will allocate a PLN billion for this purpose. The project is financed from the Operational Program Knowledge Education Development for 2014-2020. As underlined Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education, the Integrated University programs will be implemented to improve the competences of personnel and increase internationalization of Polish universities by inviting lecturers from abroad.

Public and non-public higher education institutions can apply for this co-financing. It is implemented in the form of three paths, depending on the size of the university. As a result, smaller universities will not have to compete for funds with larger ones. Projects should last from 18 to 48 months. The co-financing amounts from PLN 3 to 40 million. More: <http://www.ncbr.gov.pl/fundusze-europejskie/power/aktualnosci/art,6176,konkursy-na-zintegrowane-programy-uczelni.html>

Poznań Days of Exotic Animals

2018-05-11

Students and PhD students at the Faculty of Veterinary Medicine and Animal Sciences at the University of Life Sciences in Poznań participants on May 19 and 20 for the sixth Poznań Exotic Animal Days, under which the eighth Exhibition of Exotic Animals will take place. The organizers highlight that the exhibition will present over 150 species of fauna. In addition to exotic rodents, visitors will be able to admire colorful reptiles, amphibians or arthropods. Poznań Days of Exotic Animals is the largest non-commercial event at the Poznań university. The organizers plan to share the science in the fields of biology, breeding and ecology. They also want to encourage young naturalists to explore the fascinating world of animals from a different perspective.

Cultural diversity of Silesia expressed in language literature and traditions

2018-05-11

The University of Opole has launched the project „Cultural diversity of Silesia in language, literature and traditions”. The Polish-German undertaking is carried out by the Opole Institute of German Philology in cooperation with the Studierendenwerk Trier (SWT). The aim of the project is to capture the regional phenomenon of cultural diversity in Silesia. Its participants, students from Germany and Poland, plan to learn and document historical and current aspects and dimensions of Polish, German, Silesian and Jewish cultures. Cultural diversity enriches, inspires, and allows to overcome restrictive beliefs and habits. The specificity of Silesia is that constitut-

ing a mix of national and ethnic minorities, cultures, traditions and languages, it still forms one community - explain project implementers. The project is co-financed by Polish-German Youth Cooperation Office Potsdam.

Professor Andrzej Ślebarski wins Kościuszko Foundation scholarship

2018-05-11

Professor Andrzej Ślebarski from the solid state physics department at the University of Silesia received a prestigious scholarship from the Kosciuszko Foundation allowing the scientist to spend three months at the University of California in San Diego (UCSD). The University of California San Diego is one of the best universities in the USA, but also in the world. A few scientists of this university are Nobel laureates. Among them is Maria Goeppert-Mayer, Nobel laureate in the field of physics, born in Katowice and associated with the American university in San Diego. The scholarship will allow Prof. Ślebarski for a three-month study stay at a California university in the academic year 2018/2019. This is not the first international scholarship of the Silesian university scholar. Professor Ślebarski received already a Fulbright scholarship, and twice held two other Kościuszko Foundation scholarships.

Foundation for Polish Science to offer scholarships to the most talented young researchers

2018-05-14

The Foundation for Polish Science for the 26th time granted START scholarships to the 100 most talented young scientists from all over Poland. They will receive PLN 28,000 for their research. START is the largest scholarship program in Poland for the best young researchers who are under 30 years of age. The Foundation also selected two scientists who had exceptional scientific achievements this year: Przemysław Mróz from the Astronomical Observatory of the University of Warsaw and Dr Michał Winiarski from the Faculty of Technical Physics and Applied Mathematics at the Gdańsk University of Technology. Their scholarships will be enhanced to PLN 36,000 - informs the Foundation for Polish Science. The award ceremony will be held on May 26 at the Royal Castle in Warsaw. The call of applications for the next competition will start this autumn. More: <https://www.fnp.org.pl/oferta/start/>

III Academic Nuclear Energy Forum in Krakow

2018-05-14

From May 16 to 18, the 3rd Academic Nuclear Energy Forum will take place in Krakow. The organizer is the Department of Nuclear Power Engineering of the Faculty of Energy and Fuels at the Kraków AGH University of Science and Technology together with the Scientific Circle of Nuclear Power Engineering „Uranium”. The forum is addressed to students of majors related to nuclear energy and physics, members of scientific circles and enthusiasts of this subject from all over Poland. The program includes lectures of Zbigniew Kubacki from the Nuclear Energy Department of the Ministry of Energy. He will present “the Polish Nuclear Power Program ». Natalia Krawczyk from the Institute of Plasma Physics and Laser Microfusion will give a lecture on «Thermonuclear Fusion - Energy of the Future ». Dr Mikołaj Oettingen from the Department of Nuclear Power, Faculty of Power Engineering and Fuels will hold a

lecture «Perspectives of using the thorium in energy sector». During the Forum there will also be a competition of student presentations and workshops prepared in cooperation with the Institute of Nuclear Physics of the Polish Academy of Sciences and the Institute of Public Policies. More: <http://www.afej.agh.edu.pl/>

Conference on emotions in language and communication at the University of Warmia and Mazury

2018-05-14

The Institute of Polish Studies and Logopedics at the University of Warmia and Mazury in Olsztyn organizes on May 14-15 a nationwide conference in the series „New phenomena in language, text and communication”. This year's conference will be held under the motto «Emotions in language, text and communication» - informs the university in Olsztyn. During the conference, linguists, psychologists and media language researchers will deal with the relationship between language (text) and emotions and between emotions and communication participants. The organizers plan to explain new forms of expressing emotions in language, emotions in the semantic and pragmatic expressions, emotionality of the politics language, emotion expressions in journalistic messages and cyberemotions - emotionality in the Internet.

Professor Bilewicz of the Warsaw University to hold an open lecture on the language of contempt

2018-05-14

Prof. Michał Bilewicz will hold a lecture „Speech of contempt. How the brutal language of the Internet has changed our thinking about strangers? „ as part of the Warsaw University program „8 lectures for the New Millennium”. Professor Michał Bilewicz works at the University Center for Research on Prejudice. As he claims, «we have been dealing with a real epidemic of contempt speech for several years. Insulting Muslims, Jews or Ukrainians is a sad prac-

tice of everyday Polish media and the Internet. « In his opinion, this problem has also a global dimension. Professor Bilewicz plans to show how the language of contempt changes the media recipients. During the lecture, he will try to answer whether we become less sensitive to evil around us through speech of contempt? Do we change the way how we look at strangers? The lecture will take place on May 15 at 17.00 in the hall of the former University Library in Warsaw.

Conference „Reportage in the World - Reporting World” at the University of Silesia

2018-05-14

The International Polish Studies and the School of Polish Language and Culture at the University of Silesia in Katowice organize the international scientific conference on the 23 and 24 May as part of „Polish Literature in the World”. The theme of this year's edition is „Reportage in the World – Reporting the World”. The subject of discussion will be a reportage as an intercultural interference evolving under the influence of civilization phenomena. The participants of the conference will deal with the problems of the foreign reception of Polish reportages including the discrepancies in its understanding in Poland and in the world. They will also consider its relation to global technological, geopolitical and socio-cultural processes - digital revolution, tabloidisation of the media, globalization and multiculturalism.

Poznań Adam Mickiewicz University students to launch pro-ecological projects

2018-05-14

Three projects of Poznań students received funding in the call „IDEAMU!”. The aim of it is to develop „green” and social innovations to strengthen lasting relations between the University and the environment. The winning project is «Morasko is worth of Poznań». The students plan placing boxes and animal houses in the Morasko campus. The installations will contain descriptions of the species for which they are intended and information on the research teams involved. The second project - «Living mural» will present the green aspect with artistic presentation of Maria Skłodowska-Curie. It will connect the university with the inhabitants, it is also a bridge between human and nature elements. The third project «Greenhorns in it» is a cycle of radio university broadcasts promoting attitudes, ideas and pro-ecological activities – e.g. modern recycling and home-made methods for use of renewable energy sources.

Students from Gdańsk receive Health Protection Leaders Award

2018-05-14

Students of the inter-university faculty of biotechnology of the University of Gdańsk and the Medical University of Gdańsk, founders of the Biolumo company, received one of three awards in the category „Innovative Idea” during the 23rd International Congress of the Open System of Health Protection in Katowice. Olga Grudniak and Marcin Pitek were awarded the title of Health Protection Leaders. At the congress, they presented the design of the device for immediate determining which antibiotic will work for a particular patient. The jury appreciated their idea emphasizing the importance of the imprecise antibiotic therapy as one of the key challenges of modern medicine. Earlier, the Biolumo project was awarded in the final of the InfoShare 2017 competition, it was also appreciated by the Start-upbootcamp Digital Health accelerator in Berlin and

by the magazine «The Journal of mHealth» placing the company on the 100 Global Digital Health list.

Scholarships for young scientists of the Wrocław University of Technology

2018-05-14

Five researchers from the Wrocław University of Technology received scholarships from the „Foundation for Polish Science” Start program. Researchers will get 28,000 PLN annually. At Wrocław University of Technology scholarships were awarded to Mateusz Dyksik from the faculty of Basic Technical Problems; Dr Eng Anna Dzimitrowicz and Jan Zaręba from the Chemical department, and Maciej Kowalczyk and Łukasz Sterczewski from the Electronics department. Scholarships were awarded for the 26th time. This year scholarship holders were selected from 890 candidates. The Foundation for Polish Science „Start” is the largest scholarship program for young researchers in Poland. Scholarships are to support them financially at the beginning of a research career and enable them to devote themselves to the science.

Medical University of Wrocław cooperates with the Västmanland Hospital Västerås

2018-05-14

The University of Medical Sciences in Wrocław intensifies its cooperation with Västmanland Hospital Västerås in Sweden. The main assumptions of the agreement signed by both parties are developing studies and exchange of experience. Polish and Swedish delegations discussed new fields of cooperation in psychiatry, oncology, vascular surgery or anesthesiology. Visitors from Sweden were interested in the scientific activity of the Clinic of Psychiatry dealing in non-pharmacological way with autism, depression, Alzheimer's disease, Asperger syndrome and seeking new forms of treatment of disorders. After signing the agreement Vice-Rector for Science of the University Prof. Piotr Ponikowski emphasized the necessity of working out its practical aspects

and selecting leaders interested in joint research, projects or exchange of experience.

English Competition „Challenge Accepted” in Lublin

2018-05-15

The Maria Curie-Skłodowska University in Lublin invites students of universities from all over Poland, high school students, as well as residents of Lublin and the Lublin province to participate in the third English language and Anglo-Saxon culture competition „Challenge Accepted” - informs Aneta Adamska, spokesman of the Lublin university. The competition is organized by the Center for Promotion and the Center for Teaching and Certification of Foreign Languages at the Maria Curie-Skłodowska University. The competition consists of a 45-minute written test, in which participants will have to answer 60 closed questions. The participants should be over 16 years of age. The competition will take place on June 15 at 10.15 at the Faculty of Law and Administration of the Maria Curie-Skłodowska University in Lublin (Plac Marii Curie-Skłodowskiej 5). The number of places is limited to 400, therefore the order of applications matters. Applications should be submitted by June 13 via the website: www.umcs.pl.

„Forges of competence” of the University of Bialystok

2018-05-15

Several hundred students of the University of Bialystok learn how to implement turnkey projects in practice. Project work in cooperation with employers is one of the tasks of the project „Forges of Competence” implemented by the Eastern Technology Transfer Center of Bialystok University. Students participating in the projects are provided with practical classes in groups of several people, supervised by practitioners from companies or offices - informs Dr. Karina Sachpazidu-Wójcicka, director of the Eastern Technology Transfer Center. Establishing cooperation with local employers allows students to master their practical skills expected by the employers. As part of the «Forges of Competence» projects, the university has already established cooperation with 36 employers. Among them are: Telewizja Polska, Polskie Radio Białystok, Podlaski Voivodship Office, Voivodship Labor Office, Białystok Waterworks, police, and Central Statistical Office.

AGH University of Science and Technology to held seminar on challenges for scientists and engineers in innovative industry

2018-05-15

The Academic Center of Materials and Nanotechnology of the AGH University of Science and Technology in Krakow is organizing on 17 May 2018 the seminar „Challenges for scientists and engineers in innovative industry”. The guest and lecturer of the seminar will be Luc Van De Putte from the Netherlands, currently employed as a Group Manager Modeling at ArcelorMittal Poland. In his lecture he will deal with the issues of innovation in the steel industry, which is sometimes perceived as an old industry, but in fact it implements many innovations and investments. This provides new opportunities for scientists and engineers working in companies of this industry. During the seminar, Luc Van De Putte will present the challenges faced by the ArcelorMittal Modeling Group, where scientists (physi-

cists, chemists and material engineers) work on process models, planning and logistics improvements, and data analysis.

Collegium Civitas in Warsaw to hold seminar „Psychology of Terrorism”

2018-05-15

The Collegium Civitas Center for Terrorism Research in Warsaw in cooperation with the House of Historical Encounters invites the participants to the seminar „Views on terrorism”. The seminar covers terrorism in psychological terms - informs the Warsaw university. The discussion on psychological sources of terrorism will be conducted by Mariola Wołoszyn, psychologist and lecturer at Collegium Civitas, Dariusz Piotrowicz, police psychologist at the Warsaw Metropolitan Police Headquarters in 2004-2010 and lecturer at the SWPS University, and Andrzej Mroczek, expert on terrorism at the Collegium Civitas Center for Terrorism Studies. The seminar will start on Friday, May 25 at 18.00 at the Dom Spotkań z Historią in Warsaw at ul. Karowa 20. Admission is free. The organizers ask for confirmation at the address: cbnt@civitas.edu.pl

Researchers from Hong Kong to hold lectures at the University of Silesia

2018-05-15

Dr. Dorothy Tse Hiu-hung and Dr. Christophe Tong Yui from the department of humanities and creative writing of the Baptist University in Hong Kong will be guests of the Institute of Polish Literature of the University of Silesia from 16 to 18 May. Visitors from China will give lectures on Hong Kong literature and culture. They will also present films about the city and the specific historical and cultural situation after its return to China. The lecturers will analyze the literature and art of Hong Kong from the perspective of the so-called Time Zero, the moment of the final takeover of Hong Kong by the People's Republic of China. Dr Dorothy Tse Hiu-hung and Dr. Christophe Tong Yui combine didactic work and creative writing workshops with research work on the

latest literature of Hong Kong. They conduct translation and artistic activities. They are well-known and award-winning writers in China as authors of stories, novels and poems.

Nicolaus Copernicus University joins Consortium ATHENA-PL

2018-05-15

The Nicolaus Copernicus University in Toruń joined the Consortium ATHENA-PL. The main purpose is to develop project documentation and to build and integrate ATHENA satellite components (The Advanced Telescope for High-Energy Astrophysics). The ATHENA satellite is a new generation of X-ray telescope gathering information about the formation and evolution of galaxies, star clusters, galaxies and black holes. Consortium ATHENA-PL will deal with technologies for space observation and observations in the field of astrophysics. The consortium is formed by the Nicolaus Copernicus Astronomical Center of the Polish Academy of Sciences (PAN), Space Research Center PAS and Center for Theoretical Physics PAS in Warsaw, National Center for Nuclear Research in Otwock as well as Jagiellonian, Wrocław, Szczecin, Łódź Białystok, Kielce and Toruń universities.

University of Wrocław and Dresden Technical University to conduct joint research

2018-05-15

Psychologists from the University of Wrocław with the scientists from the Center of Smell and Taste Senses at the Technical University in Dresden will examine the social and cognitive functioning of people who lost their sense of smell. Cooperation will be possible thanks to the European program „Strategischen Fördertopf Internationalisierung“. The money from the program is devoted to the development of strategic scientific cooperation between the Technical University of Dresden, King's College in London and Prague and Wrocław universities. The aim is to internationalize the curriculum and research as well as to raise the ranking of the university. Researchers are planning to organize a summer school, a series of seminars and guest lectures, and popular science meetings to internationalize the staff of both universities and popularize research results. They also plan to create a program for exchanging experiences including bilateral visits and a mentoring program for research assistants.

Students of the University of Economics in Poznań win the competition „City in motion“

2018-05-15

The team of students of the University of Economics in Poznań won the competition „City in motion“ organized by the Poznań University of Technology, University of Economics in Poznań and the City of Poznań in cooperation with Volkswagen Poznań Ltd. The aim of the competition was to explore the development strategy of the Poznań metropolis until 2050 with particular emphasis on urban transport and logistics solutions as well as to create scenarios for the development of cooperation between local government administration, science and business. The authors of the winning project analyzed the challenges in the future transport of goods and transport of people. The group provided concrete solutions proposals in the form of applications designed to facilitate the flow of people and

goods. Students Cezary Brudka, Klaudia Chomiak and Adam Rozynkowski received a cash prize of PLN 22.000. and the possibility of two-month internships at Volkswagen Poznań Ltd.

Polish Academy of Sciences begins recruitment for Academic International Partnerships

2018-05-16

Universities, research institutes, scientific organizations of the Polish Academy of Sciences that implemented at least three projects including internationalization activities for last three years may apply for the Academic International Partnerships program. The National Academic Exchange Agency informs that research and development centers will be able to obtain funding for initiatives of international institutional cooperation in the area of research, implementation or education. Project partners must be at least 3 universities or scientific organizations located and registered abroad, which are not financed from Polish budget funds but signed a letter of intent with the Applicant. More: <https://nawa.gov.pl/institucje/partnerstwa-akademickie>

ACADEMIA Book Fair in Warsaw

2018-05-16

From 17 to 20 May, the Warsaw Book Fair will be held at the National Stadium in Warsaw. As part of this event, the Academia Book Fair is also planned. Their organizers are the University of Warsaw Publishers, Warsaw University of Technology Publishing House and company Murator. An integral part of the Fair is the competition for the best academic book ACADEMIA. The prizes are funded by the Rector of Warsaw University of Technology for the best academic publication in the field of technical and exact sciences and by the Rector of the University of Warsaw for the best academic publication in the field of social sciences and humanities. The fair is also accompanied by the award ECONOMICUS for the best economic book organized by the Dziennik Gazeta Prawna and Prof. Jerzy Skowronek Awards granted

to authors and publishers in the field of history and archives science.

Conference on science based innovations at the Lodz University of Technology

2018-05-16

The Association Top 500 Innovators and the Technical University of Lodz invite the participants on 17-18 May 2018 to a conference devoted to science-based innovations. The event will be attended by British and Polish specialists in start-ups - informs the Łódź university. As part of the event, Professor Allan Barrell from Cambridge Worldwide Associates will talk about his observations in British and Polish innovation clusters. Nicholas Coutts will present programs supporting startups, which he co-created in various parts of Europe and Mark Tyl, founder of the Innovation Forum organization, will present an offer for young startups acceleration and support in international development. During the conference a discussion panel on fundraising for start-ups and commercialization of research results is planned. The panel will be attended by Bartosz Sokoliński, Director of the Development and Innovation Bureau of the Industrial Development Agency, Daniel Maksym, Project Director in the Polish Energy Group New Energy and Prof. Alan Barrell. The conference will be held in the Bay of Sport at the Lodz University of Technology at Aleja Politechniki 10.

Intercultural communication at the University of Rzeszów

2018-05-16

The recruitment of students for the next academic year began at the University of Rzeszów. This year, the educational offer of the Rzeszów university expanded with a new study - intercultural communication at the Department of Sociology and History. The new field of study is dedicated to people who want to develop their skills not only in the Podkarpace Region, but also to build their professional career in the global world - says Dr Maciej Ulita, a spokesman at the University of Rzeszów. Professor Paweł Grata, dean of the Faculty of Sociology and History, emphasizes that the advantage of the new field of study is the possibility of pursuing a professional career in many positions related to external and internal communication in the company and HR management. In the new academic year, 25 candidates can apply to the study. More:<https://irk.ur.edu.pl/WR/>

Researchers from the University of Silesia developed nanoparticles of copper oxide with biocidal properties

2018-05-16

Researchers from the University of Silesia's physics institute have developed a new method of producing copper oxide nanoparticles with fungicidal and bactericidal properties. The solution has been patented. Nanoparticles obtained with the method of Dr Jerzy Peszke and Anna Nowak are characterized by high biocidal effectiveness against various microorganisms - fungi, bacteria and algae. They can be used, for example, to protect building ceramics as well as external and internal surfaces of buildings against the development of pathogenic agents. Their main advantage is a several times longer duration of action in comparison to preparations based on chemical compounds. In addition, their low production cost and ease of application to various types of surfaces allows for its versatile application in the form of powder - says Dr. Jerzy Peszke.

Professor Andrzej Więcek wins European Nephrology Society award

2018-05-16

Professor Andrzej Więcek, head of the Clinic of Nephrology, Transplantology and Internal Diseases of the Medical Faculty of the Silesian Medical University was awarded the European Society of Nephrology Prize (ERA-EDTA). It is recognition of the outstanding contribution of Prof. Więcek in the development of the Society. Prof. Więcek has been a member of ERA-EDTA for 30 years. In 2011 he became secretary-treasurer and three years later the President of this organization. During his term in office, he stabilized the financial situation of the Society, reorganized the office in Parma and increased the number of ERA-EDTA members. The professor is also the originator of the virtual museum ERA-EDTA and its first custodian. The award ceremony will take place on May 24 - during the opening ceremony of the European Society of Nephrology Congress in Copenhagen.

Students of the Wrocław University of Life Sciences run the National Biotechnology Days

2018-05-16

Students of the two research groups of the biotechnology and food science faculties of the Wrocław University of Environmental and Life Sciences presented an interesting scientific issues during the National Biotechnology Days organized by students of the University of Wrocław, Wrocław University of Technology and the University of Life Sciences. Wrocław biotechnologists prepared attractions for children and adults. Adults were able to see colored preparations and insects under the microscope, find out how plants grow in vitro and how blood is detected at the crime spot. Children participated in numerous experiments such as money laundering, games with non-Newtonian liquids and volcanic lava. The novelty of the event was hare and hound game organized by three universities. The prizes were university gadgets, fragranced soaps

produced by students and AgarArty - cultures of wine bacteria, enclosed in dishes.

Medical University of Wrocław launches Medical Simulation Center

2018-05-16

The Wrocław Medical University launched officially Medical Simulation Center. The investment cost is almost PLN 23 million. Full-time classes will start in October. There are 6 high-fidelity rooms (operating theater, intensive care unit for newborns, children and adults, hospital emergency department, delivery room, ambulance simulator and nursing room) in the Center. The Center is provided with the real hospital equipment and the patient simulators (phantoms). During the classes students will participate in the simulation scenarios and will work directly with the phantom. The Medical Simulation Center also has a virtual reality room where students will learn to perform ultrasound tests on simulators of the highest class and perform simulated operations in the field of laparoscopy, endoscopy and procedures on blood vessels.

Prof. Jerzy Buzek to hold lecture at the Gdańsk University of Technology

2018-05-16

„The future of Polish students in Europe and in the world” is the topic of a lecture held by Prof. Jerzy Buzek at the Gdańsk University of Technology. The lecture is scheduled for Friday, 18 May at 13.00 in the 007 auditorium of the Faculty of Management and Economics. Admission is free, but the number of places is limited. After the lecture, the students will have an opportunity to ask questions to the professor. The lecture will be accompanied by a review of the scientific activities at the Gdańsk Technical university. The students will present their achievements in the lobby of the Management and Economics department. The organizers of the lecture are the University Student Organization «Horizons» and the Student Government of the Gdańsk University of Technology. Professor Jerzy Buzek is a Polish politician and chemist, member of the Sejm of the 3rd term and Prime Minister in 1997-2001. Since 2004, he has been a Member of the European Parliament, and in the years 2009-2012 was the chairman of this institution.

Prof. Musielak to hold a lecture about the secrets of the Universe

2018-05-17

On May 24, 2018, the Institute of Physics at the Maria Curie-Skłodowska University in Lublin invites the participants to an open lecture by Prof. Zdzisław Musielak titled „Secrets of the Universe.” The lecture will be an extraordinary opportunity to listen to stories about the beginnings and possibilities of the end of the universe, the role of dark matter and dark energy, black holes and the possibilities of life on planets orbiting the stars away from the Sun - informs Aneta Adamska, a spokesman for the Lublin university. Professor Zdzisław Musielak is the author of numerous publications and the double winner of the Humboldt Prize. Since the 1980s, he has been working and teaching in the United States, recently running the Astronomy Department at the Universi-

ty of Texas. The scientist also works with NATO and NASA. The lecture will take place on May 24 from 11:15 to 12:45 at the Aula of the Institute of Physics at ul. Akademicka 7 in Lublin.

Białystok Physicists in the European consortium COST

2018-05-17

The Faculty of Physics of the Department of Physics and Magnetics at the University of Białystok will implement a new project of the European Cooperation in Science & Technology (COST)- informs Katarzyna Dziedzic, spokesperson of the University of Białystok. The „Ultrafast opto-magneto-electronics for non-dissipative information technology” project will be coordinated by Radboud University from the Netherlands within the international consortium. The head of the work carried out by Polish scientists will be Dr Andrzej Stupakiewicz from University of Białystok. He emphasized that „this project will allow for greater integration of the international scientific and technical environment in one of the most innovative areas of science related to information technology.” More: <http://www.cost.eu/>

Warsaw Faculty of Architecture wins a competition for a model single-family house in Program Flat Plus

2018-05-17

The Faculty of Architecture of the Warsaw University of Technology dominated the BGK Real Estate competition for the development of a model single-family home. The competition was held as part of the government Flat Plus program. The best solutions will be implemented as prototype houses. The Ministry of Science and Higher Education was a partner of the competition. The technical universities and architecture offices could have applied for the competition. The first and second places among the universities belonged to the projects proposed by the Faculty of Architecture of the Warsaw University of Technology. In addition, the project by the next team of the Faculty of Architecture received a dis-

inction. - The initiative taken by BGK Real Estate is another impulse to build a bridge between the world of science and business. An innovative state can be built only on the basis of close cooperation of these two environments and efficient transfer of knowledge in key areas of the economy - emphasized Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education.

Fun and games of various countries in the Polish-French publication

2018-05-17

Prof. Małgorzata Bronikowska of the Academy of Physical Education in Poznań published a book „Fun and games of different cultures”, which describes traditional games from different countries. The co-author of the publication is Jean-Francois Laurent from The Association For International Sport for All (TAFISA). Implementing traditional games by teachers can «program kids to move» - convince the authors. According to the authors, the publication is a great offer for active spring and summer weekends. The games described and shown in the book can also be used by teachers in physical education activities. The book corresponds to the assumptions of the new core curriculum, which assumes introducing traditional team games to physical education lessons.

Conference on World War II monuments in Central and Eastern Europe

2018-05-17

University of Szczecin invites the participants on Friday, 18 May to the international conference „Dealing with the past in 2018. Monuments of World War II in Central and Eastern Europe”. The partners of the event are the Foundation for Polish-German Cooperation, the Polish-German Foundation for Science and the Association of Polish Municipalities of the Euroregion Pomerania. After the adoption of the law on the ban on communist and other totalitarian propaganda from 2016 dealing with the past began. The act also concerns the commemoration of the victory over Nazism in World War II - including monuments of fame and victories of the Red Army and monuments of «gratitude» of Polish society or memorabilia of the Polish-Soviet «brotherhood of arms». The aim of the conference is to analyze the treatment of World War II monuments in Central and Eastern Europe. Participants will discuss the situation in Germany, the Baltic countries, the Czech Republic and Ukraine. Conference program: http://www.usz.edu.pl/attachments/article/1735/Pomniki%20II%20ws_program.pdf

University of Silesia to support High school in Libiąż

2018-05-17

The Faculty of Law and Administration of the University of Silesia in Katowice has become the scientific patron of the Catholic High School in Libiąż. The agreement on didactic and scientific cooperation was signed by Dr Piotr Pinior - vice-dean for part-time studies at the Law and Administration Faculty and headmaster of the high school Anetta Szewczyk. As part of the cooperation, lecturers will conduct classes in high school, students will also be able to participate in lectures, seminars and workshops at the University of Silesia. Support for teachers improving professional qualifications is also provided. Students will also benefit from the cooperation because they will be able to conduct pedagogical practices at the school. The results will be the basis for bachelor's, master's and scientific work.

Students of the Wrocław University of Technology win medals at RoboGames 2018

2018-05-17

One gold and four silver medals were won by students from the KoNaR Scientific Circle of the Wrocław University of Technology at the RoboGames 2018 robotics Olympiad in the USA. 828 robots from over 20 countries competed in the tournament. Wrocław students won gold in the Best of Show category for a robot chessboard project, in which the role of the opponent was played by the social robot EMYS built in the Wrocław University and developed as a commercial product by FLASH Robotics. Three silver medals were won by «Sky-Wave» and «Navy» robots built by Rafał Cymiński. The fourth silver was won in the Nano Sumo category, where robots were tasked to push each other off the ring. This part was won by the robot «Stasio» constructed by Michał Piotrowicz and Michał Burdka. RoboGames is the largest robotic tournament in the world that takes place every year in the Silicon Valley. The Scientific Circle «KoNaR» has operated at the Department of cybernetics and robotics, at the Faculty of Electronics of the Wrocław University of Technology, continuously since 2003.

Wrocław University of Technology starts recruitment for studies

2018-05-17

The Wrocław University of Technology has started recruitment for studies. The candidates can apply for sixteen different faculties with 61 departments. The first recruitment will end on July 5. The results will be announced on July 9. The second recruitment will start on July 14. More than 6.3 thousand MA candidates and 345 PhD students will be accepted. About 950 places are provided for extramural students - including over 600 for MA studies. This year, there will be no new faculties at the University, but there is a new specialty in the department of computer science and management - Data science. The most popular trends last year were Computer Science in English, Systems Engineering at the Faculty of In-

formation Technology and Management, Computer Science at the Faculty of Basic Technical Problems and Mechatronics at the Faculty of Electrical Engineering. For more information, please visit: <http://rekrutacja.pwr.edu.pl/>

Polish Africanist Society awarded Dr Robert Kłosowicz from the Jagiellonian University

2018-05-18

The Polish Africanist Society recognized the book „Contexts of dysfunction of Sub-Saharan African countries” by Prof. Robert Kłosowicz from Jagiellonian University as the best Sub-Saharan African publication in 2017 in the category „author's scientific publication after obtaining the habilitation” - informs the Cracow university. In the justification, we read that the Polish Africanist Society awarded the author «for the methodologically and supported by field research analysis of the dysfunctionality on the examples of Sub-Saharan African countries, which allows a better understanding the basis of state crises in this region and contributes to the development of modern international relations.» Prof. Robert Kłosowicz runs the Department of International Relations and Foreign Policy at the Jagiellonian University in Krakow.

Integrated circuits from the Kraków AGH University of Science and Technology to be in devices all over the world

2018-05-18

The AGH University of Science and Technology is an absolute leader among Polish universities in the design of integrated circuits. For many years, its scientists have been involved in their development using high-energy physics, X-ray imaging and neurobiology. This opened the way for cooperation with the Japanese company Rigaku Corporation. As a result, integrated circuits designed in Krakow are used in devices all over the world. The design of integrated circuits is carried out at three faculties: Electrical Engineering, Automatics, Computer Science and Biomedical Engineering; Physics and Applied Computer Science, and Information Technology, Electronics and Telecommunications. According to the Europractice report, which supports the design and production of integrated circuits in Europe - AGH University of Science and Technology is the absolute leader in their design among Polish universities. More about the successes of Krakow scientists in the field of integrated circuit design in the article written by Weronika Szewczyk: <https://www.agh.edu.pl/info/article/uklady-scalone-z-agh-w-urzadzeniach-rigaku-corporation-swiatowego-lidera-produkujacego-aparature-ba/>

Agreement on cooperation between Warsaw University of Technology and the Naval Academy

2018-05-18

The rector of the Warsaw university Prof. Jan Szmidt and the rector-commander of the Polish Naval Academy, commander Prof. Tomasz Szubrycht signed a cooperation agreement. The signed agreement is to contribute to «the development of scientific-didactic and scientific-research activities in areas particularly important for the defense of the country and maritime economy, using the potential, position, experience and achievements of both universities.» As part of the cooperation, it is planned to create joint

research teams, mutual provision of services in the field of access to laboratories and the use of technical equipment. Warsaw University of Technology and the Naval Academy will also exchange experts and jointly organize scientific and technical conferences and symposia.

Memorandum of understanding between universities in Zielona Góra and Chinese Hangzhou

2018-05-18

Rector of the University of Zielona Góra, prof. Tadeusz Kuczyński and president (rector) of the Chinese University of Zhejiang A & F, Prof. Yin Yibin signed a memorandum of understanding on the teaching and research cooperation of both universities. Universities from Zielona Góra and Chinese Hangzhou will cooperate in the areas of exchanging scientists and students to conduct research of common interest, visits of scientists invited to give lectures, inviting to participate in conferences, symposia, research and training; exchange of information, scientific materials and publications and to facilitate the mobility of lecturers and students through exchanges and visits between universities. The University of Zielona Góra previously signed two cooperation agreements with other Chinese universities: the University of Chongqing as part of the ERASMUS + program and a bilateral agreement with the Shanghai Pedagogical University.

Scientist of the University of Silesia to examine the finances of ancient Egyptian farmers

2018-05-18

Dr Marcin Kotyl from the department of classical philology faculty at the University of Silesia received a scholarship from the Deutscher Akademischer Austauschdienst (DAAD). The scholarship was awarded for the „Rent arrears of farmers in Roman Egypt” project in cooperation with the Zentrum für Altertumswissenschaften at the University of Heidelberg. The project concerns tax arrears related to the

lease of land in imperial property in Roman Egypt. Researchers will examine unpublished documentary papyri and learn how to calculate and collect tax arrears, the reasons for falling into debts and the terminology used in official documents. Dr Marcin Kotyl deals with the Greek documentary and literary papirology - above all unpublished tax documents and literary texts, mainly the Iliad papyri. DAAD is the world's largest organization supporting international exchange of students and scientists.

Open Innovation Week at the Wrocław University of Technology

2018-05-18

On Monday, May 21 the Wrocław University of Technology launches Open Innovation Week. For four days, lectures and workshops on design thinking, 3D printing, crowdfunding, building a network of contacts and combining science and business are planned. The conference is addressed to everyone interested in open innovation and the commercialization of knowledge. The scholars will present concepts of closed economy and Lower Silesian Smart Specializations. The organizers also announce the presentation of companies from the Academic Entrepreneurship Incubator and the introduction of the topic of crowdfunding. Open Innovation Week is organized as part of the NUCLEI project (Networks of Technology Transfer and Advanced Processing Industry). It is attended by ten universities and business support institutions from Austria, the Czech Republic, Germany, Italy, Poland and Slovakia. More at <http://openinnovationweek.pl/>

Medical University of Gdańsk projects achieve funding in OPUS 14

2018-05-18

Three projects of scientists of the Medical University of Gdańsk have received funding from the National Science Center in the 14th OPUS 14 competition. The laureates include the scientists from the molecular enzyme department at the inter-university faculty of biotechnology: Dr Rafał Sądej with the project «The role of FGFR2 in the regulation of autophagy in breast cancer - prognostic significance» and Dr Patrycja Koszałka for the project „The role of CD73 (ecto-5'-nucleotidazay) in the processes of promotion and progression of breast cancer and its evaluation as a therapeutic target”. The project „Study of reproductive potential of oocytes and embryos with the use of proteomic analysis of alveolar and culture fluid” by Prof. Krzysztof Łukaszuk from the obstetrics and gynecology nursing department of the health sciences also was financed. Over PLN 4.2 million will allow the employment of young scientists in post-doc positions and the payment of scholarships for students and PhD students.

Students designed a literature garden in the Museum of Ignacy Kraszewski in Dresden

2018-05-18

Landscape architecture students from the Technische Universität Dresden and the Wrocław University of Life Sciences designed different variants of the literature garden in the Museum of Ignacy Kraszewski in Dresden. The designs were created during Polish-German workshops. The museum of Ignacy Kraszewski in Dresden is a villa in which the writer lived for six years in exile. He created the garden to remind him Romanów, the place, where he spent the happiest years of his childhood. To this day, many Kraszewski's letters have been preserved and they in detail describe the gardens in Dresden and in Romanów. Polish and German students re-created the writer's Dresden garden. The Dresden garden is a common idea of Prof. Marcus Köhler from the Technische Universität Dresden, Dr. Justyna Jawor-

ek-Jakubska from the University of Life Sciences in Wrocław and Joanna Magacz, director of the Kraszewski Museum in Dresden.

PhD studies in Psychology and Computer Science at the Polish-Japanese Academy of Information Technology

2018-05-21

The Polish-Japanese Academy of Information Technology in Warsaw in cooperation with SWPS University of Humanities and Social Sciences launches inter-university interdisciplinary PhD studies in Psychology and Computer Science. - Our PhD studies combine psychology with the computer science and they are a response to the dynamically changing situation of psychology and IT science and to the challenges faced by scientists from both fields. The University emphasizes that computer science is increasingly dealing with research problems in the field of psychology. As an example, it provides automatic detection of emotions or generation of faces expressing the various emotions. In turn, psychology has to face the problem of establishing virtual relations and the impact of new technologies on social interactions. More: <http://www.pja.edu.pl/informatyka/doktoranckie/studia-doktoranckie-informatyka-psychologia>

Copernicus Science and Culture Festival in Krakow

2018-05-21

The Copernicus Center for Interdisciplinary Research, the Tygodnik Powszechny Foundation and the Jagiellonian University in Krakow are organizing the 5th Copernicus scientific and cultural festival on May 22-27. This year's festival will be devoted to the concept of the incident. It will be analyzed by the participants from mathematical and physical, biological, psychological, philosophical and theological perspectives. - From the very beginning, our idea was to make a festival about science different from other such events. Its guiding idea is «learning is an integral and perhaps even the most important part of culture» - says Prof. Bartosz Brożek, head of the

Center for Copernicus of Interdisciplinary Studies and vice-dean of the Faculty of Law and Administration of the Jagiellonian University. The program of the festival includes: «Lectures of the stars», «Debates», «Breakfasts of the masters», «Inventio: art of machines» and «Perceptio» with participation of Robert H. Frank, «New York Times» journalist, Daniel Gilbert, psychologist at Harvard University, astronomer Jean-Pierre Lasota and Adam Zgajewski, Olga Tokarczuk, Prof. Michał Heller and Henryk Sawka. More: <https://www.copernicusfestival.com/wydarzenia-w-ramach-copernicus-festival-2018-153121>

English studies at the Warsaw University of Life Sciences

2018-05-21

Until 6 July, the Warsaw University of Life Sciences is waiting for students interested in studying in English. The Faculty of Agriculture and Biology has launched the program Organic Agriculture and Food Production. The studies are aimed at educating high-class specialists in the field of organic farming and organic food production. The education program is interdisciplinary. Classes will be conducted by academic staff from various faculties of the Warsaw University of Life Sciences (Agriculture and Biology, Sciences on Human Nutrition and Consumption, Food Sciences, Horticulture, Biotechnology and Landscape Architecture, Animal Sciences, Economic Sciences) and lecturers from other universities, including foreign specialists. More: <http://www.sggw.pl/dla-kandydatow/rekrutacja/studia-i-stopnia>

Scientific conference „People of war” at the University of Lodz

2018-05-21

On June 7 and 8, the Institute of History of the University of Lodz organizes a scientific conference “People of War” within the series Faces of War. - Our goal is to present the persons who have marked the history of wars - heroes and traitors, outstanding leaders and losers, well-known people and those who remained hidden in the shadows. The conference is interdisciplinary. Historians, archaeologists, political scientists and representatives of other scientific disciplines are invited to participate in it. During this event, many speakers will hold their lectures: Andrzej Niewiński from the Catholic University of Lublin with a lecture «William Marshal, the best knight ever lived», Rafał Wróblewski from the Museum of Romanticism in Opinogóra will hold the lecture «Polish cavalymen of the Emperor Napoleon I» and Dariusz Radziwiłłowicz from the University of Warmia and Mazury, who will remind «Brigadier General Kazimierz Rumsza, the forgotten Siberian commander of the Polish division». More: <http://www.obliczawojny.uni.lodz.pl/>

University of Economics in Katowice to hold discussion about money - yesterday, today and tomorrow

2018-05-21

The University of Economics in Katowice invites participants to the conference on May 23 entitled „Money yesterday, today, tomorrow, in Silesia and not only there” Its purpose is to present the history of money in Poland and Silesia. The research and teaching staff of the University of Economics in Katowice, the Warsaw School of Economics and the National Bank of Poland will also discuss the form of money in the future in the light of the changes taking place in the modern market economy and the related challenges. The list of lecturers include Prof. Janina Harasim from the Department of Banking and Financial Markets of the University of Economics in Katowice, Robert Klepacz - Deputy

Director of the Payment System Department of the NBP, Dr Anna Szelałowska from the Warsaw School of Economics, Dariusz Mazurkiewicz - president of the Polish Standard of Payments and prof. Jacek Pietrucha from the Department of Economics of the Silesian University.

Wrocław University of Technology to receive nearly 8.2 million in Opus and Prelude programs

2018-05-21

The National Science Center allocated nearly PLN 8.2 million to the scientists from the Wrocław University of Technology for the implementation of research projects within Opus and Prelude programs – informed Michał Ciepielski from the information and promotion department of the Wrocław university. The largest grant was given to Dr Eng. Artur Podhorodecki, from the faculty of basic problems of technology, who received almost PLN 1.5 million for the project «Thin-film light sources with tunable emission in the 1000-2000 nm range based on colloidal, semiconductor quantum nanostructures». Dr. Podhorodecki's solutions may be applied in infrared displays in the military industry as elements of sensors and microchip biosensors and as a light source in various detection systems. In total, within the Opus program, more than PLN 7.4 million was awarded to 10 scholars, within the Preludium program over PLN 710 thousand grants were received by 6 young scientists from the Wrocław University of Technology. More on the website: <http://pwr.edu.pl/uczelnia/aktualnosci/miliony-na-badania-dla-naukowcow-z-pwr-10860.html>

First online applications for studies at the Wrocław Medical University

2018-05-21

On Monday 21 May 2018 the students can apply online for ten fields of studies at the Wrocław Medical University. Students can apply for the master's studies in medical, dentistry, pharmacy, medical analysis and physiotherapy faculties. They can also

send applications for nursing, midwifery, dietetics, emergency medical care and public health studies, as well as part-time studies in the field of public health and extramural MA studies for physiotherapy. Applying for full-time upper studies of nursing, midwifery, dietetics, physiotherapy and public health and extramural studies of obstetrics, obstetrics, physiotherapy, public health - will start on July 12, and part-time master's studies for the medical, dental and dentistry, pharmacy and medical analysis faculties on July 13.

Prof. Peter Seeberger to hold a lecture at the Lodz Polish Academy of Sciences

2018-05-22

The Lodz Polish Academy of Sciences and the Center of Molecular and Macromolecular Studies of the Polish Academy of Sciences invite participants on May 23, 2018 to hear Prof. Peter Seeberger's lecture. He is a director at the Max Planck Institute in Potsdam and professor at the Free University in Berlin. The lecture will explore carbohydrate vaccines in the prevention and control of infectious diseases. Professor Peter Seeberger was the first in the world to develop an automatic synthesis of oligosaccharides. The lecture will start at 15:30 at the Center for Molecular and Macromolecular Studies of the Polish Academy of Sciences in Łódź, ul. Sienkiewicza 112, room 9.

PhD student at the University of Silesia explores the history of Antarctic land ecosystems

2018-05-22

Mariusz Wierzgoń, a PhD student at the Faculty of Biology and Environmental Protection of the University of Silesia, is studying the history of Antarctic land ecosystems, using molecular biology. The use of molecular biology in the study of mosses will allow to check whether Antarctic endemics have been emigrated from a relatively close land - for example, spreading from subantarctic islands, or perhaps survived in Antarctica since the times when South America, Africa, India, Australia, Antarctica and the south-eastern part Asia created one supercontinent - Gondwana. Until recently, scientists believed that in colder periods on Earth some of the continents were tightly covered with ice, which effectively prevented the development of any form of life. Research has shown, however, that even in the most hostile environment, oases may appear in which certain plants can survive unfavorable times.

Pharmacy - a new study at the Pomeranian Medical University in Szczecin

2018-05-22

The Pomeranian Medical University in Szczecin has started this year's recruitment. There are 14 studies to choose at four faculties, and pharmacy will be a novelty in the 2018/2019 academic year. The Pomeranian Medical University prepared 610 places for full-time and part-time studies, 670 places for full-time and part-time studies, and 601 for full-time MA and part-time studies. In total, nearly two thousand places are waiting for secondary school graduates. Foreign students have also a choice of programs in English: Faculty of Medicine, Faculty of Medicine and Dentistry and program Asklepios, for over 100 students. Last year, the most popular courses were: medical faculty (more than 11 people for one place), medical-dental faculty (8.5), cosmetology (3.1), medical analysis (2.6), physiotherapy (2.5) and dietetics (2). Over 1,100 people started full-time studies.

Warsaw University of Technology students construct a rocket engine for liquid fuel

2018-05-23

The Warsaw University of Technology students from the MELprop Scientific Group at the Faculty of Power and Aeronautical Engineering have constructed one of the first rocket engines for liquid fuel in Poland. - We prepared it thoroughly. We carried out calculations, simulations, analyzes, we checked every subsystem step by step and only when we were sure that all was operating, we organized a full test - says the main constructor Alexander Gorgeri. He emphasizes, that the engine is a technology demonstrator and is not a product ready for use in the space industry. Despite of it, at relatively low cost, students are able to refine the technology so that it can be fully utilized. They intend to introduce the necessary modifications to the engine, limit its mass, and carry out further tests. The ultimate goal of the project is to adapt the engine to industrial use. See the engine test of Warsaw University of Technology students: <https://youtu.be/MSdUNSSZeas>

PhD student at the University of Life Sciences in Wrocław wins the Anna Pasek competition

2018-05-23

Henryk Grzywina - PhD student at the Institute of Environmental Shaping and Protection at the Faculty of Environmental Engineering and Geodesy of the University of Environmental and Life Sciences in Wrocław became a laureate of the Anna Pasek Scholarship Competition. promoting the most talented PhD students of Polish universities. The laureate is a graduate of engineering and water management. His scientific interests focus on the use of GIS (geographic information system) tools and remote sensing in environmental monitoring, and he focuses on the monitoring of soil moisture with respect to drought monitored for agriculture. The project awarded in the competition demonstrates the usefulness of remote sensing techniques for imaging

the temporal and spatial variability of humidity conditions. The author develops the use of operational methodology for forecasting agricultural drought based on satellite spectral data. Information about the Foundation: <http://www.annapasek.org/>

PhD student at the University of Poznań wins the Magellan prize

2018-05-23

The editors of „Magazyn Literacki KSIĄŻKI” awarded the Magellan Awards for the best tourist publications. Among the winners there was „And what that about Sweden” by Natalia Kołaczek, PhD student at the Faculty of Modern Languages at the Adam Mickiewicz University in Poznań. In the «travel book» category, 3 publications were awarded ex aequo: «And what that about Sweden» by Natalia Kołaczek, «Zanzibar - a treasure island. Tales from the Swahili world» by Beata Lewandowska-Kaftan and «Under the dark skin of the Philippines» by Tomasz Owsian. The idea of the competition is to honor the publishers who excel in their care for tourist quality, awakening the passion of traveling and bringing up new generations of globetrotters. This year 76 titles were qualified for the competition. They were awarded 14 main prizes, 21 awards and a special prize. Natalia Kołaczek is a PhD student at the Scandinavian Department, a translator of the Swedish language. He also runs the Szweccjoblog website.

„Lexicon of the contemporary city” - joint publication of the University and City Hall in Toruń

2018-05-23

Researchers from the Nicolaus Copernicus University together with the City Hall in Toruń created the „Lexicon of the contemporary city”. The publication contains the entries corresponding to the concept of a modern city and was created as part of the Gen-Y City project. The list of entries in the lexicon gives an overview of many important topics covering a variety of issues - from architecture, through urban planning and bioecology to smart solutions used in cities. The publication was developed by the employees of the department of urban studies and regional development at the University: Dr Stefania Środa-Murawska, Dr Elżbieta Grzelak-Kostulska, Dr Jadwiga Biegańska, Dr Justyna Chodkowska-Miszczuk, Dr. Eng. Krzysztof Rogatka and a student of tourism and recreation - Leszek Dąbrowski. The purpose of the Gen-Y City project is to support the development of creative industries and innovative enterprises. The leader of the Gen Y City network is a city of Poznań.

Welcome to Poland program to increase the competences of employees working with foreign students

2018-05-24

In 2005, 10,000 foreigners studied in Poland. In 2017, there were almost 66 thousand students from 166 countries in Poland. Such growth poses new challenges for the academic world. Therefore, the National Academic Exchange Agency announced the call for applications for the Welcome to Poland program. This will enable financing the projects related to raising the competences of employees who work with foreign students. - A hundred thousand foreign students in 2020/21 it is a very real goal, and mostly it will depend on the universities themselves - said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education at the January conference „Foreign Students in Poland”. It will

be supported by the National Academic Exchange Agency and by the new financing program, promoting universities with a high degree of internationalization. Foreign graduates in Poland evaluate our country well, they stress that it is both culturally and financially attractive - emphasized PM Gowin. With the program Welcome to Poland, universities with the Erasmus Card for Higher Education, scientific units of the Polish Academy of Sciences, research institutes and international scientific institutes established in Poland based on separate regulations can apply for the financing. More: <https://nawa.gov.pl/instytucje/welcome-to-poland>

2018 Gruber Cosmology Prize for Prof. Krzysztof Górski from the University of Warsaw

2018-05-24

The Gruber Foundation, operating at Yale University in the US, has granted its prestigious prize to the cosmology team Planck satellite. One of the leaders of this team is Prof. Krzysztof Górski from the Astronomical Observatory of the University of Warsaw. Professor Krzysztof Górski participated in studies on cosmic background radiation since the early 1990s. In the period 1993-1996 he was a member of the COBE satellite team, which for the first time measured the anisotropy of the cosmic background radiation (Gruber and Nobel Prize in 2006). Since 1996, Prof. Górski has been directly involved in the work in the Planck team.

Post-graduate studies Transport and Shipping in the Warsaw University of Life Sciences

2018-05-24

The Faculty of Economic Sciences of the Warsaw University of Life Sciences begins recruitment for a two-semester post-graduate studies: Transport and Shipping. During the course, theoretical and practical issues related to transport and management in the company will be presented. Links between logistics, transport and management will be explained as well as all the most important issues that en-

able functioning and competitiveness of the company. Completing post-graduate studies will allow participants to obtain a Certificate of Professional Competence in Road Transport without passing a written test and documenting qualifications in the field of customs services for business entities. This will allow students to apply for customs agent jobs. More: <http://transport.wne.sggw.pl/>

20th anniversary of inter-university education at the University of Silesia

2018-05-24

Twenty years ago, the University of Silesia launched the program Interfaculty Individual Studies in the Humanities. The Katowice University was the second in Poland that proposed a new study model with free access to the offer of many faculties and interdisciplinary programs expanding the basic direction of related disciplines. A year later, students were able to continue education within the framework of Inter-Faculty Individual Studies in Mathematics and Natural Sciences, and from 2014 as part of Individual Inter-faculty Studies. Such studies were selected by 913 students who defended 718 diploma theses. They were granted 205 scholarships from the Minister of Science and Higher Education. Among the graduates of inter-territorial studies at the Silesian University there are Szczepan Twardoch - a popular contemporary writer, Aleksandra Dzik - mountaineer and mountain guide, and Dr Aleksandra Sarna – renowned media psychologist.

Jan Długosz Academy in Częstochowa to be a university from June

2018-05-24

On June 1, the Jan Długosz Academy in Częstochowa will change its name to the University of Humanities and Natural Sciences in Częstochowa. Regulation on this matter was signed by Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin. During the visit to the university, the minister presented the regulation to the rector Prof. Anna Wypych-Gawrońska. He emphasized that it is the result of hard work of the whole academic community as well as numerous friends, politicians and communities supporting Częstochowa's high school. - This is one of the greatest successes in the nearly 50-year history of our Academy. From 1971, when the College of Teachers was established, later the College of Pedagogy, and then the Jan Długosz Academy in Częstochowa educated subsequent generations of academics, administration employees, PhD students and regular students. We all made efforts to strengthen the Academy so that it would become a university - says the rector of the university.

PhD student at the Medical University of Wrocław wins the FameLab competition

2018-05-24

Ruth Dudek-Wicher won the 7th FameLab competition for the best science promoters in Poland. In June, PhD student at the Medical University of Wrocław will take part in the international final in Great Britain. Her lecture, bringing PLN 25 thousand and the participation in the international finals, concerned bone infections and modern methods of their treatment. The jury of the competition in the justification emphasized her high skills, simple and accessible presentation, well-chosen and used props, freedom of expression, tactful sense of humor and distance to herself. FameLab is an international competition co-organized by the British Council, encouraging scientists to speak in public. Scientists are to tell the jury and the public within 3 minutes

what they do in their research work. More: <https://www.umed.wroc.pl/content/ruth-dudek-wicher-wygra%C5%82a-konkurs-famelab>

Professor Edward Norman Dancer from the University of Sydney awarded the J.P. Schauder Medal

2018-05-24

Prof. Edward Norman Dancer from the University of Sydney was awarded the Medal of Julius P. Schauder 2017. The medal was awarded for outstanding achievements in the field of non-linear analysis, theory of differential equations and their applications. The award was established by the Center for Non-linear Research of J. P. Schauder at the University of Toruń. The medal is awarded every two years for scientific achievements and contribution to non-linear analysis and its applications. The laureate is selected from candidates proposed by the councils of mathematical units and from professors of mathematics. Professor Edward Norman Dancer is an outstanding expert in the field of nonlinear mathematical and functional analysis and the theory of ordinary and partial differential equations. He is the author of many groundbreaking works published in leading mathematical journals.

University of Białystok to start recruitment

2018-05-25

This year, University of Białystok prepared 2830 places in full-time studies and master's programs. A total of 560 students will take part in extramural studies. The recruitment has been launched on May 22 and will be conducted via the Internet Registration of Candidates (IRK) system - informs Katarzyna Dziedzic, spokesperson of the University of Białystok. There are 30 fields of study to select. This year, the Faculty of History and Sociology offers also new studies in the field of history with a specialty in the history of military services. The Faculty of Economics and Management provides the new specialties for full-time and part-time students. Logistics in Business and International Logistics specializations will

be carried out in the field of economics. All information on the offer and recruitment rules can be found on the University of Białystok website: <http://www.uwb.edu.pl/kandydat>

AGH University of Science and Technology in Krakow holds a conference on space mining

2018-05-25

Scientists and students of the AGH University of Science and Technology in Krakow tried to answer how to evaluate an asteroid, whether the life of comets is stormy and how to acquire water in space, during the Conference on Cosmic Mining held in Kraków. The 1st Student Space Mining Conference was organized by four research groups: AGH Space Systems, the Mining Mechanics Scientific Team, the Skalnik Scientific Team and the Geophysics Group of GEOFON. The patrons of the conference were the Polish Space Agency and the Space Research Center of the Polish Academy of Sciences. During the conference, technologies related to cosmic mining were discussed. The geology of celestial bodies, 3D printing in a state of weightlessness, space propulsion, sampling of rocks from celestial bodies, use of geophysical methods in space exploration and space robotics were discussed.

Dr Roszkowska from the Warsaw School of Economics ranked among the 40 best professors of business schools in the world

2018-05-25

Dr Paulina Roszkowska, Associate Professor at the Institute of Computer Science and Digital Economy, Collegium of Economic Analysis at the Warsaw School of Economics, was ranked among the 40 best business school professors from around the world who were under 40 years of age. The organizer of the «Best 40 Under 40 Business School Professors» competition is the international organization Poets & Quants. The best professors are selected basing on the evaluation of their research, academic activity, but first and foremost by the MBA students. Dr Paulina Roszkowska was nominated by the students of Hult International Business School. In addition to the Warsaw University, she holds the position of Associate Professor of Finance at Hult International Business School in San Francisco.

Vistula Academy of Finance and Business in Warsaw to hold scientific seminar on Ireland

2018-05-25

The Vistula Academy of Finance and Business in Warsaw organizes on Monday 28 May the scientific seminar „Ireland in the international context and relations with Poland”. The lecture in English will be given by Gerard Keown, the Irish ambassador to Poland. Introduction to the lecture will be presented by Dr Wawrzyniec Konarski. During the seminar, the participants will focus on the position of sovereign Ireland as a subject of international relations, its efforts to end the conflict in Northern Ireland and Polish-Irish relations in the interwar period and after Poland's admission to the European Union. Gerard Keown is Ireland's ambassador to Poland since March 2015. He has been working in Irish diplomacy since 1996. In March 2016, he published his book entitled First of the Small Nations: The Be-

ginnings of the Irish Foreign Policy in the Interwar Years, 1919-1932.

Charger of electric cars on the campus of the Bydgoszcz University of Technology and Life Sciences

2018-05-25

Rector of the University of Technology and Life Sciences in Bydgoszcz, Prof. Eng. Tomasz Topoliński and co-owner of the RAWICOM company - Adam Hłond signed an agreement on the launch of the so-called fast charger for electric cars in the university campus. The university charging point will be adapted to perform operational and energy tests. The University of Technology and Life Sciences and RAWICOM have been conducting research for many years. At present, the university is designing a new fast charger, which will enable charging of cars using various charging systems and standards. According to the report of the Polish Automotive Industry Association in Poland, there are currently only 2 thousand electric cars. One of the reasons for this is the lack of infrastructure allowing charging electric vehicles in Poland.

Scientists of the Wrocław Medical University win the „Young Talents” competition

2018-05-25

Researchers at the Medical University of Wrocław won the „Young Talents” competition. They won in the „Success in Science” and „Success in Innovation” categories. Jędrzej Grzegorzówka, PhD student at the Department of Embryology and Histology, was awarded in the category of «Scientific Success». His work focuses on the search for mechanisms that potentially affect the progression of cancer, mainly in relation to breast cancer (IDC) and skin cancers. Miron Tokarski - a PhD student at the Department of Molecular Techniques and Izabela Pielka - a student of Medical Analytics won in the category «Success in the field of innovation». The winners are co-creators of the analysis technology enabling rapid identification of pathogens used in the device

for mobile diagnostics - Genomtec Fresh - based on the amplification and detection of specific DNA and RNA fragments.

Students of the Silesian University of Technology to start in the regatta of concrete canoes

2018-05-25

Members of the „Concrete” Scientific Circle from the Faculty of Civil Engineering at the Silesian University of Technology designed and constructed a concrete canoe, which will take part in the next edition of the university rowing competition BetonKanoRace in the Netherlands. 17 students from European universities will compete in races of self-designed and constructed concrete canoes in Eindhoven. During the competition, participants must demonstrate not only engineering knowledge of technology, but also physical strength and imagination. Double, male, female and mixed teams will race on distances of 100, 200 and 400 meters. The team from the «Concrete» scientific club is starting for the seventh time in the BetonKanoRace regatta. In the two previous competitions young engineers from the Silesian University of Technology won the «most creative project» category. This year they will row in the «President's Fists» concrete canoe designed and constructed by them.

Three scientists from the Gdańsk University of Technology receive START scholarships

2018-05-25

MSc. Mateusz Daško and MSc. Mariusz Szkoda from the chemical department and Dr Eng Michał Winiarski from the Faculty of Technical Physics and Applied Mathematics of the Gdańsk University of Technology received scholarships from the Foundation for Polish START Studies. Dr Eng. Winiarski has also received a distinction for his application. The winners were selected from 890 candidates. The basic criterion for awarding a scholarship is the quality of scientific achievements. The annual support amounts to PLN 28 thousand PLN or PLN 36 thousand for additionally awarded students. The money can be used for any purpose. The START is the largest scholarship program in Poland for researchers under 30 years of age, representing all fields of science. The group of scholarship holders are over 2,900 people. Scholarships are to support young scientists financially in the difficult beginnings of their careers and enable them to devote themselves fully to science.

University of Lodz to hold open lecture „Man and new technologies. The Humanistic Perspective”

2018-05-28

The Social Innovation Center of the University of Lodz invites participants to an open meeting as part of the „For Practice” program on May 30. During the event, Dr. Marta Songin-Mokrzan will give a lecture on „Man and new technologies. The humanistic perspective.” The lecture will address issues of human identity in opposition to non-human factors - animals and products of technology such as robots or androids. The scholar will also explore the issue of the practical application of the humanities in new technologies. Marta Songin-Mokrzan is a PhD in the field of ethnology, assistant professor at the Laboratory of Practical Anthropology at the Institute of Ethnology and Cultural Anthropology at the Faculty of Philosophy and History of the University of

Lodz. She deals with the anthropology of materiality, anthropology of technology, ethnography of production processes, philosophy and ontology of machines.

Four new majors at the University of Technology and Humanities in Radom

2018-05-28

University of Technology and Humanities in Radom began recruitment for the new academic year. The university conducts classes at 8 faculties and implements all kinds of studies, regular master's program and postgraduate studies. In 2018/2019, the University of Radom launches four new majors: Medical Materials Engineering, Applied Linguistics, Fashion Design and Fashion Accessories as well as Mechanics and Machine Building. Studies in the last of these majors will also be conducted in English. Registration for full-time studies will take place until July 11, 2018. More: www.rekrutacja.uniwersytet-radom.pl

Krakov University of Technology to invite children to a tram simulator

2018-05-28

The Institute of Rail Vehicles of the Mechanical Faculty of the Krakow University of Technology prepares for the Children's Day a special surprise. On Saturday - June 2 - children and their guardians are invited to a tram simulator. The first Polish NGT6 tram simulator operates at the Krakow University of Technology. It will allow the visitor to feel like a driver and face situations that can happen during real driving. They can be slippery tracks, the entry of a pedestrian or car on the rails, or a vehicle breakdown. The simulator faithfully reflects the tram cabin. The event will be held at the Krakow university at 11.00-14.00 in Krakow at al. Jana Pawła II 37. More: <https://www.facebook.com/events/2092540401030623/>

Silesian University of Technology cars to come fastest on the Kirkistown track

2018-05-28

The Silesian Greenpower team won the first and second place in the electric cars race of F24 + formula at the Kirkistown track in Northern Ireland. Students of the Silesian University of Technology proved once again that their cars are unrivaled. Gliwice students put up two cars for the race: SG Bullet II and SG Bullet240W. Both performed well on the track and took the first and the second places in the race. The fastest was SG Bullet II, followed by SG Bullet240W, which was also awarded for the fastest lap. Greenpower Formula F24 + competitions are held on professional Formula 1 tracks. Cars are tasked with overcoming the maximum distance in an hour. The whole competition consists of nine races on various tracks, including the final round. Teams can participate in all races, but in the general classification the three best results count. The final round is obligatory.

Students from Poznań won the competition for the most interesting physical education lessons

2018-05-28

The 11th Polish competition for the most interesting physical education lessons was won by Klaudia Urbanek and Paulina Mendowska from the Academy of Physical Education in Poznań. Poznań students in the competition for the best physical education lesson implementing the core curriculum with the use of attractive forms of physical activity proposed classes from the world of the popular cartoon “Gummibears” - «Looking for ingredients for the gummy juice we improve basic movement forms based on the gummy story». The next podium places were taken by: Mikołaj Morawski from the Poznań Academy of Physical Education for the lesson «We shape motor skills while traveling through distant galaxies» and Radosław Bartycha and Klaudia Łasicka from the State Higher Vocational School in Konin for the lesson «We improve general fitness - a functional circuit».

International Conference and Assembly of Students' Scientific Clubs in Wrocław

2018-05-28

Members of the student scientific circles came to Wrocław for the 23rd International Conference and the 35th Meeting of Student Scientific Clubs. In total, 550 students met at the University of Environmental and Life Sciences in Wrocław. They discussed various topics: evolution of spiders, impact of online media on girlfriend selection in Poland from an anthropological perspective, sensory evaluation of chocolate with larvae of flour miller, vitamin C content in potato subjected to technological processes and obtaining jellies from vegetable concentrates. Participants of the conference and the regional council discussed also the modeling of urban transport space in the context of its impact on noise and pollution emissions as well as the dynamics of water intake by the leek roots and the issue of horse nutrition in Poland. Young scientists were also interested in the liver cancer in ferret, fungi in car air conditioning and ecological safety in road transport. More: http://www.glos.upwr.edu.pl/aktualnosci/47904/spotkanie_studenckich_kol_naukowych_na_upwr.html

Polish Minister of Science visits Israel

2018-05-29

Deputy Prime Minister Jarosław Gowin with the Minister of Science and Technology of Israel Ofir Akunis discussed the intensification of contacts between Polish and Israeli universities, as well as technological cooperation within the framework of National Center for Research and Development and the Israeli Center for Research and Development for Industry's joint research projects. Jarosław Gowin, Deputy PM and Minister of Science and Higher Education and Piotr Dardziński, Undersecretary of State in the Ministry of Science on 27-29 May 2018, visited Israel. The trip agenda included meetings with representatives of Israeli and Estonian higher education with the chairman of the Planning and Budget Committee, a member of the Higher Education Council of Israel Prof. Yaffa Zilbershats and the Minister of Education and Research of Estonia Mai-

lis Reps. As the Ministry of Science informs, ministers discussed issues related to Polish experience in reforming the higher education system, talked about a unique consultation process with the academic milieu and the National Science Congress. They also informed about the concepts of internationalization of Polish science and activities of the National Agency for Academic Exchange.

PLN 200 million for the new program „Third University Mission”

2018-05-29

Social and professional activation and prevention of social exclusion are the main goals of the call for the implementation of the „Third University Mission”. The National Center for Research and Development, the executive agency of the Minister of Science and Higher Education, informs that it will allocate PLN 200 million for this purpose. As Deputy Prime Minister Jarosław Gowin said, «we create an offer for all who want to deepen and develop knowledge throughout life.» The «Third University Mission» is a new program providing the universities with the opportunity to broaden their educational offer to recipients from outside the academic community. The participants will have the opportunity to develop their skills and acquire competences that will enable their professional and social activation. More: <http://www.ncbr.gov.pl/fundusze-europejskie/power/konkursy---aktualne-nabory/mu18/>

Logopedical conference at the University of Warmia and Mazury

2018-05-29

The Institute of Polish Studies and Logopedics of the University of Warmia and Mazury in Olsztyn and the Warmian-Masurian branch of the Polish Speech Therapy Society invite participants on 8-9 June 2018 to the conference „Diagnosis, therapy and support of people with speech disorders”. The organizers want to focus on the issues of diagnosis, therapy and support for people with speech disorders. In addition to the problems of diagnosis and speech ther-

apy, particular attention will be paid to the forms of supporting speech therapy, such as: theater, art, music, computer and information technologies as well as institutional care and legal assistance in the case of various language and communication disorders.

Ecological energy sources at the University of Environmental and Life Sciences in Wrocław

2018-05-29

Photovoltaic panels at the Didactic and Scientific Center and the swimming pool of the School of Physical Education and Sport at the Wrocław University of Life Sciences are the largest photovoltaic installations in Wrocław. The entire front wall of the Didactic and Scientific Center building at pl. Grunwaldzki is covered with photovoltaic modules, which should give over 80 kWp (kWpeak, maximum peak power). It is assumed that a solar panel directed to the south with a capacity of 1 kWp will produce within a year from 900 to 1100 kWh of electricity). Solar installations on university buildings provide the opportunity for researchers of renewable energy sources. Scientists and students carry out measurements and check the effectiveness of various construction variants. The University of Wrocław also counts on savings; it replaced old lamps with LED lighting and installed a modern lighting and heating control system. More: http://www.glos.upwr.edu.pl/aktualnosci/47906/na_upwr_energie_czerpiemy_ze_slonca.html

Lublin Students best in the Nationwide Medical Simulation Competition

2018-05-29

Students of the Medical University of Lublin won the Nationwide Medical Simulation Competition, which took place at the Medical Simulation Center of the Medical University of Gdańsk. The home team took the fourth place. Teams from the 10 medical schools had to solve tasks consisting of clinical situations: pre-hospital intervention in acute heart attack, processing with myocardial infarction and cardiac arrest and respiratory cardiopulmonary resuscitation, management of pulmonary edema and asthma, acceptance of labor and surgical treatment of wounds. Teams were evaluated by referees having experience in international competitions. The first place was taken by the team from the Medical University of Lublin, the second by Jagiellonian University - Collegium Medicum in Krakow, and the third by Medical University in Poznań. A total of eighty-nine participants took part in the competition.

Students from Zielona Góra and Gdańsk studying the influence of cosmic radiation on tissue cells

2018-05-29

The Scientific Society of Space Medicine, University of Zielona Góra, in cooperation with the SimLE circle of the Gdańsk University of Technology, carried out the first stratospheric mission as part of the ANTARES project. The mission was to elevate tissue cells into the stratosphere, where the intensity of cosmic radiation is higher and observe the reactions. During the experiment held in Toruń, the stratospheric balloon with samples reached a height of 24. 657m, where the instruments showed radiation about 12 times bigger than on the Earth's surface. Students are now conducting sample tests for changes that could be caused by the increased amount of cosmic rays. The ANTARES project focuses on the processes of carcinogenesis under the influence of cosmic rays. It was the first experiment of a series that the

University students plan to conduct in cooperation with the scientific club SimLE Gdańsk University of Technology.

Advanced simulator for law students of the University of Wrocław

2018-05-29

In the Faculty of Law, Administration and Economics of the University of Wrocław, the „Virtual Crime Room” was opened. It is an advanced simulator for didactic classes using virtual reality equipment that will help future lawyers to learn their professional activities during the inspecting or securing traces. - Our students can «participate» in the investigation of the crime scene and make a detailed analysis of it. All they need are special goggles. Thanks to two hand controllers they can gather evidence and secure traces in the virtual reality - says Damian Mroczyński from the law, administration and economics department. The Crime Room is not the end of «virtual» projects of the University. It plans to create soon the Center for Virtual Reality Technology. The development of virtual techniques is a possibility of cooperation in the field of technology transfer as well as the implementation of research projects and the commercialization of research results. More: <https://uni.wroc.pl/studenci-uwr-na-tropie-wirtualnych-zbrodni/>

World Congress of Graduates at the Catholic University of Lublin

2018-05-30

On 8-9 June 2018, the World Congress of Graduates will take place at the Catholic University of Lublin. The event starts on June 8 with a holy mass celebrated by Archbishop Stanisław Budzik, Metropolitan of Lublin. The guests can listen to the lecture «100 years of the Catholic university in Lublin. Intentions and challenges» by Prof. Stefan Sawicki. They can participate in the discussion panel «Students of Freedom» and in alumni meetings at faculties and institutes. The artistic part will be featured by Marcin Kydryński and a well-known Polish vocalist Anna Maria Jopek.

National Agency for Academic Exchange hosts Delegation from Beijing

2018-05-30

The Beijing Municipal Bureau of Human Resources and Social Security delegation visited the National Academic Exchange Agency. The talks concerned cooperation between universities and scientific organizations as well as the possibilities related to the exchange of scientists. Beijing Municipal Bureau of Human Resources and Social Security is a Beijing government institution responsible for increasing the mobility of researchers. The Chinese guests were presented with the mission and priorities of the National Academic Exchange Agency, as well as the programs run by the Agency. The Chinese side is interested in the exchange of research workers with Poland and support for inter-university cooperation. It was emphasized that this could take place, among others, within the framework of the Academic International Partnerships program implemented by the Agency.

New PhD studies: Digital Humanities

2018-05-30

Literary Research of the Polish Academy of Sciences and the Polish-Japanese Academy of Information Technology started recruitment for a new interdisciplinary PhD program Digital humanities. Candidates must have a university degree in any field of humanities or IT and should have a good command of English in speech and writing (minimum level B2 certified by an appropriate document). By the end of August 2018, the documents provided by the candidates will be evaluated. In the first half of September future students should present the idea of their research project in the field of digital humanities before the recruitment committee. More: <http://ibl.waw.pl/pl/edukacja/-interdyscyplinarne-studia-doktoranckie-humanistyka>

Modern catamaran in the service of the University of Gdańsk

2018-05-30

The Faculty of Oceanography at the University of Gdańsk has started the operation of the modern „Oceanograf” scientific-research catamaran. The ship has wet, measuring, sterile, thermostatic laboratories as well as a seminar and computer room. - The first impressions of the nautical capabilities of the unit are very good. Representatives of the crew inform that the unit is very stable and the advantages of a huge working deck, which offers a double-hull design, can not be overestimated - says Dr Mariusz Sapota, director of the Institute of Oceanography. The «Oceanograf», is a catamaran with a total length of 49.5 m and a width of 14 m. The lateral height is 3.80 m, the height of the upper deck is 6.55 m. The draught of the ship is only 2 meters. The catamaran is to conduct biological, chemical, physical and geological studies of the environment and nature of the Baltic Sea and to provide students with didactic classes.

Professor Alina Wieliczko to become honorary doctor of University of Veterinary Medicine and Biotechnology in Lvov

2018-05-30

Professor Alina Wieliczko from the Wrocław University of Life Sciences became the honorary doctor of the University of Veterinary Medicine and Biotechnology in Lvov. She is the first woman in the history of this university, granted with this dignity. Professor Wieliczko works in the Department of Epizootiology with the clinic of birds and exotic animals at the Faculty of Veterinary Medicine at the University of Life Sciences in Wrocław. She is an outstanding specialist in veterinary science, the creator of rich scientific and popularizing achievements in the field of bird pathology. In an interview for «Głos Uczelni», the professor compares the award of the honorary doctor to the professorial nomination - This is something more. Of course, this dignity can be obtained without being a profes-

sor, because it is obtained for special achievements, but it is a great honor, distinction and appreciation in many areas, not only scientific ones - emphasizes Prof. Wieliczko. More: http://www.glos.upwr.edu.pl/aktualnosci/47907/prof_alina_wieliczko_doktorem_honoris_causa_lwowskiej_uczelni.html

Scientific conference „1968 - Poland, Europe, World” at the University of Warsaw

2018-06-01

The 50th anniversary of 1968 events reminds that history did not concern Poland only, but also other parts of the world. „Rebellion of the young”, counter-culture, new values, more democracy and forms of participation are the determinants of our June discussion - conclude the authorities of the Faculty of Political Science and International Relations of the University of Warsaw in a letter inviting participants to the conference „1968 - Poland. Europe. World „, which will be held on June 27-28, 2018. During the conference there are planned 6 discussion panels: “Generation of March „68 - generation of new explanations”, “The new times are coming - how the social has become the political”, “I can see thunders and lightnings - the end of obviousness in social policy”, “We all want to change the world - the rebellion and counter-culture of the generation of revolt”, “The world is strange and there is still a lot of evil - the Cold War of the 1960s”, and “There must be some way out of it - 1968 after the Iron Curtain”. As Prof. Stanisław Sulowski, dean of the Faculty of Political Science and International Relations emphasized, the organizers hope that the participation in the conference will inspire reflections on 1968 events and on the contemporary world.

Warsaw and Jagiellonian Universities in Krakow lead in the ranking of higher schools Perspektywy 2018

2018-06-01

The latest 19th Ranking of Universities Perspektywy was won by two universities ex-equo the Jagiellonian University in Krakow and the University of

Warsaw. The third place was won by the Warsaw University of Technology. The Kozminski University in Warsaw is the best among the non-public universities. The Adam Mickiewicz University in Poznań, AGH University of Science and Technology in Cracow and Wrocław University of Technology took farther positions in the ranking. In the group of non-public universities, the Kozminski University in Warsaw is followed by the SWPS University of Social Sciences and Humanities in Warsaw and the Lazarski University in Warsaw. In the group of state-owned higher vocational schools the first three positions are received by Państwowa Szkoła Wyższe in Białą Podlaska, Academy from Gorzów Wielkopolski, State Higher Technical-Economical School in Jarosław. More: <http://www.perspektywy.pl/RSW2018/2-aktualnosci/29-uw-i-uj-najlepszymi-uczelniami-w-polsce>

Gdańsk University of Technology to cooperate with universities from China

2018-06-01

Gdańsk University of Technology has signed a five-year cooperation agreement with Xidian University. During their stay in China, the rector and vice-rector of the Gdańsk university started talks with four other universities and took part in the conference University Alliance of the Silk Road in Xi'an. Professor Jacek Namieśnik, rector of the Gdańsk University of Technology and Prof. Janusz T. Cieśliński, vice-rector for organization met the authorities of the Harbin Institute of Technology, of Shaanxi Normal University, of Chang'an University and of the University of Shanghai for Science and Technology. The talks ended with declarations of willingness to start cooperation. The rectors of the Gdańsk University also participated in the international conference University Alliance of the Silk Road - associating 135 universities from 36 countries of the non-governmental institution, which aims to internationalize higher education, and stimulate the economic development of the countries associated with the Silk Road Economic Belt.

Recruitment for the University of Silesia on 1 of June

2018-06-01

From the first of June students can log in to the online recruitment system for studies at the University of Silesia. The university celebrates its 50th anniversary this year and it prepared 76 faculties and 235 specialties for students in the new academic year. The Silesian University conducts studies at the faculties located in four cities of the Silesian Voivodeship: Katowice, Chorzów, Sosnowiec and Cieszyn. The educational offer in the academic year 2018/2019 will cover the fields of humanities, social sciences, science, nature and engineering, as well as art. Students with non-traditional interests, beyond the traditional educational framework can choose their individual inter-studies. Online Registration of Candidates (IRK) for studies in the new academic year covering all types of studies will start on June 1 at noon. The basic registration will run until July 8 at 23:59. detailed information: www.kandydat.us.edu.pl

University of Opole to support the First High School in Kluczbork

2018-06-01

The University of Opole will support the First High School in Kluczbork mainly in terms of biological-chemical profile. Taking into account the students comprehensive development, both sides express the will to cooperate, support and enrich the didactic process in the 1st High School in Kluczbork in order to stimulate independence and mental activity of young people in acquiring new skills and choosing further education. The agreement was signed by the rector of the University, Prof. Marek Masnyk and the headmaster of the high school Mariusz Kaczmarek. The honorary patron of the agreement is the Marshal of the province Opole's Andrzej Buła. The High School in Kluczbork is the third school - after the Second Lyceum in Opole and the High School Carolinum in Nysa - under the patronage of the Opole university. Delegation of the Chinese province of Henan at the University of Lodz

2018-06-04

The authorities of the University of Lodz invited the Chinese delegation composed of representatives of the administration of Henan Province and Chinese universities. The guests visited the Faculty of Economics and Sociology launching every year academic teachers to the Chinese partner university with lectures. The Chinese delegation was led by Rong Xihai, director of the Education Department of the Henan Province and Shi Maosheng, the dean of international education at the University of Zhengzhou. The purpose of the visit was to deepen the cooperation of the University of Lodz with the Zhengzhou University in the 2 + 2 program in economics (the first two years of study in Poland, two more years in China), which was the first program of this type accredited by the Ministry of Education in China between the Polish and Chinese universities.

Paleozoologists from the University of Wroclaw to hold a picnic „Life and death of Gorzow Stefania”

2018-06-04

Researchers from the Paleozoology Department of the University of Wroclaw invite visitors to a science picnic as part of the Gorzów Wielkopolski Days from 8 to 10 June. They will talk about the rhino skeleton of *Stephanorhinus kirchbergensis*, known as Stefania, discovered during the construction of the Gorzów beltway. The remains are over 120,000 years and they are one of the best preserved animal skeletons from that time in Poland. The discovery initiated the cooperation of the Lubuskie Voivodeship, the City of Gorzów and the University of Wrocław. On Friday, June 8, a letter of intent will be signed about joint activities promoting paleontology. „Stefania” inspired Wrocław scientists to launch an idea for the Cenozoic Park. On Saturday, a scientific session will take place, on Sunday there is planned „Paleontology for fun” including educational films, presentation of bones, rocks and minerals and the performance

of rhino and ammonite figurines on the plaster. Picnic program on the website of UM Gorzów: <http://mckgorzow.pl/dni-gorzowa-2018-energia-miasta-program/>

New majors and specialties at the University of Silesia

2018-06-04

In the academic year 2018-2019 new fields and specialties will appear at the University of Silesia in Katowice. From October students will be able to study Architecture of Information and Music in multimedia. The Music in multimedia stationary studies at the art department include the two specialties - Sound in games and Musical composition in the audiovisual arts. The second novelty Architecture of Information includes full-time studies at the Philology department. The offer of the Silesian university includes also a new specialty - surdopedagogy with art therapy. It will be conducted as the pedagogy of disabled people with art therapy. The university expands the educational offer, launching specializations and specialties responding to the needs of the labor market and the expectations of employers.

National Academic Exchange Agency in the USA

2018-06-05

On 27 May - 2 June 2018, the delegation of the National Academic Exchange Agency headed by Director Łukasz Wojdyga participated in NAFSA fairs and conferences held in Philadelphia. NAFSA is the world's largest non-governmental organization dealing with international education. The Directors of the National Academic Exchange Agency met the President of the Institute of International Education, Alan Goodman, and participated in the panel on internationalization and the Agency's offer at Villanova University. The event was attended by Polish scientists, representatives of Polish associations, as well as scientists from Villanova University and other institutions from Pennsylvania. In Chicago, the delegation of the National Academic Exchange Agency met the representatives of universities from the states of Illinois, Wisconsin and Indiana, and with Polish media in USA.

Lublin University of Technology is the most innovative university in Poland

2018-06-05

The Lublin University of Technology has been announced the leader of innovation in this year's ranking of higher education schools prepared by the „Perspektywy” journal. - It is a great honor for us. Once again, we took the first place in the category of innovation. Our advantages are numerous inventions, whose authors are both university employees and students. Their solutions have been repeatedly awarded in national and international competitions. Also, our students since 2011 are the laureates of the „Student-Inventor” competition and win medals at the International Exhibition of Inventions in Geneva - said Prof. Piotr Kacejko, rector of the Lublin University of Technology. Over the past six years 441 patents have been submitted by the Lublin University of Technology, of which 383 were obtained. In terms of the number of inventions reported (93 in 2017) and obtained patents (71 in 2017) the university ranks among the top universities. By the number of applications and patents per employee, the Lublin University of Technology takes the 1st position in Poland.

Energy Management specialization at the VISTULA Academy in Warsaw

2018-06-05

The Vistula Academy of Finance and Business in Warsaw is launching new Energy Management specialization. Energy Management is Master's studies in English, which will allow students to explore the secrets of various energy sources: conventional, renewable, as well as nuclear energy. In their course the issues related to „global energy markets, needs analysis, supply chain management and crisis management” will be discussed. The studies are co-financed from European funds. The program will be developed in close cooperation with professionals from the energy industry. More: https://apply.vistula.edu.pl/?_

University of Adam Mickiewicz in Poznan launches recruitment

2018-06-05

From 1 June 2018, the University of Adam Mickiewicz in Poznan launches a recruitment for students. In the educational offer for 2018/2019, 7 new courses appeared. Students will study such fields as: Biology and Human Health, Economy and Economics in history or Nature protection and Nature and Forest education, which is a joint project led also by the University of Life Sciences in Poznan - said Prof. Bogumiła Kaniewska, vice-rector for student affairs at the Poznań University. The new specialties include: Geography - studies at the Faculty of Geographical and Geological Sciences, Rehabilitation of people with autism disorders and Specialty of teaching physics and chemistry. At the Faculty of Physics, the University offers a new specialty Physics of Advanced Materials for Energy Processing in English.

Rzeszów University of Technology to cooperate with the Ożarów Group

2018-06-05

Rzeszów University of Technology will cooperate with the Ożarów Group in the field of joint research and development projects. A letter of intent was signed by Dr. Eng. Mariusz Oleksy, vice-rector for development and contacts with the economy of the Rzeszów University, and Marek Surowiec, member of the Board, director of strategy for the Ożarów Group. Pursuant to the document, the parties agreed to undertake joint activities and hold lectures for students about the production of cement and its use, the organization of conferences, visits and student internships. The cooperation will also concern research and development undertakings.

University of Rzeszów meets representatives of Guangdong Polytechnic Normal University

2018-06-05

The authorities of the University of Rzeszów met the representatives of the Guangdong Technical Normal University (GPNU). The purpose of the meeting was to establish detailed rules for the organization of the learning process in the direction of „Chinese Culture and Social Development” - informs Dr. Maciej Ulita, spokesman for the Rzeszów University. The first two years of classes will be carried out in English, two more in Chinese. The completed studies will be payable respectively - 1,500 euro / semester for two years in Poland at the University of Rzeszów, and then 13,000 yuan / semester for two consecutive years in China. Dr Maciej Ulita argues, this is a future study related to the global economy, industry and also cultural exchange. If anyone dreams about knowing the specifics of Chinese culture and business then they should apply for it. During the meeting, detailed rules for the exchange of scientific and administrative employees necessary for the implementation of the assumed study program were also established.

Agreement on cooperation between Poznan University of Technology and Universidad Católica de Santa Maria

2018-06-06

University of Technology will cooperate with Universidad Católica de Santa Maria in Arequipa, Peru. The agreement on the exchange and academic cooperation was signed during the stay of Peruvian guests in Poznan. The document opens up the possibility of implementing partial studies by students and PhD students of both universities. It was signed by the Dr. Cesar Cáceres, Vice-Rector, Prof. José A. Villanueva Salas, dean of the University of Arequipa and Rector of the University of Technology, Prof. Tomasz Łodygowski. During the visit, the guests from Peru discussed the vision and strategy for further activities in the field of common research interests in chemical technology and related fields. The visitors also visited laboratories from many areas - including biotechnology, manufacturing and characterization of functional materials and biomaterials, polymer processing, chromatography, energy storage and new electrode materials.

New headquarters of the Confucius Institute in Wrocław

2018-06-06

Confucius Institute at the University of Wrocław has a new headquarters. The renovation of the building at ul. Kręta 1 was carried out in three months. This is not the end, soon the building will be provided with a Chinese garden. In the opinion of Prof. Adam Jezierski, the rector of the University, the new headquarters for the Confucius Institute was needed. - We have more and more students, and more and more guests come to open lectures and other events organized by the Institute - said the rector. The Institute is primarily a scientific institution of the Wrocław University cooperating with the university in Xiamen. The Confucius Institute may be a small element in the structure of the University, but it is quite important. It is such a Chinese „outpost”, and yet China is an economic and scientific power, this cooperation is therefore of particular importance - said Prof. Jezierski.

Nobel laureate to hold lecture at the Copernicus Science Center

2018-06-06

Polish Academy of Sciences with the participation of the Academy of Young Scientists and the Copernicus Science Center invites the participants to the lecture of Prof. Tim Hunt, Nobel laureate in medicine and physiology in 2001, which will be held on June 14 at 18.00 at the Copernicus Science Center in Warsaw. Prof. Hunt will talk about his research on cell cycle regulation and share his thoughts about a successful research career. During the panel discussion after the lecture, he will conduct a conversation about the characteristics of a good scientist, their role in the modern world, as well as the scientific balance between openness and competitiveness, professional duties and personal life.

„Borderland Mathematics” in Białystok

2018-06-06

University of Technology and the University of Białystok organize on 15-17 June 2018 an interdisciplinary conference „Borderland Mathematics”. Its aim is to popularize the use and presence of mathematics in various areas of our lives: architecture, art, nature, space and even music. The task of the conference is to connect scientists on both sides of Poland’s eastern borders and, at the same time, seek a bridge between mathematics and other fields of science. The organizers invite mathematicians from Poland and neighboring countries Lithuania, Ukraine, Belarus and Russia. More: <http://mp.wi.pb.edu.pl/index.php/en/>

University of Silesia to receive the „Amicus Librorum” statuette

2018-06-07

The University of Silesia in Katowice awarded the „Amicus Librorum” statuette from the Silesian Library. The statuette is honoring outstanding figures and institutions that have contributed to the en-

richment and strengthening of culture, the region and the city. The award was granted in the 50th anniversary of the Silesian university. It is an appreciation of the university and its contribution to the development of the region. Many scientific and popular science works that have been created at the University of Silesia are the result of research carried out thanks to the rich, often unique collections of the Silesian Library in the world. The university and Library in 2006 established the Silesian Digital Library. The project promotes culture and science, provides access to the cultural heritage collected in Silesia and to exceptionally valuable scientific publications, educational and teaching materials.

Collegium Civitas to hold a seminar “Perspectives of political development in Palestine”

2018-06-07

The Embassy of Palestine in Poland and the Office of Cultural Safety of Collegium Civitas organize on June 21, 2018 a seminar called „Perspectives of political development in Palestine”. The event will start at 18.00 in the Aula B Collegium Civitas (XII floor of the Palace of Culture and Science in Warsaw) and it will include an expert panel, a debate and a screening of a promotional film about Palestine. The inaugural speech is to be delivered by Mahmoud Khalifa, ambassador of the Palestinian State in Poland. It is worth noting that in the last ranking of Polish higher schools Perspektywy 2018, Collegium Civitas took the 1st place among non-public universities in sociology and international relations.

General Róžański delivers a lecture at the School of Economics in Radom

2018-06-07

On June 3, 2018, the general of the army, Dr Mirosław Róžański held a lecture „Challenges for the state and NATO armies and the global security system” at the School of Economics in Radom. In 2011, General Mirosław Róžański obtained a PhD degree in the field of defense sciences. In 2015-2017 he was the General Commander of the Armed Forces. During the lecture, for the first-year Master’s students in the field of Internal Security and Administration, he discussed the role of national armed forces in shaping state security, in the context of belonging to NATO structures and the need to modernize Polish armed forces. He drew attention to the provisions of the Washington Treaty, which impose on NATO member states the obligation to maintain their individual capabilities to resist assault.

Deputy Prime Minister Gowin appointed a new composition of the Scientific Policy Committee

2018-06-07

Jarosław Gowin, Deputy Prime Minister Minister of Science and Higher Education, appointed new members of the Science Policy Committee. The Scientific Policy Committee is a consultative and advisory body that supports the minister in developing documents regarding financing and development of science as well as determining national and foreign investment priorities - explains the Ministry of Science. The Scientific Policy Committee includes: 1. Dr Stanisław Czekalski 2. Dr Natalia Garner 3. Prof. Janusz Gołaś 4. Prof. Wiesława Grajkowska 5. Prof. Andrzej Jajszczyk 6. Prof. Barbara Klajnert-Maculewicz 7. Dr Eng Krzysztof Leja 8. Prof. Jacek Łęski 9. Prof. Jerzy Marcinkowski 10. Dr Marcin Nowotny 11. Prof. Jerzy Szwed 12. Prof. Tomasz Żylicz

40 years of cooperation between the Maritime University of Gdynia and the German Hochschule Bremerhaven

2018-06-07

Maritime University of Gdynia has been cooperating with the German Hochschule Bremerhaven for 40 years. The bilateral agreement on joint scientific-research and teaching activities was concluded on June 12, 1978. The anniversary celebrations are planned on the ship deck of „Dar Młodzieży”, which will come to Bremerhaven on June 19. Both universities organize staff exchanges, conduct a series of lectures for students and joint symposia and conferences. Since 1985, the journal „Joint Proceedings of Hochschule Bremerhaven and Gdynia Maritime University” has been published. The Association of Friends of the Dar Młodzieży has been operating in Bremerhaven since 1993. From the academic year 2000/2001, universities implement exchange of students and employees as part of the Erasmus Program. Lecturers and students of the Academy participate in the International Summer School organized by the Hochschule Bremerhaven since 2005.

AGH University of Science and Technology in Krakow launches recruitment for students

2018-06-07

AGH University of Science and Technology in Krakow began recruitment for students. Candidates can choose 62 studies at 16 faculties. This year, the offer has expanded by four new studies - informs Natalia Wójs from the press office of the Krakow university. As part of the first-degree program the university will accept 7,330 students. 6060 students will start full-time studies and 1270 in part-time studies. In this year’s recruitment, the Krakow AGH University of Science and Technology launched four new faculties: Renewable Energy and Energy Management at the Faculty of Energy and Fuels, Geoinformatics at the Faculty of Geology, Geophysics and

Environmental Protection, Revitalization of Degraded Areas at the Faculty of Mining and Geoengineering and Geoinformation at the Faculty of Mining and Engineering Geodesy environment. A full list of directions for candidates to register and detailed recruitent information can be found in the new recruitment service: www.kandydaci.agh.edu.pl

University of Life Sciences in Poznań wins Polish Intelligent Development Award

2018-06-07

The Center for Innovation and Technology Transfer of the University of Life Sciences in Poznań has been awarded the Polish Intelligent Development Prize 2018 in the category of Innovative Future Solutions for the University. The prize was awarded by the Polish Patent Office for the implementation of the EkoBioFood project - PULS PLANTINOVA PPNT. The Polish Intelligent Development Award is a nationwide prize awarded to the most innovative projects implemented under EU and national programs by scientific institutions and companies involved in research and development. It is given to entities which contribute to the sustainable development of the country and increase the standard of living of the local community. The prize-giving ceremony is planned at the Gala of the Polish Intelligent Development Award during the International Forum of Intelligent Development 3.0 Uniejów 2018. More about the project: <http://www.ciitt.up.poznan.pl/Projekt-ININ,p82.html>

New study Global over Development Studies at the Jagiellonian University

2018-06-08

The Faculty of International and Political Studies of the Jagiellonian University in Krakow launched a BA program Global Development Studies. It is to be an interdisciplinary program conducted in English, aimed at familiarizing students with the processes of globalization in various areas: law, politics, economy, history, sociology, culture and communication - informs the Krakow university. Graduates of the new course will learn about trends in sociology, philosophy, politics and economy in the world. The program will enable them to continue their education at master's or post-graduate studies in the field of international relations, regional studies, political science or economics.

Prof. Hermann Maurer to hold a lecture at the Wrocław University of Technology

2018-06-08

Wrocław University of Technology invites participants on Tuesday, June 12 to the lecture „We need lots of imagination to solve some of the big problem facing mankind“. The lecture will take place as part of the Interdisciplinary Scientific Seminar. The lecturer will deal with unconventional solutions to the basic problems that have faced humanity – related to overpopulation, global warming or digitization - says prof. Arkadiusz Wójs, chairman of the Interdisciplinary Scientific Seminar. Professor Maurer is associated with the Technological University in Graz. In 1965 he obtained a Ph.D. in mathematical sciences, he also graduated from the University of Calgary. He lectured at universities in Australia, Brazil, Canada, Germany, New Zealand and the USA. He has developed many innovative solutions in the field of information technology, data collection and processing, or the development of Internet networks.

Academy of Young Inventors in Częstochowa

2018-06-08

University of Humanities and Natural Sciences in Częstochowa will carry out the project „Academy of Young Inventors, an initiative broadening the horizons of creative and innovative thinking of children and youth“. The Young Inventors' Academy aims to show young people that learning can be a form of fun. It is a kind of mobilization of children and youth for critical and creative thinking, stimulating the imagination, solving problems and innovative action while acquiring knowledge. The project covers only the didactic activities aimed at developing key competences and universal skills - transversal skills - necessary on the labor market among the participants of the project. Activities will be implemented using the technical and human resources of the Faculty of Mathematics and Natural Sciences at the University of Częstochowa.

Biochemists of Gdańsk Medical University top in Superhelisa 2018

2018-06-08

Julia Denis, Izabela Kotlewska and Małgorzata Styczewska are students of the Medical Faculty of the Medical University of Gdańsk, who won the team classification of the National Polish Biochemistry Review „Superhelisa 2018“. Małgorzata Styczewska was also the best „Young Biochemist“. She scored the highest number of points in all three stages of the competition. The second place was Dominik Rus from the medical department of the Warsaw Medical University, the third was Piotr Mielczarek from the Silesian Medical University in Katowice. Teams from Katowice and Warsaw took the second and third place in the team competition. In the 15th National Competition of Biochemical Knowledge, 30 best medical students from Polish universities took part. After written analysis of issues, a test of the entire material and a final oral statement, students visited the European Solidarity Center and the Gdańsk Old Town.

University of Wrocław in the SCALINGS research project

2018-06-08

The research project Scaling up Co-Creation: Avenues and Limits for Integrating Society in Science and Innovation (SCALINGS) has been launched. The project involves a team of scientists from the University of Wrocław. The project is implemented as part of a competition whose guiding principle is to involve society in co-creation of science and innovation as well as development of responsible science and innovation (proper research and innovation-RRI). The Polish team will examine the economic and financial aspects of implementing new technologies, in particular, renewable energy in cities. The consortium of executors consists of 35 European universities including Technical University of Munich, Eindhoven University of Technology, Technical University of Denmark, The Ecole polytechnique fédérale de Lausanne, Mines Paristech, University of Natural Resources and Life Sciences Vienna, University College London and the Social Innovation Exchange.

TOP 100 Innovators of the Economy - a new program of the Ministry of Science and Higher Education

2018-06-08

The Ministry of Science and Higher Education launched the „TOP100 Innovators of the Economy” program, whose aim is to facilitate cooperation between entrepreneurs and scientists as well as to support the managing of scientific research. According to the Ministry of Science, the program will enable employees of enterprises to complete internships in foreign scientific units or in enterprises with experience in conducting research and development activities. Piotr Dardziński, Undersecretary of State in the Ministry of Science and Higher Education, emphasizes that intensifying cooperation between scientists and entrepreneurs is one of the most important aims of the Ministry. There is no possibility of developing the Polish economy without using the scientific output. The Ministry of Science will allocate over PLN 15 million for the implementation of the program. More: <https://www.nauka.gov.pl/komunikaty/uruchomienie-programu-top100-innowatorzy-gospodarki.html>

International conference on planning teacher education and development at the University of Bialystok

2018-06-08

From 7 to 9 June 2018, the Faculty of Pedagogy and Psychology at the University of Bialystok will hold an international scientific conference devoted to the planning of teacher education and development („Designing Teacher Education and Professional Development for the 21st Century: Current Trends, Challenges and Directions for the Future”). According to Katarzyna Dziedzic, spokesperson of the University of Bialystok, the event will be attended by nearly 160 researchers and representatives of educational institutions from around the world. The main goal of the conference is to undertake an international discussion on trends, challenges and perspectives in teacher education in the 21st century.

The organizers of the conference are the Faculty of Pedagogy and Psychology at the University of Bialystok and the Association for Teacher Education in Europe (ATEE).

Joint project of universities in Wrocław and Czech Olomouc

2018-06-11

The University of Wrocław and the Palacký University in the Czech Olomouc are implementing a project that increases the language competences of high school and university graduates on the Polish-Czech border. The goal is to reduce unemployment in this region. - The beneficiaries of our activities will be people learning Polish in the Czech Republic and the Czech language in Poland who want to look for a job in neighboring countries - says Ivana Dobrotová, head of the Section of Polish Philology at the Department of Slavic Studies at the Palacký University in Olomouc. The main element of the project „Increasing the language competences of future graduates in the cross-border labor market” are one or two semester courses. Students, who complete the course will receive a certificate confirming their knowledge of the language, they will also be able to take the verification exam (A2 or B1). The project will last until the first half of 2021. More: <https://uni.wroc.pl/polacy-i-i-ime-pomoga-zdobyc-prace-absolwentom/>

Prof. Emilio Meneses to hold a lecture at the University of Lodz

2018-06-11

The Faculty of Economics and Sociology at the University of Lodz invites participants to a lecture by Prof. Emilio Meneses, titled „Central Europe and Latin America: front line or peripheral regions?”, which will be held on June 12, 2018. The Professor will discuss issues of geopolitical status and economic importance of Central Europe and Latin America, especially in the context of US-Chinese-Russian rivalry. Professor Emilio Meneses is a graduate of Georgetown University and the University of Oxford. In the years 1981-1984 he was an adviser to the Minister of Defense of Chile. Then he was the head of the

Department of Defense Studies at the Catholic University of Chile and the Department of International Relations at Chilean Naval War College.

Silesian University of Technology receives over PLN 4 million in the MOTO POWER competition

2018-06-11

The Silesian University of Technology has received over PLN 4 million as part of the MOTO POWER competition organized by the Ministry of Investment and Development. This is the highest grant received among all higher education institutions. As part of the project „Silesian University of Technology as a research center in the field of education for the automotive industry”, five education programs will be developed and tested at the fifth level of the Polish Qualifications Framework. It joins vocational education with secondary and higher education. The education will be implemented in five fields: automation and robotics at the faculties of Automation, Electronics and Information Technology and Mechanical Technology, electrotechnics at the Faculty of Electricity, transport at the Faculty of Transport, mechanics and mechanical engineering at the Faculty of Mechanical Engineering, as well as management and production engineering at the Faculty of Organization and Management.

Feast of the University of Rzeszów

2018-06-11

On June 7, 2018, the University of Rzeszów celebrated its anniversary. As the part of the event, assistant professors and PhD holders were promoted, Prof. Anna Blom received the title of doctor honoris causa and Tadeusz Ferenc, the President of Rzeszów received the Great Medal of the University of Rzeszów. The celebrations began with the performance of Gaude Mater Polonia sung by the Choir of the Music Department under the direction of Dr Bożena Stasiowska-Chrobak and greetings from Prof. Sylwester Czopek, rector of the University of Rzeszów. After the graduation ceremony, Prof. Sylwester Czopek said: „I would like to thank all the promoters for their work with PhD holders and for participating in today’s solemn promotion. I wish doctors a further development of their scientific interests. „ In the second part of the celebrations of the University of Rzeszów, Prof. Anna Blom received the title of doctor honoris causa, the President of Rzeszów received the Great Medal of the University of Rzeszów and the University staff received state awards.

EkoPark at the University of Gdańsk

2018-06-11

The EcoPark was established on the Baltic Campus of the University of Gdańsk. It is the only project in the region that combines educational, scientific and recreational functions. Its total cost is almost PLN 3 million with over PLN 2 million co-financed from European funds. The park was created between the faculties of biology, chemistry and mathematics, physics and informatics on the university campus in Gdańsk Oliwa. It is an area of preservation and promotion of biodiversity. It also fulfills educational, scientific and recreational functions to the entire local community. The research on the species that require special care and practical classes for students are planned in it. The park will contribute to the increase of the ecological value of Gdańsk by increasing access to green areas and thus properly developed areas for recreation of students and Gdańsk residents.

Final of „Algorithms and data structures” within the Programming Academy of the Maria Curie-Skłodowska University in Lublin

2018-06-11

On June 11, 2018, the final of the „Algorithms and data structures” competition will take place as part of the Academy of Programming at the Maria Curie-Skłodowska University in Lublin. The „Programming Academy” is a long-term educational project aimed at popularizing information technology among school students from the Lublin Province - informed Katarzyna Kozielowicz from the press office of the Lublin university. The „Academy” offer is addressed to a wide range of students interested in programming. The organizers plan to motivate young people to broaden their horizons and prove that IT issues can be presented in an interesting and accessible form. Ultimately, the „Academy” will offer complete programming courses.

10th Summer Academy of Music in Wrocław

2018-06-11

Academy of Music in Wrocław invites music teachers and students to the 10th Summer Academy of Music. The workshops directed by excellent musicians and teachers are planned from June 26 to July 1. The deadline for applications is 12 June. The Summer Academy courses are organized for students of primary music schools, students of music secondary schools, graduates and music school educators. The Wrocław Academy of Music offers the improvement of playing technique and interpretation, the improvement of vocal technique and interpretation as well as conducting techniques in the choral and symphonic music, as well as shaping the compositional skills, the creative expression and the development of artistic personality.

Polish high schools in the latest ranking of the 1000 best universities in the world

2018-06-12

The University of Warsaw was ranked 394, the Jagiellonian University in Kraków occupied 411, and the Warsaw University of Technology took 601-650 position, in the latest QS World University Rankings. The ranking presents 1000 best universities around the world. This year there were 14 universities from Poland included in it. QS World University Ranking is prepared by the British company Quacquarelli Symmonds, which publishes analyses devoted to education and studying abroad. It is one of the four most important global educational rankings alongside Times Higher Education, Shanghai Ranking and U-Multirank. Six criteria are evaluated in the assessment of the statement: reputation in the academic environment, prestige among employers, the ratio of the number of lecturers to the number of students, the number of citations and the number of foreign students and employees. The first three in the ranking are US universities: Massachusetts Institute of Technology, Stanford University and Harvard University. More: <https://www.topuniversities.com/university-rankings/world-university-rankings/2019>

Cardinal Stefan Wyszyński University to establish Collegium Medicum

2018-06-12

The Cardinal Stefan Wyszyński University in Warsaw will launch soon Collegium Medicum. The Parliamentary Committee on Education, Science and Youth gave a positive opinion on the bill amending the Act on the Cardinal Stefan Wyszyński University. For several years, the Warsaw University has been preparing to educate future PhD holders in medicine. In 2014, the Laboratory Center was opened for basic research in the field of medical sciences. In 2016, the Center for Virtual Anatomy and Surgical Simulation was established, and the biology specialty was launched in the biology studies. As emphasized the priest Prof. Stanisław Dziekoński, the rector of the university in the Polish Parliament, Collegium Medicum is an opportunity for the Polish medical community to acquire new international partners. In recent years, the Cardinal Stefan Wyszyński University has established cooperation with the Gemelli Hospital in Rome, with the European School of Advanced Ophthalmological Research (ESASO) at the Swiss University of Lugano and with Isarklinik in Munich.

Inter-faculty studies offered by the University of Opole

2018-06-12

In the new academic year, the University of Opole invites students to study languages, law, and entrepreneurship as part of an inter-faculty program prepared by the faculty of philology and the faculty of law and administration. The first inter-faculty study at the University of Opole was created for educating staff that provide linguistic, organizational, administrative and legal support to entities conducting international cooperation. It will develop specialists fluent in two foreign languages and able to apply effectively the law in their professional activities. The studies are addressed to the students who want to learn Czech, to continue learning English and to gain specialist knowledge in the field of law and entrepreneurship. Graduates will be comprehensively prepared to take up jobs at positions requiring legal knowledge of business processes.

Students of the Silesian University of Technology win in Shell Eco Marathon

2018-06-12

Students of the Silesian University of Technology won the competition Shell Eco Marathon in the BatteryElectric Prototype category at the RKC Carting Paris. The victory in Paris assures Wrocław University admission to the Shell Eco-marathon Europe Championship. The competition in France lasted a week. Students from the SmartPower team successfully passed the technical inspection and took the first place in the BatteryElectric Prototype category. The designers hope that the France experience will help them to success at the Shell Eco-marathon Europe Championships planned for July. The final in London is the 34th competition of energy-saving constructions. The first such competition was held in Paris in 1985 and 25 wooden vehicles started then. The victory is not the only success of the Wrocław Technological University. Previously, they awarded the prize for the Best University at the Hydrogen Horizon Automotive Challenge.

Summer School on Democracy at the University of Wrocław

2018-06-12

The Institute of Political Science at the University of Wrocław invites participants to the Summer School on Democracy. They will be discussing the role of the information in the modern world and various forms of populism. The classes will start on Sunday, June 17. The organizers announce that during summer school classes its participants will discuss the functioning of contemporary media, how information is used and how it affects the society, issues in the field of social media, the problem of disinformation, populism and media development opportunities in the future. In times when access to information has become unlimited, it is extremely important to select properly and verify the content that the readers receive. In this way, the importance of competencies needed to create and receive ubiquitous information increases significantly. Summer School on Democracy will last until June 28. University of Economics in Katowice supports Silesian secondary schools

2018-06-12

The University of Economics in Katowice signed further support agreements with secondary schools. The educational cluster including already several dozen institutions has been joined by the Technical and High Schools Complex in Bytom, Complex of Technical and General Education Schools No. 3 in Katowice and I High School in Wodzisław Śląski. - The University of Economics is a perfect place to study economics, business, IT and humanities. We are happy that among our students we have the best graduates of the secondary schools with which we cooperate, including winners and finalists of the subject competitions. The successes of candidates and students motivate us to even more intensive work to improve the quality of education and science – said Prof. Sławomir Smyczek the Vice-Rector for Education and Internationalization signing the contract.

University of Zielona Góra in the Polish Consortium ATHENA-PL

2018-06-12

University of Zielona Góra became a part of the Polish Consortium ATHENA-PL. The aim of the Consortium is to coordinate the activities of scientists and engineers from Poland within the project of construction and use of the ATHENA satellite (Advanced Telescope for High-Energy Astrophysics) - informs Ewa Sapeńko the university spokesman. ATHENA will observe the sky in the soft X-ray radiation and add the knowledge about the evolution of clusters of matter in space. The Polish team will take care of construction of subassemblies of one of the two main instruments and simulations allowing to assess the possibilities of observation of various phenomena and objects. The consortium is formed by the Nicolaus Copernicus Astronomical Center of the Polish Academy of Sciences (PAN), Space Research Center PAS and Center for Theoretical Physics PAS in Warsaw, National Center for Nuclear Research in Otwock, as well as Jagiellonian, Wrocław, Szczecin, Łódź, Zielona Góra, Białystok, Kielce and Toruń universities.

Professor Wiak becomes doctor honoris causa of the d'Artois University in Arras

2018-06-13

Professor Sławomir Wiak, rector of the Łódź University of Technology became the honorary doctor of the French University d'Artois in Arras. Professor Wiak has spent last 9 years in Arras as Visiting Professor. He conducted research there and held lectures on modern computer modeling and simulation techniques used in device design, software engineering and computer-aided design. - The title of doctor honoris causa of the d'Artois University is the recognition of the French academic environment for Prof. Sławomir Wiak, his research, organizational work and the development of international cooperation – emphasizes the representant of the Łódź University of Technology.

Debate „Will the World Cup in Russia be safe?” at Collegium Civitas

2018-06-13

The Center for Terrorism Research Collegium Civitas invites participants to a debate on June 13 with the participation of experts from the politics, media and sports entitled: „Will the World Cup in Russia be safe?” The meeting will start at 17:30 at the Collegium Civitas headquarters (XII floor of the Palace of Culture and Science in Warsaw, room 1222). The speakers include Roman Kosecki, former Polish football representative, in 2012-2016 the vice president of the Polish Football Association and currently a member of the Sejm, Przemysław Iwańczyk, sports journalist, Maciej Karczyński, spokesman for the Internal Security Agency in 2012-2016, Andrzej Mroczek, expert on terrorism and Dr. Krzysztof Liedel, director of the Center for Terrorism Studies Collegium Civitas. The topics of the debate are mass sports events as high-risk events, security measures for mass sports events in the world, sports in high-risk conditions - how we perceive contemporary sports spectacles and safe support - good practices and recommendations.

Cooperation between the Maritime University and the Szczecin police for improving security

2018-06-13

Maritime Academy and Provincial Police Headquarters in Szczecin have signed a cooperation agreement. The aim is to support all initiatives and joint actions to improve road safety and improve the automotive culture among all road users and institutions and organizations supporting these activities. The signatories of the agreement are provincial police chief in Szczecin - Jacek Cegiela and the rector of the Academy – Dr. Eng. Capt. Wojciech Trybacz, Prof. of Maritime Academy. The commander stressed that the key factor will be the development of new road safety improvement projects and their active implementation. - We believe that acting together with the police, the Academy can use knowledge

and experience to observe everyday life and provide the results of analyzes in order to create the traffic space that is friendly to all road users - says the commander quoted on the Academy website.

CIMA program at the Faculty of Management in Łódź

2018-06-13

The Faculty of Management at the University of Łódź has signed a cooperation agreement with the CIMA Institute of Management Accounting. The purpose of the agreement is to create opportunities for the Faculty's students to obtain qualifications that will allow them to start their professional careers in the field of management accounting. The CIMA program will enable students in Management and Finance to obtain Certificate in Business Accounting, obtain exemptions from CIMA exams and confirm knowledge during examinations in standardized Pearson Vue Exam Centers. Founded in 1919, the Chartered Institute of Management Accountants (CIMA) associates over 232 thousand members and students from 179 countries. Its members occupy key positions in the business world.

Polish-Chinese project of chemists from Toruń and Nanjing

2018-06-13

Chemists from the University of Toruń and Nanjing Tech University will jointly implement the project „Novel mixed matrix membranes (MMMs) for the separation of liquid and gas mixtures“. On the Chinese side, the project will be led by Dr. Jin Wanqin from Nanjing Tech University, from the Polish side by Prof. Wojciech Kujawski. The Toruń scientist deals with applications of membrane techniques, especially the separation of gases and vapors (which may be used, for example, in the extraction of shale gas), and pervaporation allowing the separation of liquid mixtures that cannot be separated by distillation (used in the production of biofuels). Professor Kujawski is also the coordinator of another project concerning innovative polymer membranes carried out together with the French University of Rouen, he also managed the Polish-Austrian project «Experimental and theoretical research on the mechanism of transport of organic solvents through membranes».

Pomeranian Medical University wins a grant for the Center for Medical Simulation

2018-06-13

The Minister of Health awarded the Pomeranian Medical University in Szczecin with a financial subsidy of almost PLN 1.4 million. The money is allocated to the emerging Medical Simulation Center - informs the University on the website. The center is located at ul. Żołnierska in Szczecin near the university faculty of health sciences. Students will find high fidelity simulation rooms in the Center - an operating theater and an intensive care unit, a hospital emergency department, an ambulance simulator, a delivery room and nursing care, and low fidelity simulation rooms, technical skills laboratories, laboratories for teaching clinical skills and surgical skills, ultrasound lab and endoscopy, „virtual patient“ and examination rooms in the form of doctors' offices. There will also be seminar hall and computer rooms.

Logistics with the practical support at the Koszalin University of Technology

2018-06-13

The Faculty of Economics of the Koszalin University of Technology will launch a course Logistics in the new academic year. The education process will be carried out with the support of companies operating in the logistics industry. Two new specialties will be available: Company Logistics and Trade and Distribution Logistics. Graduates will be prepared to obtain certificates introduced by the European Logistics Association (ELA) confirming the professional competence of European Logistician. The educational process in both specialties assumes the participation of practitioners from the economic environment. Business logistics will prepare the graduate to perform complex logistic tasks as taking into account the effective cost reduction and the improvement of customer service. Logistics of trade and distribution will in turn allow to gain knowledge and practical skills in logistics management in dynamically developing distribution and trading networks in Poland. More: http://www.tu.koszalin.pl/ckeditor_assets/attachments/1400/kierunek_logistyka.pdf

University of Białystok to develop student entrepreneurship

2018-06-14

The University of Białystok has obtained funding for its project within the program of the National Center for Research and Development „University of the Young Explorer“. This time, primary school students will develop their skills in the field of creativity, innovation or entrepreneurship - informs the university in Białystok. As explained Dr. Karina Sachpazidu-Wójcicka, director of the Eastern Technology Transfer Center of the University of Białystok, the project aims to develop universal competencies necessary on the labor market in the future. The university has received over PLN 343 thousand for this project. The educational part of it assumes the implementation of three modules: “I cooperate - I

think - I solve”; “ABC of Entrepreneurship”; “My own start-up - from idea to implementation”. Recruitment for the project will start in September. 144 pupils from elementary schools of the Podlasie Voivodeship will be able to take part in the program.

Students of the Academy of Technology and Humanities in Bielsko-Biała are the best in emergency medical care

2018-06-14

Students of the Academy of Technology and Humanities in Bielsko-Biała won the 9th National Competition of Universities in Emergency Medical Services. The organizer of this year's edition of the championships, in which 25 teams competed was the Jagiellonian University. During the competition, students had to demonstrate theoretical knowledge and practical skills in the field of medical rescue operations. Teams had to complete a total of eight tasks, with extensive medical scenarios. The rescuers had to deal with a patient with acute coronary syndrome as a result of drug use, a gunshot wound in the abdomen of a 12-year-old child, and a criminal with a bronchial asthma attack. This is the third title for the Bielsko Academy of Technology and Humanities. Thanks to the victory next year - the tenth competition will be organized in Bielsko-Biała.

Future millionaires study at the AGH University of Science and Technology in Krakow

2018-06-14

The graduates of the AGH University of Science and Technology in Krakow are among the top earners in the Małopolskie voivodship. Such conclusions are presented in the Economic Graduates Report, which for the third time has been prepared by the Ministry of Science and Higher Education. According to the Report, IT and mining and geology graduates of the AGH University of Science and Technology receive monthly salary above PLN 8,000. The professional success of the graduates of the Krakow university is also confirmed by the second „Ranking of Higher Schools 2018 measured by the wealthiest Polish people” prepared by the Kuwik Ciesielski Family Office. According to the information contained in the ranking, the AGH University of Science and Technology educated the most millionaires from all Polish universities. There are nine graduates with assets exceeding 100 million Euro.

Polish Scientific Networks: Science & Medicine at the Medical University of Lodz

2018-06-14

21-23 June 2018, the Polish Scientific Networks Conference Science & Medicine will take place in Łódź. Its main goal is to create a forum for scientists and doctors implementing the latest achievements of medicine in clinical practice. The event is organized by the Academy of Young Scientists of the Polish Academy of Sciences, the Ministry of Science and Higher Education and the Scholarship Club of the Foundation for Polish Science, in cooperation with the Medical University of Lodz. The conference is addressed primarily to non-clinical scientists and clinicians and to all institutions and companies interested in supporting innovation through cooperation with doctors and scientists. During the conference, the scientists will present the most interesting projects in the field of epigenetics, cancer, biological chemistry, brain science, developmental biology, bioinformatics, systemic biology and biomodeling. More: psn.pan.pl

Students of Warsaw University of Technology on the podium in the first Brick Architecture Competition

2018-06-14

The goal of the brick architecture competition was to present a vision of optimal solutions that can be implemented in two categories: Housing construction and Construction of the future. The competition was organized by the Association of Employers of Building Ceramics and the Association of Polish Architects. In the category of Construction of the Future Klaudia Lachcik, a student at the Faculty of Architecture from the Warsaw University of Technology won for her project „Multithreading”. In the category of residential construction - single-family house, the second was Piotr Zalewski from the Warsaw University of Technology who designed the house for mountain climbers. 54 projects made by students representing 13 universities, were submitted for the competition.

PhD student of the University of Economics in Poznan wins the EFC Academy competition

2018-06-14

Marcin Flotyński, PhD student from the Department of Monetary Policy and Financial Markets at the University of Economics in Poznań, became the winner of the competition for the most interesting essay within the EFC Academy (European Financial Congress). His essay „Poland in the eurozone - yes - we should join in because we have no choice” was selected from over one hundred works from Poland and abroad. The victory in the competition ensures the young scientist to participate in the panel opening the EFC Academy, as part of the European Financial Congress at the European Solidarity Center in Gdańsk. The Congress is a debate on good solutions for the joint success of Poland and the European Union. Its purpose is also to present the Polish point of view in international discussions on development and security. About 1,300 representatives of the business management, media, state administration, consulting companies, scientists, politicians, supervisors and regulators will take part in it.

Wroclaw Academy of Land Forces cooperates with the Institute of National Memory

2018-06-14

The Academy of Land Forces in Wroclaw signed a cooperation agreement with the Institute of National Memory for the development of science and shaping the committed patriotic and civil attitudes of the future young Polish citizens. The contract concerns the study of the history of Polish arms and the search for final resting places of people killed in the struggles for independence and the unification of Poland. It also assumes cooperation in the area of commemorating historical events, places and characters as well as organizing patriotic events and promoting a soldier's ethos. The signatories will also organize symposia, scientific conferences, exhibitions and discussion panels on the history of Poland. In addition, the cooperation agreement will allow both institutions to make available their archival and library collections for use for scientific purposes.

Nobelist of Ben L. Feringa to hold a lecture at the University of Poznan

2018-06-14

of Chemistry of Adam Mickiewicz University and the City of Poznań invite participants to the open lecture „The Art of Building Small”, which will be given by the Nobel laureate in chemistry - Professor Ben L. Feringa. The lecture will start at 12 on Thursday, June 21 in the auditorium (room 264) of the university's chemistry department. In addition to the Nobel Prize in 2016 (obtained together with Jean-Pierre Sauvage and Sir J. Fraser Stoddart), he has also received many other prestigious awards for designing and synthesizing molecular machines. He is the winner of the highest Dutch scientific prize - the Spinoza prize in 2004 and the Humboldt Foundation awards in 2012. Prof. Feringa is a co-author of over 800 scientific works cited nearly 50,000. times. The Polish Chemical Society honored Prof. Feringa with the highest medal of Maria Skłodowska-Curie.

Wrocław University of Technology wins the prize of the Polish Bank Association and the „Promyk Słońca” Foundation

2018-06-14

University of Technology received the prize of the Polish Bank Association and the Promyk Słońca Foundation. The university was honored for outstanding and innovative technological solutions for people with disabilities. The initiator of the award is the „Promyk Słońca” Foundation, which rewards people, institutions and companies in this way for solutions that use new technologies to support disabled communities. The award was presented during the 13th Congress of Electronic Economy 2018 in Warsaw Jerzy Borowiec, a plenipotentiary for disabled people, received the award on behalf of the rector of the Wrocław University. - It is a big surprise for us, because we did not know at all that we are being tipped in the competition. We are even more happy that we are rewarded for our normal everyday work for students with disabilities - he said.

National Academic Exchange Agency launches a scholarship program for the Polish diaspora

2018-06-15

The National Academic Exchange Agency opens a call for the scholarship program for the Polish diaspora, which starts in the academic year 2018/19. The project aims to give young people of Polish origin the opportunity to pursue higher education in Poland and to enable them to improve Polish language. The program will allow to study at universities reporting to the Minister of Science and Higher Education (all courses except the philology directions). It also provides the students with a monthly scholarship of National Agency for Academic Exchange to cover the maintenance costs. Additionally, candidates who completed undergraduate studies out of Poland will participate in the annual preparatory course for study in Poland. [pl/studenci/studenci-zagraniczni/program-stypendialny-dla-polonii/ogloszenie](https://nawa.gov.pl/studenci/studenci-zagraniczni/program-stypendialny-dla-polonii/ogloszenie)

Scientific symposium „Metagenomes of different environments” held at the Catholic University of Lublin

2018-06-15

The Faculty of Biotechnology and Environmental Sciences of the Catholic University of Lublin organizes on June 28-29, 2018, the 3rd National Scientific Symposium - „Metagenomes of different environments”. The aim of the Symposium is to summarize the current knowledge and present the latest developments in metagenomics, microbiology, genetics, interactions between micro and macroorganisms of different environments and their importance for the development of microbiology, biotechnology, agriculture and environmental protection. During the conference, the results of research carried out in various scientific centers will be presented and discussed. The co-organizer of the event is the Warsaw University of Life Sciences, Maria Curie Skłodowska University in Lublin and the Institute of Agrophysics of the Polish Academy of Sciences.

Graduates of the University of Life Sciences win in the fifteenth „Wrocław Magnolia” competition

2018-06-15

Natalia Kordysz, landscape architecture graduate at the Wrocław University of Environmental and Life Sciences, took the first place, and Aneta Szymoniak received a distinction in the competition for the best master's thesis in the competition „Wrocław Magnolia”. Natalia Kordysz presented the development project for the wharfs on the Oława river in Wrocław. In her concept, she preserved wide green lanes along the river and used landscape features to integrate residents and promote the city. Aneta Szymoniak created a concept for the development of the area at the Ślęza River in Wrocław. She designed the area in Wrocław at Grabiszyniek, consistent with the principles of sustainable space development and

the use of green infrastructure solutions. „Wrocław Magnolia” is a competition that promotes the best master's thesis that contribute to improving the life comfort of the inhabitants of Wrocław. More: http://www.glos.upwr.edu.pl/aktualnosci/48009/xv_edycja_wroclawskiej_magnolii.html

Scientist from Poznań wins the „Supertalents in Medicine 2018” competition

2018-06-15

Dr Alicja Kalinowska-Łyszczarz, assistant professor in the neurochemistry and neuropathology of the department of the Poznań University of Medical Sciences, has won the competition „Supertalent in Medicine 2018”. This year's competition was attended by dozens of doctors and graduates of medical related faculties from academic centers and clinical hospitals. The winner deals with the diagnosis and treatment of patients with multiple sclerosis, and also conducts educational activities promoting knowledge about MS among doctors and patients. In her scientific and research work she deals with the issues of neuroimmunology and neuropathology of multiple sclerosis and related diseases. Supertalents in Medicine is a contest organized by „Puls Medycyny” since 2012. Its aim is to select and reward young doctors and graduates who will influence changes in the health care sector in Poland in the coming years.

Wrocław students choose the best teacher

2018-06-15

By Sunday, June 17, students and graduates of Wrocław's colleges and universities can submit the names of the best teachers. The „Mug for lecturer” competition is organized by the Academic Radio Luz for the sixth time - informs Michał Ciepielski from the information and promotion department of the Wrocław University of Technology. Applications with the given name and the name of the university where the candidate works should be sent to the address: kub@radioluz.pwr.edu.pl. Thus the participants will select 10 most popular teachers. From June 20 students will be able to vote via a Facebook survey. The results will be known on June 28. The competition can be attended by lecturers from all universities in Wrocław, however, they cannot be employees performing management functions and winners of previous competitions. The winner will be awarded the „Mug for lecturer” statuette and invited for an interview live on Radio Luz.

New postgraduate studies at the Medical University of Gdańsk

2018-06-15

The Medical University of Gdańsk has started recruitment for post-graduate studies in a new field - Rehabilitation Manager. Candidates from the Pomeranian Cuiavia-Pomeranian; West Pomeranian and Greater Poland Voivodships can apply for admission;. The studies are addressed first of all to psychologists and social educators, employees of social security institutions, specialists in social, legal and medical fields, as well as people with experience of work with a person with disabilities in the family or through work. The study should also interest the employees dealing with occupational health and safety, representatives of works councils and people with disabilities, human resources managers, occupational physicians and medical rehabilitation specialists, physiotherapists, occupational therapists and nurses. More: <https://zarzadzanierehabilitacja.gumed.edu.pl/47269.html>

Białystok University of Technology to implement the project „Programming from scratch”

2018-06-18

Białystok University of Technology has been running the project „Programming from scratch” for a year. It summarized previous activities within the conference „Let children think - mathematics and programming from scratch”. The University received a grant from the Digital Poland program for the «development of digital competences among teachers and students from grades 1-3 of the Białystok and Sokółski counties». The project is implemented by the IT department of the Białystok University of Technology until the end of 2019 and its value is over PLN 1 million - informs the university. The main goal of the program is to introduce programming (as extracurricular activities, and in the longer term as integrated education) to 1-3 classes of primary schools in rural and rural-urban communes of the Białystok and Sokółski counties. As part of the lessons, primary school teachers can acquire the skills necessary to teach programming.

Polish-Ukrainian studies at the Jagiellonian University

2018-06-18

The Jagiellonian University in Krakow launches new Polish-Ukrainian studies at the faculty of international and political studies from the new academic year. The new studies are interdisciplinary and are carried out simultaneously in the social sciences and humanities. During three years of study, students will gain a broad knowledge of many aspects of economic, political, social and cultural life of Poland and Ukraine. Learning of Ukrainian and English languages will be an integral part of Polish-Ukrainian studies.

PM Gowin: Regional universities to develop under new law

2018-06-18

- As a Minister of Science and Higher Education, I participated in over 120 different meetings with representatives of the higher education and we talked on the shape of the Act. The allegation that the law was not consulted is untrue - said Deputy Prime Minister Jarosław Gowin in the „Events and Opinions” program on Polsat TV. The Minister of Science and Higher Education assured that he was calm about voting on the new Act on Science and Higher Education. He also revealed that together with Jarosław Kaczyński, the president of the ruling party Law and Justice, they spent « a lot of time analyzing the law several times». The president Kaczynski was concerned to ensure the interests of regional universities as fully as possible,»- said Deputy Prime Minister Gowin. -Because Law and Justice is indeed the party that emphasizes the development of smaller and medium centers - he assured and added that «due to this law, such development of regional universities will happen».

COST seminar at the University of Warsaw

2018-06-18

On July 2, at the University of Warsaw, a seminar on the European Cooperation in Scientific and Technical Research - COST will be held. What is the COST program? How can a Polish scientist participate in COST program activities? How to join current activities (COST Actions)? These issues will be explained by Jadwiga Mrozowska, the main specialist in the Department of International Cooperation of the Ministry of Science and Higher Education. COST is a European Program for Scientific and Technical Cooperation (European Cooperation in Science and Technology) created by 36 European countries and Israel (as a cooperating state), whose most important task is to organize multilateral scientific and technical cooperation of member countries. Registration for the seminar: <http://bob.strony.uw.edu.pl/seminarium-cost-europejski-program-wspolpracy-w-dziedzynie-badan-naukowo-technicznych-european-cooperation-in-science-and-technology/>

PhD student at the University of Gdańsk awarded in the FameLab competition

2018-06-18

Paulina Jędrak, PhD student at the Faculty of Biology at the University of Gdańsk, received a prize from the Kosciuszko Foundation in the finals of the FameLab competition for a lecture „The secret of the elixir of youth” about the role of telomeres in the aging of the organism. PhD student during the finals told the participants about the aging of the body and the role of chromosomal ends - telomeres in this process. Some cells, e.g. cancerous, produce an enzyme called telomerase, which rebuilds lost telomere fragments after each division. - In my speech, I was wondering if we could use telomerase to design new anticancer therapies or extend human life - explained the PhD student. FameLab is an international competition, during which the scientists face the jury and the audience to present their research work in three minutes speech. In Poland, FameLab is organized by the Copernicus Science Center.

First university dual studies to include technology and organization of gastronomy

2018-06-18

University of Life Sciences in Wrocław launches the study Technology and organization of gastronomy. This is the first university dual course in Poland, i.e. carried out by a university and an enterprise. - This is an engineering course lasting 3.5 years, of which only 4 semesters will be taught in halls, laboratories and studios at the university, the rest is learning at work in the best companies from the HoReCa sector (hotel- restaurant and catering) - explains the dean of the biotechnology department and food science at the University, Prof. Anna Czubaszek. Students of the new field will work and earn in four different companies during their studies. Each technical, technological, managerial and diploma internship will give them different practical skills. Diploma theses will be devoted exclusively to specific practical issues and they will be written under the supervision of a specialist in the nutrition industry and

an academic teacher. More: http://www.glos.upwr.edu.pl/aktualnosci/48008/pierwsze_uniwersyteckie_studia_dualne.html

First School for Local Leaders ends in Wrocław

2018-06-18

The University of Economics in Wrocław has ended the first School of Local Leaders realized under a cooperation agreement signed between the Lower Silesian Voivodship and the University of Economics. The goal of the School is to strengthen cooperation between the University, its students and the Lower Silesian local governments in the transfer of knowledge, stimulation of grassroots initiatives, development of entrepreneurship and cooperation networks in the voivodship. In the first event eighteen students from various faculties participated in trainings, lectures, workshops and study trips. The students examined the local needs in several Lower Silesian communes, made diagnoses, carried out research and proposed specific solutions. In the result they propose municipalities to revive the Old Market, promotion and integration of small hotel and restaurant business or creation of a cooperation zone - an entrepreneurship incubator.

National Agency for Academic Exchange launches Polish-Portuguese bilateral exchange program

2018-06-19

The National Agency for Academic Exchange and the Portuguese Fundação pa a Ciência e a Tecnologia launch a bilateral exchange program. The aim of the project is to support the mobility of scientists who carry out research projects, agreed and conducted jointly by partners from both countries. Funds for projects under the program may be allocated to expenses related to travel and stay in the partner's country, excluding financing the research itself. Applications should be submitted by 31 July 2018.

Deputy Prime Minister Gowin visits the State Higher Vocational School in Chełm

2018-06-19

Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education, visited the State Higher Vocational School in Chełm, where he signed a grant for over PLN 16 million for Chełm High School. The funds will be used to build a concrete runway at the airport of the Chełm School. - I am fully aware that the costs of construction works have recently increased, therefore the ministry is prepared to allocate additional funds for this venture,»- said Deputy Prime Minister Jarosław Gowin. During the press conference, he also expressed the opinion that «every zloty invested in the State Higher Vocational School in Chełm will be used to the maximum benefit for the local community.» The concrete runway will be 1020 meters long and will be used not only by the training pilots, but also by aviation companies and the entire region. The Chełm Vocational School is also planning to build a new hangar for the renovation and inspection of aircraft.

Lodz University of Technology launches new laboratory to help smart buildings

2018-06-19

The Smart Home Grenton system laboratory was opened at the Department of Electrical Equipment of the Lodz University of Technology. It will enable students to learn the concept, design and programming of building management systems. The laboratory is the result of cooperation between the University and the Krakow-based company Grenton, one of the leading designers and producers of innovative building automation systems. The laboratory has been equipped with Grenton drivers, which allows students to visualize the effects of the system in the real object. Smart Home Grenton will be included in the first in Poland program of studies Intelligent Building Control Systems, which allows students to obtain interdisciplinary competencies required for effective designing, programming and integration of management systems in intelligent and energy-efficient buildings.

15th anniversary of Korean philology at the University of Poznan

2018-06-19

Adam Mickiewicz University in Poznan invites participants to the 15th anniversary of the Korean Philology celebrations, which will begin on Thursday, June 21 at 10:00 at the Lubranski Hall Collegium Minus. As part of the celebrations, the «Korea Forum # 3» conference is planned. Among the invited guests are representatives of the embassy of the Republic of Korea, Warsaw, Jagiellonian, Wroclaw Universities and Hangeul University of Foreign Studies and graduates of Korean philology. Students of philology learn not only to write and speak Korean, they also study literature, culture and history of Korea. They attend the Korean language course as part of the academic exchange to the Republic of Korea and can undertake research or studies at South Korean universities. Graduates are diplomats, managers of the largest South Korean companies, translators, businessmen, ministerial officials, academic teachers and corporate employees.

Heavy-metal PhD thesis at the University of Technology and Humanities in Bielsko-Biała

2018-06-19

The Council of the humanistic and social faculty of the University of Technology and Humanities in Bielsko-Biała has passed a resolution to initiate the first PhD dissertation in the 16-year history. Mateusz Żyła, a graduate of Polish philology, is a candidate to obtain a PhD degree in literary studies. The subject of the dissertation proposed by the PhD student is: «Inspirations of Young Poland Literature in heavymetal lyrics (Miciński, Przybyszewski)». Dr Ireneusz Gielata, Prof. Academy of Technology and Humanities is selected for a PhD promoter with the auxiliary promoter - Dr Tomasz Bielak. Both scientists are employees of the department of Polish philology at the humanities and social faculties of the Bielsko-Biała university. The Faculty of Humanities and Social Sciences at the

University of Technology and Humanities in Bielsko-Biała has the right to grant PhD titles in the humanities in the discipline of literary studies from November 2015.

Test access to JOVE at the Silesian University of Technology

2018-06-19

The Main Library of the Silesian University of Technology has launched a test access to the journal JOVE (Journal of Visualized Experiments). JOVE is the first scientific journal, reviewed and indexed in Web of Science, Scopus, PubMed and Medline, which publishes scientific research in visual form. Until June 26, all computers in the university network have unlimited access to the video database of peer-reviewed articles with Impact Factor (IF) in the fields of science, medicine and engineering. As part of the test access, students can use over 8,000 peer-reviewed Video Journal articles and about 600 Science Education visualizations. JOVE presents research methods, experimental and laboratory techniques from physical and natural sciences. Publishing in it allows authors to present their methods, results and data analysis. There are thousands of articles from the best scientists in the world in the JOVE database.

Płock to finance research projects of the local Higher Vocational School

2018-06-20

Six lecturers from the State Higher Vocational School in Płock received over PLN 100,000 in the call of the Mayor of Płock for financing research grants within the „Cooperation with universities” project. The aim of the call is to strengthen the scientific potential of the Płock region through the individual development of PhD holders. - Academic character of Płock has been created for years. These grants, however, are a very important element of this process - said the rector of the Płock university, Prof. Maciej Ślodki, who believes that the results of scientific research will contribute to the development of scientific dis-

ciplines and research potential of the region, the development of local entrepreneurship and the increase of innovation and competitiveness of the Płock region.

Mazovia Region, Warsaw School of Economics and Warsaw University of Technology to launch consortium

2018-06-20

Representatives of the Warsaw School of Economics and the Warsaw University of Technology met the marshal of the Mazovia Voivodeship Adam Struzik to create a new scientific consortium. The consortium of Mazovia and the universities won the highest score in the call organized by the National Center for Research and Development for research projects under the program «Social and economic development of Poland in the conditions of globalizing markets - GOSPOSTRATEG» in the category «Middle income and average product trap». The meeting concerned the support of the harmonious development of the voivodship in order to strengthen the economic development of Mazovia subregions and reduce the disproportions between the Warsaw metropolis and other parts of the Region. Deputy Minister Müller on Amendments to the Act on Science and Higher Education

2018-06-20

In the Sejm, nearly 90 amendments were adopted to the Act on Science and Higher Education and its provisions. The vote on the Act will be held on July 3. The Ministry of Science is convinced that the new law will become effective from October 1 this year. - Until now, the former provisions of the Act forced universities to accept the outer forms of organization. We give these competences to the university - said Piotr Müller, deputy minister of science and higher education, on the radio program 1 of Polish Radio. The deputy minister also explained what will change after the introduction of these amendments. - The competences of the University Council have been changed. It has weakened, although I do not think it's a good move. But this act arose on the basis of a compromise, so it would make no sense to insist on all our solutions. The Council will be elected entirely by the academic community. It is intended for the people from within the university. However, it will have to have other representatives from outside, who will be elected by the university senate – explained Piotr Müller.

Award of the Royal Entomological Society for Wrocław entomologists

2018-06-20

Dr Eng Marcin Kadeja and Dr Adrian Smolis from the Institute of environmental biology of the University of Wrocław received the prestigious award of the Royal Entomological Society. The award was granted in the category of protection of insects and their diversity for work, the subject of which was the monitoring aspects of the stag beetle in European approach. Stag beetle belongs to the largest insects on our continent. In many countries it is at risk, hence there is a need to create a monitoring protocol to assess the current and future status of the population. The authors of the awarded work proposed an optimal and universal research method based on experience from many European coun-

tries. The Royal Entomological Society was founded in 1833. It is one of the oldest institutions dealing with the problem of insects. It awards its prize every two years.

Students of three Wrocław universities implemented the Joint Architectural Initiative

2018-06-20

Three Wrocław universities summarized the Joint Architectural Initiative. Students of the Academy of Physical Education, Technological University and Academy of Fine Arts worked together with teachers on the elimination of architectural, communication and technical barriers in the apartments of people with disabilities. Mixed teams completed housing adaptation projects: for a person with dementia, with multiple sclerosis, for a blind person and for a wheelchair person. They also developed the architectural concept of a rehabilitation and education center with an independence home for patients with Prader-Willi syndrome. The completed project shows how important is the approach to the subject from the point of view of different positions. The work of students and tutors allows to shape an appropriate approach to investors / patients placing them at the center of the project, not as recipients.

Summer school at the Silesian University of Technology

2018-06-20

From Monday, June 25 to Friday, June 29, the summer school „Physics used in archeology, geology, materials engineering, environmental engineering” will take place. This is a series of classes at the Silesian University of Technology for secondary school graduates. The main goal of the summer school is to present the subject of research conducted at the Institute of Physics - the Scientific and Didactic Center of the Silesian University of Technology. The subject has been selected to allow participants to expand knowledge in physics, but also learn about its use to solve problems faced by scientists. During the summer school students will be able to visit specialized laboratories of the Institute of Physics and participate in practical workshops conducted

by specialists. Participants will receive a certificate of participation in the summer school and 3 ECTS points (European Credit Transfer System). The University offers 60 places. More: <https://www.polsl.pl/Documents/program%20szkoly%20letniej.pdf>

The University of Szczecin summarized the PhilosophUS project

2018-06-20

The debate with the participation of pupils from Szczecin schools completed the PhilosophUS project, which was realized in 2017-2018 at the Szczecin University. The aim of the project was to increase the level of argumentative and communication skills of schoolchildren of the West Pomeranian Region. The operation covered ten schools of the region - nine secondary schools and a junior school, in which employees and PhD students of the humanities faculty conducted classes in philosophy. The project was co-financed from the funds of the Operational Program Knowledge Education Development. During the debate, the students presented their argumentative skills answering questions: «Can a computer think like a human?»; «Are there universal cultural values?»; «Can you understand other cultures?» And «Post-truth and a lie. Are they the same? Is post-truth a kind of truth or lies? «

Professional Event Manager - new postgraduate studies at the Maria Curie Skłodowska University

2018-06-21

The Maria Curie Skłodowska University in Lublin launches the first practical postgraduate studies in Poland - Professional Event Manager. The teaching staff will include experts for years organizing events in Poland and abroad, as well as research workers of the Lublin university. These studios offer the possibility of real preparation for the organization of conferences, meetings, visits, concerts, performances, festivals, sports events, fairs, mass events and other events. They are addressed both to beginners and those who already have experience in the industry. There should be people with passion to gain knowledge and skills of professional event project management - informs Aneta Adamska, university spokesman. More: <https://www.umcs.pl/pl/eventy.htm>

Cooperation of Warsaw University of Technology with Veolia Energia Warsaw

2018-06-21

The Warsaw University of Technology signed a framework cooperation agreement with Veolia Energia Warszawa. The document was signed on behalf of the company by Jacky Lacombe - president of the board, general director of Veolia Energia Warsaw and by the Prof. Eng. Jan Szmidt, rector of the Warsaw University of Technology. According to the provisions of the agreement, internships for students and PhD students will be launched. Both entities will organize scientific and technical conferences, symposia and seminars, as well as prepare publications and competitions. The activities of the Warsaw University of Technology and Veolia Energia Warszawa will also be carried out in the field of research and development of new technologies, with particular focus on the energy efficiency of urban and industrial systems, including the Intelligent District Heating.

Science pays off

2018-06-21

The graduates from 2016, who earn the best, have completed one of three majors: Computer Science at the Gdańsk University of Technology and the Jagiellonian University in Krakow, Management at the Vistula University of Finance and Business in Warsaw or Electronics and Telecommunications at the Warsaw Technological University - informs the newspaper Rzeczpospolita daily citing data from the ELA system, i.e. a nationwide system of monitoring Economic Fate of Higher Education Graduates. The monthly remuneration of graduates of those majors is over PLN 8,000. As emphasized the authors of the analysis, completion of full-time studies and work during studies are factors that allow the graduates to earn more, especially in the first year after graduation. At the same time, the ELA system shows that it is worth studying and that education pays off in time. Every year, graduates of Polish universities earn more and their wages increase faster than the average earnings in their locations.

Summer courses within the Open University of Warsaw University of Life Sciences

2018-06-21

The Open University of the Warsaw University of Life Sciences is launching the summer courses. The offer includes, among others, a rich offer of language courses and training courses for English language teachers, as well as classes on internet marketing and self-presentation workshops. Prices for the course start from PLN 200. Every interested person will find something for themselves in the university's offer. Database language of SQL queries - basics; Basics of meteorology and elements of using knowledge about the weather in practice; Legal aspects of the media and your own company in 7 steps. More: <https://www.uo.sggw.pl/pl/>

PhD student at the University of Bydgoszcz wins the prize of the Polish Pedagogical Society

2018-06-21

The jury of the 4th Polish Pedagogical Society decided to award the Grand Prix PhD holder Katarzyna Grzesiak from the Institute of Pedagogy at the University of Kazimierz the Great in Bydgoszcz - for the dissertation: Experiencing success in science by PhD students. The dissertation is in the form of pedagogical ethnography, its subject is the collective case of success in science of students of PhD studies at Åbo Akademi in Vaasa in Finland. The dissertation has theoretical and empirical nature and contains three parts and eight chapters. The Polish Pedagogical Society has been awarding the best PhD dissertations since 2014. The aim of the competition is to promote pedagogical scientific projects characterized by the highest quality.

Poznan University of Technology at the NAFSA conference in Philadelphia

2018-06-21

Poznan University of Technology participated in the NAFSA conference and fairs in Philadelphia. The university presented its offer at the NAFSA National Academic Exchange Agency stand - under the motto „Ready, Study, Go! Poland „. During the fair, two new cooperation agreements were signed - with the University of Areandina from Colombia and with the Catholic University of Korea. Meetings with existing partners were held to strengthen cooperation. The Poznan University established new contacts with partners from the USA, Mexico, Chile, Spain and France - informs the university on the website. NAFSA is the world's largest non-governmental organization dealing with international education. Its annual conference and fairs dedicated to m.in. foreign students and the internationalization of universities gather about 10,000 participants from over 100 countries. This year's conference was held under the slogan «Diverse Voices, Shared Commitment».

Students-architects of the Wrocław University of Technology rewarded abroad

2018-06-21

Two works from the Wrocław University of Technology were honored by the Association of Polish Architects (SARP) in France. Paulina Gocoł and Wojciech Motyka received equal prizes. In turn, Zofia Fedorów took the third place in the international competition for the design of the Museum of Language in London. The Association of Architects in France awards the prize for the most interesting engineering project. 18 works from 18 colleges participated in this year's edition. The jury chose the work of Paulina Gocoł for her work entitled «Introverus: Experimental theater and promenade, Wrocław - Na Grobli» and the project of Wojciech Motyka - «Hermitage: House of creative work». The work of Zofia Fedor from the University took the third place in the international competition for the Museum of Language in London organized by Archasm. She managed to overcome almost 300 works created by professional architects and students from around the world - informs the Wrocław University on the website.

University of Gdańsk becomes a member of the Alliance of Silk Road Business Schools

2018-06-21

The University of Gdańsk has been officially admitted to the Alliance of Silk Road Business Schools (ASR), whose aim is to cooperate between science and business institutions in countries on the new Silk Road. Alliance of Silk Road Business Schools was established in June 2016 and brings together over 150 universities. In addition to more than 50 Chinese higher education institutions, the association includes almost 100 universities from 20 countries located on the Silk Road - Armenia, Bosnia and Herzegovina, the Czech Republic, Cambodia, Kazakhstan, Lithuania, Latvia, Moldova, Romania and Serbia. The admission of the Gdańsk university was announced at the The Belt and Road conference on International Business Education in China. During

the conference, Dr Katarzyna Świerk - head of the Office of Science and International Cooperation at the University received the award for an article and a paper on the internationalization process of the university.

Researcher from the Medical University of Wrocław wins the COPERNICUS 2018 Prize

2018-06-21

Professor Piotr Ponikowski from the Wrocław Medical University and Prof. Stefan Anker from the Charité clinical hospital - Universitätsmedizin in Berlin won the Polish-German COPERNICUS Scientific Award 2018 for outstanding achievements in the field of cardiology. Researchers were honored for research on heart failure that contributed to a better understanding of the pathophysiology of this disease and to the development of new treatment strategies. Candidates for the Award are reported by the scientific community. 29 applications were evaluated in this year's edition. The COPERNICUS Prize is awarded every two years by the Foundation for Polish Science and the Deutsche Forschungsgemeinschaft. Its aim is to promote Polish-German scientific cooperation. The award-winning scholars are expected to have special merits for German-Polish cooperation, combining different experiences, knowledge and resources to jointly solve research problems.

Summer University Warsaw 2018

2018-06-22

On July 2-13, 2018, the Warsaw School of Economics is organizing Summer University Warsaw. These are two-week international courses in economics and management, with lectures and workshops including numerous case studies, discussions and group projects. Bachelor and master students have the opportunity to obtain 4 or 8 ECTS points by participating in Summer University Warsaw. The organizers are planning the following courses: Financial management; Corporate governance, Investment project management; Economics of innovation; Brand management and Intercultural negotia-

tions. The lecturers will be teachers from the Warsaw School of Economics and invited guests from partner universities participating in the Erasmus + KA107 exchange program, as well as practitioners from international corporations. More: <http://suw.sgh.waw.pl/>

Meeting „Direct to Internationalization”

2018-06-22

On June 29, the National Academic Exchange Agency invites participants to Warsaw for a meeting „Direct to Internationalization”. The event will be devoted to training in marketing, user experience and educational markets in India, China and Ukraine. The meeting is directed to representatives of universities responsible for foreign promotion and recruitment of foreign students. It will be opened by a lecture by Edwin van Rest, the managing director of StudyPortals and a member of the EAIE General Council. Van Rest is the director of the largest portal specializing in searching and selecting courses of study, the winner of the EAIE Rising Star Award and the Award of the Change the World organization. Deputy Minister Dardziński on the universal and transnational nature of science

2018-06-22

Poland should be a place where students from different corners of the world will come and leave with the feeling that an important part of the world scientific heritage is developing here - said Piotr Dardziński, deputy minister of science and higher education, in conversation with the service „Political Theology Weekly”. He underlined that, young scientists are looking for universities specializing in their scientific interests, and the race to acquire the most qualified academic staff has a place not only in Poland, but worldwide. - The strongest minds are competing here- both from world powers such as the United States or China and from smaller countries investing in scientific development - like Switzerland or Israel. We were left behind. And this is the dimension of Polish transformation and international competition - notes Dardziński and emphasizes that science is inherently universal and transnational. How could we develop education today without the achievements of scientists from other countries? - he asks.

Anniversary of the faculty of economic sciences at the University of Torun and honorary PhD title for the Nobel Prize winner

2018-06-22

The Faculty of Economics and Management at the Nicolaus Copernicus University in Toruń celebrates its 50th anniversary. During the celebration, the winner of Nobel Prize in economics - Prof. Robert Franklin Engle received the title of honorary doctor. Robert F. Engle is a professor of finance at Stern University in New York. He was awarded the Nobel Prize in Economics in 2003 for studies on conditional variability modeling, which led to the creation of an innovative regression model for conditional variance - the ARCH model. Professor Engle is one

of the most outstanding and best-known scholars in the world dealing with econometric modeling of financial time series. As part of the jubilee, the university also held debates devoted to the problems of the Polish and world economy, scientific conferences and meetings of the Committee on Finance of the Polish Academy of Sciences and the Polish Association of Finance and Banking.

Football master's thesis awarded in the Wincenty Styś competition

2018-06-22

Master's thesis „The use of data analysis in football on the example of prediction of football results with the help of machine learning” by Michał Górnik, the graduate of the University of Economics in Wrocław received the second prize in the XX Wincenty Styś competition for the best master's thesis in the field of economic sciences. The promoter of the work is Prof. Marek Kośny from the Department of Econometrics and Operational Research at the Faculty of Management, Computer Science and Finance. Wincenty Styś competition is organized by the Wrocław branch of the Polish Economic Society. Master's theses in the field of economic sciences, written in Polish by Polish citizens can be enrolled in it. The theses must be correct in terms of the academic qualities, bringing interesting solutions useful for business practice.

PM Gowin's Reform to develop science in Poland

2018-06-25

The PM Gowin's Reform gives an opportunity for the development of science disciplines that today are lost in large departments of universities - writes philosopher Dr. Mieszko Tałasiewicz in the „Rzeczpospolita” daily and emphasizes that the new law on science and higher education opens up a good perspective for Polish humanities. In his article, Tałasiewicz rejects the accusation that the law «favors large and metropolitan universities against the small and provincial high schools.» The philosopher describes this as half-truth, because - in his opinion - the law favors simply good universities.

- Not always what is big is good and what is smaller is worse. There are great universities in smaller cities and weaker ones - in bigger ones. The new Act will allow universities to see what strengths and weaknesses they have and what is completely useless. And then, thanks to the regional university development fund, implemented with the law, the universities will know their best to develop, the worse to improve, and the weakest simply to cut off – writes Dr. Tałasiewicz. More: <http://www.rp.pl/Publicystyka/180629922-Reforma-Gowina-Humanistyka-20.html>

Professor Hlibowicka-Węglarz awarded the Brazilian Order of Rio Branco

2018-06-25

Professor Barbara Hlibowicka-Węglarz, head of Portuguese studies at the Maria Curie Skłodowska University in Lublin and honorary consul of Brazil in Lublin, was honored with one of the highest state decorations of Brazil – Order of Rio Branco. The award was granted by the President of the Republic of Brazil, Michel Temer - informs Aneta Adamska, spokesman for the Lublin university. The award ceremony took place on June 20 at the embassy of Brazil in Warsaw. The Order of Rio Branco has been awarded annually since 1963, mainly to diplomats and politicians, on the occasion of the «Day of Diplomacy» on 20th April - at the birth date of Baron Rio Branco - a well-known Brazilian diplomat, patron of Brazilian diplomacy.

Jan Kochanowski University in Kielce to establish Media Communication Center

2018-06-25

The Jan Kochanowski University in Kielce laid a cornerstone for the Center for Media Communication and Information Science. The ceremony was attended by Jarosław Gowin, Deputy Prime Minister Minister of Science and Higher Education. The Center, which will be commissioned in the second quarter of 2019, will include three institutes of the Humanities Department at the Kielce University. The Ministry of Science and Higher Education has donated PLN 18 million for the construction. During the ceremony, Deputy Prime Minister Gowin emphasized that the Jan Kochanowski University in Kielce is one of the fastest growing universities in Poland and recently the Kielce high school has joined the group of the best universities in Poland. - As a doctor of philosophy, I am especially pleased that the new building will contribute to the development of humanities. Together with social sciences, they are the basis for building national consciousness and relations with other people - said the deputy prime minister.

16th INFINITI Conference on International Finance is held at the University of Economics in Poznan

2018-06-25

Researchers from all over the world participated in the international conference „16th INFINITI Conference on International Finance” at the University of Economics in Poznan. This is one of the most prestigious European financial conferences organized at the Poznań university. This year's conference is the result of cooperation between three academic centers: Trinity College, Dublin (Ireland), Monash University Melbourne (Australia) and University of Economics in Poznań. Over 200 scholars from Europe, Australia and North America took part in the conference. Conference lectures covered international finance, financial markets, asset valuation, diversification of the investment portfolio, corporate governance, behavioral aspects and many other issues of international finance.

IT students of Gdansk University of Technology to be best- paid specialists

2018-06-25

According to the third nationwide system of monitoring the economic fate of university graduates IT graduates of the Gdańsk University of Technology are the best-paid specialists in their field in Poland. They find employment almost immediately after graduation, and the risk of unemployment is extremely low. The data on the ela.nauka.gov.pl website show that graduates of the studies at the Information Technology Faculty of the Gdańsk University of Technology earn gross salary PLN 9 681.71 per month. This is the highest salary among people who have completed this course in Poland. Finding a job takes less than a month, and the unemployment risk is zero. The monitoring system generates automatic reports-guides for each field of study of all universities in Poland. It collects data on the economic results of Polish university graduates and determines how much they earn, how long they look for a job and the unemployment rate.

Young scientists from the Poznań University of Technology win scholarships from the City of Poznań

2018-06-25

The Chapter of the Poznań City Scientific Award provided scholarships for Poznan young researchers from the Poznań. Among the awarded scholars, there are twelve students under 30 years of age from the Poznan University of Technology with impressive scientific achievements. Scholarships were awarded to Krzysztof Ciomek (IT) - for the outstanding achievements and results of scientific research in the field of computer-aided decision support; Paweł Jeżowski (technical electrochemistry) - for outstanding scientific achievements contributing to the development of modern devices for energy storage - lithium-ion capacitors; Anetta Płatek (chemical technology) - for outstanding scientific achievements and Wojciech Smulek (environmental biotechnology) - for research on

the use of plant surfactants in biodegradation processes of halogen derivatives of aromatic compounds.

New studies at University of Gdańsk

2018-06-25

University of Gdańsk offers 78 majors and 223 specialties in 1st and 2nd degree studies as well as master's studies in the new academic year. - We also offer PhD studies and the opportunity to improve professional qualifications at post-graduate studies - announces the spokesman of the university, Dr Beata Czechowska-Derkacz. In the new academic year in Gdańsk students will be able to study 4 new majors - 2 in Polish Natural Resources Protection and Experimental Genetics and Biology and 2 in English Intercultural and Business Relations in Europe and Cultural Communication. New directions meet the needs of the labor market and civilization challenges. They are interdisciplinary as acquiring knowledge and developing skills in various fields increases the chances of graduates in the labor market. They are created in cooperation with experts and future employers, and the practice internships will be provided in the best institutions and enterprises.

Silesian University of Technology among the laureates of the journal Builder ranking

2018-06-25

The architecture and construction departments of the Silesian University of Technology are among the winners of the TOP10 FOR THE FUTURE ranking. The journal Builder's ranking was based on the activity of faculty students within the „Builder For The Future” educational program. The aim of the program is to support young architects and construction engineers in supplementing education, expanding professional and practical knowledge, skills and competences. «Builder For The Future» is two environmental programs addressed to young architects and construction engineers. The program is supported by eminent Polish engineers and architects creating a group of mentors with their knowledge, experience and authority. The program includes lectures, exercises, case-studies, workshops, consultations and competitions.

Kozminski Academy among 20 best universities educating future financiers

2018-06-26

The British daily Financial Times published the global ranking of Master's Degree in Finance. At the top there are three French universities: HEC Paris, ESCP Europe and Edhec Business School. The only university of the Central and Eastern Europe in the top 20 is the Kozminski Academy from Warsaw, which took 17th place. Studies in finance at Kozminski Academy are chosen by many young Poles and foreign students as such study seems to be a guarantee of professional stability and good earnings. At the Academy, finance and accounting can be studied in both Polish and English languages. As part of the studies, unique specialties such as counteracting money laundering, corporate finance, international finance, accounting and financial reporting, or this year's novelty- Big Data Analysis, are introduced. See ranking: <http://rankings.ft.com/businessschool-rankings/masters-in-finance-pre-experience-2018>

Medical University of Lodz and Roche Poland sign a cooperation agreement

2018-06-26

Specialists from Roche Polska with scientists from the Medical University of Lodz will carry out research and development projects and look for new solutions supporting the sustainable development of health care. This is the purpose of the cooperation agreement signed between the Medical University of Lodz and Roche Polska. Agnieszka Kosowska, director of legal affairs and communication at Roche Polska, during a press conference after signing the contract said: The role of academic centers is crucial as a partner in the implementation of joint ventures in health care. In cooperation with the Medical University of Lodz, we are launching the first program of PhD implementation. The University of Lodz cooperates with over 150 best universities and scientific institutes in Europe, such as: Karolinska Institute, Oxford, Cambridge, Imperial College, IESE Business School, University of Leuven and the Max Planck Institute. In turn, Roche Polska is one of the leaders among companies dealing in providing innovative solutions in the field of health care.

Faculty of Architecture at the Krakow University of Technology to launch Open Summer School

2018-06-26

The Faculty of Architecture of the Krakow University of Technology organizes from 16 to 27 July 2018 the Open Summer School under the motto „Architecture as experience”. The main assumption of the Open Summer School is to support the didactic-scientific activity of the architecture department of the Krakow University of Technology. Students of architecture departments at Polish and foreign universities will take part in July classes. Participants will deal with issues of contemporary architecture and urban planning. Lectures and presentations will be hosted by representatives of Polish and foreign academic centers, architects and technologists. More: <http://www.cracowsummerarchitecture.pk.edu.pl/>

Discussions about tourism during the international conference in Poznań

2018-06-26

Almost 40 participants representing national and foreign scientific units held their presentations during the second national scientific conference „Laboratory of Tourist Experiences. Controversies and problems around the modern tourism economy” at the Academy of Physical Education in Poznań. The debate was about tourism and its variety, especially on the tourism forms considered to be controversial. Progressing changes, creativity of producers, innovations in the tourism sector allowing for the development of more and more specialized segments of visitors, become a kind of testing ground in the era of experience society. The best conference presentations, after positive reviews, will be published in the Polish Journal of Sport and Tourism.

Pupils of the Wrocław primary school win Inventors Academy competition

2018-06-26

The design of the drive system for supporting the stroller won the Robert Bosch competition of the Academy of Inventors. Its authors are students of the Wrocław elementary school No. 25. The Academy aims to arouse young people's interest in science and encourage them to think creatively. Wrocław University of Technology joined the project for the eighth time. This year, the jury recognized the design of an independent drive system for supporting a pram, which was created by students of elementary school No. 25 in Wrocław. The trolley is driven by two electric motors providing power to adjust the speed of the trolley to the pace of the walk. The device is safe - the motors turn off automatically when you take your finger off the start button. The prize for the winners was electronic equipment, the school received a voucher worth 5,000. PLN for equipping the technical studio. More about the competition: <http://pwr.edu.pl/uczelnia/aktualnosci/gala-finalowa-akademii-wynalazcow-boscha-na-pwr-10916.html>

Warsaw University of Technology launches project Warsaw Design Factory

2018-06-27

The Warsaw Design Factory has been launched in the Center of Innovation Management and Technology Transfer at the Warsaw University of Technology. This is special program to help students and university staff to create innovations and develop cooperation with the environment. The goal of Warsaw Design Factory is to build a modern and innovative university, interdisciplinary, creative teams of young scientists and fully engaged academic staff. The Warsaw Design Factory will host courses, workshops, trainings and programs for students and employees. The projects implemented here are to foster the development of cooperation between science and business and the teaching skills of the staff of the Warsaw University of Technology as well as to develop students' professional skills. More: <https://www.wdf.pw.edu.pl/>

Days of Polish Culture at the North-East University in Shenyang

2018-06-27

From 28 to 30 June, the Days of Polish Culture will take place at the University of North-East (North East University - NEU) in Shenyang. Polish-Chinese projects have been implemented since 2013, when cooperation between NEU and the University of Silesia began. As part of this year's Days of Polish Culture organized by the Center for Polish Studies in Shenyang Polish language teachers from the University of Silesia will hold the open lectures on Polish culture (including Polish animated films) and Polish language (changes in contemporary Polish). The program includes Polish dance workshops and listening to Polish songs. Chinese students will also be able to make Silesian dumplings and typical Polish sandwiches by themselves, as well as try the traditional soup żur and wodzionka. The ceremonial opening of Polish Culture Days will take place on June 28 at 14.00 Chinese time.

Silesian University of Technology completes the Corporate Readiness Certificate program

2018-06-27

The Corporate Readiness Certificate program, coordinated by the Student Careers Office of the Silesian University of Technology, has been completed. Among 174 students qualified for this year's program 97 students come from the University of Technology. The Corporate Readiness Certificate program was implemented in cooperation with Accenture Advanced Technology Center Poland, IBM and ING Tech Poland. The participants were senior students of technical, IT or IT and economics studies at the Silesian University of Technology, the University of Economics in Katowice and the University of Silesia. Students took part in free classes, lectures and laboratories in their own universities and partners' schools. They gained practical knowledge, which is not available on the market, they learned how to operate in a complex, modern business environment and obtained a prestigious certificate. The best students received paid internships and apprenticeships.

University of Gdańsk to cooperate with the District Court

2018-06-27

The University of Gdańsk has signed a cooperation agreement with the District Court in Gdańsk. The document was signed by Prof. Jerzy Gwizdała, rector of the University and Rafał Terlecki, the president of the court. The agreement provides for the development of analyzes, expert opinions and opinions for the needs of the judiciary, including issuing paid opinions for the needs of proceedings and the organization of postgraduate studies in the areas indicated by the Regional Court in Gdańsk, training in legal and economic issues as well as management and experimental sciences. The parties of the agreement will also cooperate in the organization of scientific conferences, symposia and other forms of transferring knowledge and experience, and jointly

inspire the conduct of research directions relevant to the justice system, as well as organize internships for best students.

University of Szczecin signs a contract with Szajna Laboratorium Optyczne

2018-06-27

The University of Szczecin has signed a contract with Szajna Laboratorium Optyczne. The document assumes cooperation in conducting didactic classes, providing the university with information materials about the industry profile, consulting in creating and modifying study plans related to spectacle optics, co-organizing workshops, symposia, exhibitions and practices. Ophthalmic optics is a study where it is very important to train practical skills. Hence the university and partners will provide a large number of classes conducted in laboratories and practices taking place in companies with an optical profile. This requires cooperation with employers, optical factories, laboratories, as well as Polish and global companies producing lenses as well as optical materials and equipment. Earlier, the University signed agreements with local entrepreneurs and global companies in the industry, as well as with the Polish Association of the Blind Persons in the West Pomeranian Region.

Deputy PM Gowin: Humanistics is essential for the cultural and spiritual development of society

2018-06-28

In the new educational system, the scientific achievements of philosophers or lawyers at one university will be compared with the achievements of philosophers or lawyers at other universities. Future evaluation will be much more fair and reliable than the current one - writes in newspaper „Rzeczpospolita” Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education. In the article «Does the Constitution for science threaten humanists?» the Deputy Prime Minister argues that the future evaluation system will take into account the specificity of the humanities and the new rules are good information for Polish humanists. - Humanities have their specificity. It is also necessary for the cultural and spiritual development of society. The new model of evaluation will equally favor publications that develop national culture, as well as those that will incorporate the results of Polish humanist research into the global circulation of ideas - explains Gowin. More: <http://www.rp.pl/Publicystyka/306259930-Czy-konstytucja-dla-nauki-za-graza-humanistom.html>

TopMinds program ends

2018-06-28

The Ministry of Science and Higher Education held the ceremonial ending of TopMinds 2018 program. It is a mentoring program created by the Association Top 500 Innovators and the Polish-American Fulbright Commission for ambitious students and PhD students from Polish universities. According to the Ministry of Science, over 330 students from over 50 national universities applied for the TopMinds program in 2018. Most students applied from the University of Warsaw, the AGH University of Science and Technology in Kraków, the Medical University of Gdańsk, the Warsaw University of Technology and the Jagiellonian University. In the second TopMinds program, which lasted from March to June 2018, participants took part at the weekend BootCamp. It was three weekend training session and project

work aimed at solving selected social problems related to health prevention, improving the quality of life and providing facilities for disabled people and foreigners during their stay in Poland. More: <http://www.topminds.pl/>

15th Americanist Forum at the University of Białystok

2018-06-28

The Department of History of the United States of the University of Białystok organizes the 15th Americanist Forum. The forum will start on June 29, 2018, its participants will talk about Polish-American relations in the context of the 100th anniversary of Poland's independence. The Forum guests will talk about the participation of Poles and representatives of American Polonia in the battles of the First World War or the attitude of President Woodrow Wilson to Polish independence issue. The honorary guest of the conference will be Dan Hastings - cultural attaché of the US Embassy in Warsaw, who will give a speech «100 Years Together: People, History, Future». During the three-day debates, the participants will listen to over 25 lectures and will learn how reacted the press overseas to the kidnapping of King Stanisław August Poniatowski by the confederates, how was the November Uprising reported? Was Kazimierz Pułaski actually the father of the American cavalry? What connected Thomas Jefferson and Tadeusz Kosciuszko?

University of Rzeszów among 4 Polish universities with increased number of students

2018-06-28

Four universities in Poland recorded an increase in the total number of students between 2017 and 2018. This group includes: University of Warsaw, University of Silesia in Katowice, Jan Kochanowski University in Kielce and University of Rzeszów. The result achieved by the Rzeszów University is satisfactory for its rector, Prof. Sylwester Czopek, who emphasizes that in the era of demographic decline and growing competition in the education market, it looks that education offered by the University of Rzeszów is good. - Figures show nearly 7 percent of

increased interest in extramural studies, which allows to assume that students also work, which may mean that they have knowledge and practical skills, which in turn allows them to build better relations between the University and the socio-economic environment and industry. Malcontents will say that they «work because they have to» and probably this is true for some of them. However, it does not change the fact that combining studies and work confirms their maturity and the ability to manage their own development - believes the rector of the University of Rzeszów.

Gdańsk University of Technology to cooperate with General Electric

2018-06-28

Department of ocean engineering and shipbuilding at the Gdansk University of Technology and Alstom Renewable Poland Ltd /Baker Hughes, and GE Company signed an agreement on scientific and didactic cooperation. The agreement includes provisions for conducting lectures by employees of the company, organization of study visits at Elbląg, participation of students in reviews of implemented projects, cooperation of the company with students - including providing topics for the implementation of engineering and master's theses, as well as organization of student internships. In addition, the company's employees will have the opportunity to continue professional development in the scientific field as part of PhD theses. The agreement also covers research and development cooperation. In the first stage of contract implementation, 10 students of the University of Technology will hold a month-long professional practice or a six-month research and industrial internship at General Electric.

Professor Jan Cwajna from the Silesian University of Technology receives Henry Clifton Sorby Award

2018-06-28

Professor Jan Cwajna from the Faculty of Materials Science and Metallurgy of the Silesian University of Technology received the Henry Clifton Sorby Award granted by the International Metallographic Society. Professor Cwajna is a graduate of the Silesian University of Technology. He obtained his PhD degree and postdoctoral degree in material engineering at his alma mater in 1991, in 2002 he received the title of professor. His scientific achievements include 381 works (including 7 monographs and chapters in monographs, 80 scientific publications in international journals, 58 publications in national magazines), 84 scientific and research works and 4 patents, including 1 in Europe. The Henry Clifton Sorby Award is awarded to people known in the international scientific community for a comprehensive contribution to broadly understood metallography and material engineering. The laureate delivers the main lecture during the annual meeting of the International Metallographic Society.

Applications that make life easier won the Samsung LABO program

2018-06-28

The 4th Samsung LABO program at the West Pomeranian University of Technology in Szczecin has been completed. Conceived as facilitating students' start-up in their professional life, the program has become a hotbed of ideas and projects of interesting local entrepreneurs. The first place was won by Rambler - an application for tour guides. Thanks to it, you can quickly and easily get in touch with members of a tourist group and create and share a trip plan or a note. The second place was won by a similar application - Clever Tracker. It allows, for booking a seat in a coach and in hotels. The third place was taken by the GYM4YOU application that helps finding gyms, personal trainers and dieticians. Samsung LABO is the result of an agreement between

Samsung, the University of Technology and regional authorities. It aims to develop students' strategic digital competences and support the construction of a knowledge-based economy.

Rzeszów University of Technology to support State Higher School of Eastern Europe in Przemyśl

2018-06-29

Both schools will cooperate in science, education, promotion of modern solutions, scientific research, innovation and entrepreneurship. The agreement was signed by Prof. Tadeusz Markowski the rector of the Rzeszów University of Technology, and Dr Paweł Trefler, rector of the State Higher School of East European in Przemyśl. It assumes cooperation in the field of the quality of education, creating and conducting postgraduate studies, additional courses. The agreement also covers joint initiation, organization and development of contacts with foreign universities, in particular from Eastern Europe.

University of Warmia and Mazury scientists discover healthy cheese

2018-06-29

Researchers from the Faculty of Food Sciences of the University of Warmia and Mazury in Olsztyn are working on the recipe for a new ripening cheese. The product is to be healthy and intended for people struggling with civilization diseases. A dozen or so recipes of ripening and curd cheeses have been developed in the Olsztyn university laboratories, including the well-known Kortowski cheese. This time, work on the cheese for people with heart and diabetes problems is underway. According to the University of Olsztyn, the cheese recipe developed by scientists from the Faculty of Food Sciences is in line with the latest trends in food production technology. - Nowadays, it's trendy that dairy products are placed to specific groups of consumers. And we want to respond to the needs of the market, which demands that food products also should have pro-health properties. Our cheese with increased con-

tent of casein beta should interest to people with cardiovascular disease, at risk of heart attack- emphasizes Dr Justyna Żulewska, who develops the technological process of producing a new cheese.

New post-graduate studies at the Cardinal Stefan Wyszyński University

2018-06-29

The Cardinal Stefan Wyszyński University in Warsaw launches over a dozen new specialties in postgraduate studies in the new academic year. Among the novelties, students find such specialties as: Personal Data Protection in the Church (Faculty of Law and Administration), Contemporary Migration. Identity and security, Geoinformatics and geostatistics, History of Polish military in the 19th and 20th centuries, Collection Management and Museum Institution (Faculty of Historical and Social Sciences), Postgraduate glottodidactic studies. Teaching Polish as a Foreign Language (Faculty of Humanities) or School of Creative Leaders (Faculty of Christian Philosophy). Registration for studies has already started and takes place via the website: www.podyplomowe.uksw.edu.pl

Maritime University of Szczecin to cooperate with the Technical School of Inland Navigation in Wrocław

2018-06-29

The Maritime University of Szczecin has signed an agreement on cooperation with the Inland Navigation Shipping Technical School in Wrocław. The university has concluded an agreement with the school for continuous improvement of the quality of education in vocational fields. The signatories of the agreement are Dr Eng Capt. Wojciech Trybacz, the Rector of the Maritime University and Paweł Zapart, director of the Inland Navigation Schools. The meeting in AM was attended by Janusz Karp, the director of the Department of Maritime Education of the Ministry of Maritime Economy and Inland Navigation. - Within our cooperation with the School, we will extend the cooperation of teachers and lecturers to provide support in the development and implementation of new curricula. The cooperation will also result in undertaking new educational projects and applying innovative methods of education in practice – announce the signatories of the agreement.

Katowice University of Economics scholar receives Springer Publisher Award

2018-06-29

Tomasz Wachowicz, Prof. of the University of Economics in Katowice received the second prize of the Springer Publishing House for the best publication as part of the Group Decision and Negotiation conference in 2018 in Nanjing, China. The publication deals with research errors and limitations when planning, organizing and analyzing the results of experimental research on bilateral negotiations, carried out in a multicultural context. The author draws attention to the necessity to take into account many factors determining the occurrence of cultural differences at various levels of generality, eg: national, organizational and group culture of student culture. The awarded article: «Some Methodological Considerations for the Organization and Analysis of Inter- and Intra-cultural Negotiation Experiments»

was created in co-authorship with Prof. Gregory Kersten from Concordia University Montreal and Dr Ewa Roszkowska from University of Białystok.

Nobel lecture at the conference on nanophotonics at the Wrocław University of Technology

2018-06-29

Nobel Prize winner - prof. William E. Moerner will give a lecture at the 11th International Conference on Nanophotonics ICNP2018. The beginning of the lecture is planned on July 2 at 9.00 in the building D-20 Wrocław University of Technology. The lecture «Nanophotonics Based on Individual Molecules and Light Gives Rise to 3D Super-Resolution Imaging and Beyond» will inaugurate the ICNP conference which will take place from 2 to 6 July at the Wrocław University of Technology. ICNP2018 will discuss the latest developments, ideas and solutions in the field of optics and photonics on the nano and micro scale. Professor William E. Moerner works at Stanford University. He deals with the spectroscopy of single molecules, tracking their motion and trapping them. He is one of the pioneers of the super-resolution microscopy which brought him together with Eric Betzig and Stephan Hell the 2014 Nobel Prize in chemistry. More: <http://www.icnp2018.pwr.edu.pl/conference/>

University of Warmia and Mazury and Michelin Poland to start dual education

2018-07-02

From October 2018, the University of Warmia and Mazury in Olsztyn along with the Michelin Polska S.A. will launch dual education. On June 28, the first students qualified for the program received the nomination letters. The studies will be carried out by the Faculty of Technical Sciences and the Faculty of Economic Sciences of the Olsztyn university. The University of Warmia and Mazury is the first Polish university that incorporates this educational model into its educational offer. - It's a new approach to learning. We offer students dual studies. It means that they normally

carry out their program of study with our participation as an employer and the studies are partially run at our factory. Thanks to this, students can practically solve the problems that they taught in the university in theory- explained the director of the Michelin factory staff in Olsztyn, Agata Trzcianowska.

AGH University of Science and Technology student examines a modular guitar

2018-07-02

Monika Sobolewska, a student of acoustic engineering at the AGH University of Science and Technology in Kraków, conducts her master's thesis research on a modular guitar. The specialist construction is to enable determination of the influence of individual elements of the instrument on its acoustic parameters. The construction of the modular guitar contains all the traditional elements of the classical guitar. The only difference is to combine the plates with the sides and the fixing of the neck. Instead of gluing the boxes, a toothed clip was used, inspired by the Japanese art of joining wood. Comprehensive studies of guitars are conducted in the anechoic chamber of the Department of Mechanics and Vibroacoustics at the Krakow University. The properties of the guitar were researched by a robot- a project of Mikolaj Wilczyński, a student of automation and robotics. The robot's task is to stimulate the guitar string in the right position and in a remote way. Thanks to automation, the solutions manage to obtain the proper repetition of the sound, which is the basis for an objective analysis of its parameters.

Silesian University of Technology works for the protection of monuments from the UNESCO World Heritage list

2018-07-02

Silesian University of Technology started cooperation with the Association of Tarnogórska Land Lovers. The aim is primarily to protect and develop the monuments of Tarnogóra, which are on the UNESCO World Heritage List. The agreement signed at the Historic Silver Mine in Tarnowskie Góry is the first such agreement in Poland between the university and a non-governmental organization operating globally. The agreement provides for the exchange of experiences and obtaining grants and subsidies for investments. One of them will be the modernization of the Steam Engine Open Air Museum at the silver mine. Additional funds will also be used for conservation of buildings listed on the UNESCO World Heritage List. The signatories will prepare research and didactic projects, organize seminars and conferences, as well as cooperate in the implementation and dissemination of the results of scientific and research works as well as the organization of internships and apprenticeships.

Medical University of Poznan scholar receives prestigious award

2018-07-02

Doctor of MS Piotr Eder from the Poznan University of Medical Sciences has been awarded the international Dr Bares Award for one of the best original papers in the field of gastroenterology and hepatology, published in 2015-2017. The award-winning work: «Magnetic resonance enteronic predictors of one-year outcome in ileal and ileocolonic Crohn's disease treated with anti-tumor necrosis factor antibodies», was published in Scientific Reports in 2015. It was written in collaboration with the Department and Department of Radiology and concerned the usefulness of magnetic resonance enterography in predicting long-term results of anti-TNF-alpha therapy for Leśniowski-Crohn disease. The Dr Bares

Award competition from 1994 promotes researchers dealing with gastroenterology and hepatology mainly from Central and Eastern Europe. Piotr Eder is the fourth Polish winner.

Competition of flying and driving unmanned vehicles at the Gdańsk University of Technology

2018-07-02

Gdansk University of Technology invites participants to the competition of unmanned, autonomous flying and traveling vehicles Intelligent Autonomous Vehicles Cup 2018, which will take place on July 6 from 9:00 to 15:00 at the Academic Sports Center of the Gdańsk university. The plan includes three competitions: Drone Race, Marker Search and Freestyle, in which the players will surprise viewers with their ingenuity. The competition is organized by the faculties of Electronics, Telecommunications and Information Technology, Electrotechnics and Automation and the SafeIDEA Scientific Circle. The event precedes the conference IAV 2019, dedicated to smart autonomous vehicles. Owners of autonomous and remotely controlled vehicles can participate in the competition after registration via: eti.pg.edu.pl/safeidea/rejestracja.

One million PLN for a joint project of the University of Bialystok and the University of Kaunas

2018-07-03

„Financial capabilities of the Jagiellonian states in the sixteenth century in terms of comparative approach” - this is the title of the project, which will be jointly implemented by scientists from the University of Bialystok and the University of Kaunas in Lithuania. Researchers will receive nearly PLN 1 million from the National Science Center, as part of the recently-finalized DAINA competition organized jointly with the Lithuanian Scientific Council. The head of the project on behalf of the University of Bialystok will be Dr. Piotr Guzowski from the Faculty of History and Sociology, on behalf of the Lithuanian

side - Dr. Marius Sirutavičius. The main objective of the project is to examine the financial capabilities of the Kingdom of Poland and the Grand Duchy of Lithuania in the 16th century (1492-1586). The researchers want to calculate the amount of tax revenue, estimate the income of a monarch, examine the credit market at the time and flow of funds between the two Jagiellonian states.

New specialty at the Maria Curie Skłodowska University to prepare specialists in handling border traffic

2018-07-03

The Institute of Slavic Philology at the Maria Curie Skłodowska University in Lublin launches a new specialty in the academic year 2018/2019. The Russian language with English in handling border traffic is to prepare specialists in the field of border traffic and customs services. In the new specialty, students will acquire professional qualifications, theoretical knowledge, practical skills and cultural competences that are necessary to perform the profession of customs officer, customs agent, border traffic specialist. In addition, this specialty will allow them to master the ability to use professional terminology and nomenclature in the field of administration, trade and tourism - informs the Lublin university.

State Higher Vocational School in Elbląg to support start-ups

2018-07-03

Rector of the State Higher Vocational School in Elbląg, Prof. Eng. Zbigniew Walczyk has signed a partnership agreement for the implementation of the project called „El-evator start platform” under the Operational Program Eastern Poland 2014-2020. The parties of the contract are Municipality of Elbląg - Elbląg Technology Park, State Higher Vocational School in Elbląg, Investin Ltd, OPEGIE-KA Ltd, Fundacja Instytut Nauk Ekonomicznych i Społecznych, Granter Ltd. and the Foundation for Advanced Technologies. The purpose of the contract is to create a partnership providing with the organization of a comprehensive support program in the Eastern Poland macro-region, which will provide conditions to create and develop the innovative start-up companies.

Summer with the Warsaw University of Technology

2018-07-03

The Warsaw University of Technology Scientific Camp is a summer offer of a scientific and recreational nature addressed to primary school, middle and high school students interested in exact and technical sciences. The Warsaw University of Technology Scientific Camp 2018 will take place in Piękna Góra near Giżycko. As the University of Warsaw convinces, this is an ideal proposition for pupils who are considering studying at the Warsaw University of Technology or other technological universities. The goal of the Camp is to provide each participant with participation in 25-hour scientific workshops, conducted by research and teaching staff graduates and students of the Warsaw University of Technology. More: <https://klatrat.org/projekt/oboz-naukowy-pw-2018>

Digital revolution in the library of the Wrocław University of Environmental and Life Sciences

2018-07-03

The Main Library of the University of Life Sciences in Wrocław launches new instruments that will allow the academic community to more easily use and search resources. The new instruments are a multi search engine - one «window» for searching library resources - and HAN (Hidden Automatic Navigator), new remote access to e-resources. The existing library card will be replaced by the employee ID card. Thanks to the multi-search engine, the users can search all printed and electronic resources in one place, get search results, access full texts of electronic books, magazines and databases, order books from all catalogs and check the status of their library account. The HAN system will provide access to electronic resources in the network and outside the university network to employees, PhD students and students of the university. It is available 24/7 from anywhere in the world and works on computers and smartphones. More: http://www.glos.upwr.edu.pl/aktualnosci/48052/nowe_narzedzia_w_bibliotece_rewolucja_w_przeszukiwaniu_zasobow.html

Researcher from the University of Wrocław wins Polpharma Scientific Foundation competition

2018-07-03

Dr Aleksander Czogalla from the biotechnology department of the University of Wrocław has been awarded within the Polpharma Scientific Foundation competition. A Wrocław scientist obtained a grant of 510,000 PLN for the implementation of the research project «Designing, manufacturing and checking the effectiveness of new TP53 gene carriers for use in anticancer therapies». The theme of this year's competition was the development and optimization of processes in medical biotechnology. The participants were scientists with at least a PhD degree who proposed: optimization of existing drug

manufacturing methods - or potential biotechnology drugs, creation of new, better expression systems, mathematical models of biotechnological processes enabling their optimization and control, devices or technical solutions that improve biotechnology processes.

Three IT jubilees at the University of Nicolaus Copernicus in Torun

2018-07-03

Outstanding Polish IT specialists participated in the fifteenth conference „Information Technology in Education” (IwE2018) at the Nicolaus Copernicus University in Toruń. The event was an opportunity to celebrate three jubilees: the 15th anniversary of IwE, the 70th anniversary of computer science in Poland and the 25th anniversary of the Information Olympics. Participants, scholars, university lecturers and institutions interested in improving the quality of IT education, listened to speeches given by eminent personalities of IT education. Lectures were delivered by: Prof. Włodzisław Duch, Prof. Krzysztof Diks, Prof. Jan Madej and Prof. Maciej M. Sysło. IT education is undergoing changes, which is why IwE is opening up to teachers and lecturers who want to consciously use methods and techniques derived from computer science to solve problems in the taught subjects: mathematics and natural sciences, humanities, artistic and early school education.

50th anniversary of Faculty of Fundamental Problems of Technology at the Wrocław University of Technology

2018-07-03

The Faculty of Fundamental Problems of Technology at the Wrocław University of Technology celebrates this year its 50th anniversary. There are 5 fields of study at the faculty - technical physics, computer science, biomedical engineering, quantum engineering and optics. The faculty scientists educate about 2 thousand students. The Faculty of Fundamental Problems of Technology (WPPT) was established on September 1, 1968 as the first unit

of this type in Poland. At present, there are about 180 scientists employed in the department - including 19 professors, 32 assistant professors and over 100 scientists holding PhD title. Until now, over 7.5 thousand graduates at the WPPT have completed their studies. They are graduates who have held or occupy prominent positions in public administration, science and business. The Faculty's employees run math and physics classes on almost all fields of study at the Wrocław University of Technology, contributing significantly to the education of thousands of engineers. More: <http://wppt.pwr.edu.pl/50-lecie-wppt>

Gowin: The government promotes sustainable development, not balanced stagnation

2018-07-04

- My opponents are defenders of the status quo. They are people who think that at Polish universities there is nothing to change just add more money. The universities certainly need more money, but if you pour it like new wine into the old wineskins, they will be wasted - said Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education in conversation with the TVP Info website. In the opinion of Deputy Prime Minister Gowin, the new Act on Science and Higher Education is to raise the level of Polish universities and prevent the brain drain. - To protect the young national elite, we must reform Polish universities - he added and argued that «the law was designed to give every type of university a chance for development. «According to Gowin, the new Act - despite the amendments - does not mean giving up the pursuit of improving the quality of higher education. The government promotes sustainable development, not balanced stagnation - notes the minister. More: <https://www.tvp.info/37875226/gowin-nie-wiem-czy-przekonalem-prof-pawlowicz>

National Center for Research and Development launches first „Dual Studies” call

2018-07-04

In a new academic year students of several dozen Polish universities will gain new opportunities to combine theoretical classes with employment in business. As part of the first call for „Dual Studies”, more than PLN 123 million will be allocated to Polish universities - informs the National Center for Research and Development. As part of the «Dual Studies» call 84 applications were submitted and 69 projects received funding. The project of Kozminski University in Warsaw to educate students in the field of health economic and big data analytics and dual course for design in the field of mechanics and mechanical engineering at the Silesian University of Technology were assessed as the best solutions. The next position was received by project of the Lodz University of Technology in the field of practical design. The University of Environmental and Life Sciences in Poznań took the third position, with a new course animal nutrition and fodder production. More and more foreign students choose Poland

2018-07-04

According to the latest data of the Central Statistical Office, in the past academic year, Polish universities have recorded an increase in the number of foreign students. As data show in the academic year 2017/2018, 72.743 foreign students studied in Poland, which is 6,950 more than in the previous year. This gives an increase of 10.56 percent within one academic year. This, in turn, reflects the dynamics of the process of internationalization of higher education in Poland. The majority of foreigners came from European countries, including more than half (37.8 thousand, or 52.0 percent) from Ukraine. The second group in terms of numbers were stu-

dents from Belarus (6.0 thousand - 8.3 percent) and from India (3.0 thousand - 4.1 percent). 63.8 thousand foreigners, or 87.8 percent have taken full-time studies. Almost one third of all foreigners (22.2 thousand) chose schools in the Mazowieckie voivodeship. More: <http://stat.gov.pl/obszary-tematyczne/edukacja/edukacja/szkolnictwo-wyzsze-w-roku-akademickim-20172018-dane-wstepne,8,5.html>

Academy of Career Development at the University of Silesia

2018-07-04

The University of Silesia invites students to training as part of the Career Development Academy. The organizers of the workshops are the Career Office of the University of Silesia together with representatives of the cooperating companies - Capgemini Poland, VEO Worldwide Services, PwC SDC, WEM Consulting and Belbin Polska. Career Development Academy is a series of summer trainings for students and graduates of the University of Silesia. Classes will take place in July, August and September in the Student Activity Zone in the rectorate of the University of Katowice, at ul. Bankowa 12, room 133. The project is addressed to people who want to develop their skills and increase their chances on the labor market. Each participant will receive a certificate confirming participation in the workshop. The topics of the meetings will concern effective communication, assertiveness, team cooperation, time management, e-branding and coping with stress. More: www.bk.us.edu.pl

Wrocław University of Technology to support seven schools from three provinces

2018-07-04

Wrocław University of Technology has signed agreements with 7 secondary schools from the 3rd voivodship. Their main goal is to promote exact and technical sciences and to help develop students' interests and passions. Contracts have been concluded for 5 years. The university is the patron of the III Secondary School in Kalisz, II Secondary School in Wałbrzych, I Secondary School in Wieluń, Secondary School with Bilingual and International Units in Leszno, Secondary School in Oleśnica, Secondary School in Jelenia Góra and I Secondary School in Świdnica. The University of Technology will provide support in the implementation of projects within the Lower Silesian Science Festival, will guarantee the participants participation in the «Talent Study» program and will present projects implemented by student research clubs.

Sejm adopted the Constitution for Science

2018-07-05

On July 3, 2018, the Sejm (Polish Parliament Lower Chamber) adopted the Law on Higher Education and Science. In the vote, 233 deputies were in favor of the bill, 195 against and 1 abstained. Now the project will be evaluated in the Senate. After finishing the parliamentary works, it will be directed to the President of Poland. - It is a great day for the whole academic community. Unprecedented consultations on a European scale have given a law that will change Polish science - says Piotr Ziółkowski, head of the political cabinet of Jarosław Gowin, Deputy Prime Minister, Minister of Science and Higher Education. As the Ministry of Science convinces, the reform adopted by the Sejm means increasing financial support for science and higher education, providing all PhD students with a scholarship system, changing the education model, greater student protection, new academic career paths and a new model of effective university management. More: <http://konstytucjadlanauki.gov.pl/>

Professor Jacek Cichoń from Wrocław University of Technology is the most favorite lecturer of Wrocław students

2018-07-05

Professor Jacek Cichoń from the Wrocław University of Technology became a favorite lecturer of Wrocław students in the Academic Radio Luz competition. The „Cup for the Lecturer” competition was organized by the radio station for the sixth time. Lecturers from all universities in Wrocław could take part in it, with the exception of winners from previous years. Professor Cichoń received 3089 votes - this is the best result in the entire competition history. The second place was held by Dr. Zygmunt Domagała from the Medical University in Wrocław, gaining 2592 votes, and the third was Prof. Piotr Drożdżewski from the Faculty of Chemistry of the Technical University, with 1729 votes. - I am very happy with this award. Acquiring students' liking is a complex process, but the most important thing is probably the fact that students feel that I just like them - said prof. Cichoń during the broadcast on Radio Luz.

Collegium Civitas to launch media and digital education workshops

2018-07-06

The Modern Poland Foundation and the Warsaw Collegium Civitas College organize free workshops on media and digital education for secondary school students. The aim of the workshop is to develop the competence of young people in communication, cooperation, critical thinking and creative problem solving as well as innovative activities. Two-day classes will be held at the Collegium Civitas headquarters (Palace of Culture and Science in Warsaw) by university lecturers. The first day will be devoted to particular areas of media and digital competencies as using information, relationships in the media environment, media language, network security, copyright and media law and economic aspects of media operations. On the second day, the workshops will focus on the legal and economic aspects of the functioning of the

media. Applications for the workshops will be accepted until August 1, 2018. More: <http://edukacjamedialna.edu.pl/info/warsztaty/>

Professor Andrzej Górak receives the Order of Merit of North Rhine-Westphalia

2018-07-06

Professor Andrzej Górak from the Faculty of Process Engineering and Environmental Protection of the Lodz University of Technology received the Order of Merit of North Rhine-Westphalia. For a quarter of a century the professor has been involved in the organization of cooperation between scientific organizations in the Land of North Rhine-Westphalia and Poland. Professor Andrzej Górak is a well-known and respected scientist in the field of chemical engineering, as well as a propagator of Polish science and an enthusiast of the idea of international cooperation. He is particularly involved in the Polish-German cooperation of scientific institutions and industrial organizations.

Student at the University of Rzeszów wins the Diamond Grant of the Minister of Science and Higher Education

2018-07-06

Bartłomiej Krzych, a second year MA student in Philosophy at the University of Rzeszów, received the prestigious Diamond Grant of the Minister of Science and Higher Education - informs Dr. Maciej Ulita, spokesman for the Rzeszów University. The idea of the Diamond Grant is to support exceptionally gifted students or graduates conducting high-level scientific research, so as to give them the opportunity to shorten the career path of science. As part of the program, the additional funds are intended for financing research conducted by highly talented students or graduates. Bartłomiej Krzych's project "The philosophical and theological thought of Fr. Augustine Jakubisiak (1884-1945)", was very highly rated by the Ministry and received funding PLN 180,000 and took 12th place out of 80 awarded projects. The scientific supervisor of the project is Krzysztof Bochenek, Prof. of University of Rzeszów.

University of Technology and Humanities in Bielsko-Biala at Career Services Day at the Sorbonne

2018-07-06

The University of Technology and Humanities in Bielsko-Biala is the first and only university in Poland participating in an international conference devoted to finding young talents - Career Services Day, which took place at the Sorbonne University. The conference with the participation of 130 universities and partner institutions from all over Europe was an opportunity for Career Offices, supporting companies and institutions to exchange experience with partner universities and learn about European trends in supporting students on the labor market. The event was organized by the partner of the university - JobTeaser, which has so far implemented the best recruitment solution in Europe for students and graduates, integrating the most prestigious institutions of higher education in Europe. Students and graduates of the Academy are the first in Poland to have access to a platform that provides the opportunity to benefit from professional career guidance and information on the selection of jobs and internships.

Silesian University of Technology receives the „University of Leaders” certificate

2018-07-06

Silesian University of Technology obtained the „University of Leaders” certificate and the „Primus” special award granted by the Foundation for the Development of Higher Education. The awards were received during the gala in Warsaw by Prof. Janusz Kotowicz, the Vice-Rector for cooperation with the socio-economic environment. The certificate confirms that the university teaches students creativity, intellectual independence, decision-making skills, responsibility, communication skills and self-confidence - features useful in fulfilling leadership roles in contemporary society. It is also a confirmation of graduate education in accordance with the needs

and requirements of the labor market, cooperation with the socio-economic environment as well as innovation and modernity of the teaching offer. The «Primus» special distinction is awarded to universities and their organizational units, which in the certification procedure obtained the highest number of points.

University of Silesia invites to „breakfast on grass”

2018-07-06

The University of Silesia in Katowice invites participants on Saturday, July 7 from 10.00 to 16.00 to the Rosarium of the Silesian Park for „Breakfast on the grass with the University of Silesia”. The guests will be able to use the Mobile Recruitment Point, solve the „Focus” quiz and sign up for studies. For kids, classes will be organized in the Children’s Zone, pupils can participate in a lecture entitled «The Secret Life of Trees» prepared by Prof. Piotr Skubała from the Faculty of Biology and Environmental Protection. The program also includes games, exercises and sports shows run by the Academic Sports Association of the University of Silesia. The event guests will take part in a show of Chinese tea ceremony combined with a tasting it. At the end, a lecture on Chinese language and customs prevailing in China is planned and within the interactive part the visitors will be able to learn some basic phrases and write selected Chinese characters.

Students of the Maria Curie Skłodowska University wins „Diamond Grants”

2018-07-09

Two students of the Faculty of Chemistry of the Maria Curie Skłodowska University in Lublin have won the „Diamond Grant”, a prestigious award of the Ministry of Science and Higher Education for graduates of bachelor’s studies or students after the third year of master’s studies conducting research and possessing outstanding scientific achievements. This year, Minister of Science and Higher Education Jarosław Gowin awarded over PLN 16 million to finance the projects. The «Diamond Grant» program has been implemented since 2012 and provides

young scientists with financial independence and paves the way to the PhD. The winners of the competition are Łukasz Baran with the project: «Computer simulations of selected molecules on solid surfaces» and Paweł Woźnicki with the project: «Combination of achiral coupling reaction type> P(O) H and cyclic vinyl esters and asymmetric Michael addition - source of chiral 1,2-functionalized cyclohexanes for applications in organic synthesis «.

International Cosmological School in Krakow

2018-07-09

From 8 to 22 July 2018 in Krakow, students, PhD students and academics interested in astrophysics and cosmology can take part in the 4th Cosmology School „Introduction to Cosmology”. The organizers of the event are the Polish Astronomical Society, Jagiellonian University, National Center for Nuclear Research, the Center for Theoretical Physics of the Polish Academy of Sciences and the Jan Kochanowski University in Kielce. The most important topics of this year’s conference will be dark matter and dark energy; space network; formation of galaxies; Gravitational waves and multi-messenger astronomy, as well as general relativity, the Jagiellonian University reports. Foreigners learn Polish at the University of Wrocław

2018-07-09

Over 100 participants have started the Summer Course of Polish Language and Culture for Foreigners at the University of Wrocław. This year's students come not only from Europe, but also from China, Israel, the United States and Thailand – with a total of 28 countries. - You will learn Polish, its complicated and difficult structure and you will feel the pleasure of speaking it. We trust the staff of the Polish Language School. I wish you many successes with the Polish language - says the dean of the Faculty of Philology, Prof. Marcin Cieński. Every year, about 1,000 people attend the courses in Wrocław. The lecturers conduct semester courses, intensive summer course, on-demand courses, preparation courses for the state examination in Polish as a foreign language and the Annual Preparatory Course for people intending to study in Polish at the University.

Researchers at the Wrocław University of Economics at the Climate Reality Project conference

2018-07-09

Representatives of the Wrocław University of Economics participated in an international conference organized by The Climate Reality Project in Berlin. The purpose of the meeting was to draw attention to the problem of global warming and its economic, environmental and social consequences. Professor Bożena Ryszawska and Prof. Piotr Szymański had the opportunity to meet with the founder of the organization - former US vice president and laureate of the Nobel Peace Prize Al Gore. They also received the «The Climate Reality Leadership Corps» certificates. The Wrocław University is the first Polish partner of The Climate Reality Project. It participates in "100 percent. Committed", one of the flagship projects of the organization related to the transition to renewable energy on campus. These activities are in line with the Paris agreement, where global leaders have committed themselves to reducing carbon emissions, developing renewable energy and a green economy.

University of Gdańsk to cooperate with Chinese Nanyang Normal University

2018-07-09

The University of Gdańsk signed an agreement with the Chinese Nanyang Normal University. The document regulates the issues of academic cooperation in the field of exchange of academic staff, students, employees as well as joint research and publications. The contract was signed by the Vice-Rector for Science and Cooperation with Foreign Prof. Piotr Stepnowski and vice-rector of Nanyang Normal University Prof. Kan Yunchao. The future cooperation between the two universities will focus on engaging PhD students in innovative research in both institutions. Nanyang Normal University is a university founded in 1907, which is in the top 10 universities in Henan province of China. It has 24 research institutes and 26 laboratories.

"Cog" becomes winner of mascot competition at the Silesian University of Technology

2018-07-09

Mohawk hairstyle and friendly, wide smile are the characteristics of the Cog. It is the winner of the competition for mascot concept of the Silesian University of Technology. It was chosen from almost 100 works. The author of the best project is Łukasz Pawlak. The second was Droni by Dorota Sosnowka, and the third was Politechnik - by Marta Radziejewicz-Winnicka. The works were evaluated by four criteria: readability of the message, innovativeness and ingenuity, aesthetic values and promotional potential. There were attractive cash prizes to win. The author of the winning work receives 3 thousand PLN, the second place winner - 1.5 thousand PLN and the third - PLN 500. The aim of the competition was to choose the concept of the mascot and its name. The mascot is intended primarily to reflect the activities of the Silesian University of Technology, to arouse positive associations and promote the values of the university.

Applying for international PhD studies at the Medical University of Białystok is in progress

2018-07-10

Medical University of Białystok is offering free international PhD studies in the field of medical and pharmaceutical sciences at the Faculty of Pharmacy in the Division of Laboratory Medicine. «The studies will enable the education of a high-class specialist in the field of medical and pharmaceutical sciences, prepared to work in an international environment, with innovative issues and using the most advanced technologies in modern science». The free PhD programs are full-time studies and last 4 years. More: https://www.umb.edu.pl/interdyscyplinarne_miedzynarodowe_studia_doktoranckie

Banking and investment consulting are new specialties at the Łazarski University in Warsaw

2018-07-10

Łazarski University in Warsaw signed a letter of intent regarding cooperation with the Warsaw Institute of Banking and the European Financial Planning Association in Poland. The cooperation concerns the launch of two new specializations in the academic year 2018/2019: banking with finance and accounting, and investment consulting with economics. Both specialties will end with an exam and the students will obtain prestigious certificates. The exam for the EFCB 3E European Banking Association is run by the Warsaw Banking Institute in cooperation with the Polish Bank Association under the Qualifications Standards System in Polish Banking. The exam for the European Investment Practice, which will end with the specialization investment consulting, is conducted by the European Financial Planning Association in Poland.

Gdańsk students succeed in the National Competition of Physiological Knowledge

2018-07-10

Małgorzata Styczeńska, student at the Medical University of Gdańsk, won the individual competition of the National Great Synapsis Knowledge Contest in Poznań. The competition organized under the patronage of the Polish Physiological Society was attended by 57 students from the 9th medical schools. In the first part of the competition, participants solved the test of choice. After the selection of 12 finalists, the second test part was held, with the increased difficulty of questions. Representatives of the Gdańsk university, Małgorzata Styczeńska, Mikołaj Młyński, and Izabela Kotlewska, took the third place in the competition of teams. The competition involved 9 student teams. The participants had to solve clinical problems during simulation scenarios with the use of practical skills and physiological knowledge. After a fierce battle, the students from Poznań won against the team from Katowice.

Silesian University of Technology ends first applications

2018-07-10

The Silesian University of Technology ended the first recruitment for studies. The university offers over 50 fields of study, including 4 novelties. 16 fields of study are also available in English. This year, candidates can choose over 50 majors at 15 faculties in three Silesian cities: Gliwice, Katowice and Zabrze. In addition to technical specializations for high school graduates they can choose pedagogy, sociology or English, Spanish and German philology. Four fields of study are new: underground construction at the Faculty of Civil Engineering, technical physics at the Institute of Physics - the Scientific and Didactic Center, closed circuit economy at the Faculty of Environmental Engineering and Energy, as well as mineral resources management at the Faculty of Mining and Geology. Registration in the first recruitment ended on Sunday, July 8. The next recruitment will start on July 23.

Pay rises for academic teachers from October 1st

2018-07-11

The increase in the minimum basic salary of university professors from PLN 5390 to PLN 6410 gross is assumed by a draft regulation of the Minister of Science and Higher Education of 5 July 2018. PLN 6410 is the minimum amount. Actual earnings will depend on the particular university. The increases are planned not only for professors working at public universities but the remuneration of all academic teachers will be calculated according to new rate. Their salary cannot be lower than 50 percent of professor's remuneration. The university professor is to earn at least 83 percent, and the assistant professor will earn 73 percent of professor's salary. Currently, approximately 10,000 academic professors are employed in Poland. The remaining academic teachers are around 88,000. The regulation is to enter into force on October 1, 2018.

More than 20 candidates for one place for criminology at University of Bialystok

2018-07-11

According to the University of Bialystok, 6,145 students applied for full-time studies this year. This year's offer included a total of 28 fields of study to choose with 1925 places. The largest number of candidates applied for the economy - 735 candidates. Pedagogy was the second with 571 students, and Legal Studies was on the third place with 531 candidates. Students were also interested in English Philology (476), Criminology (400) or Management (366). In terms of the number of students per one place, Criminology was the leader. There were more than 20 candidates applying for each place on the list. Also the Administration faculty was very popular with over 13 volunteers, and more than 12 students applied for National Security.

Student of the Warsaw University of Technology awarded in the Polish-German competition

2018-07-11

A student of the Faculty of Architecture at the Warsaw University of Technology, Mikołaj Gomółka, received one of the two awards at the final of the competition for the annual Polish-German Integration Award BDA-SARP. Mikołaj Gomółka received the award for the diploma work «Postcity. Shrinking cities on an example of Bytom», written under the supervision of Prof. Eng. Sławomir Gzella. The project presents the phenomenon of depopulated cities in a wider historical context on the example of the city of Bytom. The author of the work looks for a solution to the problem, illustrates his vision of city centers with peripheral areas transforming into gardens. This is an approach that in dense and prosperous cities would be impossible, but for diminishing cities it can become an encouraging proposition - emphasized the jury of the prize.

Skeletal bones from 6,500 years ago digitized at the Cardinal Stefan Wyszyński University

2018-07-11

Center of Information Technology of Humanities and Social Sciences of the Cardinal Stefan Wyszyński University (UKSW) in Warsaw digitized 63 bones of the Man from Janisławice. The Man from Janisławice is the oldest human skeleton found in Poland. It was discovered in 1937 in Janisławice in the Lodz region and it counts, according to the latest data, over 6,500 years. The work was carried out by UKSW and company 3D Master. As the Warsaw University reports, photogrammetry and 3D scanning with structural light were used in the works. The first stage consisted in creating complete 3D models of bones allowing not only to visualize them, but also to perform basic measurements and tests. As part of further work, it is planned to print 3D bones and process them further to create realistic copies. It is a joint project of the State Archaeological Museum, Cardinal Stefan Wyszyński University in Warsaw and 3D Master company.

Dr Łucja Bieleninik from the University of Gdańsk received Polish Academy of Sciences Award

2018-07-11

Dr. Łucja Bieleninik from the Clinical Psychology and Neuropsychology Department of the Institute of Psychology of the University of Gdańsk received the Andrzej Malewski Polish Academy of Sciences Award. The award is granted to young scientists (aged up to 35 years) for outstanding scientific achievements in the field of psychological theory, psychological research, methodology of social sciences and interdisciplinary research (one of the disciplines should be psychology). This year it was awarded for the 14th time. Dr Bieleninik is the second person from the Institute of Psychology at the Gdańsk University, who received this prestigious award. In 2015, the prize was awarded to Prof. Michał Harciarek also from the clinical psychology and neuropsychology department of the University of Gdańsk.

Innovative flight simulator to be created at the Silesian University of Technology

2018-07-11

Scientists from the Silesian University of Technology are developing a prototype of an innovative flight simulator. The project obtained a grant from the Horizon 2020 program as part of the Research and Innovation Staff Exchange (RISE) funding scheme. The WrightBroS project (Working in a Collaborative Factory of the Flight Simulators Branch of RISE) will be coordinated by the Virtual Flying Laboratory at the Faculty of Automation, Electronics and Computer Science. The University of Technology will implement it together with partners from Austria - LG Nexera Business Solutions AG from Vienna and from Slovakia - Virtual Reality Media from Trenčín, professional flight simulators manufacturers. The simulator uses the latest developments in augmented reality technology, based on the system created in the project to acquire and process expert procedural knowledge related to service and maintenance.

Three students of the Poznań Medical University receive Diamond Grants

2018-07-11

Three students from Poznań Medical University were awarded within the seventh Diamond Grant program of the Ministry of Science and Higher Education to support the most talented students or graduates. The support was received by Julia Suwalska for her research "The study of the role of clinical, psychological, lifestyle and laboratory factors in the coexistence of depression and obesity" with the scientific supervisor Dr Dorota Łojko, Grety Sibrecht "Circadian rhythm of heart beat asymmetry in healthy people. Asymmetry of heart rhythm with age, anthropometric indicators, physical activity and gender" with the scientific supervisor Prof. Przemysław Guzik and Maurycy Jankowski for "Primary breeding of fat-derived stem cells and their differentiation for applications in regenerative medicine" with the supervisor Dr Bartosz Kempisty.

Nearly 5,000 students to apply for the Białystok University of Technology

2018-07-12

The Białystok University of Technology has ended the recruitment of candidates for full-time studies. Students applied for 27 faculties at 7 faculties. In total, the university has prepared 1609 places. There are about 5,000 candidates. The most popular is Faculty of IT sciences with 592 applied students. Logistics (484), Construction (435), Automation and Robotics (334), Management (318) and Mechanics and Machine construction (300 entries) were on the following places of the rating. The list of candidates qualified for studies will be announced on July 12. Then, by July 17, there will be time to submit necessary documents. In this way, qualified candidates will confirm their willingness to study at the selected faculties of the Białystok University of Technology. The final list of candidates admitted to full-time studies will be announced on July 27.

Polish Senate to work on the Constitution for Science

2018-07-12

The Senate discussed two acts adopted last week by the Sejm: Law on Higher Education and Science and Regulations introducing the Law on Higher Education and Science. Both legislations, after amendments submitted by senators, were sent for further work into the Senate's committee. During the discussion, the situation of regional universities after the entry into force of the Act was widely analyzed. In the opinion of some senators, smaller academic centers «will be subject to degradation». Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin explained this matter. He confirmed that it is very important to provide regional universities with conditions for sustainable development. - This law is permeated with the principle of sustainable development, only that sustainable development should not be confused with the sustainable stagnation,»- said Gowin. In his opinion, the Act creates incentives that will enable each university to improve the quality of education and conducting scientific research.

Graduates of the Silesian University of Technology win in the competition The Best Progress 3 Master Thesis Award 2017

2018-07-12

Graduates of the Silesian University of Technology have won in four of five categories of the competition for the best master thesis „The Best Progress 3 Master Thesis Award 2017”, organized as part of the Progress 3 consortium. Only in the category of economics and finance the graduate of the Silesian University of Opava - Nicola Rusková won the first place. The first places in other categories were taken by the graduates of the Silesian University of Technology. Jakub Bodys won in the category of raw materials, energy and environmental protection. Kamila Dydlińska won in the category of health and applications in healthcare. In the category of information technologies and electrical engineer-

ing Krzysztof Kubiczek was a winner. The category of competitiveness of the machine industry and materials research was won by Paulina Cieśla. The Progres 3 consortium includes fifteen universities from three countries - Poland, the Czech Republic and Slovakia. Each of the consortium's universities could submit up to two entries to the competition in each of the five thematic categories.

Diamond Grants for students of the Wrocław University of Technology

2018-07-12

Joanna Duskocz and Paweł Holewa from the Faculty of Fundamental Problems of Technology at the Wrocław University of Technology have become the laureates of the „Diamond Grant” competition organized by the Ministry of Science and Higher Education. Joanna Duskocz was awarded for the project «Determination of the influence of the size of lipid aggregates on their mechanical and electrostatic properties». The student received over PLN 216 thousand for her research. Paweł Holewa received nearly 220,000 PLN for the project «Studying optical properties of epitaxial quantum dots with InAs / InPs with reduced surface density for applications in fiber-optic quantum communication». In this year's competition, 80 students representing three areas of sciences - humanities and social, natural and medical as well as strict and technical were awarded. The winners were selected from 214 applicants. More than 16 million PLN was allocated to conduct their research.

Award for the Naval Academy in Gdynia for the port security system

2018-07-12

The Naval Academy in Gdynia won the Amber Medallion in the Admiral Xawery Czernicki Grand Prix Competition. The award was granted for the Ports Protection, Passive Defense and Underwater Reconnaissance Module. The strategic object protection system is an advanced, technologically integrated system of controlling the changes of physical field

parameters in the underwater marine environment. It is equipped with detectors enabling measurement of physical features of the watercraft: hydroacoustic, electric, seismic parameters. It enables detecting and analyzing parameters of physical field for passive defense of ships, mine wars, port security and monitoring of maritime communication routes, which is of particular importance in the case of asymmetric threats. It can be used to protect ports and objects of strategic importance - fuel bases, re-loading terminals, drilling rigs and water dams.

Scholars of the Katowice University of Economics participate at a scientific conference in Copenhagen

2018-07-12

Prof. Aleksandra Burgiel and Dr Jolanta Zrałek from the University of Economics in Katowice took part in an international scientific conference in Copenhagen. They presented the results of their research on the sustainable behavior of Polish consumers. The ladies have delivered the presentation of «Sustainable consumption perception matrix», they also presented the poster «Non-ownership & collaborative consumption as a sustainable alternative for consumerism lifestyles in Poland». The conference «Sustainable Consumption: Fostering Good Practices and Confronting the Challenges of the 21st Century» was organized by the Sustainable Consumption Research and Action Initiative in cooperation with Copenhagen Business School. It was attended by over 200 academic researchers and practitioners.

Scholarship program for Polish diaspora

2018-07-13

Until 14 August 2018 participants can apply for a scholarship program for Polish diaspora for the studies in the academic year 2018/2019. The aim of the National Academic Exchange Agency (NAWA) program is to improve the knowledge of the Polish language and raise the level of qualifications in Polish communities by enabling Polish youth to start the scholarships at universities in Poland. The scholarship can be applied to people who have a Polish Card or can prove Polish origin and do not have Polish citizenship or permanent residence permit in Poland, as well as citizens of: Belarus, Ukraine, Bulgaria, the Czech Republic, Croatia, Macedonia, Moldova, Lithuania, Latvia, Estonia, Romania, Serbia, Slovakia, Hungary, Albania, Armenia, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Russia, Uzbekistan, Tajikistan, Turkmenistan, the countries of South America, Central America and Africa. More: <https://nawa.gov.pl/studenci/studenci-zagraniczni/program-stypendialny-dla-polonii/ogloszenie>

Silesian University of Technology implementing the international BIOTRAFO project

2018-07-13

The Silesian University of Technology will cooperate with 13 research organizations from around the world in the BIOTRAFO project concerning the influence of temperature on the construction of power transformers. The project coordinator is the Cantabrian University of Santander in Spain. In the BIOTRAFO project, researchers will analyze the influence of temperature on power transformer constructions in which biodegradable esters are used as cooling fluids. Environmental aspects and fire risks related to the use of these factors will also be examined. Money for research is allocated within the Horizon 2020 program as part of the Research and Innovation Staff Exchange funding scheme. The project manager is Prof. Jacek Smółka from the Institute of Thermal Technology of the Faculty of En-

vironmental Engineering and Power Engineering at the University of Technology.

Five Wrocław universities create a research center - WRoclaw Concept

2018-07-13

Rectors of five universities in Wrocław signed an agreement on the establishment of the WRoclaw Concept Research Center. Its task is to implement international research and development programs and technology transfer to the Polish economy. The Wrocław University of Technology (leader of the consortium) and Wrocław, Nature, Economics and Medical Universities joined the agreement starting the common initiative of universities from Wrocław and Saxony. The center's activity is to help consolidate the academic environment and institutions dealing with technological development and innovation. Its task will be to initiate, prepare and create conditions for the implementation of research, development, implementation and educational projects. The Center was established as the equivalent of Dresden-concept - a scientific research network founded by the Technical University of Dresden and four German scientific societies: the Fraunhofer, Max Planck, Leibniz and Helmholtz Institutes.

Students of the Adam Mickiewicz University in Poznań win Diamond Grants

2018-07-13

Seven outstanding students from the University of Adam Mickiewicz in Poznań became the laureates of the 7th program of the Diamond Grants. They will receive up to 220,000 PLN for their research to pave the way to the career in science. The winning students are Joanna Sokołowska and Mateusz Żmudziński from the faculty of biology; Małgorzata Elżbieta Bołt and Dawid Marcinkowski from the Faculty of Chemistry; Agnieszka Aneta Waligóra from the faculty of Polish and classical philology; Karolina Jadwiga Dziadura from the faculty of physics and Marcin Paweł Mielewczyk from the historical department. During the project implementation,

they will receive up to PLN 2,500 per month for the implementation of their first independent research projects, lasting from 12 to 48 months. In the 7th program, 80 winners were selected. «Diamond Grant» annually supports up to 100 most talented students or graduates of the studies in Poland. Almost 600 people have been awarded with scholarships since the first program.

Students of the Warsaw School of Economics to participate in the finals of the Enactus competition in the USA

2018-07-16

Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin met with students of the Warsaw School of Economics, who won the Polish Enactus competition and represent Poland in the final of this competition in the USA. - Our goal is to make Polish science, our research achievements and finally - Polish scientists more visible on the international arena. We are extremely pleased that at the beginning of their scientific path, our students take part in prestigious international competitions. I keep my fingers crossed for the Polish team – said Deputy Prime Minister Jarosław Gowin during the meeting. Enactus operates in 36 countries around the world (at 14 universities in Poland) and gathers over 700,000 members from nearly 1,700 universities. University teams participating in the competition are tasked with implementing educational and business projects within the framework of socially responsible business (CSR), addressed to local communities.

Computer science is the most popular study at the Wrocław University of Technology

2018-07-16

The Wrocław University of Technology registered almost 20,000 candidates for studies. They could choose from 61 different faculties in sixteen departments. More than 6.3 thousand pupils applied within the first application call - said Andrzej Charytoniuk from the university's information and promotion department. The Computer Science in English at the Faculty of Information Technology and Management turned out to be most popular study with over 7 volunteers for one place. 6 candidates applied for one place in the IT sciences at the electronics department. Computer science in the department of basic technical problems (6 people for one place) and cyber security at the Faculty of Electronics (5.82) was also of considerable interest. Last year, candidates for studies preferred information technology, geodesy, cartography and cybersecurity. Currently, there are over 28 thousand students at the University of Technology.

Three students of University of Life Sciences in Poznan win Diamond Grants

2018-07-16

Three students of the University of Life Sciences in Poznań are winners of the Diamond Grant program of the Ministry of Science and Higher Education. During the implementation of their first independent research projects the students will receive up to PLN 2,500 a month. The grants will be awarded to Michał Brzoski from the department of agriculture and bioengineering to study the impact of process factors on the efficiency of biogas production from municipal waste using artificial neural networks; Paulina Korpys from the Faculty of Food and Nutrition Sciences to study the intensification of production of heterologous proteins in *Yarrowia lipolytica* unconventional cells through the use of molecular engineering mechanisms of maturation and secretion of polypeptides and Monika Kubiak from the Faculty of Food Sciences and Nutrition: Manipu-

lation of cellular response to stress as a strategy increasing the overproduction of heterologous proteins in recombinant *Yarrowia lipolytica* unconventional yeast cells.

Agreement of universities in biomedical engineering

2018-07-16

Collegium Medicum of the Nicolaus Copernicus University and the University of Technology and Life Sciences in Bydgoszcz signed an agreement to strengthen cooperation in the field of biomedical engineering. The main aim of education is comprehensive education of students as a specialist staff for health care units, production and construction plants and repairing medical equipment, research and development units in the areas of modern medical technology. The scope of education includes all important elements of medical, technical and IT knowledge. Students who undertake studies in the Biomedical Engineering will implement a study program focused on practical skills, contact with the patient, cooperation in the medical environment of health care institutions and scientific research institutes producing medical equipment. The program will be enriched with entrepreneurship classes.

University of Silesia to hold „business breakfast” devoted to modeling and 3D printing

2018-07-16

The Office for Cooperation with the Economy of the University of Silesia invites participants on Tuesday, July 17 at 9.30 for a „business breakfast” devoted to the scanning, modeling and 3D printing. The meeting will take place in the rectorate of the University of Katowice (second floor, room No. 159). The meeting is addressed to the academic community, primarily to people whose research topic is associated with modeling and 3D printing. The organizers are representatives of ScanTech companies from Katowice and CADXPART from Krakow specializing in the field of scanning and 3D printing. The meeting is organized as part of the Incubator Innovation + project, which is to support the process of managing the results of scientific research and develop-

ment works, in particular in the commercialization (non-competitive project of the Ministry of Science and Higher Education «Support for research management and commercialization of R & D results in scientific units and enterprises»).

University Natural Center is open all summer

2018-07-17

The University Center of Natural Sciences will be open all summer on the campus of the University of Białystok. The visitors can visit it from Monday to Friday between 9.00-15.00 and on Saturdays, from 9.00 to 14.00. Admission is free - informs Katarzyna Dziejdzik, a spokesman of the University of Białystok. The facility consists of 9 exhibition halls and 10 permanent exhibitions. The largest exhibition room is dedicated to the nature of north-eastern Poland. Visitors can see bison, moose, deer, as well as wolves, badgers, raccoons, beavers and many species of birds. In addition, thanks to special infospots, visitors can learn to recognize 220 species of Polish birds and their voices. In the next rooms, guests can see fossils of post-glacial sediments, minerals and rocks as well as exhibitions presenting protected and characteristic plants of the Podlasie Region, the fauna of subtropical seas, tropical arthropods and the wildlife of polar regions.

MBA at the Białystok University of Technology

2018-07-17

From October 2018, the Master of Business Administration (MBA) diploma will be available at the Faculty of Management Engineering at the Białystok University of Technology. The project partner of the Białystok University of Technology is Gdańsk Foundation for Management Development. President of Poland signs the amendment to the Act on the Cardinal Stefan Wyszyński University

2018-07-17

President Andrzej Duda signed an amendment to the Act on the Cardinal Stefan Wyszyński University in Warsaw. It allows the university to create a medical direction and run it in the newly appointed Collegium Medicum. During the ceremony, President Duda said: «It is university, based on the Christian foundations in terms of its ethics, of the way they teach young people here. It is very important that such a university as the first university in our part of Europe will have a medical department and will train doctors. It will educate people who will care for human life, guided by the principles of Catholic ethics.» Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education emphasized that «graduates of the Cardinal Stefan Wyszyński University will differ not only because of their outstanding qualifications, but also because of their clear value system, which is particularly important in this profession, namely the secret life and death. The secret of human dignity and humanity.»

18 thousand candidates for the Nicolaus Copernicus University in Toruń

2018-07-17

The online registration of candidates for full-time MA studies at the Nicolaus Copernicus University in Toruń has been completed. The total number is 18 thousand candidates for 6,000 places. Iraqi Koya University becomes a new partner of the Silesian University of Technology

2018-07-18

Silesian University of Technology has concluded an agreement on cooperation with the Iraqi Koya University. The cooperation will take place primarily in the didactic and research areas. Both universities will engage in activities and programs that can contribute to their development and cooperation between them. The contract has been concluded for five years. The Silesian University of Technology has been cooperating with universities in Iraq for many years - students of Iraq have studied in Silesia, and even now an Iraqi outstanding young scientist becomes a PhD student. - I hope that Iraqi students, who have improved their skills at the Silesian University of Technology and then returned to the country, will praise our university and use their knowledge, and thus it will be the beginning of our long-term cooperation - emphasized Prof. Marek Pawelczyk, the prorector for of science and development at the University.

Faculty of Biology of the University of Gdańsk receives the certificate „University of Leaders 2018”

2018-07-18

The Faculty of Biology of the University of Gdańsk received the title „University of Leaders - 2018.” It also received the „Highest Quality of Studies” distinction for universities that implemented the most advanced, original, modern and effective systems for ensuring the best quality of education and encouraging innovation in academic teaching. The ceremonial gala of the 8th National Higher Education Certification Program «University of Leaders 2018» took place in Warsaw. During it, the rector and representatives of the university received certificates and statuettes awarded for high quality education and conducting studies in accordance with the needs of the modern labor market. The evaluation of the university is based on the analysis of data contained, among others in the certification survey,

the POLON system, the National System Monitoring Economic Fates of Higher School Graduates, opinion from the Polish Accreditation Committee, the Central Statistical Office and the Ministry of Science and Higher Education.

Faculty of Economics, Management and Tourism of the Wrocław University of Economics receives prizes

2018-07-18

The Faculty of Economics, Management and Tourism in Jelenia Góra within the University of Economics in Wrocław received the title of „Meritorious for the city of Jelenia Góra” and “the Golden Honorary Badge of Merit for the Lower Silesian Voivodship”. The justification stressed that the activities of the Faculty for Lower Silesia were visible from the very beginning of the university's history. Academic and didactic staff, being members of numerous expert teams appointed by state bodies or institutions, carry out activities for Lower Silesia related to with development of development strategies for communes and cities of the region, special programs for Lower Silesian enterprises, local revitalization programs for cities and communes, and project feasibility studies. The research results of the Faculty's teaching staff are used in Lower Silesia's economic and social reality.

Foundation for Polish Science has awarded the Leszek Kołakowski Honorary Scholarship

2018-07-18

Leszek Kołakowski Honorary Scholarship in the amount of PLN 100,000 was awarded by the Foundation for Polish Science to Dr. Caterina Tarlazzi from the University of Geneva. As the foundation informs, «the goal of the scholarship is to honor scholars who already at the beginning of their academic career can boast of outstanding achievements in the history of medieval and modern ideas and philosophies until 1939.» Dr Caterina Tarlazzi specializes in the history of medieval philosophy,

and her research focuses on the problem of universal values, with particular emphasis on the philosophy of Pierre Abelard. In her scientific research, she combines interests in logics and metaphysics with the search for sources in unpublished manuscripts and the criticism of texts.

Poznan students are Product Creators

2018-07-19

The Special Purpose Vehicle of the University of Economics in Poznań together with the Żabka Polska retail company implemented the project „Product Creators”. Seven student teams have developed technological and market concepts as well as prototypes of innovative food products from the category of ready meals and snacks. The project was attended by students of the University of Economics and the University of Life Sciences in Poznań. All ideas combined professionalism, very good understanding of the market, full technological readiness and high innovation. Solutions with a completely new approach to a product within its category have been developed in just two months by teams consisting mostly of first-year students. During the final presentation, the authors sold the rights to three projects. They will be further developed and refined, and the authors will participate in the implementation process in the company.

Silesian University of Technology receives almost PLN 7.7 million for dual studies

2018-07-19

The Silesian University of Technology has received a total of almost PLN 7.7 million for five dual study projects from the National Center for Research and Development (NCBR) call. The projects that have received funding under the «Dual Studies» call will be implemented at the following faculties: Mechanics and Machine Building, Rail Transport, as well as Logistics and Material Engineering. The project of the studies Mechanics and Mechanical Engineering at the Faculty of Mechanical Engineering was ranked first in the ranking list of the competition, ex aequo with the project of the Leon Koźmiński University in Warsaw. The „Dual Studies” call is an initiative of the National Center for Research and Development, with aim to raise the competences of people participating in higher education and adapt the curricula to the expectations of future employees and their potential employers.

University of Silesia cooperates with the Regional Teacher Training Center in Katowice

2018-07-20

The University of Silesia has signed an agreement on didactic and scientific cooperation with the Regional Teacher Training Center „WOM” in Katowice. The agreement assumes assistance to teachers in the preparation and conduct of classes for students of „PTO”, supporting them in raising professional qualifications and enabling participation in selected academic activities conducted at the university. Students under the agreement will have the opportunity to participate in training activities organized by the Center. In addition, the cooperation opens the possibility of conducting research of teachers and participants of training and organization of activities promoting the educational offer of the university. On the university's side, the documents were signed by the Vice-Rector for Education and Students, Prof. Ryszard Koziołek, on behalf of the Center, the contract was signed by the director of «WOM» Anna Zakrzewska-Zamora.

Deputy Prime Minister Gowin talks on the academic evaluation in Lublin

2018-07-23

The evaluation of the scientific activity was the subject of the meeting of Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education with rectors responsible for the evaluation processes of universities from Lublin, Podlasie, Podkarpackie and Świętokrzyskie Regions. The meeting was devoted to a new scientific quality assessment and it took place at the Maria Curie Skłodowska University in Lublin. During the event, Deputy Prime Minister Gowin emphasized that the basic change in the system of scientific activities at universities is that the scientific activity of the whole university in particular disciplines will be subject to the evaluation. Thanks to these changes, the academic achievements of historians from one university will be compared with the achievements of

historians from other universities, the achievements of lawyers employed at a given university - with the achievements of lawyers employed in other research centers. The future evaluation will be much more just and reliable than the current one - added Gowin.

More places for medical studies in the academic year 2018/2019

2018-07-23

On July 19, 2018, the Regulation of the Minister of Health entered into force increasing the number of places in medical studies in the academic year 2018/2019. The limit of places in the medical field will amount to 7846. According to the regulation, the largest increase in the number of places will take place in master's studies in Polish with 4,678 places. The aim of the changes is to eliminate staff shortages in the Polish health service through the gradual increase of the number of students in the medical and dentistry faculties. See the content of the regulation: <http://www.rynekzdrowia.pl/Plik/150872.html>

Scientific disciplines of the University of Warsaw top Shanghai Ranking

2018-07-23

Shanghai Ranking Consultancy has announced this year's list of universities. There are ten scientific disciplines of the University of Warsaw on the ranking lists. The highest places (51-75) were taken by mathematics and physics. The others are political science, which took the place of 201-300, ecology, psychology, economics, computer engineering (in places 301-400), chemistry, earth sciences and material engineering (places 401-500). Dr Maciej Duszczak, vice-rector for science at the University of Warsaw, emphasizes that these results are excellent news for the university and a good prognosis before the overall results of the ranking, which will be published in mid-August. Shanghai's Global Ranking of Academic Subjects is an international list of universities evaluated in terms of 54 scientific disciplines - natural, social and medical sciences, engineering, as well as life sciences. This year, more than 4,000 universities were listed from around the world. The top positions have been taken by American universities, the best was Harvard University.

Researchers from the École Nationale Polytechnique d'Alger to cooperate with the University of Silesia

2018-07-23

Scientists from the École Nationale Polytechnique d'Alger from Algeria visited the University of Silesia in Katowice. They talked about the possibilities of establishing cooperation between high schools. Their cooperation can result in scientific achievements, patents and even the implementation and development of economic cooperation between Poland and Algeria. Scientists from the École Nationale Polytechnique d'Alger are planning to use biological methods to purify and enrich phosphate ores - one of Algeria's natural resources. The biologists from the University of Silesia intend to develop environmentally friendly methods for removing cadmium from phosphate ores. The first work has

already been undertaken and one of the students of the Algerian technical university, Hakim Rabia MSc, is a laureate of the UNESCO scholarship program including optimization of research methods.

Students of the Wrocław University of Technology receive over 400,000 PLN from the Diamond Grant program

2018-07-23

Joanna Doskocz and Paweł Holewa from the faculty of basic technical problems at the Wrocław University of Technology have become laureates of the contest of the Ministry of Science and Higher Education „Diamond Grant”. Paweł Holewa was awarded for the project «Investigation of optical properties of epitaxial quantum dots InAs / InP with reduced surface density for applications in fiber-optic quantum communication», which will receive nearly 220,000 PLN funding. Joanna Doskocz was awarded for the project «Determination of the influence of the size of lipid aggregates on their mechanical and electrostatic properties». The student will receive over PLN 216 thousand for her research. The first „Diamond Grants” were awarded in 2012. In this year's seventh competition the winners were selected from among 214 young scientists in a two-stage competition procedures. They have gained over PLN 16 million in total for their research.

Poznan University receives certificate in the competition „University of Leaders”

2018-07-23

In the 8th National Competition and Certification Program for Higher Schools „University of Leaders”, the faculty of educational studies of the Adam Mickiewicz University in Poznań obtained the Certificate for Social Leaders and the Extraordinary Distinction „Highest Quality Studies”. The certificate confirms that the university conducts studies teaching students creativity, intellectual independence, decision-making skills, responsibility, communication skills, self-confidence and other features useful in fulfilling leadership roles in contemporary socie-

ty. The Faculty of Education was also awarded an Extraordinary Distinction «Highest Quality Studies» as an organization that stands out on the educational market by implementing the most advanced, modern and innovative solutions aimed at providing high quality education.

Students of Gdansk University of Technology awarded in the „Student-Inventor” competition

2018-07-23

The Polish Patent Office summarizes the 8th national competition „Student-Inventor”. The award was received by Zuzanna Bielan from the Faculty of Chemistry of the Gdańsk University of Technology. Adam Dąbrowski from the mechanical faculty received the Rector's Award of the Kielce University of Technology in the same competition. The special diploma was also awarded by the Gdańsk University of Technology. Zuzanna Bielan was awarded for her method of obtaining a layered magnetic photocatalyst. The special prize of the Rector of the Kielce University of Technology was awarded to Adam Dąbrowski for the method of measuring the fluctuation of the heat flux from the tested surface - especially in the case of the space rocket's cover. Rector of the Kielce University of Technology also awarded a diploma to the Gdańsk University of Technology «for the participation of university students in the National «Student-Inventor» Competition, which is to support the culture of innovation and the idea of intellectual property protection in the academic youth environment».

Unique master's course at the Jagiellonian University

2018-07-24

In the academic year 2018/2019, the Jagiellonian University together with the World Intellectual Property Organization (WIPO Academy) and the Polish Patent Office introduce a unique Master's degree „Intellectual Property and New Technologies” in English. The new study is addressed to people interested in intellectual property law in the context of new technologies. It allows students to acquire comprehensive knowledge and answer to practical questions related to violation of intellectual property rights on the Internet, patent protection in the area of new technologies, digital content and protection of privacy and personal data online at the national, EU and international levels. More: <http://www.wpia.uj.edu.pl/ip>

10,000 candidates for studies at the Warsaw School of Economics

2018-07-24

The Warsaw University of Life Sciences (SGGW) completed the first recruitment for studies. Subsequent recruitments will last until mid-August. The 38 master's studies offer 3,500 places available to the applicants. Over 10,000 candidates registered for the studies. Similarly to last year, the direction of finance and accounting was the most popular in this year's recruitment. There are 1147 candidates applying for 120 places, which means that nearly 10 candidates applies for one place. The other most popular studies in this year's recruitment at WULS-SGGW are dietetics, logistics, tourism and recreation, veterinary medicine, IT and biotechnology.

Summer school of language, literature and Polish culture at the University of Silesia

2018-07-24

Almost 250 people from nearly 30 countries will participate in the XXVIII summer school of Polish language, literature and culture organized by the

School of Polish Language and Culture at the University of Silesia. Classes will start on August 1. The participants of the summer school will learn Polish for a month. They will also participate in lectures and seminars on history, literature, art, culture, social and economic changes and the political situation in Poland. The program includes language games, poetry meetings, shows, concerts, Silesian feast and meetings with interesting people. Among this year's students are scholars of the National Agency for Academic Exchange, the Senate of the Republic of Poland and students from the partner universities including 40 scholars from Beijing University of Technology and Southwest University in Chongqing.

Deputy Prime Minister Gowin talks about a new academic evaluation at the Warsaw University

2018-07-25

The new academic evaluation will no longer compare faculties with often incomparable profiles, but it will be carried out within science disciplines of the universities. Therefore, it will be much more fair and reliable than the present one - said Deputy Prime Minister Jarosław Gowin during a meeting with the academic community at the University of Warsaw. According to the Ministry of Science and Higher Education, it was another meeting devoted to the new principles of evaluation. At the meeting in Warsaw the Ministry of Science was presented by Piotr Müller, deputy Minister and Aleksander Dańda, director of the Department of Science. As emphasized Deputy Minister Piotr Müller, the Ministry of Science puts quality first in the new evaluation principles. - We assume that an academic teacher employed on a research or teaching position will be required to submit within 4 years minimum 4 of their most important scientific achievements. We prefer 4 good articles than 20 weak ones - added Müller.

Recruitment opened at the Medical University of Bialystok

2018-07-25

Over 7,500 candidates for 1,100 places applied during this year's recruitment to study at the Medical University of Bialystok. The most popular study with 19 candidates applying for one place is dentistry. Other popular faculties of the university are dietetics, medical analytics, cosmetology and physiotherapy. Medical University of Bialystok continues to recruit for part-time studies. It offers 180 places. In addition, in August this year, the university intends to recruit for a new study of obstetrics.

Lazarski University in Warsaw to offer Neurologopedics as post-graduate studies

2018-07-25

The Lazarski University in Warsaw launches a new course of post-graduate studies: Neurologopedics and early support of child development. Recruitment will last until September 30. The launch of a new studies on neurologopedics and early development support is dictated by the growing needs of the labor market. The aim of the studies is to provide students with practical skills, knowledge and instruments in the field of neurologopedics, necessary for independent diagnosis and neurologopedic therapy. The studies will last three semesters and will include lectures, seminars, exercises and internships. Their program is addressed to post graduated students with a specialty in speech therapy. More: <https://www.lazarski.pl/pl/oferta/studia-podyplomowe/akademia-skutecznej-komunikacji/neurologopedia-i-wczesne-wspomaganie-rozwoju-dziecka/>

Dual studies at the University of Humanities and Natural Sciences in Częstochowa

2018-07-25

Institute of Foreign Languages of Jan Długosz University of Humanities and Natural Sciences in Częstochowa launches dual degree first-cycle studies „German in business.” Graduates with a bachelor's degree will have practical training in two foreign languages: German Wirtschaftsdeutsch at B2 level and English with elements of business language. They will learn the principles of working in an international group, gain knowledge about the culture of other ethnic groups, and thanks to a three-month paid internships at the workplace, they will also know the specificity of the company's operation. The competences will give an opportunity to work in international enterprises - in business outsourcing centers, in particular accounting offices, as well as assistants for foreign contacts in companies, administrative units and institutions focused on international cooperation.

Koszalin University of Technology to launch research and implementation center

2018-07-25

The Faculty of Technology and Education at Koszalin University of Technology plans to create the research and implementation center for surface engineering, process design and processes simulation as well as vibroacoustic studies. The center is to be built by the end of 2019. The innovations implemented after the launch of the Center will enable expanding the research and service offer of the university in the field of surface treatment, including heat, chemical and plasma treatment, and the electrical machinery, woodworking and furniture industries. - We are creating our Research and Development Center with aim to cooperate with the industry. We invest in instruments to expand our range of services. We will be able to specialize even better in the study of surface properties. This is a chance to develop solutions that will more durable and more resistant to abrasion - says vice-rector for science and development of the university - Prof. Eng. Witold Gulbiński.

Researcher of the University of Silesia awarded the Honorary Badge for Merit

2018-07-25

Prof. Zbigniew Kadłubek, head of the Department of Comparative Literature at the philological faculty of the Silesian university, was awarded the Golden Badge of Honor for the Merits for the Silesian Province. Prof. Zbigniew Kadłubek is a classical philologist, a comparative linguist and essayist. He is the author of sketches and books about the old and contemporary culture of Silesia, as well as the selection of essays «Saint Medea» and the geo-poetical novel «Fado. A song about the soul. « His «Letters from Rome» from 2008 (epistolary novel in the Silesian ethnolect) was performed at the theatre scenes. Honorary Badges for Merits for the Silesian Voivodeship are awarded to persons (or institutions, local government units, entrepreneurs and organizations), who contributed to the economic, cultural and social development of the voivodship.

Silesian University of Technology to cooperate with Zakłady Urządzeń Komputerowych ELZAB SA

2018-07-25

Silesian University of Technology in Gliwice starts the cooperation with Zakłady Urządzeń Komputerowych ELZAB S.A. The partners will cooperate primarily in the implementation of research, development, implementation and production works and projects, as well as in the commercialization of developed solutions. The cooperation will include projects related to pulse pump and other medical electronics devices, mechatronic and power devices, as well as electromobility - especially for charging stations and hydrogen production stations. The partners will also cooperate on projects in the field of industrial automation and other electronic and electrical devices. The agreement will allow the university and the company to use mutual knowledge and experience. One of the main goals of joint projects is to implement their results into business operations.

Rzeszów University of Technology to cooperate with Gyeongsang National University

2018-07-26

Rzeszów University of Technology has signed a cooperation agreement with the South Korean Gyeongsang National University. The cooperation will concern scientific research conducted as part of jointly developed research projects and exchange of professors, academic staff and students as well as publications and scientific materials. According to the Rzeszów University of Technology, there are many areas of cooperation between universities, but the most promising is aviation. - Our partner university has such a field of study and develops research in this field. We hope that this agreement is the first step to conduct joint scientific research, exchange of experience, joint research grants and student exchange - said Prof. Grzegorz Ostasz, prorector for international cooperation at the Rzeszów university. Gyeongsang National University was founded in 1948. It specializes in biological sciences, aviation and mechanical systems as well as nanotechnology.

One million PLN for the project of the University of Humanities and Natural Sciences in Częstochowa

2018-07-26

Jan Długosz University of Humanities and Natural Sciences in Częstochowa received over PLN 1 million for the project „Design your future - dual studies in the field of Innovative Technologies and Modern Materials”. The main goal of the project is to modify the curriculum and to implement dual practical studies that meet the expectations of potential employers and future employees. The university wants to achieve this through the implementation of programs of alternate education - in parallel in the form of theoretical classes carried out at the university and practical classes carried out at the employer's place. The result of the project will be increasing the competence of students on unique specializations of Virtual Prototyping or Design and Industrial Design, conducted within the study of Innovative Technologies and Modern Materials.

Students from Asia improve English at the Summer University of Opole

2018-07-26

Students from China, Indonesia, Kazakhstan and Kyrgyzstan participate in classes held at the Summer University of Opole. They learn English, visit various cities and learn about the history of Poland and Europe. Four groups of students from Asia - a total of 60 people - came from partner universities: Fujian Normal University, Southwest University and Dalian University of Languages from China and from Universitas Brawijaya from Malang in Indonesia. For three weeks, students will practice English intensively, and in the afternoons they will be divided into specialist groups: Intercultural competence & communication, Academic English or Art and literature. In the evenings artistic and cultural activities are planned, and on weekends they will trip to Wrocław, Krakow and European capitals. Participants will live on the university campus, with additional classes accompanied by students from Poland, Ukraine and Turkey.

University of Lodz holds the second Student Research Grants competition

2018-07-27

The effects of bisphenol A and nonylphenol on proliferation and gene expression, pop-petivism, silver-palladium bimetallic systems on graphene, a new space strategy for Europe or the perception and reception of sculptures by artists from the Makonde people are just some of the topics of winning projects in the second Student Research Grants competition. 81 research projects were submitted by students of the Łódź university and the winners received financing for a total amount of PLN 270,000. Grants awarded to students of the University of Lodz should encourage their further scientific work and prepare for applying for money from grants of other institutions. More: <http://www.studenckiegranty.uni.lodz.pl/>

Students from the USA on courses at Collegium Civitas

2018-07-27

Collegium Civitas has been holding Summer School classes for American students. From May to July 2018, 60 students from the USA visited the Warsaw University. They took part in courses on security, cybercrime and cultural diversity. Guests from the USA also gained knowledge about Polish culture and history during trips to museums and cultural institutions. They participated in concerts and visited Krakow. In addition, they had the opportunity to learn about the history of the «cold war» during a three-day stay in Berlin. Most of the participants have already returned to the USA. 11 students continue their stay in Warsaw participating in the internship program at the Warsaw Uprising Museum, the Jewish Historical Institute and the Center for Research on Terrorism, Collegium Civitas.

Warsaw Medical University in an international project to improve the quality of nursing students' education

Projects of the University of Silesia co-financed within the „University of the Young Explorer“ call

2018-07-27

The National Center for Research and Development has announced a list of projects co-financed in the „University of the Young Explorer“ call under the Operational Program Knowledge Education Development. 11 projects will be implemented by the University of Silesia. The aim of the projects will be to develop educational programs and to implement teaching activities for children and teenagers from 6 to 16 years of age. These activities serve to stimulate their cognitive curiosity, stimulate intellectual, axiological and social development, inspire creative thinking and develop interests and passions, promote the culture of innovation, and familiarize with the academic environment and the university as a place for scientific viewing of reality and integration of the local community around centers academic. The competition was open to public and non-public universities, which prepared projects that ensure the development of key competences and universal skills for children and youngsters.

Deputy Minister Müller promises support for the universities in implementing the reform of science and higher education

2018-07-30

- On the day of signing the law on science by the president, we will send letters to higher education institutions in which we describe what the reform is, what is its schedule and how the ministry can provide its implementation - said Piotr Müller, deputy minister of science and higher education, in an interview with Gazeta Prawna. Deputy Minister Müller was asked about the help that the ministry will offer to universities. He announced that the training for university managers will be conducted from mid-September. The staff training is also planned and a reform handbook will be issued in

mid-September. It will contain information on the changes to be introduced, the terms and dates, and what are the differences between the current and future status of universities. The intercollegiate team is also developing an exemplary university statute - Müller added. Maria Curie-Skłodowska University in Lublin satisfied with the recruitment results

2018-07-30

The registration of candidates for most programs and for regular master's studies at the Maria Curie-Skłodowska University (UMCS) in Lublin has been completed. - We are satisfied with the recruitment results so far. We welcome unflagging interest in our educational offer and high number of candidates- including foreigners. We have expanded our offer for people interested in English-language learning and have also strengthened the already available majors by creating new, practical specialties - informs Katarzyna Skąlecka from the UMCS press office. During this year's recruitment, the most popular studies (in terms of the number of registrations) were finance and accounting, law, psychology, English, logistics, internal security, IT and economics.

Postgraduate Studies in Regional Knowledge at the University of Silesia

2018-07-30

Philology Department of the University of Silesia in cooperation with the Marshal's Office, Silesian University and the Upper Silesian Association organizes the two-semester, interdisciplinary, post-graduate studies on knowledge about the region. The studies are addressed to people who are particularly interested in Silesia. Graduates will obtain competences to carry out regional education classes at schools and cultural institutions. They will also be equipped with the ability to use effective and attractive meth-

ods and forms of education acquired during academic, field and workshop classes. The plans include exercises in important places in Silesia, visiting cities and getting to know people who are a source of knowledge about the region. Graduates will be regional education leaders. They will create original classes, regional programs and other forms of education related to knowledge about Silesia.

Pomeranian Medical University in Szczecin launches the Progressio- Integrated development program

2018-07-30

The implementation of the Progressio - Integrated development of the Pomeranian Medical University in Szczecin has started. This support program will include 1927 students, 100 administrative and administrative staff and 2 teaching staff. The aim of the project is to develop the university by expanding the educational offer corresponding to the needs of the economy, labor market and society, and to improve the functioning of the university by supporting organizational changes and improving staff competences. The project will include studies for medical, medical and dental students, medical analysis, biotechnology, nursing, physiotherapy, cosmetology and dietetics students, as well as specialized courses and study visits for nursing students, training for management and administrative staff and internship for teaching staff. The purchase of IT systems to manage the university and employing a career counselor are also planned.

University of Casimir the Great in Bydgoszcz receives funding for dual studies

2018-07-30

At the University of Kazimierz the Great in Bydgoszcz, students will be able to study at dual studies in the new academic year. Two courses from the didactic offer of the university have received over PLN 2.5 million co-financing from the National Center for Research and Development. The first of the projects concerns the direction of resocialization pedagogy. Students can participate in paid internships extending their professional competences. Internships will alternate with education at the university. From the 3rd semester, students will choose one of the internship locations where they will take practical classes under the care of a tutor for two days a week. The second project concerns the humanities of the second-generation, specialty research and game design. Students will have a total of over 12 months of paid internships in gaming enterprises. This is the first in Poland offer of dual studies in game design.

Jilin University from China becomes a partner of the Center for Microelectronics and Nanotechnology of the University of Rzeszów

2018-07-30

The University of Rzeszów signed an agreement with the Chinese Jilin University. It concerns in particular the cooperation between the Center for Microelectronics and Nanotechnology of the University of Rzeszów and the International Center for Modern Science of the University of Jilin - said Dr. Maciej Ulita, a spokesman for the Rzeszów University. In addition to the standard scope of cooperation consisting in the mutual exchange of experiences, the agreement includes bilateral mobility of the teaching and didactic staff or the co-organization of scientific conferences and the implementation of joint research projects. The first goal is to submit a joint SHENG project - as part of the Polish-Chinese Foundation of Initiatives. The project concerns nonlinear completely dielectric topological structures (metamaterials).

3D printing is new postgraduate study at the University of Technology and Humanities in Radom

2018-07-30

Faculty of Mechanical Engineering at the University of Technology and Humanities in Radom in cooperation with the Radom Center for Innovation and Technology plans to launch post-graduate studies under the name „3D Printing”. The studies are to start from the semester of the academic year 2018/2019. Their participants will be prepared for work supporting the construction of manufactured parts, selection of materials depending on the use of parts, implementation of manufacturing processes using 3D printing, geometry measurements and testing of mechanical properties of manufactured machine parts. Additionally, in the Radom Center for Innovation and Technology, the students are to learn the principles of supervision over the operation of 3D printing equipment, production management, coordination of work, evaluation of their results, as well as the principles of efficient use of software for computer aided design.

Autonomous underwater robot presented by the Wrocław University of Technology in San Diego

2018-07-30

Students of the Wrocław University of Technology have constructed a robot that will take part in the prestigious competition of autonomous robotic submarines RoboSub in the United States. The machine will face competitors from leading American technical universities - informs Michał Ciepelski from the information and promotion department of the University. The robot has been made of aluminum and laminate. The machine is equipped with a gripper, 4 cameras, 7 engines, as well as specialized position sensors. The robot also has pressure and leak sensors - signaling the smallest moisture. The strategic partner of the project is the National Center for Research and Development. The RoboSub Competition in San Diego will also include teams from leading

American technical universities - Caltech and MIT. The leitmotif of the event will be the casino, and the robots will have seven tasks to complete with increasing difficulty. All competitions will be played in a pool with a depth of 3 to approx. 15 m.

Project of the Białystok University of Technology is the highest rated in the competition for educational mobility

2018-07-31

The National Agency of the Erasmus + Program announced the results of the call under the „Learning Mobility: Mobility of students and employees of universities with partner countries in 2018” program. The projects were submitted by 129 universities from all over the country. The application of the Białystok University of Technology was assessed as the best. Białystok's university also received the highest co-financing in the amount of EUR 800,000. Thanks to it, almost 260 students will be able to visit partner universities in the countries outside the European Union and at the Białystok Technical University. The program includes students and university staff. Białystok University of Technology proposed cooperation with partner universities from 36 countries. The largest number of program participants will be able to benefit from exchanges with Russia and Serbia. See the results of the competition: http://erasmusplus.org.pl/wp-content/uploads/2018/07/komunikat_wyniki_selekcji_KA107-2018.pdf

University of Technology and Life Sciences in Bydgoszcz to cooperate with ARRK Shapers' Polska

2018-07-31

University of Technology and Life Sciences in Bydgoszcz has signed a cooperation agreement with ARRK Shapers' Polska Ltd. The agreement assumes joint conduct of research, analytical, pro-innovative and implementation works, in particular in the field of consulting, research and scientific, design and construction work, searching for innovative solutions and products as well as designing, coordinating and implementing joint research and projects. ARRK Shapers' Polska Ltd is the largest and most modern tooling in Poland. The company employs over 270 people - mainly UTP graduates. It specializes in the production of high-lot injection molds for the automotive industry for Toyota, Jaguar, Mercedes, BMW or Porsche.

New faculties at the College of Ecology and Management in Warsaw

2018-07-31

October 2018, the offer of postgraduate studies at the College of Ecology and Management in Warsaw will be extended by three new faculties: Academy of Culture Management, Independent Medical Coordinator, and Drawing and Painting. The main goal of the Academy of Culture Management is to equip students with theoretical knowledge and a set of practical skills necessary to supervise the activities of cultural institutions and manage the cultural institution. Study of an independent medical coordinator is addressed to graduates of following faculties: Public Health, Nursing, Medical Emergency. The study is to prepare graduates to manage the circulation of medical documents and to settle services provided as part of the National Health Fund. Drawing and painting study is aimed at art teachers and instructors in cultural and educational institutions wishing to improve the painting and drawing skills. More: <http://www.wseiz.pl/pl/dla-kandydata/studia-podyplomowe>

Center for Renewable Energy of the University of Zielona Góra in the Ekostrateg program

2018-07-31

The Renewable Energy Center of the University of Zielona Góra in Sulechów received a nomination in the Ekostrateg 2018 economic program. The program aims to reward companies and institutions that care for the natural environment, looking for innovative solutions for the economy. Ekostrateg is a nationwide image program aimed at companies in the energy sector and public institutions dealing with environmental protection. The originator of the program is the Polish Agency of Entrepreneurship. The basis for the nomination of the Renewable Energy Center are numerous activities in the field of research and development in the energy sector, as well as active cooperation with the scientific community. The awarding ceremony will take place at the Poznań International Fair during the 6th Polish Congress of Entrepreneurship on September 24-25.

Construction of the Institute of Computer Science at the University of Gdańsk begins

2018-07-31

The expansion of the Faculty of Mathematics, Physics and Computer Science at the University of Gdańsk has begun, including the modern building of the Institute of Computer Science. The University of Gdańsk received funding for the project implementation under the Regional Operational Program of the Pomorskie Voivodeship for the years 2014-2020. The new building of the Institute of Computer Science will be a modern, five-storey building with one underground and four above-ground storeys. There will be seminar and computer rooms, auditoria, teaching and research rooms as well as office and social rooms. The building will be adapted to the needs of the disabled - informs the University press spokesman, dr Beata Czechowska-Derkacz. The facility will be connected to the existing building of the Faculty of Mathematics, Physics and Computer Science with linking passages at the level of

the second and third floors. The completion of the investment is planned for the end of 2020.

Equipment for almost PLN 9 million received by the West Pomeranian University of Technology in Szczecin

2018-07-31

The West Pomeranian University of Technology in Szczecin, by the end of 2019 will be supplied with a measurement laboratory and a welding plant for almost PLN 9 million. In this way, the university will develop scientific and researching potential in shipbuilding, offshore, energy or transshipment. The metrology laboratory will be provided with the apparatus for measuring the dynamic properties of structures and large-size machines, IT infrastructure, equipment for diagnosing and controlling machines, for example portable machines and technology for strength and utility tests of new composite materials. A modern simulation system for thermal-deformation cycles of welding processes will be purchased for the university welding plant to evaluate the technology and materials used for welding. Modern equipment will be also received by the department of mechanical engineering and mechatronics.

European Union Commissioner praises the Polish reform of science and higher education

2018-08-01

The contribution of Polish authorities to the ongoing debate on research and innovation in Europe turned out to be extremely valuable - writes Carlos Moedas, European Union commissioner for research, science and innovation on the occasion of 20 years of the National Contact Point for European Union Research Programs in Poland. In his letter, on the website of the European Commission Representation in Poland, Commissioner Moedas expressed his satisfaction that „the currently implemented important reform Constitution for science takes into account the key recommendations of the international Mutual Assessment, conducted at the request of the Polish authorities under the Horizon Policy Support Instrument 2020. In the opinion of Carlos Moedas, the reform should increase the openness of Polish science, create favorable conditions for the flow of knowledge, increase the quality of teaching and improve the art of research.

Tourist business - dual studies at the University of Information Technology and Management in Rzeszów

2018-08-01

The University of Information Technology and Management in Rzeszów launches dual studies Tourist Business from October 2018, which will be conducted jointly with entrepreneurs. The program of new studies has been consulted with practitioners and is targeted precisely at the tourism industry sector. It gives direct contact with potential employers not only during internships, but also during classes for almost half of the didactic hours. In addition, the large part of the classes will take place directly in companies at specific job positions, which gives a unique opportunity to gain work experience already during the studies - emphasizes Dr. Krzysztof Szpara, dean of the Faculty of Medicine at the University of Information Technology and Management. More: <https://kandydaci.wsiz.rzeszow.pl/pl/studia-i-stopnia/biznes-turystyczny/#opis-kierunku>

First in Europe studies on the legal aspects of blockchain technology at the Lazarski University in Warsaw

2018-08-01

The Lazarski University in Warsaw started recruitment for the first postgraduate studies Blockchain Technology Law. According to the university, the Blockchain Technology Law is the first post-graduate program in Europe devoted to the legal aspects of blockchain. The study aims to provide students with practical knowledge of the challenges useful for lawyers, tax advisors and entrepreneurs on this market. It is also directed to prosecutors, attorneys, legal advisors, representatives of public administration and all those who want to gain specialist knowledge. The topics of the course will include such issues as: Bitcoin, Ethereum and other cryptocurrencies, digital tokens, smart contracts, taxes, regulations, and crime. More: <https://www.lazarski.pl/pl/oferta/studia-podyplomowe/akademia-praktykow-prawa/prawo-technologie-blockchain/>

Bee's Day at the University of Wrocław

2018-08-01

The Botanical Garden of the University of Wrocław invites participants to the Bee's Day. The program includes stories about bees, fairs and outdoor game with a bee in the leading role. The event will begin on Sunday, August 5th at 10. The event is to show how to help bees. The Botanical Garden organizes a field game with a bee playing the leading role, workshops for building houses for insects and a demonstration of cutting out bitterwoods. Experts of the subject will talk about the pollination processes, what differs the bee from the honey bee, what are the reasons for the bee disappearance, how to help pollinators and what are properties of different honeys. - We want to show how much we owe to these insects. In our latitude as much as 85 percent. crops are pollinated by bees. Without bees, these plants would cease to reproduce. Meanwhile, bees are in danger. From about 470 species of these insects in Poland as many as 222 are endangered with extinction.

Scholarships for scientists of the Nicolaus Copernicus University in Toruń

2018-08-01

The Polish Academy of Learning awarded scholarships from the Lanckoronski Foundation and the Foundation Fundacji of Brzezia Lanckorońskich to researchers from the University of Toruń. The prizes were received by Dr Mirosława Buchholtz from the Department of English Philology and the Department of English Literature for the project „Art and artists in the stories of Henry James”; Dr Dorota Grabowska-Pieńkosz from the Faculty of Pedagogical Sciences for the preparation of a monograph of the Pedagogical Society; Dr Krzysztof Kania from the Faculty of Historical Sciences for a scientific study of the life of August Zaleski; Dr Karol Kłodziński from the University Library for the study of the activity of slaves and freedmen in the provincial administration of the early Roman Empire; Prof. Szymon Olszaniec from the Faculty of Sciences for the preparation of a monograph of the Roman administration in late antiquity / early Middle Ages and Prof. Waldemar Rezmer and Prof. Aleksander Smoliński from the Department of Military History at the Faculty of Historical Sciences. More: <https://www.umk.pl/wiadomosci/?id=25546>

University of Poznan to implement projects financed by the Foundation for Polish Science

2018-08-01

Four projects of the Adam Mickiewicz University in Poznan (AMU) won in TEAM and TEAM-TECH competitions organized by the Foundation for Polish Science. The total amount of funding is over PLN 14.5 million. In the TEAM category, three projects of the University will be co-financed. Two of them are carried out at the faculty of biology: under the supervision of Dr Krzysztof Sobczak - «RNA-based pathogenesis with the expansion of trinucleotide repeats - mechanisms and strategies of treatment» and of Dr Piotr Ziółkowski - «Identification of chromatin factors affecting meiotic recombination in plants». The project «The most important concepts of historical thinking» of Dr Ulrich Timme Kragh from the faculty of modern languages also was awarded. In the TEAM-TECH category, the winner was the team of Poznan Science and Technology Park of the UAM Foundation for the research «New inductors of plant resistance and their use as an innovative approach to protecting plants from pathogens».

President signed Law on higher education and science

2018-08-02

August 1, 2018, the President of Poland, Andrzej Duda, signed the Law on Higher Education and Science and its introductory provisions. This is a comprehensive reform of higher education. It assumes major changes in the operation of the university, their financing and scientific careers. The Constitution for Science will replace the four existing laws that regulate the area of higher education and science: law on higher education, the law on the principles of financing science, the law on degrees and academic title, and the law on student loans. The act will come into force on October 1, 2018.

Studies on RODO at the Krakow Andrzej Frycz Modrzewski Academy

2018-08-02

Krakow Andrzej Frycz Modrzewski Academy has introduced a new postgraduate program: Risk management in the organization within information security and RODO changes. The aim of the studies is practical preparation of listeners to perform audits and risk analysis in the area of information security and to work as the Data Protection supervisor, or the proxy for cybersecurity. Classes will be conducted by practitioners, specialists and experts, in cooperation with the Polish Institute of Internal Control.

Cardinal Stefan Wyszyński University launches Sports Center

2018-08-02

At the beginning of 2020, the Cardinal Stefan Wyszyński University (UKSW) will open the Sports Center in Warsaw. The investment is financed from the funds of the Development of Physical Culture of the Ministry of Sport and Tourism and the Minister of Science and Higher Education. According to UKSW, the planned Sports Center will have three floors. The facility will include a hall of 56 m for 38 m. It will enable team games - handball, volleyball, basketball and badminton. In addition, there are sports club rooms with exercise, aerobic, weight, fitness and food rooms in the hall. On the first floor there will be stands for 226 viewers. The value of the investment has been estimated for PLN 20 million.

Ecological implementation doctorate at the Wrocław University of Technology

2018-08-02

Limiting the amount of water used during the filter rinsing and defining the conditions for the reuse of washings are the main goals of the studies conducted as part of the implementation doctorate by Halina Urbańska-Kozłowska. The works are carried out at the Wrocław University of Technology

and the Municipal Water and Sewage Enterprise. The result of research conducted under the supervision of Dr. Eng. Małgorzata Wolska from the Faculty of Environmental Engineering at the University of Technology is reduction of water losses in the production processes, protection of water resources, lower production costs and lowering of water charges in apartments. The possibilities of managing the washings were analyzed in Poland several times, however, there is no clear information in the literature on their composition. If the implementation is successful, it will contribute not only to the water production plants in Wrocław, but it allows also to formulate generalizations for other enterprises. More: <http://pwr.edu.pl/uczelnia/aktualnosci/jak-zmniejszyc-zuzycie-wody-w-oczyszczalniach-10939.html>

New field of study at the University of Humanities and Natural Sciences in Częstochowa

2018-08-02

Pre-school and all-school education is a new field of study at the Jan Długosz University of Humanities and Sciences in Częstochowa. Full-time and part-time studies in this field will take 3 years. The graduate of the new field receives a reliable theoretical and practical preparation necessary to perform the profession of kindergarten and primary school teachers. The students obtain knowledge about the educational processes of a child in pre-school and junior school age. They will have social competences to work with teachers, parents and the social environment. They must be communicative, direct and professional in relations with children, parents and colleagues. Graduates can work in pre-school institutions, pre-school departments in primary schools, alternative forms of pre-school education and grades 1-3 of primary school. More: <http://www.ujd.edu.pl/news/view/edukacja-przedszkolna-i-wczesnoszkolna-ruszya-rekrutacja-na-nowy-ki-erunek-studiow>

Chemical Faculty of the Rzeszów University of Technology becomes a partner of the ChemHR program

2018-08-03

The Faculty of Chemistry of the Rzeszów University of Technology has become a partner of the ChemHR program, whose aim is to strengthen the personnel education system for the chemical industry by organizing a series of industrial seminars. The lecturers of the seminars are experienced specialists employed in the largest companies in the chemical industry. The topics of the seminars will concern issues related to logistics, distribution, production and trade of chemicals. In addition, the ChemHR program may include student internships. The organizer and initiator of the program is the Polish Chamber of Chemical Industry, which brings together and represents the most important entities of the chemical industry in Poland. The scientific partners of the program are the Chemical Faculty of the Rzeszów University of Technology, the Warsaw University of Technology in Plock, the Faculty of Management at the Warsaw University of Technology and the Faculty of Chemistry of the Silesian University of Technology.

Warsaw Medical University to participate in the international project of the European Cardiac Society

2018-08-03

The first Department and Cardiology Clinic of the Medical University of Warsaw will take part in the project of the European Cardiac Society named STEER-AF. The aim of the STEER-AF project (Randomised trial in patients with Atrial Fibrillation) is to examine in a randomized way the impact of doctor education on therapeutic decisions taken in patients with atrial fibrillation. The project will be attended by scientific units from six countries: Poland, Germany, Great Britain, Italy, France and Spain.

Dual studies at the University of Life Sciences in Poznan

2018-08-03

The University of Life Sciences in Poznań begins the implementation of the first majors in dual studies. The first students of such studies will appear in the summer semester of the academic year 2018/19. The students of the Animal Nutrition will start their dual studies. Also, Wood Technology (in a completely new version in close cooperation with employers) and a new Agrobusiness study will be launched in the academic year 2019/20. The new study program which will provide numerous classes with practitioners and academic teachers with professional experience will invite almost 230 students. Everyone will be able to participate in paid internships at employers' companies. The launch of new courses with a practical profile is to contribute to the preparation of human resources, responding to the needs of the labor market, the economy and society. The main idea is to deepen cooperation with key employers for dual courses.

University of Szczecin to launch Interdisciplinary Advanced Studies

2018-08-03

„Interdisciplinary Advanced Studies” is a new offer of the University of Szczecin implemented as part of the „University 2.0 - Career Zone” project. The aim is to use the academic and didactic potential of the university in order to educate the leaders of social and economic life, ready to find the solutions requiring the use of information from many disciplines. Each participant of the new studies will simultaneously study two chosen courses of the studies and carry out an interdisciplinary research project under the supervision of two tutors. At the same time, the students will use financial support for research and a range of organizational solutions offered by the project «University 2.0 - Career Zone». More: <http://interstudia.usz.edu.pl>

University of Zielona Góra concludes an agreement with the Taras Shevchenko National University in Kiev

2018-08-03

The University of Zielona Góra has concluded an agreement with the National University Taras Shevchenko in Kiev - in the field of philosophy and political science. The document was signed by the rectors of both universities: Prof. Eng. Tadeusz Kuczyński and Prof. Leonid Hubersky. The Dual Diploma Program is intended for second-year students studies at both universities. Students from the Kiev University will be able to come to Zielona Góra for the last two semesters of studies and write a master's thesis under the direction of two Polish and Ukrainian promoters in Polish or in English languages. The same opportunity will have students from Zielona Góra. They can spend two semesters at the University of Kiev and write a master's thesis in Ukrainian or in English. The implementation of the program will be coordinated by the Polish-Ukrainian Center for Humanities Studies, created last year by both universities. Recruitment for the dual studies has already begun.

Students from China to participate in the summer school of ceramics conservation at the Nicolaus Copernicus University

2018-08-06

The Faculty of Fine Arts of the Nicolaus Copernicus University in Toruń launches the first summer school of ceramic preservation. Chinese Beijing Union University students attend lectures on art history, European ceramics, materials science, research methods and basic issues of material destruction. In the summer program of the school there are also exercises for Chinese students to learn the basic methodology of conservation procedures: purification, desalination, disinfection, strengthening, filling up of cavities and enamel. They will also be able to test their skills in practice by carrying out conservation work on various original ceramic objects. At the weekends, classes in the form of case studies in Toruń and Gdańsk, as well as visits to monuments and museums, participation in concerts, exhibitions and outdoor events are planned.

University of Zielona Góra runs double diploma program for over 20 years

2018-08-06

The University of Zielona Góra has been conducting double diploma program for over twenty years. The newest partner of the university is the National University of Taras Shevchenko in Kiev. The cooperation in the field of double diploma began with the Integrated Foreign Studies, which were conducted by Faculty of computer science, electrical engineering and automation of the University together with Technische Hochschule Mittelhessen - University of Applied Sciences (formerly Fachhochschule Gies-sen-Friedberg). Over the years, the program was joined by universities from other countries: the Technical University of Tallinn (Estonia), the Lviv Technological University and the Technical University of Vilnius. In 2012, the Silesian University of Technology from Gliwice also joined the program. All the universities set up a network of Universities of Central and Eastern Europe (CUCEE).

University of Bydgoszcz to receive half a million PLN for the for the project „Young explorers in the kaleidoscope of science 2.0”

2018-08-06

The University of Casimir the Great in Bydgoszcz received 500,000 PLN for the project „Young explorers in the kaleidoscope of science 2.0”, which will be implemented from August 2018. The main goal of the project is to create mechanisms for cooperation between the university and the social environment by organizing workshops and classes for students from rural areas of the Kuyavian-Pomeranian Voivodeship. The university announces the organization of a series of classes in mathematics, physics, chemistry, biology, computer science and German language. The students will take part in the „University of the Young Explorer” camp and in the classes for the development of their educational and social competences. All classes will be conducted by the university's academic and didactic staff. They will use techniques supporting the learning and memorizing process - multimedia presentations, demonstrations, experiments, field and team work.

University of Wrocław to cooperate with the Polish Leibnizian Society

2018-08-06

The University of Wrocław has signed an agreement on cooperation with the Polish Leibnizian Society - Societas Leibnitiana Polonorum. The aim of the agreement is close scientific and organizational cooperation related to the study and dissemination of the legacy of Gottfried Wilhelm Leibniz, including philosophy, theory of mind, law, mathematics, logic, theology, engineering, information technology, archeology, political science, botany and zoology. The agreement is intended to stimulate domestic and international research on Leibniz's legacy and propagate its scientific achievements. Dean of the faculty of social sciences, Prof. Robert Wiszniowski became the representative of the University in the current relations with the Society. The Polish Leib-

nizian Society brings together researchers from the universities of Wrocław; Warsaw; Gdańsk and Łódź as well as from the Adam Mickiewicz University in Poznań and the Ignatianum Academy in Krakow.

University of Gdansk developing cooperation with China

2018-08-06

The University of Gdańsk cooperates with 14 Chinese universities. It runs the Confucius Institute and the majors of Polish philology at two Chinese universities - informs dr Beata Czechowska-Derkacz, spokesman for the university. The University of Gdańsk cooperates with the China Youth University of Political Studies, the University of Political and Legal Sciences in Shanghai, the Institute of Technology and the Foreign Language University in Beijing, and the University of Harbin and Jiangsu University. They cooperate in particular with the faculties of law and administration, economics, management, social sciences, philology, history and chemistry. The cooperation includes exchanges of academic staff and students, conducting scientific projects, conferences, seminars, symposia and events promoting Chinese culture and language. The University of Gdańsk, together with China Youth University of Political Studies, runs the Confucius Institute and Polish philology for Chinese students at Harbin and Canton Universities.

Gowin: I would like to thank to honest critics

2018-08-06

- Constitution for Science has been signed by the President. I would like to thank the academic circles who collaborated with the Ministry of Science and Higher Education. I would like to thank to honest critics. I promise that the implementation of this great reform will be continued in the dialogue with the academic world - informed Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education. The Constitution for Science was supported by: Main Council of Science and Higher Education, National Doctoral Representation and Student Parliament, Conference of Rectors of Public Vocational Schools, Network of Small and Medium Public Academic Universities, Conference of Rectors of Academic Schools in Poland, Conference of Rectors of Artistic Universities, Regional Conference of Rectors of Academic Universities, Independent Students' Union, Association of Employers of the National Organization of Industry Innovators and Association of Entrepreneurs and Employers.

Faculty of Physics of the University of Białystok receives the Grant of the National Science Center

2018-08-06

Dr Michał Matczak from the Institute of Molecular Physics of the Polish Academy of Sciences will conduct his research at the Department of Physics of Magnetism at the University of Białystok. He received over 900,000 PLN for the project implementation in the SONATINA 2 competition of the National Science Center - said Katarzyna Dziedzic, spokesperson of the University of Białystok. The scientist will study the magnetic properties of materials that could be used to construct magnetic mass memories and logic systems using skyrmions. Skyrmions are magnetic quasi-particles of very small sizes, allowing to obtain high information storage densities. SONATINA is a competition aimed at scientists who have a PhD degree no longer than 3 years. In the second competition, 154 applications were submitted, of which 45 researchers will receive funding.

Faculty of Chemistry of the Jagiellonian University to launch the laboratory of innovative technologies

2018-08-06

The construction of an innovative technology laboratory at the Faculty of Chemistry of the Jagiellonian University in Krakow will begin this year. It will include, among others, the most modern equipment for experiments, which will be purchased in 2020 for the money received from the Regional Operational Program of the Małopolska Region for the years 2014-2020. The laboratory of innovative technologies has been designed as a modern, functional, but also architecturally interesting building, overhang on reinforced concrete pillars. It will be linked to the existing building of the Faculty of Chemistry. There will be a special gate to transport the materials and devices directly to the laboratory using a rotating crane. The new building will be completed in the academic year 2020/2021. The total value of the project is almost PLN 30 million.

Competitions for scientists at the University of Warsaw

2018-08-07

The University Technology Transfer Center of the University of Warsaw organizes competitions for researchers from the Warsaw university who would like to receive financial support for the commercialization of their ventures. Scientists and PhD students from the University of Warsaw as well as research teams whose members are university employees may take part in the competitions. The first competition concerns pre-implementation work, the second call is the idea for creating a spin-off company. The grants amount up to 40,000. PLN for pre-implementation work, and up to PLN 20,000 PLN for the creation of a spin-off company. The competitions are organized as part of the Innovation Incubator + program financed from the Operational Program of Intelligent Development by the Ministry of Science and Higher Education. More: <http://www.uott.uw.edu.pl/60-000-zl-na-prace-przedwdrozeniowe-i-lub-zalozenia-spolki-spin-off/>

Dual studies of Engineering of technological processes to launch at the University of Natural Sciences and Humanities in Siedlce

2018-08-07

The recruitment for a new field of Engineering of technological processes has started in Siedlce. Those dual first-cycle studies at the Faculty of Sciences will last 3.5 years. According to the University of Natural Sciences and Humanities in Siedlce, which launched the course, all students starting their studies in the academic year 2018/2019 will participate in the project of the National Center for Research and Development «Engineer with practice needed immediately!» and they will be provided with internships throughout their studies. Engineering technological processes are interdisciplinary studies combining knowledge in computer science, construction, material engineering and production engineering. The program and the study plan were created in cooperation with the largest employers in Siedlce, where students will be able to take the internships.

European universities for improving the Dual Career program for student athletes

2018-08-07

Members of the Conference of Rectors in Coimbra in Portugal signed an agreement on the Dual Career program for student athletes. The new regulations are to improve developing their scientific and sports careers. The agreement, signed by the rectors of European universities and the European University Sports Association, aims at higher education institutions to help students develop their scientific and sports careers. The main assumptions are: providing students with the possibility of pursuing a dual career, adjusting the regulations to provide the opportunity to study and train, promoting the best conditions for training, providing them with the best trainers and the access to the best educational and health offer. The agreement was signed during the largest European university sport event - The European Universities Games Coimbra 2018.

School of Molecular and Theoretical Biology at the University of Poznan

2018-08-07

Adam Mickiewicz University in Poznań has launched this year's School of Molecular and Theoretical Biology. 82 high school students from Poland, Belarus, Croatia, Spain, Moldova, Germany, Russia and the United Kingdom as well as from the Philippines and the USA take part in it. During the classes, participants implement projects under the guidance of outstanding scientists. - The idea of the school is primarily to involve students in scientific research, conducted by experts from around the world. Each participant independently chooses a team of specialists with whom she wants to cooperate - says the head of the Evolutionary Biology Laboratory at the University, Prof. Jacek Radwan. Classes are conducted by about 100 lecturers - scientists, university staff, PhD students and people responsible for the organization of the project. They are scientists from Harvard University, Adam Mickiewicz University, the University of Edinburgh and the Moscow State University.

University of Bialystok launches exhibitions

2018-08-08

By the end of August 2018, two exhibitions can be visited at the Institute of Biology of the University of Bialystok. The first exhibition presents the nature of the Podlasie valleys shown in the pictures of university employees. The second exhibition presents the story of life on Earth - says Katarzyna Dziedzic, spokeswoman of the Białystok university. Most of the photographs presented at the photo exhibition have been taken over the last thirty years as a part of wandering along the Narew and the Biebrza rivers. The second exhibition «Life on Earth - an outline of history» presents the development of fauna and flora from the Cambrian period of the Paleozoic era, to the Pleistocene, the time of several serious glaciations of Earth during last 2 million years.

Students of the Warsaw University of Technology creating a yogurt substitute

2018-08-08

Students of biotechnology of the Warsaw University of Technology are working on a substitute for yogurt based on millet. The product is to be a local and cheaper competitor of yoghurts available on the market, made of coconut, rice and soy milk - informs the Office for Promotion and Information of the Warsaw university. Students within the «Herbion» Scientific Circle of Biotechnologists operate at the Faculty of Chemistry of the Warsaw University of Technology. They decided to create yoghurt based on cereal raw materials. They chose millet, because it has many valuable features and it is gluten-free. This also means that people who have celiac disease or gluten allergy could eat such yogurt. As students emphasize, millet is also cheap and easily available. Additionally, as other alternatives of plant milk – there is no lactose and cholesterol in it.

Scholars to study loan and guarantee funds at the University of Lodz

2018-08-08

The Department of Accountancy of the Faculty of Management at the University of Lodz is conducting research on the market of loan and guarantee funds in Poland. The aim of the project «Financing the operation of loan and guarantee funds» is financed by the OPUS grant from the National Science Center and it is to determine the degree of financial independence of guarantee and loan funds in Poland. As part of the research, scientists from Lodz intend to conduct a series of analyzes, surveys and focus groups. The conducted research will allow to determine whether the loan and guarantee funds will be operated in the future on the current or even higher level when co-financing from the European Union programs ends.

PhD student from Iran at Gdansk University of Technology examining food contaminated with pesticides

2018-08-08

Mansoure Kermani is preparing a PhD thesis in analytical chemistry at Isfahan University of Technology in Iran. Her research is a part of an internship at the Department of Analytical Chemistry of the Gdańsk University of Technology and it may bring the creation of breakthrough methods for detecting substances threatening human health in water and food. The student began writing her PhD thesis on the preparation of nanostructural sorbents for studying the presence of pesticides in the environment through gas chromatography at the university in Isfahan. The project implemented in Gdańsk concerns the preparation of sorption materials in the SMPE technique (microextraction to the stationary phase) for the isolation of compounds essential for environmental protection, mainly of pesticides and herbicides. These sorbents will be hybrid materials based on a combination of porous silica and ionic liquids with different properties.

Five faculties of the Silesian University of Technology receive positive opinions for their implementation PhD programs

2018-08-08

The five faculties of the Silesian University of Technology received a positive evaluation and passed to the second stage of the competition organized by the Ministry of Science and Higher Education. The Ministry awarded Faculty of Automatic Control, Electronics and Computer Science, Faculty of Chemistry, Faculty of Environmental and Energy Engineering, Faculty of Materials Science and Metallurgy and the Faculty of Transport. The universities applied for money for full-time PhD studies starting in the academic year 2018/2019, when education will be conducted in cooperation with the PhD student's employers. The money will co-finance the costs of using

the research infrastructure in order to implement the PhD student's research, as well as to finance the PhD scholarship during the PhD studies provided for in their program, but not longer than 4 years. More: <https://www.polsl.pl/Lists/AktualnosciUczelniane/PokazWiadomosc.aspx?WebPartTitle=ListWiadomosci&Page=1&WebPartTitle2=News&Filter1Field2=Identyfikator&Filter1Value2=2341>

Complementary recruitment for studies at the University of Bialystok

2018-08-09

Complementary recruitment for full-time studies at the University of Bialystok will start on August 16 and will last until September 14, 2018. An additional recruitment for second-cycle studies will be held from 22 August. According to Katarzyna Dziedzic, a spokesman of the University of Bialystok, candidates have 9 studies to choose from: history, Eastern studies, philosophy and ethics, cultural studies, e-commerce, environmental protection, IT and econometrics, mathematics and physics. At the second-cycle stationary studies, additional recruitment will be conducted in 7 directions: philosophy, Polish philology, cultural studies, social work, forensic and judicial chemistry, mathematics and physics. Here, registration will start on August 22, and will end on September 14 (except for forensic and judicial chemistry – candidates can register in this direction until September 19).

Rzeszów University of Technology receives new plane for training pilot students

2018-08-09

The Marshal of the Podkarpackie Voivodship gave the Rzeszów University of Aeronautical Education a subsidy of PLN 350,000 for the modernization of the didactic and scientific base. According to the Rzeszów University, the support will be allocated to the purchase of a new plane for the training of pilot students. The plans of the Air Training Center include the purchase of the «Piper» PA - 28 Arrow airplane, which will be intended for professional training of pilots. It would be the third plane of this type in the fleet of the center. At the moment it consists of: seven «Tampico» TB - 9, two «Piper» PA - 28 Arrow, three «Piper» PA - 34 Seneca V, five «Liberty» XL-2 and one ZLIN - 242L. Rzeszów University of Technology is currently educating 112 pilot students. Most of them after leaving school immediately find a job in the airlines.

Competition for the best master's thesis „Intelligent power grids - development and operation”

2018-08-09

Tauron Dystrybucja Spółka Akcyjna invites graduates of electrical power engineering, electrical engineering, energy, electronics, automation and robotics, telecommunications, computer science and mechatronics to participate in the 5th competition for the best master's thesis in the academic year 2017/2018. The theme of this year's competition is: «Intelligent power grids - development and operation». The main prize for the author of the best master's thesis on this subject is 10,000. PLN. The organizers will accept applications until October 15, 2018. Details of the contest are available at: www.tauron-dystrybucja.pl/konkurs

Academy of Young Inventors at the University of Humanities and Natural Sciences in Częstochowa

2018-08-09

Jan Długosz University of Humanities and Natural Sciences in Częstochowa invites participants to the project „Academy of Young Inventors, an initiative broadening the horizons of creative and innovative thinking of children and youth”. The project is addressed to young people aged 10-16, fascinated by the world of natural and exact sciences. The pupils will have the opportunity to participate in popular science lectures and independent design and performance of experiments in the field of biology, chemistry, physics and technology. They will participate for one-day educational trip and the opportunity to present their own achievements at the Forum of Young Inventors. Classes will take place from 20 to 30 August in the building of the Faculty of Mathematics and Natural Sciences of the University - in Częstochowa at al. Armii Krajowej 13/15. The condition is submission of documentation by the parent and participation of the child in recruitment for the project. More: <http://www.power.ajd.czest.pl/amw.html>

PhD student at the University of Economics in Wrocław wins the ETIUDA competition

2018-08-09

Mariusz Maziarz, PhD student at the Ecological Economics Department of the Wrocław University of Economics, became one of the 39 winners of the ETIUDA 6 competition. He receives almost 75 thousand PLN for research the causality in contemporary economics. The young scientist has already been noticed in other competitions. In 2016, he received a W. Styś scholarship for outstanding achievements in the field of social sciences and humanities. In 2016, he won, among others grant of the PRELUDIUM competition in which the National Science Center finances research projects carried out by people starting their careers. He is also the winner of the first place in the competition on the essay «Ethics

in Finance. The Robin Cosgrove Award, organized by the Polish Bank Association. Representatives of various scientific disciplines applied for funds for research within the ETIUDA 6 competition. The most number of 152 applications were submitted in exact and technical sciences.

Researcher at the Medical University of Gdańsk receives a scholarship from the Deutscher Akademischer Austauschdienst

2018-08-09

Dr Zbigniew Heleniak from the Chair and Clinic of Nephrology, Transplantology and Internal Medicine at the Medical University of Gdańsk received a three-month scholarship from the Deutscher Akademischer Austauschdienst (DAAD). DAAD is an association of German universities, whose main task is the internationalization of German universities and supporting international academic exchange. The organization grants individual scholarships, finances group travel and delegating German scientists to foreign universities. Significant financial resources are allocated for cooperation between German and foreign universities in the framework of specific projects - for programs supporting the internationalization of German universities, as well as for financing study programs, centers and universities abroad.

Professor Andrzej Nowak from the University of Zielona Góra becomes one of the laureates of the Isaacs Award

2018-08-09

Professor Andrzej Nowak from the faculty of mathematics, computer science and econometrics at the University of Zielona Góra and Prof. Georges Zaccour (HEC Montreal, Canada) became the laureates of the prestigious Isaacs Award for outstanding contribution to theory and the use of dynamic games. Rufus Isaacs created in 1950-70 the basics of the theory of differential games. The prize of his name is awarded every two years by the Committee of the International Society for Dynamic Games. The aim of the Society is to promote and popularize the theory and applications of dynamic games and to disseminate scientific information. The Society achieves them by organizing symposia, conferences, workshops and publishing magazines with a high scientific standards. The subject of research conducted by Prof. Nowak are issues of decision-making processes and stochastic games, the theory of optimal economic growth and the issue of optimal use of the capital.

Warsaw Medical University to test innovative telemedicine equipment

2018-08-10

The Warsaw Medical University will receive new, innovative technological facilities. The university signed a letter of intent on cooperation with the Krakow-based company MedApp, which assumes the development of the existing cooperation in the field of invasive cardiology and electrophysiology. According to the magazine «Rynek Zdrowia», researchers and students of the Warsaw Medical University will receive innovative telemedicine equipment and will independently test it. Based on their comments and recommendations, MedApp will develop the functionality of its products, finally presenting a product ready for implementation to full clinical practice. The Medical University of Warsaw is another scientific unit among MedApp's partners.

Until now, the Kraków-based company cooperated with the Collegium Medicum of the Jagiellonian University.

University of Lodz becomes the leader in the second MINIATURA competition

2018-08-10

The most grants in the competition of the National Science Center MINIATURA were obtained by young scientists from the University of Lodz. In the latest call of the MINIATURA, the University of Lodz received funding for 5 projects. The second and third places were taken by the Nicolaus Copernicus University in Toruń and the Catholic University of Lublin, which have earned respectively three and two grants. The awarded projects included, among others, the proposal of Dr. Szymon Wiśniewski from the Faculty of Geographical Sciences of the University of Lodz. He will examine how the behavior of Lodz residents regarding public transport has changed due to the limitation of trade on Sundays. For this project, the Lodz scientist will receive over 35 thousand PLN.

Special pedagogy at the State Higher Vocational School in Płock

2018-08-10

The State Higher Vocational School (PWSZ) in Płock received the decision of the Ministry of Science and Higher Education to grant the Faculty of Humanities and Social Sciences of the University of Płock the right to conduct 1st degree studies in Special Pedagogy. The program of studies in the new field assumes gaining qualifications enabling the design and implementation of pedagogical and therapeutic activities for people with developmental and functional disorders and dysfunctions, in particular intellectual disabilities and autism spectrum disorders.

Mayor of Szczecin provides scholarships for students

2018-08-10

The best graduates of high schools and technicians can receive educational scholarships of the Mayor of Szczecin. In this way, the city wants to encourage young talented people to learn at public universities in Szczecin and prepare staff for regional business. The program is implemented as part of the „Academic Szczecin”. The aim of the program is to prevent the outflow of gifted secondary school graduates from the city and to help in acquiring qualified personnel for regional business. The fund is also to build the prestige of Szczecin's public universities, promote the educational offer and increase competitiveness and accelerate the economic development of local entrepreneurs. The scholarship may be awarded to a student with a secondary school-leaving certificate obtained in the year in which recruitment is conducted. The maximum amount of support is 6,000 gross PLN. Applications can be submitted until 10 October at the secretariat of the Strategy Office of the City Council of Szczecin.

Seven PhD students of the University of Wrocław to participate in the ETIUDA competition

2018-08-10

Seven PhD students of the University of Wrocław won over 750,000 in total PLN from the National Science Center as part of the sixth ETIUDA competition. The following projects will be financed: «Veterans in Spanish society in the 17th century» by Paweł Szadkowski; «Personal items made of bones dated to the early Bronze Age: materiality and meaning» Kinga Winnicka; «Deliberation in the hermeneutic perspective. From the theory of language to the political practice» by Wojciech Ufla; «Cognitive and personality correlates of olfactory memory» by Agnieszka Sabiniewicz; «The role of metalloproteinases in shaping long-lasting synaptic plasticity and excitability of the neuronal network in the CA1 area of the hippocampus of mice» by Patrycja Brzdąk; «Characteristics, optimization and application of

Zn2 + ion-dependent interactions» by Anna Kocyla and «Application of algorithmics in the context of selected social and economic issues» by Krzysztof Sornata.

University of Economics in Katowice gets an average of 2,51 candidates for one place

2018-08-10

In this year's recruitment for full-time studies at the Katowice University of Economics, 3821 candidates applied, which is 269 more than last year. 1525 people have been accepted, which gives an average of 2.51 candidates for one place. Most candidates chose finances and accounting, but the hardest thing was to get into engineer's logistics, where over 6 candidates applied for one place. Similarly to the previous year, the university increased the requirements on average by 32%. - Due to the growing interest in our studies and the adopted policy of improving the quality of education, we increase the requirements for candidates. The border score to be accepted for studies is higher - says Robert Tomanek, Prof. University of Economics and Rector of the University. More: https://www.ue.katowice.pl/no_cache/uczelnia/aktualnosci/article/ue-katowice-stawia-na-jakosc.html

Nicolaus Copernicus University wins the competition of the Ministry of Justice

2018-08-10

The Resocialization Section of the faculty of pedagogical science at the Nicolaus Copernicus University in Toruń is among the winners of the call of the Ministry of Justice devoted to counteracting the causes of crime. The prize is a grant for the project „On the way to Song of Songs”. The goal of the project is to prevent people from entering the crime scene and to present an alternative to functioning in a conflict with the law. The undertaking assumes preventive meetings with the God's Band of Former Bandits for minors threatened with demoralization; music workshops for endangered and socially

maladjusted youth; Christian concerts and a group created by juvenile volunteers of the Toruń Song of Songs Festival. As part of the project, the brochure called «Forgiveness» was published. It shows the stories of women convicted of crimes against life and health. The conference on counteracting crime will be the summary of the whole event.

Warsaw University of Life Sciences to launch the Innovative Center of Nutritional Sciences

2018-08-13

- In the area of agriculture industry, a technology race is under way. In this race Poland will not be staying at the back. That is why we support research aimed at the development of this extremely important sector - said Jarosław Gowin, Deputy Prime Minister and Minister of Science and Higher Education, during the signing of the agreement enabling the construction of the Innovative Nutrition Center of the Warsaw University of Life Sciences. Under the agreement signed by Deputy Prime Minister Jarosław Gowin, the Minister of Agriculture Jan Ardanowski and the Rector of the Warsaw University of Life Sciences, Prof. Wiesław Bielawski, Ministry of Science and Higher Education will allocate 40 million PLN for the construction of the Innovative Center of Nutritional Sciences. According to the Ministry of Science, the investment assumes the creation of a didactic-laboratory facilities intended for conducting scientific and educational activities in the field of human nutrition science. The center will also be equipped with a unique laboratory enabling conducting world-class research. The investment is to be completed by 2022.

New courses at the University of the Open University of Warsaw

2018-08-13

The Warsaw Open University began the recruitment for its courses. The university has prepared over 280 course proposals with almost 80 new offers. Due to the great interest, the «Learn from the best» pro-

gram will be launched once again. This is an opportunity to meet with outstanding experts from various fields of science. In this trimester, the Open University especially recommends the course «Arcana of the human mind - part two», in which lectures will be given by eminent experts in psychology Andrzej Depko, Jacek Santorski, Dorota Zawadzka and Prof. Bogdan Wojciszke. There will be plenty of proposals for journalism and media lovers. The course «The fourth power, or about the media from the kitchen» will help to understand the mechanisms of information flow in the media. See the full list of courses: <https://www.uo.uw.edu.pl/kursy>

Two PhD students of the Silesian University of Technology become laureates of the ETIUDA competition

2018-08-13

Two PhD students of the Silesian University of Technology have been among 64 winners of the ETIUDA competition in the field of exact and technical sciences. They will receive funding from the National Science Center for the implementation of their research projects. Małgorzata Burek from the Faculty of Chemistry will receive PLN 120,700 for the implementation of her project «Hydrogels containing trehalose - research on synthesis, characterization and biomedical use». Wojciech Uchman from the Faculty of Environmental and Energy Engineering will receive PLN 108,656 for the project entitled «Experimental and computational determination of performance characteristics and efficiency of the micro-cogeneration system». ETIUDA is a competition for scientists taking their first steps in the research. Within its program, PhD candidates receive scholarships of 4.5 thousand PLN monthly. The laureates also have the opportunity to complete an internship at a selected foreign research center.

Gdańsk University of Technology joins the „School of Eagles” project

2018-08-13

Since the new academic year, Gdańsk University of Technology joins the „School of Eagles” project, implemented by the Ministry of Science and Higher Education. The aim of the project is to create at the university education for extremely gifted students. The basic task will be to create for the outstandingly gifted young people an appropriate didactic path with the use of an individual study program, the possibility of cooperation with dedicated tutors and providing the scholarship support in the amount of PLN 1370.70 per month. The «School of Eagles» assumes creating educational paths for highly talented first-year students (selected on the basis of results of national and international contests), as well as the best students of the subsequent years of first-cycle studies (selected on the basis of results obtained in the first year of studies) through the implementation of high quality of academic education within the tutoring system.

University of Gdańsk to cooperate with the Port of Gdansk

2018-08-13

Cooperation in the field of student internships, research and development projects, organizing training and conferences, as well as knowledge transfer and commercialization of research results - these are the main assumptions of the agreement between the University of Gdańsk and the Port of Gdansk - said Beata Czechowska-Derkacz, a spokesman for the university. The agreement will allow to organize the internships for outstanding students, as well as trainings within the expert knowledge and experience of the University's academic staff. The area of joint activities also includes research and development projects as well as support for scientific research relevant to maritime economy. Joint scientific conferences and symposia will also be organized. The agreement is another initiative within the framework of the University's cooperation with

public institutions, enterprises and organizations in which the university offers its scientific-research and organizational potential.

Ministry of Science supports Universities of the Third Age

2018-08-14

Under the initiative of the Social Responsibility of Science, one of the three pillars of the PM Gowin's Strategy, the Ministry of Science and Higher Education has already allocated PLN 10 million to a program dedicated to seniors. The aim of the Third Age Universities program is to support the idea of intergenerational solidarity, social activation of seniors, integration of local communities, as well as to develop the intellectual potential of the elderly and prevent their exclusion. As the ministry of science underlines in the information, Poland ranks among the top countries in the field of social support and social activation of seniors. It established many institutions to prevent the exclusion of older people. Poland was the third country in the world, after France and Belgium, where the University of the Third Age was developed. More: <https://naukadlaciebie.gov.pl/kategoria/universytety-trzeciego-wieku/>

12 projects of students from the University of Warsaw awarded in the competition „The best of the best! 3.0 „

2018-08-14

In the program „The best of the best! 3.0” 98 projects were recommended for funding. 12 projects were submitted by students of the University of Warsaw. The program «The best of the best! 3.0» is addressed to outstanding students who have a plan of their research. It assumes mainly financing their participation in international conferences or competitions. The beneficiaries of the competition will receive over PLN 11 million. Among the awarded projects were: Expanding knowledge and presentation of research results in the field of nucleotide chemistry and biology and nucleic acids through participation of members of the Scientific Society of Biological Chemistry «Nucleotide» in international

scientific conferences (Center of New Technologies of the University of Warsaw), Preparation and participation of the Warsaw University team in international robotics professions (Faculty of Physics) and Development of a system supporting speech generation in patients after laryngectomy using artificial intelligence methods (Faculty of Psychology).

First recruitment completed at WSPiA Rzeszów High School

2018-08-14

WSPiA Rzeszów College completed the first recruitment for studies in the academic year 2018/2019. The number of candidates is by 10 per cent higher than last year, with 30 percent more pupils to study in full-time studies. The biggest increase of the number can be observed in the field of law, which was chosen by almost 50 percent of candidates more than last year. The course «Internal security» was chosen by almost 30 percent more people than last year. - Considering our new course «Administration / Management», we have noted a 25% increase in the number of candidates - says Przemysław Pawlak, spokesman for WSPiA Rzeszów High School. The WSPiA Rzeszów is the only high school in the Podkarpacie Region with PhD program in the field of «law». Also, as the first school in the region, it can conduct master's studies in the field of «Internal security».

Researchers at the University of Wrocław to study migration processes

2018-08-14

Dr Patrycja Matusz-Protasiewicz and Prof. Leszek Kwiecieński from the Department of Strategic and European Studies at the Institute of International Studies of the University of Wrocław received funding within the Horizon 2020 for the ADMIGOV project - Advancing Alternative Migration Governance. The project concerns migration management in the European Union as the impact of globalization on migration and Europeanisation processes, protection of human rights, international law and systemic approach to migration as a new type of public policy and intergroup relations. The surveys will also cover sending non-EU migrants. The project is managed by the University of Amsterdam. The consortium consists of 13 entities, including universities, international and non-governmental organizations. This is a RIA (Research and Innovation Actions) project, which means that it is financed by the EU. The total budget is almost EUR 2.8 million.

Professor Maksymowicz becomes adviser to Deputy Prime Minister Gowin

2018-08-16

Professor Wojciech Maksymowicz, vice-rector of the University of Warmia and Mazury in Olsztyn for Collegium Medicum will be the advisor to Deputy Prime Minister Jarosław Gowina. The Minister of Science and Higher Education appointed Prof. Wojciech Maksymowicz to the team for development of science and higher education. Professor Maksymowicz is a neurosurgeon at the University Clinical Hospital in Olsztyn, vice-rector of the University of Warmia and Mazury for Collegium Medicum and the initiator of the Olsztyn clinic Alarm Clock for adults. He declares that he will translate the effects of science into everyday practice. The basic task of the team is to monitor the implementation of the new law on higher education, which will become applicable in Polish universities from October this year.

5th Conference of Expert Rights of the Student

2018-08-16

On August 23-26, 2018, the 5th Conference of Expert Rights of Students will be held at the Warsaw School of Economics. The purpose of the conference organized by the Students' Parliament is to prepare student self-government organizations to conduct training in the field of student rights and duties. Conference participants will be prepared methodically and substantively to carry out this type of training. Each student self-government has the possibility to delegate one representative who will take part in the prepared trainings, and the second person on the reserve list. The access is limited and made on the first come- first accepted basis. Participation in the conference is free of charge for representatives of student self-governments (it also includes accommodation and meals). Participants cover only travel costs. More: <https://eps.psrp.org.pl/2018/07/29/juz-wkrotce-rusza-rejestracja/>

Scientists of the Wrocław University of Technology win scholarships from the National Science Center

2018-08-16

Eight researchers from the Wrocław University of Technology received scholarships within the Etiuda competition. The rewarded scientists are Marta Kolonko for «Molecular analysis of C-terminal regions of Methoprene tolerant and Germ-cell expressed proteins from *Drosophila melanogaster*», Dominik Drabik for «Development of experimental methods to determine the mechanical parameters of lipid membranes», Karolina Orłowska for «Metrology of optomechanical interactions with MEMS microelectromechanical systems», Arkadiusz Jędrzejewski for «Non-equilibrium critical phenomena and phase transformations in dynamic spin models», Filip Formalik for «Influence of phonon dynamics on structural changes and adsorption in hybrid nanoporous materials», Mateusz Szatkowski for «Generation of exotic light field states with the use of spatial light modulators», Adam Mielnik-Pyszczorski for «

Modeling of the kinetics of charge and spin carriers in conjugated semiconductor nanostructures» and Paweł Widomski for «The influence of hybrid layers on durability of forging tools». More: <http://pwr.edu.pl/uczelnia/aktualnosci/granty-naukowe-dla-naszyc-mlodych-wzaczy-10944.html>

University of Gdańsk in QS World University Ranking 2019

2018-08-16

The University of Gdańsk is one of 14 Polish universities placed among the thousands of the world's best academic universities in the latest international ranking of QS World University Ranking 2019. - The University of Gdańsk appeared for the first time in the QS World University Ranking. This is a great achievement for us. And in addition, our University was the only one from Pomeranian universities in this most important ranking of world measuring academic quality of the universities - says Prof. Piotr Stepnowski, vice-rector for science and cooperation with foreign countries. QS World University Ranking is one of the four most important global rankings - along with Times Higher Education, U-Multirank and the Shanghai Ranking. The ranking measures the academic prestige of the university. It takes into account the reputation in the academic environment, prestige among employers, the ratio of the number of lecturers to the number of students, the number of citations and the number of students and employees from abroad.

School of Open Mind XX- Scientific Conference of Students and PhD Students in Kielce

2018-08-17

On August 27 - September 2, 2018, the School of Open Mind XX Scientific Conference of Students and PhD Students will take place in Kielce. Its organizers are Faculty of Humanities, Faculty of Law, Administration and Management at the Jan Kochanowski University in Kielce, National Pedagogical University in Tarnopol, National University in Kamieniec Podolski and the Academy of Humanities and Pedagogy in Krzemieniec. The aim of the conference is to integrate the academic community. Every year, dozens of participants with their scientific supervisors participate in the meetings speaking only Polish, Ukrainian and Russian. Participants are prohibited from using non-Slavic languages. During the event, methodological workshops are conducted by scientists from three countries and interdisciplinary PhD conference will take place. Participants will also take part in three Polish, Ukrainian and Russian cultural evenings.

Solar boat of Gdansk students comes seventh in the world championship

2018-08-17

The boat designed by the students of the Ocean Engineering and Shipbuilding of Gdańsk University of Technology took the 7th place in the general classification of the solar boat world championship. This is the best result among all representatives of Polish universities. The boat of Gdansk University GUT SOLAR1 took part in competitions in Groningen and Leeuwarden in the Netherlands, finally taking 7th place for 22 starting units. - The regatta consisted of various competitions in different weather conditions. The boat participated in the sprint races, long-distance races in city channels that required excellent maneuverability and skills- reports MSc. Hanna Pruszek, tutor of students.

Three scientists from the Nicolaus Copernicus University become the laureates of the Miniatura 2 competition

2018-08-17

The scholars of the Nicolaus Copernicus University in Toruń became the laureates of the Miniatura 2 competition of the National Science Center. The Center supports the implementation of basic research. Dr Maciej Serowaniec from the law and administration department will receive PLN 6 490 for the project «The Supreme Audit Institutions in the Constitutional Systems of the Member States of the European Union»; Dr Brygida Świeżawska from the faculty of biology and environmental protection will get PLN 49,665 for preliminary studies on the project «Determination of the glutamic acid content in ATP binding by the catalytic center of adenylate cyclases from *Arabidopsis thaliana*» and Dr Eng Wojciech Zalewski from the faculty of economic sciences and management will receive 40 590 PLN for preliminary research «Support of logistic processes in road transport with the use of telematics systems».

Medical University of Wrocław debuted in the Shanghai ranking

2018-08-17

Medical University of Wrocław made its debut on the prestigious list of the best universities in the world in the category of medical faculties. In the Shanghai ranking, only 5 Polish medical high schools were classified. The Medical University of Wrocław was ranged among the best medical faculties in the world on the position 300- 400th, together with medical schools from Gdańsk and Łódź. The Collegium Medicum of the Jagiellonian University was ranged 200- 300th, and medical universities from Warsaw and Katowice were ranged 400- 500th. In total, 25 Polish universities, including 4 Wrocław high schools were classified in this year's ranking. The Shanghai Academic Ranking of World Universities was created in 2003 and since then has been publishing an annual list of the 500 best

universities in the world and separate lists of the leaders of particular fields and majors. In the overall ranking, Poland is represented by the University of Warsaw (range 301-400) and the Jagiellonian University (401-500).

University of Warsaw is the best Polish university in the Shanghai ranking

2018-08-20

In this year's ranking of the best universities in the world (Academic Ranking of World Universities), the University of Warsaw was classified in the group of universities at 301-400 positions. Another Polish high school - Jagiellonian University took the place in the range 401-500. The Academic Ranking of World Universities (ARWU), also known as the Shanghai List, is the ranking of the best universities in the world published since 2003. It is prepared by the Jiao Tong University in Shanghai. In this year's ranking, the American Harvard University was recognized as the best university in the world. The second and third place, as in the previous year, were taken by Stanford and British Cambridge Universities. The Kraków Academy of Mining and Metallurgy has been classified in the seventh hundred of the ranking. Adam Mickiewicz University in Poznań, the Warsaw Medical University and the Warsaw University of Technology are placed in the eight hundred. The Silesian Medical University in Katowice was in the ninth hundred and Lodz University of Technology, Nicolaus Copernicus University in Toruń, University of Lodz, University of Wrocław and Wrocław University of Technology are positioned in the tenth hundred of the ranking. University of Silesia to launch project „University of the Best”

2018-08-20

University of Silesia and the City of Katowice with the support of the Youth Palace and Psychological and Pedagogical Counseling No. 5 in Katowice will implement the educational initiative „The University of the Best”. «The University of the Best» is a project addressed to the most talented primary and secondary school pupils living in Katowice, who go beyond the curriculum of their scientific interests. The main method of work in the «University of the Best» will be personalized training based on tutoring. The result of the cooperation between the supervisor and the student is to find the optimal path of scientific development and adapt it to the interests of the pupil, as well as discovering and developing his talents. The project will be implemented in two periods, from October 2018 to June 2020. More: www.uniwersytetnajlepszych.us.edu.pl.

Cardinal Stefan Wyszyński University to launch new studies on Personal Data Protection in the Church

2018-08-21

The Cardinal Stefan Wyszyński University in Warsaw started recruitment for postgraduate studies Personal Data Protection in the Church. The study program was agreed with the President of the Office for Personal Data Protection and covers general issues regarding the protection of personal data and the rights and obligations of church legal persons in the processing of personal data. Particular emphasis in the study program has been placed on the specificity of personal data protection in the Church. Graduates of studies in Personal Data Protection in the Church will receive a certificate confirming the acquired competences in the scope of personal data protection, which will allow them to perform the functions of the Information Security Administrator. Conference on the 21st century construction at the University of Technology and Life Sciences in Bydgoszcz

2018-08-21

The University of Technology and Life Sciences in Bydgoszcz invites participants to the IV International Scientific Conference CEPPIS (Civil Engineering - Present Problems, Innovative Solutions). The event is a part of the celebration of the European Year of Civil Engineers (2018 European Year of Civil Engineers). CEPPIS is a flagship event organized by the COMA Scientific Association for Building Management. It is attended by scientists from around the world dealing with contemporary construction problems. The meeting is an opportunity to present the results of research, as well as to exchange experiences of the scientific community. During the conference, which will be held at the University of Bydgoszcz on September 12, it will be possible to take part in the discussion and presentation of theoretical or practical considerations as well as the experiences and results of the conducted research. The theme is the construction of the 21st century - challenges and risks. The official language of the conference is English.

Polish-Israeli summer school was held at the Warsaw School of Economics

2018-08-22

On August 6-16, 2018, the Warsaw School of Economics (SGH) in Warsaw in cooperation with the College of Management of Rishon LeZion in Israel organized a summer course of economic law analysis. Over 50 students EMLE program (European Master in Law and Economics) from Israel and Poland took part in classes devoted to corporate governance and economic analysis of the judiciary procedures. The Students' Association for Economic Analysis of the Warsaw School of Economics participated in the organization of the summer school. The College of Management at Rishon LeZion is a private university founded in 1978. The Israeli university educates around 12,000 students within

bachelor and master studies.

Warsaw University of Technology to launch the New Technologies Campus

2018-08-22

The Warsaw University of Technology will receive more than PLN 82.5 million of funding from the European Union for the creation of the New Technologies Campus and for the purchase of specialist research equipment. The total value of the project is over PLN 136 million. The funds for the implementation of the project come from the Regional Operational Program of the Mazowieckie Voivodeship. The contract in this matter was signed by Adam Struzik - Marshal of the Mazovian Province and Prof. Dr Eng Jan Szmidski - rector of the Warsaw University of Technology. The New Technologies Campus will cover a dozen facilities and public spaces in the Warsaw University of Technology and in Zamienie near Warsaw. The project will be implemented by a scientific consortium led by the Warsaw University of Technology and Pro-Development and W & B MOLD - WB.

Congress of agricultural economists to be held at the Warsaw University of Life Sciences

2018-08-22

The Faculty of Economic Sciences of the Warsaw University of Life Sciences invites students to participate in the XXV Congress of the Association of Agricultural and Agribusiness Economists. The Congress entitled «Challenges for the development of agribusiness and rural areas» will be held on September 11-13, 2018. The event is addressed to representatives of science and business in the field of agriculture and agribusiness. The aim of the Congress is to present the results of research related to the functioning of agribusiness and rural areas. The key goal is to create the conditions for scientific discussion on new areas of research that provide knowledge necessary to effectively solve rural problems. More: <http://www.seria.com.pl/>

Deputy minister of science announces the reform of the Polish Academy of Sciences

2018-08-23

The systemic reform of the Polish Academy of Sciences is essential and it is high time to begin it. This also applies to salaries at the academy institutes - said Deputy Minister of Science and Higher Education Sebastian Skuza to the Dziennik Gazeta Prawna in an interview. Deputy Minister Skuza also pointed out that the Constitution for Science will cause a real increase in expenditures on science and higher education. Compared to the situation before the new bill, there will be much more money in the system of education. This is due to the introduction of an annual valorization of expenditures on higher education and science. In total, the amount for both divisions will increase year-on-year with PLN 700 million up to PLN 1.2 billion. Currently, the minimum increase guaranteed by the regulations is only PLN 100 million. In addition, public universities will receive in 2019 government bonds worth PLN 3 billion. This additional capitalization will allow them to invest and spare more funds for current expenses - said Skuza.

University of Warsaw to hold Workshops on Artificial Intelligence

2018-08-23

The Interdisciplinary Center for Mathematical and Computational Modeling of the University of Warsaw (ICM) invites participants to an all-day and free workshop on August 31. The aim is to promote cutting-edge Artificial Intelligence (AI) methods and implement these methods on the latest Power 9 equipment within OpenPower Academia. The event participants will learn the secrets of artificial intelligence and the newest achievements of the industry's pioneers, using POWER9 systems implemented in the world's largest SUMMIT supercomputer. During the workshop participants will have remote access to POWER9 systems. The workshops will allow them to learn about the newest developments in the field of deep learning tools and techniques, and

learn how to use OpenPOWER systems and PowerAI tools to perform AI projects. Workshops will start at 10.00 at the ICM Technology Center in Warsaw at ul. Kupiecka 32.

Students of Collegium Medicum of the Jagiellonian University to learn how to develop new medicines

2018-08-23

Drug Discovery & Development is a new field of study which will be launched in the next academic year at the Pharmaceutical Department of Collegium Medicum of the Jagiellonian University in Krakow. The education program includes the identification and development of new medicines. The cooperation of academic circles with the largest and most innovative Polish pharmaceutical companies is an opportunity to provide the pharmaceutical and biotechnology sector with high-quality specialists. Polish pharmaceutical company Adamed is one of the companies that support a new study by shaping the program, lecturing specialists and organizing internships. More: www.ddd.farmacja.cm.uj.edu.pl

Scholarships in Iceland for students speaking Icelandic

2018-08-23

The Icelandic Ministry of Education, Science and Culture invites all students of Icelandic philology who speak Icelandic for annual scholarships in Iceland. The operator of the scholarship program is the Árni Magnússon Institute of Icelandic Language. The offer is addressed to students who have completed at least one year of study and speak Icelandic at the minimum level Icelandic Online 1 and 2. Priority will be given to applicants under 35 years of age. Scholarships are awarded for the academic year 2019/2020 and will be implemented from September 1, 2019 to April 30, 2020. Applications should be sent directly to the Árni Magnússon Institute until December 1, 2018. More detailed information and forms: http://www.arnastofnun.is/page/studentastyrkir_menntamalaraduneytis_en

University City of Science to be launched in Katowice in September

2018-08-23

In September, meetings promoting science will take place within the University of Science. The university plans to hold a series of lectures and exercises addressed to students and teachers of primary schools, middle schools and high schools. Classes will be organized in four cycles: «Singularities of the World of Physics», «Biorobotics», «Encounters with science» and «Amazing history of mankind». Lectures and exercises will be conducted by scientists from the Didactic Laboratory of Physics of the University of Silesia, the Unibot group, the University Scientific Society and the Center for Continuing Education at the University of Silesia. The classes will be held at the university campus. The first event is scheduled for September 10. More: <https://www.facebook.com/events/237268810217857/>

Medical University of Silesia in Katowice for the second time included in the Shanghai ranking

2018-08-23

The Silesian Medical University in Katowice for the second year was included in the Academic Ranking of World Universities (ARWU) - known as the Shanghai Ranking. The Silesian University was classified on places from 500 to 1000 (ARWU World Top 500 Candidates 2018). The ranking includes twelve Polish universities. Only University of Warsaw and the Jagiellonian University took places in the first 500 positions. In the 500 - 1000 range there are ten Polish universities, including only two medical schools - Silesia and Warsaw Universities. The creators of the ranking take into account the number of graduates or employees who received the Nobel Prize or Fields Medal, the number of the most cited scientists, the number of publications in the journal Nature or Science, publications listed in the Science Citation Index - Expanded and Social Sciences Citation Index. The list also includes the size of achievements in relation to the size of the university.

Researchers from the University of Warsaw and the Polish Academy of Sciences set up a spin-off company

2018-08-24

Five scientists from the University of Warsaw (UW) and the Institute of Pharmacology of the Polish Academy of Sciences set up a spin-off company - Matariki Bioscience. It will deal with the commercialization of compounds that may become new drugs. Matariki Bioscience is the first spin-off of the University of Warsaw operating within the «drug discovery» model. The compounds are developed at the Peptides Laboratory of the Faculty of Chemistry of the University of Warsaw, then they will be tested in preclinical studies and in the early phases of clinical trials. The company's task will be to prepare a drug to be financed and taken over by a large pharmaceutical company. This, in turn, will provide funding for expensive late-stage clinical tests.

British-Polish Scientific Forum to be held in September in Warsaw

2018-08-24

On September 13-14, 2018, the British-Polish Science Forum will be held at the Warsaw Marriott Hotel. The event is organized by the British Embassy in Warsaw and the Ministry of Science and Higher Education. The Forum will be the main point of the British-Polish Year of Entrepreneurship, Science and Innovation and one of the activities agreed by the Prime Ministers of Theresa May and Mateusz Morawiecki during the last Polish-British intergovernmental consultations. During the two-day Forum, the organizers are planning lectures, discussion panels, presentations and workshops devoted to Polish-British cooperation in the field of research, development, innovation and higher education. More: <https://www.gov.uk/government/news/uk-poland-science-forum-to-be-held-in-warsaw>

Scientific Clubs from the Wrocław University of Technology become the laureates of the program Best of the Best! 3.0.

2018-08-24

Four research clubs from the Wrocław University of Technology have become laureates of the Ministry of Science and Higher Education program „The best of the best! 3.0. „. Students will receive over PLN 1.2 million to implement their scientific plans and projects - informs Andrzej Charytoniuk from the Department of Information and Promotion of the university. PWR Racing Team, Akademicki Klub Lotniczy and Robot Science Club «KoNaR» will receive 319 thousand PLN. Thanks to the support, students will take part in several international competitions next year. PWR Racing Team will be able to start with their car at the prestigious Formula Student competition in the USA. The support of 240,000 PLN will be also received by the «OFF-Road» Scientific Circle- the constructors of Martian rover Scorpio. In the entire program, 98 out of 138 submitted projects were provided with almost PLN 12 million from the funds of the Operational Program of Knowledge and Education Development, whose aim is to support exceptionally gifted students in the development of their activities.

Conference „Technical Safety - changes for development” at the Gdańsk University of Technology

2018-08-24

The Office of Technical Inspection (UDT) and the Faculty of Mechanical Engineering of the Gdańsk University of Technology invite participants to the conference „Technical safety - changes for development” on 5 September at the Gdańsk University of Technology. The representatives of the Ministry of Finance and the Polish Agency for Enterprise Development, were invited to participate in the event to present the Constitution for Business. The organizers invite students, PhD students and uni-

versity employees - in particular representatives of administrative services, management staff, technical specialists, persons responsible for health and safety, manufacturers, designers and users of technical devices, as well as persons interested in ensuring technical safety. The UDT will present the solutions in modern research services, mobile laboratories, a new approach in customer service and certification in the field of public safety. Life- long learning at University of Białystok

2018-08-27

The oldest candidate qualified for full-time studies at the University of Białystok is 69 years old. He will study history - says Katarzyna Dziedzik, spokesman for the Białystok university. Students from the 40+ group have always been numerous on weekend courses. Similarly, the number of students aged 40+ has been growing for a few years at stationary studies at the University of Białystok. There were 12 of such students in 2012 and currently the university provides the courses for 16 seniors. - In our opinion, this is the effect of changes in our society. The education model promoted by the European Union including lifelong learning, has apparently been accepted in our country - explains Katarzyna Dziedzik.

University of Rzeszów to receive half a million PLN for the for improving the competences of primary school pupils

2018-08-27

The University of Rzeszów has signed a contract with the National Center for Research and Development for the project „University of Rzeszów for Young Explorers”. The amount of support for the University of Rzeszów will amount to PLN 483.272. The total value of the project is PLN 498,219. According to Dr Maciej Ulita, a spokesman at the University of Rzeszów, the project will be implemented from October 2018 to December 2019 by the Rzeszów University in partnership with the association «EKOSKOP». The beneficiaries of the project will be 1258 primary school students from the Podkarpace Region and the surrounding area. The main assumptions of the project are to support schools in developing pupils' competences and skills: mathematics and natural sciences, understanding, creativity, entrepreneurship, problem solving and team work.

First Polish business postgraduate program devoted to Latin America

2018-08-27

Collegium Civitas together with the Professor Andrzej Dembic Foundation created an innovative postgraduate program „Latin America: Business and Culture”. The Warsaw University invites participants to the course addressed to representatives of business, civil services, local and national administration, dealing with foreign cooperation, as well as employees of non-governmental organizations who ultimately want to expand their activities to Latin American countries. According to Collegium Civitas, the study program Latin America: Business and Culture is not only a set of general academic subjects, but also practical knowledge provided by experts who deal with this region on a daily basis. Students will learn about contemporary Latin American economic and political issues, including the cultural specificity of the region, including business

and diplomacy. More: <https://www.civitas.edu.pl/pl/oferta-edukacyjna/ameryka-lacinska-biznes-i-kultura-podyplomowe/program-i-harmonogram-ameryka-lacinska-biznes-i-kultura-podyplomowe>

University of Gdańsk to develop documentation for the construction of the port in Gdynia

2018-08-27

The University of Gdańsk will develop environmental documentation for the construction of the Outer Port in Gdynia. The agreement on this matter was signed by the rector of the university, Prof. Jerzy Gwizdała and the president of the Gdynia Maritime Port Authority - Adam Meller. Researchers at the Gdańsk University will conduct research for the next 12 months. They are to answer the question about the significant negative impact of the construction of the Outer Port on Natura 2000 areas. The scope of analyzes will include inventory of avifauna (birds) staying in the Natura 2000 area of the Puck Bay, ichthyofauna (fish) and benthic organisms living on the bottom of the reservoir. - The future of Gdynia is connected with a deepwater container terminal dealing with the largest vessels that are able to reach the Port of Gdynia. Assuming that around 700-800 people will work in the terminal, it will generate over a dozen thousand jobs in the entire country - announces Adam Meller.

Faculty of Civil Engineering of the Silesian University of Technology receives the certificate of the Accreditation Committee of Technical Universities

2018-08-27

Faculty of Civil Engineering of the Silesian University of Technology receives the certificate of the Accreditation Committee of Technical Universities The Faculty of Civil Engineering of the Silesian University of Technology in recognition of the high quality of building engineering at the engineering and mas-

ter level received the certificate of the Accreditation Committee of Technical Universities (KAUT) and also was awarded the European quality certificate EUR-ACE Label for the academic years from 2017/2018 to 2022/2023. The award is a confirmation of the very positive assessment of the qualifications of the Faculty of Civil Engineering staff and education, as well as the high qualifications of the faculty graduates. Receiving the KAUT and EUR-ACE certificate, the Faculty of Civil Engineering became one of four accredited high schools in Poland, together with the Krakow University of Technology, the Gdańsk University of Technology and the Military University of Technology.

Bricolage of Economics, Management and Finance - innovative studies at the University of Szczecin

2018-08-27

The Faculty of Economic Sciences and Management at the University of Szczecin has created an innovative PhD program- Bricolage of Economics, Management and Finance. Studies are focused on cooperation with the business environment in the region and the country - informs the university spokesman, Julia Poświatowska-Szumilo. The program includes three basic education modules: general - the theoretical part focused on learning the basic trends in current economic sciences; the researcher's module - with an extensive scientific and methodological element indispensable in conducting scientific research and a didactic module preparing to conduct classes. The studies will be implemented on the basis of a project within the means of the National Center for Research and Development. Within its framework, PhD students will receive 40,000 PLN, which they will be able to spend on: research, purchase of literature, trips to conferences or library inquiries and the costs of publishing his scientific works.

University of Casimir the Great in Bydgoszcz to launch dual studies

2018-08-27

In the new academic year, the University of Casimir the Great in Bydgoszcz will launch dual studies. Two dual courses have received over PLN 2.5 million of funding from the National Center for Research and Development. The first project includes a new pedagogy and rehabilitation within the current offer of the university. Students will be able to benefit from paid internships in institutions, alternating them with classes at the university. From the 3rd semester, they will choose one of the internship places, where they will take practical classes under the care of a guardian for two days a week. The second project includes the specialties of researching and designing games. In the course of studies, from the third to the sixth semester, students will have a total of over 12 months of paid internships in enterprises of the gaming industry. Some of the study topics will be fully included in the tasks carried out with the entrepreneurs. Studies will end with the completing the diploma projects, not only theoretical works.

State Higher Vocational School in Chełm to co-organize the Polish Navigational Championships

2018-08-28

From September 3 to 9, 2018, the State Higher Vocational School in Chełm organizes the Airplane Navigation Polish Championship in the senior and junior categories. The organizer of the championship is the Chełm High School with the participation of the Polish Aeroclub. Professor Dr Eng Arkadiusz Tofil, Rector of the State Higher Vocational School in Chełm, said that the appropriate infrastructure owned by the university and its experience in the organization of air events will contribute to ensuring that the competition is carried out at the highest level with proper security. The sponsor of the competition is the largest charter airline in Poland - Enter Air, which financially supports the team of the State Higher Vocational School in Chełm. This is the next

stage of cooperation between the university and the airline, which has so far resulted in recruitment for the position of a pilot among students.

Constitution for science strengthens the rights of students

2018-08-28

The signing the Constitution for Science by the the President of Poland completed almost three years of work on the Act. The whole academic community, including students, participated in these works. - We want students, as well as other groups of the academic community, to continue to be the partners of the Ministry in implementing the reform - said Deputy Prime Minister Jarosław Gowin during the 5th Conference of Experts on Rights of the Student, which took place in Warsaw. As emphasized the Minister of Science and Higher Education, higher education institutions for the first time in history will be penalized financially for failing to keep agreements with students. The provision prohibiting raising the fees during the studies was present also in the old law, however, no sanctions were imposed on the university that would not keep the promises. Now we are changing it, and the protection of students will be real, - added Gowin.

State Higher Vocational School in Głogów to launch two dual studies

2018-08-28

The State Higher Vocational School in Głogów acquired PLN 2.5 million to launch dual studies at the faculties of „Automation and Robotics” and „Metallurgy”. The money comes from the Operational Program Knowledge Education Development. The acquired funds will be allocated for the implementation of classes, the purchase of equipment, the payment of remuneration for students participating in practical classes, and additional industry courses recognized all over the world. In both studies theoretical classes will be implemented alternately with practical classes in local companies from the industrial sector, related to the field of education. Thanks

to dual studies, students can establish and tighten contact with an employer and gain professional experience, while employers have an influence on the education of candidates for a given position and can work on building correct attitudes and habits at the stage of study.

Researcher at the University of Life Sciences in Wrocław receives Nor-Feed Award

2018-08-28

Dr Kamil Sierżant from the Department of Biology and Animal Breeding of the University of Life Sciences in Wrocław won the Nor-Feed-Award 2017 for his PhD thesis on the use of polyphenols in feeding farm animals. Polyphenolic additives are a group of natural antioxidants obtained from plants that improve the work of the circulatory system. This is best seen on the example of so-called the French paradox, which occurs in the countries of the Mediterranean basin, where the population is less likely to suffer from cardiovascular diseases - explains the researcher. In the case of animal nutrition, preparations containing polyphenols, e.g. herbal extracts or essential oils, may change the turnout of certain microorganisms in the gastrointestinal tract, acting similarly to nutrition antibiotics prohibited in European Union. Polyphenolic compounds can also improve the condition of animals and their well-being. More: http://www.glos.upwr.edu.pl/aktualnosci/48231/dr_sierzant_z_upwr_z_nagroda_nfa_2017.html

Researcher from the University of Silesia to study extreme cyclones

2018-08-28

Dr Łukasz Pawlik from the Faculty of Earth Sciences at the University of Silesia is a laureate of the UW-ERTURA 2 competition announced by the National Science Center (NCN). He received more than 112 thousand PLN for his research of cyclones. Dr Pawlik is implementing the WINDIMPACT research project. He conducts research on extreme force cyclones, including their impact on biogeomorphological and soil systems. Thanks to the subsidy, the climatologist will hold an internship at the University of Reading in Great Britain. He will work there in a team headed by Prof. Sandy P. Harrison. The UWERTURA 2 competition is addressed to scientists with at least a PhD degree, who were managers of research projects co-financed by the National Science Center and plan to conduct a foreign internship. Thanks to this, they are given the opportunity to gain knowledge and experience in the international grant system.

Scientist from Toruń to investigate the star formation areas in the outer parts of the galaxy

2018-08-28

Dr Agata Karska from the Astronomy Center of the University in Toruń will receive PLN 2 million to create a research team. The grant comes from the competition of the Foundation for Polish Science in the FIRST TEAM program. The money is allocated to the project «Laboratory of Molecular Astrophysics: regions of star formation in the outer parts of the Galaxy». Researchers plan to identify the «pre-school» stars and their characterization through a series of astronomical observations using the best telescopes in the world. As part of the project, the first Polish research group dealing with astrochemistry (or molecular astrophysics) will be created. This is a dynamically developing interdisciplinary field of science investigating space chemistry in the world. The long-term goal of scientists and companies is to create a laboratory in Poland to design parts

for the most important astronomical telescopes of the future. More: <https://www.umk.pl/wiadomosci/?id=25613>

Human nutrition and dietetics study at the University of Humanities and Natural Sciences in Częstochowa

2018-08-30

Human nutrition and dietetics is a new field of study in the offer of the Jan Długosz University of Humanities and Natural Sciences in Częstochowa. The study program is adapted to the current requirements of the labor market, which will contribute to raising the professional competence of graduates and optimal preparation for their future work. Studies in a new field are designed for people who want to expand knowledge and skills in the field of proper nutrition and dietetics and also acquire knowledge related to the safety, processing, preservation and storage of food. The university provides laboratories equipped with modern measuring equipment and latest-generation computer equipment, staff with high didactic qualifications and significant scientific achievements, access to a rich faculty library, online databases, faculty computer lab as well as foreign trips.

Coaching a healthy lifestyle at the State Higher Vocational School Witelona in Legnica

2018-08-30

State Higher Vocational School The Witelon University in Legnica launches a new field of study - Coaching a healthy lifestyle. The program covers a broad spectrum of knowledge and skills in the promotion of diverse forms of healthy lifestyle of people of different ages and health. The new direction is interdisciplinary - it educates in the field of medical sciences, health sciences and physical culture sciences as well as social sciences. The studies will provide knowledge in the three most important elements guaranteeing satisfaction in life: physical activity, proper diet, emotional and mental stability. The graduate will be prepared to take up work in rehabilitation centers, sanatoriums and health resorts, educational facilities, sports clubs,

companies, organizations and institutions related to improving health, HR and public relations departments and organizations of health promotion.

Nicolaus Copernicus University ranked seventh in the Webometrics - Poland

2018-08-30

The Nicolaus Copernicus University in Toruń was ranked 7th in Poland and 21st in Central and Eastern Europe in this year's Webometrics ranking. In the global classification, the university occupied the 675th position. Webometrics Ranking of World Universities (Webometric Ranking of World Universities) is a list which, based on complex indicators, examines the presence of academic and research institutions on the Internet. The ranking is published by Cybermetrics Lab - a research group from the Spanish National Research Council headquartered in Madrid. The evaluation uses four criteria: Internet presence (5%); visibility on the Internet (50%); citation of scientific stars (10%) and number of the best publications in their disciplines (35%).

Jagiellonian University to cooperate with the University of Panama

2018-08-31

The Jagiellonian University in Krakow signed a cooperation agreement with the University of Panama. The document was signed by the Rector's Plenipotentiary of the Jagiellonian University for internationalization Prof. Adam Jelonek and the rector of the Panamanian University Prof. Eduardo Flores. According to the Krakow University, the document stipulates that both universities will undertake activities aimed at facilitating and intensifying cooperation in the field of scientific research as well as teaching and transferring knowledge in the fields of biology, biotechnology and environmental protection. Joint activities may take the form of developing bilateral education and research programs; exchange of lecturers, students, PhD students, administrative and technical employees; promotion of scientific activity and the implementation of research projects.

Summer Polish language course at the University of Warsaw has ended

2018-08-31

At the University of Warsaw, the 63th summer Polish language course ended. 174 participants from 44 countries spent 4 weeks learning Polish language and culture not only during classes, but also through music and theater workshops. The organizer of the course was the Center of Polish Language and Polish Culture for Foreigners «Polonicum». As the University of Warsaw informs, the summer school is very popular among students and other people who want to learn Polish. Classes were conducted at various levels. This year's course was attended by 55 scholars of the National Academic Exchange Agency. In addition, a specialized language program was developed, focusing mainly on the language of political science, economics and medicine.

Graduate of biotechnology at the University of Wrocław wins Stefan Banach scholarship

2018-08-31

Danil Poliluev, a graduate of studies at the Faculty of Biotechnology of the University of Wrocław, became the laureate of the Stefan Banach scholarship program, funded by the National Academic Exchange Agency. The graduated student is interested in new methods of combating cancer and methods of reducing the toxicity of chemotherapy. He is an active member of the Student Scientific Circle of Biotechnologists «Przybysz» and a delegate for the Scientific Circles Council. Thanks to the Stefan Banach program, he can start second-cycle studies at a public university of his choice in Poland. He intends to continue his studies at the University of Wrocław, master's and doctoral studies at the Biotechnology Department. Stefan Banach scholarship program is addressed to foreigners from Eastern Partnership countries and Central Asian countries and aims to support the social and economic development of countries in this area.

Pupils to apply for the Small University of Rzeszów

2018-09-03

Rzeszów pupils from primary and middle schools at age from 7 to 15 can apply for the Small University of Rzeszów, the program organized by the University of Rzeszów. Dr. Maciej Ulita, a spokesman at the University of Rzeszów underlines that the participants' entries can be conducted only via the Internet. Students of the Small University of Rzeszów will be selected through the random process from among those who applied and was registered in the electronic database. The classes will be held in three age groups: pupils from grades 1-3 of elementary school, pupils from grades 4-6 of elementary school, junior high school students and students from grade 7 of elementary school. Each group is to have about 60 people. Recruitment form: <http://www.mur.ur.edu.pl/rejestracja/>

Educational mission of the National Agency for Academic Exchange in Ukraine

2018-09-03

In autumn this year, the National Academic Exchange Agency will organize an educational mission to five Ukrainian cities. Ukrainian students are one of the most mobile national groups undertaking higher education outside their home country. According to the Central Statistical Data, as many as 54% of foreign students at Polish universities are students from Ukraine. As the National Academic Exchange Agency informs, the mission will start with meetings and presentations for Polish language teaching centers and Polish diaspora centers in Kharkiv on 13-14 November 2018. Next, the delegation will go to the educational fair «Education Abroad» in Kiev (November 15-17). After the fair, the delegation will go to Zhytomyr (November 18), then to Vinnytsia (November 19-20) and Cherkassy (November 20-21). Representatives of Polish universities who want to take part in the mission can register at: <https://nawa.gov.pl/promocja-i-targi/targi/9-targi-na-ukrainie/group-registration>

Dual studies at the State Higher Vocational School in Tarnów

2018-09-03

The State Higher Vocational School in Tarnów launches new dual studies thanks to the funds obtained from the National Center for Research and Development. Recruitment for dual studies will be carried out among students starting standard studies in the academic year 2018/2019 on the following majors: Electronics and Telecommunications and Mechatronics. Dual studies are a special type of studies, during which students spend part of practical classes (internships) in industrial plants. In the case of Tarnów students, they can visit and study the Grupa Azoty S.A., Zakłady Mechaniczne Tarnów S.A. and ATB Tamel S.A. After completing dual studies in the field of Electronics and Telecommunications or Mechatronics, the student receives the title of engineer and is prepared to take up a job as a person with experience in the industry.

Half of the faculties of the University of Białystok receive the highest scientific category „A”

2018-09-03

Four faculties of the University of Białystok have received the scientific category „A” within the final evaluation made by the Evaluation Committee of Scientific Centres. The „A” category again was awarded to the Faculty of History and Sociology of the Białystok University - informs Katarzyna Dziedzic – the University's spokesperson. The assessment is carried out every 4 years, and the last results were announced in the autumn of 2017. At that time, the Committee also awarded the category «A» (very good grade) to the Faculty of Law and the Faculty of Philology. The other faculties received category «B» (satisfactory level). As a result of appeals, after re-examining the data on the scientific activities of several faculties and their employees, the category «A» was restored to the Faculty of Physics and to the Faculty of History and Sociology. Thus, currently, half of the faculties of the university have been awarded with the highest scientific category «A».

Architecture students of the Silesian University of Technology dominated the #ValenciaCall competition

2018-09-03

Students of the Faculty of Architecture of the Silesian University of Technology took first and second place in the international architectural competition #ValenciaCall. The aim of the competition was to design social housing in Valencia, Spain. Contest participants had to take into account the role of the historic city center and the presence of historic buildings, needs of the local community, local culture and tradition, trends in social housing and the purpose of the building. From among over 100 works sent from all over the world, the jury awarded the Casa Española - a work by Paweł Pacak and Katarzyna Ponińska from the Faculty of Architecture of the Silesian University of Technology. The Casa Española is a project based on the atmosphere of the Spanish city and lifestyle of the residents. The work El Espacio of Marta Błaszczuk, Anna Czapla, Filip Gawin, Kacper Kania and Marlena Michalska was awarded the second place. The project is based on three important pillars: diversity, privacy and openness. More: <https://www.polsl.pl/Lists/Aktualnosci/Uczelniane/PokazWiadomosc.aspx?WebPartTitle=ListWiadomosci&Page=1&WebPartTitle2=Number&Filter1Field2=Identyfikator&Filter1Value2=2361>

Symposium of the Polish Bioinformatics Society at the Wrocław University of Technology

2018-09-03

The 11th Symposium of the Polish Society of Bioinformatics (PTBi 2018) will take place from September 5 to 7 in the Congress Center of the Wrocław University of Technology (building D-20, 8 Janiszewski Street). The Symposium is an annual meeting on bioinformatics organized by the Polish Bioinformatics Society. The event's co-organizers include the faculty of basic technical problems, the chemical faculty of the Wrocław University of Technology, the biotechnology department of the Wrocław University and the

faculty of biology and animal husbandry at the University of Life Sciences in Wrocław. The topics of PTBi 2018 cover all aspects of bioinformatics - including the development and application of computational methods for modeling and analysis of the structure, function and evolution of genes, proteins and biological systems. More: <http://ptbi2018.pwr.edu.pl/>

Faculty of Law and Administration of the University of Zielona Góra to support the secondary school class in Szprotawa

2018-09-03

The Faculty of Law and Administration of the University of Zielona Góra decided to support one of the classes of the High School in Szprotawa. The aim of the cooperation is to enable pupils to deepen their interests in legal sciences and to promote the scientific and didactic offer of the Faculty of Law and Administration. According to the agreement, Szprotawa pupils will benefit from the university's research and teaching offer, including use of its equipment facilities. The faculty also committed to allowing pupils to participate in lectures, seminars and workshops within the didactic offer prepared for law students and administration. The agreement also assumes allowing them to participate in research carried out at the Faculty.

University of Poznan to work with Cognifide

2018-09-03

Adam Mickiewicz University in Poznań signed a cooperation agreement with the IT company Cognifide. The most important goals of the agreement are cooperation in educating young people in the fields of IT and mathematics, and supporting students using theoretical knowledge in business realities, e. g. through workshops. The agreement also provides for student internships and consultations regarding the student curriculum. Since 2005, Cognifide has been creating web applications based on CMS: Adobe Experience Manager and Sitecore. It works for well-known brands: Ford, Lincoln, Shell,

Colgate-Palmolive, Unilever or Telegraph. It has offices in London, New York, Bydgoszcz and Poznań.

Students from Bielsko-Biała to co-create a project to protect the natural environment

2018-09-03

Students of the Information Technology Club at the University of Technology and Humanities in Bielsko-Biała in cooperation with the Gemini Park shopping center and the People-Innovations-Design Foundation created the Solar Portal – an installation that aims to draw attention to respect for the natural environment through the use of solar energy. The portal was established at the entrance to the shopping center. It is equipped with photovoltaic cells collecting solar energy. This enables the work of such devices like chargers and interactive multimedia installations. The lighting is made up of several dozen LED points, which in combination with the motion sensor brighten the person passing through the portal. The project also includes the implementation of a website with information about the portal, whose photovoltaic and electronic installations were designed by the students of the Academy.

Neuromanagement - unique postgraduate studies at Collegium Civitas

2018-09-04

Collegium Civitas in Warsaw is launching the first postgraduate studies in Poland for neuromanagers. The aim of the Neuromanagement studies is to improve the individual potential of the manager at all levels based on the latest knowledge in the field of neuroscience. The course is to prepare professional leaders understanding the secrets of the brain, which is the generator of every human decision in order to develop more effective team management. Participants of postgraduate studies will receive 4 international certificates (in Polish and English) of the Swiss STRUCTOGRAM Brain Structure Analysis Tool, recognized in 21 countries around the world. More: <https://www.civitas.edu.pl/pl/uczelnia/aktualnosci/pierwsze-polsce-studia-podyplomowe-dla-neuromenadzerow>

Poznań-Atlanta Executive MBA program accredited by the Association of MBAs

2018-09-04

The Poznań-Atlanta Executive MBA program has been accredited for the third time, for the maximum possible period of five years by the Association of MBAs (AMBA). The Association of MBAs based in London performs periodic audits and grants (or refuses to grant) the most prestigious accreditation of the Master of Business Administration programs. This accreditation is received by about 2 percent the best business schools around the world. The Poznań program has received it since 2008. The report of the evaluation committee emphasizes the above-average quality of students and graduates of the program, high ranking position and brand recognition of both Poznań University of Economics and the Poznań-Atlanta Executive MBA Program, commitment of the management team to ensure constant improvement of the Program's quality, and its strong links with business practice.

University of Silesia to launch new post-graduate studies in speech fluency disorders

2018-09-04

In October, University of Silesia in Katowice will launch the first in Poland two-semester post-graduate studies in speech fluency disorders. The study is addressed at professionals qualified to perform the speech therapy. The course will allow to broaden knowledge and skills in the diagnosis and therapy of people with speech fluency disorders. Thanks to the acquisition of interdisciplinary knowledge, graduates will gain methodological skills in the field of speech therapy, including prophylactic activities undertaken in the event of speech fluency disorders. They will become specialists with very high competencies in the treatment of stuttering, illficies of a neurogenic, psychogenic and organic basis. Recruitment lasts until September 15. More: www.fil.us.edu.pl/studia-podyplomowe/studia-podyplomowe-waburzenia-plynnosci-mowy.

New studies at the University of Gdańsk

2018-09-04

The University of Gdańsk has prepared 4 new studies for the new academic year: 2 in English and 2 in Polish. The new studies include: Protection of natural resources - interdisciplinary studies that provide knowledge on the legal, economic and practical aspects of nature conservation, with maintaining the sustainable economy and preserving biodiversity. Genetics and experimental biology - interdisciplinary studies combining areas of genetics and genetic engineering, molecular biology, biochemistry, cell biology. Intercultural and Business Relations in Europe - inter-faculty studies preparing for analyzing economic and social phenomena in the context of cultural conditions of the European Union. Cultural Communication - education in the field of analysis of phenomena in the field of communication in culture in the English language area and organization of media and cultural institutions.

Gowin: Within 5 years, Polish universities will be positioned in the second hundred of high schools in global rankings

2018-09-05

- I am convinced that in the next five years, the best Polish universities, at least the University of Warsaw, will enter the second hundred of world universities - said Jarosław Gowin, Deputy Prime Minister Minister of Science and Higher Education, in an interview with Polish Radio Gdańsk. The Minister also commented the quality of preparing secondary school graduates for studies. Hearing the opinion that the school prepares its pupils rather for solving tests than for studies, Deputy Prime Minister Gowin replied that it is justified to complain about the schools that educate insufficiently well the exceptionally talented generation of Poles for further studies. The government decided to return a system of four-year secondary schools. - Three years of secondary school is too short to prepare for studies. The Polish school should focus on learning creative thinking, because the labor market in the 21st century is changing rapidly, and

the capital that can be provided by the school is the ability to think independently - added Gowin.

Students and PhD students of economic sciences at the University of Warsaw win international competitions in Rome

2018-09-05

The students and PhD students of University of Warsaw from faculty of economics took first place in international Rotman European Trading Competition 2018, which took place in Rome. 39 teams from 36 countries took part in this year's competition. Each of team consisted of four people - two men and two women studying at the same university. The participants' task was to perform specific transactions using the Rotman Interactive Trader application during five competitions. Students solved various cases concerning specific problems in a simulated market in real time. More: <https://www.wne.uw.edu.pl/pl/aktualnosci/nawosci-samorzadu-studentow/studenci-wne-zajeli-pierwsze-miejsce-w-rotman-european-trading-competition-2018-w-rzymie/>

New division of scientific disciplines based on the OECD classification

2018-09-05

The draft regulation, in which astronomy is included in the physical sciences, will have no any negative impact on research in this discipline, nor its funding from public sources, neither conducting studies in astronomy. Division of disciplines is not the own idea of the Ministry. As the Ministry of Science emphasizes, the starting point for the new classification is the system of the science disciplines adopted by the Organization for Economic Cooperation and Development (OECD). As part of the OECD classification, astronomy (including astrophysics, space science) is one of the subdisciplines within the discipline of «physical science». What is also important, the changed classification of disciplines will have no impact on the study. Universities conducting studies in the fields of astronomy will still be able to educate in this area.

Researchers from Bialystok join the team for scientific cooperation with USA

2018-09-05

Vice-rector for medical science at the Medical University of Bialystok, Prof. Marcin Moniuszko and Prof. Marek Konarzewski from the University of Bialystok joined the team for scientific cooperation with USA. This team was created by the ordinance of the Minister of Health of August 2018. Under the Polish-American agreement, scientists from both countries will cooperate in the field of joint research and training. The priorities include: vaccine-preventable diseases and other infectious diseases, tuberculosis - in particular its multi-drug resistant strains and strains with enhanced drug resistance - pandemic flu, chronic diseases, cardiovascular diseases, malignant tumors, diabetes, respiratory diseases and dementia. Joint Polish-American research will also concern mental health.

Mediation of art - a new study at the Academy of Fine Arts in Wroclaw

2018-09-05

In the new academic year the Academy of Fine Arts in Wroclaw is launching a new, unique in Poland study of Mediation of Art - combining practice and theory of art. The study was created as a reaction to the latest art phenomena, the impact of the network, the latest technologies and the changing reality of the art market. Students of the new field will gain workshop skills in professional art studios. They will also deepen knowledge of art theory and history, artistic criticism, contemporary culture as well as media and trends related to the functioning of the art market. Classes will be conducted by outstanding artists, critics, curators and culture animators. Graduates of mediation in art are to understand the issues of artistic and market strategies. They should be able to write critical texts about art, organize a place for exhibitions and a gallery, design a long-term animations and workshops, write a project and implement it.

Aesthetic medicine of face to become new study at the Pomeranian Medical University in Szczecin

2018-09-05

In the new academic year, the Pomeranian Medical University in Szczecin is launching postgraduate Aesthetic Medicine of Face. The course is intended for doctors or dentists with a permanent right to practice. Studies will acquire professional knowledge and practical skills in the field of anatomical and histological structure of the area of aesthetic medicine treatments in the face and neck, diagnosing aesthetic problems of the face and neck, preventive treatment in the biological aging of the face and neck, correction of smile aesthetics with the use of dental treatment, corrective treatment of selected facial skin problems, selected aspects of medical law, bioethics, clinical psychology and dietetics. Graduates will be granted the right to conduct basic consultations in the field of facial aesthetic medicine and to perform aesthetic medicine treatments.

School of Polish Language and Culture to launch Language and adaptive course at the University of Silesia

2018-09-06

The School of Polish Language and Culture at the University of Silesia in Katowice is launching language and adaptation course for 60 foreigners undertaking second-degree studies in Poland under the Stefan Banach Scholarship Program. The course is co-financed as part of the development program by the Ministry of Foreign Affairs. Students from Ukraine, Belarus and Moldova will start their studies at Polish universities after the lectures and seminars extending their knowledge about Poland, and after an intensive Polish language course that will help them participate in academic life. Scholarship holders will learn about the role of Poland in the European Union, international political and economic relations, economic situation and social awareness of Poles, history and principles of academic coexist-

ence. Thus, they will be able to participate in discussions, seminars and workshops on Polish customs and traditions.

Medical University of Silesia invites volunteers to participate in the Standardized / Simulated Patient Program

2018-09-06

The Medical University of Silesia in Katowice is beginning implementation of an innovative „Standardized / Simulated Patient Program”. The main objective of the project is to support the student education process by including specially trained people for simulation activities, exercises and practical examinations. The Simulated Patient is a person who can realistically reproduce the history of the disease by imitating physical symptoms and emotional reactions of a real patient. The Standardized Patient plays a role in a repeatable way, giving the students possibility to practice a certain skill in identical or similar conditions. Playing clinical situations will allow future medics to acquire the skills, develop a good relationship with the patient, develop emotional intelligence, provide difficult talk and conduct the diagnostics. The university invites people aged 18 and plus who have completed at least secondary education and have passion for acting. More: <http://www.cdism.sum.edu.pl/podstrony-projektu-power/standaryzowany-pacjent/>

Success of the „Polish come back” program

2018-09-07

The Ministry of Science and Higher Education wants scientists who have left the country to return to Poland. - The „Polish Come back” program implemented by the Foundation for Polish Science is very successful. Ten scholars applied for one scholarship - said Piotr Dardziński, the deputy head of the Ministry of Science in an interview with the portal Interia. «Polish Come back» is a program that is to help bring the best Polish researchers from abroad. According to estimates, 10,000 Polish scientists work only in Europe. Those who decide to return to the country can count on a salary of up to 350,000. PLN gross annually. As Dr Zofia Sawicka deputy director of the National Agency for Academic Exchange said in an interview with the agency Newseria Biznes «annually we will be able to accommodate about 25 scholars meeting the high science requirements, so that the public funds of this program will be repaid in the form of significant contribution to Polish science». Polish companies and the innovativeness of the Polish economy will also benefit from the return of scientists.

EUROPHRAS conference at the University of Białystok

2018-09-07

The University of Białystok on September 10-12, 2018, is organizing the largest phraseological conference in the world, EUROPHRAS. Nearly 200 researchers from around the world will take part in it. According to Katarzyna Dziedzic, a spokesman of the University of Białystok, the conference will be attended by phraseologists from 37 countries, including Australia, New Zealand, Japan, China, South Africa, Switzerland, Greece, Georgia, Croatia, Belgium, France, Spain and Italy, Finland, Germany and Russia. The meeting is devoted to constant expressive connections, first of all phraseologies, proverbs and winged words. They are presented in various perspectives, for example contrastive, translational, lexicographical and didactic perspectives. The discussed issues concern the theoretical aspects of phraseology and the practical use of fixed

word combinations, for example in advertising texts. More: <http://infol.uwb.edu.pl/program.html>

Gdańsk Medical University and Radio Gdańsk continuing the health education project

2018-09-07

Medical University of Gdańsk, University Clinical Center in Gdańsk and Radio Gdańsk will jointly educate citizens of the province Pomerania. The partners signed an agreement on the continuation of the „Be Healthy - No Queue” project. Next year, the three institutions will work together to spread information about health, disease prevention and treatment methods available especially in Pomerania - implementing the original idea of the Gdańsk Medical University and Radio Gdańsk started in 2017. Previously, orthopedic specialists, physiotherapists, cardiologists, dentists, endocrinologists, immunologists, diabetologists, gastroenterologists, rheumatologists, dermatologists and specialists from the pharmaceutical department of the Medical University of Gdańsk shared their expert knowledge and advice.

University of Silesia to launch University Science Town

2018-09-07

The University of Silesia is launching the program of University Science Town. Within the program the scientists of the University of Silesia will run a series of lectures and exercises addressed to students and teachers of primary schools, junior high schools and high schools. Lectures will be organized in four cycles: «Singularities of the World of Physics», «Biorobotics», «Encounters with science» and «Amazing history of mankind». All lectures and workshops will be conducted by the scientists from the University of Silesia including University of Children; robotics community Unibot; University Scientific Society and Center for Continuing Education of the University of Silesia. The sessions will take place on the campus - the first event is scheduled for September 10.

Prof. Jan Maciejewski receives Premio Apoxiomeno

2018-09-07

Professor Jan Maciejewski, head of the Department of Sociology of Availability Groups at the Institute of Sociology at the Faculty of Social Sciences of the University of Wrocław, has become the first Polish laureate of the Premio Apoxiomeno award. The Apoxiomeno Association, based in Florence, aims to promote legality and security from the perspective of various areas of life under the slogan «Art and sport in uniform». In the art and culture category, awards are given to artists, journalists and representatives of international cinematography promoting the activities of security services and the army. In the sport category, the prize is awarded to Olympic athletes promoting the values of peace and solidarity through sport. This year, for the first time in history, the jury decided to distinguish a representative of science dealing with security issues. Professor Maciejewski was awarded for innovative scientific activity in the field of the sociology of disposable groups.

Gowin: It's scientists proposed a new classification of disciplines

2018-09-10

Astronomy and physics in many countries of the world are treated as a common discipline. The proposal to consolidate these disciplines into common physical sciences did not come from the Ministry of Science and Higher Education - said Jarosław Gowin, Deputy Prime Minister head of the Ministry of Science, in the „Graffiti” program of Polsat News. - I have asked the most representative scientific bodies to prepare a proposal for a new classification of disciplines: the Conference of Rectors of Academic Schools in Poland, the Main Council of Science and Higher Education and the Central Commission for Degrees and Titles. Experts and scientists themselves, proposed such a classification - Deputy Prime Minister Gowin explained. As the Minister of Science added, now these proposals are consulted, and the decision will be taken after collecting the opinion. - We have a record number of over 100 disciplines. In most European countries there are several dozen of them. In the canonical classification of the OECD Organization for Economic Cooperation and Development, there are only 38 - added Deputy PM Gowin.

Scientific conference in Vienna about memory and oblivion of German crimes

2018-09-10

On September 25-26, 2018 the Scientific Station of the Polish Academy of Sciences in Vienna organizes the conference „Forgotten and remembered. Memory and oblivion of German Nazi repression, concentration and extermination camps „. Participants of the conference will listen to over a dozen lectures and presentations devoted to the memory and oblivion of German crimes during World War II. Stephan Lehnstaedt from Touro-College in Berlin will give a lecture «German (non) memory of extermination camps within Action Reinhardt: Bełżec, Sobibór, Treblinka.», Sławomir Buryła from the University of Warmia and Mazury in Olsztyn will bring

closer the issue of lager literature, Paweł Kosinski from the Institute of National Remembrance in Warsaw will give a lecture on the instrumentalization of memory on the example of SS-Hauptsturmführer Karl Chmielewski, the commandant of the Gusen camp, presented in the memoirs of Polish prisoners and his son Werner.

Festival Metamorphoses on artificial intelligence at the Copernicus Science Center

2018-09-10

How will the wider use of artificial intelligence affect society? During the Festival Metamorphoses, the participants can check how algorithms change our civilization informs the Copernicus Science Center in Warsaw, which from 13 to 16 September 2018 organizes the Przemiany Festival. Participants of the event will listen to the lecture «Artificial Intelligence and Society», which will be given by Prof. Luciano Floridi, lecturer in philosophy at the University of Oxford and University of Bari. The organizers also invite viewers to the «Machina Sapiens» exhibition, where they can see artistic projects created by the machines and works of artists using AI algorithms. More: <http://www.kopernik.org.pl/projekty-specjalne/festiwal-przemiany/festiwal-przemiany-2018/>

Researcher at the University of Humanities and Natural Sciences in Częstochowa receives the title of Fellow ChemPubSoc Europe

2018-09-10

Professor Piotr Balczewski, head of the Department of Structural and Materials Research at the Institute of Chemistry, Environmental Protection and Biotechnology, Faculty of Mathematics and Natural Sciences, at University of Humanities and Natural Sciences of Jan Długosz in Częstochowa was awarded the title of Fellow ChemPubSoc Europe. ChemPubSoc Europe is an organization associating and financially supporting 16 European chemical societies gathering a total of about 70 thousand members. The societies publish 14 high-quality magazines in their

countries. The organization also has its own publishing house - ChemViews Magazine. The award is the highest prize awarded every two years by ChemPubSoc Europe. They are received by the scientists who contribute to increasing the scientific level and the recognition of publications in chemistry in Europe and in the world. Nominations were announced at the 7th EuChemSoc Congress in Liverpool.

Conference of linguists in Poznań

2018-09-10

On September 13-15 the Department of English Studies at the Adam Mickiewicz University in Poznań invites participants to the 48th Poznań Linguistic Meeting. The theme of this year's conference is „Language and evolution: issues and perspectives”. The main lecture: «The evolution of language: at the interface of biology and culture» will be delivered by W. Tecumseh Fitch from the University of Vienna. Daniel Everett from Bentley University will deliver the plenary lecture «Homo erectus, symbols and origin of language» and discuss his research „How Language Began”. Both scientists will also take part in the plenary dialogue and in the debate with other speakers presenting the results of their research during plenary sessions: Ljiljana Progovac, Geoffrey Schwartz and Przemysław Żywicznyński, Piotr Gąsiorowski and Nikolau Ritt. More: <http://wa.amu.edu.pl/plm/>

Fraunhofer Design Center opened at the Opole University of Technology

2018-09-10

The Fraunhofer Design Center for Advanced Light Technologies (FPC ALight) was officially opened at the Opole University of Technology. This is the first in Poland branch of one of the most important institutions supporting industry and implementing new technological solutions. The center will deal with «slimming» materials used in automotive, aviation and civil engineering as well as issues related to coal processing, railway and metal industry and electromobility. The partner of the Opole University of Technology in the project is the Science and Technology Park in Opole. The guest of the event was Deputy Prime Minister, Minister of Science and Higher Education Jarosław Gowin, who supported the project from the beginning. - The opening of the Center is a historic day for the Opole University of Technology, but also for the entire Polish science and economy. I am happy about this as a Pole and a European - said the minister. More: <https://wu.po.opole.pl/wielka-waga-lekkich-technologii/>

UMI-SIMAI-PTM conference in Wrocław

2018-09-10

Wrocław University of Technology and the University of Wrocław together with Italian and Polish mathematician associations invite the participants to the UMI-SIMAI-PTM conference which will be held from 17 to 20 September. The conference program will cover a wide range of contemporary mathematical research. Plenary lectures and thematic sessions within the framework of the Joint meeting of the Italian Mathematical Union, the Italian Society of Industrial and Applied Mathematics and the Polish Mathematical Society (UMI-SIMAI-PTM) will take place on the campuses of both universities. Plenary lecturers will be delivered by scholars from Università di Trento, Université Paris-Dauphine, University of Firenze, University of Utah, University of Pittsburgh, Heidelberg Universität, Politecnico di Torino and Università di Torino as well as Polish universities - Jagiellonian, Warsaw and Wrocław universities.

New post-graduate studies at the University of Białystok

2018-09-11

Nearly 60 different proposals can be found in the offer of post-graduate studies at the University of Białystok in the academic year 2018/2019. Among them there are 2 novelties: Labor and Social Security Law and Social Knowledge - informs Katarzyna Dziedzic, spokesman for the Białystok university. Studies in Labor Law and social insurance will be conducted at the Faculty of Economics and Management. In their course, students learn the rules regarding the employment and dismissal of employees, different types of contracts, remuneration, working time, and holidays. In turn, Social Knowledge is a proposal of the historical and sociological department for graduates of various majors interested in obtaining the right to teach the Social Knowledge in all types of schools in which such subject is implemented.

Archaeologists from the University of Rzeszów investigating the Scythian stronghold in Podkarpacie

2018-09-11

Fragments of Greek amphorae, vessels, a dozen Scythian arrowheads and bronze ornaments are the discoveries of archaeologists from the University of Rzeszów in Chotyniec (Podkarpacie) found during the study of the settlement from about 2,500 years ago belonging to the Scythian family. As Maciej Ulita, a press spokesman at the University of Rzeszów, said on the air of TVN24, that currently the team of archaeologists is continuing research carried out last year in Chotyniec on the ash spot, located in the settlement from the early Iron Age. - With each layer of earth removed, it turns out that the discovered seat of the Scythian people hides many secrets. The sensation of last year was the Greek amphora for wine, which seems to be the only such artefact in Poland and became the hallmark of the Chotyniec expedition - added Dr. Ulita.

Congress of Young Polish Mathematicians in Lublin

2018-09-11

The Mathematical Institute of the Polish Academy of Sciences and the Faculty of Mathematics, Physics and Computer Science of the Maria Curie-Skłodowska University in Lublin are the main organizers of the Congress of Young Polish Mathematicians, which will be held on September 20-23, 2018 in Lublin. Congress is an event that gathers mathematically talented middle school and high school students from Poland. During the event, its participants will listen to lectures of: Prof. Dr Marek Kordos from the University of Warsaw - «Everything (well, almost everything) about a cycloid», Prof. Piotr Gwiazda from the Mathematical Institute of the Polish Academy of Sciences - «Mathematics approximate», and Prof. Andrzej Ruciński from the University of Adam Mickiewicz in Poznań - „Extreme harvest theory”. 3rd Congress of Bio-science of Polish BIO2018 at the University of Gdańsk

2018-09-11

The University of Gdańsk invites participants from September 18 to 21 at the III Congress of Bio-science of the Polish BIO2018. It will be attended by world-renown scientists dealing in natural sciences and related fields. Congress is also the 51st Congress of the Polish Biochemical Society. Interdisciplinary topics of papers, meetings and discussions include new solutions in medicine - especially in the treatment of cancer and genetic diseases. The program includes 30 scientific sessions and nearly 500 guests, 150 presentations and speeches, almost 200 poster presentations and a satellite session «Women in Science». Scientists in their speeches will take up contemporary civilization challenges, like the research into the immune system in the fight against cancers, new methods of diagnosing cancer and genetic diseases, research and application of stem cells, research on the possibilities of modifying plant metabolism and research on so-called «Historical» DNA.

Students of the Wrocław University of Environmental and Life Sciences to participate in the Quarry Life Award competition

2018-09-11

By September 20, students can vote for the project of environmental protection students of the Wrocław University of Environmental and Life Sciences in the Quarry Life Award competition. Four students check how to improve the soil quality in the Nowogród Bobrzański sand mine by using biochar. Students conduct a vase experiment on the soil brought from the mine. They use biochar, mineral fertilization, a mixture of grasses and legumes - one that is sown in difficult and dry areas. The project has been running since April, the students are making measurements by checking the height of the stalks, the amount of flowering plants and the germination rate, checking whether the biochar actually causes that the plants grow larger and healthier. The Quarry Life Award competition has been encouraged students to look for new ways to increase the biodiversity in the mining areas for several years. In the last three editions more than 1,100 project applications were submitted, and the winners received prizes with a total value of over 750,000. euro. Warsaw School of Economics to launch new post-graduate study Space management in the new economy

2018-09-12

The next postgraduate study is launched at the Warsaw School of Economics: „Space management in the new economy”. Candidates can apply to the Department of Transport of the Warsaw university. The purpose of the one-year post-graduate program is to provide current knowledge and skills that will allow graduates to join in the business development of Space economy. - I consider the course will provide the most valuable knowledge of project management activities, as well as the opportunity to meet many people from the Polish space industry - said Ilona Tobiasz, Development Director at SENER Polska, participant of the first series of postgraduate studies, which took place two years ago.

4th National Political Science Congress in Lublin

2018-09-12

The Faculty of Political Sciences of the University of Maria Curie Skłodowska in Lublin, the Polish Political Sciences Society and the Political Sciences Committee of the Polish Academy of Sciences organize the Fourth National Political Science Congress, which will be held from 18 to 20 September. The theme of the Congress is «The State in Times of Change». According to Aneta Adamska, spokesman of the Lublin university, the participants of the event will focus on the basic, «traditional» political categories of state and power, taking into account the dynamics and variability of qualitatively new

features of the social environment in the states. 726 researchers from 85 research centers will participate in the Lublin Congress, of which 30 participants represent foreign universities. The participation in the commencement of the event was announced by Jarosław Gowin, Deputy Prime Minister Minister of Science and Higher Education. The inaugural lecture will be given by Prof. Stefano Guzzini, outstanding German-French political scientist, specialized in the theory of international relations. Students and employees of the AGH University of Science and Technology create the promotional spot

2018-09-12

Expedition to Spitsbergen, exploration of the Caucasus Mountains, races on the fast track or solar boat competitions - these are just some of the activities of students and employees of the AGH University of Science and Technology in Krakow presented in their latest promotional spot. «Our point of view - POV AGH» is a short film made from beginning to end by university students and staff. During the implementation, the creators used specialized cameras with the possibility of recording from the first person perspective. The work on the AGH promotional spot started a year ago. «Our point of view - POV AGH» is the first promo that show how the slogan AGH «Wiedza-Pasja-Więź» (Knowledge- Passion- Bond) works in practice. The first film touches the theme of student passion, the next promo will reveal more scientific issues and lifestyle of students from AGH. See the spot: www.bit.ly/AGH-POV

Three Gdańsk high schools to carry out the DATA BRIDGE project

2018-09-12

Gdańsk University of Technology obtained financing for the new MOST DANYCH (DATA BRIDGE) project, which provides for the construction of a repository of Open Research Data to collect and share data generated during many research projects carried out at universities and scientific institutions. The aim of the project is to increase the availability of research data financed by institutions supporting scientific activity and to establish a center of competence in this field at the university. The project received funding in the amount of PLN 26.7 million from the European Regional Development Fund and will be implemented by a consortium of Gdańsk University of Technology, as the leader of the project, as well as the University of Gdańsk and the Medical University of Gdańsk.

University of Economics in Katowice to educate children and young people

2018-09-12

Until September 25, pupils can sign up for the next semester of free economic education programs for primary and secondary school pupils at the University of Economics in Katowice. They can apply for the Economical Children's University, the Academy of the Young Economist and the course Economics for the High School and Technical School. Classes in the form of interactive lectures and workshops will take place on Mondays. The academic teachers will focus on the issues of management, economics, marketing, finance, economic history, psychology and business ethics, as well as own development and projects. The Economical Children's University received the Parents' Award for the most developing Silesian initiative for children up to 14 years in the Logic category and a distinction in the Visual arts category in the Sunflowers 2017 plebiscite organized by the portal czasdzieci.pl.

Researcher of the Warsaw Medical University becomes a member of the European Health Parliament

2018-09-13

Paweł Koczkodaj, PhD student of the Faculty of Health Sciences at the Medical University of Warsaw and a graduate of this university was appointed to the European Health Parliament (EHP) in Brussels. As emphasizes Warsaw Medical University, he was selected as one of 55 specialists who will work on solutions improving health in Europe. The Polish scientist will focus on the issues of anti-cancer prevention. The aim of the European Health Parliament is to exchange ideas with European Union officials, members of the European Parliament, non-governmental organizations, the media and interested citizens, and then develop and present political recommendations in the area of health protection. The developed solutions will be presented at the plenary session of the EHP and send to decision-makers and people related to health care throughout the European Union.

Career development festival at the Lazarski University in Warsaw

2018-09-13

Lazarski University in Warsaw invites participants on September 15, 2018 to the Career Development Festival, which is addressed to all seeking information on further education and inspiration to acquire new skills. Festival participants will be able to listen to lectures on law, business and development. The participants will also be able to learn more about post-graduate studies and MBA programs at the Lazarski University. As the organizers assure, the festival is also a good opportunity to talk with lecturers of particular majors. More: <https://ckp.lazarski.pl/festiwalrozwojukariery/>

Young geologists from the University of Wrocław studying Iceland

2018-09-13

Students from the Scientific Circle of Geologists of the University of Wrocław began the science camp „Iceland 2018”. The purpose of the expedition is to describe and document photographic major geological sites in Iceland, take samples of rocks forming volcanoes Askja, Hekla and Katla, and create a geotourist guide. - Through the guide, we want to share the knowledge about the origins of Iceland, its age, the reason why in one part of the island we encounter rocks with a relatively sour composition, others with a more alkalid composition, however it would seem that Iceland abounds only in basalt rocks - explain participants. The group of 12 students is supported by Prof. University of Wrocław Marek Awdankiewicz - volcanologist, petrologist of igneous rocks from the Institute of Geological Sciences and Dr Honorata Awdankiewicz from the Polish Geological Institute of National Research Institute. Supervisors will watch over the scientific part of the trip. More: <https://uni.wroc.pl/mlodzi-geolodzy-z-uwr-odkryja-tajemnice-islandii/>

Universities in Częstochowa to receive millions for development

2018-09-13

Jan Długosz University of Humanities and Natural Sciences in Częstochowa and Częstochowa University of Technology will receive a total of PLN 50 million for their development. The support was declared by the deputy minister of science and higher education Piotr Müller during a press conference in Częstochowa. The money is to be transferred after the entry into force of the new law, i.e. after October 1. The funding is to be used for the development of scientific and research infrastructure - without rigidly specifying to what specific investments will be allocated - said the deputy minister. - In total, we will transfer PLN 3 billion to the development of Polish universities. The money will be divided in such a way that a significant part will be transferred not only to large universities, voivodship cities, but above all to smaller academic centers, which for years have not been able to obtain financing for their development - said Müller. Viadrina and the University of Poznan to carry out the European New School for Digital Studies project

2018-09-13

The European University Viadrina from Frankfurt on the Oder and the Adam Mickiewicz University in Poznań will cooperate as part of the „European New School for Digital Studies” project at the Collegium Polonicum in Słubice. The English-speaking unit is to combine the knowledge of the European University Viadrina in the field of entrepreneurship with the competences of information technology at the Poznan University. There will be scientific research and classes on challenges that global digitization poses to society, the economy and legal systems. The joint group of experts from both universities is working on the project. The first step will be to launch the “Master of Digital Entrepreneurship” in the academic year 2019/20. In the longer term, the

studies are planned to be developed and should attract students, PhD students and renowned scientists to the program. More: <https://amu.edu.pl/aktualnosci/na-glowna/365558-most-naukowy-nad-odra-viadrina-i-uam-wspolnie-stawiaja-czolo-wyzw-poleczenstwa-cyfrowego>

Professor Bielecki: No other law in Poland was so thoroughly prepared

2018-09-14

- I took part in two-year consultations and I think that there is probably no other law in Poland, which was so thoroughly prepared - said Prof. Witold Bielecki, rector of the Kozminski University in Warsaw, commenting on the Constitution for Science. Kozminski University's newest success is that Financial Times ranked its Management study 20th in the world. Referring to this result, Prof. Bielecki underlined that one of the reasons of this success is the internationalization of the university, which educates 1,500 foreign students from over 60 countries. - We have to start with acquiring international accreditations. I mean the European EQUIS accreditation, the American AACSB or AMBA, which is only for MBA programs. They form so-called triple crown. Accreditations allow high schools to compare with the standards of foreign universities. I am grateful to Minister Gowin for considering my proposal that the Ministry should finance the costs of such accreditations - added the rector of the Kozminski University. Chinese language course at the Białystok University of Technology

2018-09-14

Białystok University of Technology organizes a Chinese language course which will be run by the Bureau for International Cooperation of the Białystok University and the teacher sent by the Confucius Institute in Beijing. According to Dorota Sawicka, a press spokesperson of the Białystok University

of Technology, the Białystok University of Technology has intensively cooperated with universities of China for several years. Every year, Summer Schools of Logistics are organized, where students from both countries can acquire practical and theoretical knowledge about logistics and transport. At the Faculty of Management Engineering, there is the International Chinese and Central-Eastern European Institute of Logistics and Service Sciences, which was established jointly by the Białystok University of Technology and Zhejiang University Ningbo Institute of Technology in China. International award for students-geologists from the Adam Mickiewicz University in Poznań

2018-09-14

The Student Circle of the American Society of Petroleum Geologists at the Adam Mickiewicz University in Poznań received the international Outstanding European Student Chapter Award given by the Europe Region Office of the AAPG (American Association of Petroleum Geologists). AAPG is the largest organization in the world associating specialists in the field of geology - scientists, employees of companies exploring and exploiting mineral resources, students and enthusiasts. Despite the name, AAPG is a global institution. It has almost 40,000 members in one hundred countries around the world. AAPG provides for university-level education and grants for outstanding students. It organizes co-financing for extracurricular knowledge acquisition and global competitions in earth sciences. This is facilitated by a network of around 300 student circles around the world - including 30 circles in Europe.

Cooperation between the Polish Naval Academy in Gdynia and Zakłady Mechaniczne „Tarnów” S.A

2018-09-14

The Naval Academy in Gdynia signed a letter of intent on cooperation with Zakłady Mechaniczne „Tarnów” S. A. The document concerns cooperation in the development and implementation of a new generation of materials for applications in the armaments and shipbuilding industries. As a result of joint research, new effective technologies for the production of composite materials will be developed. It will be accompanied by searching for materials with unique properties, in particular resistant to piercing and with good corrosion resistance. The signatories of the letter have already cooperated within the framework of the Scientific and Industrial Consortium. Together with the Military University of Technology in Warsaw and PIT-RADWAR SA, they created the first Polish autonomous ship's weapon system to combat airborne, surface and shore objectives - OSU 35. The consortium received the prestigious award of the Polish defense industry 2018.

Academy of Polish diaspora established

2018-09-17

Developing the qualifications of Poles living abroad is one of the objectives of the agreement signed between the Cardinal Stefan Wyszyński University (UKSW) in Warsaw and the „Wspólnota Polska” Association. Signatories of the agreement have committed to undertake and develop activities aimed at cooperation with the Polish diaspora and individual Poles abroad. The activity is to cover science, education, culture, religion, economy, tourism and sport. The agreement is intended to provide more professional support for Polish scientists living outside of Poland including researchers, teachers, doctors, nurses, priests, students and other professional groups of Polish descent. The objectives of the agreement will be implemented through the creation of the Academy of Polish Diaspora. Its task will be to organize seminars, debates and conferences in Polish Diaspora's issues.

Professor Chłosta becomes honorary doctor of Semmelweis University in Budapest

2018-09-17

Head of the Chair and Clinic of Urology at the Collegium Medicum of the Jagiellonian University in Kraków Prof. Piotr Chłosta received the honorary doctorate of the Semmelweis University in Budapest, the oldest medical school in Hungary. Professor Chłosta is an outstanding specialist in the field of urology. The main areas of his scientific and professional interests are oncological urology, endourology and laparoscopic urology. As the first urologist in Poland and one of the first in the world to perform laparoscopic excision of retroperitoneal lymph nodes in patients with metastatic testicular cancer, he was the first in Poland to create a replacement intestinal bladder only laparoscopically and, as the first urologist in the world, performed an implantation of artificial sphincter around the prostatic coil in a man by laparoscopy.

World-renowned Canadian scientists to give lectures at the Gdańsk Medical University

2018-09-17

Professor Philip F. Halloran, international expert in the field of transplantology and nephrology from the Nephrology Clinic of the University of Alberta in Edmonton, head of the Alberta Transplant Applied Genomics Center and Dr. Konrad Famulski, cooperating with him, will deliver lectures at the Medical University of Gdańsk on September 19. Professor Halloran will give a lecture «Molecular analysis of transplant biopsies: insights into mechanisms of disease» and Dr. Famulski «The remarkable versatility of the molecular signature of acute kidney transplant injury.». Both researchers will deliver their lectures in the conference room of the Nephrology, Transplantology and Internal Diseases Clinic. Professor Phillip F. Halloran is the author of numerous publications in the field of transplantology and immunology. Currently, he deals with new methods of molecular diagnostics of transplanted kidney pa-

thology. In 2016, he was recognized as «the most influential personality in the field of transplantology in the last 25 years».

Pomeranian Open Science Conference and Focus on Open Science workshops at Gdańsk University of Technology

2018-09-17

The Library of the Gdańsk University of Technology and the University Information Services Center invite participants to the Second Pomeranian Conference „Open Science: Direction - Open Science” on September 26-27. The speakers are scientists and librarians working at the Gdańsk University of Technology and representatives of publishers, international organizations (Figshare), institutions and cooperating companies (Clarivate Analytics). The conference will be preceded by the international Focus on Open Science workshop organized on September 25 in collaboration with Scientific Knowledge Services, LIBER (Association of European Research Libraries) and University College London Press. Participants of the conference and workshops will analyze the question how to conduct research, store and share their results. They will also consider how the cooperation between scientists and research centers can implement the policy of openness in science postulated by the European Commission.

Agreement on cooperation between the University of Life Sciences in Lublin and the Ukrainian National Research Institute

2018-09-18
